In my annual message of 1882, I recommended the abolition of all excise taxes, except those relating to distilled spirits. This recommendation is now renewed. In case these taxes shall be abolished, the revenues that will still remain to the Government will, in my opinion, not only suffice to meet its reasonable expenditures, but will afford a surplus large enough to permit such tariff reduction as may seem to be advisable, when the results of recent revenue laws and commercial treaties shall have shown in what quarters those reductions can be most judiciously effected.

I am sorry to say that President Harrison and this Republican Congress are not in harmony with these views and recommendations of President Arthur.

REPUBLICANS RESPONSIBLE.

There is not one unjust and oppressive law on the statute-books for which the Republican party is not directly responsible. A tariff which would produce the greatest amount of revenue was necessary to the Government during and at the close of the war. But a "protective tariff"—in other words, a tariff which puts several dollars into the pockets of the protected monopolists for every one it puts into the Treasury—was never necessary. The Morrill tariff of 1861 began this game of robbery at a time when the spirit of patriotism would otherwise have been deaf to the clamor of the monopolists, whose incessant cry, whatever the public calamity may be, is still that of the daughters of the horse-leech, "Give, give."

The pretense at that time for the enactment of the law was the necessity for revenue to support the Government, and this necessity, as experience has demonstrated, could best have been met by moderate and uniform rates of duties on the ad valorem principle. The leading purpose of the Republican party is, not to raise the greatest amount of revenue for the Government by taxes on foreign goods imported, but to raise the taxes so high as to keep foreign goods out of the market. This is now the avowed policy of the Republican party, as I have shown in the extract from their national platform. And to carry out this policy in the most offensive and oppressive manner the tariff laws impose the taxes, not in proportion to the value of the several articles, but upon quantities, in weight or measure, without regard to value. The effect of this fraudulent system is to make poor men pay as much tax upon their plain clothing, bed-clothing, and upon most articles they buy as rich men pay for similar articles of the finest quality. Clothing is taxed at so much the pound, blankets at so much the yard, wines and liquors at so much the gallon, and so on with other articles, with little, if any, reference to their value.

The Democrats in Congress have struggled in vain for many years in opposition to these measures and for their repeal or modification. We have had at one time a majority of the House of Representatives and the President on our side, but the Republican Senate has stood as an impenetrable fortress thus far in support of monopoly. The same thing is true in regard to internal-revenue taxes.

EXCISE ALWAYS A WAR MEASURE.

Three times in the history of the country it has become necessary to impose internal taxes.

The first occasion for them was during Washington's Administration, to pay off the Revolutionary debt, and, when the immediate necessity for them had passed away, they were repealed, although they were not one-fourth as burdensome as the present system.

The second occasion which called for the imposition of excise taxes was the war of 1812. The effect of the war was to check importations, and thus to cut off the revenue from the tariff. But soon after the peace, when commerce revived, it was found practicable to lay aside a system of taxation which has always been peculiarly odious to freemen in England and America, by the unnecessary and searching inquisition it authorizes into the business affairs of the people.

The third occasion for the imposition of an excise tax was the late civil war. And it is admitted that, with a tariff honestly laid for revenue and with an economical administration of the Government, this vexatious form of taxation might be altogether dispensed with. Republican monopolists themselves, indeed, have been among the foremost of those who through the press and in party platforms have demanded the repeal of the internal taxes, not because they are odious and oppressive to the people, but because the revenue derived from them would, as they supposed, render unnecessary a continuance of a high rate of tariff duties. But, as I have pointed out, the McKinley bill proposes to carry the rate of duties so high, in compliance with their national platform, as to exclude foreign goods from our country, and thus to cut off the revenue from that source. Hence the necessity alleged by the Republicans in this Congress for retaining the excise.

It is true that the internal-revenue tax has been greatly modified and curtailed since it was first put in operation as a war measure. All taxes upon banks, bankers, corporations, and manufactures of every kind, except those relative to articles and products in which the Southern people are mainly interested, have been swept away. The income tax has been repealed because it was a tax on the millionaires and wealthy classes in which the great cities and wealthy communities abound. But there is no "let up" for the tobacco-farmers and the fruit-distillers of North Carolina. Their noses are to be held to the grindstone in order that prohibitory tariffs, which produce no revenue, may be imposed and enforced and that the owners of millions—many a one of them worth more than the whole people of any county in North Carolina—may be relieved from taxation.

This is part and parcel of the declared policy of the modern Republican party. That policy is to make the rich richer and the poor poorer. Like the old Federalists, the modern Republicans have apostatized and utterly abandoned their original principles. But, unlike the old Federalists, these modern Republicans have not preserved their honor. On the contrary, they act as if they had lost all sense of honor and principle, and their great end and aim is to hold power in order to grow rich by robbing the people under the forms of law. This is the policy of the leaders, not of the masses, of course, who are honest, and who will one day find out that they have unconsciously been made the very instruments by which their liberties are being taken from them.

THEIR FINANCIAL POLICY.

All the great measures of the Republican party have the same end in view. There is a common purpose running through them all. They blend and co-operate like the various parts of a complicated piece of machinery. Not content with their wrongful measures of taxation, which discriminate in favor of the rich and against the poor and in favor of one section and against another section, the Republicans have proceeded to increase the burdens of the people by diminishing the amount of currency in circulation.

Among the war measures which became necessary was the issue of hundreds of millions of United States notes, commonly called "greenbacks" from their color. They were declared to be a legal tender for all debts, public and private, except in the payment of custom-house revenue by the importers, and the payment of interest by the Government on the United States bonds, which were issued in exchange for the greenbacks. The object of this arrangement, by which the tendency to depreciation in the greenback would in some degree be arrested, may have been wise and necessary. But these bills did depreciate, nevertheless, until they touched the point of about 38 cents in the dollar, in comparison with coin.

There were then some four hundred millions of greenbacks in circulation, while the national banks had also begun to issue their notes. Money was plenty. Railroads were built. All sorts of private enterprises were embarked in, and lands were mortgaged and debts incurred in a greatly depreciated currency to carry them into execution.

A return to specie payments under such circumstances would be a very difficult matter and needed to be brought about slowly, gradually, and with the utmost care to avoid oppressing the great body of the people, including the entire debtor class, nearly all farmers. But it was just at this time that the Republican leaders proceeded, clandestinely, to double the weight of all public and private debts by enacting legislation which deprived silver of its character as money.

Such an outrage upon the rights of the people could not at the time be perpetrated openly. It was equivalent to interpolating words into a will after the death of the testator or into a deed after it had gone to probate; for, if we concede that the original contract between the Government and the bond-buyer may have contemplated the redemption of the bonds in coin—and this can possibly be inferable from the fact that the act of 1862 authorizing the issue of the bonds provided a sinking-fund for their redemption in coin—and if we admit the fairness of the declaratory act of 1869, guarantying their redemption in coin, the knavery is still flagrant in the act of 1873 and in the Revised Statutes of 1875, by which the coinage of the legal-tender silver dollar was prohibited, and the silver dollars in circulation were declared to be no longer legal-tender money with which debts exceeding $5 could be paid. My own opinion is that the act of 1869 was "a new contract for the benefit of the bondholders," without any consideration whatever, and utterly unjustifiable.

The demonetization act of 1873 was carried through the Senate by Mr. JOHN SHERMAN, of Ohio. The bill purported to be an act for the regulation of the coinage; it was not known to be a demonetization scheme, but was supposed by everybody in the Senate to relate only to the details of the business of coinage.

The bill was engineered through the House of Representatives in like manner under the management of the grave and venerable Samuel Hooper, of Massachusetts—the very impersonation of the ideal

"solid man of Boston,"—whom no one would have suspected of being a crafty and skillful parliamentary veteran. Mr. Kelley, of Pennsylvania, afterwards stated on the floor of the House that he believed Mr. Hooper to be ignorant of what was in the bill.

Under such auspices, however, the bill went through both Houses and became a law, and it was nearly or quite two years before the people became aware of the outrage which had been perpetrated upon them by the act. But when the nature of the fraud was discovered and made known the popular indignation, especially in the South and West, was too strong to be withstood by its perpetrators, and in both Houses of Congress there was a general confession made by those who had voted for the act that they had not a remote idea of what the bill contained and that it was far from their thoughts that they were voting to demonetize silver. Among those who made this confession were Senators Thurman of Ohio, Conkling of New York, ALLISON of Iowa, Bogy of Missouri, Beck of Kentucky, VOORHEES of Indiana, Hereford of Nebraska, Howe of Wisconsin; and Mr. Blaine, who was Speaker of the House when the bill was passed by that body, acknowledged in the Senate in 1878 that he was utterly ignorant of the true character of the bill.

In the House such men as Garfield, Kelley, CANNON, HOLMAN, Burchard, and others pleaded ignorance as an excuse for not opposing the bill; while President Grant, who signed the act, showed his profound ignorance of what he had done when eight months later, in a letter to Mr. Cowdrey, dated October 6, 1873, he expressed his surprise that silver was not coming into the market to supply the demand for circulation.

But the crime committed by the authors of this act is by no means limited to the clandestine manner in which it was smuggled through Congress and imposed upon the President. Congress had no right to pass such an act with its eyes wide open, for to do so would be to perpetrate a gross fraud upon the people, who pay the taxes. Mr. HOLMAN, of Indiana, when it was discovered that the demonetizing bill had passed, denounced the measure as "a colossal swindle."

The bonds were all payable in coin—not in gold only—but in gold and silver. They were issued in pursuance of the acts of July 14, 1870, and January 20, 1871, and bore 4 and 4½ per cent. interest. The declaratory act of 1869, guarantying coin redemption, enabled the Government to borrow at these rates and take up the old 6 per cent. bonds. The principal and interest were payable in coin, gold and silver. Congress therefore could not, without a breach of faith with the people, change the conditions and compel them to pay gold only. It was just as gross a breach of faith as would be an act now to make the new bondholders, who paid full value for coin-bearing bonds, take irredeemable and depreciated paper currency for principal and interest.

How flagrant the knavery, then, of the swindling act of 1873, by which silver was demonetized! The Republicans in this Congress propose to complete the conspiracy which was begun in 1873 by repealing the Bland coinage act of 1878, stopping the coinage of silver altogether and thereby making the gold dollar the exclusive standard of value.

And if anything could add to the shamelessness of the original transaction, it is the fact that its author was himself a Greenbacker a few years before he become a monometallist. He had declared that the Government had a right to pay off the national debt in greenbacks at a time when they were far below par. But he visited Europe soon afterward, and there his eyes seem to have been opened to the peculiar and exclusive value of a gold currency.

THE RECKLESS PENSION SYSTEM.

It was natural to expect that the Government would provide pensions for the soldiers and sailors who were disabled in the service during the late civil war and for the widows and orphans of such as lost their lives in that service. The Democratic Representatives of the South, although the interests of their constituents have been directly opposed to the passage of such laws, have never thrown obstacles in the way of pension legislation when it has been conceived in a spirit of honesty and fairness. But that limit was passed more than twelve years ago, and now the Republican party, in order to secure the attachment of all who can put in the shadow of a claim to having been in the military service, has been ready to vote them pensions, with arrearages running back to the close of the war. In their desperate straits, with the yawning gulf of utter defeat and banishment from power before them in the November elections, they scruple at nothing, and are ready to bankrupt the Government rather than lose their hold upon it.

The war terminated in 1865. It was to be expected that all who were suffering from wounds and from disease contracted in the service would proceed to file their claims for pensions as soon as practicable, as they were invited to do by the Government, and that all legitimate claims would be put in at most within fourteen years after the close of the war. Accordingly, up to and including the year 1878 there had been filed 566,722 applications for pensions by soldiers and sailors and their widows; and of these 366,827 claims had been allowed. The claimants amounted to nearly one-third and to certainly more than a fourth of all who were mustered into the service during the war, and to quite one-third of those who rendered any essential service, while the claims allowed up to that date amounted to not far from a fourth of all who smelt gunpowder during that struggle.

But the war upon the Treasury at the end of fourteen years after the fighting in the field was over had but just begun. Of the 366,827 soldiers and sailors and their widows to whom pensions had been granted up to and including the year 1878, only 242,755 remained alive. These were not enough to deplete the Treasury at the rate demanded by the Republican high-tariff policy. The disbursements were rapidly running down. The case required heroic treatment; and accordingly, on January 25, 1879, an act was passed which authorized the payment to all whose names had been placed on the rolls, and to all who in future should be pensioned, arrears running back to the date of the death or discharge of the soldier; and by the act of March 3 of the same year the arrears pension was to begin on the date when the wound or disability was incurred. Every pensioner under the act received back-pay for fifteen to eighteen years.

The effect of these acts was to reinvigorate the flow of the public money out of the Treasury. In the fiscal year 1878 the disbursements for pensions were only $26,844,455, but in 1879 they rose to $33,780,526 and in 1880 leaped up to $57,240,540.

The tariff monopolists were delighted, and saw in the vista of the future a long career of prosperity for them based on the unjust taxation of the people. The Southern people pay their share, which is at least one-third of all the taxes collected by the General Government, and receive no part of the expenditures either for pensions or on account of the public debt. This drain upon the resources of the South will keep her people poor for years to come. While the act of March 3, 1879, required that applications for pensions involving the payment of arrearages should be filed prior to July 1, 1880, this restriction was removed in behalf of widows and orphans by the act of August 7, 1882, so that to this day the arrearage principle applies to them. And this will account for the fact that the disbursements for pensions have continued to increase from that time forward. At the end of the fiscal year 1889, as the last published report shows, there were 489,725 pensioners on the rolls, to whom $89,131,968 had been paid for that year.

But this was not enough to satisfy the cormorants, and at the present session a bill is to be passed which will pension every man who was in the service during the war, if for but three months, who has become too feeble to support himself by physical labor or who will swear that such is his condition. This is to be called the dependent pension act. It need not be shown whether applicants have a competency or not or what their financial condition is; but it is sufficient to show that they are suffering from either mental or physical disability which disqualifies them to perform manual labor; that they enlisted for three months and were ready to serve, although they were never called into the field.

These "dependent pensioners," although they may be worth their thousands, are to be allowed $12 per month at most, but not less than $6.

It is safe to predict that the act will be liberally construed, and that it will be only the poorest, most dependent, and least important members of the Grand Army of the Republic who will be put off with $6. And the new army of dependent pensioners will sing anew the old war song, "We are coming, Father Abraham, five hundred thousand more."

Indirect taxation is of all forms of taxation the most burdensome to the people. The payment of the tax is indirectly added to the cost of articles of consumption used by the people. The $450,000,000 of revenues collected by the General Government represent, it is said, twenty-two and a half days' work done by the people; every farmer and laboring man and every person who works for a living contributes his or her share of the taxes. The average tax on what the farmer buys and consumes is said to be 70 per cent. in addition to the real cost. In other words, if a farmer buys $17 worth of merchandise, $10 is cost and $7 is tax. If he buys $1 worth, 59 cents is cost and 41 cents is tax. If he buys $5 worth, $2.95 is cost and $2.05 is tax.

The Southern people paid last year for pensions and for the interest on the public debt not less than $50,000,000, and the amount will largely increase every year in the future. This money leaves the South never to return. And while the burden is not so heavy upon the Northern people, because the same money that is paid into the Treasury for these purposes is paid out again to others living in the same section, the injustice and hardship to individuals are very great. In the one case a whole section is taxed for the benefit of another. In the other case one man is taxed for the benefit of another. In either case the system operates unequally and unfairly. The Detroit Free Press thinks that—

> If the people could realize this fully there would be a halt called in the matter of extravagant appropriations. If the people saw clearly, as Mr. Wells points out, that the pension laws called for the labor of the people for twelve days in each year, there would be a good deal more careful consideration of the proposition to increase the tax on that account. If the workingman understood that he is contributing one-twenty-fifth of his wages to pay pensions he would certainly be heard from in respect to the proposition to take another twenty-fifth for the same purpose. He would understand it if an agent of the Government stood by when he receives his weekly wages and demanded a dollar out of every twenty-five. Why should he not understand it when that is just what is done indirectly?

The American laborer instead of being benefited is the greatest sufferer by an unjust system of tariff taxation. The passage of the McKinley bill, instead of opening up new fields of employment for the laborer, will deprive him of advantages which he now possesses, besides greatly increasing the cost of his living.

An English wit fifty years ago characterized the policy of one of the parties of the day as a scheme for "giving everybody everything," and it is on this principle that the Republicans now propose the enactment of a pension law which will pension every man who was at any moment of time in the service, although he may not have left home, or put on a uniform, or even harbored an evil thought against the enemy. They will not scan his record closely. They will not ask whether he was a hired susbtitute or the hirer, nor whether he was a "bounty jumper," nor how many times he jumped the bounty. What they want are leeches to bleed the Treasury in order that there may be a necessity for high tariffs and high taxes.

It is a curious fact and worthy of particular mention that the disbursements of pensions have increased in a twofold ratio to the number of pensioners. In other words, recent pensioners are paid twice as much as those who first applied. I will illustrate.

For instance: In 1862 there were 8,159 pensioners on the roll, to whom were paid $790,384.76. This was at the rate of $96.87 per capita. In other words, they received $8 per month and the 87 cents per capita were paid the officers who disbursed the money.

In the year 1863 there were 14,791 pensioners, who received $1,025,-130.91, which was at the rate of $69.30 per capita—average, of course—and the result of the division shows that many of the men were allowed less than $8 per month.

In 1864 the number of pensioners had increased to 51,135, and their pay was $4,504,616.92, which was at the rate of $88.09 per capita. But the 285,697 pensioners who were on the roll in 1882 received $54,296,-280.54, which was at the rate of $190.08 per capita per annum.

The next year 303,658 soldiers, sailors, and widows received $60,431,-972.85, and so on with the following years, in the last of which, 1889, 489,725 men and widows received $89,131,968.44.

It will be said that these large annual disbursements were paid in great measure for arrearages. But does that help the case? If these latter-day applicants for pensions are so very deserving, why did they not apply sooner? If they felt that they were not in need of pensions until fifteen or twenty years after they were mustered out of the service, why force arrearages upon them?

This system of paying arrearages of pensions—in other words, of giving back-pay to recent applicants for pensions—had no precedent prior to this last war. It is simply a Republican device for depleting, that is to say, robbing, the Treasury, for the twofold, dishonest purpose of securing votes and of making higher taxes necessary. The soldiers of the Revolution, of the war of 1812, and of the Mexican war received no arrearages.

At the close of the war the public debt amounted to nearly $3,000,-000,000; and the annual interest, which was then 6 per cent., amounted to $153,000,000. But the great resources of the country, under the pressure of heavy taxation, rapidly reduced the principal, while the refunding process in 1870 reduced the rate of interest to 4 and 4½ per cent. The result was that a large surplus of revenue, from year to year, could be applied to paying off the principal; and at the end of twenty-five years the interest-bearing debt is reduced to one-third of its original amount, while the annual interest is now less than one-fifth of what it was at the close of the war. The public debt has been reduced to $921,000,000, and the interest is now only $29,417,603.15. There has been a reduction of about $1,000,000,000 in ten years.

These facts give unalloyed pleasure to every honest mind when made acquainted with them. But not so with the Republican monopolists. They would keep the public debt at the highest figure and the interest at the highest rate in order that sectional and class legislation and the continuance of high tariffs may seem necessary. But their hope now is in the growing volume of the pension burden. And it is a singular fact that that burden has been increased in proportion as the interest on the public debt has been diminished in amount. I present the case in tabular form, as follows:

Years.	Pensions paid.	Interest paid.
1867	$18,619,956	$138,892,451
1869	28,422,884	125,523,998
1870	33,077,383	111,959,330
1880	57,240,540	79,633,981
1885	65,693,706	47,014,133
1889	89,131,968	33,752,354
1890 (about)	109,500,000	29,500,000

It is noticeable that, like Castor and Pollux, the pension disbursement rises as the interest disbursement goes down, and this is not an accidental coincidence. It is the result of the far-seeing policy of the Republican plutocrats for keeping up the necessity for a high tariff and high taxes. The pension expenditures next year will probably exceed $175,000,000.

In this connection I will quote from an editorial in The American, of Philadelphia, of April 12, 1890, one of the ablest Republican journals in the United States, to show that even the most partisan Republicans have come to the conclusion that the existing pension system is radically wrong and unjust. After showing that "service" in the army "was a patriotic duty, not a mercenary engagement," and after declaring that "no true American defended the Union for hire * * * and no true American would desire to have the heroic record of 1861–1865 buried beneath a mercenary system of extravagant and unjustified pensions, the greed for the 'almighty dollar' besmirching the very colors of the flag," the editorial concludes:

One of the most mischievous of ideas is that the revenues of the country are so great that extravagant pensions may be justified. The fact is that those revenues, which are not themselves wrongly derived, are not a dollar in excess of the country's—we mean the whole people, not simply their Federal system—actual needs. Cries against taxation are heard in many quarters, in some with reason, and this when there are not enough schools, and hardly any good roads, when upon every hand the necessities of our local governments outrun their resources. If, under these circumstances, the Treasury shall be drained for any unjustified purpose, it would be a crime against the Republic, wounding it not only now, but for all future time. To deplete the Treasury is to cripple the proper functions of the Government; to pension citizens for "service" simply is to entail a burden and establish a precedent, which may make impossible the future defense of the country in a time of peril. When the Republic makes the protection of its integrity a commercial transaction, we shall not be far from the hour of its downfall.

WHO COMPLAINS.

Before closing it is proper to state that it is not the tobacco-manufacturers now engaged in the business who complain of the internal taxes, but the complaint comes from the farmers and the class of small manufacturers—themselves generally farmers—who were engaged in cultivating or manufacturing tobacco before the internal-revenue system was adopted. The restrictions imposed on the cultivation of tobacco are unprecedented in this or any other country.

No English-speaking people engaged in the cultivation of the soil were ever before, under heavy pains and penalties, denied the privilege of selling their crops. What would be thought of an act of Congress which should impose similar restrictions upon the sale of Indian corn, wheat, rye, oats, and other grains?

And yet such an act would be defensible upon the same grounds and by the same arguments which are employed in support of the tax on the sale of leaf-tobacco. The cotton tax is now conceded to have been unjust, if not unconstitutional. Then how can the restrictions and tax on tobacco be defended?

AGGREGATE INTERNAL REVENUE.

The aggregate internal revenue paid by the people of all the States during the fiscal years ending June 30, 1863, to 1889, inclusive, was $3,597,346,871.34, of which North Carolina paid $42,734,549.73; and during the fiscal year 1889 North Carolina paid $2,467,150.27.

Of this last sum, distilled spirits, and sales of, produced	$594,007.44
Manufacturing and sales of tobacco	1,865,173.63
Fermented liquors	1,248.34
Other small items	6,720.86
Total	2,467,150.27

The annual receipts are largely on the increase, being for all the States for the year 1889 $130,894,434.20, and for the year 1890 about $142,595,000. During the current year the amount of internal taxes paid by North Carolina will be about $2,760,000. The total collections on tobacco, in all the States, for the years 1866–1889, inclusive, amount to $787,419,613. For the year 1889 the amount collected was $31,866,-860.42, and for the current year about $34,959,000.

In North Carolina, in the year 1889, the tobacco tax paid $1,865,-173.63. For the current year the amount will be about $2,016,000. Tobacco culture is not on the increase in North Carolina. In 1884 the acreage was 69,600, the product 34,858,000 pounds, of the value of $4,008,670. In 1888 the acreage was 57,107, the product 25,755,000 pounds, of the value of $1,931,644. Take away the tax and we hope to see a vast change for the better in this great industry.

The tax on fruit brandy is one of the most unjust laws on the statute-book. The farmer can not afford to convert his fruit into brandy. The tax is too high and the requirements of the law are too stringent. The result is that there is a great waste of the raw material. There is no market for apples and peaches in many sections and the fruit rots upon the ground in the orchards. If this tax was repealed the farmer could save all his fruit. What he could not utilize in one way he could in another.

The tax collected on fruit brandy varies immensely from year to year. The greatest amount collected in North Carolina in any one year was, in 1871, $194,802,27. The very next year the tax collected was only $26,218.19. In 1876 the tax yielded only $19,845.61. In 1888 the amount collected was $35,845.32, and in 1889 the amount was $43,323,-07. The collections for the United States vary with much the same irregularity, collections for the years named being as follows: 1865, $12,-005.33; 1866, $283,499.84; 1871, $1,236,005.67; 1873, $2,014,645.60; 1874, $356,681.41; 1888, $799,296.19; 1890, $1,165,371.91. The total collections in the United States up to date amount to about $25,450,-000, of which North Carolina paid not less than $1,877,000.

AMENDMENTS OFFERED.

The following is a brief explanation of the amendments I have offered to the internal-revenue provisions of this bill:

Section 1 abolishes what are known as minimum punishments and gives a discretion to the courts to impose any punishment, not exceed-

ing the maximum limit, authorized by the statute, whether such punishment be less or greater than the minimum punishment mentioned in the law. This section is intended to discourage frivolous and petty prosecutions. There are many cases where the judge might properly impose a less punishment than the minimum required by the statute if he possessed the power.

The minimum punishments range from a fine of $100 and thirty days' imprisonment to a fine of $1,000 and one year's imprisonment. There are many technical and frivolous cases where the minimum punishments should not be imposed. The Federal judges seem to be a unit in favor of this section.

Section 2 directs that no warrant shall be issued, in internal-revenue cases, upon an affidavit making charges upon information and belief, unless made by certain official persons. In every other case a sworn complaint is required alleging the facts to be within the personal knowledge of affiant.

The section is intended also to limit the liability of the United States in the matter of the fees of marshals, clerks, commissioners, and other officers. Attorney-General Miller, in his report to the present Congress, makes the following suggestions:

> From a number of judges, as well as from other sources, comes the information that very great abuses arise out of the action of commissioners of the circuit courts in the amount of fees they make and charge for themselves, as well as those which they assist the marshals, and, in some cases, district attorneys, in making. Whether it is practicable to eliminate entirely the excessive charges in the enormous bills of expense in proceedings had before these commissioners is perhaps doubtful; but certainly Congress, by enacting a clear and definite fee-bill for such proceedings, and by providing that no prosecutions shall be commenced except in an emergency shown in an affidavit, until the district attorney shall have approved of the commencement of such proceedings, and by prescribing severe punishment for any violations of the laws so enacted, can do much to repress these abuses and relieve the Treasury from illegal exactions.

The section as formulated does not go quite as far as the Attorney-General recommends.

Section 3 requires a warrant issued by a commissioner or other United States judicial officer to be returnable before some such judicial officer residing in the county of arrest, or, if there be no such officer in that county, before some such United States judicial officer residing in another county nearest to the place of arrest. This is a reform that has long been needed. The late Attorney-General Garland, in his last two annual reports, earnestly recommended legislation upon the subject. He said:

> Commissioners of circuit courts generally issue warrants that are returnable to themselves alone, regardless of the distance and cost consequent upon the order. They have the right to do this, yet experience shows that the right is open to reform. The right to issue a warrant might be left unrestricted in all respects, leaving the commissioner discretion to act upon reasonable grounds of suspicion and belief and on a charge made upon reasonable cause of the commission of a felony, but the commissioner before whom the warrant should be returned might be another, and perhaps ought to be another, if the offense is committed without the county of his residence. * * * The Department can not direct the commissioner how to act, as that officer is subject to the court alone. It is therefore a proper subject for legislation to remedy the abuse.

Section 4 gives full authority to the circuit courts and to the district courts exercising circuit-court powers, with the approval of the Attorney-General, to appoint as many commissioners as may be needed in the different localities of each judicial district, and also authorizes the Attorney-General to remove any of said commissioners *ad libitum* and summarily. It is the practice of some of the judges to revoke, without notice, the commissions of these officers when the public interest requires it. Other judges doubt their authority to do this summarily and without trial. The purpose of this section is to give the Attorney-General a veto upon the appointment of such officials as he thinks undeserving and to confer upon him the power to remove them summarily. Under the present law the circuit courts have the sole power of appointing United States commissioners, and some of the judges hold that these commissioners, being judicial officers, can only be removed by impeachment.

A letter from the First Auditor of the Treasury, dated March 10, 1890, informs me that "numerous cases can be cited where the discovery of fraudulent practices on the part of a United States commissioner has had no more serious result than the suspension of so much of his account as appeared, upon the face of the papers, to be manifestly wrong, when such discovery should and would have been followed by prompt dismissal had the Attorney-General been given the power to so act." In a letter dated April 3, 1890, the Attorney-General himself also says:

> Section 4 is right. I can not help thinking, however, it would be an improvement if the commissioners could in some way be made amenable and brought under the control of the Attorney-General. Many of the worst abuses existing in the administration of justice under Federal laws originate with and are fostered by the commissioners. They are only removable by the circuit courts, and judges of these courts naturally give but little attention to such matters, and the result is the commissioners are practically without responsibility.

Section 5 confers upon the Commissioner of Internal Revenue authority to discontinue any civil or criminal case any time before final judgment. It is believed that the Commissioner of Internal Revenue may already possess such power. Attorney-General Evarts so held in a letter to Hon. Hugh McCulloch, Secretary of the Treasury, dated February 6, 1869 (12 A. G. Op., 552); but it seems that the power is no longer exercised. The purpose of the section is to make the law plain that the Commissioner may exercise the power intended to be conferred in conformity to said opinion of Mr. Evarts.

Section 6 proposes to put a stop to the destruction or mutilation of stills and other distilling apparatus. Section 3332 of the Revised Statutes, as amended by the act of March 1, 1879, provides that in case of seizure of a still, or other distilling apparatus, of less than $500 value, and where it shall be impracticable to remove the same to a place of safe storage from the place where seized, the seizing officer is authorized to destroy the same only so far as to prevent the use thereof, or any part thereof, for the purpose of distilling. And it was also directed that such destruction should be in the presence of at least one credible witness, and that such witness should unite with said officer in a duly sworn report of such seizure and destruction to be made to the Commissioner of Internal Revenue, in which report they shall set forth the grounds of the claims of forfeiture, the reasons for such seizure and destruction, their estimate of the fair cash value of the apparatus destroyed and also of the materials remaining after such destruction, and a statement that from facts within their own knowledge they have no doubt that said distilling apparatus was set up for use and not registered or had been used in the unlawful distillation of spirits, and that it was impracticable to remove the same to a place of safe storage.

The act of March 1, 1879, was intended to discourage the destruction or mutilation of stills and to prevent the same except in rare instances. The provisions of this act, however, remain a dead letter upon the statute-book. My information is that, in almost every instance, whenever a still is seized by the internal-revenue officers it is immediately cut up and destroyed, whether it be practicable to remove the same to a place of safe storage or not. The destruction of stills is one of the most irritating and vexatious features of the internal-revenue system and is no longer necessary. The law can be enforced just as rigorously, and the revenue just as certainly and efficiently collected, without this harsh feature as with it.

The enactment of section 7 is demanded out of humane considerations. Under it the judges of the United States courts will be authorized to make proper provision for the comfort of any prisoner whose life or health is endangered by the close confinement of the prison. The judges of the State courts in many of the States have some such power. It is believed a discretion of power of this sort can be safely confided to the United States judges.

Section 8 provides for the repeal of all special license taxes upon manufacturers of stills, retail dealers in spirituous liquors, and retail dealers in malt liquors. The amount of revenue annually derived from these sources is about $4,860,000. The release of these special taxes by the Federal Government would restore to the several States a fruitful source of revenue and enable each State to regulate the liquor traffic in its own way.

On December 5, 1888, on motion of Mr. VANCE, the substance of the above-mentioned amendments was offered to the Senate substitute for the Mills bill, but the amendment in every instance rejected by the Republican majority of the Senate, with the exception of section 7, which was adopted. These amendments had been incorporated in the Mills bill at my request, and may be found in my bill of March 3, 1887. The first five amendments were also included in my bill "to amend the internal-revenue laws," which passed the House on my motion February 7, 1888, but was not allowed to be considered in the Republican Senate.

The Wool Industry.

SPEECH
OF
HON. HENRY C. HANSBROUGH,
OF NORTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports and for other purposes.

Mr. HANSBROUGH said:

Mr. CHAIRMAN: A decrease of nearly eight million head of sheep in four years and a falling off of $23,000,000 in the domestic output of wool in three years naturally call forth the inquiry What is wrong with the sheep industry in this country? When we examine the statistics to ascertain the cause of this remarkable shrinkage we find that in 1885 the production of wool in the United States amounted to $77,000,000; three years later the value of the domestic product was $54,000,000. This great falling off is directly chargeable to the reduction of the tariff, which resulted in largely increased importations and at the same time discouraged the domestic sheep-raiser.

In 1883, the year that the duty upon imported wools and worsteds was reduced, we had in this country in the neighborhood of 51,000,000 head of sheep. In 1888, three years later, the number of sheep in the United States had decreased about 8,000,000 head. Meantime, in-

portations of wool from foreign countries to the United States increased from 70,596,170 pounds in 1884 to 113,558,753 in 1888, and yet the prices of wool showed but slight changes. The figures pertaining to this part of the wool question are worth tabulating:

Year.	Sheep in the United States.	Domestic production of wool.	Imports of wool.	Average price of raw wool in New York.
	Number.	*Pounds.*	*Pounds.*	*Cents.*
1884	50,626,626	300,000,000	78,350,651	38
1885	50,360,243	308,000,000	70,596,170	32
1886	48,322,331	302,000,000	129,084,958	35
1887	44,759,314	285,000,000	114,038,030	35
1888	43,544,755	269,000,000	113,558,753	33
1889	42,599,079	265,000,000	126,487,729	35

Here it is distinctly shown that as a result of the lowering of the wool duties in 1883 our sheep flocks have been greatly reduced in number, a reduction in exact figures of 8,037,547 head, worth, at the reasonable value of $2.30 per head on the farm, $18,485,358.10. In other words, owing to the failure of the United States Congress of 1883 to properly protect the wool industry, instead of reducing the duties, as it did, over $18,000,000 worth of the farmers' capital was driven to the slaughter-pen. What would have been the increase upon these 8,000,000 head of sheep under a wise protective policy? Figures almost fail us in making the computation.

Has there been any compensation to our people for this loss in their flocks? None whatever.

We of the Northwest are deeply interested in sheep-raising and the production of wool. Our farmers are studying the question from the standpoint of self-interest. The failure of late years to raise large and profitable crops of wheat in the Dakotas, in Minnesota, Wisconsin, and other grain-producing States has forced the agriculturist to adopt the policy of diversification. In my State sheep-raising is proving itself to be the most profitable industry that the farmer can engage in, the surest of returns. The great Red River Valley will always produce big yields of wheat, but in the highlands the result is not so certain. These highlands are peculiarly adapted to the wool industry, and within the past two years the number of sheep in the State has been increased 300 per cent. The climate is admirable and the diseases that prove so destructive to flocks in some other countries are unknown in North Dakota and other Northwestern States.

The farmers of the United States now produce about 40 per cent. of the wool that our people need for all purposes. The other 60 per cent. is produced in foreign countries, and we are compelled to buy it to keep from freezing to death. It is a strange situation. Here we have the very best advantages for producing wool, and yet we are dependent upon the foreign sheep-raiser for more than half we use. It should not be so. We ought to produce every pound of wool we use. If we can produce 40 per cent., why not 100 per cent.? "Ah!" the free-trader answers, "we must have certain kinds of wool we can not produce to mix with that we do produce." For many years this proposition was supposed to be well founded, but of late it has been completely exploded. We can and do produce third-grade wools in great abundance. The Southern States are peculiarly adapted to the production of this grade of wools, and this fact ought to take the question of wool protection in the United States out of politics. The State of Texas alone can furnish one-third of the wool needed in this country, but it will not do so while the people of that State continue to send men to Congress who are the bitter enemies of the American system of protection.

Nearly all of the third-class wools we use are grown in Russia, Asia, India, the Argentine Republic, Scotland, and China, the heaviest importations being from the countries in the order named. We have in this country every variety of climate to be found in the countries mentioned above, and there is no reason why, with proper protection to compensate for the difference in the price of labor, we should not produce all the wool we consume. It is the highest duty of the American people to become self-sustaining.

I find a most comprehensive statement of this whole question in the majority report of the House Ways and Means Committee of this Congress, and it is herewith submitted as a part of my remarks. The report says:

The production of wool is itself an important industry, and receives added importance through its influence upon other agricultural pursuits. In 1883 Hon. John L. Hayes, late secretary of the National Association of Woolen Manufacturers and president of the Tariff Commission of 1882, estimated the wool product of the United States for the year 1883 at 320,000,000 pounds, and stated in substance that there was no State in the Union, and scarcely a county in any State, where sheep husbandry was not pursued.

By the census of 1880 in every county in the United States except thirty-four, sheep were raised. In 1883 the number of sheep in the United States was over 50,000,000 and the number of persons owning flocks was in excess of a million. This large number of wool-growers was, to a considerable extent, withdrawn from the business of raising grain and other farm products, to which they must return if wool-growing can not be profitably pursued.

The enormous growth of this industry was stimulated by the wool tariff of 1867, and was in a prosperous condition prior to the act of 1883. Since then the industry has declined in alarming proportions, and the business has neither been satisfactory nor profitable. The committee have given to this industry, so universally distributed throughout the country, the most careful and painstaking consideration, and have recommended an advance of duties which it is believed will afford ample protection to the farmers of the country engaged in wool-growing.

By the proposed bill the duties on first and second class wools are made at 11 and 12 cents a pound, as against 10 and 12 under existing law. On third-class wool, costing 12 cents or less, the duty is raised from 2½ cents a pound to 3½ cents, and upon wools of the third class costing above 12 cents the duty recommended is an advance from 5 to 8 cents per pound.

The bill which passed the Senate in 1888–'89 made the dividing line on third-class wools at 12 cents with the same rates of duty upon all classes of wool except third class costing less than 12 cents, as herein recommended. The Senate fixed the duty upon this grade at 4 cents, while the committee recommend 3½ cents. It is believed, however, that with the restrictions, definitions, and classifications, and the addition of port charges to the foreign cost recommended in the proposed bill, this difference will be fully compensated.

The United States ought to produce all of the wool it consumes, and will with adequate encouragement and defensive legislation. The amount of wool consumed in all forms and for all purposes is nearly, if not quite, 600,000,000 pounds annually. In January, 1889, there were in the country 42,599,079 sheep, producing about 245,000,000 pounds of unwashed wool, while the imports for the last fiscal year in all forms, wool, clothing, and carpet, is estimated at about 350,000,000 pounds. There were imported of clothing wools 29,224,522 pounds; of combing wools 6,871,666 pounds, and of carpet wools, so called, 90,391,541 pounds; of waste 8,662,209 pounds—practically scoured wools; and the value of woolen and worsted goods imported was $52,564,942, representing about 160,000,000 pounds of wool. A considerable amount of wool was imported as carpet wool, paying a duty of only 2½ cents a pound, which was used in the manufacture of clothing and should have paid the clothing-wool duty.

There seems to be no doubt that with the protection afforded by the increased duties recommended in the bill the farmers of the United States will be able at an early day to supply substantially all of the home demand, and the great benefit such production will be to the agricultural interests of the country can not be estimated. The production of 600,000,000 pounds of wool would require about 100,000,000 sheep, or an addition of more than 100 per cent. to the present number.

The contention that wool-growing in this country has not been aided or encouraged by protective duties is sufficiently answered by the following statement of the annual production and production per capita from 1840 to 1884:

Amount of wool produced in the United States.

Year.	Production.	Per capita.	Year.	Production.	Per capita.
	Pounds.	*Pounds.*		*Pounds.*	*Pounds.*
1840	35,802,114	2.5	1879	232,500,000	4.3
1850	52,516,969	2.7	1880	240,000,000	4.6
1860	60,264,913	1.7	1882	290,000,000	5.1
1869	162,000,000	4.2	1884	308,000,000	5.4
1874	181,000,000	4.2			

It will be noticed that in 1860, after fourteen years of revenue tariff, the total production of domestic wool was 60,264,913 pounds, or 1.7 pounds per capita, while in 1884, after twenty-four years of protection, the total production had increased to 308,000,000 pounds, or 5.4 pounds per capita. This increase justifies the policy of affording this important agricultural product adequate protection.

The bill seeks to stop the frauds which have been so shamelessly practiced in the past in violation not only of the spirit, but the letter of the law. The preparation of wools under new names and forms, to avoid legal duties, has been very generally practiced.

Noils, ring waste, garnetted waste, slubbing waste, carbonated waste, roping, and roving have been imported into this country at the duty on unwashed wool, when they were in fact washed and scoured, partly manufactured, and ready to go into our looms. It is believed that if the provisions of this bill be adopted these violations will be prevented and this gross injustice to the wool-growers of our country remedied.

Another instructive document which I have had the pleasure of reading is the address of Hon. William Lawrence, of Ohio, before the Farmers' National Congress at Chicago, November 11, 1887. This address is so full of meat and covers the question so completely that I submit it herewith as a whole. No man who reads it will longer doubt the course that the people of this country ought to pursue. Mr. Lawrence said:

In obedience to a request of the secretary of this Congress, I will endeavor to address you on "The American wool interest." This "interest" consists of that industry which produces American wool and woolen and worsted goods and mutton. The wool industry is one of the great sources of a healthful article of food, and of an element in a chief form of clothing and other woolen and worsted goods. The history of its introduction and gradual growth in the United States is interesting and instructive.*a* But for practical purposes only that portion of it is material which illustrates the result of legislation and surrounding conditions so far as they may aid in ascertaining the effect of present and prospective legislation and conditions, and guide us in deciding what the future of this industry may require.

The wool interest is great in the number of persons to whom it gives employment and in the capital invested in it; it is great by way of contrast with other industries and in its utilities. There is no phase of it which encourages evil or brings misery to our race: its mission is to feed the hungry, to clothe the naked, to minister to real wants. In every age it has been regarded as honorable and has engaged the attention of the great, the wise, and the good. Kings and princes and Presidents have given it their favor and patronage, and the approving smiles of heaven have followed it through all the ages. Shepherds were the "witnesses of the wonder that accompanied the Savior's birth" when the star of Bethlehem shone upon the plains of Judea as the shepherds watched their flocks by night and an angel proclaimed to them "good tidings of great joy," and the listening winds ushered in the era of peace on earth and good-will toward men.

It is in behalf of this industry—essential to the well-being of mankind, to the independence, if not to the existence, of every nation in peace and war—that I am to speak to you now. And the necessity for speaking and for action, prompt, energetic, and effectual, grows out of the fact that this great industry is threatened, if not with total extinction, yet at least with such serious damage as to

a See Senate Ex. Doc. No. 25, third session, Forty-fifth Congress, January 14, 1879, Special Report of Chief of Bureau of Statistics, United States Treasury Department, on Wool, etc., 1887.

vastly reduce its present proportions, to arrest its growth and progress, and thereby to cripple every other industry of the country. It is in danger of being transferred, with all its benefits and blessings, to alien hands and foreign lands.

In performing the duty assigned me I will endeavor to show: I. The magnitude of the American wool interest. II. What this interest may, under proper fostering influences, become. III. What are the fostering influences requisite to enable American wool growers and manufacturers to supply all the wool and woolen and worsted goods we need, and enable our people in due time to become exporters of these fabrics. IV. Justice to American agriculturists and sound policy require legislation to give American wool growers and manufacturers the whole American market, so far and so fast as it is possible for them to supply it.

I. THE MAGNITUDE OF THE WOOL INTEREST.

It has not been possible to obtain reliable statistics for the current year as to all the details of this industry. I will, therefore, give such as are official for the years indicated.

The census of 1880 shows the number of male persons over twenty-one years of age in the United States to be 12,830,349, of whom 1,020,728 were flock-owners, in addition to which were a large number of owners of sheep ranches. It is safe to say one-twelfth of all the voters of the United States are owners of sheep and are engaged in the production of wool and mutton.

For the year 1884 official statistics show:

Number of sheep in the United States	50,626,626
Pounds of wool clip	308,000,000
Value	$91,168,000
Pounds of raw wool imported	87,703,931
Value	$13,593,299
Value of manufactures of wool imported	51,444,872
Official valuation of sheep	119,902,706

The statistics of 1880 as to domestic woolen manufactures show:

Number of establishments	2,689
Capital invested	$159,091,869
Hands employed	161,557
Wages paid	$47,389,087
Value of product	267,252,913
Cost of material used	164,371,551
Value of sheep	119,902,706

The president of the National Wool-Growers' Association, Hon. Columbus Delano, has estimated the value of lands, barns, sheds, and equipments employed in the sheep industry at $408,291,200. A prominent wool-dealer *a* has said of the imports of woolen and worsted goods for the last fiscal year that they "amounted in all to $44,000,000, at importers' valuation; but, as recent investigations show that goods have been imported as low as 32 per cent. of their valuation, on the whole, it is safe to say that the undervaluations amounted to at least one-half, and $30,000,000 would be nearer the amount imported. These goods would take at least 150,000,000 pounds of our domestic wool to make."

These statistics give with substantial accuracy the magnitude of The American wool industry in capital invested, the number of people employed therein, and the amount and value of the product. But even this is rendered more clear by way of contrast with other industries from statistics showing "the comparative value of some of the leading agricultural and mineral products of the United States for 1885," as follows:

Corn	$635,675,000
Hay	389,733,000
Wheat	275,320,000
Cotton	269,989,812
Oats	179,632,000
Coal	143,567,000
Gold and silver	83,401,000
Gold alone	31,801,000
Silver alone	51,600,000
Potatoes	78,154,000
Wool	77,000,000
Pig-iron	64,714,400
Tobacco	43,266,000

Thus the value of the wool product of 1885 was shown to have been greater than that of the mines of gold and silver combined; greater than that of pig-iron, about half as much as that of all our coal mines, nearly equal to our whole potato crop, and this does not include the value of the mutton food produced, which annually amounts to 10 000,000 sheep of the farm value of $30,000,000. The American wool includes not only the production of wool, but also the manufacture of woolen and worsted goods. Wool-growing and wool-manufacturing have prospered side by side under fostering legislation and by favorable conditions; they have suffered together by hostile legislation and adverse conditions. They are "one as the sea." The value of wool manufactures as contrasted with that of other principal manufacturing industries is shown by the census of 1880 as follows:

Flouring and grist mill products	$505,185,712
Slaughtering and meat packing *b*	303,562,413
Iron and steel	296,557,685
Lumber, sawed or planed	270,072,085
Wool manufactures *c*	267,252,913
Foundry and machine-shop products	214,387,468
Cotton goods	210,950,383
Clothing, men's	209,584,460
Boots and shoes *d*	196,920,841
Sugar and molasses, refined	155,484,915
Tobacco manufactures	116,772,631
Leather, tanned	113,384,336
Liquors, malt	101,058,385
Carpentering	94,152,139
Printing and publishing	90,789,341
Furniture	77,845,725
Leather, curried	71,351,297
Agricultural implements	68,040,486

The annual consumption of woolen manufactures in this country in 1880 amounted, at wholesale prices, to about $303,000,000, of which $267,000,000 were of domestic and $36,000,000 of foreign production. The average consumption per capita in 1880 was about $6, of which $5.30, or 88.3 per cent., consisted of domestic, and only 70 cents, or 11.7 per cent., of foreign production. *e*

The statistics of our exports show that substantially our people neither export wool nor manufactures thereof. Thus far we have either not been able or have not been placed in a condition by legislation to produce all we need for consumption.

Thus I have endeavored to show in part the magnitude of the American wool interest.

The American wool-grower and manufacturer of wool is more interested in the future than in the past; hence the second subject which requires our consideration is:

II. WHAT MAY THE AMERICAN WOOL INTEREST BECOME?

The answer is: It may be made in the not very far distant future to supply all the wool and woolen and worsted goods our people need. This I proceed to show:

I. The present supply of sheep is inadequate to American wants.

It has been said that "it can be safely predicted that, owing to the present overproduction of sheep caused by the high wool tariff, there may be little or no gain [of sheep in the United States], if not an actual loss, in the near future." *a*

"The present overproduction of sheep," indeed!

The 60,000,000 of people in the United States require for consumption annually about 10 pounds of unwashed wool per capita, or 600,000,000 pounds. We now have 44,759,314 sheep, producing about 260,000,000 pounds of wool in this year; for the fiscal year 1887 we imported raw wool, 114,038,080 pounds, and in woolen and worsted goods probably about 150,000,000. *b* Thus, while we are importing half the wool we use, are we to be informed that there is a "present overproduction?"

It is a grave error to assert that we have an "overproduction of sheep" for growing any kind of wool. We imported in the last fiscal year: clothing wool, 17,963,982 pounds; combing wool, 10,721,753 pounds, and so-called carpet wools, 85,352,295 pounds. We need 50,000,000 sheep more than we now have. There has been a recent reduction in the number, as there will be hereafter, because of the ruinous effect of the wool tariff of 1883.

The recent report of the Bureau of Statistics on wool, etc., says (page 41) Mr. Lynch "is a recognized authority upon wool statistics." The foregoing figures of imports are from statistics given by him. The domestic wool clip is perhaps overestimated. There is high authority for saying his estimates are sometimes erroneous; that "in 1880, for instance, they made more wool than was manufactured or handled." "The value of wools imported in the fiscal year 1887 was: Clothing wools, $3,431,567; combing wools, $2,528,568; carpet wool, $10,464,352; total, $16,424,479."

It is practicable, under proper fostering influences and within a few years at most, to raise all the sheep and so to produce substantially all the wool we need. We have the lands ready, awaiting occupation for this purpose. On almost every farm of 160 acres in the United States a flock of from forty to sixty sheep can be kept on pastures and with winter feed which would in a large measure go to waste. In many localities whole counties can be utilized by sheep husbandry that will otherwise remain desolate and uninhabited forests. The mountain sides of Virginia, West Virginia, Pennsylvania, California, and other States can be made to swarm with sheep, and thus add to the value of lands and relieve the burdens of taxation in those States. In many of the older States whole counties are made up of hilly lands, worn by cultivation and the washing of rains until they can no longer be cultivated, but which have been made and can be kept fertile by sheep husbandry, and if not used for this purpose must be turned out as waste. These lands can be devoted alternately to this industry and to cultivation, and thus permanently utilized.

So it has been said:

"From Mexico to the British Possessions, from the Missouri River to the Pacific Ocean, an area of more than a thousand million acres (not including Alaska), has been for ages the home of countless numbers of the buffalo, of the antelope, and on the higher elevations the Rocky Mountain sheep and the Rocky Mountain goat. Relatively few are the acres that do not supply some form of vegetation for herbivorous animals." *c*

Here are millions of acres which can be used for no other purposes, and will be idle, uninhabited wastes unless so utilized.

And it has been demonstrated, theoretically and practically, that sheep husbandry, under proper conditions, can be made profitable in the so-called Southern States. In a report to Congress from the Department of Agriculture in 1878 it is said:

"The sixteen States lying between Delaware and Missouri and between the Ohio River and the Gulf of Mexico had a population in 1870 of 13,877,615, and two-thirds of all engaged in occupations * * * were in some rural vocation. Nearly half this acreage, amounting to more than 200,000,000 acres, is in wild pasturage of more or less value for subsistence of farm stock, and much of the herbage is unutilized to-day. Sheep do well in these regions, which comprise all the climates and soils of the temperate zone." *d*

The same conditions in a large measure remain, but with a capacity for sheep husbandry increased by the clearing of lands and the cultivation of grasses.

---

a Edward A. Greene, of Philadelphia, published letter April 30, 1887, to Hon. Columbus Delano. Most of the statistics given in this address are taken from the learned, able, and valuable special report on wool, etc., made by Hon. W. F. Switzler, Chief of the Bureau of Statistics, United States Treasury Department, 1887.

b Not including retail butchering establishments.

c All classes; includes carpets, other than rag, felt goods, hosiery, and knit goods, wool hats, woolen goods, and worsted goods.

d Including custom work and repairing.

c Professor J. R. Dodge, 1879, in Senate Executive Document No. 15, third session Forty-fifth Congress. The hill lands in the older States, and much of the region here described, can be used for sheep, but not for cattle, because the water supply is limited and sheep do with less water than cattle.

d Senate Executive Document No. 25, third session, Forty-fifth Congress, January, 1879. The United States consul at Buenos Ayres, in his report, June, 1887, says wool can be raised in "the desert portions of Texas and New Mexico and Arizona, whose arid soil and the general scarcity of water are a great drawback to their proper development." And he says "sheep will fill an industrial gap in these regions, which otherwise we can scarcely hope to find a filling for, and this would give us a new source of national wealth." See Report on Wool, etc., Bureau of Statistics, 1887, page 39.

John Consalus, of Troy, N. Y., a prominent wool-dealer, says in the American Wool Reporter, September 1, 1887: "Texas can grow as large an amount of wool as is now clipped in all our States and Territories, and under proper protection it will be done."

The Southern States are now largely engaged in sheep husbandry.a

The Tariff Commission of 1882 in their report said that "the first phase of the industry of wool production that arrests the attention of the economist is its general distribution. Not a State in the Union, and in some of these not a county, but has some portion of its wealth invested in wool production." And it has been shown that sheep husbandry is so diversified in its character, the kinds of wool produced, and in the varieties of sheep that it can be successfully and profitably conducted, not only on cheap lands, but, in some forms, in the older States and on high-priced lands. Thus it has been said, "An important branch of this industry, and one that many have found quite profitable on lands worth $100 an acre, is the raising of early lambs. New Jersey, lying between the two largest markets in the country, which feed a population of 2,000,000, is famed for the high price of all feeding material; and yet this branch of sheep husbandry flourishes there as in no other State in the country."b

The vast prairies and plains of Texas, of the Territories, and some of the Western States, furnish grass on which mutton-sheep can be grazed for a time, but they do not furnish grains to fatten them for market. The time is not far distant when these plains and prairies, with their cheap pasturage, will supply the older States with cheap mutton-sheep, as they now do cattle, to be grazed on their tamer pastures and fattened on their grains and other food, thus blending the interests of different portions of the country and yielding profit to both. There is no conflict, but mutual harmony and concurrence of interest, between all portions of the country. Enough has been said to show that we have all the lands to produce all the sheep we need. We have the people ready for the work. With all our industries, there are too many willing hands that are unemployed. If they can find a market which will pay a reasonable price for all the wool we need, they stand ready to produce it.

If wool-growing be made as profitable as wheat-raising, a portion of the labor devoted to that branch of agricultural industry will be transferred to sheep husbandry. In the fiscal year of 1887, there was an overproduction of wheat of 101,971,940 bushels, which, for want of an adequate home market, we exported, thereby shipping abroad the fertility of our soil, never to be returned. Every bushel should have been consumed on American soil by persons engaged in manufacturing goods which we now import, fashioned from wool and cotton, and iron and steel, and wood, and crockery-clay, and glass-sand, and other materials.

Some objections have been urged to the protection of our wool industries, and to these I will give some attention.

OBJECTIONS CONSIDERED.

The Secretary of the Treasury in his annual report of December 6, 1886, in discussing the wool tariff of 1883, says: "The tax [tariff] prevents our manufacture and export of competing woolens that require the use or admixture of non-American wools, and so restricts the home demand, thus making the export of our domestic woolens impossible." In other words (1), we can not raise all the wool we need, but require foreign wools to mix with ours in the manufacture of domestic woolens, and (2) with free wool we could now export woolen goods. Here are two errors. He does not venture to say what kinds or how much foreign wool we need, or to inform us what classes of wool need the "admixture." The legislation of Congress commencing with the tariff act of March, 1867, makes three classes of wool: clothing, combing, and carpet wools; clothing wool for the manufacture of cloth, combing wool for the manufacture of worsted goods,c including delaines, etc., and carpet wool for the manufacture of carpets.d The clothing wools were generally varieties of merino, the combing wools the long wools, and the carpet wool of coarse, inferior qualities largely imported from Russia. Since 1867 machinery has been so improved that merino wool can be combed and manufactured into worsteds.e In 1867 carpet wools were used exclusively for the manufacture of carpets; now they are largely used—to the extent of, probably, 40,000,000 pounds annually—in making clothing goods.f Thus the tariff acts of 1867 and of 1883, and their classifications, are no longer applicable to existing conditions. But the fact remains that we need wool for the manufacture of cloth for worsted goods and for carpets. I believe it has never been suggested that we can not raise all the wool we need for the manufacture of woolen cloth. It is equally certain that we can raise all the combing wools we need. The only pretense of any actual necessity for the importation of foreign wool is that some of the Australian wool when manufactured into delaines will give a luster which can not be obtained from wool exclusively American. It is said that this luster is "now required by the dictates of fashion." But it is also said that "it is only fashion and not usefulness that requires" this luster, and further that "it would require a few years of breeding (in America) to get the same effect as some of the Australian wools."g With every variety of soil, climate, and environment, we can in a brief space of time raise wool to produce any luster which can be obtained from foreign wool. But if this were not so, in a contest between American interests and the dictates of fashion without any utility or necessity, the folly of fashion must be made to yield. If any there be who will shine in foreign luster, let them "pay dear, very dear, for their whistle," and soon the general fashion will outshine the foreign folly.

But can we raise all the carpet wools we need? I answer, yes; all we need; soon, very soon. In this I am fortified by abundant evidence. The Bureau of Statistics, in a recent elaborate, able, and instructive report on wool, etc., quotes from "Mr. James Lynch, of New York, a recognized authority upon wool statistics," this declaration: "It may be said that the coarse wools from any section may be used for carpets." The same report quotes with approval the statement of the profound and eminent statistician J. R. Dodge "that the carpet-wool product of the United States is almost exclusively the fleece of sheep of Mexican origin, which are raised chiefly in Texas, New Mexico, Arizona, and certain of the Territories of the mountain region of the country situated between the Mississippi Valley and the Pacific Slope." And Mr. Lynch furnishes the Bureau of Statistics the following statement of wool production in the United States for the year ended June 30, 1883:

Description.	Produced in United States.	Imported.
	Pounds.	*Pounds.*
Clothing wool	233,000,000	11,546,530
Combing wool	65,000,000	1,373,114
Carpet wool	22,000,000	a40,130,323
Total	320,000,000	

Now, if in the fiscal year 1883 we produced 22,000,000 pounds of carpet wool, why can we not in the near future produce three, or five, or even ten times as much? There are undoubtedly localities in the mountain regions of some of the Territories where merinos and long-wool sheep may not thrive, but where the hardier varieties of the native Mexican sheep, or those partly so, may still be produced sufficiently to give us wool as coarse and inferior in other respects as the meanest Donskoi. Such sheep may be made in due time to utilize a region available for nothing else. A well informed authority says: "Even for carpet purposes one of the largest manufacturers [of carpets] claims our wool to be the best [for carpets] and worth more intrinsically, but the demand for cheap carpets in price (not in wear) prevents him using it." He then proceeds to say that, even for the purpose of making the cheap and inferior carpets for such demand as there is for them, "five million pounds of this [inferior foreign carpet] wool (no more) may be a necessity; all the balance should be and can be raised here."b

But, if it be true, as has been claimed,c that the production of the cheapest classes of inferior carpet wools "would be unprofitable for the farmer," because "the American farmer can produce wool with the same amount of cost and attention, yielding twice as many pounds of wool for each sheep," and realizing larger returns, then I would say let the lowest grade of inferior wool be imported for the sole purpose of making the cheaper carpets, and if necessary let it come with a nominal duty, if by any legislation its use can be so limited that it shall not be employed in debasing other goods with which to defraud American citizens. But it is not true.

We can produce all the carpet wools we need. With a hundred million sheep which we should have, the belly, neck, and breech wool—all carpet stock—would supply all wool required for carpets. In view of all this it is safe to assert that we can soon produce all the clothing and combing wools we need; that no admixture of foreign wools is required to give success to wool-growing or wool manufacturing; that in all probability we can in a few years supply all the carpet wools we need; but in any event the importation of but a comparatively small amount will be required. It is by no means true that free foreign wool would enable our manufacturers to export woolen goods. The cheaper labor in other countries gives them such an advantage that we can not compete with them in the markets of the world, except under commercial treaties which can as well secure foreign markets for protected wool and woolen goods as for free wool. Wool is but a small part of the cost of manufactured goods, and any temporary increase in price by a tariff can not materially affect it. Probably 80 per cent. of the cost including the production of wool consists in the wages of labor, and it is this that affects prices.d It will require some years to enable our manufacturers to supply our own wants. When that period arrives we can consider the question of exporting.

3. American manufacturers can, under proper fostering influences and after a brief space of time, produce substantially all the woolen and worsted goods we require. The skill which fabricates our present product is capable of all necessary expansion, and in the not far distant future, with commercial treaties with other American Republics, Brazil, Japan, and some other nations, and with the much needed increase of the American mercantile marine, our manufacturers can become exporters of their fabrics, and take that high position in the commerce of the world for which American resources, enterprise, skill, and industry so eminently qualify them. If we are true to ourselves the day will soon dawn when we will no longer be dependents on foreign supplies.

Thus the question is answered, what may the American wool interest become?

III. WHAT ARE THE FOSTERING INFLUENCES REQUISITE TO ENABLE AMERICAN WOOL GROWERS AND MANUFACTURERS TO SUPPLY ALL THE WOOL AND WOOLEN AND WORSTED GOODS WE NEED, AND IN DUE TIME TO ENABLE OUR PEOPLE TO BECOME EXPORTERS OF THESE?

I answer unhesitatingly that chief among them is protective legislation which will exclude the foreign product so far and so fast as we can supply what we need. Our true policy is that Americans shall patronize and give employment to American rather than to foreign producers, and thereby secure employment for idle hands, give American wages for American services, enlarge our resources, and with them our own abundance, and no longer be dependent for the clothes we wear on foreign capital, labor, and skill. I will not discuss the general policy of a protective tariff. That is not involved in the question whether we should give to American farmers the privilege of supplying all the wool we need. Our lands are here and can not be removed; they must be rendered available in every possible form, or so far as they are not they are idle and unproductive. Our capital is already invested and our labor is here awaiting employment. The question is not whether we shall build up new industries generally or create new plans; it is now whether we shall utilize the plant we have in land, and, in order to do this, increase our plants of woolen and worsted manufactures.

And now I address myself to the question, why should we demand protective legislation? This is an inquiry to which there are several answers.

1. We can not supply American wants with American wool or woolen or worsted goods without protection. We will be driven from these industries by foreign competition. This may be proved by the opinions of those who have studied the subject and by the logic of facts.

The Chief of the Bureau of Statistics at Washington, in his recent report on

a The statistics of 1887 show sheep now in the States as follows: Texas, 4,761,-631; West Virginia, 563,606; North Carolina, 450,063; Missouri, 1,182,272; Virginia, 449,243; California, 6,009,698.

b See Senate Ex. Doc. No. 25, third session, Forty-fifth Congress, January, 1879, page 11, which explains how the industry is conducted.

c Worsted manufactures include "all-wool and cotton-warp delaines, challis, barèges, imitation barèges, all-wool and part-wool reps and worsted yarns for carpets and hosiery."—*Rep. Bureau Statis.*

d William H. B. Thornton, of Chicago, in the United States Economist and Dry Goods Reporter of August 13, 1887, refers to "wools of a strictly carpet nature, such as Donskoi, native Smyrna, Cordova, Valparaiso, native South American, and wools of the like nature coming from Turkey, Greece, Egypt, Syria, or elsewhere.

e See report Bureau of Statistics on wool, etc., 1887, pages 25 to 41.

f Mr. Bond, in an article published in the recent report of the Bureau of Statistics, on wool for 1887, page 64, says the imports of carpet wool for 1887 "amounted to 81,504,477 pounds, the extreme amount of which I estimate could be used for clothing purposes would be about 8,800,000."

Theodore Justice, of Philadelphia, in a letter May 5, 1886, says: "Out of the millions of pounds of carpet wool imported, it is on good authority admitted that 60 per cent. of them are used for clothing purposes, thereby taking the place of that much of the better-bred American wools."

Edward A. Greene, of Philadelphia, in a published letter of May 2, 1887, says: "The greatest wrong to our wool-growers, however, is the importation of carpet wools, of which 86,000,000 pounds were imported last year. Not over 30,000,000 pounds of these wools were used for carpets, the balance being used for clothing purpose."

And this is fully shown in a Congressional document report, House Committee on Ways and Means, Hearings on Wool Tariff, etc., January, 1890.

g Edward A. Greene, of Philadelphia, letter to William Lawrence, May 2, 1887.

a See Report No. 42 of Joseph Nimmo, jr., Chief Bureau of Statistics, September 10, 1884, page 544.

b Edward A. Greene, Philadelphia, April 30, 1887, letter to Columbus Delano, president National Wool-Growers' Association. At the hearing before the House Committee on Ways and Means, January, 1890, it was fully proved that with sufficient protection all needed carpet goods can be produced in this country. See Congressional report, page 206.

c Volume II, report Tariff Commission, 1882, page 2335.

d See volumes II and XX of the Tenth Census as to manufacture, cost of labor, etc.

wool, says: "It is idle to talk about raising sheep in Europe or in this country to compete with South Africa or the Plate country or Australia. Our sheep farming must eventually be confined to small flocks of improved breeds raised on farms where they require little or no extra labor. It has already come to this in Europe and in the Eastern and Middle States, where lands are valuable, and will finally prevail in the West, as the large ranches are divided up and settled. The conditions are entirely different in South Africa, Australia, and South America, where laborers are at least semibarbarians or peons and the immense plains of cheap lands and torrid climate seem better adapted to sheep-raising than other industries."*a* That is, without an adequate protective tariff wool-growing will not be remunerative, and so as an industry will perish. And in the same report he tells us that even under the present wool-tariff of 1883 "it can safely be predicted that * * * there may be little or no gain in numbers [of sheep], if not an actual loss in the near future." Another thoroughly well informed expert says: "In this country, where wages are high and the necessaries of life and social conditions so widely different from the Old World, it is evident that competition without protection is impossible. Italy has her sheep attended by shepherds at 2 cents per day, their only food black bread soaked in oil; India, Turkey, Persia, Russia, wages and modes of living on about the same scale; South America, Cape of Good Hope, and Australia, but one step higher. As the natives in most of these countries attend the flocks, they require but little clothing, and they get but a mere pittance, barely sufficient to sustain life."*b*

The logic of facts proves that without adequate protection we can not render wool-growing remunerative here. In Australia, South America, and other countries, "no provision is necessary for food and shelter in the winter season other than that provided by the bounty of nature."*c* They furnish an extent of territory practically unlimited with lands almost without cost; they have immense flocks of sheep, they can increase their number almost without limit, and supply the world with an abundance of every class and grade of wool.*d* They can furnish wool at prices so low that they can defy competition and annihilate every flock in the United States, unless we shall be saved by protection. The report of the Tariff Commission shows that in 1882 Buenos Ayres unwashed clothing—equal to Ohio and Pennsylvania X wool—was quoted 13.5 cents per pound, with cost of transportation to Boston 3.152 cents per pound.*e* The Chief of the Bureau of Statistics shows that under the tariff act of 1864 Buenos Ayres wools "could be bought at the Rio de la Plata under 12 cents per pound, and come in under the 3-cent duty."*f*

The reduction of our wool produce by the act of 1883 has increased the American demand for foreign wool, and, but for this, South American clothing wool could be produced for 10 cents per pound and laid down in Boston for less than 15 cents. Such wools can not profitably be produced in our older States unwashed for less than about 30 cents per pound. The history of our own wool tariff and wool production shows that without adequate protection annihilation awaits our wool industry. Prior to the act of March 2, 1867, Congress had failed, except for a brief period under the act of 1828, to provide adequate protection to the wool industry.*g* When the tariff bill of 1828 was under consideration in the Senate the illustrious and far-seeing statesman, Thomas H. Benton, proposed to insert a clause laying a protective duty of 10 per cent. per annum on wool until it should amount to 50 per cent. ad valorem, and 5 per cent. afterward, until it should amount to 70 per cent.; a higher average rate of duty than has ever yet been enacted by Congress, and that, too, at a time when the expense and delay of ocean transportation were so great as in themselves to give American wool-growers advantages and protection which no longer exist. His wisdom did not prevail. The result was that the wool industry languished for a long period. An accurate statistician has said: "In 1810, when the first census of products of industry was taken, the quantity of wool produced in the United States was returned at from thirteen to fourteen million pounds. In 1812, Mr. Tench Coxe, of Philadelphia—a trustworthy authority—computed it from twenty to twenty-two million pounds. During the last four (?) census years the number of sheep and production of wool were as follows:

Year.	Sheep.	Wool.
	Number.	*Pounds.*
1850	21,723,220	52,516,959
1860	22,471,275	60,264,913
1870	28,477,951	5100,102,387

It will be seen that the increase in the number of sheep in the decade from 1850 to 1860 was only 748,055, equivalent to 3½ per cent. Then came the first and only just, sufficient, and, for the time it was in force, effectual tariff act of March 2,1867. This act classifies wools into clothing, combing, and carpet wools. It imposed duties as follows:

"On clothing wools, unwashed, value 32 cents per pound or less, 10 cents per pound and 11 per cent. ad valorem. Value exceeding 32 cents per pound, 12 cents per pound and 10 per cent. ad valorem. Washed, double duty.

"On combing wools, value 32 cents or less per pound, 10 cents per pound and 11 per cent. ad valorem; value exceeding 32 cents per pound, 12 cents per pound and 10 per cent. ad valorem.

"On carpet wools, value 12 cents per pound or less, 3 cents per pound; value over 12 cents per pound, 6 cents per pound.

"On all classes scoured, treble duty."

Under the operation of this law the wool industry prospered. The increase in the number of sheep from 1860 to 1870 amounted to 6,006,316, or 27 per cent.; from 1870 to 1880 the increase in number was 12,287,949, or about 44 per cent.; *e* and in 1884 our sheep numbered 59,360,243. Our wool product increased faster than our sheep; that is, "the average weight of fleece rose from 2½ and 3½ pounds to 5 and 5½ pounds [of washed wool], according to location."*d* Thus the wool industry, for the first time in our history, grew rapidly, was prosperous and remunerative under the act of March 2, 1867, and up to act of March 3, 1883.*e*

a Report, page 46. This was under President Cleveland's free-wool Administration.

b John Consalus, Troy, N. Y., in the American Wool Reporter, September 1, 1887.

c Mr. O. M. Spencer, our consul-general at Melbourne, in a report made to the State Department, gives the number of sheep in the Australian provinces, and says:

"The above figures sufficiently indicate the enormous pastoral wealth of Australia, while its capabilities for the multiplication of live-stock is practically without limit. Such is the mildness of the climate and the adaptation of the country for grazing purposes that no provision is necessary for food and shelter during the winter season other than that provided by the bounty of nature. It is believed that Queensland alone 'could easily run' from thirty to forty million head of cattle without cultivating an acre of ground for fodder or spending a sixpence in the improvement of the natural pasturage."—*A Glance at Australia in* 1880.

d The recent Report on Wool, etc., by the Chief of the Bureau of Statistics, gives something of the history and extent of the wool product in India, African colonies, Australia, the Argentine Republic, Russia, etc. It says:

"The countries that yield the largest surplus of wool for export are Russia, the Argentine Republic, South Africa, and Australia. Their capacity for supplying the manufactures of the world seems to be ample. They have improved their sheep by crossing with the merinos, and their wools, especially those of Australia and the Plate country, are among the finest in the world.

"These two last-named countries are much alike in their peculiar fitness for sheep-raising, and, as yet, are not taxed to anything like their capacity. Australia alone is as large in area as the United States.

"In Australia the plains devoted to sheep-raising are in the hands of comparatively a few, who have perpetual leases of immense tracts of Government lands at low rates. Some of these tracts contain as much as 100,000 acres, so that the country bids fair to continue to be a sheep-raising section."—Page 46.

On pages 225 to 247 are tables giving the number of sheep and the product of wool in every country of the world.

e Report Tariff Commission of 1882, volume II, page 2432.

f Report on Wool, etc., 1887, page 60. In the same report, pages 228 to 231, are tables showing the prices of American wools from 1862 to 1886, and of foreign wools from 1867 to 1887.

The report of the Chief of the Bureau of Statistics of the Commerce and Navigation of the United States for 1886–'87, page 883, shows the price of domestic wool from 1877 to 1887, inclusive, and on page 878 the price of imported wools from 1878 to 1887, inclusive. The average price of imported clothing wool at our custom-houses was 16.2 cents per pound.

At a meeting of Ohio wool-growers, held January 12, 1886, an address to the Secretary of the Treasury was prepared by Columbus Delano, George L. Converse, J. D. TAYLOR, David Harpster, and W. W. Cowden, which quotes Joseph Walworth, the veteran wool-buyer of the Pacific Mills, as saying:

"A good deal of attention was given last year to the low price of wheat in England, about $1 a bushel, and that was the lowest price in London for a hundred years. But the price of wool was equally low. I bought combing wool in England the past season one-quarter to one-half penny cheaper than I ever bought it before. The price fell pretty low in 1878, but not so low as it did in 1885. It is up to a penny to a penny-halfpenny now above the lowest price. But some of the shrewdest men of England think the future is to bring us very cheap wool. A manufacturer who began his career on wages of £1 a week and is now worth over £3,000,000, told me that he expected to see wool eventually as cheap as cotton. In fact, you can buy Montevideo wool at 7*d.* in England today. Then, New Zealand is raising 60,000,000 pounds of splendid wool, and has introduced English mutton sheep and English grasses, and the improvement of steam communication has practically annexed that country to the mainland of England. The shipment of frozen mutton from New Zealand to London enables the sheep-owners to produce wool at a lower cost by furnishing them a market for the flesh as well as the fleece. Even at the low prices of last year sheep-farming has paid 90 per cent. in Australia and New Zealand, and as the market for mutton widens and competition increases there is no knowing how low the world may secure its wool in the future."

g The tariff rates under all acts of Congress are given in the Special Report of 1887 on Wool, etc., by the Chief of the Bureau of Statistics, pages 118–120.

a The act of May 19, 1828, levied a specific duty of 4 cents per pound and 45 per cent. ad valorem, and after June 30, 1829, 4 cents per pound and 50 per cent. ad valorem. This act was voted for by Benton, Van Buren, Richard M. Johnson, James Buchanan, Silas Wright, Louis McLane, and Samuel Houston, all Democrats.

b Edward Young, Ph. D., formerly Chief of the Bureau of Statistics, in the May, 1881, number of America, a New York tariff periodical. The same figures for 1850, 1860, and 1870 appear in the Report of 1887 on Wool, page 163, by the Chief of the Bureau of Statistics.

c The report of the Bureau of Statistics, made in 1887, on wool, etc., page 163, states the number of sheep on farms in 1880 at 35,192,074, but, on page 71, the total number at 40,765,900. A former chief of the bureau stated the number of sheep in 1880 at 42,192,074, of which on farms 35,192,074 and on ranches 7,000,000.

d The number of sheep and product of wool for the years specified were as follows:

Years.	Sheep.	Product.
	Number.	*Pounds.*
1850	21,723,220	52,516,959
1860	22,471,275	60,264,913
1870	28,477,951	100,102,387
1875	33,783,600	.....
1876	35,935,300	.....
1877	35,804,200	.....
1878	35,740,500	.....
1879	38,123,800	232,500,000
1880	40,765,900	240,000,000
1881	43,569,899	272,000,000
1882	45,016,224	290,000,000
1883	49,237,291	300,000,000
1884	50,626,626	308,000,000
1885	50,360,343	302,000,000
1886	48,322,331	286,000,000
1887	44,759,314	.....

See Wool Report, 1887, Bureau Statistics, pages 72, 73. Also Appendix, Table No. 3, page 16, and Table No. 20, page 174.

e The prices of wools from 1817 to 1885 are shown in Statement No. 17 of Quarterly Report No. 3, series 1885–'86, of the Bureau of Statistics. The Quarterly Report No. 4, 1886–'87, page 883, shows the price from 1877 to 1887. The New York prices for 1882, 1883, and 1884 are found more satisfactory in Statement No. 42 in regard to wool, etc.; in the special report of the Bureau of Statistics made by Joseph Nimmo, jr., Chief of Bureau, September 10, 1884, "on the operations of the tariff act of March 3, 1883, for the six months ending December 31, 1883, the average prices being as indicated below:

Year.	Fine.	Medium.	Coarse.
	Cents.	*Cents.*	*Cents.*
1882	42	43	31
1883	40½	42	31
1884, January	40	39	32

The New York and Philadelphia prices for different classes of wool from 1824 to 1887 are shown in the Special Report of 1887 on Wool, etc., by the Bureau of Statistics, Table No. 12, pages 110–118, and Table No. 69, page 228.

Immediately after the act of 1867 the paper-money prices of wool declined, because of the increasing value of such money, because all previous war prices declined, because "large quantities of army clothing accumulated during the war were thrown upon the market at exceedingly low prices," and for other reasons shown in the Wool Report of 1887, pages 61, 62.

This act reduces the duties to a scale as follows:

"Clothing wools, value 30 cents per pound or less, 10 cents per pound; value over 30 cents, 12 cents per pound; washed wool, double duty.

"Combing wool, value 30 cents per pound or less, 10 cents per pound; value over 30 cents per pound, 12 cents per pound.

"Carpet wools, value 12 cents per pound or less, 2½ cents per pound; value over 12 cents per pound, 5 cents per pound.

"All classes scoured, treble duty."

In addition to this reduction, the repeal of sections 2907 and 2908 of the Revised Statutes, remitting charges, commissions, etc., made a further material reduction. *a*

But the reduction of duties on wool is not the only ruinous feature of the act of 1883.

"When that act was passed, the class of goods known as worsted was made of long-staple combing wool. The temptation to import goods under the low duty of the worsted clause has led to such improvements in machinery that any kind of wool can now be combed; so that many of the finest goods, made of short-staple clothing wool, after the same has been combed, are called worsteds, and we see fine worsted yarn supplied to this country at a lower duty than would be charged on the raw material of which these goods are made. There is surely no protection to the wool-grower in such a tariff as this. If the present irregular and unsatisfactory schedules on worsteds remain, there is little hope of higher prices for wool. The repeal of the worsted clause would then leave all worsteds to be classed under the woolen schedule, which is sufficiently protective and would increase the scoured value of American wool. By checking excessive importations, the surplus revenue would be decreased, and, what is better, manufactured goods, made by American mills out of American wool, would then supply our home market. So long as we manufacture only one-half of the goods we use, it is folly to talk about seeking the markets of the world. We are at present suffering from the flooding of this country with overproduction of woolen goods, which are brought in under the present ill arrangement of the tariff. American mills are shutting down, and American wools are neglected and declining in price, while foreign mills are running day and night to supply this country with goods." *b*

The effect of this act has been to make wool production unprofitable by reducing the price; to reduce the number of our sheep and of our wool products, thereby to encourage and increase the importation of foreign wools, and give American patronage to foreign producers instead of our own. *c* It has reduced our sheep 5,867,312 in number, when, on the basis of increase under the tariff of 1867, there should have been an increase of 6,000,000, making a loss equal to about 13,000,000 sheep and a loss in clip of wool of 48,000,000 pounds, worth $14,400,000. Thus the wool-growers have lost by decrease of flocks in reduced wool product $14,400,000 and in price of wool they produced in 1887 at least $26,000,000. And we are correctly told that under the tariff act of 1883 there is "in the near future" to be a continued and actual growing loss in number. *d* The imports of wool in 1882 were 67,861,744; in 1887 they were 114,038,030, *e* when they should have been reduced to 40,000,000, and under proper protection might have been less.

It has been suggested that the older wool-growing States have been suffering by competition in Texas and the Territories, and especially by ranch competition; that the industry is moving westward, and that this is the cause of the decline of the wool industry in the older States. But here again the logic of facts and of reason is against this theory. Since 1884 there has been a decrease in the number of sheep in almost every State and Territory of the United States. Take the seven groups into which the Bureau of Statistics has divided our vast domain and given the number of sheep for 1884 to 1887, inclusive, in each, and there is a decrease shown as follows: *f*

Recapitulation by groups.	1884.	1885.	1886.	1887.
New England States	1,384,888	1,283,809	1,249,328	1,237,085
Middle States	3,792,675	3,498,425	3,083,594	2,968,032
Southern States	12,950,761	12,468,301	11,534,652	9,241,449
Western States	15,636,760	15,244,052	15,131,912	14,332,538
Pacific Coast	9,616,092	9,370,617	9,745,058	9,892,652
Territories	7,245,450	8,495,039	7,577,787	7,087,558
Total United States	50,626,626	50,360,243	48,322,331	44,759,314

a See page 541, Nimmo's Report of September 10, 1884, before referred to in note.

b Justice, Bateman & Co., Philadelphia Wool-Dealers' Circular, November 1, 1887, Wool Report, 1887, Bureau of Statistics, 42.

c All this is shown by the report on wool, etc., 1887, by the Bureau of Statistics.

As to prices in Philadelphia:

Classes of wool.	1882.	1887.
Ohio, Pennsylvania, and West Virginia:	*Cts. per lb.*	*Cts. per lb.*
Fleece washed XX	42	34
Fleece washed X	41	31½
Half-blood	44	37½
Quarter-blood	37½	37
Common and cotted	30	30
Texas, fine northern and eastern	29	20½
Texas, medium northern and eastern	29	23
Texas, coarse northern and eastern	20	16½
Texas, improved western and southern	22½	18½
Texas, coarse	17½	14½

THE NUMBER OF SHEEP AND WOOL PRODUCT.

Year.	No. of sheep.	Wool product.
		Pounds.
1884	50,626,626	308,000,000
1887	44,759,314	265,000,000

Report, pages 43-71.

d Wool report, 1887, Bureau of Statistics, page 43.

e Wool report, 1887, page 73.

f Wool report, 1887, Bureau of Statistics, page 165.

I have a table prepared by the eminent and accurate statistician of the Department of Agriculture, *a* showing the number of sheep in each State and Territory for the years 1850, 1860, 1870, 1884, and 1887, and it fully verifies the facts I have stated. Then, again, there is no competition between the older States and Territories and Texas, because the whole product of all is about one-half the wool we consume.

It may be that Texas and the Territories can produce certain kinds of sheep and certain kinds of wool cheaper than the older States. Our wants require precisely this variety. Vermont, Ohio, Pennsylvania, West Virginia, Michigan, and other Central States produce "for certain purposes the best wool in the world. It has no equal anywhere, and in the Territories it has no pretended competitor." *b* And the president of the National Wool-Growers' Association said to the House Committee of Ways and Means, at Washington, in 1884, that sheep from the older States, "when transferred to the Territories, yield a tender fiber, and although they [the sheep] are treated with the best care which intelligent husbandry can efford, yet it is impossible to bring their wool to such a standard that it will favorably compare with the fine wools of Ohio" and other States. And he said he was prepared with samples illustrating his statement. *c*

For many purposes wools from Texas and the Territories meet a demand which is not supplied by wool from the older States, and the wools from the older States fill a gap which Texas and the Territories can not supply. And then, again, an "admixture" of both is for many purposes essential. Thus the production of wools of each portion of the country creates a demand for and enables manufacturers to utilize all. So Texas and the Territories can raise cheaper sheep, as they do cattle, to be shipped to the older States, grazed, fattened, and put into market, supplying wool and mutton, with a perfect harmony of interests, mutually beneficial to each and to the whole country.

Under the tariff act of 1883 the "American wool interest" is doomed to decay. It is rapidly declining in the number of our sheep, the product of our wool, and in the manufacture of worsted goods. It is not possible now to give the extent in the decline in manufactured products, but they are readily accessible. And to add to the depressing influences at work we are threatened with the utter destruction of the wool industry by the total repeal of the wool tariff.

The Secretary of the Treasury, in his annual report of December 6, 1886, says: "I respectfully recommend to Congress * * * the immediate passage of an act simply and solely placing raw wool on the free-list." And he adds that this "should be followed by * * * a compensating adjustment [reduction] of the duties on manufactured woolens." This would complete the ruin alike of the wool-growing and wool-manufacturing industries.

I now proceed to show that:

IV. Justice to the American agriculturist and sound policy require such legislation as will give to them the exclusive privilege of supplying every product of the soil which the fostering aid of law will enable them to produce in sufficient abundance to supply the American demand.

And the same principle should be applied to manufactures.

Our legislation for many years has recognized this policy. The act of March 3, 1883, imposes duties as follows: "Animals, live, 20 per cent. ad valorem; beef and pork, 1 cent per pound; hams and bacon, 2 cents per pound; cheese, 4 cents per pound; butter, 4 cents per pound; lard, 2 cents per pound; wheat, 20 cents per bushel; oats, 10 cents per bushel; rice, cleaned, 2½ cents per pound; rice, uncleaned, 1¼ cents per pound; hay, $2 per ton; hops, 8 cents per pound."

So a duty is imposed on sugar, wool, etc. If wool must come free, why shall not rice and sugar come free? Why not admit wheat and hops and oats from Canada free? If we must buy our wool from foreign producers, why not admit all agricultural products of the pauper labor of other countries? Let us suppose a case:

A farmer has 640 acres of land. Of this, 40 acres can be utilized in grazing sheep, but for no other purpose. A small part can be used in producing rice, and nothing else; another small part, sugar, and nothing else. On one part of it is water-power, which can be utilized for propelling a woolen factory. The residue is adapted to the production of cotton, wheat, and corn, and hay and oats, and under one of its hills is coal to furnish heat for dwellings and run steam machinery. He has lands adapted for gardening, and sons and neighbors ready to make all these sources of wealth available. If he and other of his neighbors in like condition and in sufficient numbers utilize all these beneficent gifts of the Almighty, they recognize His wisdom in bestowing them and they become independent of all the world. They can supply all their wants in all that the earth can yield and in all that human skill can make. Their market is at their doors. The cost of carrying farm and garden and orchard to men in factories making cloth and clothing is so little that they realize the full results of their labor. Whatever may be the scale of prices adopted, whether higher or lower than in far distant places, they are so adjusted as to be fair and just to all. They can not produce coffee or tea or dyestuffs, but they can furnish cheese and butter and bacon, and farm implements, and other products, and send them abroad in exchange for the commodities I have named. Those who are engaged in cultivating lands and producing wool, and manufacturing cloth, and making gardens, and gathering fruit from orchards, give employment to carpenters in building houses, to butchers in preparing beef and mutton for use. All find employment; abundance and prosperity abound everywhere.

At this point some *doctrinaire* invades the busy scene of this prosperity and says to these people thus engaged in peaceful industries: "You can buy wool cheaper in Australia; let your 40 acres of sheep-grazing land go to waste. You can buy rice cheaper in some foreign clime; let your rice lands go to waste. You can buy woolen goods cheaper; burn your woolen factories, let your water-power run to waste, and cease to work your coal mines. God made a mistake when He gave you these gifts. The *doctrinaire* was not taken into His counsel, and so the Almighty erred." They take his advice. The inevitable results follow. The men engaged in mining coal are out of employment; they go to raising wheat and corn and oats. The men engaged in raising wool, and in making cloth, and in building houses are all out of employment; they go to raising wheat and corn and oats. The men engaged in gardening and raising fruits do the same. They are a community of farmers. They have abundance of wheat and corn and oats; but the abundance has caused a decline in the price, and it takes one bushel out of every three to carry their surplus 3,000 miles to a foreign market, so that one-third of their labor is wasted.

David Harpster, president of the Ohio Wool-Growers' Association, in an address, March, 1890, describes the present situation as follows:

"There has been no time in thirty years past when the farmers have suffered so much from low prices of farm products as now. The cause of this is plain. The crops of 1889 were as follows: Wheat, 490,500,000 bushels; corn, 2,112,892,000 bushels; oats, 751,515,000 bushels, besides rye, barley, buckwheat, hay, etc. There has been an overproduction of 100,000,000 bushels of wheat, for which there is no market, except in Europe, where it is met with wheat from the East Indies and Russia, raised with labor costing only from 6 to 20 cents per day; and hence the European price is low. There are substantially no foreign markets for corn or oats.

a Professor J. R. Dodge.

b Columbus Delano, president of the National Wool-Growers' Convention, before the Committee on Ways and Means of the national House of Representatives, February 20, 1884.

c He produced a letter from Justice, Bateman & Co., Philadelphia wool-dealers, to him, dated February 7, 1884, showing the same facts.

"The remedy for these conditions is plain. The people of this country consume annually the equivalent of 600,000,000 pounds of unwashed wool. If we should produce, as we can, and under a sufficiently protective tariff would, all this wool, we would have 100,000,000 sheep. But under the tariff reduction of 1883 our flocks have been reduced to 42,569,079, producing about 240,000,000 pounds, and we import in the form of wool and in woolen goods the equivalent of 360,000,000 pounds. When we import this wool we patronize foreigners, we practically import the corn, oats, and hay that fed the 60,000,000 foreign sheep whose wool we import and use and the wheat and meat that fed the men who cared for the flocks and fenced the land to graze them.

"If Congress will give us a sufficient wool tariff we will soon cease to import wool; we will add 60,000,000 to the number of our sheep, and these will make a demand and give us fair prices for all the surplus corn, oats, and hay we now produce and make a demand for still more. This would enable us to take 10,000,000 [acres] of the 38,000,000 we are annually devoting to wheat and keep it fertile by devoting it to sheep husbandry, and with this change we could raise less wheat, cease to export wheat, and our prices would then be on an American basis, fair as compared with prices of all other articles and no longer the prices of Europe. In fact, in a few years there will be no foreign market for American wheat. A sufficient wool tariff will restore prosperity to our farmers, and thus every farmer is interested in a sufficient wool tariff, whether he owns sheep or not."a

They no longer have a demand for the products of the garden, the dairy, nor for coal, and they cease to produce them because they can not ship them abroad. The little that is left of their product of wheat and corn and oats will not enable them to buy the foreign wool, or woolen goods, or rice. Their gardens are in ruins, their water-power and sheep and rice lands are in waste, their resources are diminished, and poverty and desolation are the rewards or rather punishments which have befallen them for their folly in adopting the advice of the *doctrinaire*, instead of utilizing the gifts that God gave them.

The whole American Republic, with its vast resources, its 60,000,000 of people, is one great agricultural and manufacturing community whose condition is illustrated in what I have described. Wheat is now chief among the exports of our cereals. Our policy is to devote a portion of our lands now employed in the overproduction of wheat in raising wool, and to make a home market for all we produce in wheat and wool. We can do so. When we ship wheat abroad it is used to feed men engaged in manufacturing products to return to us in payment. It is better to let the manufacturing be done here, let the manufacturers do their eating here, have their homes here, build houses here, give employment to carpenters, masons, butchers, grocers, and gardeners here.

Our total product of wheat was about 450,000,000 bushels in the fiscal year 1887, of which we exported 101,971,940 bushels, estimated at the New York custom-house of the value of $90,716,481. The price of this, as of the residue of the crop sold here, is fixed by the price in England. And the price there is fixed by the price at which wheat can be supplied from the British East Indies, where wheat is produced by men who labor and board themselves on wages of 10 cents a day. Thus the American price is fixed by foreign pauper-labor prices. It will not be ten years until the construction of railroads with English capital in the East Indies will bring wheat from the interior to the seaboard so cheaply and in such abundance that the American market for wheat in Europe will be forever gone. As the wheat produced in the British East Indies increases the price grows less; our wheat meets the competition and declines in price. The price of wheat in Chicago in the month of November was for several years as follows: 1880, $1.05 per bushel; 1881, $1.28; 1882, 94 cents; 1883, 95 cents; 1884, 72½ cents; 1886, 73½ cents; and in 1887, 72½ cents, and each succeeding year will witness the downward tendency.

We send our wheat abroad to feed people while they produce wool and woolen goods and iron and steel goods to ship back to us in exchange. The American farmer must pay the heavy cost of shipping his bulky wheat to Europe; out of three bushels he ships abroad, one bushel is consumed in shipping two more to market. Thus he loses one-third of his product. The cost of shipping woolen goods and other manufactured products from Europe here is comparatively small. The foreign producer sells his goods to us in a market with prices not based on pauper labor, but on American labor wages.

Here, then, is the result: In the fiscal year 1887 we exported wheat of the value of $90,716,481. We imported wool, custom-house value, $16,424,479; manufactures of wool, $44,902,718; manufactures of cotton, $28,940,353; total of these, $90,267,550.

Here is an overproduction of wheat which we ship to Europe in exchange for articles produced there, but which we can as well produce here. If five years ago a protective tariff had given American manufacturers the exclusive privilege of making the whole ninety millions and more of these articles, and had also secured to American wool-growers the privilege of producing all the wool we need, we would now have 100,000,000 of sheep, 60,000,000 more than we now have; they would have used the 8,000,000 acres of land on which we raised a hundred millions of overproduction in wheat; and for pasture in addition 40,000,000 acres of land left idle and unemployed, and for hay and grain to feed them 6,000,000 acres more; they would have yielded a return of over $100,000,000, instead of the $90,000,000 received for our wheat export; the fertility of our soil would have remained on our farms instead of being shipped abroad; the price of our wheat would not as now be based on the price of pauper-labor competition in the East Indies, but equalized American prices, and employment would have been given to 130,000 men who were in part idle and in part producing surplus wheat. These men thus employed would in turn have given employment to others, carpenters, masons, clothiers, butchers, bakers, printers, and last, but not least, school-teachers and ministers of the gospel.

This arrangement, which places wool-growers and manufacturers of wool and cotton on one side of the ocean and the producers of wheat on the other, is unwise and burdensome. The cost of shipping the products from each side to the other is so much labor lost to the world. Place them side by side, and this labor and the commissions and profits and robberies of middlemen, and losses in transportation, will all be saved. Then each producer will receive as nearly as possible the full value of his labor and products.

Our true policy is to give to American wool-growers the privilege of supplying all the wool we need. And why shall this not be so? The pretext for free wool is to "confer on the wage-earner of the United States the boon of untaxed clothing."b The way to confer this boon is to cease to import wool or clothing; produce here all we need, and then neither wool nor clothing will pay any tariff tax.

The whole history of our industries proves that the ultimate effect of protection is to secure cheaper products. Even as to wool, the Tariff Commission of 1882, referring to the wool tariff of 1867, in their report say:c "The wisdom which guided its promoters has found substantial vindication in the growth of sheep husbandry during the past fifteen years. * * * As a result of augumented production the price of wools has been reduced to the consumer, while at the same time the producer by improving his stock has been enabled to realize as much money from individual animals as he secured in former years."d

If we destroy our wool industry foreign nations, finding no competition here, will dictate prices, and very soon we "will pay dear, very dear" for our ruinous experiment. Even if this could not be so, yet all prices adjust themselves, each product to that of all others, and justice is secured for all, producer and consumer alike. And even if for a brief space of time "free wool" would give cheaper wool and cheaper clothing, the means of buying would be diminished for farmers and all consumers. The "boon" secured to them would be for a brief space of time lower prices, soon to be followed by higher prices, and through all the time reduced means of payment, and as to many—too many—no means at all.

It has been said that there has been a general decline in the price of wheat and other products, as well as in wool. Yes, wheat has declined because of overproduction and exports which fix the price on a foreign rather than an American basis. Wool has declined in price without sufficient protection, because of foreign competition. There has been a decline in manufactured goods by reason of improvements in machinery and in skill, thus securing large product, less price, but greater profits and better wages.

But there has been no universal decline in prices. The wages of labor have justly increased, the prices of lands have increased; the price of wool has declined until its production is unremunerative, and this is the test which proves protection necessary.

If the ultimate effect of protection is to be cheaper wool, the inquiry may be made, How, then, will protection benefit the wool-grower? The first effect of adequate protection of the wool industry will be to increase the price. This will stimulate the industry and increase the number of our sheep and wool product. Our breeds of sheep will be rapidly improved, so that a given number of sheep will produce largely more pounds of wool than ever before, and a reduced price per pound will hence yield a larger revenue and increased profits. In the near future sheep will, to a large extent, be made available both for wool production and mutton, and thus, even with reduced prices both of wool and mutton, they will yield a larger revenue and increased profits, thus growing cheaper wool, and cheaper food for all our people.

The American farmer can fully supply the American market with every product of our soil and climate. Wool is one of them. If we surrender the privilege of supplying this in full measure we concede a principle which will demand the surrender of the privilege of supplying other of our products.

Let us unite in the demand that the laws shall be so made that Americans shall have the American market for all that Americans can supply.

a This subject can be found more fully discussed in a speech of William Lawrence, of Ohio, before the Commercial Club, of Providence, R. I., February 15, 1890.

b Report Secretary of Treasury, December 6, 1886, page 57.

c Report, page 28.

d This is fully shown by prices of wool as given in the report, 1887, of the Bureau of Statistics on wool, etc. Table XII, pages 110-118, and Table LXIX, page 228.

Chickamauga Battle-Field National Park.

The mystic chords of memory, stretching from every battle-field and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.—*Abraham Lincoln.*

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 28, 1890.

The House having under consideration the bill (H. R. 6454) to establish a national military park at the battle-field of Chickamauga, the question being on the passage of the bill—

Mr. GROSVENOR said:

Mr. SPEAKER: On the 19th and 20th days of September, 1863, there was fought upon the hills and in the valleys and along the river in Walker County, Georgia, 10 miles south of the city of Chattanooga, Tenn., one of the greatest battles of modern times.

It is not my purpose in supporting this bill and explaining its provisions to enter at any considerable length into the history of the strategy which resulted in the shock of arms on the memorable occasion the bill commemorates. It was a battle between brothers. A contest between men of the same blood and nationality, men who had been reared under the same flag and protected by the same Constitution.

It is not my purpose on this occasion to discuss the causes which led to the great war in the first instance; it is enough for me to say that upon one hand the column which faced the south, at Chickamauga, and placed itself, like a giant, across the valley that led to the north, was made up of soldiers of the Union, and at the head of their column was carried the old flag of the Union. From across the river of blood, in great perpendicular columns, came the men of the South-land. At the head of their columns gleamed a new flag, the flag of a misguided constituency, intent upon the destruction of the old Union, the old Constitution, and the establishment of a new government, under new forms of law. The inspiration of the one was born of their misguided and unfortunate judgment that war was the legitimate and necessary remedy for imaginary evils, and that inspiration had become, to them, patriotism and love of country; for, however misguided men may be, that which is rebellion in the first instance and rebellion in the last instance to the majority of the people of the country is loyalty and patriotism to the men who thus took up arms.

So, on this occasion—with the remembrance of those days yet fresh upon me, and the strong love I had then and have now for an undivided country as the pole star of my political conviction—I will not discuss this question in a manner to reopen the wounds of those days and those years, which are healing all too slowly in the unfavorable atmosphere of political agitation. Fondly as I love the old Union, strongly as I condemn rebellion under any form that is

possible to be conceived, in a free government like this, I am here now to speak only in words of fraternal kindness of the men of the South. We have demonstrated what Abraham Lincoln in substance said, when the war began—

No matter how long the fight, no matter how long the war shall last, in the end we are all brothers.

And now, standing more than a quarter of a century from the final gun of Appomattox, the words of the immortal Lincoln come to us as the words of inspiration, "We are brothers still." Let us be brothers still. If there are waste places, let us build them up, always with an eye to the single and undying proposition that loyalty to country is as sacred to the people to-day as it ever was, and that unfaithfulness to country, whether it takes the form of antagonism to Constitution or flag, or whether it takes the form of disloyalty to the laws of the country, disobedience to the precepts of Government, or whether it takes the more obnoxious form of the overt act of disloyalty, treason, is odious. Loyalty is the glory of the American citizen. The men who joined in the war of the rebellion are as well able to testify to this to-day as we are. They tasted the bitterness of rebellion. The fair plains of the South were destroyed by the marching columns of their enemies—enemies for the time. The smoke of their burning cities ascended up to heaven. The deserted fields testified to the horrors of war. The death of their sons filled their homes with mourning. The Rachels of their households were weeping for their children, and they have never been comforted, because they are not. Commerce destroyed, prosperity annihilated, society unsettled, public and private debts unpaid, desolation, disaster, and despair everywhere.

If it may truly be said that no people anywhere ever sinned more flagrantly, it may with equal truth and justice be said that no people ever suffered in a greater degree for their errors than they. We of the North suffered. Our hearthstones were desolated. Our heroes bled. Our young men marched forth under the inspiration of patriotism and came not home. Our fathers and mothers sat in lonely homesteads and watched for the coming of the manly youths who fell upon the plains of the South. Their bones were left to whiten along the pathways we trod amid the silent pines, along the beautiful rivers, and upon the mountain-topsof their own country, held then by the hands of an enemy. They fell for their devotion to a principle they loved, and throughout their Northland their friends annually stand around marked and unmarked graves of the brave dead of the war; and on each recurring anniversary of their patriotism we shed tears of affection in memory of the brave men who suffered for us, and strew their last resting place with floral testimonials of our affection.

So both sides have suffered. The one, as we say, for the right; the other, as we say, for a grievous wrong; but we all suffered. It shall be left to history and the teachings of the future to characterize the error of the one and the fidelity of the other; but we are ready now in unison from both sides of the country to honor the heroism of the other and of all.

It is the duty of patriotism, preserving the line between loyalty and disloyalty, to co-operate in every direction to obliterate the wounds of the war. I would not forget it. I would not forget the brave young men who fought for the flag of my country, and you, my countrymen, on the other side, I would not forget you. I would not forget the heroism of the men who with you marched to the cannon's mouth in the defense and propagation of so fatal an error as the one which you supported. You may not celebrate victory, for yours was defeat; you may not commemorate success, for yours was failure; you may not exalt triumph, for yours was disaster; but you may treasure in your memories the devoted and heroic conduct of the men who stood with you in the dark hour of peril and death.

How shall we best build up and reunite the Union? How shall we best recement the ties that bound us together before the war? The field is a wide one, and time would fail me to discuss even in a small portion half the ground covered by so mighty a subject. But we can here suggest one plan of operation. We propose to preserve in the form of a national park, to be the property of the Government, to be controlled and governed by the officers of the War Department forever, a park unique in its conception and one that will commend itself to the patriotic people of the country. And in discussing this brauch of the question I shall treat the American people as a brotherhood.

We do not propose a beautiful park, with beautiful lanes and flowers and ornamental trees and shrubbery and ornamental walks and gate-ways. We do not propose that, but we do propose to acquire the title to over 7,000 acres of the land of Georgia upon which this blood was shed, and to acquire easements to the roads leading thereto, and to preserve the battle-field in as nearly the condition it was in at the close of the 20th of September, 1863, as it is possible to do. We will not change into beautiful drives and thoroughfares the roads over which the fierce columns of Bragg marched to the deadly encounter, nor the roads over which moved the columns of Rosecrans, but we would preserve them in the condition they are, and we would preserve the battle-field itself, with its wooded hill-tops, its fair bestudded plains, and all its particular and general appearance, as nearly as possible in the condition in which it was left at the close of the conflict. We would make it a spot that would remind the soldier of either army of the dread conflict that shook the hills and paled the sun-light on those memorable days. We would leave Kelley's farm, and the Widow Glenn's farm, and McFarland's Gap, out of which marched a large portion of the discouraged and depressed Union Army, and the tan-yard, and the peach-orchard, the territory around Lee and Gordon's mill, the famous crossing at Glass's mill, the Dry Valley road, and we would leave without a tree taken away or a shrub disturbed the famous Snodgrass Hill, where against the shock of Longstreet a handful of Union troops stood against such terrible odds so many hours on that bloody afternoon of September 20. We would preserve the peach-orchard where volleyed the thunder of Smith's Battery, and the sloping hill-side that ran with the blood of Harker's men, and we would not destroy one tree of the wooded slope up which went the magnificent column of James B. Steedman at the late hour of that afternoon when, with flying banners and sounding music, there passed to their death or fell with wounded bodies more than seventeen hundred in forty minutes. We would leave the points of the battle-field where the famous brigade of Van Derveer stood like a rock against the surging tide of the host of the South, and we would leave in an untouched condition the field of glory from which Reynolds and Turchin cut their way out of the environments of Confederate steel and marched to security at Chattanooga. And we want to preserve the road running to Rossville, that famous, grand, historic locality running away up to the Union left, where Sherman and his magnificent army formed and drove the Confederate troops to the right of the rebel position on the great day of Missionary Ridge.

We would leave all this intact and we would put monuments to mark the place where the troops of Thomas and the other troops to which were given the orders to capture the rifle-pits which cost them so much blood charged up to the crest of Missionary Ridge and drove Bragg and his gallant troops away off to the south. We would preserve that historical spot where Bragg for days and weeks established his headquarters on Missionary Ridge and looked with longing eyes down upon the hills and valleys filled and filling with Union troops, intent upon regaining what was almost lost at Chickamauga, and whence the misguided head of the so-called Southern Confederacy looked down and listened to the music of the Union bands who in the early morning played the tunes to the cadence of which, in his younger days, as a soldier of the United States Army, Jefferson Davis had marched. So, in plain and concise words, we want to preserve the woods of Chickamauga; we want to preserve the fringes of trees, bushes, and shrubs that nature has planted along the banks of the river of blood. We want to preserve the entire tract.

We have taken in as a part of the park the roads heretofore described, because we desired to have control and management of all these approaches. They are public roads, traveled by the citizens of the country, and will be continued in that way and for that purpose always. It is not the intention to make any change in the occupation of the farms, at present at least, while the ownership will be in the Government. The purpose is to permit the people living on the surface of the park to retain possession of their holdings, under such terms as will be favorable to them, and, at the same time, to secure their interest in the care and attention to be bestowed upon the park.

Mr. Speaker, as the people of the country move further away from Chickamauga and kindred events, or, in other words, as the tide of time carries further to the rear those stirring events, these battle-fields will become more and more important and more and more attractive to the people of the country. To Chickamauga, as to the Mecca of old, the patriotic people of America will journey, and they will draw patriotic inspiration from the surroundings of that memorable battle-field. The very surroundings of these historic spots are all sacred to the soldier of the war.

The pilgrim to this battle-field will take his position upon the top of Lookout Mountain, and from it he can study the whole strategy of Chickamauga, Missionary Ridge, and Lookout Mountain. Across the river at his feet and below him at his left are Moccasin Point, Cameron Hill, Brown's Ferry, and the blood-stained Wauhatchee, and immediately below him are still the traces of the rifle-pits by means of which Hooker dislodged the enemy from the foot of Lookout, and then casting his eye a little to the right he sees, at least in memory, the line of forts behind which Rosecrans sheltered his army from Chickamauga. There stands Orchard Knob, whence Grant, surrounded by his lieutenants, witnessed the great conflict of Missionary Ridge. Away off to the left as far as the eye can reach is Sherman Heights, memorable for the great struggle on our left and the Confederate right, where the waves of battle, hurled from the North on the South, struck each other and were shattered upon the crest of the hill, the crest being marked by the dead of many a regiment of gallant men. Then casting the eye along Missionary Ridge we see the entrance to the great battle-field at Rossville. To the right runs the road through McFarland's Gap, over which a large portion of Rosecrans's army retired on the bloody night of September 20; to the left, the Rossville road, over which the column of Crittenden moved before the battle.

But who can describe the memories and glories of Chickamauga? Who can put in print and in the cold language of memory the stirring events of those two terrible days? It was here that the flower of the Western army of the Union met the tried, trained veterans

of the South, re-enforced by the splendid column of Longstreet. Here it was that the tide of battle surged forward and backward. Here it was that the twenty-odd thousand American citizens fell, dead or wounded, upon this famous battle-field.

Now, Mr. Speaker, I desire to place in an enduring form a complete record of the organization which at this time has culminated in the presence in Congress of the bill which I had the honor to introduce. For some considerable time discussion has been going on among certain gentlemen who participated in the battle of Chickamauga looking to the organization of an association for the establishment of a national park, and in May, 1888, a number of those officers visited the battle-field of Chickamauga and spent several days in a careful examination of the lines of the two armies and a re-examination of the topographical surroundings. I will present here the history of the origin and development of this park project:

THE ORIGIN AND DEVELOPMENT OF THE PARK PROJECT.

A visit of a number of Union officers to the Chickamauga battle-field in June, 1888, led to the publication of a series of letters in the Cincinnati Commercial-Gazette, in which the suggestion was made that the field should be secured and preserved and all the lines of battle be permanently marked.

In September following, General Henry M. Cist, secretary of the Society of the Army of the Cumberland, offered the following resolution at the meeting of that society in Chicago:

"I move that a committee of five be appointed by the chair for the purpose of taking the necessary steps to inaugurate a movement for the purchase of the ground on which the battle of Chickamauga was fought; that monuments be placed thereon to mark the location of the troops that fought there, and that it may be preserved similar to the plan of the battle-field of Gettysburgh."

In presenting the resolution General Cist said:

"There is no battle of the late war so little understood as Chickamauga; none so important in all its bearings and in all its results as that of Chickamauga. I think it is due to the society and to the old Army of the Cumberland that some steps be taken to preserve the field of the greatest engagement fought by that army, if there is nothing that would make the movement an improper one, any intimation of which, of course, would come up before the committee and the committee could then investigate and report to the society. I, for one, would like to see a plan devised for the purchase, if it could be done, of this battle-field, so that it would be preserved for all time, and, if possible, that the several positions occupied by the different organizations in the battle should be marked upon the field."

The resolution was then adopted, and General Rosecrans appointed as members of this committee General Henry M. Cist, General C. F. Manderson, General Russell A. Alger, General Absalom Baird, General Henry V. Boynton.

General Cist called his committee to meet in Washington February 13, 1889. General Manderson presided. After a brief discussion it was agreed to ask for a conference with such Confederate veterans of Chickamauga as were in Washington, with a view to invite their co-operation in forming a joint memorial battle-field association.

This conference was held next day, in the room of the Senate Committee on Military Affairs. There were present Generals Rosecrans, Baird, Reynolds, Cist, Manderson, and Boynton and Colonel Kellogg, of the Union officers, and Generals Bate, of Tennessee; Colquitt, of Georgia; Walthall, of Mississippi; Wheeler, of Alabama; Wright, of Tennessee; and Colonels Bankhead, of Alabama, and Morgan, of Mississippi.

The plan of preserving and marking the field of Chickamauga, under the auspices of a joint memorial corporation representing all the States that had troops there, patterned in general after the Gettysburgh Association, was cordially approved.

Generals Cist and Colquitt were appointed a committee, with power to add four to their number, to prepare an act of incorporation and correspond with leading officers from each State whose troops fought at Chickamauga, with a view of securing a proper list of incorporators. A number of officers on each side, members of either the House or the Senate, who are greatly interested in this project, were detained from the meeting by debates in which they were engaged.

Generals Cist and Colquitt completed their subcommittee by adding Generals Baird, Walthall, Wheeler, Wright, Boynton, and Col. S. C. Kellogg. It was agreed that each side should name fifty of the leading veterans of that field and some civilians, North and South, who have prominently identified themselves with the project, as incorporators of a Joint Chickamauga Memorial Association, for preserving and marking the battle-field.

At a subsequent meeting a list of incorporators and the outlines of a charter were agreed upon, and Senator Colquitt was appointed to take the necessary steps to secure the incorporation. He placed the matter in the hands of Julius Brown, esq., of Atlanta, who gave the matter prompt attention and prepared and advertised a petition for a charter, which was granted at the December term of the superior court of Walker County, Georgia.

On the 19th of September, 1889, a joint meeting of Union and Confederate veterans was held at the tent in Chattanooga erected for the meetings of the Society of the Army of the Cumberland. The meeting was under the auspices of the following local committees:

On Chickamauga Memorial Association.—Adolph S. Ochs, chairman; A. G. Sharp, S. B. Moe, J. F. Shipp, W. J. Colburn, H. S. Chamberlain, C. W. Norwood, J. B. Nicklin.

On Chickamauga barbecue.—Gordon Lee, chairman; W. P. McClatchey, secretary.

THE FIRST MEETING IN CHATTANOOGA.

The big tent wore a pretty aspect when the immense throng of old soldiers assembled there for the purpose of organizing the Chickamauga Memorial Association.

There were the soldiers of the blue and the gray, the veterans of both sides, the brave men who fought beneath the Stars and Stripes and those who battled under the stars and bars. There they were, seated together side by side, all intent upon one great purpose, and the heart of each one swelling with love and good feeling for the other, all blessing the day that has bound together the North and the South and finally welded the hearts of the blue and the gray.

Every one was earnest and every heart seemed to be fully in the matter. It was truly a movement and an assemblage that would cry aloud—

"Blot out the lines that would divide
And desecrate our sod!"

The big tent was handsomely decorated. Upon the center-pole numbers of flags hung upon which were inscriptions of various sorts. From this pole wide bands of bunting were drooped in graceful festoons, and the side-poles were completely covered with the national colors.

From the dome on the west side of the tent swung an immense canvas sign, bearing the inscription:

"That government of the people, by the people, for the people, shall not perish from the earth."

On the east side of the tent was the large raised platform, handsomely decorated, indeed. Flags and streamers were hung gracefully from front to rear, and draped in pretty folds round the stand in the front center of the platform. In the exact center and on the right and left front corners were large pyramids of ferns, cactus, mosses, youpon, wistaria, smilax, etc.

The first to march into the tent were the Union veterans, headed by the Fort Payne band. The column was headed by General W. S. Rosecrans and General Cist. As they marched into the tent the crowd thronged upon the outside and cheered lustily.

Following this came the Confederate veterans, headed by the Fourth United States Artillery band, and as they marched under the vast canvas the band struck up "Dixie." In an instant a thousand men were on their feet waving their hats and cheering loud and long. Nor did those cheers come alone from those who revere the memory of a dead Confederacy as they would that of a dead mother, but from men upon whose breasts gleamed the badges of the Army of the Cumberland and who wore the blue with so much honor.

At 3 o'clock Mr. Adolph S. Ochs, on behalf of the local committee, called the meeting to order, and, on behalf of the people of Chattanooga, wishing a hearty God-speed to the grand movement and extending a hearty welcome both to the blue and the gray.

A beautiful prayer was then offered by Rev. Dr. Bachman.

Capt. J. F. Shipp, of N. B. Forrest Camp, No. 3, Confederate Veterans, put in nomination for chairman the name of General W. S. Rosecrans, prefacing the nomination with several complimentary allusions to the general and designating him as a man admired by both the blue and the gray.

This nomination was greeted with much enthusiasm, and General Rosecrans was elected to the chairmanship by acclamation.

Capt. J. F. Shipp, General John Glynn, jr., and General Ferd. Van Derveer were appointed a committee to escort General Rosecrans to the chair, which they did amid deafening applause.

After quiet had been restored General Rosecrans spoke as follows:

ADDRESS OF GENERAL W. S. ROSECRANS.

Ladies and Gentlemen and Comrades of the Blue and the Gray:

This occasion is one of which you will look through history in vain to find a second. To-day twenty-six years ago began the great bloody battle of Saturday, the 19th day of September, 1863, within 12 miles of this place, and the survivors of that battle, both blue and gray, and the people who to-day enjoy the fruits which grew out of that battle are assembled together to consider how they shall make it a national memorial ground, which people of all time shall come and visit with the interest due to the greatness of the events which occurred on that battle-ground. One of the most noble features to me of this occasion is this: it is very difficult to find in history an instance where contending parties in after-years meet together in perfect amity. It took great men to win that battle, but it takes greater men still, I will say morally greater, to wipe away all the ill feeling which naturally grows out of such a contest. [Applause.]

To me there is another feature of peculiar interest, and that is that there has been no time since the war when the noble sentiments of the survivors and respect felt by the people of the South for the men who fought and fell in their cause could systematically undertake to commemorate the deeds they performed and to keep alive their memories by the erection of monuments, without incurring the complaint of the newspaper press that they were keeping up the memories of the war and the feelings of hatred which ought to perish as peace returns.

On the soil of Georgia both the blue and the gray can unite in obtaining control over the grounds, laying out the roads and marking sites where the men entitled, in their opinion, to special respect and special veneration may have monuments erected to their memories, where the organizations who choose to do so can put up monuments to the heroism displayed on those fields, without criticism and with rather the feeling of comradeship. That to me is a very noble thing, and I believe that the spirit which brings you here on this occasion and the foundation upon which your views of that thing rests conspire to produce a result very wonderful indeed.

You will be told a great many things by those who will follow me to show how strong the foundation of our expectation is that we are commencing a national event at this meeting this afternoon.

As I am quite unfitted for public speaking and heartily detest the task, I think what I have said will be enough to show to you how thankful I am to be with you and to be called upon to preside over this meeting.

The first exercise in order will be some remarks from General H. V. Boynton, who deserves the thanks of everybody, and especially of the comrades of the Army of the Cumberland, for his work in studying up this subject and he will tell you a great deal more than I can about it.

I have the pleasure to present to you General H. V. Boynton.

It is eminently proper to here give this elegant, comprehensive, and indeed exhaustive address of General Boynton. No man could do it better, for no man knew more about it than he.

It is as follows:

ADDRESS OF GENERAL H. V. BOYNTON.

My Friends:

I have been asked to make a statement of the objects which those members of the Society of the Army of the Cumberland who conceived the idea of a Joint Chickamauga Memorial Association have in view, the motives which actuate them, and the methods by which they hope to attain the desired ends. These I will attempt to set forth in brief form.

Perhaps if I take a few moments in going over the path which led some of us to a deep interest in this project, it may suggest to you strong reasons in support of it.

A year ago last summer it was my privilege to revisit Chickamauga in company with my old commander, General Van Derveer. The ride was the more impressive because the day was Sunday. On reaching the Cloud House, on the northern boundary of the field, there came to us from a country church near by the voices of solemn song.

The last music which had fallen on our ears as we left that field a quarter of a century before was the screech, the rattle, and roar, and thunder of that hell of battle which had laden the air with horror through all that earlier and well remembered Sabbath.

In a moment, as with a flash, memory peopled those scenes for us with the actors of that other day. We gloried in Rosecrans and mourned that Thomas did not still live to enjoy his ever-increasing renown.

We saw Baird's, and Johnson's, and Palmer's, and Reynolds's immovable lines around the Kelley farm. We recalled Wood on the spurs of Snodgrass Hill, and Brannan and Grosvenor, and Steedman under Granger, on the Horseshoe.

There rolled back on the mind the unequaled fighting of that thin and contracted line of heroes and the magnificent Confederate assaults which swept in upon us time and again, and ceaselessly, as that service of all the gods of war went on throughout those holy hours.

Then—thinking of our Union lines alone—we said to each other: "This field should be a Western Gettysburgh, a Chickamauga memorial."

It was but a flash forward in thought to our present plan, and the proposition became "Ay, it should be more than Gettysburgh, with its monuments along one side alone; the lines of both armies should be equally marked."

We went over the ground where Forrest's and Walker's men had marched on

Saturday into the smoke of our rifles and the very flame of our batteries. Again we saw their ranks melt as snowflakes disappear over the heat of conflagration.

We stood on Baird's line, where Helm's brigade went to pieces, but not till three men out of every four—think of that!—not till three men out of every four were dead or wounded.

We saw the waves of Longstreet's men roll in on the difficult slopes of the Horseshoe, dash wildly and break there, and recede, only to sweep on again almost with the regularity of the ocean surges, and ever marking a higher tide.

We looked down again on those slopes, slippery with blood and strewn thick as with leaves with all the horrible wreck of battle, over which, and in spite of repeated failure, these assaulting columns still formed, and reformed, and came on.

And then, thinking of this as fighting alone—grand, awe-inspiring, magnificent fighting—the project of a Joint Chickamauga Battle-Field Association was born in the mind.

I stood silent and thought reverently of that unsurpassed Confederate fighting, and in my heart I thanked God that the men who were equal to such endeavors on the battle-field were Americans. Behold the essentials and the essence of our project!

Let all the lines be marked. Let the whole unbroken history of such a field be carefully preserved.

So thinking, on my return home I wrote of Chickamauga to the Cincinnati Commercial-Gazette, of August 17, thus publicly suggesting the scheme:

"The survivors of the Army of the Cumberland should awake to great pride in this notable field of Chickamauga. Why should it not, as well as Eastern fields, be marked by monuments and its lines be accurately preserved for history? There was no more magnificent fighting during the war than both armies did there. Both sides might well unite in preserving the field where both, in a military sense, won such renown."

The idea received much and only favorable comment in the North.

General Cist, the secretary of the Society of the Army of the Cumberland, was the first to take a practical step in the matter. On Chickamauga day, September 20, of last year, he introduced a resolution at the Chicago meeting for the appointment of a committee to consider the question of securing and preserving the field and marking all the lines upon it. Our meeting to-day, preparatory to formally organizing our association, is the direct outgrowth of General Cist's resolution.

Twenty-six years ago to-day the thunders of the deadliest battle of modern times were rolling over the low lands and re-echoing from the mountains which look down upon Chickamauga. Many great fights shook our continent and attracted the attention of the world as our war went on; but the splendid facts of the bitter, stubborn, and desperate contest along the unknown stream, in the thick forests which lined it, and on the ridges which dominated them, were, for years, almost as completely hidden from the public as were the armies which operated over this obscure and tangled field.

But as the publication of the official records of both armies has progressed, and made intelligent study of the strategy and the fighting of Chickamauga possible, the battle has been gradually unrolled before the public until it stands to-day where those of us who participated knew so well that it deserved to rank—for both armies—as the most stubbornly contested battle of the war. And not only this, but the percentages of its casualty lists are found to exceed those of Napoleon's most noted battles, as well as those of all the later fields of modern Europe. This conclusively appears from some facts which I have heretofore presented in print in regard to Chickamauga and which are pertinent here.

The marvel of German fighting in the great battle of Mars-la-Tour was performed by the Third Westphalian regiment. It suffered the heaviest loss in the German army during the Franco-Prussian war. It went into battle 3,000 strong, and its loss was 49.4 per cent. There was nothing in the campaigns of which this formed a part which exceeded these figures, and they became famous throughout the German army. And yet in our war there were over sixty regiments whose losses exceeded this. Seventeen of them lost above 60 per cent. and quite a number ranged from 70 to 80. There were over a score of regiments on each side at Chickamauga whose loss exceeded that of the Westphalian regiment.

The battle was desperate from the moment it opened till its close. For the most part the lines fought at close range, and, in the countless assaults, often hand to hand. On the first day there were no field-works of any kind. On the second, Thomas was protected on the Kelley farm by such rude log works as could be hastily thrown together. Brannan, after the break on Sunday, and Steedman were without a semblance of works. The battle, in the main, on both sides, was dogged, stand-up fighting far within the limits of point-blank range. For the second day, on the Confederate side, the contest was one continued series of brave and magnificent assaults.

A reference to the losses on each side will show that there has been no exaggeration in the description of the fighting. Rosecrans's loss was 16,179. This included 4,774 missing, of whom a large number were killed or wounded. Bragg's losses, as compiled and estimated at the war records office, were 17,804. Thus the total loss for each army was over 25 per cent. of the entire force of each, and it will be found to average about 33 per cent. on each side for the troops actually engaged.

Longstreet's wing of the Confederate army lost 44 per cent., nearly all of this on the second day and the largest part of that in an hour and a half on Sunday afternoon.

Steedman's and Brannan's divisions, which confronted a portion of Longstreet's assault, lost, the first, 49 per cent. in four hours, and all these were killed or wounded but one, and the second an average of 38 per cent., while one brigade—Van Derveer's, of Brannan—lost only a fraction less than 50 per cent.

For the entire Union Army the losses ranged from these maximum figures down to 33 per cent., a terrible minimum of one in three.

Bushrod Johnson's division lost 44 per cent., Patton Anderson's brigade, of Hindman's, 30 per cent., and most of this on Sunday afternoon. Bate's brigade of Stewart's division, lost 52 per cent. Preston's division, in an hour and a half before sunset on Sunday, lost 33 per cent., and Gracie's brigade nearly 35 per cent. in a single hour while assaulting Brannan's position on the Horseshoe. The brigade losses in Cheatnam's division ranged from 35 to 50 per cent. The aggregate loss in Breckinridge's division was 33 per cent., while Helm's Kentucky brigade lost 75 per cent. Cleburne's loss was 43 per cent.

These figures become the more significant when compared with the statement of losses of the world's noted battles. General Wheeler, the distinguished Confederate cavalry commander, thus vividly presented this question at the gathering of the Society of the Army of the Cumberland and Confederates at Chattanooga in 1881:

"Waterloo was one of the most desperate and bloody fields chronicled in European history, yet Wellington's casualties were less than 12 per cent., his losses being 1,432 killed and 9,528 wounded out of 90,000 men, while at Shiloh, the first great battle in which General Grant was engaged, one side lost in killed and wounded 9,740 out of 33,000, while their opponents reported their killed and wounded at 9,616, making the casualties about 30 per cent. At the great battle of Wagram, Napoleon lost but about 5 per cent. At Wurzburg, the French lost but 2½ per cent., and yet the army gave up the field and retreated to the Rhine. At Rocour, Marshal Saxe lost but 2½ per cent. At Zürich, Masséna lost but 8 per cent. At Liegnitz, Frederick lost but 6½ per cent. At Malplaquet, Marlborough lost but 10 per cent., and at Ramillies the same intrepid commander lost but 6 per cent. At Contras, Henry of Navarre was reported as cut to pieces, yet his loss was less than 10 per cent. At Lodi, Napoleon lost 1½ per cent. At Valmy, Frederick lost but 3 per cent., and at the great battles of Marengo and Austerlitz, sanguinary as they were, Napoleon lost an average of less than 14½ per cent. At Magenta and Solferino, in 1859, the average loss of both armies was less than 9 per cent. At Wörth, Specheran, Mars-la-Tour, Gravelotte, and Sedan, in 1870, the average loss was 12 per cent. At Linden, General Moreau lost but 4 per cent., and the Archduke John lost 7 per cent. in killed and wounded.

"Americans can scarcely call this a lively skirmish. At Perryville, Murfreesborough, Chickamauga, Atlanta, Gettysburgh, Missionary Ridge, the Wilderness, and the average of killed and wounded on one side or the other was over 30 per cent."

And when it is considered that this degree of bitter fighting was persistently maintained by both sides throughout two days, without any defensive works deserving of the name, and for the most part without any at all except as the natural features of the ground supplied them in part to the Union side, it is readily seen that there is no other field of the war which more fully illustrates the indomitable courage and all the varied fighting qualities of the American veteran. A large number of organizations on both sides in that battle came out of it with a loss of every other man who entered it, killed or wounded.

The assaults on the Confederate side were without parallel in the war. Pickett's charge at Gettysburgh was a single effort. But Longstreet's entire wing at Chickamauga assaulted time and again on more difficult ground than the slopes of Cemetery Hill. There were three general assaults which each deserved to rank with Pickett's charge, while the Union defense of the Horseshoe Ridge is without parallel in the war. So thin a line of heroes never before successfully withstood such tremendous assaults. Of the whole battle, from opening to close, there was never a truer thing written than General Hindman's words in regard to his conflict with Granger's troops: "I have never known Federal troops to fight so well. It is just to say also that I never saw Confederate soldiers fight better.' And Kershaw, of Longstreet's Virginia troops, who had seen all the fighting in the Army of Northern Virginia, said of one of the Confederate assaults which Brannan repulsed: "This was one of the heaviest attacks of the war on a single point."

Surely the ground of such fighting deserves to be preserved for pilgrimages and historic study. To illustrate the attainments of soldierly endeavor with which the veterans of each army distinguished themselves in our war there is no spot of fighting ground in which each can take a greater pride or where each can lay stronger claims to victory. While the Confederates secured and held the field, General Rosecrans gained his objective—Chattanooga.

Chickamauga is, then, beyond question, the most noted battle-field of modern times when measured by the stubborn and undaunted fighting done upon it—a standard whose fairness there will be none to dispute.

We meet here surviving veterans of that field, ranged once in confronting lines, fringed with all that made war horrible or gilded its horrors with glory. We, who fought as iron veterans fight, gather here to-day under one flag, citizens of one country, to celebrate and take measures to perpetuate the memory of the fighting which will cause Chickamauga to take first rank among the battles of the world.

So far as I understand it, this is in no sense a political move. Nor need it be regarded as non-partisan. Speaking for myself, I do not desire to be misunderstood. I yield to no man an iota of my convictions. They are as dear to me and as clear to my mind as when we fought for them. On the other hand, for the purposes which we seek here, I ask no one of the brave men who fought for their convictions under a different flag to yield them in any degree to me. These differences we do not discuss, nor do they properly enter into our project.

That contemplates mainly American fighting as fighting, the celebrating in enduring bronze and marble the achievements of American manhood as illustrated in the unsurpassed pluck and endurance, the stubborn, desperate, and magnificent fighting performed by each side on this field of Chickamauga.

We propose to take a very important, very necessary, and eminently practical step beyond the far-famed Gettysburgh Memorial Association, and ascertain and permanently designate all the lines of both armies, and set up tablets to mark the lines of advance and the extreme points reached by each squadron, battery, or regiment, be it Union or Confederate, and to state their strength and losses, to the end that the ordinary visitor and military student shall be able, one and all, to understand our great object-lesson of American prowess on the field of battle.

As to the ways and means of our project, we propose to go before Congress at its coming session and ask it to appropriate a sufficient sum to buy the entire field from Rossville Gap to Crawfish Springs, or so much thereof as the directors, when our organization is complete, may deem expedient to secure. This purchase, of course, must be contingent upon the State of Georgia ceding jurisdiction to the Government for the sole purpose of maintaining a national military park.

There is no intention of dispossessing the present owners and occupants of the field. It would be better that they should remain, upon conditions advantageous to themselves, to preserve its roads and its outlines of field and forest, and its farm-houses, as they were at the time of the fight. But these things belong to the details of the project, and it will doubtless be easy to arrange them all so as to give general satisfaction.

Eleven Northern and eleven Southern States had organizations in the battle, and Kentucky, Missouri, and Tennessee had troops on each side. The United States were represented by nine organizations. The General Government will without doubt appropriate liberally, as it has done for the Gettysburgh field, to mark the positions of the regular regiments and batteries. The purpose is to ask each State to erect monuments to mark the ground where its troops distinguished themselves. There must, therefore, be a joint management of the park by the Government and the States interested, the manner of which must be left to Congress and those charged with working out the details of the plan.

To our proposed park, ending at Rossville Gap, the city of Chattanooga and its immediate surroundings, Lookout, Orchard Knob, and Missionary Ridge, properly attach themselves and enlarge the dimensions of our scheme and make it unsurpassed and unsurpassable as a place for interesting pilgrimages or military study. Here the natural features, which for all time will clearly mark the lines of battle, are such that scarcely anything is needed except tablets to mark the position of forts and headquarters, to complete it as an addition to the project we are here considering. The roads now exist leading from Rossville to the extreme north point of Missionary Ridge, and from Chattanooga to all other points of chief interest in the noted fields about the city.

No words from me to you, who can, with vivid memory, repeople the fields and the surroundings of Chattanooga with the battle pageants which will make them illustrious for all time, are necessary to enforce our project or make it clear that when once established it must excite universal and continuing interest.

Among the Ohio soldiers who carried the flag of their country and that gallant State to high honor and imperishable distinction upon the battle-fields of the war, none was more faithfully patriotic, untiring, and self-sacrificing than was General H. V. Boynton. He fought in all the campaigns of the Army of the Cumberland, including Chickamauga.

His intelligence has contributed largely to the development of our plan. His study of the battle-fields and of the battles of the war has made him an authority of uncommon excellence as to all that pertains to Chickamauga, its campaign, its carnage, its fame, and its history. An association has been formed under the laws of Georgia,

and I present here the final proceedings leading up to the organization of the Chickamauga Association.

CHICKAMAUGA MEMORIAL ASSOCIATION.

[Official proceedings.]

CHURCH ON THE BATTLE-FIELD OF CHICKAMAUGA,
Crawfish Springs, Walker County, Georgia, September 20, 1889.

At a joint meeting of the Veterans' Associations of the Blue and the Gray, held this date as above designated, Mr. Adolph S. Ochs, chairman of the local committee on the Chickamauga Memorial Association, called the meeting to order and suggested the election of a chairman. So ordered.

General Henry M. Cist was unanimously elected, and General H. V. Boynton and Col. T. M. McConnell appointed to escort him to the chair.

On motion, Mr. Ed. T. Manning was unanimously elected secretary.

The chairman stated the object of meeting, and in connection therewith Mr. Adolph S. Ochs read the petition for charter, which would be shortly granted.

On motion of Mr. Ochs all members present were enrolled as members of the Chickamauga Memorial Association.

General Grosvenor spoke advocating the immediate election of officers.

General Fullerton coincided in such action.

General Grosvenor then placed in nomination for the first president of the Chickamauga Memorial Association General J. T. Wilder, of Tennessee.

Seconded by Capt. J. F. Shipp.

General Wilder was declared the unanimous choice of the associations present and represented.

General Wilder, being present, accepted the trust.

Captain Shipp placed in nomination for vice-president General Joseph Wheeler, of Alabama.

Seconded by General H. V. Boynton.

General Wheeler was declared unanimously elected.

Capt. George B. Guild nominated General Marcus J. Wright, of Washington, D. C., as secretary, who was unanimously elected.

General Grosvenor nominated General J. S. Fullerton, of St. Louis, Mo., who was unanimously elected treasurer.

Secretary Manning then read the list of directors submitted by the Ex-Confederate Veterans' Associations:

Alabama—General Joseph Wheeler.
Arkansas—Capt. C. R. Breckinridge.
Florida—General T. Finley.
North Carolina—General D. H. Hill.
South Carolina—General E. M. Law.
Tennessee—General Marcus J. Wright.
Texas—General Roger Q. Mills.
Virginia—Hon. George D. Wise.
Georgia—General Alfred H. Colquitt.
Georgia—General James Longstreet.
Kentucky—General Joseph H. Lewis.
Louisiana—General Randall L. Gibson.
Mississippi—Col. Charles E. Hooker.
Missouri—General F. M. Cockrell.

General Boynton then presented the following list of directors, submitted by the ex-Union officers:

Kentucky—Col. G. C. Kniffen.
Minnesota—General J. W. Bishop.
Ohio—General Henry M. Cist.
Ohio—General C. H. Grosvenor.
Ohio—General Ferd. Van Derveer.
Tennessee—General Gates P. Thurston.
Missouri—General J. S. Fullerton.
Indiana—General J. J. Reynolds.
Tennessee—General J. T. Wilder.
Illinois—General A. C. McClurg.
United States Army—General A. Baird.
United States Army—Col. S. C. Kellogg.
Washington, D. C.—General W. S. Rosecrans.
Washington, D. C.—General H. V. Boynton.

On motion of Mr. H. S. Chamberlain, seconded by Col. J. H. Duggan, the election of directors, twenty-eight in number, as herein named, was made unanimous.

On motion of General Thurston, the two officers present were authorized to call a meeting of the board of directors at such time as they think best and to take such other action as they may deem necessary.

General Wilder then stated that the superior court would soon issue the charter, and if authorized he would accept the same. He was duly empowered.

On motion, the associations of the blue and the gray then adjourned.

HENRY M. CIST, *Chairman.*
ED. T. MANNING, *Secretary.*

In making up the list of incorporators the selections from each State were made as nearly as practicable in proportion to the troops each had in the battle.

After the association has been incorporated there will be an opportunity for all who choose of the veterans of either army, or of those interested in the project, whether they served in either army or not, to become members upon the payment of a membership fee of $5, which is to be paid but once, no subsequent fees of any kind being contemplated. This will entitle the subscriber to a certificate of membership and to one vote at all meetings of the association, either in person or by proxy.

The Union Army had 195 separate organizations on the field, of which 36 were batteries. The Confederate army had 274 organizations, of which 50 were batteries and 6 belonged to the Confederate regulars. These were thus divided among the States:

Union.—Illinois, 36; Indiana, 42; Kansas, 2; Kentucky, 16; Michigan, 8; Minnesota, 2; Missouri, 3; Ohio, 56; Pennsylvania, 7; Wisconsin, 9; Tennessee, 2; United States Regulars, 9.

Confederate.—Alabama, 43; Arkansas, 17; Florida, 7; Georgia, 35; Kentucky, 7; Louisiana, 13; Mississippi, 21; Missouri, 2; North Carolina, 4; South Carolina, 18; Tennessee, 68; Texas, 16; Virginia, 7; Confederate regulars, 6.

Thus, eleven Union States and the regular Army were represented by troops in the battle, and all the Confederate States, with Kentucky and Missouri and the regular army of the Confederacy.

The association as finally formed is as follows:

CHICKAMAUGA MEMORIAL ASSOCIATION.

President: John T. Wilder, Johnson City, Tenn.
Vice-President: Joseph Wheeler, Wheeler's Station, Ala.
Secretary: Marcus J. Wright, Washington, D. C.
Treasurer: J. S. Fullerton, St. Louis, Mo.

Incorporators.

Alabama—William H. Forney, J. T. Holsclaw, W. C. Oates, Joseph Wheeler, and S. M. A. Wood.
Arkansas—James H. Berry, Clifton R. Breckinridge, Evander McNair, and L. H. Mangum.
Colorado—G. C. Symes.
District of Columbia.—Absalom Baird, H. V. Boynton, and W. S. Rosecrans.
Florida.—Wilkinson Call, Robert H. M. Davidson, and Jesse J. Finley.
Georgia.—Joseph M. Brown, Alfred H. Colquitt, J. B. Cummings, James Longstreet, Lafayette McLaws, and E. B. Tate.
Illinois.—S. D. Atkins, Lyman Bridges, A. C. McClurg, E. A. Otis, John M. Palmer, and P. S. Post.
Indiana.—Joseph B. Dodge, W. Q. Gresham, J. J. Reynolds, M. S. Robinson, G. W. Steele, and J. T. Wilder.
Iowa.—Frank Hatton and W. P. Hepburn.
Kansas.—John A. Martin.
Kentucky.—C. D. Bailey, J. C. S. Blackburn, R. M. Kelly, C. G. Kniffin, Joseph H. Lewis, Alfred Pirtle, and W. J. Stone.
Louisiana.—Randall L. Gibson and Felix Robertson.
Michigan.—H. M. Duffield and A. W. Wilber.
Minnesota.—J. W. Bishop and R. W. Johnson.
Mississippi.—Charles E. Hooker, J. Bright Morgan, Jacob M. Sharp, J. A. Smith, and Edward C. Walthall.
Missouri.—Joseph S. Fullerton, William Henry Hatch, Robert McCulloch, John S. Melton, and W. H. Wade.
New York.—C. A. Dana and A. G. McCook.
North Carolina.—William R. Cox, David H. Hill, Charles W. McClammy, and Matt W. Ransom.
Ohio.—H. M. Cist, W. Goodspeed, Charles H. Grosvenor, P. P. Lane, J. G. Mitchell, J. G. Taylor, and Ferd. Van Derveer.
Pennsylvania.—William J. Palmer, John Tweedale, and John G. Vale.
South Carolina.—Ellison Capers and E. M. Law.
Tennessee.—Frank C. Armstrong, William B. Bate, John C. Brown, S. B. Maxey, Adolph S. Ochs, Lucius E. Polk, Alexander P. Stewart, Gates P. Thruston, and Marcus J. Wright.
Texas.—C. B. Kilgore, Roger Q. Mills, and William B. Sayers.
Virginia.—R. A. Brock, I. M. French, and George D. Wise.
Wisconsin.—H. C. Hobart and John Mitchell.
United States Army.—J. M. Brannan, H. C. Cushings, S. C. Kellogg, Frank G. Smith, and Thomas J. Wood.

In this connection I present tabulated statements, as follows:

First. The rebel forces at Chickamauga.

CHICKAMAUGA.—BRAGG.

States.	Infantry.	Cavalry.	Artillery.	Total.
Alabama	23	5	15	43
Arkansas	12	1	3	16

Maryland	3	West Virginia	4
Michigan	9	U. S. Regulars	10

In this connection I desire to incorporate into my speech, and make part thereof, a report of the Committee on Military Affairs, of this House, in favor of the passage of this bill:

[House Report No. 643, Fifty-first Congress, first session.]

Mr. LANSING, from the Committee on Military Affairs, submitted the following report, to accompany bill H. R. 6454:

The Committee on Military Affairs, to whom was referred the bill (H. R. 6454) to establish a national military park at the battle-field of Chickamauga, having had the same under consideration, respectfully report the same with an amendment, and recommend that the bill as amended do pass.

The bill under consideration establishes as a national military park the approaches which overlook and the ground upon which occurred some of the most remarkable tactical movements and the deadliest fighting of the war of the rebellion, namely, the fields of Chickamauga and Chattanooga.

The preservation for national study of the lines of decisive battles, especially when the tactical movements were unusual both in numbers and military ability, and when the fields embraced great natural difficulties, may properly be regarded as a matter of national importance.

This your committee understands to be the underlying idea of that noted organization of Union soldiers, the Society of the Army of the Cumberland, with whom the pending project originated. Interested with them and supporting them in the movement we find leading representatives of all the Eastern and of all the Western armies; and for this we find ready explanation in the fact that all the armies and nearly every State of the North and each State of the South had troops on one or both these fields.

The proposition to mark the lines of both sides is held to be absolutely necessary to a clear understanding of the fields and to the sufficient illustration of the persistent, stubborn, and deadly fighting of American soldiers, which made the field of Chickamauga for both sides, as the statistics show, one of the bloodiest, if not the bloodiest, battle-field for the numbers engaged and the time of their fighting of any of the great battles of the modern world from the days of the first Napoleon to the close of the war for the Union.

The corresponding field for eastern operations is Gettysburgh, where every State in the Union is interested, and the necessity of marking both lines to an intelligent study of the field has been recognized in a proposition before this Congress to provide for marking the Confederate lines upon that noted field.

The proposed Chickamauga and Chattanooga national park consists of two features, the approaches and the park proper. It is expected that title to the former will be obtained by the United States, without cost, through cession of jurisdiction by the States of Tennessee and Georgia, respectively, of the public roads now in existence, and which it is proposed to utilize as approaches to the park. No appropriation is therefore made for their purchase, and informal assurances have been given for their prompt cession to the United States.

The battle-field of Chickamauga proper forms the body of the park. As described in the bill, it embraces about 7,600 acres. It is proposed to obtain title to this by condemnation under the general act. In order that no resident on the tract may feel himself driven from home or from his possessions, it is provided that the Secretary of War may arrange with all who desire to remain to lease their lands at a nominal rent, the conditions on their side being that they will aid in the care of the grounds and in preserving all the natural features of the field as they now exist.

The approaches to the field form most important adjuncts of the proposed national park. The approach from Chattanooga begins at or near Sherman Heights, at the north end of Missionary Ridge. This is the battle field of the Army of the Tennessee, under General W. T. Sherman, during the operations about Chattanooga, November 23, 24, and 25, 1863. From this point this approach runs along the crest of Missionary Ridge to Rossville Gap. Throughout its whole length it overlooks the battle-field of General Hooker's troops from the Army of the Potomac on Lookout Mountain and terminates where these troops after the battle on the mountain reached and crossed Missionary Ridge. This approach also overlooks the ground of the first day's operations about Orchard Knob, and coincides throughout its length with the lines of General Bragg's army, and thus passes along the entire front of the famous assault of the Army of the Cumberland, under General Thomas upon Missionary Ridge.

The continuation or this first-described approach is the Lafayette or State road from Rossville, Ga., passing through the center of the battle-field of Chickamauga, and being the axis and the prize of the fight, to Lee & Gordon's mills on the Chickamauga River, which was opposite the center of the Confederate army at the opening of the battle, and thence to Crawfish Springs, the point from which the Union Army advanced to the battle, and thence to Glass' Mills, on the Chickamauga, the left of the Confederate line of battle. The third approach is the road from the junction of the first two at Rossville, Ga., along the northern foot of Missionary Ridge, to McFarland's Gap, being the road over which the Union Army advanced to Chattanooga after the battle, and forming the entrance to the northern portion of the proposed park. These are all roads which, for the most part, like those of the battle-field itself, have a stony or flinty foundation, and which require comparatively little care, and all of them are to be obtained without cost to the United States.

The following are the lengths of the approaches and roads thus to be ceded to the United States without cost:

	Miles.
Sherman Heights to Rossville	6
Rossville to Lee & Gordon's	7
Rossville to McFarland's Gap	2
McFarland's Gap to Crawfish Springs road	6
Lee & Gordon's mills to Crawfish Springs	2
Crawfish Springs to Glass's mills	2
Total	25

[This total does not include 14 miles of road added by Senate and House amendments and which are shown on the accompanying map.]

The purpose is to maintain the body of the park, which embraces the field of Chickamauga, as nearly as may be in its present condition as to roads, fields, forests, and houses. There have been scarcely any changes in those respects since the battle except in the growth of underbrush and timber. Almost the only work of any consequence in the restoration of the entire field to its condition at the time of the battle will be the cutting away of underbrush over a very limited area.

The roads as they now exist are the same as were used in the battle, and very little road construction will hereafter be necessary to give access to every point of interest on the field. When, therefore, once established the cost of the care of the park and its approaches will be very small.

The area which it is proposed to acquire for the park by condemnation contains, as nearly as may be, 7,600 acres. The land is largely forest and ridge land, though there is considerable good farming land in the tract. The average cost of the whole can not, with all improvements, exceed $20 an acre. The sum appropriated by the bill, which is $250,000, will be ample for the comple e establishment of the park, including preliminary surveys, fixing its boundaries, surfacing its roads, and ascertaining the military positions.

The purpose is to have each State which had troops engaged on the field provide the monuments for marking the positions of the troops, after the general plan heretofore pursued at Gettysburgh by the Gettysburgh Battle-Field Memorial Association. This work will be performed at Chickamauga and Chattanooga by the Chickamauga Memorial Association, acting under the supervision of the Secretary of War. This latter association is incorporated under the laws of Georgia. Its charter specially states that it will not issue stock, and that its objects are not pecuniary gain. Its incorporators number one hundred, half of them ex-Union veterans of prominence in the battle, and the other half ex-Confederate soldiers of equal prominence on their side.

The sole expense to the United States for monuments will be those for marking the positions of the regular regiments and batteries, being only 16 in number for both fields.

The approaches to the park which traverse Missionary Ridge can be cheaply and quickly reached from Chattanooga by four turnpikes, and by steam and electric railroads, upon which the fare is 5 cents. The Chickamauga field can be reached by railroad in fifteen minutes from Chattanooga, this road traversing the whole field from McFarland's Gap to Crawfish Springs. Two other railroads will add facilities for reaching other portions of the park as soon as its establishment is secured.

Your committee finds the interest in this project wide-spread. To such an extent is this true that it may properly be called national. The recent demands for the new maps of Chickamauga from every section of the Union illustrate this fact. The Union armies of the Tennessee, the Cumberland, and the Potomac, under Generals Sherman, Rosecrans, Thomas, and Hooker, all finally united under General Grant, are equally interested in preserving the lines of this extended and notable battle-ground.

On the Confederate side the armies of the Tennessee, of Northern Virginia through General Longstreet's corps, of the Mississippi through General Johnson's troops, and General Buckner's army from East Tennessee were all engaged.

The regular Army had nine regiments and seven batteries on these fields, while the following eighteen States had troops in the Union Army engaged in these movements: Maine, Massachusetts, Connecticut, New York, Pennsylvania, New Jersey, Maryland, Ohio, Indiana, Kentucky, Michigan, Wisconsin, Minnesota, Iowa, Illinois, Kansas, Missouri, and Tennessee. Every Confederate State had troops on these fields, while Kentucky, Missouri, and Tennessee contributed numerously to both armies.

As already stated, the figures show Chickamauga to rank for the numbers engaged and the time of their fighting among the most noted battles of the modern world.

Wellington lost 12 per cent. at Waterloo; Napoleon, 14¼ per cent. at Austerlitz and 14 per cent. at Marengo. The average losses of both armies at Magenta and Solferino, in 1859, was less than 9 per cent. At Königgrätz, in 1866, it was 6 per cent. At Wörth, Mars-la-Tour, Gravelotte, and Sedan, in 1870, the average loss was 12 per cent.

The marvel of German fighting in the Franco-Prussian war was by the Third Westphalian Infantry at Mars-la-Tour. It took 3,000 men into action and lost

49.4 per cent. Next to this record was that of the Garde-Schützen battalion, 1,000 strong, at Metz, which lost 46.1 per cent. There were several brigades on each side at Chickamauga and very many regiments whose loses exceeded these figures for Mars-la-Tour and Metz.

The average losses on each side for the troops which fought through the two days were fully 33 per cent., while for many portions of each line the losses reached 50 per cent., and for some even 75 per cent.

A field as renowned as this for the stubbornness and brilliancy of its fighting, not only in our own war, but when compared with all modern wars, has an importance to the nation as an object-lesson of what is possible in American fighting, and the national value of the preservation of such lines for historical and professional study must be apparent to all reflecting minds. The political questions which were involved in the contest do not enter into this view of the subject, nor do they belong to it. The proposition for establishing the park is in all its aspects a purely military project.

The Eastern armies have already the noted field of Gettysburgh upon which to mark and preserve the history of their movements and their renowned fighting. To this the Government has already made liberal appropriations to mark the positions of the regular forces there engaged and for other purposes.

It seems fitting that the Western armies should select a field and be assisted in preserving it by the General Government. It is easy to see from the facts presented that there is no other field upon which all the armies were as fully represented. There is probably no other in the world which presents more formidable natural obstacles to great military operations than the slopes of Lookout Mountain and Missionary Ridge, while, as shown, there is no field that surpasses Chickamauga in the deadliness and persistence of its fighting.

The tactical movements were numerous and brilliant on each field, and many of them remarkable. Indeed, both are as noted in this respect as in the character of the fighting.

There were present upon one or the other and in the case of most, upon both fields, Grant, Sherman, Thomas, Rosecrans, Hooker, Sheridan, and Granger, of the Union Army, and Bragg, Longstreet, Hood, Hardee, Buckner, Polk, D. H. Hill, Wheeler, Forrest, and Johnston, of the Confederate forces. The preservation of these fields will preserve to the nation for historical and military study the best efforts which these noted officers, commanding American veterans, were able to put forth.

The two together form one of the most valuable object-lessons in the art of war, and one which, looking solely to the interests of the public, may properly be preserved.

Your committee therefore recommend the passage of the bill with the amendment on page 6, which is inserted for the purpose of enabling the Secretary of War to take advantage of the whole of the coming season in expediting the establishment of the park, it having been made to appear to your committee that much preliminary work can be done while awaiting the process of condemning the land and the action of the State Legislatures in ceding jurisdiction. The accompanying map (p. 547) shows the outlines of the proposed park and the location of the approaches.

Thus, Mr. Speaker, I have presented a faithful, and I believe accurate, statement of the plan of the project and the purposes of its originators.

The plan originated with the officers of the Army of the Cumberland, and it was proper that that gallant army should take the initiative and perpetuate by this memorial its great achievements.

No matter what may be said of the general result of the battle, it conferred undying glory and imperishable honor upon the Army of the Cumberland. But the Army of the Cumberland could not forbear in its plans the taking in of the other battle-fields in the neighborhood, Lookout Mountain, Missionary Ridge, and Chattanooga, for they all form one grand historic pageant in the splendid march of American heroism.

The men who fought were from all over the country. They were from the fields made famous by the Army of the Potomac, by the Army of Tennessee, and they came from all the great fields of conflict to add undying honor and imperishable fame to their already brilliant records. Eighteen Northern States had troops there, including some from far away Maine and from Massachusetts and Connecticut.

All the Southern States had troops there. Kentucky, Tennessee, and Missouri had troops there on both sides. Surely, Mr. Speaker, this was an American battle-field.

The American name advanced in the history of heroism and martial prowess at Chickamauga.

I have already presented the enormous losses and comparative losses by reproducing the speech of General Boynton. He has made the figures both plain and startling. The losses were greater for the numbers involved and time of fighting than any battle of modern times. The campaign of Chickamauga was a campaign in the mountains. The Union troops crossed mountains and rivers, annihilated and set aside natural objects.

The Southern troops distinguished themselves as on no other battle-field. The assaults of Longstreet on Snodgrass Hill were more persistent and deadly than that of Pickett at Gettysburgh, and, without seeking to establish myself as a military critic, I feel justified and safe in saying they were much more intelligent and had greater possibilities of practical results.

Hooker's storming of Lookout Mountain is a prominent feature and will be preserved in song and story while pride in martial achievement is an element of human character. It is a field which more nearly perpetuates the prowess of Americans on both sides than any other field of the war. It is an enduring field. Physically its growth of forests and underbrush are not luxurious, but are hardy and will continue.

The field itself has changed but little, and its roads have remained substantially as we left them.

The States are to mark the positions of their troops, as at Gettysburgh, but the lines are to be ascertained by the Secretary of War, and the whole park and all that appertains thereto is to be under the control of the Government and be managed by the Secretary of War.

Mr. Speaker, the preservation of a battle-field with its grand monuments, its testimonials on every hand of the patriotic sacrifices made by the loyal people of the country in behalf of the preservation of its Union, its Constitution, and its laws, is an act worthy of the highest endeavor of American statesmanship. The memories of these battle-fields will be the incentive to patriotism in the generations to come. The heroic sacrifices made by the soldiers of the war will be criteria of patriotism for a thousand years.

The young men of America in the coming generations will emulate the deeds of their fathers. As the soldier of 1861 marched to the rescue of the flag of his country his mind went back to Lexington and Concord and Brandywine and Yorktown and Valley Forge.

As the young men of America in the coming generation march to the sound of patriotism at the call of their country their minds will revert to the heroic sacrifices of the men of 1861, and the standards of their emulation will be Gettysburgh and Franklin and Vicksburg and Stone River, the Wilderness and Antietam and Chickamauga and the other battles for the Union in which their fathers bore honorable part. And in the coming days of the Republic the young men of the South and of the North and of the East and of the West of this reunited country will emulate the deeds of their ancestors, of our war.

When civil war threatens, if it ever does, the memory of the days from 1861 to 1865 will warn the people of the country and show to them the desperate tenacity with which the men of the United States will stand in the future by the Union. The Union was the trophy of the war, the temple of liberty which has been rebuilded and rebeautified by the deeds and the results of the war, resting with immutable confidence upon the substructure of the Union. To the Union we owe the glories of to-day. To the Union we look with that hopefulness which inspires our confidence in the future, and these battle-fields will be testimonials of the strength of the Union.

The mystic chords of memory, stretching from every battle-field and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.

Let us then preserve these battle-fields, and from them "the mystic chords of memory" shall unite the hearts of the American people in bands of fraternity and patriotic fellowship and all the people of the United States will unite in songs of praise to Almighty God, who made us and preserved us a nation.

Personal Explanation.

SPEECH
OF
HON. WILKINSON CALL,
OF FLORIDA,
IN THE SENATE OF THE UNITED STATES,

Monday, June 2, 1890.

On a question of privilege in reply to certain charges against him contained in a pamphlet by W. D. Chipley sent to each Senator.

Mr. CALL said:

Mr. PRESIDENT: I rise to a question of privilege.

I have here a pamphlet, extracts from which have been printed in the public prints, and which has been sent through the mails to every Senator, some of whom, as they have informed me, have read it and others consigned it to the waste basket, where it properly belongs. The pamphlet is entitled Review of Senator CALL's Record, by W. D. Chipley.

It charges upon me false swearing, The appropriation of other people's property——

Mr. SPOONER. I suppose the Senator from Florida would like to be heard, and we should like to hear him on this side of the Chamber, but it is impossible.

Mr. CALL. I shall endeavor to speak louder.

The PRESIDING OFFICER. The Senate will please be in order.

Mr. CALL. This pamphlet contains charges upon me of every species of crime, false swearing, disgraceful transactions with a Norfolk bank involving numerous misstatements, duplicity concerning the Fort Brooke reservation, the use of Senatorial knowledge for a land-grant treachery in the Indian-war matter, boodle from Littlefield, disreputable lobbying, ignorance always, reflections upon every State Democratic administration, disrespect of decisions of the United States Supreme Court, bossism, the practice of misstating, the misuse of Senatorial position for personal ends, and also calls in question my efficiency.

Mr. President, I think it is due to the Senate and to the people of a State who send a Senator here that he should so conduct himself that, while he can not hush the voice of slander and malicious falsehood, he should be able to clear himself of any imputation which malice or interest may prompt to be made against him. I hold myself subject to that rule, and I think it due to the people who have so often honored me with their confidence that I should say that this pamphlet from

the first sentence in it to the last word in it is a falsehood; that it does not contain one syllable or one word of truth; that even its commas and periods and semicolons and quotation-marks speak a falsehood.

There is no part of my public life, no part of my private life, nor of any transaction in which I have ever been engaged, which I can not easily defend and vindicate to the satisfaction of every one.

The truth is, Mr. President, that this pamphlet is intended to protect a vast appropriation of the public lands of the State of Florida by individuals, and it is a conspiracy against legislation in behalf of the people. It has no politics in it, either Democratic or Republican, but it is a conspiracy by corrupt methods to prevent such action on the part of the Congress of the United States by traducing me among the people of the State and by producing an impression upon the Senate here derogatory to me and my character to prevent such action as is necessary for the protection of the people of the country.

Why, Mr. President, here is a domain greater than many States that has been appropriated under misconstruction of the laws by the executive department of the Government and passed to the private use and fortune of a few individuals. I speak not now of the land which the State might lawfully claim under the confirmatory act of 1857 and which has been patented to her, whether rightfully or wrongfully, under the terms of the act of 1850, but I speak of that vast amount of land which remains unpatented, and of all those cases where patents covering the homes of the people have been improvidently and unlawfully issued. Under this old railroad grant of the 17th of May, 1856, and under the swamp-land selections unapproved a vast quantity of land, being an interest of hundreds and thousands and millions of dollars to a few individuals, is involved in the action which I have taken, and that is the meaning of this pamphlet.

Mr. President, it is not my design to detain the Senate here by an investigation of each one of these charges against me. It is my purpose to ask of the Senate that I may be allowed to print as a part of these remarks for my own vindication such parts of the CONGRESSIONAL RECORD as are necessary and proper, in my judgment, to exhibit the falsehood of these charges, and the letters which I have here relating to them, and the statements which are proper for my vindication against the charges of this pamphlet. If there be no objection, I will ask to be allowed, without detaining the Senate, to print as a part of my remarks these several statements and the letters and the portions of the CONGRESSIONAL RECORD which relate to them.

The people of Florida have already vindicated me by the manner in which they have received this miserable and audacious libel.

The people of Fort Myers passed resolutions at the meeting when it was first made public, pledging me their continued support and confidence. To them and to the people of Florida I make acknowledgment of my gratitude for the expressions of confidence and support which they have sent me from all parts of the State. I am proud of them, of their intelligence, their virtue, their sense of justice and right.

The following is the account of the meeting and the resolutions:

[From the Times-Union, May 19.]

THEY ARE SOLID FOR CALL.

FORT MYERS, FLA., *May* 17, 1890.

The Hon. W. D. Chipley, accompanied by Judge White of Quincy, opened the campaign against Senator WILKINSON CALL at this place Tuesday night. They were courteously received by a committee of the Democratic party. The platform in front of Parker's store had been fitted up as a rostrum and quite a large crowd was present, amongst whom were many ladies.

The colonel reviewed the record of Senator CALL at length, charging him with many crimes of a most flagrant nature; most of the charges, however, were the same that were made against him previous to his last election.

At the close of Colonel Chipley's address the crowd called for Dr. J. V. Harris, who in a short but vigorous speech completely wiped the ground up with the colonel, but in such a pleasant manner, complimenting him all the while, that he will probably get over it in time.

At the close of the doctor's speech, during which he was continually cheered, he introduced the subjoined resolutions, which were enthusiastically passed, but one person dissenting, and he simply because he was full of rum and wished to be contrary.

As soon as the resolutions were passed, some of the boys let drop a tasteful banner from the balcony above, upon which was inscribed in large letters: "Senator CALL, first, last, and all the time." The effect was somewhat electrical, but acted as a wet blanket upon the spirits of the colonel, who did not appear to be near so "chipley" as when he arrived.

The crowd broke up in much good humor, declaring that they hadn't had so much fun since Christmas.

I send you the resolutions as passed for publication.

JAMES W. BAIN.

THE RESOLUTIONS.

Whereas certain parties have undertaken to review the record of Hon. WILKINSON CALL, one of our representatives in the Senate of the United States; and

Whereas whatever concerns our Senators affects the entire party in the State, therefore we, as Democrats of Lee County, deem it proper to take some action in the matter; and

Whereas many of us have been acquainted with the private as well as the public character of Senator CALL for a long time, some of us having known him for a period of forty years: Therefore,

Be it resolved, That from the election of Senator CALL to the United States Senate to the present time we have always found him to be an earnest and able advocate of the needs and rights of his constituents, a warm supporter of Democratic principles, an honest and upright man, a firm and true friend, and a most faithful servant of the people.

Resolved, That he is especially entitled to our thanks for his defense of the public domain against the encroachment of railroads and other corporations, which would appropriate thousands of acres of unearned lands which belong of right to the people; also, for his protection of the fund due the widows and orphans of the soldiers of the Seminole war against the absorption by improperly authorized and unscrupulous adventurers.

Resolved, That he is entitled to our love for the very "enemies he has made;" and that we will not support any one as a representative to the Legislature from this county, or as a senator from this district, who does not openly pledge himself to support Senator CALL to be his own successor in the Senate of the United States.

Resolved, That the Times-Union and local newspapers be furnished with copies of these resolutions, and that the press of the State be requested to copy

GRATEFUL TO PEOPLE OF FORT MYERS.

I am profoundly grateful to the people of Fort Myers especially, and to the people of every other county in the State, for these resolutions and for their defense of me against the foul libels of this pamphlet. Everywhere in the State assurances come to me of indignation at its calumnies.

NEEDS NO DEFENSE WITH PEOPLE OF FLORIDA.

I need no defense against them with the people of Florida, and this proof of their confidence and support is to me the proudest and dearest event of my public life. I have the assurance also that here with my associates in the Senate, where I have served for more than eleven years, I need no defense against these false accusations, the offspring of avarice, of unlawful greed, and the malice of personal malevolence.

I might well afford to allow Mr. Chipley and his statements to pass from that obscurity from which he has emerged, only as the publisher of these slanders, to that oblivion to which time speedily consigns the evanescent atoms of defamation. But I owe a duty to the people of Florida and to the Senate, here, from my place, to state that this pamphlet does not contain one word or syllable of truth from its opening to its closing sentence, and that its very commas, semicolons, periods, and quotation-marks are false and express and imply false statements.

RAID OF MESSRS. CHIPLEY, WAILES & CO. ON THE PEOPLE EXPOSED.

I owe a duty also to the people of Florida who have three times elected me to the United States Senate, who have nominated me at every election for Senator since my first election by great majorities, and to the people of the United States to expose the falsehood of the statements of this pamphlet, and in doing so to bring their attention to a conspiracy against the rights of the people, the just administration of the law, and the preservation of free government as dangerous as was that of Catiline to the liberties of Rome.

This is the effort of Mr. Chipley, Wailes, and associates, land-grant and corporation agents, in their raid on the people of Florida to extort millions of dollars out of them for themselves and their foreign associates, for their land which the laws have made free to them. Its prompt publication here in Washington and its distribution to each Senator is for the purpose of preventing the passage of bills forfeiting the land grant of May 17, 1856, and giving patents from the United States to all settlers, and to all who have purchased their land from the railroad company in limited quantities, and thus giving repose, peace, and security to every man and his family in his home and improvements.

Messrs. Chipley and Wailes and associates have long done me the honor of thinking that I am the friend of the people and can not be induced to share in their nefarious schemes of extorting money from the people by selling their own homes to them and in selling them to foreign money-lenders, and if they can only make the impression here and with you that I am unworthy of confidence and respect, and thus prevent the passage of such legislation at the present time and deprive me of the people's confidence and support, it means many hundreds of thousand dollars of the people's money in their pockets.

PEOPLE CAN NOT BE INFLUENCED BY DEFAMATION.

These persons, industrious in their pursuit of gain, in their business of selling the free homes of the people, presume to insult the intelligence, the religion, the sense of public right and public duty of the people of Florida and of the Senate, by assuming that the defamation of hired correspondents and pamphlets and paid newspapers and untrue statements are the instrumentalities by which the people of Florida can be controlled and induced to look with disfavor on public servants who are faithful to the people, and elevate into power the convenient and pliable instruments of fraud and corruption.

The people of Florida have great respect for the press, and the able and pure men who make it a great means of progress, enlightenment, the correction of public wrong, and the advancement of religion and morality, but they have a contempt and loathing for the human jackals who live upon fraud, falsehood, and calumny, and upon men who seek public preferment by the use of such means.

WILLING TO TRUST THE PEOPLE WITHOUT ANSWERING CHARGES.

I was not, I am not afraid to leave my cause and the people's cause to the verdict of the people of Fort Myers, or any other community in the State, although I was not present, and they had not heard from me in denial of the statements of the agent and vice-president of the Pensacola and Atlantic Railroad Company, with its land grant of 27,000 acres to the mile of the land largely the free homes of the people of Florida, and his aids, and in the interest of the unholy and cruel wrongs to the poor man who, with his family, has made a home on the land which the laws of the United States have given to him.

FALSEHOODS OF HIRED CORRESPONDENTS OF LAND-GRANT AGENTS.

My purpose in making this statement to the Senate and to the people of Florida is to ask attention to the public interests which are involved in this attack more upon them than upon me, and to a concerted effort in the interest of the great misappropriation of public lands of the United States to control the State to fill their pockets with the people's money, and to put a mortage upon them, their wives and children.

Mr. Chipley, in his speech and in the pamphlet he has published, has fallen below the point of a just resentment, and has reached that degradation in a just public opinion where contempt is lost in pity.

There is nothing whatever to warrant, excuse, or justify his statements in his speech and pamphlet. There is not one word or syllable of truth in it. These are the falsehoods which for eleven years the hireling correspondents of persons intercsted in this misappropriation of the public lands have been paid to insert in such newspapers as would allow their columns to be used for defamation in the interest of fraud. I feel honored by being made the object of attack.

A PUBLIC SERVANT CAN NOT PREVENT SLANDER, BUT SHOULD DISPROVE IT.

A public servant, filling an important public trust for the people, should so conduct himself, not only that he may be clear of stain and reproach, but that he may at all times be able to refute and disprove slanders. I hold myself subject to this rule.

FIRST CHARGE—FALSE SWEARING.

The first charge made against me by Mr. Chipley is perjury or "false swearing."

When ex-Governor Noble A. Hull, and afterwards Mr. Harry W. Clark, was presented for postmaster at Jacksonville, Governor Hull, and after him Mr. Clark, was opposed by Mr. Dougherty, Mr. A. S. Mann, and others. Mr. S. I. Wailes, as I have reason to believe, prompted Mr. Dougherty, then member of Congress, to make the objection that I was not a citizen of Jacksonville, and therefore had no right to any special influence in the nomination, because I had stated, as he alleged, in an application for a homestead that I resided in Putnam County. The records of the Post-Office Department will prove this statement, and I have a copy of them.

The oath required me to swear that it was then my intention to make a home on this piece of land if the homestead should be allowed. The oath certainly was not that I intended to make a home upon it if it was not allowed by the Government, nor did I make oath that it was my intention to make a home and reside on it if I did not get possession of it, nor did I swear that I would not change my intention and abandon the homestead. I did not get possession of it, and I did not make my home on it. I brought suit for it and have not yet been able to obtain possession of it. It was then, and is now, my intention to make a home upon it. I ask what evidence has Mr. Chipley, in this state of facts, to accuse me of false swearing, and by what name shall be described his statement that I was "guilty of false swearing."

I leave the people to say what is the character of the man who bears false witness against another.

"TRIED TO STEAL A POOR NEGRO'S HOMESTEAD."

The second charge is that I "tried to steal a poor negro's homestead."

Let us examine this statement. If true it was most infamous, and the man who would steal another man's homestead deserves your condemnation, but not so much as the man who, without authority of law, takes many thousands of the homesteads of poor people and puts them into his pocket. The facts in this matter are of record, known to many persons and easily proved. My brother-in-law, Maj. E. C. Simkins, died, leaving his wife a Spanish grant in Putnam County, which before 1819 had been occupied. It fell to me to protect and represent her rights and interests. In my absence here on public duty a colored man named Swaim, a tenant on the place who had been allowed to live there by Major Simkins for charity, entered a three-year pre-emption on a part of this grant under an erroneous United States survey. This entry separated the place and injured it. I contested his pre-emption and it was set aside. I then applied under the law to the proper authorities to be allowed to homestead it. A contest occurred in which it was finally decided that I had a right to make the entry. I applied for possession and it was refused, and I brought suit and obtained judgment, and the case is still in contest on the point of the correctness of the United States survey. Mr. Chipley seeks by the plat which he prints to prove that I stated a falsehood in my former letter. It is only necessary for me to state that the bond for title under this grant to Major Simkins is for the land between Baldwin and Barringtons and Johnsons, and the Swaim entry is between these two descriptive points.

This charge first appeared in the anonymous correspondence of the newspapers here, known to be at the instigation of Mr. S. I. Wailes, whose clerk then (resident) in the United States land office at Gainesville was the promoter of Swaim's attempt to take Mrs. Simkins's property from her. It now appears under Mr. Chipley's personal statement of it as a truth. "It is the voice of Jacob, but the hand is the hand of Esau."

Mr. Chipley says that the entry did not cut the place in two parts. This, like all his statements, is entirely untrue. It is not in any way material except so far as it concerns my truthfulness. The plat which he shows does not prove the fact to be as he states it. It would be necessary to examine the bond for title and the plat of the Spanish survey as confirmed by the Supreme Court of the United States. The fact that this grant was always claimed to cover this land is found in the words of the bond for title, "the land between Baldwin's and Barrington's." The Swaim entry is between these two places.

The following is an extract from a letter from Inter Lachen, published in the Palatka Herald, the immediate neighborhood of the Simkins place, and states what is known to every one in that neighborhood. Referring to the Chipley pamphlet, the writer says:

Now, there are plenty of people who know about some of his charges, and some that he refers to very often in his speech, to wit, the negro Swaim's homestead. He dwells on Swaim's orange grove. Now, Swaim never planted an orange grove in his life; his wife planted ten or twelve little trees around the house, and he took them up and sold them. There was, however, a few sour trees growing on this land, and what few of them Swaim did not take up and sell are possibly standing there yet in the hammock.

As to CALL'S relatives not owning the land on each side; they do own down to the lake, north and south of Swaim's homestead. Swaim did live on the place seven years, but lived there in a cabin as a tenant on Simkins's plantation. He cultivated, or pretended to cultivate, lands in said plantation all these years, never raising enough, I do not think, any one year to pay the rent, and some years did not pay any rent at all.

This is all as to that false charge. I am thus particular about an immaterial matter to the end that I may show you the value of Mr. Chipley's statements and the persons with whom he is connected, and leave you to your own conclusions as to the objects of his pamphlet.

UNLAWFUL PATENTS OF SETTLERS' HOMES TO STATE LAND-GRANT AGENTS.

In this pamphlet, I observe on page 51, printed in parallel lines, two resolutions introduced by me, one in 1888 and the other in 1890, on the petition of many citizens of Florida; the former instructing the Committee on Public Lands to inquire whether it was essential or advisable for the protection of actual settlers on the public lands of the United States, in the State of Florida, which have been heretofore patented or certified to others than actual settlers, improvidently or without authority, to report a bill for the cancellation of such patents and referring to a former resolution which I had introduced instructing the committee to report such a bill to the Senate; also an extract from my speech in the Senate on the 14th of January, 1890, in reply to Mr. DOLPH, in which I said, "Nobody asks for any proceedings to set aside and cancel any patents." Mr. Chipley's pamphlet writer sees an inconsistency in these two statements, but there is none.

The speech in reply to Mr. DOLPH referred to the resolution then pending before the Senate, in the discussion of which Mr. Chipley and Mr. Wailes and the two railroad companies claiming these lands had been defended by Mr. PLUMB; and the language had no reference or meaning as to anything other than this or before that time. The resolution quoted speaks for itself. Anything that protects the actual settler and keeps the price of his home out of their pockets excites the anger of Messrs. Chipley & Co. and their newspapers.

Who can see anything but that which is right and commendable in canceling a patent for a settler's home unlawfully and improvidently issued? Surely these men have become insane to attack me openly on such grounds, and in a printed pamphlet boldly to claim the right to take the people's homes not only without law, but against law.

I did, I do now, and always will demand the cancellation of patents which Mr. Chipley and Mr. Wailes or any other persons have obtained unlawfully to a settler's home or improvements. The remainder is for the Legislature and the people to do or not do.

NEVER REFUSED TO MEET MR. CHIPLEY.

This libelous pamphlet commences with a falsehood and continues and ends with false statements.

I never refused to meet Mr. Chipley and any and all persons in the State opposed to me. I refused to go with him over the State and give him and his associates the concluding speech to abuse me. I attended a meeting in Pensacola where he was invited to meet me, but did not. Again, he was invited to meet me at De Leon Springs and failed to do so. Again, he was told, in my reply to him, that he would be allowed a fair hearing at all my meetings on terms fairly arranged for discussion.

Why should I be afraid to meet him? I stated in my letter that Mr. Chipley had received no mark of confidence and respect from the people of the State. Delegates to conventions and members of committees are not chosen by the people at large.

As to the hard work he has done, I deny it. I have canvassed the State at every election. I have never met him except in the last canvass when he went with us from Pensacola to Apalachicola and returned. His hard work consisted in sending out quantities of documents, chiefly his own proclamations of himself, interrupting the canvass and in his end causing a great many people unnecessary trouble. All through the canvass he was not west of the Apalachicola River, and in my opinion was only an embarrassment and obstacle to success.

SETTLERS AND PURCHASERS CAN GET TITLE ONLY THROUGH SENATOR CALL'S BILLS.

The first page of his pamphlet contains a letter purporting to be from me which contains an untruth; in this, that it is a private letter written to a person who claimed to be a friend of mine, and leaves out the context. The extract he prints from the letter is true. I repeat

it here. "Neither purchaser from the railroad company, nor settler, will ever get a title except through me," or my efforts, or the measures I advocate.

In all this statement Mr. Chipley does not state one word of truth. I never challenged Mr. Chipley to meet me. I challenged all the persons who opposed my views in reference to public land to attend my meetings and select their man, as they could not all speak at the same time, and Mr. Chipley, as one of them, was included in the challenge. The letter he prints, like all his carefully prepared statements, is so arranged as to convey an untruth.

NO ONE MAN CAN BE THE AUTHOR OF PUBLIC MEASURES.

Mr. Chipley says I am not the author of a single measure in State politics or national legislation. He says I have never been identified with any public or private enterprises within the limits of Florida with any credit to myself, the State, or people, and that my record is absolutely barren of any good.

No one person is or can be the author of a measure in State politics or legislation. No one public man in the State or out of it has been identified as a public servant with any public or private enterprise.

Is it in building railroads? If so, what part of it has the public servant been connected with? Has he furnished the money out of his own pocket or taken it out of the people's? If he has taken it out of the people's pocket, shall he build a railroad with it and give it to foreigners, and then lobby with judge and governor and Legislature to make the gift as severely oppressive and onerous to the people as possible?

I ask again, what measure of State legislation or politics is there or has there been for me or any other public man to be the author of? There is none and has been none. Mr. Chipley has not the first conception of the public policies of a State, nor of the meaning or nature of public as distinguished from private enterprises.

THE IDEA OF THE WRITER OF THE CHIPLEY PAMPHLET OF MEASURES IN STATE POLITICS AND NATIONAL LEGISLATION.

His idea seems to be that to be the author of a measure in State politics or legislation and to be identified with public or private enterprises is to obtain a charter from the Legislature as a free gift with an enormous land subsidy of 27,500 acres to the mile, and with a right to tax the people at discretion for the right to live on the land and with the further exclusive right to take all they make on the land in payment for transporting it to market and its return in the shape of goods, with a very occasional privilege of riding on the road themselves; and having obtained this free gift from the people to sell it to aliens and non-residents and put the money in the pockets of the persons obtaining the charter. This is a public enterprise and a measure in State politics and legislation, and what his writer terms the honor and glory of building a railroad.

SENATOR CALL NEVER USED PUBLIC LAND AND PEOPLE'S HOMES FOR PRIVATE ENTERPRISES.

I have not been identified with such a measure, and I never will be. Neither have I been identified with private enterprises, such as building houses for sale, merchandising, planting and cultivating groves and farms, owning mills and factories, building canals, not with my own money, but with the public land, the people's homes, and the people's taxes. Men are not elected to the Legislature nor sent to the Senate for this purpose. This is not our American idea of government.

SHOWS WHAT ARE PUBLIC ENTERPRISES.

Public enterprises, in the only sense in which this phrase can be used in connection with legislation or the duties of a legislator in our system of government, are the making of laws which establish public policies. These policies are not new, but they almost always concern subjects which have for many centuries been the concern of governments. They relate largely to taxation and its methods, to military and naval offense and defense, to the policies of war and peace, to the regulation of land tenures and titles, whether to be concentrated in the hands of a few persons or held by all the people and free to them in the first instance on condition of actual settlement and improvement; to the creation and regulation of corporations, to transportation, to the laws of health and hygiene, and local, national, and international quarantine; to coinage, to the laws regulating the relations of debtor and creditor, to the internal improvement which is committed by the Constitution and practice of our Government chiefly to the National Government, except as to the grant of charters by the States, and also to the relations of the races and to aids to education.

These are the subjects committed to a legislator, whether State or national. In them there is no room for new authorship.

The authorship of a new measure which changes the established policies of the Government is not the work of a day nor of one man, who has but one vote, but it is the consensus of opinion of all the people and their representatives, and the public servant can only give his voice and vote for that which he thinks best. I know of no important measure, either State or national, of which any one man, however great, has been the author. Thomas Jefferson had inscribed on his tomb as his claim to honor and remembrance by posterity:

Author of the Declaration of Independence and of the statutes of Virginia for religious freedom, and father of the University of Virginia.

But neither Mr. Chipley nor I am Thomas Jefferson, and it may truthfully be said that this great man and patriot and statesman only meant that he had been a most prominent advocate of these great ideas which had been formulated into laws.

SENATOR CALL SHOWS THAT HE HAS BEEN RIGHTFULLY CONNECTED WITH ALL PUBLIC ENTERPRISES.

In reply, then, to his statement that I have not been the author of any important measure of State or national policy, nor identified with any important public or private enterprise, I say that it is not true. I have been identified with every important measure of State or national policy both before the war and after from my early youth until now, while Messrs. Chipley, Wailes & Co. have been making money out of the free homes of the people and obstructing the path of legislation for cheap transportation by corrupt lobbies and by distributing free passes. My vote and voice in council and before the people have always been for the people's right for free education, for industrial education, for free homes on the public lands, for the correction of public wrongs, and the protection of the people against the rapacity and greed of lobbyists and corruptionists, for the reform of the national jurisprudence, for a system of revenue and taxation and finance that would take the heavy burden of unjust taxation from the farmers and orange-growers and agriculturists.

SENATOR CALL PROTECTED THE PEOPLE OF FLORIDA AGAINST UNLAWFUL TRIBUTE OF TWELVE MILLIONS OF DOLLARS.

For protecting them against the unlawful tribute of ten or eleven millions of dollars which Mr. Chipley and Mr. Wailes have caused to be levied on them and the future prosperity of the State.

FAST MAIL SUSTAINED BY SENATOR CALL CAUSED TAMPA'S PROSPERITY.

My vote and voice have also been given for the establishment of the fast mail line and the maintenance of other mail lines by liberal appropriations for the railroad mail service of the State.

My vote and voice have been for the just regulation of corporate power and right, according to them all just right and protection and restraining them to be the people's servant, and not the people's master; for all works of internal improvement and opening the channels of rivers and harbors, for erecting light-houses and life-saving stations to protect and encourage commerce.

These are the public enterprises which I have been commissioned by the people of the State to be concerned in and identified with, and I have obeyed them.

SENATOR CALL HAD NO INTEREST IN FORT BROOKE RESERVATION.

Mr. Chipley next states that I used my Senatorial knowledge for a land deal, and charges me with duplicity concerning the Fort Brooke reservation. This statement, like the others, I here pronounce to be absolutely false. It has been disproved by more than three respectable witnesses over their own signatures. These witnesses are Capt. John S. Tucker, of Virginia, a gallant one-armed Confederate soldier, who was the attorney of Hon. John T. Lesley and other citizens of Tampa who were then trying to obtain the reservation for the benefit of the people; Capt. H. B. Littlepage, an ex-Confederate naval officer of character, and by Hon. John T. Lesley, a distinguished citizen of Tampa. I had no interest in or connection with any land deal. I had no Senatorial knowledge about any land deal. I print the following letters which will prove Mr. Chipley's statement to be entirely untrue and without any foundation. The public record will also prove it to be untrue.

The letters of Hon. John T. Lesley and Capt. James McKay in reference to the Fort Brooke reservation were placed in my hands by Senator CALL in 1882-'83 to select a suitable attorney to represent these gentlemen, according to their request. I selected Mr. John S. Tucker.

The telegrams in question were sent by persons representing the Tampa gentlemen. Senator CALL's opposition to their entries were communicated by me to the attorney, and has always been well known to all parties claiming interests in this reservation. Senator CALL has had no connection with any of these parties, but has always opposed all entries, both theirs and all others. I was at that time employed as a clerk of Senator Johnson's committee, and for that reason was frequently in Senator CALL's company, and being well acquainted in this city was asked by him to select an attorney for Mr. Lesley and others.

The facts in this matter are well known to me and others, by whom they can easily be established.

H. B. LITTLEPAGE.

WASHINGTON, D. C., *July* 24, 1886.

Having seen an article in a Florida newspaper charging Senator CALL with double dealing and collusion with parties in Tampa in certain homestead and scrip locations made on the Fort Brooke reservation, I desire in justice to Senator CALL to make a statement of the facts within my knowledge in reference to this matter

Senator CALL, in 1883, through Capt. H. B. Littlepage, of this city, placed in my hands letters from Hon. John T. Lesley and Capt. James McKay, of Tampa, in which he was requested to obtain an entry of this reservation for the town of Tampa, and, if this could not be done, then for certain gentlemen, citizens of that town; and that if it was not in his power to give them his personal aid and support he would select a suitable attorney to represent them.

Senator CALL stated to me, through Captain Littlepage, and subsequently in person, that the writers of these letters were men of character and standing in their community, but that he was committed to the support of a bill for the donation of the land to the town of Tampa for educational and other purposes, and that he should oppose all private entries, as he had been doing, until otherwise instructed by the people of Tampa.

It is due to the Senator to say that he has always firmly and persistently maintained this position both in the Senate and before the General Land Office, and, so far from being in collusion with the parties seeking to obtain these en-

tries. I know that he has been their strongest opponent; but for him, I am of opinion that these entries would have been confirmed, or at least some of them

Very respectfully,

JNO. S. TUCKER, *Attorney at Law.*

UNITED STATES SENATE,
Washington, D. C., August 4, 1884.

I hereby state that I am a member of the Committee on Public Lands of the United States Senate, and that Senator CALL, of Florida, has repeatedly appeared before that committee during the past and previous sessions of Congress and urged the committee to report favorably a bill offered by him for the donation of the Fort Brooke reservation to the town of Tampa for public schools and parks and other purposes. Mr. CALL was quite urgent about this bill, but the committee could not find time in the press of other more important business to reach a satisfactory conclusion about it.

JOHN T. MORGAN, *United States Senate.*

UNITED STATES SENATE,
Washington, D. C., June 7, 1890.

DEAR SIR: In response to your inquiry I will state that I am a member of the Committee on Public Lands of the United States Senate, and that you have frequently, persistently, and at all times urged the sale of Fort Brooke reservation, and have insisted that the proceeds arising from such sale should be given to the public schools of the city of Tampa, Fla.; such has been your position since I came to the Senate in 1885.

Very truly,

J. H. BERRY.

Hon. WILKINSON CALL, *United States Senate.*

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
December 16, 1889.

I, Lewis A. Groff, Commissioner of the General Land Office, do hereby certify that the annexed papers, pages 1 to 4 inclusive, are true and literal exemplifications of a certain letter from Hon. W. CALL, dated Washington, D. C., July 10, 1883, now on file in this office. * * *

In testimony whereof, I have hereunto subscribed my name and caused the seal of this office to be affixed, at the city of Washington, on the day and year above written.

[SEAL.]

LEWIS A. GROFF.

UNITED STATES SENATE, *Washington, July 10, 1883.*

SIR: I beg leave to ask your consideration of a late order for the sale of the Fort Brooke reservation, in Florida, under the pre-emption laws.

I have repeatedly stated to you, and to the Secretary, my opposition to any sale or disposition of this land to any private individuals and asked that any disposition of the same should be suspended until the next Congress should have an opportunity to act on a petition presented by me from the people of Tampa, asking that the land be donated to the town of Tampa for educational and other purposes.

I again renew this protest and earnestly request that this land be withheld from sale or entry until Congress can act at its next session on the petition which I have presented.

The reasons which require this donation to be made to the town of Tampa are manifest and forcible.

The land is immediately adjacent to the town of Tampa. It is necessary to the health and comfort of the people as a park. It is the only land suitable for public buildings. It is, I believe, the general desire of the people of the town that it should be donated to them for public purposes.

It is no longer of any use to the Government as a fort or for a garrison.

I have repeatedly made these statements to you, and here renew them.

I have some reason to hope that Congress, at its next session, will act favorably on the petition, and make a donation of the reservation to the town of Tampa.

Yours,

WILKINSON CALL.

Hon. N. C. MCFARLAND,
Commissioner of Public Lands, Washington, D. C.

It will be seen from the subjoined statement that the town council of Tampa petitioned Congress for the confirmation of the entry and scrip location of Messrs. Lesley and Henderson. It will also be seen that, while I considered it my duty to present their petitions and give them so far as I had any power a full opportunity to assert any rights they might have, I also thought it right to adhere to the action which the people of Tampa had instructed, namely, the donation of the land to the free education of the children of Tampa.

THE PEOPLE ASKED FOR IT FOR FREE EDUCATION.

I had no doubt, and I have none now, that John Lesley might have been safely intrusted with this land, and that he would have used it liberally for the benefit of the people. I know him and knew his father, a true man, a faithful friend, a sincere christian, zealous for right; father and son men worthy of honor and respect. But the people of Tampa asked for it for the children, and so far as I had any power these letters show that my course has been the same from my first entrance into the Senate until now:

PROCEEDINGS OF THE TOWN COUNCIL OF TAMPA.

Members present, W. T. Haskins, president, G. B. Sparkman, S. A. Jones, H. L. Branch, W. B. Henderson, Dr. J. P. Wall, T. E. Jackson, and T. C. Taliaferro.

The following report from the committee was submitted:

MAJORITY REPORT.

To the president and members of the town council of Tampa:

Whereas we believe that Messrs. Henderson and Lesley have vested legal rights in the reservation, and that the subjoined proposition agreed upon between these gentlemen and ourselves as a committee is a fair, reasonable and liberal proposition for the town, and we recommend its adoption by the council.

We further recommend that Messrs. Henderson and Lesley enter into a written contract with the council conditioned to carry out the provisions of this agreement, and that the council pass a resolution requesting our Senators and Representatives in Congress to take such action as will enable Messrs. Henderson and Lesley to perfect their scrip location on said reservation.

G. B. SPARKMAN.
S. A. JONES.

A motion to lay the above report on the table was lost; Wall, Jackson, and Taliaferro voting in the affirmative; Sparkman, Jones, and Branch in the negative. The president decided in the negative.

Mr. Chipley also alleges that I did not protest against the entry of the Fort Brooke reservation.

I print also a certified copy of the protest, and the letters referred to. I leave it to the people to say what Mr. Chipley's word and his pamphlet are worth.

SENATOR CALL NOT TREACHEROUS TO STATE'S INDIAN WAR CLAIMS.

The next statement is "his [my] treachery in the Indian war claims."

This is another part of the business of the firm of Wailes & Co., on which depends, according to Governor Bloxham's letter to Senator Jones, a fee of $60,000 or more to Mr. S. I. Wailes and associates.

I print Governor Bloxham's letter.

I deny the statement that I have been treacherous in respect to the Indian war claims.

The facts are as follows: When I came to the Senate the claim of the State of Florida for reimbursement to the State of the money paid out by the State before the war for the suppression of Indian hostilities had been placed by the governor in the hands of my colleague, Mr. Jones. He had brought the subject before the Senate and had it pending before the Committee on Military Affairs, by which it was understood to be unfavorably considered. Senator HAMPTON, of South Carolina, at the request of Senator Jones, had taken charge of the bill, and had contended strongly for the payment of both the principal and interest of the claim. In the face of the adverse judgment of the committee he had succeeded, largely as a personal concession to him, in obtaining a compromise by which the committee agreed to pay the principal and to charge no interest on the debt due by the State on her bonds to the Indian trust fund. Senator HAMPTON thought he had been very fortunate in obtaining this report, and Senator Jones agreed with him in this opinion. I gave Senator Jones all the support in my power in obtaining payment of the whole claim, principal and interest, but had no right to interfere in a matter which had been placed in his hands. After the bill had thus been reported to the Senate, my colleague, Senator Jones, came to me with a telegram and afterwards with a letter from Governor Bloxham to him (which has been published), in which he stated that because of Mr. Wailes's contract for fees, which would amount to about sixty thousand, the amount allowed by the committee after deducting the amount of the State's bonds held by the Indian trust fund, about $250,000 or $300,000, principal and interest, would be so small that he did not feel authorized to accept the committee's report, and requested Senator Jones to have the bill postponed. Senator Jones so informed Senator HAMPTON, who had charge of it. I had nothing to do with it, and had neither the right nor the power to interfere. The subject continued in Senator Jones's charge by the action of the State authorities.

Some time afterwards Governor Perry came to Washington several times and used all his influence to overcome the adverse opinion which had been created by the rejection of the committee's report and Governor Bloxham's letter stating that about sixty-two thousand of the money paid by Congress to the State was to be the fee of Mr. Wailes. I gave him all the assistance in my power, always, however, protesting and advising that this Wailes fee would be, as it had been, a stumbling-block in the way of the passage of the bill, and would delay if not defeat it; and he did all in his power, but failed to accomplish success.

In the last year of his administration the Wailes's bill for interest was passed in the House. Mr. Dougherty and Governor Perry came on the floor of the Senate and personally requested me to have the House bill referred to the Committee on Claims instead of the Committee on Military Affairs, which had before had charge of it. This I did in the face of objection by a member of the Committee on Military Affairs.

Governor Perry and Mr. Dougherty then asked me to see the chairman of the committee and have the bill referred to Senator JONES, of Arkansas, as a subcommittee to report on the bill. This I did, and it was so referred. Governor Perry and Mr. Dougherty appeared before the committee, and Mr. Wailes also requested a hearing, as I was informed by the members of the committee. The governor and Mr. Dougherty and Mr. Wailes took entire charge of the subject. The result was that the bill was adversely reported, only one member of the committee reporting favorably. I am not responsible in any degree for this result. The CONGRESSIONAL RECORD shows that I tried to get the adverse report before the Senate for consideration and failed because of the earnest objections made to it.

To show how entirely malicious and inexcusable this pamphlet is, I print from the following letters and statements which have been before Congress and the people of the State for years.

In the Brooksville Register of March last [1885] an article was published against me in these words:

Senator CALL did all he could to prevent the payment of the Indian war claims, going so far as to characterize them as a fraud, and saying that it smelled badly.

I denounced this statement in the Senate on 3d April [1885] as a false and malicious calumny and the author as a false witness, and I published the letters of Senators Jones, HAMPTON, and Governor Bloxham, in which Senator Jones said:

Senator CALL had nothing to do with the defeat of the Senate resolution to pay the State of Florida $92,000 to reimburse Indian war expenses. The resolution had nothing to do with the payment of scrip or the Indian war soldiers.

Senator HAMPTON said:

Senator CALL did not defeat or prevent in any way the passage of this resolution, and the Register is utterly mistaken; the resolution was recommitted on the request of Senator Jones.

UNITED STATES SENATE, *Washington, D. C., April 27*, 1885.

DEAR SIR: In reply to your note of to-day, I reply that when the bill to indemnify the State of Florida was pending before the Military Committee of the Senate I asked your co-operation and support of said bill, and you assured me of it; that you spoke to Governor HAMPTON in favor of the bill, as I recollect. I told you that the settlement which I obtained from the Military Committee was the very best that I could obtain, and I remember that you said it was a very favorable one under all the circumstances.

Yours truly,

C. W. JONES.

Hon. W. CALL, *United States Senate.*

UNITED STATES SENATE, *Washington, D. C., April 14*, 1885.

Hon. WILKINSON CALL, *United States Senate:*

Having called my attention to the following testimony, I have no hesitation in saying that the language attributed to me with respect to yourself never was used by me, nor was any suggestion ever made by Mr. Wailes in reference to the calling of the yeas and nays.

C. W. JONES.

The following is Governor Bloxham's letter to Senator Jones:

Now, take $132,000 in bonds; interest on the same, $240,000; and $92,000 cash, making $464,000 upon which Mr. Wailes would claim 15 per cent., and you see at once that, after deducting his commission from the cash we receive, there would be but an insignificant sum to turn into the State treasury. The amount would be too small to be satisfactory. I think it had better go over than practically for all we receive to go in the shape of commissions.

W. D. BLOXHAM.

WASHINGTON, D. C., *April 11*, 1885.

DEAR SIR: In the Brooksville Register of March 21, 1885, in which is printed "Evidence on Indian War Claims," alleged to have been taken before a committee of the Legislature of Florida, Mr. S. I. Wailes, a witness, states as follows:

"When I was first made agent of the State I became aware of a letter which was very injurious to Governor Drew and his cabinet and the State generally, written by ex-Governor Reed to the Secretary of the Interior, Mr. Schurz. I obtained a copy of the letter and forwarded it to the governor. He requested that I should have a copy of the letter and give the same to Mr. CALL. I went to Representative DAVIDSON with a copy and he showed it to Senator CALL, and he asked me to make a copy for Mr. CALL's use."

In reference to the foregoing I have to say, that if ever I received a copy of the letter mentioned from Mr. Wailes and showed it to you and asked Mr. Wailes to make a copy for you, the matter has entirely escaped my mind, for I have not now the slightest remembrance of it. I do not believe the statement of Mr. Wailes to be true.

And I can further say that you did not prevent the passage of a bill providing for the payment of the Indian war claim, but on the contrary I am aware that you have always been zealous in endeavoring to have the matter settled in a manner beneficial to the people of the State. I never heard of you circulating any charge which stamped dishonesty on the high officials of the Democratic party of Florida.

Yours very truly,

R. H. M. DAVIDSON.

Hon. WILKINSON CALL.

SENATOR CALL, WITH SENATOR PASCO, PLACED IT ON APPROPRIATION BILL.

After Mr. PASCO'S election and his assignment to the Committee on Claims, and the Legislature having petitioned for the passage of the bill, it was favorably reported through Senator PASCO'S efforts from that committee. The following extract from the CONGRESSIONAL RECORD will show that, with Mr. PASCO'S aid, an amendment for its payment was put on the annual appropriation bill. It happened to fall to me to have the vote of the Senate, without yeas and nays, by which it was at first announced by the President to be defeated, reconsidered by a division, and an amendment for the payment of the claim put on the bill. This does not appear in the RECORD, the only entry being "The amendment was agreed to;" but it can be easily proved.

SENATOR CALL'S SPEECH IN FAVOR OF PAYING THE STATE INDIAN WAR EXPENSES.

On March 1, 1889, on page 2531, is the following speech made be me in support of an appropriation for the payment of the Indian war claim, principal and interest:

Mr. President, this claim on the part of the State of Florida has been adjudicated at various times, and a bill for its payment passed the House of Representatives of the former Congress, two years ago.

There is no doubt that the money was honestly expended by the State for the suppression of Indian hostilities.

The facts are undisputed. The necessities of the State at this time are very great, and this money will be expended, not only in the interests of the State of Florida, but of the whole country, in preventing the reappearance of the epidemic which prevailed in the State and its communication to other States.

In consequence of the great loss imposed on the State by the epidemic last year the State's finances have become very much reduced, and the State is in very great need of this money at this time for the purpose I have mentioned.

Inasmuch as there is no dispute whatever in regard to the fact of the money having been honestly expended by the State, and the debt has been recognized by a committee of this body and by a bill passing the other House, I think that the amendment ought to be allowed to go upon the bill.

When the vote was taken by the sound without yeas and nays the amendment was announced by the Chair to be defeated; upon my motion for a division, it was carried.

This amendment was afterwards stricken off in the conference committee, the House objecting to its payment then, and a clause substituted for a report from the Secretary of the Treasury of the amount necessary to pay the claim.

These are the facts proved by the CONGRESSIONAL RECORD. It appears from them that the first time the bill has ever come before the Senate favorably and even approached payment it has been through my efforts, my colleague having his due share of credit for the favorable report of the Committee on Claims and for the action of the Senate. It will also be observed that the allowance of interest on the war claims of the loyal States for expenditures during the war is now being favorably considered, and at the former time when the claim of our State was before Congress these claims had not been considered favorably. It is only just to Senators HAMPTON and JONES to make this statement.

Mr. Chipley in his pamphlet refers to a remark made by me in New York last summer to a "State official," Hon. Mr. (now Judge) Barnes, who was explaining to me the State's need of money, when I stated that I thought the State might have been wise to have taken the $92,000 offered by the Hampton bill and prosecuted their claim for interest.

This was only a chance remark, and not intended to be treasured up for a charge against me. It was, however, the opinion of Senators HAMPTON and JONES, who thought the State's claim for interest would not be prejudiced by it.

STATE'S CLAIM RESTS EITHER ON ACTUAL OR ASSUMED MUSTER INTO UNITED STATES SERVICE.

The pamphlet writer also refers to my ignorance, in introducing certain bills, of the fact that if the troops had been mustered into the United States service they would have been paid. It is only necessary to say that the pamphleteer does not understand what he seeks to write about. The foundation of the State's claim is that the troops were ordered to be mustered, but one of the bills referred to was for the soldiers who were not paid.

SENATOR CALL REQUIRED AMOUNT OF WAILES'S FEE TO BE PAID TO SOLDIERS AND THEIR WIDOWS.

The bill to reimburse the State the money paid out by the State had no reference to the unpaid soldiers and made no provision for them. The bill I introduced to reimburse the State provided in effect that the amount of the Wailes fee should be required to be paid to these soldiers, their widows and children, in payment of their services which have never been paid for. This seems to be the point which hurts. The bill as I introduced it, which Mr. Chipley thinks showed my ignorance, assumed that the unpaid soldiers who live in Florida and who fought in the war should have this money instead of Mr. Wailes.

Mr. Chipley may think this is ignorance and folly, but I still think so. I still think that the proper use of money paid to the State by the United States for the services of citizen soldiers in an Indian war is to pay the unpaid soldiers, their widows and orphan children, rather than a Washington lawyer and lobbyist. This is one of the charges against me, and all the others are equally foolish.

DISREPUTABLE LOBBYING UNTRUE.

Another charge made by Mr. Chipley is "his [my] disreputable lobbying" in the Florida Legislature in 1879, after my election in 1879. I read in the New York World to-day a statement, I have no doubt from one of Mr. Chipley's and Mr. Wailes's hired slanderers, that I had been threatened with expulsion from the State senate for disreputable lobbying. The statement is untrue. Judge Niblack was my warm personal and political friend. We agreed in our efforts in 1879 to try and save to the people of the State what was left of the public lands and of the railroads. The old Florida Railroad interest had then a few representatives in the Legislature, and one of them is doubtless the author of this statement. I had just been elected to the Senate by that body. I was giving my time to the protection of the people and their homes and rights, and I was stronger with the Senate and the people, as I am now, than the old Florida Railroad Company and Messrs. Chipley, Wailes & Co. The remark attributed to me is entirely untrue.

BOODLE FROM LITTLEFIELD FALSE.

The next statement upon which Mr. Chipley stakes his truth is in these words: "His boodle from Littlefield." This is only a false statement. The facts are as follows and are of record: In 1869 Judge James M. Baker, Silas L. Niblack, and myself agreed that we would try and save for the stockholders and the several counties that held stock the Pensacola and Georgia Railroad from Lake City to Quincy, then advertised to be sold by the trustees, as we thought without authority of law. We associated with us in a written agreement Mr. Dibble, of Jacksonville, of the house of Dibble, Worth & Co., of New York, then in good standing and of large credit and business, Mr. Requa, and Mr. A. Huling, men of wealth. These gentlemen brought into the association others—three Democrats and three Republicans, Mr. Dibble being a conservative man in sympathy with the Democrats.

JUDGE JAMES M. BAKER, SILAS NIBLACK, AND SENATOR CALL.

A written agreement was made, which can be produced, that the railroad should be bought at the sale and the original stockholders protected and the trusts of the internal improvement act continued and the road completed westward to Pensacola and the road from Lake City to Jacksonville united with it. It was further agreed that the title under the sale should be settled by the courts. Mr. Dibble agreed that Dibble, Worth & Co. should furnish the money necessary to pay the first payment or forfeit. Messrs. Swepson & Littlefield had agreed to buy the road and this organization was made to prevent such purchase. The road was sold and bought. Judge Baker, Niblack, and myself had

nothing to do with this part of the transaction. Subsequently Mr. Dibble and the other members, against the protest of Baker, Niblack, and myself, made an agreement with Messrs. Swepson & Littlefield, and Judge Baker and myself brought suit to break up this agreement and carry out the original agreement. The record of this suit is in the courts. It was carried to the supreme court of the State and decided against us.

We opposed the passage of the act for the issue of the four millions of bonds, and the fact is of record and can be proved and was involved in the suit.

Long after this decision against us, Mr. John P. Sanderson, the attorney of the new company, became satisfied that their title was doubtful without our assent to the sale, and Judge Baker, Niblack, and myself agreed to sell to Colonel Sanderson for the new company whatever rights we acquired under the purchase at the sale of 1869. We were very glad to do so. It was an honest, fair, and just transaction, and there was no boodle in it. We had acquired certain rights in law in the title under the sale in the prosecution of an honest public purpose, and we sold them to those who thought them valuable, after being defeated in a lawsuit to preserve the property to the original owners. We were never members of the company, and this was all the connection we ever had with it. Again I ask, what are the statements of Mr. Chipley against me or any one worth?

JUDGE JAMES M. BAKER'S NAME AGAINST MR. CHIPLEY'S STATEMENT.

I place the name of Judge James M. Baker, my associate in this transaction, a man pure and spotless in life, honorable and patriotic in purpose and action, a lawyer and a judge, as impartial and just as ever graced the court of State or nation, against Mr. Chipley and his statement, and therewith I rest content.

SENATORIAL KNOWLEDGE FOR PERSONAL ENDS—A FALSE STATEMENT.

"Senatorial knowledge for personal ends." This is untrue. I never used my Senatorial influence for my personal benefit for a single penny's worth.

If reference is had here to the Swaim homestead, I have shown that it is too silly for serious answer. Have I not a right which every citizen has to apply for a homestead? Is it a wrong to any one to appeal to the constituted authorities for a claim of right? Have I a right to protect a widowed sister's right by availing myself of privileges which the law gives to me?

If the Fort Brooke charge is meant, the letters I print prove its untruth. I never had the least personal interest in the claim on Fort Brooke reservation, or in anything connected with it, and John T. Lesley and his lawyers in Washington will so testify.

If the Norfolk bank transaction, the letter herewith printed will show that the transaction was honorable and in every way proper. If it is meant that I applied to the proper authorities to protect me against an unjust and unlawful lawsuit, which can only have the effect of promoting the interests, as I believe and as I think I shall in due time prove, of a conspiracy against me because I am an obstacle to the accomplishment of schemes of unlawful appropriation of the public lands and of personal advancement to office, I had a right to do so. I do not lose my rights as a citizen to the just protection of the laws because I am a public servant. This, like all the rest of this pamphlet, is only worthy of answer to show the author's purpose.

The following letters will dispose of this statement:

UNITED STATES SENATE, *Washington, D. C., May* 14, 1890.

MY DEAR SIR: In regard to the Post Combination Sewing-Machine, I beg to say I became a purchaser of its stock about the same time with yourself; that some of the best and most reputable men in Washington were its stockholders and directors, and the company was in all respects bona fide and respectable, and that its stock was depreciated by bad management. The stock was sold at one time at 45 cents on the dollar, and at one time I could have sold my thirty shares at that price. I have the stock yet.

Mr. Whitehead, of the National Exchange Bank, was at one time director, and your connection with the company was entirely honorable and above board, and my only regret is that the depreciation in the stock prevented all of us realizing handsomely on a legitimate business venture.

Very truly yours,

M. C. BUTLER.

Hon. WILKINSON CALL, *Washington, D. C.*

WASHINGTON, D. C., *June* 14, 1890.

DEAR SIR: Having learned that you have been charged with improper acts in connection with the Post Combination Sewing-Machine Company and the Exchange National Bank of Norfolk, Va., having been respectively treasurer and secretary of said sewing-machine company, in justice to yourself we take occasion to testify to the facts: That at the time you placed your stock with the said Exchange Bank it had a cash value of $30 per share; that it afterwards went up to $42 per share, and was in demand at that price; that after your stock had been placed with said bank all future assessments upon it were paid by the president of said bank, Hon. John B. Whitehead, with checks payable to the treasurer of said sewing-machine company; that said John B. Whitehead was a member of the board of directors of the said sewing-machine company, and that he attended the business meetings of said company and heard its matters fully discussed and seemed to have a high opinion of it as a business enterprise; that when said sewing-machine stock became fully paid up it was issued to the Exchange National Bank.

We further state that the Post Combination Sewing-Machine Company was organized by an agreement among the most reliable business men of Washington City to become an incorporated company, to buy the patents with the stock and to purchase the stock at 20 cents on the dollar, payable in installments; that you had in your hands a large amount of this stock for Senators M. C. BUTLER, James B. Beck, Col. J. R. Sneed, Judge MacArthur, Mr. CUMMINGS, and others; that all these persons paid at the proper time for their shares of the stock in your hands, and their portion of the stock when issued was delivered to them.

The entire remainder being unpaid was placed in the hands of Mr. Whitehead, president of the Exchange National Bank, and the whole amount of each share paid for by the bank and delivered to the bank.

You were not present and had nothing to do with it. Your conduct was honorable and correct in every respect.

The company was a strong one, and you had no connection with the causes of its failure. You neither claimed the stock nor paid for it nor received it, nor was it issued in your name.

No falsehood or slander can cast any blame on you in this transaction.

Respectfully yours,

THOS. J. LUTTRELL, *Treasurer.*
H. B. LITTLEPAGE, *Secretary.*

Hon. WILKINSON CALL,
United States Senate.

[Office of State agency, N. Tyler, secretary, room 34, Corcoran Building.]

WASHINGTON, D. C., *August* 19, 1889.

DEAR SIR: I desire to obtain from you some information as to the Post Combination Sewing-Machine Company, of which you were the secretary.

Please advise me by postal card to the above address when and where it will be convenient to you to have an interview.

The information I seek is for private use entirely.

Very respectfully yours, etc.,

NAT. TYLER.

Capt. HARDIN B. LITTLEPAGE,
2109 F street, City.

WASHINGTON, D. C., *June* 14, 1890.

DEAR SIR: On the 19th of last August I received a letter from Mr. Nat. Tyler, a lawyer of this city, requesting to see me in regard to the Post Combination Sewing-Machine Company, of which I was secretary. That the information sought was for private use entirely. I called at Mr. Tyler's office, and after asking several questions about the company's affairs he stated that he would be candid with me and tell me his object, as I might misunderstand his inquiries; that some Florida papers were making war upon you, and that he had been employed to write you up.

As your whole connection with the Post Sewing-Machine Company was of the utmost honesty and integrity and can be testified to by any number of our best citizens, I regard this attack upon you as malicious and unwarranted, and therefore advise you of it.

Respectfully yours,

H. B. LITTLEPAGE.

Hon. WILKINSON CALL, *United States Senate.*

Mr. John B. Whitehead, president of the Exchange National Bank of Norfolk, was then and is now a man of the highest character, and deserves the high reputation which he bore and still bears. The failure of the bank was in no way attributable to him. He was then and is now a business man of fine ability and of perfect integrity. He was a man of large fortune, all of which was surrendered to the creditors of the bank. The enterprise in which he engaged had the sanction of the best business men in Washington City, and for a considerable time the bank could have sold the stock for more than twice the amount paid for it.

JOHN E. HARTRIDGE'S COMBINATION.

The Chipley-Wailes libel charges me with defeating Mr. Hartridge's combination by blundering stupidity and disgusting Mr. Hartridge's Republican friends by doing what I had been requested not to do, and says this statement is obtained from Mr. Hartridge.

Everything I did was at the request of Mr. Hartridge, and proof can be furnished of the fact.

The following letters from Senators PUGH, of Alabama, and GEORGE, of Mississippi, Democrats of the Judiciary Committee, who had charge of this nomination, will show the entire want of truth in Mr. Chipley's statement. I have a similar letter from Senator M. S. QUAY, of Pennsylvania, who was one of the Republicans upon whose vote Mr. Hartridge relied.

Copies of this letter have been sent to Florida, and it is unnecessary to print it here. It will not be denied:

UNITED STATES SENATE, *Washington, D. C., June* 19, 1890.

MY DEAR SIR: I am a member of the Judiciary Committee, and that committee had under consideration the nomination of John W. Hartridge to be district judge of the northern district of Florida. You introduced Mr. Hartridge to me, and he had several consultations with me on the subject of his confirmation. You did everything that you could do to promote the confirmation of Mr. Hartridge, and it is doing you great injustice to say that anything you failed to do or anything you actually did contributed in the least to his defeat.

Yours truly,

JAMES L. PUGH.

Senator CALL.

SENATE CHAMBER, *Washington, June* 16, 1890.

DEAR SIR: I was a member of the Committee on the Judiciary when Mr. Hartridge was nominated for district judge of the United States for the northern district of Florida. I am satisfied now, as I was then, that it was impossible to have secured his confirmation. There was nothing done by you that in any way contributed to his defeat, and everything was done by you and all other Democrats which was possible to secure it.

If there had been enough Republicans who were willing to vote for his nomination to secure it with the vote of the Democrats they could and would easily have confirmed him. The fact that he was not confirmed is evidence that the statement is not correct.

Certainly no blame can be attached to you for the failure of his confirmation.

Very sincerely, your friend,

J. Z. GEORGE.

Hon. WILKINSON CALL, *United States Senate.*

TWO HUNDRED AND FIFTY-SEVEN BILLS INSTEAD OF FIFTEEN BECAME LAW OR PASSED CONGRESS.

The next charge of Mr. Chipley is that I am ignorant, stupid, incompetent, and do not know how to write a bill; that I have intro-

duced four hundred and fifty-seven bills in the Senate and passed practically none of them, and that I am generally of no use or value.

This statement is entirely untrue. Two hundred and thirty-eight bills introduced by me contain provisions which have become law or have passed the Senate and the House.

The idea of judging a Senator by the number of bills he has passed, and condemning him because he has not passed a certain number, or condemning or praising him because of the number of bills he has or has not introduced, could only have been conceived by a person entirely unaccustomed to legislation.

The bills referred to were many of them private bills for individuals, introduced by request from all parts of the United States. Every citizen has a right to be heard in Congress and to have a chance to have his right considered. This right of petition, whether by bill or otherwise, is his right. I have always given every man, however poor, the right to be heard through me in Congress. Many of these bills have been amendments to appropriation bills. Many others have become laws by being reported in the bills framed by the committees to which they were referred, and were passed with other provisions and other subjects, such, for instance, as the amendments to homestead laws, which have been quite numerous to river and harbor bills; such as amendments proposed to the tariff and revenue laws and amendments to pension laws.

PRINCIPLES OF REAGAN INTERSTATE-COMMERCE BILL BECAME LAW, BUT THE REAGAN BILL WAS NOT PASSED.

A notable instance will illustrate this legislative habit. Senator REAGAN, of Texas, was amongst the first to introduce bills regulating interstate commerce, which became known as the Reagan bill, yet the Reagan bill did not become a law, although the principles of the Reagan bill are now the law. The number of these bills is increased by the habit of reintroducing at the commencement of each session those which failed to pass or have consideration at the previous session.

SENATOR CALL ON COMMITTEE ON APPROPRIATIONS.

My services for some years have been on the Committee on Appropriations, which reports only the general appropriation bills for the Government.

The work of legislation is not the work of any one Senator or Representative. Measures are rarely if ever the result of any one bill introduced by one man. Legislation is divided into that which is general and special—to that which relates to new policies or to the correction of existing law.

The subjects of legislation which concern the State of Florida are the appropriations for rivers and harbors, public buildings, Indian war expenses, Indian war services unpaid, Indian war pensions, free homes for the people on the public lands, tariff, and internal revenue.

MONEY FOR FLORIDA.

Since I have been here the appropriations have been greater than in all the previous history of the State. I have had my full share of influence in this respect.

Appropriations for public buildings since I have been here have been greater than in all the past history of the State. I have had my full share of influence in this respect.

BILLS OF SENATOR CALL WHICH BECAME LAW IN PART OR ALTOGETHER.

I have twice put an amendment on the pension bills granting pensions to the survivors and widows of the soldiers of the Florida Seminole Indian wars. I, with my colleagues, have twice prevented a reduction of the duty on oranges and have increased the duty on some Florida products which had a right to consideration. I have had my full share and influence in adjusting the former duties with fairness to the cigar-manufacturing interest and to the tobacco growers.

I introduced a bill to give patents to the settlers and bona fide purchasers on the old railroad land grant of May 17, 1856, subject to the action of Congress. The principles of this bill are contained in the bill for adjustment of railroad land grants and are now the law. I have twice passed through the Senate bills asserting the right of Congress over the railroad land grant of May 17, 1856, and for the protection of the free homes of settlers against Mr. Chipley and his associates and giving patents to the persons whose money has been taken for worthless claims to land.

I aided in passing a bill through the Senate requiring the courts to take jurisdiction of this grant and settle titles. I passed through the Senate an amendment to the forfeiture bill giving title to all actual settlers. Subsequently all the provisions of the bill which I introduced giving title to purchasers in good faith became a law in the general bill for adjustment of railroad land grants, although they were not applicable as they should have been to the land grant under the act of May 17, 1856.

I introduced a resolution for intervention by the United States between Peru and Chili, and for an alliance and international congress of the American peoples. The substantial provisions of this resolution were afterwards adopted and realized in the Pan-American Congress lately held in this city.

I made a speech for free coinage of silver, the ideas of which are now about to be realized. Certainly this idea is not my peculiar property, but I think I may claim that I have contributed my share to its adoption.

FAST MAIL AND TAMPA AND KEY WEST.

I have introduced and supported steadfastly and earnestly appropriations for the establishment and support of the fast-mail line from Boston to Tampa and from Tampa to Havana via Key West, with a special appropriation for it. It is this line and this service that have enabled and induced Mr. Plant to make his great expenditures for the development of Tampa, and I may justly claim that to my services in the Senate more than any and all other causes is due through this action the growth and present and future prosperity of Tampa, and the corresponding development of Key West. I have no doubt that Mr. Plant and Col. H. S. Haines, one of the most able and competent railroad men in the United States, and Mr. Imgraham, the able president of the South Florida Railroad Company, will readily confirm my statements.

OTHER BILLS AND SPEECHES OF SENATOR CALL.

I have introduced bills for the establishment of a national university of natural research and education in the District of Columbia, and for industrial education, and made speeches on it. I am pleased to think that these ideas will some day be carried out.

I have made speeches on the tariff, on banks, on the Treasury surplus, on free education, on coinage and the precious metals, on railroad receivers, and reform in the practice of the United States courts, on executive power, on land-grant forfeiture, and on all the subjects of national policy which have been before Congress, and on religious freedom. I wish these speeches were much better than they are, but my colleagues kindly assure me that they were not unbecoming to the Senate and not without usefulness. I am very sure that they have not fallen to the level of the miserable ribaldry of Mr. Chipley's lawyer's written libel on me, either in matter, style, false statement, or any other respect.

This is my record in the Senate. I am not ashamed of it, nor are my friends.

MR. CHIPLEY'S RECORD.

Now let us examine Mr. Chipley's record. It is a small subject, and but for the fact of his connection with the land-grant wrongs and the raid on the free homes of the people, his natural audacity and perversity in wrong-doing which make him the cat's-paw of the claimants and the lobbyists who have better minds to conceive and better judgment to execute, it would not be of sufficient importance to occupy either your or my time and attention.

MR. CHIPLEY AND THE LAND GRANT OF 27,000 ACRES TO THE MILE.

I know nothing of Mr. Chipley's record before he came to Florida. I am informed that he was brought to the State by a merchant of Pensacola, Mr. Sullivan, as a railroad agent for his business in operating the road from Pensacola to the Alabama line, and continued in that capacity and in the employment of the Louisville and Nashville corporation, of Louisville, Ky., until the State Legislature passed the act of 1881, agreeing to give Judge Stanley and his associates 23,600 acres to the mile of swamp and overflowed land thereby rendered unfit for cultivation, and in addition agreed to give them all the right, title, and privilege which the State then had, under the act of Congress of May 17, 1856, to the land lying alongside the road which should be actually built from Pensacola to Chattahoochee, making, if this latter grant was valid and carried anything, 27,200 acres to the mile, or a principality of 4,080,000 acres for a railroad from Pensacola to Chattahoochee, about 150 miles.

Mr. Chipley says that the railroad company has received only 8,550 acres to the mile. I do not know anything as to this. My statement was that this company had received a grant of 23,600 acres to the mile. The granting act shows this to be true. Whether they have actually received it at this time or are to receive it in the future is immaterial. The act which created the company gave it to them, and as the Commissioner states that the selections amount to 23,000,000 acres, and 16,000,000 have actually been certified to the State, it makes no difference whether they have yet received it.

Having received this vast donation of land all over the State, much of it I am informed situated many miles away from the railroad and where the people will never either see or transport freight upon or ride on the railroad, Mr. Chipley, I am informed and there is no doubt as to the fact, sold or disposed of the charter in some way to the Louisville and Nashville Railroad corporation, or to persons connected with it by whom the money was furnished to build the road, Mr. Chipley himself, it is stated and believed, making a large sum of money out of the sale of this free gift of the people of Florida, which cost him nothing. Mr. Chipley claims "the honor and glory" of building the railroad—that is, of selling the charter to some person who could use the credit of the Louisville and Nashville corporation, making a fortune out of the sale and having them build the road.

BLIND, DEAF, AND DUMB MEN COULD BUILD A RAILROAD WITH THIS GRANT.

All that I have to say about this is that a blind, deaf, and dumb man, with a card hung around his neck stating that 4,080,000 acres of land, with the right of transporting everything made by the people and bringing back anything for which it was exchanged, might be

turned loose in any money center of the United States and of Europe, and the offer would be gladly accepted by thousands of people and a large sum of money paid for the privilege of doing it.

FORFEITURE OF LAND GRANT TO STATE OF MAY 17, 1856.

About the year 1883–'84, I think, the Hon. John T. Lesly, a distinguished citizen of Tampa and South Florida, often honored with a seat in the Legislature and with the confidence of the people of Hillsborough County and South Florida, addressed me a letter calling my attention to the public duty of forfeiting the land grant of the act of May 17, 1856, from Waldo to Tampa. I placed this letter before the Senate and referred it to the Committee on Public Lands, and printed it for the benefit of the people. This letter was followed by petitions from 847 other citizens of South Florida. Among them is the name of A. S. Mann, and Mr. Milton Mabry, ex-lieutenant-governor, has informed me within the last few days that he was among the petitioners.

The three petitions were followed from time to time by a great many others. Thus instructed by the people I investigated the subject and ascertained that the grant had no existence and that it had never taken effect; that the Legislature had never disposed of it, and that the old Florida Railroad Company had never had any even plausible pretense of a claim; that the claim of the Florida Railway and Navigation Company was purely an unlawful appropriation of the public domain and that the reservations had been made in plain and palpable violation of law. I immediately commenced the necessary measures to bring the status of law and fact to the attention of the proper authorities, to the Secretary of the Interior, and to the Senate.

The proper resolutions of inquiry and bills were introduced and urged by me. The CONGRESSIONAL RECORDS and my speeches will show how earnestly I labored to obey the people's will and to protect their homes. It was not long before the land agent of the Pensacola and Atlantic Railroad Company, Mr. Chipley, began to show his teeth with the same audacity, ignorance, and selfish perversity as characterizes this pamphlet.

The propositions of law and fact were clear and indisputable, and twice has the Senate sustained them against all the opposition that has been made to them. The extracts from the RECORD contained in Mr. Chipley's pamphlet carry an untruth in every respect, as does every other word and syllable in this pamphlet.

The bill to which Senator MORGAN refers was a bill brought in late in the session, when it could not have passed the Senate, and it confirmed the railroad's claims of title under pretense of forfeiting it—a subterfuge not unknown to land-grant agents and claimants.

Mr. Chipley and Wailes & Co. have been assiduous in their efforts as lobbyists with the Senators and the Committee on Public Lands and in every possible method of detraction and abuse of me from that day to the present.

MR. CHIPLEY AS A LAND-GRANT AGENT, AND THE FREE HOMES OF THE PEOPLE.

Mr. Chipley as a land-grant agent of a claim from the State of 27,000 acres to the mile, or 4,080,000 acres.

In West Florida there is an old reservation, made on May 17, 1856, under the land grant of May 17, 1856, on the promise of Hon. David L. Yulee that the Legislature would thereafter dispose of it to the Pensacola and Georgia Railroad Company, and that by anticipatory action the Legislature had already done so. The Legislature did not dispose of it, and the Pensacola and Georgia Railroad corporation did not build the road, but died without a successor, and the Legislature forbade it from building the road. Mr. Chipley, vice-president of the Pensacola and Georgia Railroad Company and land-grant agent, as I am informed, seized upon this old reservation which had stood unnoticed and unclaimed by the State from 1856 to 1882. In 1883, the time when he and Mr. Wailes claimed the grant as still subsisting, about eight years after Secretary Chandler decided that the grant had no existence, I resisted in the name of the people that entirely unlawful appropriation of their homes. Mr. Chipley prints a certificate of Mr. Stockslager, Commissioner of Public Lands, given under the act to adjust railroad land grants unlawfully, a deed from the Pensacola and Atlantic Company of some five thousand acres of land.

Mr. Stockslager assumed that the Pensacola and Atlantic Railroad Company had received that land lawfully. He was doubtless not advised of the fact that the old Pensacola and Georgia reservation was absolutely void, and is so declared in express terms by the laws of the United States.

Senator GEORGE, of Mississippi, for some time chief-justice of that State, and now amongst the ablest, and perhaps most able lawyer in the Senate, has made this so plain that no lawyer, not interested in the case, even pretends to deny it.

I place the speech and opinion of Chief-Justice and Senator GEORGE against Mr. Chipley, vice-president of the Pensacola and Atlantic Railroad Company, and land-grant agent, and leave you to decide which is right, and whether I am to be blamed for agreeing with Senator GEORGE that the people's homes in this grant belong to them and not to Mr. Chipley and Mr. Wailes.

Let us look a little while at what Mr. Chipley claims, as against the people, under this old, fraudulent, and absolutely void and unlawful reservation.

These are the quantities in each of the above counties as given to me in a letter from the Acting Commissioner of Public Lands, Governor Stone, of late date. The amount claimed from Pensacola to Chattahoochee and from Waldo to Tampa, as appears in Governor Stone's letter of May 24, which I will print, is as follows:

LAND FROM PENSACOLA TO LAKE CITY, FLA.

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., April 28, 1890.

SIR: In compliance with your request of the 26th instant, relative to lands listed or approved to the State of Florida on account of the grant made by the act of May 17, 1856 (11 Stat., 15), for the Pensacola and Georgia Railroad Company, I submit herewith a statement, by counties, showing approximately the amounts so listed.

Very respectfully,

W. M. STONE,
Assistant Commissioner.

Hon. WILKINSON CALL,
United States Senate, Washington, D. C.

Lands listed, or approved, to the State of Florida on account of the act of May 17, 1856, for the Pensacola and Georgia Railroad Company.

Name of county.	Acres.	Name of county.	Acres.
Calhoun	55,665.80	Liberty	11,056.35
Columbia	29,077.39	Madison	72,113.36
Gadsden	24,149.32	Santa Rosa	214,502.02
Hamilton	46,707.59	Suwannee	122,128.45
Holmes	74,245.69	Taylor	1,717.53
Jackson	117,776.02	Walton	316,068.17
Jefferson	9,902.43	Washington	166,960.24
La Fayette	5,814.28		
Leon	14,006.35	Total	1,273,890.99

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., May 24, 1890.

SIR: Refering to your request of this day relative to the quantity of land reserved in certain counties under the act of May 17, 1856, making a grant of lands to the State of Florida to aid in the construction of a railroad from Amelia Island (Fernandina) on the Atlantic to the waters of Tampa Bay, with a branch to Cedar Keys, on the Gulf of Mexico, you are advised that an approximate estimate shows as follows:

	Primary limits.	Indemnity limits.
	Acres.	*Acres.*
Marion County	138,240	207,360
Hernando County	46,080	120,960
Sumter County	138,240	157,440
Polk County	39,360	84,480
Hillsborough County	99,240	104,800
Alachua County	37,440	126,720

These figures represent in the aggregate the actual quantities covered by the withdrawal made for the benefit of said grant within the counties mentioned, without deducting therefrom the lands excepted or in any wise lost to the grant.

Respectfully,

W. M. STONE, *Assistant Commissioner.*

Hon. WILKINSON CALL,
United States Senate.

MAY 27, 1890.

SIR: The area of the selections made by the State of Florida prior to the confirmatory act of March 3, 1857, is 11,630,271.61 acres.

Total swamp selections up to this date is 23,222,439.60 acres.

Total swamp land patented up to this date is 16,114,669 acres.

ACTING COMMISSIONER GENERAL LAND OFFICE.

(For Senator CALL.)

REDDICK'S HOME AND IMPROVEMENTS SOLD BY MR. CHIPLEY.

The following was sent me by the people of Escambia County:

STATE OF FLORIDA, *Escambia County:*

Before the subscriber this day personally came Henry W. Reddick, who, being duly sworn, says: That he is a citizen of the State of Florida and a resident of Washington County, in said State, and has resided in said Washington County for the past nineteen years; that for the past sixteen years he has resided at a place known as Four-Mile Point, on the south shore of Choctawhatchee Bay, in said county, and during said time has had inclosed and under cultivation about 30 acres of land, more or less; that he is a married man and the head of a family, and during the said past sixteen years has lived with his wife and family in a dwelling built by him on said premises; that on or about the 28th of December, 1882, affiant, for the purpose of availing himself of the benefits of chapter 3324, Laws of Florida, entitled "An act to enable settlers on State lands to obtain titles thereto," approved March 7, 1881, made application to P. W. White, at Tallahassee, for entry by affiant of said 30 acres and an additional 30 acres contiguous thereto, and all lying and being in lot 1, township 2, lot 15, township 2 south, range 21 west, and paid over to the said P. W. White the sum of $18, the same being the first installment of one-third of the purchase-money of said 60 acres, to wit, one-third of $54, the purchase price of said land, being 90 cents per acre; that after the payment of said money affiant was informed by C. L. Mitchell, who was successor in office to the said P. W. White, said information being by letter, which said letter is hereto attached, that said land had been transferred to the Pensacola and Atlantic Railroad Company; that affiant then applied to the said Mitchell for repayment to affiant of the said sum of $18, but said repayment was never made to affiant; that affiant has never paid anything more on said land, but is still living on it, and was informed about a year since that said raiload company had sold said land to one Mrs. Clara Rushbridge.

Affiant further says that the buildings, fencing, and other improvements made by him on said land are of the value of $500.

H. W. REDDICK.

Sworn to and subscribed before me this 5th day of March, 1889.
[SEAL.] E. C. MAXWELL, *N. P.*

STATE OF FLORIDA, *Escambia County:*

Before the subscriber this day personally came Thomas Hannah, who, being duly sworn, says: That he is acquainted with Henry W. Reddick, and has known him for the past ten years; that during the said time of his said acquaintance with the said Reddick he (the said Reddick) has been living with his wife and family in his dwelling-house at Four-Mile Point, on the south shore of Choctawhatchee Bay; that said Reddick has inclosed and otherwise improved about 30 acres of the land about and around his dwelling, and, in the judgment of affiant, the value of said improvements is about $500.

THOS. HANNAH.

Sworn to and subscribed before me this 5th day of March, 1889.
[SEAL.] E. C. MAXWELL, *N. P.*

STATE OF FLORIDA, *Counties of Washington and Walton:*

To the senators and members of the house of representatives of the Legislature of Florida:

The petition of the undersigned, citizens of Washington and Walton Counties, Florida, in behalf of the relief of Henry W. Reddick, of said Washington County, respectfully represents:

That petitioners have read the affidavit of said Henry W. Reddick, which is annexed hereto, and are acquainted with most of the facts therein set forth; that the things therein stated which they do not know of their own knowledge to be true they believe to be true on information which they deem reliable and worthy of belief; that said Henry W. Reddick made an honest and earnest effort to secure, by virtue of a beneficent law of the State, an indefeasible title to the home at which he has lived for some nine or ten years, and failed therein through no fault of his; that in the judgment of petitioners the said Henry W. Reddick is deserving of the State's consideration in the premises, and your petitioners therefore respectfully pray that your honorable bodies will give his case your most careful consideration, and reimburse him the value of the home from which he will, in all probability, very soon be obliged to exile himself.

Watkins, lawyer; John Chrisholm, merchant; F. C. Eaton, merchant; Daniel McLeod, hotel clerk; J. P. Alfred, M. D.; Hugh Jones; Will. C. Shugart, editor Critic; J. J. McCaskin, timber-mover; Sam T. White, tobacco-grower; Dawsey White, farmer; Fred W. Stalker, signed; W. C. Eddy; L. F. Cochran, jeweler; H. Wolf, J. A. Holman, W. C. McLean, attorney; F. G. McKellar, James W. Bowers; S. H. Johnson, farmer; Calvin Cyers, farmer; D. L. Campbell, M. D.; G. W. Mellish; Q. F. Tuwin, lawyer; Dan Burk, M. D.; H. Carton, Geo. McCaskill, Wess McKinnon; H. Taylor, D. D.; C. C. McIver; J. B. Craft, machinist; W. R. Hightom, mason and plasterer; W. H. Dixon, planing-mill; S. H. Cook, Rev. R. P. Ambler, J. W. Douglass, J. W. McRae, H. T. Prescott; W. J. Cawthon, farmer; J. J. Fell, mechanic; W. L. Cawthon, merchant; Joe Hutchison, John C. Garrett, C. L. Leus, W. C. Black, Isaac Bracken; M. T. W. Cawthon, stock; M. Manning, C. L. McKinnon, J. L. McKinnon, A. D. McKinnon; John C. McSween, ex-sheriff; John McLeod, sheriff; Fred Houseman, Geo. Houseman.

This statement tells its own sad story of wrong and suffering and of public indignation. It is only one of many hundreds, perhaps thousands, of families sacrificed to unlawful gain.

MR. CHIPLEY'S GREAT INTEREST IN THIS LAND GRANT.

You will perceive then how great the interest Mr. Chipley has for himself and his foreign clients, and for Mr. Wailes, in his animosity towards me.

This vast principality of land represents now and in the future the homes of more than two hundred thousand men, women, and children, each of whom is to pay tribute of toil and endurance and hardship and sacrifice to Mr. Chipley and his foreign clients, and to Mr. Wailes.

I have no interest in the subject but to do my duty. It is not a penny's advantage to me; my election does not depend on it. A hundred Mr. Chipleys and Mr. Wailes and associates can not deprive me of the people's confidence and appreciation of my disinterested efforts to serve and protect them in their rights to their homes. The next chapter in Mr. Chipley's record is his opposition to the passage of a resolution by the two houses of the Legislature of Florida, and to the passage of a bill by the Congress of the United States, giving a patent to the people to whom he had unlawfully sold their own homes and the public lands of the United States, without even the pretense of authority, either from the State or the United States, which would have given repose and security to their title. Mr. Chipley says that the matter is settled, and that he "scorns and defies" my efforts to protect the people's homes. I am confident that the people will get patents from the United States, and Messrs. Chipley, Wailes & Co. be held accountable for the wrongs done to them.

I will not bandy words or names with him. In my opinion Mr. Chipley's action in all these respects is a great and inexcusable injury to the people, to the justice and dignity of the State, and to the cause of public morals.

MR. CHIPLEY AS A RAILROAD AND LAND-GRANT LOBBYIST.

Mr. Chipley as a legislative lobbyist and a convention manipulator. I print the following letters:

I am not at liberty to give the names of the writers, but they will acknowledge them if desired. They are facts from men of high standing, whose statements will be accepted anywhere. Five years ago the Hon. Stephen R. Mallory obtained the passage of an act of the Legislature making the use of railroad passes or tickets for the purpose of influencing conventions or political officers a crime and punishable. This law was called forth by alleged use of the corporate power and privilege of the Pensacola and Atlantic Railroad Company by Mr. Chipley.

The letters are as follows:

MESSRS. CHIPLEY, WAILES AND CO. PROPOSE TO ELECT UNITED STATES SENATORS AGAINST THE PEOPLE'S WILL.

Mr. CALL. If joint resolutions are in order, I offer a joint resolution and ask for its present consideration.

The PRESIDENT *pro tempore.* The first reading will be at length, if there be no objection.

The joint resolution was read the first time, as follows:

"*Resolved, etc.*, That the Interstate Commerce Commission be, and it is hereby, empowered and instructed to make investigations as to all cases of interference or control or attempted interference with or control of future elections of United States Senators or members of the House which shall be reported to them by railroad corporations engaged in interstate commerce either by the distribution of passes or tickets to influence the election of members of the Legislature with such intent or by the employment of agents for this purpose, or by any other means: *Provided*, That such investigation is not intended to include or in any way affect giving passes for courtesy or charity. The Commission is hereby authorized to compel the attendance of witnesses and to use and exercise all the powers conferred upon it in the act creating the Interstate Commerce Commission, and report the same to Congress, with the evidence taken by them."

Mr. CALL. I introduce that resolution by request. It is accompanied to me with the following letter from a person of very high character, whose statements, while I withhold his name, I wish to say will be confirmed by him before the committee upon examination whenever he shall be required to testify. The letter is addressed to me:

"MAY 4, 1890.

* * * * * * *

"I heard a conversation in which you are interested, and the people of Florida and the United States much more than you.

"A Dr. McKhaun, agent of the bureau of immigration, is traveling all over the State with his pockets full of railroad passes. He was just from Pensacola, and had dined with Mr. Chipley, vice-president of the Pensacola and Atlantic Railroad Company. He told me much of what he heard Mr. Chipley say to Mr. J. B. Johnson, of Pasco County, as to when and where and how they would proceed against you. Johnson is still in Pensacola, Mr. Chipley's guest.

"The clerk of the court in Calhoun County showed free passes to ride over Chipley's road, and said that every county official had a free pass. They will leave nothing untried to accomplish their object.

"This is manifestly an effort to use the power of this railroad corporation to choose United States Senators and members of the House by improper means. It is due to the Farmers' Alliance in the State and the stand they have taken that you should bring it to the notice of the Senate and Congress and the country."

Here is another letter of the same kind:

"DEAR SIR: I drop you these few lines for the purpose of informing you of one of the tricks, and I might add dirty tricks, now being indulged in by your opponents here in Florida. I am reliably informed by one who knows whereof he speaks, and is on the 'inside track,' that there are detectives employed to note your every movement in both your public and private life.

"I do not give you this information for the purpose of putting you on your guard at all, but for the purpose of letting you know of the base methods to which your opponents are resorting in order to accomplish your defeat before the next Legislature. If you ever should have occasion to make use of this, I wish you to keep quiet as to your informer, for the reason that I was told confidentially of it. * * * You may now count me as among your supporters. I do not care to be found among men who would resort to such methods as these to accomplish any man's defeat.

"My opposition to you heretofore was based on your position on the railroad lands of Florida, and while I can not yet see the wisdom of your taking such a position in regard to these lands I think that in every other respect you have made us an able and faithful Senator."

Mr. CULLOM. Is the Senator willing to allow the letter to go with the resolution to the committee?

Mr. CALL. I am not at liberty to give the name of the gentleman who writes me, but I vouch for his being a person of character.

Comment is unnecessary. In these letters you can find proof of the motives and of the malice and the untruths of Mr. Chipley's book.

His success as an author is equal to his success as a political manager and a railroad builder. He works with other people's means and ruins the people first and then those who employ him. I consider his enmity an honor, his dispraise a proof of virtue, his friendship a reproach.

I have no fear of him or of his book or of his statements. Mr. Chipley's last exhibition is to elect United States Senators to be the servants of land-grant agents. The manner by which he proposes to do this is to assail the character and the ability of the public servants whom the people trust, and by the liberal distribution of tickets and passes to elect men to the Legislature whom he can influence.

AS AN AUTHOR AND ORATOR.

Mr. Chipley as a writer and an orator.

Mr. Chipley charges me with incoherent speech and with being stupid

in my speech at Pensacola as reported and as quoted by him in his interesting book on my record.

It was very imperfectly reported. I tried to make something out of it before leaving Pensacola, but I gave it up in despair; but if Mr. Chipley had staid there to hear me, perhaps he would at least have understood it; and the burden of it was that the land was the people's, and the law was and is that it is for free homes for the people, and that without law neither Mr. Chipley, nor Mr. Wailes, nor any governor, or trustees, or Commissioner of Public Lands, or Secretary can take it away from them; and that there was a most foul conspiracy in the interest of a vast spoliation of the public domain to override the people, to control their Legislature, and to rule the State by the use of corrupt means.

THE LOBBY IN THE LAST LEGISLATURE.

I now ask the attention of the Senate and my fellow-citizens to the lobby that gathered, like ill-omened birds of prey, at their last Legislature with free wines, liquors, and cigars, with railroad passes and tickets free.

Hon. Mr. Vaughn, of Escambia County, a member of the Legislature, an honest man, a true friend of the people, a useful legislator, stated in writing at a public meeting in my presence, and authorized me to use his name, "that he was told by the chief of the lobby in Tallahassee that if he would let a certain bill go through money should not stand in the way," or words to that effect, indicating that money was offered to him for his vote.

This pamphlet and Mr. Chipley's canvass, in my opinion, is a part of this prearranged scheme for the people's oppression, for the mortgage of their homes, for the appropriation of their labor, by the conversion of the vast domain bought from Spain into the private property of Mr. Wailes and Mr. Chipley, and those whom they represent.

SENATOR CALL NEVER RECEIVED MONEY FOR A POLITICAL SPEECH IN MADISON OR ELSEWHERE.

One of the libels of this pamphlet is that in the "dark days" I was invited to make a speech in Madison and refused to go unless $50 was paid to me. The statement is untrue. No such thing ever occurred. I never received a penny in my life for making a political speech. I have always canvassed the State at my own expense, and frequently paid the expenses of others. This is known to a great many persons. I never met Mr. Chipley on these occasions, and have never seen him amongst the canvassers.

All these charges against me are mere pretenses; are idle absurdities. My life has been passed from my earliest youth in Florida. It has been my habit and that of those from whom I came to give rather than take from others. I have lived but in two places in my life—at Tallahassee and at Jacksonville; in both places those who know me well know that my heart and my home and my means, however small, have always been open to all who were in need. I can therefore well afford to smile at the libels of this pamphlet.

HON. STEPHEN R. MALLORY OBTAINED THE CHARTER FOR THE PENSACOLA AND ATLANTIC RAILROAD COMPANY, NOT MR. CHIPLEY.

The Hon. Stephen R. Mallory, known in the State as a man of ability and promise, being a member of the Legislature in 1881-'82, obtained for Judge Stanly and others a charter to build the Pensacola and Atlantic Railroad from Pensacola to Chattahoochee, which agreed to give the company about 3,600,000 acres of the swamp and overflowed land, selections to be taken anywhere in the State for the construction of this road, about 150 miles in length; also, to give them such rights as the State had in the grant of May 17, 1856, lying along the road which they should build, thus making a grant of about 4,080,000 acres.

LANDS SUBJECT TO BE APPLIED TO FREE SCHOOLS.

The Chipley-Wailes pamphlet alludes to a remark in one of my speeches that the school lands of the State had been lost in the troubles of the war, and now rested in the bonded indebtedness of the State as a burden on the tax-paying people, and that the sinking fund for the railroads, which represented in part the sale of this land, had been sold by an order of Justice Woods for the indebtedness of the Florida Railroad Company in the Vose suit. The Chipley-Wailes pamphlet says this is not true, and raises an idle quibble that the whole of the Vose decree was not for the Florida Railroad indebtedness, and that the proceeds of the Disston land sale of $1,000,000 did not go to pay this debt, which I have often asserted and proved was for the personal debts of Mr. E. N. Dickerson. I again assert this to be substantially true in all its parts.

The reports of the trustees of the internal-improvement fund show a very large part of the Vose decree to have been for the Vose debt, which Mr. Dickerson is proved to have assumed. The portion of the bonds of the Pensacola and Georgia Railroad which were included in that decree does not in any way affect the truth of the statement. If Mr. Dickerson had paid the Vose debt against the Florida Railroad Company, as he agreed to do, the Pensacola and Georgia Railroad having been sold for $1,400,000, $900,000 of which was paid in bonds of that company and the remainder secured by a first lien, it is easy to see there would have been no substantial charge on account of bonds against the internal-improvement lands. The remainder of the lands were subject by the internal-improvement law to be applied to the "support of schools," and the 4,000,000 acres sold to Disston were in like manner subject to be applied to the education of the children of the State.

The trouble is not in my statement, but in the fact that Chipley, Wailes, and associates can not understand how it should be right to appropriate public funds to public purposes.

PICTURE OF THREE HOUSES IN WASHINGTON AS MINE.

The Chipley-Wailes pamphlet contains a photograph of a house in Washington which it says I live in and which it says is a "palatial residence." It is intended to show how "this poor man endures in Washington his humble residence to serve the people." The photograph shows the picture of three houses taken together as if one house. I do not own either of the three, nor any other house or lot in Washington.

For the four years before the current year I lived in one of them while in Washington; and if any one is interested to know, the house is covered by a mortgage, the interest on which is equal to the rent of a good house; and all that I get out of it is the privilege of living in it and paying rent in the shape of interest. It is open to every citizen of Florida who is not a land robber and an enemy to the people of the State, and has furnished shelter and entertainment to them and their children and will continue to do so whenever they will accept its hospitalities. It is not built with the proceeds of any man's home on the public lands; there are no Reddicks sacrificed to build it.

THE HILL LETTER.

The Chipley-Wailes pamphlet and speech alludes to a Mr. E. N. Hill's letter read by me at the Pensacola meeting and prints a letter from Mr. C. E. Merrill, which expressly states that I had authority to use the letter, and if it had not I would have had the authority and right to do so.

I had never seen Mr. Hill nor heard of him until a short time before the letter was written. Mr. J. M. Hines, a newspaper man of respectable character who had frequently informed me, as had others, that Mr. Wailes and associates had paid newspaper men to defame me in the press, brought Mr. Hill to see me, and he made the statement to me in the presence of others, without solicitation or promise, that he had been employed and paid by Chipley, Wailes & Co. for that purpose. At my request he put his statement in writing and I subsequently requested him to address the letter to Mr. C. E. Merrill, then the editor of the Times-Union.

Subsequently I was informed of the existence of Mr. Hill's letter of the 19th of February, 1886, to Mr. Wailes, printed in the Chipley-Wailes pamphlet, offering for a thousand dollars to furnish information that would disgrace me and send me to the penitentiary. I need not say that Mr. Hill had no such information and none existed, but that he had been employed at that time, as he subsequently stated, by the Chipley-Wailes combine is clear from his making such a proposition, which he certainly would not have done to any one except persons in collusion with him.

There was no reason why I should seek to induce Mr. Hill to write a letter about Mr. Chipley. I had a very slight acquaintance with Mr. Chipley. I had never heard of him in any capacity except as an agent of a railroad company. I had spent a night, while canvassing West Florida, during a storm on a railroad car which was under his control, and I consented, much to my regret, to be taken to his house in Pensacola at a late hour of the night on my return from the country in the last State canvass, and that was the extent of my acquaintance with and knowledge of him.

I have no reason to doubt that Mr. Hill wrote both the letters, and that he was employed by Chipley, Wailes and Co. to defame me in the newspapers, and prevent, if possible, my efforts to keep the public lands of the United States out of their control.

The writer of the pamphlet seems to be very intimate with Mr. Hill. He says: "Let the Senator tell what he said when Mr. Hill's messenger called at the Senator's house for his pay." No messenger ever called at my house for pay. No pay was ever asked for. No money was ever paid to Mr. Hill.

I have never had anything to do with Mr. Hill, and when his letter was received there was a witness present by whom all these statements can be proved. On the other hand, I have no doubt that the proof of this conspiracy against the people of Florida and against me, as their servant, can be and will be obtained outside of Mr. Hill, and of a conclusive character, both circumstantial and direct. The fact of his employment by the Chipley-Wailes associates is rendered certain by the statements of the letter which I publish in another place relative to the employment of detectives to find out or make something which might be used to my injury or discredit. The name of the writer is withheld at present, but he is a man of character whose statements are reliable.

MY NEPHEW, RHYDON M. CALL, AS MY PRIVATE SECRETARY.

On page 32 of Mr. Chipley's pamphlet is a statement that I kept my nephew, R. M. Call, on the rolls of the Senate, and had him sign the pay-rolls several times after he left here. Suppose I had done so and had chosen to pay the clerks who did my work myself. I would have had a perfect right to do so; but the statement is entirely false and untrue, like everything else in his pamphlet.

My nephew spent some time with me. I was glad to be able to assist

him and to give him the privileges of the floor of the Senate, and I could only do so by appointing him my secretary.

When he left I employed Mr. J. G. Walker for a short time, and after him my present secretary, Mr. L. J. Eliot, and Mr. Call's name being on the rolls for the first month or two the rolls had to be signed by him in order to draw the money, because of a neglect to enter his successor's name on the rolls of the Senate.

Mr. Wailes and Mr. Chipley, who do me the honor to employ spies to try to find something either in my private or public life that may be the foundation of some charge, thought they had discovered a ground of censure. I did what was right, what any man of proper feeling would have done, and I would be very willing to do so again. Mr. R. M. Call signed the rolls because the appointment had to run from the first day of the month, and in March he did the same thing because, partly through my negligence, the first part of the month passed without filing his successor's appointment. But, suppose Mr. Walker, and after him, Mr. Eliot, had chosen to do the work all the time, and allow Mr. R. M. Call to receive the money, where was the wrong of it, and where the "boodle" in it? Who would have been hurt? Has not a man the right to work for nothing if he chooses, just as much as Mr. Chipley has to work for a railroad company claiming a great part of the United States land in the State.

Mr. Eliot's letter is here printed:

WASHINGTON, D. C., *June* 2, 1890.

I have read the statement in Mr. Chipley's pamphlet against Senator CALL relating to Mr. R. M. Call's acting as private secretary to Senator CALL in December, 1885, and early in 1886. I have been with Senator CALL since February, 1886, as secretary and stenographer. Senator CALL's nephew during the time he was here was on the Senate rolls, and for a short time after he left. I did the work from the time stated, and Mr. R. M. Call's name having been inadvertently allowed to remain on the rolls vouchers were sent to him to sign but the money was paid to Mr. J. G. Walker and myself. Mr. CALL often requires the services of several persons. His correspondence is large, and he requires prompt attention to every letter. Mr. Walker was employed by Mr. CALL for several months both before and after I began to work for him. There was nothing improper in the matter, as Mr. R. M. Call did not receive the pay after he left here.

Respectfully,

L. J. ELIOT.

TWO HUNDRED AND THIRTY-SEVEN PROVISIONS WHICH HAVE BECOME LAWS OR PARTS OF LAWS.

This audacious libel says:

I have prepared a list of four hundred and seventy bills, and I will give $25 to any one who will find a bill introduced by Senator CALL which I have omitted which became a law.

The list is taken from the published lists contained in an executive document. Mr. Chipley did not prepare it. That is the first incorrect statement. The second is that a great many bills in this list became laws in some form or other which he has not stated. To show the value of Mr. Chipley's statements about me, or any one, or anything else which stands in the way of his schemes, I will go over this list.

In the Forty-sixth Congress bills Nos. 568, 569, 570, 651, 653, 654 became law in whole or in part.

The bill changing the limit of the appropriation of the Jacksonville public building has become a law.

Bill changing the limit of appropriation at Key West has been twice recommended by the Secretary of the Treasury and an additional appropriation made, and another one will be made.

Bill to continue improvement of Pensacola Harbor has been placed in the river and harbor bill, for which it was intended ——— to continue the work on the St. John's River; and also bill ———, for further improvement of St. John's River have both passed in river and harbor bill, where they were intended to be placed.

Provision for the improvement of the Caloosahatchee River, passed in the river and harbor bill.

Bill for forfeiture of railroad land grants passed the Senate in bill submitting the question to the courts, and in amendment to general bill on the subject.

FIFTIETH CONGRESS.

S. 236. Five-ton exemption bill; became a law in another form.
S. 237. Suwannee River bill; passed in river and harbor bill.
S. 238. Bill for Amelia Island harbor; became law in river and harbor bill.
S. 239. Passed the Senate and agreed to in conference, but failed of final consideration.
S. 241. Passed in river and harbor bill.
S. 242. Passed the Senate in Mr. SHERMAN'S bill reported from Finance Committee.
S. 245. Became a law in another form, I think.
S. 246. Passed in river and harbor bill.
S. 248. Passed the Senate at another session, and, I think, the House.
S. 249. Passed both Houses and approved.
S. 250. Passed in army bill.
S. 254. Passed.
S. 735. Passed and approved.
S. 1076. Passed and approved.
S. 1431. Passed and approved.
S. 1721. Passed and approved.
S. 2629. Passed and approved.
S. 2672. Passed in Indian appropriation bill.
S. 2723. Law by allowance of pension by Department.
S. 2917. Passed subsequently by joint resolution.
S. 3312. Passed in appropriation bill.
S. 3568. The substantial provisions of this bill reported in a bill from the committee, and passed.
S. 3391. Became a law.
S. 3465. Became a law in other bills.
S. 3568. Bureaus established in Havana and at the Dry Tortugas.
S. 3853. Passed in other bills.
S. 3555. Passed.
S. 3678. Passed in another resolution.
S. 102. Passed.
S. 153. Passed in river and harbor bill.

Here are thirty-eight bills in the Fiftieth Congress, introduced by me, which became laws in one form or another. It is quite immaterial whether it was through the general appropriation bills, by incorporation with other bills or by original bill from the committee. The question is whether the ideas of the bill were useful to the public service and were approved by Congress. Mr. Chipley is just as far from the truth in every other statement he has made.

The proportion of the bills at other sessions of Congress which became laws is equally great.

FORTY-SIXTH CONGRESS.

S. 658. Experimental stations; has since become a law in other bills; witness Lake City College.
S. 569. Has since become law.
S. 679. Has since become law.
S. 816. Has since become law.
S. 1107. Became a law since.
S. 1155. Became a law in river and harbor bill.
S. 1219. Became a law in river and harbor bill.
S. 1402. Became a law in other bill.
S. 1452. Became a law.
S. 1495. Became a law in other bill in part.
S. 1506. Became a law in other bill.
S. 1546. Became a law in general bill.
S. 1641. Became a law in other bill.
S. 1642. Became a law.
S. 1653. Became a law in river and harbor bill.
S. 1753. Became a law in general bill.
S. 1822. Became a law in other bill.
S. 1462. Became a law subsequently.
S. 2081. Passed in general bill authorizing Postmaster-General to establish routes.
S. 2086. Became a law subsequently.
S. 2060. Became a law subsequently.
S. 2101. Became a law in river and harbor bill.
S. 2188. Became a law in part by annual appropriations of $6,000 for the purpose in general bill.

FORTY-SEVENTH CONGRESS.

S. 223. Anclote Light; became a law subsequently.
S. 228. Pension for P. B. Perry; became a law subsequently.
S. 294. Became a law in general bill.
S. 1145. Experimental farms; became a law in general bill.
S. 1512. Became a law subsequently in general bill.
S. 226. Became a law subsequently in general bill.
S. 1761. Became a law in general bill.
S. 2004. Became a law in general bill.
S. 1527. Relief of A. Hopkins; became a law subsequently.
S. 1174. Became a law subsequently.
S. 1609. Became a law in general bill.
S. 1800. Became a law.
S. 220. Became a law.
S. 1680. I think this bill became a law subsequently.
S. 230. Became a law.
S. 249. Became a law.
S. 839. Became a law.
S. 855. Became a law in general bill.
S. 1803. Became a law.
S. 1173. Became a law in other bill.
S. 1140. Became a law in other bill.
S. 57. Became a law in river and harbor bill.
S. 1685. Became law by action of Treasury Department.
S. 1381. Became law.
S. 514. Became law in other bill.
S. 236. Became law.
S. 2472. Became law in general bill.
S. 2429. Became law.
S. 2349. Became law by settlement in the Treasury Department by compromise pending action on the bill.

FORTY-EIGHTH CONGRESS.

S. 2103. Became law.
S. 1879. Passed the Senate in another bill.
S. 137. Became law.
S. 890. Became law in part in river and harbor bill.

S. 894. Became law in part in river and harbor bill.
S. 2064. Became law in appropriation bill.
S. 1901. Became law in another bill.
S. 1228. Hartridge & Christopher; pending bill settled.
S. 1575. Became law.
S. 2034. Became law.
S. 1405. Became law.
S. 891. Became law.
S. 225. Became law.
S. 1321. Became law.
S. 1723. Became law.
S. 666. Became law in Mexican war pension bill.
S. 1093. Became law. No proof of loyalty required in Mexican war pensions.
S. 892. Became law in part.
S. 893. Became law in part.
S. 136. Became law.
S. 138. Became law.
S. 985. Became law.
S. 1989. Became law in part by annual appropriations for this purpose.
S. 2047. Became law in part in river and harbor bill.
S. 889. Became law in part in river and harbor bill.
S. 1281. Became law.
S. 1408. Became law in river and harbor bill.
S. 888. Became law by settlement by compromise pending action on bill.
S. 128 and 129. Became law in bills reported from Committee on Printing.
S. 102. Became law in other bill.
S. 2623. Became law.
S. R. 103. Became law in general bill.

The Chipley-Wailes pamphlet says that of all these bills and joint resolutions only one, S. 2623, became law. Comment is unnecessary.

FORTY-NINTH CONGRESS, FIRST SESSION.

S. 1464. Passed Senate in bill reported by Mr. COCKRELL from Committee on Military Affairs.
S. 169. Became law in general appropriation bill.
S. 420. Became law in part in other bills reported from Committee on District of Columbia.
S. 458. Became law.
S. 441 and 451. Became law in part in river and harbor bill.
S. 440. Passed the Senate and agreed to in part in conference report.
S. 457. Became a law in general bill.
S. 449. Passed the Senate twice in bill reported from Committee on Finance.
S. 433. Became law.
S. 453. Became law.
S. 469. I think this bill became law in other bills.
S. 443. Pensacola Harbor, became law in river and harbor bill.
S. 455. Became law in general bill.
S. 445. Became law in Mexican war pension bill.
S. 447. Became law subsequently.
S. 432. Became law in part subsequently.
S. 168. Became law in general bill.
S. 167. Became law in general bill.
S. 463. Became law in part subsequently.
S. 442. Became law in general bill.
S. 452 and 463. Became law in general bill.
S. R. 10. Became law.
S. 446. Became law in other bills.
S. 166. Became law by compromise in Treasury Department on basis of bill, in part. Motion for committee of investigation. Subcommittee of Committee on Public Lands was appointed.
S. 874. Telegraph line to Jupiter Inlet; became law and line established.
S. 1030. Same as above.
S. 1293. Passed the Senate and put in the appropriation bill.
S. 1313. Passed the Senate in other bills.
S. R. 1. Resolution exempting soldiers and sailors from civil-service examination; became law in part.
S. 1613. Became law in part in other bills.
S. 2151. Became law subsequently.

FORTY-NINTH CONGRESS, SECOND SESSION.

S. 3051. To pension B. Thebaut; passed the Senate repeatedly and is now a law.
S. 3153. Became law in general bill.
S. 3324. Became law in other bills.
S. 3065. Became law in other bills.
S. 3232 and 3233. Became law.
S. 102. Quarantine station near Key West; became law.
S. 2991. Pensacola Harbor; became law in general bill.
S. 2918. St. John's River; became law in general bill.
S. 2992. Tampa a port of entry; became law in general bill.
S. R. 86. Became law in effect and the information was furnished.
S. 2915. Became law in general bill.
S. 254. Articles of war relative to deserters; passed the Senate.
S. 1431. I think this became law on report from Light-House Board.
S. 233. Became law in general bill.
S. 3568. Became law in part.
S. 3312. Became law in part in other bills.
S. 249. Became law.
S. 735. Became law.
S. 228 and 241. Became law in general bills.
S. R. 70. Became law.
S. 2916. Became law in other bills.
S. 250. Became law in other bills.
S. 242. Passed the Senate; SHERMAN'S report from Committee on Finance.
S. Res. 102. Became law.
S. 217. Became law in other laws.
S. Res. 35. Jacksonville subtropical; passed the Senate.
S. Res. 218. Passed Senate and House in part, and appropriation made.
S. 1076. Passed Senate and House.
S. 219. Pensacola Harbor; became law in part in general river and harbor bill.
S. 339. Became law in other bills.
S. 234. Became law in other bills.
S. 228. Became law in other bills.
S. 2603. Passed Senate in other bill.
S. 222. Became law in other bill.
S. 221. Became law in other bill.
S. 2773. Became law by action of Secretary of the Treasury.
S. 237. Became law in general bill.
S. 1721. Became law in other bills.
S. 2629. Became law in other bills.
S. 3308. Became law in part in appropriation bill
S. Res. 111. Became law in bill establishing stations at Dry Tortugas and in Havana, Cuba.

Two hundred and thirty-four bills and joint resolutions introduced by me, of the numbers and titles cited in the Chipley-Wailes pamphlet, have become laws or parts of laws, or passed both Houses of Congress in some form. Nearly all of this number having become laws, I need not exhaust time, patience, and paper by enumerating them. A brief classification of them will convince every one that the writer of the Chipley-Wailes pamphlet does not know as much about the laws or Congress as he does about selling the people's homes and about the duties of a railway freight and traffic agent and the imposition and collection of ruinous freight and passenger rates from the people.

FURTHER MENTION OF IMPORTANT BILLS WHICH BECAME LAW.

Mexican war soldiers are pensioned; Pensacola and St. John's Bar and River have annual appropriations; Fernandina and Amelia Island, and Cumberland Sound, also have annual appropriations; Volusia Bar and St. John's River improvements became laws; St. Augustine, Caloosahatchee River light-house at Anclote; public buildings at Jacksonville and Key West, Apalachicola River harbor improvements, writs of error in criminal cases, homestead law amendments, compensation of inspectors of hulls and boilers, Suwanee River improvements, bill giving patents to settlers, passed both Houses and agreed to in conference in the Fiftieth Congress; no oath of loyalty required in Mexican war pensions, park donated to St. Augustine, lot purchased for the barracks at St. Augustine, bill to establish a bureau of silk culture, became a law in an appropriation practically effecting that purpose; experimental farm college or station became a law in effect by the establishment of a station at Lake City; St. John's River lights, Dog Island light-house, Mosquito Inlet light-house, relief of certain purchasers of public lands are the subject-matter of some of the bills which the Chipley-Wailes pamphlet states failed to become law, but which in fact did become laws in some form or other.

SENATOR CALL'S RECORD OF BILLS COMPARED WITH THAT OF OTHER SENATORS BY THE RECORDS.

It will be seen from the official record that the bills introduced by Senator CALL which became law bear a fair comparison with those introduced by any other Senator.

WHAT SHALL BE SAID OF THE WRITER OF THE CHIPLEY-WAILES PAMPHLET?

What shall we say of the poor, miserable writer of the Chipley-Wailes pamphlet, who can not make a better libel than this which the public laws themselves expose? Yet this is the means by which it is sought to take away from the people their free homes on the vast domain of public land, equal in size to many States of the Union, and put the proceeds of its sales in the pockets of Chipley, Wailes & Co. and their foreign employers.

DEGRADING SPECTACLE.

No spectacle more degrading has ever been presented to the Senate and the people than this audacious attempt to prevent legislation by invading the precincts of the Senate with a libel so foul and so false, and yet so weak, upon a Senator only because he has done his duty to the people in trying to protect them against the unlawful appropriation of their homes and their labor.

LAW OF THE UNITED STATES.

There is a statute of the United States which may properly be applied to such a case. It reads as follows:

If two or more persons conspire either to commit any offense against the United States, or to defraud the United States in any manner or for any purpose, and one or more of such persons do any act to effect the object of the conspiracy, all the parties to such conspiracy shall be liable to a penalty of not less than $1,000 and not more than $10,000, and to imprisonment not more than two years.—*Section 5440, Revised Statutes.*

AMOUNT OF MONEY OBTAINED FOR FLORIDA WHILE SENATOR CALL HAS BEEN IN THE SENATE.

The following letters show the amount of money expended in Florida since I have been in the Senate:

TREASURY DEPARTMENT, *May 28, 1890*

SIR: In reply to your telegram of the 21st instant, asking to be furnished with a statement showing the appropriations made from 1880 to 1890, inclusive, on account of rivers and harbors, public buildings, light-houses, life-saving service, and quarantine establishment for the State of Florida, I have the honor to transmit herewith statements giving the desired information.

Respectfully yours,

W. WINDOM, *Secretary.*

Hon. WILKINSON CALL, *United States Senate.*

Statement of appropriations for river and harbor improvements in the State of Florida for the fiscal years 1880 to 1890, inclusive.

1880	$39,500	1887	$306,750
1881	249,000	1888*	
1882	222,000	1889	375,000
1883	374,000	1890*	
1884*			
1885	276,000	Total	1,840,250
1886*			

* No appropriations.

Amount appropriated for river and harbor improvements in Florida before 1879, $505,483.

Legislation in regard to public buildings in Florida between March 4, 1879 (Forty-sixth Congress), to the close of the Forty-ninth Congress, March 3, 1889.

Jacksonville—Post-office, custom-house, etc.:	
1886, July 29. Limits cost to $150,000; appropriates	
1887, Mar. 3. Appropriates	$70,000
1887, Oct. 2. Appropriates	80,000
Key West—Court-house, post-office, etc.:	
1885, Feb. 25. Limits cost to $100,0000; appropriates	100,000
1887, Mar. 3. For foundation appropriates	8,000
1889, Mar. 2. For protecting site	3,000
Key West—Marine hospital:	
1880, June 16. Repairs sea-wall	1,000
1883, Aug. 7. Completion sea-wall	4,000
1884, July 7. Completion sea-wall	1,000
Pensacola—Post-office and court-house:	
1882, June 10. Limits cost to $200,000	200,000
1886, Aug. 4. Appropriates for approaches	5,000
1888, Mar. 30. Completion in excess limit	2,000
Tallahassee:	
1888, June 7. Limits cost to $75,000 and appropriates	75,000
Total	549,000

OFFICE SUPERVISING ARCHITECT TREASURY, *May 22, 1890.*

Statement showing amounts expended for the establishment of new life-saving stations and houses of refuge on the coast of Florida, the places at which they are located, and the cost at each place. (The statement includes all the expenditures for such purposes on the coast named between 1880 and 1890.)

Jupiter Inlet, a life-saving station	$7,708.75
Santa Rosa Island, a life-saving station	7,034.97
Smith's Creek, a house of refuge	3,068.93
Mosquito Lagoon, a house of refuge	3,055.51
Chester Shoal, a house of refuge	3,057.50
Cape Malabar, a house of refuge	2,976.98
Indian River Inlet, a house of refuge	3,260.75
Total	30,163.39

The above expenditures were made by fiscal years as follows:

Fiscal year ended June 30, 1885	$644.70
Fiscal year ended June 30, 1886	29,374.13
Fiscal year ended June 30, 1887	144.56
Total	30,163.39

Statement of amounts expended in Florida from August 1, 1882, to May 12, 1890, from the appropriations for "preventing the spread of epidemic diseases," "in aid of yellow-fever sufferers," "quarantine station, Key West, 1889," and "quarantine service, 1890."

Previous to 1882 the expenditures were under the control of the National Board of Health.

Epidemic diseases.

From August 1, 1882, to June 30, 1883	$5,381.93
From July 1, 1883, to June 30, 1884	14,627.33
From July 1, 1884, to June 30, 1885	2,080.75
From July 1, 1885, to June 30, 1886	
From July 1, 1886, to June 30, 1887	
From July 1, 1887, to June 30, 1888	13,159.86
From July 1, 1888, to June 30, 1889	227,829.90
From July 1, 1889, to May 12, 1890	4,130.00
Total	268,209.77

Appropriation in aid of yellow-fever sufferers.

From September, 1888, to June 30, 1889	64,563.80

Appropriation to perfect the quarantine service of the United States.

From August 1, 1888, to June 30, 1889	3,069.19
From July 1, 1889, to May 12, 1890	2,534.43
	5,603.62
Unexpended balance to be expended during the year	82,396.38

Appropriation for quarantine service, 1890.

From July 1, 1889, to May 12, 1890	$6,022.64

RECAPITULATION.

Epidemic diseases	268,209.77
In aid of yellow-fever sufferers	64,563.80
To perfect the quarantine service, Key West	5,603.62
Maintenance, etc., quarantine service, 1890	6,022.64
Total to May 12, 1890	344,399.83
Unexpended balance to be expended during the year from the appropriation to perfect the quarantine service of the United States. Also, what may be expended from the appropriation for "preventing the spread of epidemic diseases," "quarantine service," etc.	82,396.38

LIGHT-HOUSES, ETC.

Appropriations for works in Florida.

Act approved—	
June 16, 1880	$10,000.00
March 3, 1881	20,000.00
August 5, 1882	4.00
August 7, 1882	50,000.00
August 7, 1882	30,000.00
March 3, 1883	30,000.00
March 3, 1883	35,000.00
July 7, 1884	10,000.00
July 7, 1884	20,000.00
March 3, 1885	40,000.00
March 3, 1885	200.00
March 3, 1885	17,500.00
March 3, 1885	600.00
August 4, 1886	50,000.00
August 4, 1886	17,500.00
March 3, 1887	20,000.00
March 3, 1887	17,250.00
July 31, 1888	40,000.00
October 2, 1888	35,000.00
March 2, 1889	1,750.00
Total, 1880 to 1889	424,804.00

RECAPITULATION.

Life-saving stations	$30,163.39
Public buildings	549,000.00
Add new appropriation for tax bills	100,000.00
Light-houses	424,804.00
Rivers and harbors	1,840,250.00
Preventing epidemic diseases	426,399.77
To this date	3,502,417.25

The total amount expended for rivers and harbors in the whole history of the State before I came to the Senate was a little more than $500,000.

Three million five hundred and two thousand four hundred and seventeen dollars and twenty-five cents have been appropriated for Florida since I have been in the Senate. This amount will reach with the appropriations of 1890 over $4,000,000.

The Chipley-Wailes statement, therefore, contains as many false statements as there are dollars in the above enumeration.

SENATOR CALL'S SERVICES HAVE BEEN FOR THE PEOPLE'S GOOD.

There is another difference; this great sum of money was honestly obtained under the law for public purposes. It came to the people of the State to enrich them with blessings of permanent utility. It contains no proceeds of the sale of the free homes of the people; there are no Reddick families sacrificed and turned out on the highways. It is no part or share of lobby fees. It does not levy tribute to the extent of ten or twelve millions of dollars on the labor, the comfort of the people of Florida of this and future generations. It deprives no poor men's children of an education or of future success in life, as does the Chipley-Wailes misappropriation of the public lands to their own benefit, and that of their employers, to be spent in other States and in foreign lands.

Federal Election Law.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 28, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. STOCKDALE said:

Mr. CHAIRMAN: The proposition to enact into law this bill now under consideration has occasioned a debate here which in my judgment is entirely foreign to the real issue that is pending before the House and wide of the real objects and designs of this bill, and which its supporters dare not discuss on this floor. For if the real designs of this measure were unmasked the people would recoil from it as a wicked thing. Gentlemen on the other side have been making orations in favor of pure elections with as much muscular earnestness as though they meant that. And this is the amusing part of the play.

Some gentlemen, the uninitiated, may be in earnest. There are always members of the troupe who honestly believe to the end that they are playing tragedy. Their seriousness makes the farce better. Some of the really intellectual supporters of this bill may be sincere. "God, I thank thee that I am not as other men," was not peculiar to wealthy Pharisees. The parable might be taken from real life then, or now, or at any time. And the "other men" might well exclaim "Amen," and doubtless the fellow was in earnest. But the brainy leaders and managers who work behind this glamour of glittering pretenses about pure elections know that this bill was skillfully framed as a cover to their plans to change the result of honest elections by means of corrupt Federal officials supported by Federal bayonets. The only man of intelligence who has supported this bill openly and honestly is the Speaker of this House, when he said "we will do our own counting and make our own certification."

It is not the elections they will deal with under the protection of this bill, but the counting and certification are the potent factors in getting men into Congress. "Practical results are what they want, to do business" is the word, and Speaker REED has the courage to put it on its merits, and declines to join in this masquerade that deceives nobody. The gentleman who stands godfather to the bill [Mr. LODGE] consumed two hours of the time of the House trying to cover its nakedness, but while he wove elegant drapery it is too thin.

Born of greed and love of power, nurtured upon usurpations and injustice, it can not be made to assume the form of innocence.

They have introduced into this debate no evidence, but have burdened the RECORD with bold and bald assertions, defaming the South; then with solemn upturned faces say, "We—who are not as other men—will send our disciples down there to purify their elections."

They have provided a system of machinery that they have the cheek to present to the country on that proposition. We have had an example of a free ballot and a fair count with such machinery as this; and they forget or they shut their eyes to the fact that as it was then it will now be composed of the very basest of men, and it is intended by some, not all, I know, to produce corruption in the elections in the South.

But I find this peculiarity about this measure, Mr. Speaker: Every man who has spoken on that side on this question has not intimated that it will ever apply in his own State. The inference is that it will always be applied somewhere else. It is something like the people—if I may quote Lorenzo Dow—who believe in the doctrine of election, and they believe that of necessity a large part of the human race is going to be damned, but you can not find any one of them who will acknowledge that he is to be the damned fellow. [Laughter.]

Neither will these men when they speak in favor of this law admit that they are the parties who are going to be affected by it or that their sections will reap its fruits. It is always somebody else. It is the South that is going to be damned.

I will excuse the gentleman from Ohio [Mr. WILLIAMS] for his sentiments. I have no feeling against him, for I have this consolation; he says that his wife was born in Texas and that his children were born in Tennessee. Now, if his wife was born of the noble blood of the Lone Star State, and his children first breathed the air of heaven on the hills of Tennessee, those boys will never learn at the knee of that noble woman to support a system of refined cruelty, as this bill proposes, and inflict it upon a brave and chivalrous people. It will be the last of the race that will ever support such a bill. [Applause.]

I want, Mr. Speaker, in the time I have to speak, not to waste time on the constitutional questions involved in this bill—able gentlemen have been heard on those propositions—but to say that there is no occasion for the legislation proposed, that it is un-American, that it means usurpation, that it is without reason, and the proposition must have something sinister behind it. And I greatly fear there is much of revenge in it. So far as Pennsylvania and New York and the other Northern States that have been criticised on this floor are concerned, gentlemen who represent those States are amply able to take care of themselves, and I have nothing to say. The gentleman from Massachusetts [Mr. LODGE] remarked that it was cowardly in the nation to give the ballot into the hands of men and not protect them in the use of it. Admit it, but does that justify the Republican party in using the National Legislature in framing laws to protect the men whose votes they want, and in performing that pretended duty with corrupt and cruel machinery that will crush out their own race? Is that not equally cowardly, I might say dastardly?

But ah, the next gentleman from Massachusetts [Mr. GREENHALGE] says that the dominant race will not be dominated; that the race accustomed to rule will not be controlled by a race unaccustomed to rule. I say, too, that there is no danger of negro domination in the South, if they were let alone and allowed to exercise their own will. It is not negro domination but New England and negro domination mixed we fear—a domination of avarice using the colored men as tools to force the South to pay tribute to New England and the North, and that, too, by creating enmity between the races that did not exist before. I say that the problem that was solved after the war in the Southern States is without parallel in the history of this or any other nation, civilized or otherwise. No such problem was ever presented to any people, and none but the superbest manhood could have solved that most complex problem so promptly and so well, and I do solemnly believe that there is not on the earth to-day, if there ever has been, another people with the inborn greatness to accomplish such a feat with all the surroundings. And I can not be charged with egotism for such utterances. I am not a native of the South, but was born and raised and educated in the North.

In my early manhood, proud of my native State whose borders I had seldom crossed, I left my home to see something of the mighty, surging, Anglo-Saxon American race. Every mile I traveled I became prouder of being an American. I wandered southward, and there saw in the descendants of the matchless cavalier the highest type of civilization. Then peace reigned over the broad expanse from the Lakes to the Gulf, and from Plymouth to the Golden Gate, and the nation had one great heart. When the untoward years precipitated that stupendous conflict, history was compelled to say that such warriors had not lived before. At the end of those four frightful years the transformation was appalling. The North was made more prosperous by the war, and shouts of victory went through all the land. The South was left standing amid a desolation gloomy as the shadows of death. While the North reveled in luxurious homes, listening to the songs of triumph, the hollow voice of despair smote upon the ears of the South among the blackened chimneys where their homes had been. I watched their actions with nervous anxiety. When they went forth to battle they left their happy homes in a land beautiful and prosperous as the fabled valleys of the Orient. They left behind them magnificent estates, teeming wealth, and a glorious womanhood, unsurpassed in all the world. When they returned, the few that did return, the tramp of destruction had left desolation. The court of death had held sway in the once fair land, and the fair daughters were clad in mourning and want stared in their faces.

Amid these appalling surroundings a new and startling social problem sprang into view. Here was a race in great numbers, who had been slaves for three centuries, suddenly invested with citizenship. They had no history, no antecedents; no one knew what would be the result. The government of master and slave was gone—indeed all government was gone—and new relations must be assumed at once. They had no time to meet and consult. They had no means to assemble if they had had the time. I wondered anxiously what will those marvelous people do in this crisis demanding an incredible degree of magnanimity and noble manhood? Is the vaulting spirit of the cavalier crushed out forever, and shall the proud race end here? Who will have the heart to write the history? Then came to the front that superb womanhood of whom that unexampled soldiery was born, and with her sublime faith encouraged the scarred and crippled veterans to enlist anew in the great battle of life and to march bravely into the future, gloomy and foreboding as it was.

With the justice and magnanimity that spring from noble natures, they rose to the occasion; each man acting for himself, as with one impulse, they did at once and without ostentation what the most enlightened civilization would have done after deliberation and consultation. They at once extended a friendly hand to the race they had owned, and in cordial grasp they went to work to reclaim their native land from a dismal devastation. Within thirty days the whole problem was solved, so far as the races were concerned, and the two races, once masters and slaves, now citizens all (the disfranchised masters and enfranchised slaves), were working peacefully together in mutual confidence and perfect good-will. The crops had been planted and partly advanced.

All the freedmen asked was the word of their former masters that they would divide fairly in the fall, which was promptly and freely given and strictly observed. That unexampled revolution in society that was expected to cause upheaval and anarchy was by the master minds and great hearts of a people who could rise amid poignant suffering and terrible disaster to the full stature of the noblest manhood and womanhood adjusted in a day. These people just emerged from the most terrible war of modern times, wrung with the pangs of crushing defeat, weighed down by the sorrows of beholding ruined homes and the graves of brave comrades and kindred, showed themselves greater than even this unprecedented emergency. They yielded promptly to the inevitable, recognized the changed relations of society, and recognized and respected the full and complete rights of their emancipated slaves.

We have been told by half the Republican speakers in this debate, so far, that the slaves were loyal to their masters during the war, and Southern men should have no enmity against them now.

That the slaves were loyal to the Southern people during the war as a rule is eminently true. There were some who proved treacherous and went out and joined the enemy and piloted troops back to their old homes to plunder and rob and burn, but they were not numerous enough to disgrace the race. As you say, they staid on the plantations and took care of the families while the masters were in the war, and they were intrusted to hide such things as would be stolen when the enemy approached. And the most marvelous feature of it was that during the whole of the war it was not thought necessary to bar a door against them, nor for two or three years afterwards, until the

Republican party sent among them a set of emissaries profane in sentiment, of debauched habits, bold and cunning, but below the Hessians in morals.

They did not seem to regard the relation of master and slave, but were as friends, and passed from that status into freedom without a jar, and moved on peacefully until the Philistines came. You could not realize that. You expected anarchy, and kept the war on for a year; and had the great mine-owners and manufacturers of the North been their former owners there probably would have been; but the friendships of generations were deeper and higher than slavery, and in the new relation there was no more fear of the freed negro than a man would fear his son the day he became of age. The next morning after it was announced to them that they were free as their masters, and could go where and do as they pleased, the house servants and attendants outside went singing through the house and about the premises attending to their work as usual, and the field-hands went to the field in the same squads.

All this is highly creditable to the colored race, and will be held in grateful remembrance by the white people of the South, and bears its fruits still, and no ex-slave has ever been turned away by his old master if he had the means to aid him. It also tells another story, a chapter of unwritten history, that will irritate you to hear: That never could have occurred where hard task-masters and cruel treatment produces continuously strikes and riots. It speaks in terms more eloquent and forcible than pen or tongue of noble qualities in the white race which you seek to destroy. It shows that even in the position of masters they were noble enough, and humane enough, and great enough, and so acted as to bind to them in bands of everlasting friendship the race they owned as slaves; a friendship that survived slavery; a friendship that the cunning machinations of wickedness have failed to destroy, and is living evidence of nobleness of character in the master race, as well as faithfulness in the colored race.

The old masters and the old slaves are friends to-day, defying all the vicious schemes put in motion to alienate them. The young men of the two races have grown up alienated, it is true, and "pity 't is 't is true." That condition is the result of causes which the white people of the South had no part in producing and are not responsible for. The people whom the Republicans sent to prey upon and reconstruct the South desired to rob the people there. They needed power to accomplish that end. The decent negroes would not follow them. The negroes pointed with pride to the fact that they were free and citizens, and their former masters were their friends, to whom they could go for assistance; that they sat upon juries together, and were addressed as gentlemen of the jury, former masters and slaves alike.

I speak from personal knowledge when I say there was no enmity in either race towards the other until it was imported there by Northern Republicans, and the poison carefully and industriously and insidiously instilled into the unsuspecting and naturally superstitious mind of the negroes. They destroyed the happiness the negroes felt, and it was great, at being free by creating within their untutored mind the false apprehension that they would be returned into slavery. By that means they succeeded in controlling the negroes so far as to get in power.

The men, or whatever they were, that held the offices, and their minions, and many of the teachers under Republican rule there engaged in that avocation to accomplish their purpose. For that diabolical act I have no comment. The crime of wholesale robbery of the white people they were enabled to perform by means of the negro vote thus obtained, and even their brutal tyranny, may be forgiven by the great, magnanimous people who suffered by it if it be not repeated. Who shall forgive that crime against the negro race I know not.

When the very decency of civilization demanded the unfettering of the Southern people, they, by their dauntless spirit and unexampled courage and energy, brought prosperity up out of desolation. Both races shared it, and harmony was being restored. The matchless recuperative energies of the South not only excelling anything known to history, but, as my eloquent friend from New York [Mr. COVERT] said, "surpassing the wildest conceptions of romance," appeared to the astonished gaze of the world, and the sympathy and magnanimity of all good people rejoiced at the superb heroism of her people, and civilization viewed with conscious pride the magnificent manhood and womanhood and the marvelous achievements of that renowned race.

But the Republican party, lynx-eyed and wary, soon descried in the rebounding prosperity, in the returning harmony of the races, peacefully at work in that marvelous country, a menace to their long-cherished hope and fixed determination to divest the people of power and place it where the associations of aggregated wealth and great combinations and corporations could have unrestrained sway in shaping the legislation of the country in their own interests. That their methods might destroy the property, the prosperity, the peace, and the lives of both races in the South was of minor importance to their own money-getting.

> What are a thousand (lives) like thine
> To piles of gold like mine!

After a successful and peaceful Democratic Administration had dissipated the last fears of the colored race as to their liberties and rights, it was apparent to the Republican party that something must be done to rekindle enmity so rapidly dying out between the races, and the old methods were revived with some additions. If a difficulty occurred anywhere in which a negro and a white man were involved it was taken up and the negroes throughout the land were informed that a general massacre of their race was going on, and Congress, particularly the Senate, was made a sort of kneading machine to fix each one into a mass, leavened with a few packages of the best brand of slanderous misrepresentations to make it rise and swell into huge and ugly proportions.

It was a wonder why the Senate periodically stopped the legislation of the country to investigate some alley fight, and printed at Government expense volumes of falsehoods against the South, and then subsided without any action. Now it appears they were flyblowing public opinion in the interests of this bill. This being the popular branch and members fresher from the people, some have uttered their slanders impromptu; others wrote them down and read them. But the Senate has them stored away. And about the time the dog days are on they will bring out the packages molded and sour, and with what glee will they snuff the fetid aroma and hold it under the noses of the new Senators and waft it to the country, that every man who delights in human suffering and enjoys the prospect of black heels on white necks may say, Ah, ha, and ah, ha!

Mr. Speaker, I will not express doubts here of gentlemen's sincerity when they say this bill does not mean negro domination. I simply submit that the sincerity and intelligence of the supporters of the bill can not both be maintained on that theory.

Gentlemen who talk that here, have failed to comprehend or appreciate the cunning and ability of Mr. Davenport, its author, and owe him an apology if they talk sincerely.

I know it is sought to hide its deformity by surplus rhetoric, and the learning of Massachusetts has been invoked for that purpose. But, Mr. Speaker, clothe it as you will its ears are too long to be concealed except to willful blindness, and the voice of the beast is not disguised.

To argue that the provisions authorizing partisans—probably corrupt—clothed in the authority of the Government to impress the ignorant, to make a "from house to house canvass," followed by armed ruffians as deputy marshals—I say to argue that such provisions are not intended to afford opportunity for bitter and unscrupulous partisan canvassers to inflame anew the negro mind against the white people and to intimidate negroes who want to vote the Democratic ticket, and to corrupt the elections, is inconsistent with the history and practices of the Republican party in the South heretofore; and, as I have said, the proposition only raises a question between the sincerity and intelligence of the advocates of the bill. I presume Mr. Davenport, its author, will not pretend that it means anything else. I will not be discourteous enough to express an opinion as to which side has it. It might be propounded as a parliamentary inquiry.

A celebrated citizen of the Bay State, said to be sound on silver in all its shapes, is reported as intimating that he was indifferent as to what was said of him if he was not called a fool.

The gentleman from Massachusetts who stands sponsor to this bill [Mr. LODGE] said, and many have repeated after him, that honest men who do not commit election frauds need have no fear of this bill. Why, Mr. Speaker, the gentleman from Massachusetts is historian enough to know that the Inquisition was established and maintained upon precisely that theory. That argument is not new at all. The victims there always had a trial such as is provided in this bill.

And the kind embrace these religious gentlemen propose to extend to the liberties and prosperity of the South is strikingly like the embrace of the virgin extended to disbelievers in that institution. And I might say here that it is plain enough for the wayfarer to see that this inquisition is to be erected to punish unbelief.

If the South would but say Abba Father to Republican arrogance and have no other God before protection, and bind themselves and their children to contribute to the insatiate greed of monopolies, why, instead of meeting a volley of barbed epithets on entering here, they would enter under a canopy of smiles and be greeted with shouts—behold the Lord's anointed. No inquiry would be made as to previous character or by what devious ways they made the journey to Mecca.

But, it is said, this bill provides for putting the machinery into the hands of the Federal judges, in whom the people have confidence. Yes, and in that consists the chief infamy of the scheme. It is not only a cunningly devised plan to destroy the South and thereby weaken opposition to their usurpations of power, and to be used as a decoy to distract the attention of the honest people of the country from their real designs, but to debauch the courts and use them as instruments in partisan injustice and fraud.

The great plan of this Government, the wisdom of which has invoked a century of encomium on the fathers, was that the three branches were created co-ordinate, but each equal to and entirely independent of either of the others—three supreme powers in one accord, to express the sovereignty of a great people. It was, indeed, a grand conception. With that conception lodged in your minds, look at this bill and contemplate that branch of the Government in which the people have heretofore had most confidence, and to which they

have looked as a grand and dignified safeguard to their liberties, getting down in the mire to the depths of the requirements of this bill.

The circuit judge of the United States court is not to take notice of the law and administer it at the terms of his court, but whenever he shall be informed by a chief supervisor of elections that it is necessary that the court should be opened. No petition asking the judge to open court and showing cause for it, and letting him decide, but he is to be informed by a supervisor, and he must bounce as a lackey and open the court. This supervisor, who will be *prima facie* corrupt, simply informs the judge, to use the language of the bill, "that he has business to present to such court in respect to the next ensuing election." The judge must open the circuit court (not a district court) within ten days, no matter that he may be holding court somewhere in his circuit, and all the district judges may be doing the same, where great cases, civil and criminal, are being tried. He must bounce like a dependent minion, that this bill makes him, and open his court within ten days. Where? At some court-house or where some court is usually held? Oh, no. "At the most convenient place for transacting the business of registration or election matters," says the bill.

Every district in the circuit may make their demand at the same time, and the bill provides that "the court when so opened shall be always open until the second day after the election." That will require all the district judges at the same time to be absent from their courts, probably for two months, so that the supervisor can absolutely dominate the judges by keeping them tramping around the country with the court in a carpet-bag for months unless they consent to do what he wants.

I wonder if one of these supreme judges, who pose with so much dignity in this Capitol, will have to perform that duty when he goes out as circuit judge; and if so, how he will look going through the country, wearing that black gown on a mustang pony, with the court in his saddle-bags, hunting the most convenient place to meet 50 or 100 rascals, who have, through the supervisors, ordered him out.

But the judge, whoever he may be, will have the consoling reflection that he can stop at any cross-roads and sit astride that pony and exercise a power that no other man in this or any other civilized country can exercise, neither president nor king. He can determine who shall hold the office of Representative in the American Parliament—a thing that heretofore only the sovereign people could do, and who only can do it now in England, or France, or Germany. In the French Republic a plurality will not elect a member to the Chamber of Deputies, but a new election must be had. They could save time and trouble by adopting the Reed-Davenport plan of doing their own counting and certifying, backed by dominated courts and armed marshals and the Army and Navy. It beats the alleged Mississippi plan entirely. It makes the Government pay for it. Men who commit frauds in his interest know they will be tried before him, and by a jury selected and packed by a commissioner of his own creation and of his own party.

My friend from Tennessee [Mr. McMILLIN] has suggested, "and that, too, when the United States judges are all, with the unanimity of a combination, pressing Congress with might and main to increase their salaries." I had not thought of that, and his words sounded like the ring of the curfew on the ears of the belated Briton.

When you put it in the power of a judge to determine by manipulation of machinery in his hands whether his political friend or political enemy shall go to Congress, you place before him a temptation that he should not see. And when the further circumstance occurs that by acting fairly he sends to Congress a member who will vote against additions to his salary, and by acting unfairly he sends to Congress a member who will vote to give two or three thousand dollars annually for the balance of his life—if he be weak in moral sense he will yield; if he be strong in integrity, and justly decides in favor of his friend, he will be suspicioned; and in any event the court is degraded, and you commit a crime to hold out the temptation and debase the courts.

Mr. Speaker, is it because the dominant party is in such straits and love power so much that this reckless expedient must be resorted to? Or is it because great success in oppressing portions of the people by which they acquired great wealth has inspired such contempt for pure government that they can look with complacency on the subordination of the courts to party interests, and this is simply a disciplining process to bring the courts under the domination of party power, so as to have them well in hand when greater schemes of usurpation are to be inaugurated. I will not criticise the present judges, for I do not know who will fall in presence of this temptation. While England's greatest judge, it is said, was susceptible to the touch of gold, Jeffreys withstood it, but ambition for a better place and partisan hate made him do worse. To honest men who think that no such thing can occur in America I refer you to days when worse men than they were on the American bench. It would be discreditable to either name to associate with it the name of the besotted bestial debauchee whom the Government sent as United States judge to dispense justice to the people of Louisiana a few years ago. A committee of the Senate said they knew no language strong enough to express the abhorrence of him.

After he and the United States officers of the United States courts had made a very cesspool of the court for years, and appropriated to their own use every estate of importance that came into the bankrupt court, he was, you will say, impeached at once; no, he was kindly advised to resign. The President and Congress did not want to injure his character as these things were only done in the South. There are certificates in that court now, over official signatures, with the seal of the court affixed, and perjury in every line, that robbed the people out of millions of money. They will, perhaps, be shipped back South to certify members into Congress under this law. They know how "to do business," and are in favor of "practical results." And men who can count 3 per cent. of a bankrupt fund to the estate, and 97 into their own pockets, would be fair counters in this game soon to be played with the ballots of the people. There should be written after every section of this bill, wherein United States judges are mentioned, the words of the gentleman from Tennessee: "And that, too, when all the judges, with the unanimity of a combination, are pressing Congress to raise their salaries."

It is impossible to have an independent and pure judiciary and humiliate the judges; and this bill will, if it becomes a law, make them walk under the yoke and do, if not disreputable, at least contemptible and humiliating political work.

The people have lost confidence to some extent in the purity and uprightness of the legislative and executive departments. The press of the country laughs at both when they talk of non-partisan action. Now it is proposed to besmirch the national ermine, if temptation will do it, and humiliate the judges by putting men of low degree over them and require them to submit to corrupt masters. Gentlemen, let me ask you to pause before you do it. Is not this great country entitled to have one of its departments above suspicion? The reputation of the judiciary should be as sacred to a nation as that of a wife to her husband, and no man worthy that name would place her where her purity could be questioned, however great the gain might be to him.

Can not you devise some other means to accomplish this great wrong? Can not you think of some other agency to oppress and push back the South and get rid of a rival without debasing the courts?

Why not come out boldly, like the Speaker, and acknowledge what you really mean by this bill, simply to do your own counting and your own certifying, and boldly, as the gentleman from Illinois, give notice that if there is any interference with that operation bullets will be ready? That is what you all mean when you put supreme power in the hands of the supervisors, with pay for as many armed ruffians as he may want as marshals. Why not come out like men and support your leaders?

If the Republican party really wanted fair elections, and thought force were necessary, it would be far less expensive, far more humane and much more patriotic, and certainly more honest, to send the Army directly to watch the elections. But that would not suit your purpose. You could not control the army officers. They are not pressing Congress to raise their salaries. They are not ready to shoot and intimidate white voters and negro voters who want to vote the Democratic ticket, for a few days' pay as deputy marshals. They would not pack juries.

They would not produce any race conflict. They would not do their own counting and their own certifying, but would see that fair elections were held and certification made by State officers. But that is not what you want. One honest, fair election, and the result properly certified all over the United States, and the real voice of the whole people expressed, would annihilate the Republican party.

I presume the case has been well diagnosed by Dr. REED and the conclusion reached that nothing short of this abomination will save the patient, and nauseous as it is to the honest and conservative men of the party it must go down with the hope that the doctor and his attendants will be enabled by the use of the appliances to count and certify enough for the purpose, and if necessary the supervisors and armed deputies can incite race conflict for the benefit of doubtful districts in the North.

Members of the House so far have been more conservative than Senators and other prominent leaders. The members here have not expressed an intention of going further than to shoot the men, and not that if there is no interference with their own counting and certification. No member here has announced the desire to incite the negroes to massacre innocents and burn their homes as a means of having fair elections. Whether Senators will renew their suggestions to the negroes to use the dagger and the torch and prominent leaders and journals of the Republican party will urge the same thing in the interest of pure elections remains to be seen when the bill goes there. The Speaker of the House has said that there is no fear of negro domination in the United States. He is mistaken; it prevails in the United States now in an adulterated form, and not different from that which prevailed in the South during reconstruction.

The majority of the white people of the United States are Democrats and the Republican party is in power now by negro votes, and this is a revolutionary party measure to further stifle the voice and throttle the will of the Anglo-Saxon race in America. If the Republican party had let the negroes and white people alone there never would have been trouble between them. No negro would have complained of intimidation or that his vote was not counted as he

cast it. There never would have been any election riots or bloodshed. The interests of the races were and are the same. As I have said, their friendship was complete. The Republicans who flocked to the South found that state of affairs there, and seemed astonished at it. In Mississippi they framed constitutions containing clauses disfranchising the white people. They submitted the Mississippi constitution to the people for ratification. While a large portion of the leading white men were disfranchised, the white people who could vote and the negroes in perfect accord voted it down.

The ex-slaves said they did not want to disfranchise the old masters; that was in 1868. The next year the constitution was again submitted and the objectionable clauses voted down by separate vote, but elected a Republican Legislature. Then the insidious work of making the negroes enemies to the whites, in order to hold onto power in Mississippi, was commenced. And other States shared the same fate. Reconstruction lasted seven years. Its villainies are not half known, but enough is known to make it a stench in the nostrils of decency the world over. It could not stand the light. It slowly dawned on the honest negroes that they were victims, and they joined with the white people and voted the Vandals out of the country. Prosperity came back to the country, and peace and goodwill have prevailed ever since. Grand juries and petit juries are composed of both races. No breath of suspicion that the courts are not honestly conducted; no difference is made, except a negro is generally sentenced for a shorter term than a white man for the same offense. The white people educate them, build their school-houses, contribute largely to build their churches, and always assist the needy. I never saw a negro tramp in the South.

The negroes have 200 per cent. more property than they had in 1875. Yet these are the men you can not trust with the rights of the negro. I do not wonder at it.

The more the negro becomes educated, the better he sees, and the more prosperous he is, the keener he feels that he is the slave and has been made the victim of the great protected interests of the North and East. He begins to see that all he consumes he pays a bounty on to his fellow-citizens, and what he makes to sell is depressed in price by a vicious financial system. He sees that the intelligence of his section, to which he is indebted for his prosperity, voting against high tariff and monopolies and trusts, and as fast as he learns his interests is inclined to do the same.

The great aggregations of wealth, monopolies, trusts, pools, combines, gambling exchanges, alias the Republican party, saw all that also, and promptly determined their policy to meet the emergency. And our arrows will fall far short of the origin and source of this bit of legislation, that is but the initiatory step in a gigantic scheme, if they be aimed only at the Speaker and his followers here. He is doing what he was elected to do, and which if he failed to do or try to do he could not be either Speaker or member of this body.

His masters are not Shylocks standing on a bond, but American Republicans demanding a check signed in blank that they may fill out for everything in sight.

While I admit that he is the agent, the field marshal, and has done what no other member could have done, if THOMAS B. REED should die to-night this bill would be a corpse to-morrow, but the movement would only be postponed.

Whatever may be said of the morals of the men who manage the great combinations and trusts of this country, and hence the Republican party, they are not lacking in brain power, and their vision is never obscured or their judgments warped by any such meek sentiments as patriotism or magnanimity or justice. They bow only at the shrine of omnipotent gold.

For years after the reconstruction methods had been hissed from the presence of decency they supposed the South had been so despoiled that she never would recover, or, if at all, it would be long after they had consummated their plans to assume permanent control of the Government legislation in relation to finance and commerce. Gradually and stealthily they were loosening the hold of the people on the Government machinery and centralizing the power in the General Government. Once there they had no fears that they would be able to control it. They spent their leisure time and squandered ill-gotten millions in ostentatious visits to Europe. Many of them crawled to the feet of the nobility, begging with gold in hand for social recognition.

The market price for titled imbeciles for husbands went up into the millions. They put off American manners and eschewed American opinions and assumed European customs and ideas and sentiments. They studied with admiration the systems and workings of strong governments. I have heard advanced on this floor what seemed to the members, judging from their manner, should silence opposition and refute all argument, to wit, that England or Germany or some European Government had acted in a certain manner on that question. Those powerful men with colossal fortunes, sycophantic to royalty, imperious and austere at home, found plenty to do their bidding.

They formulated and issued instructions to politicians and said, obey these and we will furnish money to buy voters; refuse, and not a dollar.

They never deigned to visit the South, but rested on the reflection that people without money, afflicted with race antagonisms, can not be of importance.

They believed their retainers when they said that the South could be easily kept under by slander and misrepresentation, exaggerating altercations into race conflicts, and keeping the North solid against them; by putting enmity between the races, thereby continuing turmoil and strife, destroying their prosperity so that the white people will become discouraged and submit in despair to negro rule, we can control the negroes. So the Parnell and crimes advertisement plan was resorted to, except that the publications were read in the Senate and House, so as to get them in the RECORD and circulated at Government expense.

But they awoke in amazement to find that unprecedented people, supposed to have been crushed out for a century at least—perhaps to end in anarchy and conflict of races—already on the highest plane of civilization, with the kindly heavens showering down prosperity upon them like a benediction to their sublime faith and matchless courage.

The inquiry went round, "What manner of people are these, who can not be destroyed;" who spring into new life from the very womb of desolation, who, as with magic power, transform sere and horrid destruction into blooming prosperity within fifteen years; that, too, without aid or even a friendly greeting, but beating their way against the rebuffs and jeers and hisses of the Government whose duty it was to protect and aid them?

Germany seems to regret that she did not cripple France more in their late war, but has the magnanimity and honor to let her alone.

The present Administration, including the Congress here, seems to regret that the South was not stamped deeper into ruin, and is proceeding now to the work of destruction with a malevolence more dangerous than that which perpetrated the cruelties of reconstruction, for then the motives could be attributed to the revenges coming out of war. But now the hatred is against the Democratic party, which, being the party of the people, interposes the only barrier to the great Republican scheme of centralization and the complete subordination of the Government and its legislation to the great money powers that control the Republican party.

The Democratic party is magnanimous and can forgive and forget. It extended a friendly hand to the South in her woe, rejoiced in her returning prosperity and the greatness of her people, endeavored all the time and still desires to give the South an equal chance in the race of life by enacting fair and not discriminating legislation. Hence all parties in the South soon learned that they must look to the Democratic party for protection to their liberties and prosperity if they were ever again to have any. That augumented that party into a majority in the United States, which is still increasing, though its voice has often been stifled by corruption and frauds. This is the offense for which the South is doomed to suffer this fearful persecution.

The Republicans know that a law applying in terms to a part only of the States is unconstitutional. They know they dare not use force to intimidate voters and protect false counts and certifications in the North. They have, in their straits, invented this scheme to enable base men to use the power of the Federal Government in localities without restraint, believing, no doubt, that public passion in the North has been prepared by slanderous publications and speeches to sustain or condone any outrages that may be perpetrated on her people, so that minions selected for the purpose can go from house to house, followed by armed ruffians, to intimidate voters, and a subservient board can count in and certify as members of this House such persons as will do their bidding.

If these methods can make enemies of the races now living in peace and produce conflicts and turmoils, the purposes of this bill will be all the better served, for they will serve to close the ear of the North to the complaints of an outraged people. The destruction of the South will weaken the Democratic party and the great scheme of the Republican party can be consummated.

No matter that the prosperity of the negro must perish with that of the white race. Greed has no heart and avarice no conscience. So these sons of Cræsus, the Europe-going, Europe-admiring bosses of the Republican party, imported this bastard English crimes act to make an Ireland of the South. They seek to create a tribunal modeled after the Parnell commission, which pursued the innocent long after it was known to the commission that purchased perjury was the basis of the prosecution. After giving them months of further time to rake the world for further slanders with which to destroy Ireland, the commission dismissed without rebuke these suborners of perjury who had labored with skill and millions of money to fasten, for a century to come, upon a brave people the fetters that have chafed into their flesh for centuries past. It was only Ireland that suffered and was to be outraged.

That the party in power dominated that commission, using the influence of the Government until its rulings became so shamelessly partisan that the greatest lawyers of the realm retired from its presence in disgust, every intelligent man knows and every good man deplores. But it is fortunate that the Government used a special commission, which ceased to exist when its disgraceful service was done, and not the courts, whose records have thereby escaped the pollution of suborned testimony used by the connivance of the Government to destroy the prosperity of a part of its own subjects.

It is unfortunate for the ermine of America that the framers of this

bill did not follow to the end the Parnell commission bill, and if they must use the judges for this degrading partisan work, at least separate them from the courts and form a commission, so that the records of those tribunals may not be disgraced before the eyes of the world and future generations. That the party in power in America will dominate this machine, all expect; that all its parts will work together is not doubted. Whatever methods the people who will be selected to count in and certify their friends to membership in this body may adopt, they will have no fears. The "jury fixers" will see that the criminals go hence without day. It is only the South that is to be destroyed, and no one will heed her complaints.

The courts of America are not above suspicion of partisan influence now, as is evidenced by harsh criticism and not infrequent denunciation of their decisions by members of both Houses of Congress. When this pressure shall be put upon them the temptation will be greater to study and comply with the views of the party which created the law. The independence which is expected of judges on account of life tenure will be removed in this instance, as they will be called upon to elect a Congress before which they will apply for increase of salary.

He would be a judge very dull of comprehension who would read this debate and see the spirit manifested by the majority, which will be duplicated in the Senate; read the denunciations of the white people of the South and the eulogies upon the negroes, then study the bill with the machinery provided for its execution; partisan supervisors with power to make the judges run like valets at their bidding; armed marshals *ad libitum* with Army and Navy waiting, and "jury fixers" furnished—I say they would be dull judges who would not see that negro domination is the object of this bill. They will never suppose that this armament is to be used on negroes who have been eulogized here, but to intimidate and, if necessary, kill white people who have been denounced here to the extent of the vocabulary of invective.

It is not an unfair version of this bill to say that this part of it is intended to take the courts down from their high and independent position and bring them under the surveillance of the legislative department, so that they may be used in the great scheme of centralization. If the judges endure this humiliation they may be expected to "pity and then embrace" all future similar vices.

I do not believe the judiciary of any State of the Union would submit to such degradation. I do not charge on the majority of the House as a body the design of debasing the courts. I believe every lawyer on both sides and in the Senate, who loves his profession as a great and noble science and as the stronghold of constitutional liberty, despises that part of this bill. I refer to the great moneyed combinations who dictate nominations and furnish the money to elect the candidates, who may be denominated a "board of control" to the Republican party, sitting in New York and other cities, by whom the independence and the rights of the people and the integrity of the Republic are all considered as secondary in importance to the protection and increase of their already colossal fortunes. They are a power in the Republican party that few will dare disobey. The warning finger of the Speaker can take the bone out of any of your backs.

In short, the contest in America between aggregated wealth, strong government, and centralized power on the one hand and the masses of the people, liberal government, and liberty on the other hand is assuming more definite form daily. This is a bold advance stride by the usurpers, some of whom are ready to put off the mask while others prefer still to remain under cover.

The gentleman from Massachusetts [Mr. LODGE], for instance, talks of honesty and fairness in reference to this bill with a facial earnestness that is comical in the extreme, in view of the surroundings. Some of Mark Twain's best hits consist in saying absurd things with a sort of droll earnestness, but I do not think he would say as stolid a thing, in joke, as that this bill is intended for a good purpose. Nothing is more comical than the gentleman's seeming belief that he has been clever enough to convince other people that he is in earnest in the assertion that this infamy is not planned for the success of the Republican party, even by the destruction of prosperity and peace and life, if need be, in the South.

The other gentleman from Massachusetts [Mr. GREENHALGE] would probably have the same manner at a funeral or a dance. He seems to enjoy, in anticipation, the cruelties of this measure.

The Speaker does not descend to disguises, but announces boldly that all this circumlocution means simply that the Republicans, surrounded by armed marshals, will count in and certify whom they want. That is honest, at least.

The gentleman from Iowa [Mr. HENDERSON], with rage suppressed to the danger line, vehemently announces the balance of the policy, that killing bullets will be used if there is any interference with the schedule. That again is honest, and not surprising.

It was expected that was the use to which some thousands of armed ruffians would be put. The gentleman also informs us that the North has been waiting twenty-five years for changes in the South and are becoming impatient. What changes, may I ask? I can readily conceive what a part of the Northern people have been waiting for. Those who are actuated by generous and Christian impulses, those who are magnanimous enough to help wounded fellow-citizens to their feet, and to allow them to reclaim their devastated homes—they have been doubtless waiting impatiently for the time when the South can be let alone and slanders cease.

But what changes were the gentleman and his party waiting for the first ten of that twenty-five years, when they held the South, exhausted and bleeding as she was, in the grasp of a brutal and savage tyranny that rendered any change but slow death impossible? And what for the last fifteen years? Certainly not for prosperity to come to that people nor harmony between the races, for both exist there and have all the time. And this bill bears upon its face evidences that it was framed to destroy both. With the attitude of the present Administration towards the South, with no officer in the national Cabinet to lift a voice in her behalf, but an indignity thrown in her face by the chief officer in his management of the Pan-American Congress; with the unpleasantly vivid memory of how the Government complimented the worst of the carpet-bag crew for their work of destruction and oppression by giving them offices of emolument and trust, we may expect like men to seek employment under such a law and to do like work with the expectation of similar rewards.

These supervisors and their armed crew, believing, as they will believe, this measure intended to push the South back by means of race conflicts and turmoil and to break the spirit of the people, will be inspired to their work as the carpet-baggers did, and get their reward, and therefore I say the tendencies of the bill are extremely vicious, for I believe that to put enmity between two races who are now living in peace and who must live together in the future, and to produce race conflicts, with their dire results, for party ends, is to commit the blackest crime of the age.

I do not pretend to charge such motives on all who supported the bill or who will support it. The large majority who will vote for it would shudder at such motives. That those who with study, deliberation, and skill framed its provisions had such designs, if it became necessary to the desired result, is evidenced by the bill itself. Any intelligent, patriotic man who will carefully consider its provisions in the light of the past, if he believes that such are its designs, will conclude that it has in it more of the spirit of assassination than any statute of America.

With these surroundings I admit in sorrow that the future never gave out such hollow and ominous forebodings to the South. With such skies over them it will require stout hearts to go forward undismayed.

No doubt you think this rack sufficiently cruel to crush out forever the proud spirit of the white race in the South, whom you seem to hate so bitterly for the reason they are advocates of the party of free government and interfere with your plans of making money, and therefore must be destroyed. But, gentlemen, let me say in truth and soberness you will perpetrate these crimes and inflict your cruelties in vain. Temporary success may indeed reward you for this crime against humanity, but liberty and justice will rise again as surely as truth will rise. You will not even then have tried the depths of the powers of endurance nor have broken the spirit of that grandest of the races of men.

There are races of people who never bow to a master, but may, of course, be exterminated. From what magnificent people the red races of America descended is not known; but centuries of savage life, though bringing many degrading traits to them, have not weakened the spirit that never begs mercy. For three centuries they and their native forests have melted away before the ax and scimiter of civilization. They have suffered where there were none but the heavens to weep and none but the towering sentinels of the wilderness to bow over them, but they have bent the knee only to the Great Spirit. They are marching to extinction before a mistaken and cruel policy of the American people, with sinewy step and erect form and head. The requiem of the last tribe will soon float over the "Golden Gate" as the weird music over Biloxi Bay, on the beautiful shore of the State I am proud to serve; but not a mound nor hillock nor riverside between the oceans or lakes and Gulf will mark a spot where a red man cowered under persecution.

I know many races have been reduced to vassalage by long continued cruelty and oppression of conquerors, but Caledonians, Celts, Huguenots, and Cavaliers have never served and know no master but death. No tortures you can inflict will bring to your eyes the feast of beholding black heels on white necks.

If the sentiments of the gentleman from Iowa are to be the policy of the party in the enforcement of this measure, if it becomes a law, and a killing bullet is to accompany every ballot, this bill is well designed for the purpose. As the gentleman's remarks were all directed against the South and the law is not intended to apply to the North, we know what it means. Hordes of armed men under partisan supervisors, responsible to nobody, with these same sentiments, will perhaps be willing to attempt to carry out the spirit of the law. If this Government, denominated by the gentleman as the kindest in the world, thinks that course courageous, to murder citizens in the interests of pure elections, the machinery is here in this bill.

But I desire to say for the colored race I have no complaint or charge to make; I have always been friendly to them and know them well; that, except a few unscrupulous leaders who want positions at any cost to either race, they do not seek the position that this measure is intended to force them into. The history of the race shows that they

are not ambitious to rule other races; they want peace and easy prosperity, which they now have, and the men who drive them into the undertaking to control the Anglo-Saxon race are enemies of both races, and criminals. We had experience of negro rule, led by white men from the North, for seven years, and do not propose to return to it; it was disastrous to both races. The interest of both races demands that intelligence should rule. The white people have the intelligence and the property, have charge of the educational system and institutions of learning; they have brought peace and prosperity to both races, and education to the colored race, and it is their duty to control the domestic policy of the States, and they neither ask nor want advice from fanatical Northern Republicans, who, for selfish ends, would destroy them all. All the enmity that has ever existed between the races was caused by that class of people.

While this scheme is of fearful importance to the South and of great magnitude and skill, worthy of intellectual, bold, bad men, there is at least one feature of its management that sinks to the contemptible, and that is, the feeble attempts of some of its advocates to convince the country that they are sincere in the assertion that this is a national measure and intended to be just and fair, and not born of sectional revenge and aimed at destruction of the South. Why, the amendment offered by the honorable gentleman from New Jersey [Mr. LEHLBACH], making it national, was throttled by the Republicans with the promptness with which a band of robbers would throttle a detective. They know they dare not make it apply to the North, but they feel confident that they have so poisoned the public mind against the South that no one will care what injustice is perpetrated there.

The rights of an American citizen under Republican rule depend largely on where he lives and how he votes. The Government has had an army killing Indians for twenty-five years because the white people of the Northwest wanted their lands. The Chinese were pronounced undesirable citizens by the Northwest, and the Government broke its solemn treaty at their command. An empire of land was granted and millions of money paid to give the Northwest railroads. Great irrigation schemes are now being forwarded in the Northwest, and the seal fishermen of that region are engaging the country in controversy with England. The fishermen of the Northeast complained, and the Government promptly went to their assistance. And that sturdy American, Grover Cleveland, would have bridled the English lion and restrained his incursions but for the cringing of Republican Senators. The country is taxed that Northern industries may prosper, and protection removed that Southern industries may languish.

If a negro complains, or any one for him, the Government pauses to hear it. But let Southern white men raise their voices in behalf of their homes and people and vote for their own interests, and bitter denunciation from a hundred trained throats is poured upon them; and none so vituperative as the West. A leading Western journal suggested to the negroes that the Indians situated as the negroes are would make the rivers of the South run red with blood. In the North American Review, over the signature of the leading ex-Union soldier in the Republican party, appeared the following paragraph:

> The negro must be allowed to vote, and his vote must be counted, otherwise, so sure as there is a God in Heaven, you will have another war more cruel than the last, where the torch and dagger will take the place of the muskets of well-ordered battalions. Should the negroes strike that blow, in seeming justice, there will be millions to assist them.

Similar sentiments were uttered by the leading Republican Senator in his place in the United States Senate in the Fiftieth Congress. So far as I know, none of these utterances (which seemed to be too nearly simultaneous to be accidental) have been rebuked by any Republican journal or speaker; and taking into consideration that the Northern people have been persistent in the assertion that the South is responsible for acts of individuals because her journals did not denounce them, this fact becomes of grave importance, for by the same logic they are indorsed and encouraged by the North. While those publications were circulated among the negroes and indorsed by the worst element of them, they did not adopt the suggestions. The negroes have no taste for an enterprise of that sort; they are better people than those who entertain such sentiments. Had they pursued that course and destroyed the prosperity of the South this bill would probably not have been framed.

Grave inquiries come out of these surroundings and force themselves upon our attention. Is this bill the outcome and embodiment of such sentiments instigated by that class of statesmen? Are these armed deputies to be appointed *ad libitum* to serve as the millions mentioned by that great Republican leader of thought and threateningly repeated in the Senate? Is this the degradation to which this Government and this nation and this race are to come in the hands of the Republican party?

I make no such charges against members of this House. I would not do that as a Representative of the people on this floor. I do not believe there are half a dozen members who would not shudder at such consequences. I do not believe the instigators of the worst features of this bill are in the House.

I say these inquiries come out of the surroundings in view of what has transpired heretofore. No man who lived through that period and reads this bill will doubt that its provisions and plan were suggested by the practices of reconstruction, and that like results are expected.

I have no desire to rehearse the scenes of those times. No language can describe the facts as they actually occurred. I will content myself with quoting here some comments made upon them by a member of this House while they were being perpetrated, Hon. D. W. VOORHEES. Speaking of the Southern States, he said:

> They emerged from the desolating conflict fit objects for the wisdom and care of a benevolent statesmanship rather than as the proper prey of hungry jackals, who wrangle and feed upon the wounded after the battle. Their fate, however, in many respects surpasses in infamy and in misery the worst that ever befell a conquered people. * * *
>
> Sir, I challenge the darkest annals of the human race for a parallel to the robberies which have been perpetrated on eleven American States. Ireland has been made to enrich many a lawless lord lieutenant sent over by England to govern that beautiful but unhappy island. The stories of her wrongs and pillage have been said and sung in every hamlet in the civilized world; yet her contributions to the cause of a wicked government have been mere pittances compared to what the South has been compelled to make. * * * The basest Roman consul, whose name is preserved on the pages of the historian, becomes respectable by the side of a Southern governor under the present policy of this Government.
>
> * * * * * *
>
> Had you sown the seeds of kindness and good-will, they would long ere this have blossomed into prosperity and peace. Had you sown the seeds of honor, you would have reaped a golden harvest of contentment and obedience. Had you extended your charities and your justice to a distressed people you would have awakened a grateful affection in return; but as you have planted in hate and nurtured in corruption, so have been the fruits you have gathered.

J. S. Black, the great commoner of Pennsylvania, said in his open letter to Mr. Garfield (in illustration of the rule that "might makes right"):

> "Mohammed asserted it when he forced his religion on the subjugated East. On the same principle Poland was partitioned and Ireland plundered a dozen times. The King of Dahomey acted upon it when he sold his captives, and the men of Massachusetts indorsed it when they took them in exchange for captives of their own."
>
> You and your confrères adopted it as a part of your political creed when, after the Southern people were thoroughly subdued, you denied them all the rights of freemen, tore up their society, abrogated all laws which could protect them in person or property, broke their local governments in pieces, and put them under the domination of notorious thieves, whom you forced them to accept as their absolute masters.

I will only say that these great masters of the English language have not overdrawn, but fallen short of the facts. It ought to be added that all these persecutions were heaped upon a people already crushed by war, and amid a desolation that told of terrible and unnecessary cruelties. I have never heard a word of regret or apology for these barbarities by any Republican on this floor. I do not suppose any were ever spoken. On the contrary, when that work was done, the boldest, wickedest, basest perpetrators were rewarded by the Government by signal manifestations of its favor. It trusted its honor to their keeping.

This bill, deliberately and skillfully framed, provides elaborately the machinery and the means to accomplish the same results. The chief topic of Republican orators and journals in the last campaign was abuse of the South. The President joined in it. As soon as he was seated he suggested this measure. The only arguments in support of it are invectives as bitter as they were in reconstruction times; and the utterances I have quoted from leading Republicans have never been rebuked by any Republican journal, and are therefore acquiesced in and encouraged. No word of sympathy or encouragement is ever spoken or written by Republicans to the South in her great struggle with adversity and with the race problem, but every possible impediment and obstruction is thrown in her way. Not a word of commendation for her efforts in educating the negroes, but every act is denied or distorted.

The Republican press has for years been ablaze with denunciations against the solid South. Solid how? In her vote. That vote added to the Democratic party of the North makes that party formidable. That party is the only barrier to the entire domination of the Government by the monopolies and trusts and great moneyed combinations of the North, using the Republican party as a means, and therein lies the great offense for which we must suffer.

This bill contains the machinery to destroy the South. Will they do it rather than abandon their scheme? The history of the last twenty-five years forces every unbiased, intelligent mind to the reluctant and horrible conclusion that they will if they can. I know the good men of the Republican party will not believe it, and the bad ones assume not to believe. But it is easy to see that this bill is framed with that view. It puts this great power in the hands of irresponsible men who will perpetrate the crimes. They know you will not go South, and that you will not listen to any one who speaks good of her people, but will applaud him who brings evil tidings. When the work shall have been done and the party profited by it you will say again you did not know, but wrong will be as cruel as though you had known. I, too, was a disbeliever until now when evidences gather around like specters.

I addressed a reunion of Confederate soldiers in my own State soon after those utterances from leading Republicans which I have quoted were published, and concluded my comments upon them by saying:

> The United States soldiers would loathe a proposition to incite the African race to massacre the white people and to help them do it, as they would loathe dishonor, shame, and cowardice. They would no more engage in such diabolism than embrace a leper, and tens of thousands of christian women of the North would hold up their white hands and with flashing eyes demand, "Where is the

boasted civilization of the nineteenth century?" Is the dawn of the twentieth century, now almost up to the horizon, to be painted out by this "deep damnation?"

* * * * * * *

No, no; the Stars and Stripes will never look down upon that scene while a soldier is the Executive and commands the Army and Navy. Brave men will not turn fiends. Satan has not been unchained for his thousand years' revel. Civilization is not a blasphemous mockery, but a living inspiration from on high.

I have been asked what I have to say now of the Executive in whom I expressed confidence. I have replied that I can not answer until I see his signature to this bill, enacted into law by this Congress. Then any honest man will be compelled to say that the great seal of the United States or of any civilized country never appeared in any place indicating so base a purpose.

Even the anarchists could appeal to the courts and were protected against the Chicago police upon the ground that they were American citizens and had the right to hold their meetings and talk as they pleased. But for the South there must be special tribunals where partisan supervisors control the judges.

This will be the first instance in England or America where the judges are required to act in their official capacity without first exercising their own judgment. Even the writ of habeas corpus can only be obtained from the judges by petition showing sufficient grounds. But this bill puts the judges under the absolute control of partisan and probably corrupt supervisors. The supervisor is made an autocrat over the United States judges. All he is required to do is to write a note to a United States circuit judge and say, in the language of this bill, "I have business to present to the circuit court in reference to the next ensuing election; open your court." The judge may be trying cases elsewhere involving human life or millions of property. He can not even ask what is the business. The supervisor would not tolerate that in his subordinates. "Get up and go; do you hear?" And go he must, like a menial, within ten days, to the most convenient point for the hundred scoundrels who have made false representations against the people. When there his duties will be ministerial and subordinate to a politician of the most partisan type, and probably corrupt. I say it is degrading to a judge and humiliating in the extreme except to those who fail to appreciate the honor and dignity of their high positions and are willing to wear drabbled ermine for gain.

It was said during the war, by one of the great actors in it, "We are making history." That would be more applicable now. We are not repeating, but making history now. There is no precedent for this.

Mr. Speaker, in the progress of mankind on the face of the earth the great races of men have been few and wonderful. We know nothing of the origin and but little of the life of the Egyptian race. The pyramids that seem to rise up out of oblivion, beyond the horizon of history, testify of a magnificent race, and by the light of revealed history we see only glimpses of its departing glory.

Notwithstanding that the Israelitish and Greek and Latin as well as the Anglo-Saxon races were so similar (except as to time) in the circumstances of their origin as to astonish historians; yet each one evolved and left a halo of civilization with distinctive features as easily recognized as the planets in the sky.

Embalmed and laid away in languages that are not spoken, and therefore do not change, we find the sublime thoughts, exalted ambitions, and great race pride of the civilizations that have arisen upon the earth. The architecture of more than one age, of more than one race, of more than one civilization, is embodied in the construction of this Capitol. Genius lives while dynasties rise and fall and civilizations come and go. It is one of the inscrutible things of creation that so few have been permitted to walk in the blessed light of civilization while the unnumbered millions have groped their way from the birth couch to the tomb in darkness. Why the veil between mankind and the effulgence of civilization that seems so near has been withdrawn so seldom and partially is beyond finite comprehension.

But history discloses the fact that every great civilization was the result of a great race first created. Civilization does not create great races; if it did it would not decline. And the divine Power that breathed into those races the vitalism of great civilizations created each with race affinities, race affections, and race pride, by means of which a great nation was formed and held together by the mystic ties of race affinities and race pride, where every citizen was proud of every other great or good citizen; resulting in great intellectual forces trained by a common system of education, inspiring unity of thought and action, high patriotism, great ambitions and great successes, and hence great civilizations.

The Anglo-Saxon race assumes to lead the nations included in the present civilization, and America boastfully claims to bear the advance banners in the great march of progress; and yet the world pauses now to look for the first time upon a civilized people in full possession of their own Government deliberately giving over a division of their own country and a large proportion of their own people, of their own race, of their own tongue, kindred, and blood to the domination of another inferior and groveling race; so that the highest intellectual culture and refinement and virtue may be dragged down and ruled by ignorance and superstition and vice. The best colored men will not engage in it.

Of a truth we are making history, for no precedent for such an act has disgraced any civilization, and the first chapter is being written into the world's history to record the action of a great race writing the mark of Cain upon its own frontlet. And, as is usual with usurpation, these schemes are put forward under the guise of liberty and christianity and justice to the colored race, when it is palpable and the authors of this bill know that the prosperity and peace and happiness of both races will sink together under the influences of this measure, if it becomes a law, as in the simoom's breath.

A gentleman on the other side quoted the eloquent lines, "Oh, Liberty, Liberty, what crimes are committed in thy name!" and which I think are applicable here. And the same author might have added, "Oh, Justice, Justice, how many cruelties have been perpetrated in thy name!"

I can imagine how other races, who have no pride in ours, perhaps a tinge of envy, can regard this movement with complacency. But that the proud Anglo-Saxon race, with the glory of its achievements upon it, with its aspirations and hopes before it, can inflict this venomous wound upon itself is incomprehensible. Or is the world about to witness the spectacle of the vaulting ambition of the Puritan blood subsiding into servitude to an arrogant plutocracy, and its sublime aspirations withering into a sordid love of gain, then using its great power to compel the Cavaliers to bow under the same tyrannical scepter or submit to humiliation and ruin evoked by means of enmity, turmoil, and strife created for the purpose?

I had thought until now that the war was settled in good faith, and that the action of the Government in restoring the States would be kept in good faith. It is not usual to go back and rake the embers after a quarrel is settled, but this bill seems to have an affinity for strife and attracts to itself all the bitter things which I hoped were buried forever. But its provisions are so extreme and cruel that no argument can be adduced in its favor, and the bitter memories of the war have to be raked over to inflame the Northern mind so that they will tolerate it.

Half the Republican speakers in this debate either commenced or landed in the late war between the States, and therefore I speak of it. It had gone out to the world and into history that the Union States fought the seceding States not in the spirit of conquest, but with the honest patriotic purpose of restoring the Union as it was before hostilities commenced. That those of the Union soldiers who fought in the front of the battle were impelled by such motives we must believe. Men do not die in a cause in which they are not sincere. Mr. Garfield said "War without an idea is simple brutality."

It is to place those valiant soldiers below the plane of this civilization to say that to them saving the Union meant to bind and hand it over to the powerful combinations of wealth, with license to trample upon a portion of the people when it suited their interests, instead of returning it to its pristine glory for all the people; or to say that millions of soldiers were marshaled into great armies by a republic and made to wage a war so fierce and terrible that every battle made a cemetery, in the interests of wealth and not of the people; or to say that their motives were vengeance and not liberty, for that would be worse than war without an idea, a war with a base idea. I want to contemplate them as high above that plane as the stars are above the sands, as honor and patriotism and love of justice are above corruption and tyranny and this bill.

Let not the honor of the Union armies be tarnished nor their fame shadowed. As a Confederate soldier I am unwilling that history shall say the Confederate armies fought other than a glorious foe. As an American I am unwilling that a single laurel shall be dethroned from the brow of any American soldier of either army, for I expect them, as American soldiers, to form one great, invincible army, with the prestige of exalted valor like a halo upon every column.

The true soldier who fights for liberty and justice is the highest type of mankind. He who fights and kills for a price is not a soldier. Those whose aims were really for liberty and justice, and whose purposes were to restore the Union in good faith, contemplate with pride the result of their stupendous struggle. They have the satisfaction of beholding the flag of the Union floating peacefully and grandly over the eleven States that would have departed, returned cheerfully to their first allegiance—the eleven stars still in their places—the whole galaxy of equal brilliancy and magnitude; prosperity and peace spread out as a panacea to heal the terrible wounds of war; a loyal people, full of hope, with superhuman efforts pushing forward to the goal of future greatness and glory. It was indeed a great achievement.

But amid their supreme congratulations comes the hoarse voice of this bill. It is the command of the great combinations of wealth to the Government they essay to control, saying in effect, "But we recognize in the growing prosperity and strength of the South the marvelous increase of rival industries and the growing strength of the great party of the people, which is the only barrier to our great scheme of centralization. No matter that white and black go down together, they must be taught to vote for our interests against their own or the voices will be suppressed and their prosperity destroyed. The liberties of the people are subordinate to our interests; we are masters here."

I would be willing to leave it to the arbitrament of the veteran soldiery of the Union if they would take the trouble to understand this

measure. If the living soldiers were mustered once more—I mean the real soldiers who marched in front and camped on the battle-field—and the proposition laid before those scarred veterans who have looked into the cannon's blazing mouth and charged through fire and smoke and shot and shell bearing aloft the flag of the Union in the terrible carnage of battle on a hundred historic fields, "For what did you fight and for what did your comrades die? Did you mean by saving the Union the humiliation and final destruction of the brave soldiers you met in the awful acquaintance of battle, who surrendered with implicit faith in your honor, who drank from your canteens and ate of your rations at Appomattox? Did you mean that the wealthy and hence powerful should have leave to destroy at will the prosperity that cost those people years of privation and toil when it suited their interests to weaken opposition to their schemes of further aggrandizement and domination of the Government? Was it union with the colored race alone and hostility not to abate with the white race, as evidenced in this bill, for which you fought so gallantly, or the undoing of both races by creating strife between them?" Who would dare to stand before them thus?

Those bent with age would straighten up to the full stature of soldiers, and all with flashing eyes would respond in tones of command: "Get thee behind me, Satan! No, we meant no such blasphemy on civilization, no such infamy on our country. Had such been our objects, the fame that the world now concedes to us would hang as a mocking curse over our names and sit gibbering on the graves of our comrades, and if we believed this measure meant or would inflict such results we would sound the reveille from Boston Harbor to the Golden Gate, and drive it from the borders of the Union that we saved to and for all the people."

They would say, "Our vision rested upon a higher goal in that great struggle. A common ancestry, Americans all, erected in the New World this magnificent structure for the home of Liberty and a great nation, and when we saw the South departing with half the nation's glory we marshaled our hosts to bring her back to her place in the nation's temple and under the nation's flag.

"We did not intend that the South with her magnificence should depart from the Union and claim for herself alone all the glory of her ancestral line of warriors and statesmen that belonged to the whole country. We did not intend that the descendants of the Puritan and Cavalier should divide here on a misunderstanding, but should return and, with disputes settled and friendship restored, should remain one people with one government, in great strength and prosperity, secure against assaults from without, and we succeeded.

"The more we tried the mettle of our antagonists the more important it appeared that they should be brought back. We fought for a great purpose, we accomplished that purpose, and now rejoice with you to see prosperity returning, and hope it will remain and increase. The greater you become the greater will be our credit for restoring the Union.

"Why, we were never your enemies personally. We fought disunion, we staid our march for three months while the President held out to you an invitation to return. We point you to the closing scenes of the war for our vindication; we are the same men now as then."

It must be admitted that part of the history of the Union armies is a complete vindication of their patriotic intentions and purposes, and that the purposes of this bill, as we understand it, would not have been tolerated by them, for it tends to degrade the results of the war into means of illicit gain. The South contemplated the surrender of her armies with many forbodings of oppression and cruelty, and prolonged the war to the last hope. But the conduct of the Union soldiery largely dispelled those fears. They made no triumphal entry into the capital city. Their actions on that occasion spoke to the surviving Confederates in tones eloquent as the strains of the morning stars: "We do not want you as captives; we will not even deprive you of your liberty; we wanted you back into the Union under the flag; that we have brought you through seas of blood, not in revenge as we will show you, but that the ties of blood, and race, and nationality be not severed, and the national strength not broken. Ye great famished soldiers, drink from our canteens and eat our rations on this the last battle-field. We will clasp hands here, hostile soldiers no more, but citizens of a common country. We have tested your courage, and will trust your honor. We will part now and go to our respective homes, and live in peace and friendship."

The effect was marvelous. Peace and quiet reigned undisturbed throughout the whole land and would have remained until this day but for the machinations of politicians who were unwilling to see the great civil war end without their names appearing in connection with it. Could the horoscope have been cast then with prescient skill and the kindly stars had deigned to open the future and throw upon the skies a panorama of the coming years, I know not what would have been the effect. I do know that the years unfolded reconstruction to the astonished gaze of civilization. It came grinding across the face of the earth for seven dreary winters, for seven desolate summers, for seven blighted springs, and seven barren autumns, before it pulled its slimy length away.

The history of that period was not written; better for the credit of civilization that it was not; better for the South, perhaps, that it remains only in a seared black stripe across her memory, to live only in tradition. I had hoped that it was inclosed for an eternal sleep in the great tomb of the past; that the waves of oblivion had closed over it forever with the deep "Amen!" of the people who suffered by it.

But those scorching memories burn fiercely again as the mind drags through this bill and comprehends the full scope of its provisions.

The diabolism of this measure, framed with deliberation a quarter of a century after the war ceased, is startling in the extreme. This, together with the fact that the measure was suggested by the Chief Executive, who has since shown eagerness to get at the South, with the spirit manifested in this debate here and heretofore in the Senate, and the methods of the Republican party as shown by the Speaker of this House, make it more alarming

But the soldiers did not invent reconstruction and are not responsible for it. There are men in the wake of armies sometimes, the lower class of camp followers, who prey upon disaster, are willing to see destruction come to people so their business may flourish, to rob the wounded and assault them for protesting, to push them back and curse them if they attempt to rise. To such men was the South given over after the war. The politicians, who felt they did not have the time to go to the front and take the risks of battle, but were hungry for the glory of victory after it came, whose patriotism smoldered while the armies were in the field, but burst forth into effulgence when the war had ceased, were unwilling that the great civil war should history pass into and the soldiers have all the glory. And therefore they blamed General Sherman for giving liberal terms, fell upon an unarmed and exhausted people, and took from them by force the pittances left from the ravages of war, pushed them back whenever they attempted to rise, opened the wounds that were healing, heaped upon an impoverished people debts that burden some of them until this day, and christened it reconstruction, and only ceased when public decency cried out "For shame!"

But, as I said, the real soldiers did not invent that scheme. And I believe, if they understood the full scope of this bill, so surely calculated to produce similar or worse results, they would trample it under foot, and say to the people of those States which they restored to the Union at such stupendous cost, "We will have no hand in the humiliation of our own race, nor the destruction of their prosperity. We restored the Union as it was; we brought back sovereign States, not conquered provinces. We never planted the Stars and Stripes anywhere as the emblem of subjugation, but bore them aloft as the glorious ensign of liberty to wave over all the people of the Union fully restored in strength as well as in form and beauty. You have performed your duties as good citizens by laboring with matchless courage and energy to reclaim your land from the devastations of the war, and by a cheerful obedience and loyalty to the Union, thus adding strength to the Government, strength to its wealth-producing power, to its tax-paying power, adding in a degree not to be computed to the prestige of its military greatness, and if need be will add to its military strength in the field those great soldierly qualities that will make its armies invincible. To humiliate or destroy such people and push them back into the desolation from which they have so heroically come is to commit a crime against the Government and against humanity."

It might be asked what should have been the course of enlightened statesmanship under the surroundings, to say nothing of Christianity, becoming this age and a great people? Would it not have been becoming to the great name of America and the leading race in this advanced civilization to have followed the lead of the soldiery, who could be magnanimous in peace as well as terrible in war? Any other Government in the world, and this one in the hands of another party, would have availed itself of the results of the war, and by a magnanimous policy shown to these people that they were mistaken in their apprehensions and ought not to have gone.

The spirit manifested in this bill, committing the Government to the policy of turning the back of the hand to these great citizens, to make them feel that the Government to which they have sworn honest allegiance and want to support and do support wants none of their loyalty and none of their friendship, and that punishment has not ended, shows that avarice is above patriotism in the minds of its supporters.

I ask here in what does the glory of the Union armies consist? You must answer that it consists in one great achievement—for that monuments and statues are raised and continue to be raised to the public gaze that the heroes of the war may not be forgotten; that one great achievement was the capturing and bringing back to this Union the greatest race of warriors and statesmen the world has ever produced. The soldiers were proud of the achievement and went to their homes satisfied with their laurels.

But that people have fallen into the hands of politicians controlled by the great money interests of the country, and party exigencies demand that this superb people, the grandeur of whose statesmen has embellished American history for generations—their trials and triumphs since the war mark them as unrivaled in courage and dauntless spirit; a people whom desolation can not dishearten, ruin and grinding tyranny can not discourage, and despair itself can not dismay; a people who in every department of life would add to the strength, prosperity, and grandeur of the nation and embellish the highest civiliza-

tion, and who would gladly bring all their great traits to the support of the Government—must be made to feel the sting of African domination after they have been made enemies to the white race, and led by men who have no kind word but only denunciation for the white people; their prosperity destroyed and they pushed back into the desolation of the past because there is money in it.

I know men assume the guise of honesty and talk with placid faces about this being not a revengeful measure, but I have more hope of justice finally from the man who acts in passion to injure than from him who smilingly tells you he is your friend, but that his interests demand that he cut your throat.

If there was any sincerity in the boastful attitude of this Government in its foreign relations, if the vigorous foreign policy, so grandly heralded to the world, meant anything but glittering diplomatic correspondence and final yielding of all valuable points, if the Government meant to assert itself as it talks, and there was any prospect of a trial of military strength with a great power stronger than Hayti, for instance, a different policy would prevail.

But history tells the story. Great aggregations of wealth contemn liberal government, despise elections as expensive and uncertain, and want centralized power that can be reached and controlled. They would rather destroy a part of their own country which impedes their way to further usurpations than to foster its strength for the national power and honor. While the Government was holding the Southern States for the carpet-baggers to go through their pockets, American citizens were being shot to death in Cuba without a trial, crying out, as the fatal bullets entered their breats, that they were American citizens and were guilty of no offense. Seven other vessels besides the Virginius had lowered the American flag by order of Spanish commanders. Mr. VOORHEES, then a member of this House, speaking of these and other outrages on the American flag, said:

> If there is any further mode not yet adopted by Spain for the expression of contempt for this country, for her honor, her flag, her commerce, the lives and the liberty of her citizens, it lies beyond the range of my imagination.

Some elegant and decorous diplomatic correspondence settled the matter amicably, however, but the plundering of the South went bravely on. There was no faltering there. It was so much easier to trample upon our own citizens than to face the Spanish fleet.

So it will be now, when the little diplomatic fusilade now in progress shall have resulted in England having her way. She will sneer at American pretensions, and continue to gather in the profits of our northeastern and northwestern shore fisheries. And the American Government will show its statesmanship and courage by destroying the prosperity of a large section of its own country and breeding discord among and tyrannizing over a part of her own citizens. Then our great men, millionaires by oppression and fraud, will sail to Europe in British ships and strut on the streets of London and Paris after some faded nobleman, seeking invitations to dinner and family alliances with a name attached to a vagabond, and say "You excelled us in diplomacy, but we passed the Lodge bill and put the negroes over the white people in the South."

Englishmen will reply mentally, if they do not speak it, "And then you talk to us about Ireland, and snivel over Russian cruelty to prisoners. Why, that is far beyond any Russian decree. The Czar would scorn to humiliate his own race. It is worse than any German legislation for Alsace-Lorraine—infinitely worse than the crimes act—worse than anything in a christian land. Is the proud spirit of the Anglo-Saxon and his race pride sinking under the corrosive influence of avarice and the influx of other races in America, except in the South?" No one doubts the courage of the great North. Courage without justice is always dangerous.

The spirit manifested in the measure to baffle and suppress half the civilization of the nation in the interest of wealth is ominous to the nation as well as cruel to the South. I am aware that they, in their abundance and strength, laugh to scorn the idea of danger. So did Rome. When her resistless power extended her empire to the ends of the earth the world trembled at the name of Rome; her glory dazzled the vision of her people as the blazing sun in the zenith; but the spirit that slew Cæsar in the name of patriotism started her on the sad descent. Philanthropists should remember that whatever celestial spirit brought civilization to mankind, the marvelous truth remains, that once lost it has never returned to the same land, nor to the same race, nor in the same language.

But I have an abiding faith that this measure, if it beomes a law, vicious as it is, comprehensive as it is, skillfully contrived as it is, and however remorselessly it may be executed, will still fail of its purpose. When the refined cruelties here provided shall have been applied, not to your satisfaction, of course, but until public opinion, in the name of justice and common decency will demand cessation of enormities, you will still have failed in the scheme of destruction. That partial success will be attained and the prosperity in the South, now so cheering, the result of a quarter of a century of hardships, privations, and toil will be partly destroyed, I will not deny. That the rights and liberties of our people will be periodically trampled upon, and coarse and brutal tyranny go unpunished and unrebuked—perhaps be rewarded as heretofore—I can not dispute. The colored race, now friendly, may be converted into enemies of the white people, and the Northern mind inflamed so as to close their ears to complaints of injustice. The maimed Confederate soldier, who has worked with the one arm left him longer hours as his form bent lower, telling his sons to trust in the honor of the Union soldiers, will be startled.

The white people, who have worked so herocially and took upon themselves even in their distress the burden of educating their freed slaves, who hailed with gladness expressions of leading Northern Republicans predicting prosperity for the new South, will look upon this Dead Sea fruit with a shudder and sigh as they exclaim, "And this is the new South to which we have been beckoned onward with treacherous smiles; this the triumph for which the Union armies fought; this the way they saved the Union, and for which the Government will pay annually $164,000,000 of pensions, of which the South pays without complaint far more than her proportion according to the wealth of the country."

I might step aside here to say to those of the Union soldiers who turn their backs on the Confederate soldiers, to whom you were once magnanimous, that when the war ended you went to your homes in a land groaning under a superabundance of production; a wealthy people and a rich, glad Government laid their abundance at your feet and strewed your pathways with flowers, and yet $164,000,000 is required to supply the wants of the needy. The Confederate soldiers went to where their homes had been amid a devastation before which Greek or Roman would have quailed. Men, maimed as those whom you pension, as helpless, are working in the fields and making a living for their families and paying a part of your pensions besides. To that extent you eat from their haversacks and drink from their canteens, and no word of complaint; but could you not spare them and the widows and orphans this destruction?

Whether it is done or not they will not despair before all this phalanx of evil forebodings, however much they regret to see the silver lining of the clouds turn black in mockery of their misfortunes. The spirit of our people will not be broken, and their hearts will not quail, but every throb will beat full and clear with deathless hope in the immortality of their race. They will march into the future, dark as it is, without shortening the stride, believing that beyond the shadow of this poisoned vaporous cloud there is a purer atmosphere and a brighter day. There are many Union soldiers whose magnanimity is greater than the love of gain and whose honor is above revenge, and who will will not support this great wrong.

The great party of the people of just government and of liberty have set their faces against oppression. There is upon the earth, thank God, a civilization greater than tyranny, grander than the glittering empire of gold, into whose system God has breathed the vitalism of Christianity and it will live. It has given to France a republic. It is about to disenthrall Ireland. It is leading England with rapid strides towards a people's government. All the German states, as well as the empire, are rapidly imbibing liberal principles. It has penetrated China and given it a constitution; established courts of justice in Russia, in Central and South American States, and in Mexico despotism is fleeing before it. Canada is virtually a republic. Only the United States is going backward in its system of government, and becoming more intolerant and speeding towards centralization. Doubtless these gentlemen believe that the American people may be led as the French were to vote a republic into an empire, but their haste to grasp the reins of arbitrary power is perhaps an element of safety to the people. Liberty may take alarm in time and loosen the grasp of the mailed hand from her throat, and still preside over a free people.

The South is as loyal to the Republic to-day as any part of its domain, and far truer to its principles than some other parts of it.

We are here neither to boast nor cringe, but as the accredited agents of a people who have no superior to join with the representatives of the nation in what is best for the whole people. It is our Government and it is yours. I do not assent that it belongs to the soldiers because they saved it. It belongs to the people, to all the people. I assert only that to which all will assent when I say that the representatives of forty-two States are here upon equal terms, with equal rights, and bound by the same obligations.

I but voice the sentiments of the sovereign masters whose agent I am, and, as I believe, of the whole South, by saying they desire neither to inflict nor endure injustice, but desire a national liberal government under which all may prosper in peace. They will be prompt to discharge every duty of good citizens in the fullest and broadest sense in peace or war. They do not intend to be driven from their loyalty to the Government because of temporary oppression, however cruel, but try to put the Government in better hands. We shall not be driven from our allegiance to our own Government and the maintenance of the Constitution.

If anything was lacking this bill concludes the proof that the only safety to person or property in the South from vandal legislation is in maintaining the Republic and the Constitution inviolate, and therefore the highest and strongest motives known to mankind bind us to the preservation of both.

People who can recover in a day from a shock that disrupted to its foundations their social system, men who can comprehend and grasp and control the startling problem of society to be reconstructed with a new element in it, on a new and different basis, with no law prevailing, not a civil officer in some States, as dispassionately and wisely as any other people could have done after years of study and anxiety, and then carry that newly organized society through seven years' rule of conscienceless brigandage, uncorrupted and unsullied and undismayed, will not likely turn back now from the Government to which they have sworn allegiance and upon the integrity of which their liberties depend. Nor will they be deterred from their purpose by the unmanly insinuations or threats of those whose aim and purpose is to suborn the Government into the hands of a syndicate of wealth, always more tyrannical than kings.

The brave men of the North, the brave soldiers of the North who honestly fought for Union, do not want the brave soldiers of the South deterred from their allegiance to the Union and the Government, but welcome them as stanch supporters and defenders of both. They want them to be men such as were met in the terrific battles of the war. We want them to carry the United States flag in the same way that they carried the flag that went down grandly, but went down forever, at Appomattox, and if the small war cloud that floats in the horizon shall gather force and spread over and darken the skies, notwithstanding you want to turn the back of the hand of the Government against the Southern people, the Southern soldier will rally to the defense of the Union, the Government of the United States—our Government—with as much firmness, with as much courage, and as promptly as your people will. Notwithstanding the enactment of your pension laws to encourage the patriotism of the soldiers and the fact that you would refuse us even the right to live in peace under its protection, notwithstanding you make the Government frown in our faces at every advance we make, we do not believe that such a policy represents the great American heart, and will fail in the end.

The big heart of the North pours out its thousands when physical distress comes to the South, which proves that the enormities that are crouched under cover of this bill have lodgment only in the great associations of wealth, who see in it a means of aggrandizement at what cost to others they care not.

This is the best Government there is, and we do not ask a better if it be not perverted, and we are most earnest in preserving it as it is.

In strange contrast with the cruel provisions of this bill the Union soldiers, with a few exceptions, utter no bitter sentences against the South on this floor, nor do they speak denunciations of our people in this House. They do not boast of their victories over their fellow-citizens, and yet an "ay" vote on this bill will be the bitterest word that could be spoken. I will hope they do not mean it as I understand it. I can not yet believe that the old soldiers, the real soldiers, will consent to the destruction of the South. I think they would rather rejoice at the indomitable energy that redeemed their native land from the devastations of war, and feel like taking them by the hand and saying, "Come with us, and we will join hands and build up this Government and this nation into a power that with our combined strength can defy invasion from abroad and preserve the liberties of all the people from usurpations at home."

I would say one word further, as I have spoken of the Union soldiers. I admire their courage; am proud of their fame as American soldiers. I prefer to believe that those who support this measure are the exceptions, and that the rank and file are still willing to deal justly by a brave foe, and if their hearts were sounded free from political prejudices they would say of those people what I once heard a Union soldier say, "We fought you and we conquered, but when the war was concluded our duty was performed; we want no more wounds inflicted and scorn the man who would humiliate so brave a people. If war clouds gather in the horizon we want you at our side, for if there is anything we do know it is that rebels will fight when they make up their mind to do it, and if war shall indeed come, which God forbid, the columns of blue and of gray will confront the invading armies, side by side, shoulder to shoulder, bearing the same flag in defense of their common country, and sweep from our shores every invading foe, and if you want to play 'Dixie' on your end of the line we will play the 'Star Spangled Banner' on ours as we march into action."

And I will say when the struggle becomes terrible the South will not stand back in retaliation for this great wrong; but when hostile guns shall thunder at the gates of your cities, and your wives and daughters, in consternation of the nearing battle, hurry with refreshments to the brave soldiers that are falling along the line, some fair Jessie Brown will exclaim with uplifted hand and bated breath as she catches the wild strains of "Dixie's Land," "It 's nae a dream; it 's the slogan of the South, Sanders, dinna ye hear it? The Confederates are comin," and if you let your Union commanding officer go along the line he will halt where the cannon roar loudest, where shells hiss fiercest, and men fall fastest, and where the tide of battle will turn he will speak of them not as rebels, but will say, "Lead your boys in gray in front of this enemy and tell them to give them the old rebel charge and the rebel yell if they want to." Gods, what valor; the victory is ours. [General applause.]

Federal Control of Elections.

SPEECH
OF
HON. I. H. GOODNIGHT,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, June 28, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. GOODNIGHT said:

Mr. SPEAKER: The perpetuity of our Government rests upon the virtue of our people.

The entire fabric of this Republic is bottomed upon the idea that its citizens are capable of self-government.

To question this sentiment is either a threat against the freedom of our institutions or an admission that our system is a failure.

This bill, providing that agencies of the Government shall superintend and control elections in the States, is a distinct avowal that our people are either too ignorant or too corrupt to govern themselves. Such an avowal portends great evil to the Republic. In the formation of this Union one of the rights clearly reserved to the State was to elect and commission its own officers. No reservation was more sacred, and none so potent in perpetuating a free government.

When our elections are held, canvassed, and certified by officers elected by and answerable to the people, there is small probability of wrong. It has been many times demonstrated that the honest impulses of the voters of this country will tolerate not even the appearance of corruption in public officials. For verification of this truth I need not go further back than the recent election of governor in Ohio.

So universal is this principle that, whatever be his rank or popularity, every public man knows that an act of deliberate wrong is his undoing. So true is this, and so well is it understood, that, whatever may have been true of men before election, afterwards their official character and conduct have been, in this country, honorable to a degree unknown in the history of nations.

Men have succeeded to the Presidency after campaigns directed mainly against their private character; they have been thus promoted by the rankest fraud, after defeat by the sovereign will of the country; yet their accountability to the people, the last analysis of republican government, has uniformly obtained administrations free from vice and conserving the common good.

The people, constituting this Government, standing within, with the potent power of review, are centripetals impelling every official to the center of the sphere of right.

But all these principles of truth, these laws of action are disregarded and these effects for good are to be destroyed by this bill.

To take from the people the right to elect and commission members of this Congress and give the power to agencies of our own choosing is a long step toward the complete overthrow of our Government.

If, as provided by this bill, Congress can say that an election by the people may amount to nothing, that the governor's certificate is without potency, and that the certificate of an agency named by a Federal court is all-powerful and conclusive in making up this House and determining its organization, what then hinders us from naming the agents to give these certificates? If we can provide agencies to issue our certificates, independent of the State, why may we not at once declare our own succession? We may thus easily perpetuate our own power individually or as a party, but have we not at the same time destroyed the Republic?

Thus, in the trend of this bill may be seen how short and how easy are the steps to despotism.

By the methods here proposed the line dividing a republic from a centralized government is indeed a narrow pass, and that dividing centralization from the empire is still more narrow.

Sir, these are truths which may not be talked of lightly. The consideration of this measure deserves to rise far above sentimentality or party supremacy. To its discussion I bring neither prejudice nor passion as elements of debate. Too young to know of war, except as history; believing myself too loyal and full of love for the common country to see any part of it suffer from ignorance or caprice, cunning or hate, I contribute the little I can to hinder.

I do not regard this bill as a thrust at the South alone, as some interpret it. It is an open menace to this Union. Congress can pass no law putting a ban upon Kentucky that does not equally imperil Pennsylvania. The effect may not be so immediate, but the philosophy to each is the same, and will compass the ruin of both. To abridge the right of a single State is to abridge the right of all; to endanger the peace or cripple the business prosperity of one is to threaten the Republic.

This is a nation of States. It was born of and has its life and potency from the States. We have no more power to destroy the identity of a State than has a State to infringe the entirety of the Union.

In this discussion I have heard the doctrine of State rights denounced by gentlemen from Kansas and Iowa as an "abominable heresy." Sir, when these gentlemen come to discuss the original-package bill I am curious to know how they will dispose of this "despicable doctrine."

I predict now that they will be loudest and rankest in the clamor for the triumph of this abused and "abominable heresy." We shall probably agree with them then, and regret that consistency does not impel them to agree with us now.

The constitutional questions involved in this subject and the history relating thereto have been so well considered by other gentlemen that I have no desire to retrace the discussion.

I call attention, however, to one difficulty which, so far as I know, has been omitted.

From that clause of the Constitution empowering Congress to "make or alter" the regulations of the State, it seems to be universally conceded that Congress can, or was expected to, make such laws only in the event the State has failed.

All the States having made laws, there is no hiatus, and hence it is not claimed here that Congress is making the election laws or that it can make them. Having, therefore, no power to "make" such laws, the only power we can derive from the Constitution is contemplated by the provision authorizing Congress to "alter such regulations."

It will hardly be denied that the power to conduct and control elections must reside either in Congress or in the State. If there be those who hold that this power rests with both, they will at least agree that the power must be exercised by the one or the other. Two courts or sovereignties can not rightly exercise conflicting jurisdiction over the same subject-matter at the same time. This is as impractical as that two bodies should simultaneously occupy the same space. Even where the jurisdiction is concurrent, while one sovereignty or court is rightfully exercising such jurisdiction no other can interfere with or usurp such right.

The complaint here is not that the States fail to elect Congressmen, but that they do elect under imperfect "regulations." Then, what is the remedy? No plain or honest-minded man will hesitate a moment in saying the remedy is to "alter such regulations" and provide for proper elections by the State. This is the exact provision of the Constitution. It has taken a skillful and an ingenious mind to shun these breakers. To simply alter "such regulations" would still leave the matter in the hands and under the dominion of the States. It would not authorize the Government agencies. It would not empower a Republican canvassing board to make up its own Congress.

So the bill does not alter the State law. Its manager upon this floor, seeing the difficulty, openly avows that the State laws remain absolutely unchanged. The title of the bill also evidences the truth of this. Then, Mr. Speaker, what do you do? You do not "make" the law; you do not "alter" the regulations. Hence this act is without semblance of authority from the Constitution, your only right being to "make" or "alter." When you interfere otherwise, as by this bill, you lay unclean hands upon this ark of the people's covenant, and their divinity will curse the defilers.

You say the bill is a supplement to the present laws. The county officials still hold the election, admit votes, count and certify them, and the governor certifies them to Congress. None of this is "altered." But by your supplement it is all annulled. While the State officers hold the election, which you admit you can not prevent, your selected partisans stand by, inspect, and scrutinize, and certify as they please, or as they are directed by their chief, and thus disregard and overturn the real results of an election. This is without warrant in the Constitution. There is nothing that implies, or even seems to imply, such authority.

The bill is not only without warrant, but it begets the absurdity of two sovereignties exercising the same administrative act in conflict with each other, which can not be contemplated without bewilderment. The bill is so full of evil that it is difficult in any reasonable time to emphasize its greatest wrongs. That the law is not general subjects it to criticism. One hundred men in any district, or fifty in any part less than an entire district, are sufficient to procure the operation of the law. These need not be voters of the district, or citizens of the Union, if they are only content to claim to be such. How easy it is to claim is illustrated by the claim of honorable gentlemen here that this is a fair and reasonable measure, who turn white with anxiety or rage when it is insisted that the bill if passed must be enforced in their districts.

Can any conservative man seriously insist that fifty thousand honest, intelligent voters of a district shall be harassed by the hardships of this measure upon the petition of fifty or one hundred of the most worthless wretches who may live or be imported among them? It is needless to conceal that there are many who for no motive higher than the fees to be paid and the "little brief authority" to be exercised will ask the law's enforcement where no necessity exists. There is no provision in the bill against bad faith. Is this House willing to subject the two hundred thousand good people of my district to the mean device of fifty of its lowest and worst? Is this House prepared to make it possible that the people of this country, already tax-burdened, shall pay at every election $15,000,000 upon the corrupt pretense of a few of its most degraded? If so, then "Ephraim is joined to his idols; let him alone."

Among the most reprehensible provisions of the bill is the deliberate system of espionage to harass the foreign-born citizen and defraud him of his right to vote. If, as some are bold enough to say, the bill is solely to protect the negro's franchise, why this cunning device against naturalization?

The negro "we have with us always." He is a native, not an imported factor. This feature of the bill discovers its entire purpose. It is not in the interest of freedom; not to promote the public good; not for any section or class, but to establish party supremacy. The Republican party is to be perpetuated, and to this end the distinguished Speaker of this House has said it is necessary that you must register the voter, count the vote, and certify the result. You might fail in any one unless you assume control of all.

Judged by elections held in this House during the present session, unseating members supported by more than a dozen thousand majority, no one will doubt Republican triumph if the people can be dispensed with. Under this bill the courts are not only to be degraded by loss of confidence in their purity on account of their partisanship, but they are subordinated to the chief supervisors.

The court has no discretion in convening or appointing, but must obey the chief. The chief is properly named, because if this bill becomes a law his power will be supreme. He will rank even our distinguished Speaker, since he can only control the House, while the "chief" will elect the House. The chief will name the appointees without limit, except he is not allowed to appoint less than double the number needed. He may appoint fifty times as many as are necessary, but shall not appoint less than twice as many.

Ordinarily we limit against excessive exercise of discretion, but here the limit is against moderation.

No exercise of power by Federal "chiefs," appointed for partisan purposes, is thought to be excessive or immoderate, but fearing some may be timid you "boot and spur" them for the race.

He may transfer supervisors from one to another district, and thus remove them from the influence of, and responsibility to, their neighbors.

He can also assign them to any other duties authorized by the laws of the United States.

Here is unlimited authority in the chief to reward his subs when there is no registration or election on hand.

If so unlikely a thing should happen as that a Democrat should be appointed supervisor, the chief may remove him for unfaithfulness, the chief being the judge.

All supervisors appointed—and there may be six or six hundred in a precinct—are United States officers for two months after election. What does that mean if they are only to see that men are allowed to vote?

The ultimate end of this bunglesome, complex measure, as defined by the bill itself, is the enforcement of the election laws "subject to the instructions and directions of the chief supervisor."

If a subordinate should be inclined to heed so small a thing as conscience or listen to the dictates of right, it will be seen that the chief may instruct and direct him what to do, and he must obey, even though it be to certify without a vote upon which to base it.

There may be any number of deputy marshals paid according to their statement as to service. They may arrest citizens, intimidate voters, make canvass from house to house, at Government expense, for information to furnish election campaign workers. They and the supervisors shall travel from county to county, from one extreme of the State to another, upon the summons of the chief, or to attend a single registration. This item of expense has not been included in the many estimates of the enormous cost of enforcing this law.

The canvassers are to meet November 15, long enough after the election for all needful changes to have been made in the records, and receive $20 a day for certifying that a Republican has been elected. The Clerk of this House shall recognize that certificate under a penalty of $5,000 fine and one year's imprisonment, although the certificate be false on its face, and though it be shown to be untrue by the certificates of the governors of the States, answerable to their people, after counting and certifying as they have done for a hundred years.

These chiefs are to be hedged about with such divinity that the Secretary of the Treasury is directed by the bill to locate them in the Government buildings, though it be necessary to evict State pension agents, United States engineers, revenue collectors, or collectors of the ports.

Sir, the bill is so mammoth and complex that there is not a man upon this floor who could to-day hold a regular election under it; and yet there is scarcely a line and not a section of it that does not import a crime against both liberty and law.

Gentlemen mistake the necessity for it. Party emergency is the only demand. Many of you, most of you, support this bill as a remedy for fancied evils at the South who know nothing, and claim to know nothing, of such evils.

You rely upon belief based upon information at second-hand, and from most questionable sources. Why not act in this as in other mat-

ters, upon the ordinary rules of evidence? Why believe the slander of a maliciously evil or misinformed paper, rather than the evidence of a hundred reliable people with opportunity to know?

I fancy and congratulate myself in the belief that there is not a gentleman on the opposite side of this House who would not willingly believe any statement I might make upon a business matter, yet when I tell you that the colored men in my district cast their votes without hinderance or restraint you will not believe, but ignorantly contradict.

You make a mistake in supposing that all colored men vote the Republican ticket. Many of them do not. Some vote the Democratic ticket from choice, many on account of "environments" altogether agreeable to and anxiously coveted by them. The gentleman from Massachusetts complains that we are not supported by sufficient vote. There is a larger vote behind me than was received by eleven of the twelve members from Massachusetts.

My district cast more votes in 1888 than were given Tilden and Hayes both by the great States of Oregon, Rhode Island, Delaware, or New Hampshire. Yet these four States, with so diminutive a vote, have now in Congress eight Senators and five Representatives, who will, I suppose, support this bill based upon the smallness of the Southern vote. There are many reasons why people do not vote in the South so fully as in the North and West. Many colored people do not vote because they have found so little profit in it, and have been so often deceived and disappointed by professed friends. Since the war the whites have been engrossed in business. They are far from and have enjoyed but little of the patronage of the Government. They know little of office-holding; they do not study it; they do not hunt it, as those nearer the seat of Government, or having friends close to the Administrations.

Fifty years ago Mr. Clay declared that when the time came that our people should seek Government employment as a means of livelihood only, and not for love of country or its perfect service, the evidence of our decay would be manifest. I am sorry to think the evidence is upon us, but glad my people contribute so little to it.

Sir, the few years since the war have settled many and serious questions in the South. The colored question was largely one of labor and of education. We have given our money, with liberal hand, to school and qualify the colored people for citizenship. In that time I doubt if all the Northern States combined have contributed as much to colored education as has Kentucky alone.

As to the labor question, we challenge all sections upon its settlement. Our settlement was with the former slave, who felt, in a qualified sense, that the property was partly his. He was unlettered and full of suspicion, yet the adjustment is thorough and amicable. We have been cursed by none of the strikes or riots that have afflicted the North and West, destroying hundreds of lives and millions of property and even now constantly threatening wreck and ruin.

Sir, having settled these questions, as you have been unable to do, we crave time to adjust all others. We need no law other than we have. We need not your help, except the help of friendship. There is no quarrel between whites and blacks. It is simply a growth and needs to be left alone.

But gentlemen say if there is no trouble, the law will not hurt. They triumphantly ask why we oppose it if there is nothing wrong. I ask them in return why they oppose its execution in their districts where we are assured the millennium is already triumphant?

But, Mr. Speaker, it was not the insignificant tax on a pound of tea that excited our fathers to the revolution. It was the violation of principle. Then it was taxation without representation that brought contention. Here it is worse, for you propose taxation by a fraudulent representation, chosen by enemies to "impose burdens grievous to be borne." Sir, is there not in this Congress virtue sufficient to compass the defeat of this evil measure? Or will gentlemen, blinded by partisan zeal, or sectional bigotry or hate, persist in passing the wicked act? To this complexion has it come at last; if so, then surely justice has flown "to brutish beasts, and men have lost their reason." [Applause on Democratic side].

Monopoly—Land Grants to Railroad Corporations.

Great estates destroy the spirit of patriotism in those who have everything and those who have nothing.—*St.-Pierre.*

SPEECH
OF
WILLIAM S. HOLMAN,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, July 16, 1890.

The House being in Committee of the Whole and having under consideration the bill (S. 2781) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. HOLMAN said:

Mr. CHAIRMAN: The Senate bill declares the forfeiture of all lands granted by the United States to States or corporations to aid in the construction of railroads lying opposite to the portions of such railroads not "now completed;" the amendment reported to the House by the chairman of the Committee on Public Lands [Mr. PAYSON], in the nature of a substitute, is, as to the extent of the forfeiture, exactly the same, and only differs from the Senate bill in minor details.

As the long controversy over these grants, covering, at intervals, the last twenty-nine years, will terminate with the passage of the pending bill, the passage of which seems now inevitable, I will ask the indulgence of the committee while I state briefly the facts in relation to this extraordinary policy, the results of which are even now seriously affecting every portion of our country, for it will be seen that the injurious effects of this policy extend far beyond the value of the public wealth given by Congress to the land-grant corporations.

Since I became a member of this House, more than thirty years ago, I have been controlled by the conviction that the true policy of this Government was to reserve its public domain, no matter how inexhaustible it might appear to be, for homes for its people; that all public lands adapted to agriculture should be reserved for actual settlers, free of charge, subject only to grants in aid of education, and in bounties to citizens who may have served in the Army or Navy in the national defense. The policy which I have named was unquestionably the policy of this Government from the beginning and down to the year 1862, when this system of grants of the public lands to corporations, which was destined to exhaust the public domain, began.

Three great parties have at different periods been closely identified with the public domain, the foundation of our greatness as a nation, the Democratic, Whig, and Republican parties. Each of them will answer to impartial history for the manner in which it has executed this, the greatest trust ever involved in the administration of the public affairs of any people. The public domain was acquired by those three great parties as follows:

ACQUISITION OF THE PUBLIC DOMAIN.

	Acres.
By the Democratic party:	
Louisiana, April 30, 1803 (President Jefferson)	756,961,280
Florida, February 29, 1819 (President Monroe)	37,931,520
From Mexico, by two treaties, February 2, 1848, and December 30, 1853 (Presidents Polk and Pierce)	363,535,920
	1,158,628,720
By the Whig party:	
By purchase from Texas, September 9, 1850 (President Fillmore)	61,892,480
By the Republican party:	
Alaska, March 30, 1867 (President Johnson)	369,529,600
	1,589,950,800

Florida and all of the great States and Territories between the Mississippi River and the Pacific Ocean have been carved out of the great country which the Democratic party added to the public domain, and the 61,892,480 acres acquired by the Whigs. The two parties which have added lands to our public possessions for homes for our people, Democrats and Whigs, as I shall show, husbanded these lands as our most valuable, indeed our priceless, possession. The distinctive glory of the Democratic party is that it added to our original possessions which were bounded, in the beginning, on the west by the Mississippi, an empire of fertile lands, and made our western boundary the Pacific Ocean. And it will be seen that the Republican party has surrendered immense portions of these fertile lands, which the old parties held sacred for homes for our people, to corporations and to an accursed monopoly.

LAND GRANTS TO STATES.

At an early period Congress made limited grants of land to States to aid in the construction of roads, canals, and other works of internal improvement, and between the years 1851 and 1856 Congress made certain limited grants to certain States in which public lands were located to aid in the construction of railroads. But the anxiety of the men intrusted by the people with authority to manage their national affairs, to husband the public lands and reserve them for actual settlers only, is illustrated by the fact that from the foundation of the Government down to 1861, the largest sale of lands ever made to one person even when the war debt of the Revolution was pressing on Congress, was the sale of 248,540 acres to John Cleves Symmes, in 1794, embracing the present city of Cincinnati, Ohio, at the price of $165,963.42, and 822,900 acres to the Ohio Company in 1787, at the price of two-thirds of a dollar an acre. The largest private grant was that made to the Marquis de Lafayette of 11,520 acres in Louisiana, and afterwards a township of land in Florida, and the largest grant made to a State was that made to the State of Illinois in 1852 of 2,595,053 acres to aid in the construction of the Illinois Railroad, under the control of the State. The moderation of these grants will appear by comparison with the grants made after 1861.

It may be said in excuse for the grant to Illinois that it was made to a State, that the measure was carefully guarded, and in addition to that, the grant being made to the State of Illinois, that State was able to make it beneficial to the whole people. This Illinois Railroad Company was to pay, forever, annually into the treasury of the State 7 per cent. of its gross earnings, thus greatly relieving the people of the State from the burden of taxation, while the grants to corporations reserved no such benefits to the people or the States.

At the convention of 1852 at Pittsburgh which nominated Hale and Julian for President and Vice-President, the first gathering of the elements of the great party which has since 1861 in the main

controlled our Government, a resolution was adopted entitled to high honor.

It sounds like one of the clauses in the Declaration of American Independence. It declared the purpose of the party to secure to all men a fair chance in the struggle for life. It is a noble utterance of the right of men to the ownership of the soil they make fruitful by their labor:

Resolved, That the public lands of the United States belong to the people, and should not be sold to individuals or granted to corporations, but should be held as a sacred trust for the benefit of the people, and should be granted in limited quantities, free of cost, to landless settlers.

In all the range of our history since the Declaration of Independence was pronounced and the Constitution of the United States was adopted there is no grander declaration to be found. But it is an astounding fact that within two years after the Republican party, whose illustrious leaders were able in the beginning to declare so grand a purpose, came into power, this extraordinary system of land grants to corporations was inaugurated, and within ten years reached a magnitude that startled the whole country. "Baronial estates" of millions of acres, instead of "American homesteads" of 160 acres, became the platform of that party in Congress, as expressed in its measures of legislation. The people with almost one voice demanded that a halt should be made, and at an early day gave to the Democratic party the control of the House of Representatives, and this fatal policy at once ceased.

LAND GRANTS TO CORPORATIONS.

When, in the Thirty-seventh Congress, the homestead bill was under consideration and I had the honor to offer an amendment providing that the soldiers of the Union Army (we were then in the midst of the late war) should be entitled to bounty in lands such as had been granted to the soldiers of the Republic in all former wars, the amendment was defeated upon the argument that the tendency would be to centralize the public lands into large estates through the purchase and location of the land-warrants which would be issued to the soldiers. I was not satisfied then that the reason for the defeat of that amendment had been frankly expressed. During that Congress the grant of public lands to corporations began, and within ten years a body of land, aggregating at the lowest estimate 181,393,960 of acres, was given away to corporations, and furnishing facilities to capitalists to monopolize hundreds of millions of acres more.

I take the figures from the reports of the Commissioner of the General Land Office, and when I consider the favoritism extended to these corporations in the adjustment of the grants and liberal interpretation of the laws in their favor, I entertain no doubt whatever that lands amounting in the aggregate to at least 181,393,960 acres will be awarded them on the grants made between 1861 and 1872, less the comparatively small portion in value in recent years declared forfeited by Congress.

The following statement of these grants is furnished by the General Land Office:

Railroad land grants made by Congress after March 4, 1861.

Names of corporations.	States.	Number of acres.
Leavenworth, Lawrence and Galveston	Kansas	800,000
Atchison, Topeka and Santa Fé	do	3,000,001
Union Pacific, Southern Branch	do	1,520,000
St. Joseph and Denver City	do	1,700,000
Portage, Winnebago and Lake Superior (Wisconsin Central)	Wisconsin	1,800,000
La Crosse and Milwaukee	do	624,843
St. Croix and Lake Superior	do	291,799
St. Croix and Bayfield Branch	do	144,399
Lake Superior and Mississippi	Minnesota	900,000
Sioux City and St. Paul	Iowa	524,800
McGregor Western	do	1,536,000
Grand Rapids and Indiana	Michigan	852,960
Southern Minnesota and Minnesota Valley	Minnesota	404,000
Marquette and Ontonagon (Marquette, Houghton and Ontonagon)	Michigan	221,066
Peninsula (Chicago and Northwestern)	do	240,000
Minnesota and Pacific	Minnesota	500,000
Do		499,455
Minneapolis and Cedar Valley (Minnesota Central)	Minnesota	257,361
Winona and St. Peter's	do	504,000
Southern Minnesota	do	735,000
Hastings, Minnesota and Red River of the North	do	555,000
Union Pacific		12,000,000
Denver Pacific		1,000,400
Kansas Pacific		6,000,000
Central Pacific and Western		9,000,000
Hannibal and St. Joseph (Union Pacific Central Branch)		781,944
Sioux City and Pacific		60,000
Burlington and Missouri River		2,441,000
Northern Pacific		47,000,000
California and Oregon (Central Pacific)		3,500,000
Oregon Central (Oregon and California)		3,500,000
Atlantic and Pacific		42,000,000
Southern Pacific		9,500,000
Oregon Central (Oregon and California)		1,200,000
Southern Pacific, Branch Line		3,550,000
New Orleans, Baton Rouge and Vicksburg		3,800,000
Texas Pacific		18,000,000
Stockton and Copperopolis		320,000
Total		181,393,960

I have rejoiced in the manly and eloquent denunciation of my friend from Illinois [Mr. PAYSON] in former years of the policy under which these profligate grants of public lands were made in derogation of the rights of the people and his earnest demand that these corporations should be held severely to their contracts.

But my friend attempts an Herculean task when he undertakes to relieve the Republican party from the responsibility and odium of these grants; grants made, too, to mercenary capitalists when the clash of arms could almost be heard in this hall and all patriotic men were only intent on the issues of the war. Here and there, of course, some Democrat may have voted for some of these grants, but during the period when these grants were made the Republican party controlled absolutely and without question every department of the Government. Will the gentleman undertake to shift from his political friends the responsibility of failing to declare these forfeitures when they had power to make that declaration?

Mr. PAYSON. Would the gentleman regard it as an interruption if I should make a suggestion at this point?

Mr. HOLMAN. Not at all.

Mr. PAYSON. The gentleman from Indiana will remember that whenever I have taken occasion to comment upon the situation to which he is now alluding I have always been careful to say, and have said with all the earnestness I was capable of using, that at the time these grants of land, improper as many of them have since turned out to be, were made, the question was not regarded as a party question, but men occupying positions in public life upon both sides of this Chamber were equally conspicuous in their support of the grants. On numerous occasions I have called attention to the names of gentlemen who were then taking a part in public life and who were active in support of these measures, and the gentleman from Indiana will do me the justice to say that that has been the line of suggestion that I have generally made.

Mr. HOLMAN. But, as a matter of fact, the legislation making these grants was strictly partisan, except in this, that one of the ablest and most valuable members that ever occupied a seat upon this floor, Elihu B. Washburne, opposed these measures from the beginning. His lips are forever silent; yet, if living, with what burning words would he demand the forfeiture of these grants to the last acre! On the one hand Elihu B. Washburne earnestly opposed these measures, as did every Democratic Member and Senator from the beginning with one or two exceptions. It is true a distinguished Senator from my own State voted for one of the grants. These are exceptions, such as appear in all our legislation. But these measures were essentially partisan.

I admit that small grants to States of the Union were made prior to the 4th of March, 1861, but the enormous land grants made later, when the Republican party came into power, to corporations amounting in the aggregate to at least 181,393,960 acres in ten years, a body of land exceeding in the aggregate the area of the States of Maine, Massachusetts, New Hampshire, Vermont, Rhode Island, Connecticut, New York, Pennsylvania, Delaware, Ohio, Virginia, West Virginia, and Indiana combined, rested upon a different principle. The small grants of the Democrats and Whigs to the States were for the benefit of the States and the people. The imperial grants of the Republican party to corporations were for the exclusive benefit of corporations. Any benefit the people might derive from the grants was merely incidental and subordinate to the gain and profits of the corporations, and notwithstanding the demand of my friend from Illinois [Mr. PAYSON] in former years for the annulment of these grants, and notwithstanding the efforts of his distinguished predecessor from Illinois [Mr. Washburne] to prevent these grants being made, the Republican party as a political organization must bear the odium of these grants to corporations, and the people will hold that party responsible for the irreparable injury that policy has inflicted on our country.

The effects of this unpatriotic, mercenary, and selfish policy will soon appear, and millions of homeless people will brand with imperishable dishonor the memory of the men, who, invested by the people for the time with the control of public affairs, have in less than a single generation basely surrendered to corporations the magnificent gift of Providence, this vast region of fertile lands which for generations to come should have furnished our people free homes and a fair chance in the race for life, surrendering to corporations and monopoly the wealth in lands of incalculable value, to the end that the wealth of the nation should be increased but increased inevitably in great private estates entailing in the early future poverty and wretchedness on millions of our people who with free access to those lands, this bountiful gift of nature to mankind, would have enjoyed prosperous and happy homes.

It is infinitely better, and such was the judgment of the founders of our Republic, that the wealth of the nation should be gradually increased and remain well diffused among our people, than that wealth should by artificial methods and class legislation be greatly increased and centralized into great private estates, leaving the great mass of our people in poverty. During the first three-quarters of a century of our Republic the policy of securing equal rights to all men and promoting the steady increase of wealth through natural agencies, which left that wealth well diffused, was firmly maintained, so that while there were no great private estates there was an equality in the material condition of our people unexampled in the history of the world, unless it was in the agrarianism of the Hebrews, where by a

law held to be of divine appointment it was declared that the lands should be divided among the people.

And ye shall divide the land by lot for an inheritance among your families; and to the more ye shall give the more inheritance, and to the fewer ye shall give the less inheritance. Every man's inheritance shall be in the place where his lot falleth; according to the tribes of your fathers ye shall inherit.

Whatever may be the opinion of men as to the divine origin of that law, its justice no one can dispute, and yet what a contrast between that equitable law which produced the most vigorous fragment of the human race and the policy of large grants of lands to the few on the fraudulent pretense of advantage to all!

THE FORTY SEVENTH CONGRESS AND THE LAND GRANTS.

But the real test of the attitude of parties on this subject is to be found later on, when the first opportunity for declaring the forfeiture of all these land grants arose, in the years 1881 and 1882; and in considering the question as to who is responsible for the present state of things, I desire to invite the especial attention of the committee to the facts. The grant to the Northern Pacific Railroad corporation finally expired on the 2d day of July, 1879, and the grant to the Texas and Pacific corporation on the 4th day of July, 1882. These were the last grants to expire.

When the Forty-seventh Congress was organized Mr. Keifer, of the State of Ohio, was on the 5th day of December, 1881, elected Speaker after a very extraordinary contest in which very unpleasant rumors floated through this Capitol touching on organized purpose to resist the forfeiture of these land grants. During that Congress the power of Congress for the first time to declare a general forfeiture of all these land grants, including the Texas and Pacific grant, was complete. The expiration of all the grants by limitation of law brought the whole subject within the control of that Congress.

Now, my friend from Illinois can not overlook what transpired during that Forty-seventh Congress without feeling that the great party with which he has always affiliated was fully exposed and dishonored in their refusing to declare these forfeitures when no obstacle stood in the way as to the lands then not earned by these corporations under the terms of the laws making the grants, amounting then in the aggregate to more than 55,000,000 acres on the basis of the pending Senate bill where no railroad had been thus constructed. I state the figures, I think, far below the facts. Now, what occurred? What did the gentleman from Illinois himself witness? A portion of the bills proposing a forfeiture of the land grants went to the Committee on Pacific Railroads, a portion of them to the Judiciary Committee, and a portion were referred to the Committee on Public Lands, the object being manifestly by this division of the bills to defeat any effective action.

As soon as that Congress met I introduced a bill to declare a forfeiture of all of these grants to the extent that the railroads had not been constructed within the time prescribed by law. Other gentlemen did the same thing. Of course these bills in general received no attention; one or two of them did, in the manner to which I shall refer.

During the whole of that Congress, with bills before the Committee on the Pacific Railroads, before the Committee on the Public Lands, and before the Judiciary Committee declaring these forfeitures where the right of Congress to declare the forfeiture was not in dispute, more than 55,000,000 acres of the land clearly subject to forfeiture, even on the theory of the pending Senate bill, and more than 105,000,000 on the principle I advocate, the House was not permitted, by the rulings of the Speaker and action of the majority, to even vote on any proposition whatever on the subject except on the reference of a minority report touching the Northern Pacific grant to the Calendar of the House.

I speak cautiously, and I understand my friend from Illinois [Mr. PAYSON] to assent to what I say. Now, in view of all this, who is to be held responsible for the present order of things? Now we are told by the majority that we can only forfeit the beggarly fragments that remain, fragments that the land-grant railroad corporations wish to get rid of, if thereby they can get their grants confirmed except as to those fragments:

Mr. HERMANN. Will the gentleman allow me to interrupt him a moment?

Mr. HOLMAN. Certainly.

Mr. HERMANN. The gentleman is now endeavoring to draw a line of distinction between the two political parties as to their attitude upon the question of land forfeitures?

Mr. HOLMAN. Yes, sir; I am drawing that line.

Mr. HERMANN. I ask the gentleman from Indiana how he can vindicate the course on this subject of one of the most illustrious Democrats who ever served in Congress—the late Vice-President, Thomas A. Hendricks——

Mr. HOLMAN. I have anticipated the remark of my friend from Oregon on this subject. I have stated that one or two Democrats favored these grants, or at least one of them. I am now discussing exclusively the attitude of the "two great political parties" with reference to land grants and their forfeiture. An individual vote is of no consequence.

The public domain, the great inheritance of our people, is substantially exhausted. It has in a great measure gone into the hands of private parties. What party is responsible for it?

In the Forty-seventh Congress the Republican party was in absolute control of the Government. How did it happen, then, if there had been a willingness on the part of the Republican majority of the House to declare the forfeiture of these unearned grants, that the House was never permitted during the whole of that Congress to vote on any bill declaring the forfeiture of a single acre of these lands? I submit that the rumors current in this Capitol, that the House was organized to prevent the declaration of these forfeitures or any of them, had at least some foundation. I think it can be safely asserted that the House of Representatives of the Forty-seventh Congress was organized with an express understanding of the Republican leaders that the forfeiture of these grants should not be permitted.

My friend, Judge PAYSON, was a member of the Committee on the Judiciary of the Forty-seventh Congress, and he is always an active member of a committee, fully informed of all that is transpiring. The majority of the committee, through Hon. THOMAS B. REED, its chairman, now Speaker of the House, had reported against the policy and against the power of Congress to declare the forfeiture of the Northern Pacific grant. I hold in my hand the report of the minority of the Committee on the Judiciary in relation to that land grant, including the report of my friend Judge PAYSON.

This minority report, made on the 21st day of July, 1882, is signed by J. Proctor Knott, a member of that committee from Kentucky, DAVID B. CULBERSON, of Texas, R. W. Townshend, of Illinois, Van H. Manning, of the State of Mississippi, all of whom signed the general minority report, which took the ground that Congress had power to declare the forfeiture, and that it was the imperative duty of Congress to exercise that power. Judge PAYSON signed the minority report, appending to it the following note:

I have not verified the figures above, but indorse the final conclusions and recommendations.

The resolution recommended, which concludes the report, is in the following words:

Resolved, etc., That all the lands granted to the Northern Pacific Railroad Company under an act of Congress entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Lake Superior to Puget Sound, on the Pacific coast, by the northern route," approved July 2, 1864, which had not been patented to said company on the 1st day of July, 1882, be, and they are hereby, declared forfeited to the United States by reason of a breach of the conditions upon which said grant was made, and that said lands are hereby restored to the public domain and made subject to sale and settlement under existing laws.

That was a sweeping proposition, but, applied, of course, exclusively to the Northern Pacific Railroad corporation. I will show hereafter the small amount of that grant that had then been patented. That measure would have restored more than 29,765,152 acres of valuable land to the public domain from that one grant alone. It would have restored over 5,000,000 acres of your most valuable mineral lands in the single State of Montana. And yet the House of Representatives during that Congress, although that report was submitted on the 21st day of July, 1882, with ample time for action, the House of Representatives did not permit a vote on the measure so reported in any shape or form. I will call attention later to these mineral lands.

That was the Forty-seventh Congress, and I think that my friend from New Jersey [Mr. MCADOO] spoke truly and prudently when he said that the course pursued by the majority in the Forty-seventh Congress, on this and kindred subjects, had much to do with the coming into power of the Democratic party in the following Congress. So the Forty-seventh Congress passed by and not an acre of these lands was restored to the people.

What a contrast, Mr. Chairman, between the Forty-seventh and Forty-eighth Congresses in regard to these grants. I will ask the Clerk to read the following resolutions from the RECORD of the proceedings of that Forty-eighth Congress, Mr. Carlisle, Speaker, which was adopted as soon as the House was organized and was able to act upon the subject through a motion to suspend the rules. It was, indeed, the very first motion to suspend the rules that was made in the House in the Forty-eighth Congress.

The Clerk read as follows:

Resolved, That in the judgment of this House all the public lands heretofore granted to States and corporations to aid in the construction of railroads, so far as the same are now subject to forfeiture by reason of the non-fulfillment of the conditions on which the grants were made, ought to be declared forfeited to the United States and restored to the public domain.

Resolved, That it is of the highest public interest that the laws touching the public lands should be so framed and administered as to ultimately secure freehold therein to the greatest number of citizens; and to that end all laws facilitating speculation in the public lands or authorizing or permitting the entry or purchase thereof in large bodies ought to be repealed, and all of the public lands adapted to agriculture (subject to bounty grants and those in aid of education) ought to be reserved for the benefit of actual and *bona fide* settlers, and disposed of under the provisions of the homestead laws only.

Resolved, That the Committee on the Public Lands is hereby instructed to report to the House bills to carry into effect the views expressed in the foregoing resolutions; that said committee shall be authorized to report such bills at any time, subject only to revenue and appropriation bills, and the same shall in like order be entitled to consideration.

Mr. HOLMAN. I had the honor to submit these resolutions to the House. That last resolution was the foundation of the present rule of the House, which has existed ever since the Forty-eighth Congress, which gives to the Committee on the Public Lands an exclusive jurisdiction of these forfeitures and full opportunity for making its reports and having them considered by the House.

Mr. CUTCHEON. Will the gentleman yield for a question?

Mr. HOLMAN. Certainly.

Mr. CUTCHEON. Will the gentleman be pleased to state what was the vote of the House in the negative?

Mr. HOLMAN. Yes, sir; it was 17 on a yea-and nay vote.

After the adoption of these resolutions, and during the Forty-eighth, Forty-ninth, and Fiftieth Congresses, the House, under the control of the Democratic party, Senate Republican, Congress declared forfeited the following grants:

Congressional action on land-grant-forfeiture bills.

Name of railroad.	Congress.	Acres.
Oregon Central	Forty-eighth	810,880
Texas Pacific	do	18,500,000
Iron Mountain of Missouri	do	300,000
Atlantic and Pacific	Forty-ninth	23,871,360
Tuscaloosa and Mobile		7,000,000
Mobile and New Orleans		
Elyton and Beard's Bluff		
Memphis and Charleston		
Savannah and Albany		
New Orleans and State Line		
Iron Mountain of Arkansas		
Marquette, Houghton and Ontonagon	Fiftieth	294,400
Ontonagon and Brûlé River	do	211,200
Total		50,987,840

It must be admitted, however, that not one of these forfeitures was obtained where even a shadow of claim could be or was asserted by any corporation without humiliating concessions being made to the Senate by the House.

But, Mr. Chairman, I have mentioned that the grant to the Texas and Pacific Railroad Company expired on the 4th of July, 1882. It was a grant of 18,500,000 acres of land. When the grant expired there had not been a spadeful of earth thrown in the construction of the road. Of course there was no pretense but that it was subject to forfeiture. The majority of the Judiciary Committee of the Forty-seventh Congress consented by their report, submitted to the House by Hon. THOMAS B. REED, its chairman, to the forfeiture, simply because the time had expired and nothing had been done, and nothing was intended to be done for private enterprise without subsidy had constructed a railroad through that grant.

I desire now to call the attention of gentlemen to the report of the minority of that Judiciary Committee in relation to that forfeiture. I wish to say before it is read that that report is signed by every one of the minority of the committee (except Mr. Converse, of Ohio) and by Judge PAYSON. It is well known that an abler body of lawyers have never made a report to this House in our time than the gentlemen whose names are signed to that minority report. I ask that it may be read.

The Clerk read as follows:

VIEWS OF THE MINORITY.

While concurring in the recommendations, the undersigned are unwilling to be committed, even by the remotest implication, to the doctrine that the United States might be deprived of its right to enforce a forfeiture of the lands granted to this or any other railroad company for breach of the conditions upon which such grant was made, simply because Congress may have reserved the power "to adopt such measures as it may deem necessary and proper to secure the speedy completion of the road" in aid of which the lands were granted, and because the company, notwithstanding the breach, may be proceeding with its work.

The undersigned are aware that it is substantially so argued in the report of the committee in the case of the Northern Pacific Railroad, as they are unable to perceive any difference in the legal effect of the language upon which the conclusion was made to hinge in that instance and that employed in the seventeenth section of the act granting lands to the Texas Pacific Company; but they dissented from the doctrine then, and dissent from it now.

Nothing could be better settled or more universally conceded than that the grantor of an estate upon conditions subsequent may, unless his right be expressly waived or lost by his own laches, re-enter upon a breach of any condition upon which the estate may depend, and that upon such re-entry the estate of the grantor becomes void *ab initio*, the person who re-enters being seized of his original estate in the same manner as if he had never conveyed it away; and it is equally as well settled that laches are never to be imputed to the Government. Both of these principles were recently asserted by this committee with great clearness and force in the case of the Ontonagon and Brûlé land grant.

If, therefore, the Government, as grantor, has the right, without regard to the lapse of time to reinvest itself of such an estate for a breach of any of the conditions upon which it had previously granted it, it is impossible to see how it can be deprived of the power to do so simply because it has reserved to itself the right to do something in addition to the exercise of the mere right of forfeiture. A question as to the policy of insisting upon such forfeiture is one thing; the naked legal right to enforce it is quite another.

The undersigned, therefore, can not assent to any reasoning or intimation in the report tending to establish the proposition that the right of absolute forfeiture does not exist either in this grant or that to the Northern Pacific Railroad Company in case of a breach of any condition upon which such grant was made.

J. PROCTOR KNOTT.
L. E. PAYSON.
R. W. TOWNSEND.
VAN H. MANNING.
D. B. CULBERSON.
N. J. HAMMOND.

The report of the minority is a manly protest against the view of the majority as to the powers and duty of Congress. And yet the Forty-seventh Congress did not even forfeit that Texas and Pacific grant. That was done by the Forty-eighth Congress.

THE NORTHERN PACIFIC GRANT.

Now, Mr. Chairman, in regard to the Northern Pacific Railroad, I wish to read some extracts from the minority report, and see whether, assuming that the ground taken by these eminent lawyers was correct as to the power of Congress, it was policy upon the part of Congress to declare that forfeiture. In this report the following statement is made:

The entire road when completed, 2,700 miles, will have cost about $75,000,000, or at the rate of $28,000 per mile. (See report of the Secretary of the Interior, 1875, vol. 2, page 575.)

Further on, after discussing the various statements as to the cost, the report states as follows:

The undersigned suppose that all that could be asked of the Government in the exercise of the most prodigal generosity would be a sufficient amount of lands to enable the company to construct its road without costing it a single dollar of its own money, and as either of the foregoing hypotheses shows a surplus of many millions more than are necessary for that purpose, it has occurred to them that it might be to the interest of the people of the United States generally to look somewhat after that surplus, whatever it may be.

Now, what is the true state of facts in regard to that railroad? I discuss the subject from this standpoint, that it is the Northern Pacific that is especially urging this forfeiture to the extent proposed by the Senate bill and also by the substitute reported by the gentleman from Illinois from the House Committee on the Public Lands—that is, land "where no railroad has up to this time been constructed."

Now, let us see the transactions under this grant. I hold in my hand the report of the Commissioner of the land-grant railroads for 1882, and this statement is made in regard to the Northern Pacific land grant:

The company reports having sold lands up to June 30, 1882, for an amount aggregating $13,108,835.28, of which sales $1,426,461.87 were made during the year ending June 30, 1882. It is estimated that their land will aggregate 42,000,000 acres; 746,509.52 acres have been patented to date. The company claims to have earned up to June 30, 1882, 12,234,848 acres.

Twelve million two hundred and thirty-four thousand eight hundred and forty-eight acres earned up to June 30, 1882; thus was then the extent of the claim of that corporation as to lands then earned; so if the forfeiture had been made in that first session of the Forty-seventh Congress, and only to the extent of land "then unearned," there would have been restored to the people 29,765,152 acres with no possible ground of complaint on the part of this corporation, for the time for the completion of its railroad had expired more than two years before, and this, too, assuming that the grant of land to this corporation was only 42,000,000 acres.

But one step further. In the report made to Congress by the Commissioner of Railroads in 1883 the following statement is made:

The maximum price per acre (exclusive of town lots) has been $30 and the minimum $2.60.

Now, what is the report for the last year? I hold in my hand the report from the same office for the year 1889.

The average price per acre for all lands to date is $3.89, the maximum price being $15 and the minimum price $1.

Mr. PAYSON. That was for the sales of that year?

Mr. HOLMAN. No, sir; the average price for all sales.

Mr. PAYSON. But the maximum price.

Mr. HOLMAN. The average price for all sales made is $3.89; the maximum being $15, and the minimum price $1.

Mr. CLUNIE. And the other was $30.

Mr. HOLMAN. Yes; in 1883, the official report of the same office, having charge of these land-grant railroads, states that the maximum price was $30 and the minimum $2.60. From the last report we are informed that the maximum price was $15, and the minimum price $1. Can you be surprised, gentlemen, that such discrepancies should occur? Can your Government grant to a corporation such an enormous estate in lands as 42,000,000 acres, involving in values hundreds of millions of dollars, dependent for adjustment on your departments without that state of things occurring?

Read these reports, gentlemen. Most of you, I presume, have read them. You can not have failed to be impressed with the fact that while the Secretary of the Interior and Commissioner of your General Land Office are now and have been in the past honorable public officers, whose integrity no one would question, yet they must act through a multitude of subordinates in the adjustment of these enormous grants and they will be fortunate indeed if the influences of the officers of these corporations are not felt in their great divisions in the adjustment of these accounts. Above all, these gentlemen in high positions should see to it if they would hope for any degree of integrity in these great transactions that their subordinates stand aloof from the courtesies of these corporations.

I quote the entire paragraphs from the three reports. And first, as to the amount of land this Northern Pacific Railroad corporation claimed it had earned under the law up to June 30, 1882, more than two years after the time fixed by law for the completion of its railroad had expired.

[From the report of the Commissioner of Railroads for the year ending June 30, 1882, page 42.]

LANDS.

The company was chartered by act of Congress approved July 2, 1864, and received a grant of land of twenty sections to the mile within the States and forty sections per mile within the Territories.

It is estimated that this grant will aggregate 42,000,000 acres of land; 746,509.52

acres have been patented to date. The company claims to have earned to June 30, 1882, 12,234,848.24 acres. No patents have been issued by the United States to the company since November 4, 1875, except one, April 8, 1880, for 3,016 acres in Washington Territory.

The company reports having sold lands up to June 30, 1882, for an amount aggregating $13,108,835.28, of which sales $1,426,461.87 were made during the year ending June 30, 1882. During the past year, up to November 1, 1882, the President of the United States has appointed commissioners to examine for acceptance by the Government 625 miles of road, 300 miles on the western and 325 miles on the eastern divisions, reports of which have been returned to the Secretary of the Interior.

[From the report of the Commissioner of Railroads for the year ending June 30, 1883, page 49.]

The company has disposed of 4,539,743.11 acres to June 30, 1883, for the sum of $15,593,156.20. The maximum price per acre (exclusive of town lots) received has been $30, and the minimum $2.60. The maximum now asked is $20 and the minimum $2.60 per acre. The average price per acre received from all sales during the year ending June 30, 1883, was $4.02.

[From the report of the Commissioner of Railroads for the year 1889, page 56.]

The number of acres of land received by this company from the Government to June 30, 1889, was as follows: By patent, 1,031,031.78; by certificate, 20,196,262.16, making a total of 21,227,293.94 acres, of which 7,107,864.86 have been sold. From these sales the company has received $24,820,509.97, and there are outstanding on account of time sales $5,119,147.44.

The average price per acre for all sales to date is $3.89, the maximum price being $15 and the minimum price $1.

I have set forth the statements of these three reports of the United States Commissioner of Railroads as to this Northern Pacific land grant specifically, so that no doubt may exist as to the facts.

By the report for 1882 it is shown that up to June 30, 1882, this company claimed to have earned 12,234,848.24 acres.

By the report for 1883 it is shown that the maximum price per acre for which it sold its land (exclusive of town lots) had "been $30, and the minimum $2.60," and that the "maximum now asked is $20 and the minimum $2.60 per acre," the average price per acre during the year being "$4.02."

By the report for 1889 it is shown that "the average price per acre for all sales to date is $3.89," the maximum price being $15 and the minimum price $1. All these are official reports of an officer of the United States with ample salary.

Now, assuming that the grant to the Northern Pacific corporation was 42,000,000 acres (I will show later that the grant greatly exceeds that amount), and as it is shown by the official report I have quoted that "the company [the Northern Pacific Railway Company] claim to have earned to June 30, 1882, 12,234,848.24 acres," it clearly appears that on the 6th day of June, 1882, when Hon. THOMAS B. REED, then chairman of the Committee on the Judiciary, now Speaker of the House, reported against the forfeiture of the grant to that corporation on the ground that "the United States did not want back its lands," although the time expressly prescribed by law for the completion of the whole railway had expired more than two years before, if at that time, June 6, 1882, the forfeiture had been declared, as is now proposed to be done as to the now remaining fragment, 29,765,152 acres, a territory as large as Ohio and over 4,000,000 acres more would have been restored to the public domain. Now you propose, at the dictation of that corporation, to declare the forfeiture of the remnant of the grant which that corporation does not want and freely surrenders with the view to the actual confirmation of all the rest.

So it appears that "the United States did not want back its lands from the Northern Pacific," 29,765,152 acres which Congress clearly had the right to forfeit on the 6th day of June, 1882, but Congress is now eager to get back the 2,000,000 acres of land the corporation does not want. Is the corporation the absolute master?

Now, how do our accounts stand with this Northern Pacific Railway corporation? The Auditor of Railroad Accounts, through the Secretary of the Interior, reported to Congress on the 26th day of January, 1881, as follows:

Total road to be constructed, 1,865 miles, at an estimated average cost of $26,868 per mile, amounting to $50,110,000. The entire road when completed, 2,700 miles, will have cost about $75,000,000, or at the rate of $28,000 per mile. (Page 575, volume 10, Executive Documents, first session, Forty-seventh Congress.)

Now, it appears from the last report of the Commissioner of Rialroads, for the year 1889, which I have already quoted, that—

The number of acres of land received by this company from the Government to June 30, 1889, was as follows: By patent, 1,031,031.78; by certificate, 20,196,262.16; making a total of 21,227,293.94 acres, of which 7,107,864.86 have been sold. From these sales the company has received $24,820,509.97, and there are outstanding on account of time sales $5,119,147.44. The average price per acre for all sales to date is $3.89, the maximum price being $15 and the minimum price $1.

So the account stands as follows:

21,227,293 acres of land, at $3.89 per acre	$82,574,169.77
Cost of the 2,700 miles of railroad	75,000,000.00
Balance	7,574,169.77

So that the land already "patented and certified" to this corporation exceeds the cost of the railroad by the sum of $7,574,169.77. And yet you see, gentlemen, that the grant embraces 20,772,707 acres more, making the 42,000,000 acres.

So that the account would stand thus:

Value of lands already patented and certified in excess of the cost of the railroad	$7,574,169.77
20,772,707 acres remaining, at $3.89 per acre	80,805,830.23
Total	88,380,000.00

So, gentlemen, it is proposed by the pending Senate bill to confirm to this corporation public lands exceeding in value the cost of their railroad to the extent of the enormous sum of $88,380,000, getting back 2,000,000 acres. This 2,000,000 acres at the same price, $3.89 per acre, amounts to the sum of $7,780,000, leaving after you declare the forfeiture of this fragment which this corporation wishes to relinquish, as a railroad was long since constructed through it by private enterprise from Wallula to Portland, the excess in the value of land granted to this corporation over the cost of the railroad is $80,600,000. Eighty million six hundred thousand dollars! I should state that as a matter of fact this railroad is 2,450 miles long instead of 2,700. So it will at once appear that the value of this subsidy is greatly beyond the sum I have named.

But this statement does not fairly present the magnitude of the grant. I have assumed, as will be remembered, that it embraced 42,000,000 acres. The Auditor of Railroad Accounts, in the annual report of the Secretary of the Interior for the year ending June 30, 1882, states the grant at 57,920,000 acres, and further states as follows:

The latest estimate of land which the company may obtain is as follows (and setting forth a table of distances fixing the amount), 42,500,000. (Report of the Secretary of the Interior, page 574, volume 10, first session Forty-seventh Congress.)

I make this statement to show that I do not overestimate the enormous grant of land this corporation will ultimately receive if the pending measure shall become a law; yet, who shall say that it will not receive more than 42,500,000 acres under this grant of 57,920,000 acres, when under any administration of your land system its own agents will adjust its land grant?

The especial infamy of such a system of Government grants is that it creates a power that intrudes into your departments, legislative, executive, and judicial, and decides the contests in which it may be involved. Thousands upon thousands of families have already been driven from their homesteads on which they had expended years of labor, and thousands upon thousands more will be in the adjustment of this North Pacific land-grant corporation as well as all others of these land-grant corporations, families who had settled upon the lands years before the grants were made and families who had settled on them when all men understood that the lands had been forfeited will be driven from their homes.

The administration of these land grants in their adjustment has already been a shame and dishonor to our civilization. Old men, soldiers of the Union Army, who had secured homes in the West under your beneficent homestead law, or thought they had, have walked through the corridors of this Capitol for days and weeks with weary feet, some of them with patents issued under the great seal of the United States for their homesteads, seeking to catch the ear of some member of Congress to aid them in their hopeless struggle with some one of these powerful land-grant corporations, which had driven them from the lands they had made fruitful by their labor; but their appeal was vain. Only a forfeiture by Congress of these grants, in fact forfeited, could save their homes, and this Congress, or at least your Senate, has persistently denied—the bills passed by the House in the Forty-eighth, Forty-ninth, and Fiftieth Congresses, declaring these forfeitures, were imperiously rejected by the Senate. During these Congresses of course the House was Democratic, the Senate Republican.

These railroad land grants have involved this Government in measures of injustice to its own people of which a despotism would be ashamed. Think, gentlemen, of a citizen of the United States being evicted from his farm, held by him under a patent from the President of the United States, by a railroad corporation, because Congress would not declare, as it rightfully could, the forfeiture of the land! Why can we not declare these forfeitures of lands not earned in conformity with law, and protect from poverty and wretchedness multitudes of settlers, their wives and children, who in good faith have settled on these lands in pursuance of the universal belief that as the time for the completion of the railroad had expired and no railroad constructed, the lands were open to settlers under the homestead law?

But, gentlemen, I ask your attention especially to this fact: Your General Land Office took it for granted in former years that when the time for the completion of a land-grant railroad expired the lands where no railroad was constructed were restored to the public domain without any action of Congress, and hundreds of thousands of acres of such lands were entered under the homestead and pre-emption laws by actual settlers, as I have mentioned. Homestead and pre-emption entries were made of lands in the Gulf and Ship Island grant, the Mobile and Girard grant, the Des Moines River grant, and in a multitude of other instances, to the extent of hundreds of thousands of acres. Then the Supreme Court decided that, notwithstanding the fact that the corporations had failed to complete the railroads within the time prescribed by law, the title still remained in the corporation until Congress declared the grant forfeited. Your sense of justice has already compelled you to appropriate a large sum of money to pay $3.50 per acre to the settlers on the Denver and St. Jo grant to whom patents had been issued, their cultivated farms inuring to the benefit of that corporation as a free gift. Your sense of justice will compel you to pay millions of dollars to the men who entered lands under the homestead and pre-emption laws within the limits of these grants, unless you declare the forfeiture

which justice and common honesty demand. These settlers must, if you refuse to declare the forfeiture, either buy their lands from the corporation or be turned out of possession. And still you will never do justice to these settlers. You will perhaps allow them $5 per acre, yet there are hundreds of thousands of acres of these lands held under patents with the great seal of the nation affixed, highly improved, and worth from $25 to $50 per acre as has heretofore been shown to Congress. And such is the result of your land "subsidy" policy, high-handed and infamous injustice on the one hand, to the honest settler on your public lands and a plundering of the public Treasury on the other, and all this for the benefit of corporations whose wealth is mostly owned by the capitalists of Europe, and whose default for years in the fulfillment of their contracts more than justifies you in declaring their grants forfeited.

Gentlemen, consider the fact that our people have universally entertained the belief, a natural and reasonable belief, that when the time fixed by law for the completion of these railroads expired the lands became a part of the public domain and open for settlement, a belief universally entertained by members of Congress, Senate and House, until the extraordinary opinion was rendered by the Supreme Court that notwithstanding the default of the corporations to comply with their contracts the title to the lands remained in the corporations until Congress declared the forfeiture.

Will you, gentlemen, for the purpose of enlarging the enormous wealth you have already granted to these corporations, confirm their grants to the extent of railroads completed up to this time when you know that this act of yours, of palpable injustice, as I think, will turn out of their homes many thousand—twenty-five thousand would be a moderate estimate—of honest settlers, their wives and children, who have settled on these lands after the time when by law the railroad was required to be completed, and under the natural belief that the land was subject to settlement? Will you do this, gentlemen? The equity and right is with these settlers. Will you in the interest and for the benefit of the corporations turn them out of their homes?

You can not overlook the fact that time was made the very essence of all of these grants, infamous as they were; that was in fact the only redeeming feature; the only excuse for the grants was "the opening up of the country," yet the Northern Pacific corporation, and all of the rest affected by the present effort to forfeit their lands, did nothing until the advancing settlement and labor of multitudes of people enormously increased the value of the lands. The Northern Pacific grant made July 2, 1864, required the completion of the railroad on July 2, 1876, and yet work on the railroad was not even commenced until July 2, 1870. The time was extended until July 2, 1879, and only a fragment of the road constructed when the time expired, and other railroads under private enterprise without subsidy were in process of construction westward from St. Paul, Minn., and constructed eastward 214 miles from Portland, Oregon, to Wallula.

If the Northern Pacific grant had never been made, it is reasonably certain that private enterprise would have constructed a railroad from Portland, Oregon, to Duluth, Minn., before the Northern Pacific reached Wallula. This corporation waited until private enterprise had invaded that whole region of country, instead of "opening up the country," and now proposes, with the aid of Congress, to rob multitudes of bona fide settlers of their lands who, after the time for the completion of that road had expired, settled on the lands where no railroad had even been commenced. And Congress is now called upon by this Northern Pacific corporation to consummate this act of injustice. Gentlemen, will you yield to a demand so manifestly unjust? Will you give to this corporation, all of whose members are American and foreign capitalists, not only that great railroad of 2,450 miles in length, an imperial possession which will drain into foreign coffers millions of dollars from our country annually, but give them in addition lands which should have been the free homes of your people of the value of $80,000,000, and in addition to that for their benefit turn out of their homes tens of thousands of your people who in good faith have settled on these lands and made homes since the time fixed by law for the completion of these railroads expired?

But I have greatly underestimated this imperial grant to the Northern Pacific. The official reports show that the corporation had disposed up to January 30, 1882, of 7,107,864 acres of its grant for $29,939,657.41, "coal and timber lands being reserved until the country is occupied," and they are reserved still, and every sale of the land of this corporation is coupled with this condition, embodied in the deed of conveyance, that all "coal and minerals are reserved, with the right of the company and its assigns to enter the land and mine the same."

What do you say to this, gentlemen? It is known that 5,000,000 acres of the grant of this corporation in Montana alone is mineral land of great value. Five million acres! This corporation's grant included "coal lands and iron mines," but not other "mineral lands." Gentlemen, will you not by passing this bill in effect and finally confirm the claim of the Northern Pacific to the millions of acres of "mineral lands," of inestimable value, now known to be within their grant in Montana and Idaho? You known the patents will be issued when you pass this bill. You can see how "thrifty" this European corporation is in the management of your imperial gift! Of course the "coal and timber" lands would not be sold until the teeming population of the country and their labor added immensely to their value. The "mineral lands" will be opened up when you confirm the grant! Who, gentlemen, can estimate the value of this enormous gift? It will be a source of magnificent revenue to these English lords and German barons and European capitalists, at the expense of the farmers of Minnesota, North Dakota, Montana, Idaho, and Washington and all the people of our country, for generations to come!

And such is the result of your system of land subsidies. The Cascade branch of the Northern Pacific railroad, a portion for which it will receive the largest subsidy per mile, was not completed until twenty-one years after the grant was made and six years after the time when by law the railroad was required to be completed, and all this time the company was in the way of private enterprise which was eager to construct a railroad through that region of country.

I have more than once asserted on this floor that not one of these grants to corporations was passed through Congress by fair and honorable legislation. Can any man explain by what methods the Northern Pacific corporation prevented the forfeiture of its grant through successive years and until it completed its Cascade branch?

The Northern Pacific has the greatest interest at stake. So, sir, it naturally occurs that that powerful corporation, not only during this Congress, but during the last session of the last Congress, has peremptorily demanded the passage of this Senate bill, so that this great grant (a grant of land without a precedent in the history of the world) should be confirmed to these European gentlemen who have become in the natural course of things the possessors of your lavish gift. Of course these lordly possessors will sell the land, but at prices beyond the reach of your landless people. Yes, sir, European capitalists are now the owners of the imperial wealth of lands which by the laws of God and nature belong to our people and their children. You have stamped the accursed brand of monopoly on these fertile fields and placed them forever beyond the reach of laboring men.

If that country had been settled up according to the natural course of events, just as the country east of the Mississippi River was mainly settled, as the States bordering on the western shores of the Mississippi River were mainly settled, by men and their wives and children seeking homes, by homesteaders, these railroads would have been built, in the natural order of things, and the lands would have been settled upon by our people seeking homes, by our hopeful and enterprising sons and daughters of the older sections of the Union, already overflowing with population, and in the natural order of things in the early future every quarter-section of those lands would have been a happy and prosperous home.

But considering the effect of passing this bill as to the Northern Pacific alone, can you, gentlemen, consent to confirm to this corporation the 20,772,707 acres of land not yet certified or patented which you have exactly the same right to declare forfeited as the 2,000,000 you propose to forfeit by this bill? I press that question on you, gentlemen.

The absolute absence of equity in the claim of this corporation to these lands, and the careful attention which that powerful body of men most interested in the land question, the farmers of the United States, is giving to these abuses in the management of public affairs, naturally awakens the anxiety of these corporations and they are demanding that by prompt action of Congress their grants shall be confirmed and their patents issued, and they willingly surrender the fragments if Congress will only confirm the great body of their grants—fragments to which, as all men can see, they have not the shadow of claim.

I think the House, notwithstanding the assumption of the Senate, a body far less responsible to the people than the House, should hesitate long before it yields to the demand of a corporation for beneficial legislation when that corporation has a record only for dishonorable defaults. Must we yield to these corporations all they demand? Have these land-grant corporations, these favorites of your progressive policy, already grown greater than Congress?

[Here the hammer fell.]

Mr. PAYSON. I ask unanimous consent that the gentleman from Indiana be allowed to proceed without limit.

There was no objection.

Mr. HOLMAN. I am very much obliged to the gentleman from Illinois and the committee for this courtesy. It is claimed that public benefits were secured by these grants.

Let us see how the "art of definition" interposes between the legislative purpose of Congress and the claims of these corporations. The old grants to Illinois which went under the legislation of that State to the Illinois Central Railroad Company (but not the subsequent grants to corporations, for they were for the benefit of the corporations), all contained the following provision:

> And the said railroad shall be and remain a public highway for the use of the Government of the United States, free from toll or other charge upon the transportation of any property or troops of the United States.

Of course every member of Congress understood that that railroad company, in consideration of the grant of land made to the State of Illinois and assigned to that company, was "to transport the property and troops of the United States free of charge."

The debates in Congress show that conclusively. I had heard

that that corporation denied the correctness of that interpretation, and introduced in the Thirty-sixth Congress a resolution calling upon the Judiciary Committee, an unusually able committee, to report on that subject. That committee unanimously reported to the House that the reservation to the United States by that clause clearly meant, and was so understood by Congress at the time the grant was made, that the Illinois Central Railroad Company and all the others receiving grants on that condition "were to transport the property and troops of the United States free of charge." But soon after the Supreme Court decided that "the only right reserved by Congress under that clause to the United States was the right to use the track of that railroad" with its own locomotives and cars, but if the railroad company "transported the property and troops of the United States it was entitled to two-thirds of the compensation for such transportation as it charged private parties for similar transportation. The Government during the late war and since has paid millions upon millions of dollars to this Illinois Central Railroad Company and other land-grant railroad companies for the transportation of its "property and troops," and is so paying up to this day. Every year we pay many millions of dollars to these corporations, notwithstanding the fact that these railroads were in fact the gift of the United States to them. These corporations, which received direct grants of land, charge the United States for transportation at their own will.

But the trouble with the Senate is not so much with reference to the question of power as with regard to the expediency of this legislation. And I wish to call attention to the language used by the majority of the House conferees on the bill declaring the forfeiture of these grants to the extent I proposed at the last session in making their final report to the House of the disagreement between the two Houses. Before the Clerk reads I will remind gentlemen that the proposition to refer the question of these forfeitures to the Supreme Court, as is now proposed by my friend from Missouri [Mr. STONE], was submitted to the Senate conferees and was promptly rejected by the Senate conferees.

If you declare the forfeiture of all these grants, as I propose, as to all lands through which the railroads were not completed when the time expired for the completion of the whole of the respective roads, then the question would come before the Supreme Court of the United States in such a form that the people would have some show. You would then have declared, as this House has declared over and over again, that the whole forfeiture to the extent I have named should be made. The question would then stand before the Supreme Court of the United States supported by the decision of the department of Government which made the grants and declared the conditions. If, however, you hold that your forfeiture should only extend to lands conterminous with the portions of roads "not now completed," the chances are overwhelming that the Supreme Court would accept as final the decision of Congress.

I now ask the Clerk to read from the conference report to which I have referred, made on this issue at the last session of Congress. Judge PAYSON was one of the House conferees, but made, as will be seen, a separate report.

The Clerk read as follows:

The conferees on the part of the House have submitted to the Senate conferees several propositions. Among others they proposed that the question of the right and power and the extent of the power of Congress to declare the forfeiture of these lands should be referred to the Supreme Court of the United States with original jurisdiction, the cause to be advanced on the Calendar on account of its special importance; also the proposition that the bill should be confined to the minor grants where complications have arisen growing out of the patenting of a portion of the lands within the grants at the time when the grants were treated as forfeited, leaving the great grants, involving the larger portion of the lands, open to a further future consideration.

These propositions were declined by the Senate conferees, who were not willing to modify in any degree the basis on which they proposed to declare the forfeiture; that is to say, except as to cases where the railroad corporations were making no claim whatever. So that the issue between the two Houses remains without any modification whatever. The railroad corporations do not resist, as far as the House conferees are informed, the proposition of the Senate—it does not come in conflict with their interest—but they do persistently oppose the proposition of the House. The majority of the conferees of the House earnestly recommend and insist that the House do not recede from the position it has heretofore occupied.

They insist that high public policy and justice to the people demand that these grants of public lands long since forfeited in fact shall be declared forfeited by law, and we indulge the belief that at an early day the force of public opinion will secure that result.

WM. S. HOLMAN.
W. J. STONE.

I do not concur in the reasoning in the foregoing statement. The first section of the Senate bill, if adopted, will declare forfeited all lands that are clearly and confessedly liable to forfeiture, and at the same time preserve absolutely to the United States every right that it now has to declare other and further forfeitures if Congress shall desire. Not a single right of the Government is waived; not one. All rights are carefully preserved by section 10. We save from all future claim by the railroads every acre of land as to which there is a clear right of forfeiture, leaving disputed lands to further legislation. Should the bill fail, further construction of the railroads would confessedly embarrass, if not entirely lose us the title of lands which can now be saved without yielding any principle by the House.

L. E. PAYSON.

THE LAND THAT SHOULD BE DECLARED FORFEITED.

Mr. HOLMAN. Now, Mr. Chairman, I will at the proper time submit the following provision as a substitute for the first paragraph of the amendment in the nature of a substitute of the gentleman from Illinois [Mr. PAYSON].

The Clerk read as follows:

Strike out the first section of the substitute and insert:

"That all lands heretofore granted by Congress to any State or to any corporation to aid in the construction of a railroad or a railroad and telegraph line opposite to and conterminous with the portion of any such railroad not constructed and completed within the time specified in the act making the grant for the construction and completion of the whole of such railroad are hereby declared forfeited to the United States, and the United States resumes title thereto, and all such lands so granted lying opposite to and conterminous with the portion of any such railroad not constructed and completed within the time prescribed by the act of Congress making such grant for the construction and completion of the whole railroad as provided for by such act, is hereby restored to the public domain and declared to be a portion thereof: *Provided, however*, That the forfeiture hereby declared shall not extend to the right of way of any such railroad through the remainder of the route, including the necessary grounds for depots, or to lands included in any village, town, or city within the limits of the lands hereby declared forfeited.

"All such lands so restored to the public domain shall be disposed of under the provisions of the homestead law only. But all bona fide settlers on any such lands shall be entitled to priority of right in entering the land occupied by them, and shall be allowed a credit for the time of such bona fide occupation: *Provided further*, That the titles of bona fide purchasers of any such lands whose titles were acquired prior to the 1st day of January, A. D. 1888, from any such State or corporation to whom any such grant of lands was made lying conterminous with a then completed portion of any such railroad, shall not be impaired by this declaration of forfeiture."

This amendment if adopted will forfeit 53,741,596 acres. The following is the statement furnished by the Commissioner of the General Land Office to the House Committee on Public Lands in the Fiftieth Congress as to the effect of the two propositions, namely, the one declaring the forfeiture of all land where *no* railroad has been constructed up to this time, the other all lands not earned by the corporations within the time prescribed by law. The Senate bill of the last Congress was the same as the present Senate bill, and Judge PAYSON'S amendment is the same as the Senate bill as to the extent of forfeiture. My amendment is the same as the House bill of last Congress. Mr. STONE, of Missouri, and Mr. MCRAE, of Arkansas, had an amendment pending proposing to forfeit the entire grant when the railroad had not been completed in conformity with law, so this statement of the Commissioner of the General Land Office was prepared so as to show the effect of each of these three propositions on the land grants named.

Statement of the Commissioner of the General Land Office, Hon. S. M. Stockslager.

Name of railroad.	Estimated number of acres which will be forfeited—		
	By Senate bill.	By House bill Fiftieth Congress.	In event of forfeiture of entire grant.
Gulf and Ship Island	652, 800	652, 800	652, 800
Coosa and Tennessee	140, 160	140, 160	140, 160
Coosa and Chattooga	144, 000	144, 000	144, 000

* Lands certified to State for this road prior to May 23, 1872, amounting to 440,709.16 acres, were confirmed to State by act of that date (17 Stat. L., 159), for sole use and benefit of the Selma, Rome and Dalton Railroad Company. The lands so confirmed may not be subject to forfeiture.

But after that statement was prepared by the Commissioner of the General Land Office, during last Congress (Fiftieth Congress) we passed a bill forfeiting the grants to the State of Michigan, that is, the Marquette, Houghton and Ontonagon grants and the Ontonagon and Brûlé River grants, which will be seen amount in the aggregate to 505,600 acres under the Senate bill and 582,400 acres under the then House bill, and these lands must of course be deducted in determining the effects of the pending measures. With these amounts deducted the effect of the two propositions is as follows:

Amount of land forfeited by the Senate bill is 5,121,836 acres; by my amendment, 53,741,596; a difference of 48,619,760. But as this forfeiture is against the railroad corporations only, lands heretofore sold by these corporations conterminous with portions of the railroads heretofore completed, and purchased in good faith, are excepted from the forfeiture. This concession, I think, ought to be made in behalf of bona fide purchasers opposite completed railroads. This

relieves the subject from all embarrassment and makes the question of forfeiture simply a matter between the United States and the corporations and does not affect any considerable amount of land.

THE INDEMNITY LIMITS.

But permit me to suggest the further fact in favor of these forfeitures that many thousands of settlers on what is known as the "indemnity limits" of these grants have, to their utter ruin, found these corporations claiming their improved farms under some indefinite claim of "deficiency of land in place," and in this way thousands and tens of thousands of bona fide settlers now find, after years of labor, the titles to their homes valueless. How can they resist the claim of these powerful corporations with their horde of attorneys in this Capitol with close relations to your General Land Office?

Surely these corporations could not have the effrontery to complain of a forfeiture of all the lands which they had not earned in conformity with law "within the time prescribed by law." Time was of the essence of all these grants. The spirit and letter of every grant ever made was that if the corporation failed to construct its railroad within the time prescribed in the grant the lands should revert to the United States, and shall the settlers within the indemnity limit, 40 miles or more from the site of railroad, and who settled there after the time for the completion of the had expired and no railroad constructed, be left to the mercy of the corporation?

Gentlemen can hardly have forgotten that only a few years ago, when the main line of the Northern Pacific Railroad was completed to Wallula, a horde of European noblemen and capitalists came to this country as the guests of that corporation to see the last spike (a golden spike, I believe) driven. These gentlemen were the owners and the European representatives of the owners of this great landed possession Congress graciously gave away to an infamous monopoly. And will you by confirming this grant drive out your own laboring people who settled in good faith on those lands long after the time fixed by law for the completion of the road had expired and where no railroad had been constructed, and do it for the benefit of the nobility and capitalists of Europe? Without injustice you can declare the forfeiture of these lands and protect your people. Your failing to do so will be an act of injustice to these settlers, and an act of national dishonor.

It will be seen by this table of the Commissioner of the General Land Office that 1,075,200 acres of the 5,121,836 acres forfeited by the Senate bill is in the Southern Pacific grant.

Mr. PAYSON. But, if my friend will permit me to interrupt him, he is in error in supposing that to be a portion of the land belonging to the Southern Pacific road which this bill will forfeit. If the gentleman will permit me——

Mr. HOLMAN. Certainly.

Mr. PAYSON. The road that is unconstructed of the Southern Pacific, and to which reference is made in the bill, is between Tres Pinos and Huron in Central California.

Mr. HOLMAN. Yes, I understand; but this land is in the eastern and southern section of California.

Mr. PAYSON. No; it is north of the Mohave Junction; north of the desert.

Mr. HOLMAN. Yes; but it is in the eastern and southern section of the State.

Mr. PAYSON. But they are trying to earn it, for 20 miles of the road have been constructed during the past year, as I am informed. I have no personal knowledge, but from information I believe that to be true. The gentlemen from California can set me right if I am in error. But they have constructed, as I am informed, 20 miles, and that between Tres Pinos and Huron, which is not included in my computation at all.

Mr. HOLMAN. What is not included?

Mr. PAYSON. The land lying opposite the road already constructed.

Mr. HOLMAN. We have no official information on the subject. If they have constructed 20 miles, then this Senate bill will reach that much less land. But we have no official information on the subject. The land you would reach under the Senate bill would be of very little consequence in any respect. There is 2,000,000 acres on the west end of the Northern Pacific from Wallula to Portland that you would forfeit, that is the body of your forfeiture, but large tracts of the land have been actually sold by the Northern Pacific corporation between these points, where it does not even propose to construct its railroad, and this bill confirms each sale to the extent of 320 acres on the purchasers paying $1.25 an acre. It is not the money, but land, our people want.

Mr. HERMANN. Yes, sir; but about 3,000,000 acres.

Mr. HOLMAN. It is stated to be 2,000,000 acres by the Commissioner of the General Land Office.

Mr. PICKLER. What does your proposition embrace?

Mr. HOLMAN. It embraces a total of 53,741,596 acres. The difference between the two propositions is 48,619,760 acres, a body of land more than twice as large as the State of Indiana and nearly twice as large as the State of Ohio.

My friend from Missouri [Mr. STONE] criticises Judge PAYSON for the inconsistency of his record.

But on the contrary I honor Judge PAYSON for the stand he heretofore occupied in relation to these grants, with unfaltering fidelity demanding these forfeitures. I know how hard it is, Mr. Chairman, for any gentleman to pursue a course in Congress against the current of opinion of his political associates, for it is a fact well understood, both in the Senate and the House, that the political friends of Judge PAYSON have generally disapproved of his position in regard to these land-grant forfeitures. I honor him for the position he has heretofore and for many years occupied on this question, although I regret exceedingly that he has reached the conclusion that he ought to acquiesce in the views generally entertained on this subject by his political friends.

I wish most sincerely that he could still see his way clear to adhere to that former position, so honorable to himself and promising such benefits to the people. I regret that he did not continue to insist that the House should stand where it has stood for the last eight years, demanding this measure of justice; and if any wrong resulted to the people, let the responsibility rest where it properly belonged—on that branch of Congress which, in the interest of corporations, has refused to concur in legislation which public policy and common justice alike demand.

THE SENATE.

It must be borne in mind that whatever may be said in regard to what party is responsible for these grants this final action determines the question. Of course the party which made these grants, the party which favors "bounties" and "subsidies" through which a portion of our people become rich, consigning to poverty multitudes of their fellow-citizens, would hardly abandon a policy on which it is in fact founded.

Mr. PAYSON. If my good friend from Indiana will permit me to interrupt him just there.

Mr. HOLMAN. Certainly.

Mr. PAYSON. It would be unbecoming in me, Mr. Chairman, if I did not express my sincere gratitude to my friend from Indiana for the kindly remarks which he has made in reference to myself in regard to the position that I have assumed and maintained in respect to land-grant forfeitures during the past years. But in view of what my friend has said in regard to the responsibility for legislation on this subject, I would like him now to say, as a member of this legislative body, what reason he has for believing, if any, that the position of the United States Senate to-day upon this question will be any different from what it has been during all of the years that this contest has been pending.

The gentleman knows as well as I do the position that has been assumed by the Senate, and I believe—if the gentleman will permit me to occupy his time for the moment—that the only bill which by any possibility can receive the approval of the other body of the National Assembly is the bill which I have had the honor to report from the Committee on the Public Lands. Now, if my friend from Indiana does not agree with me in that regard, I would be exceedingly glad to have it stated before the Committee of the Whole House on the state of the Union what reason he has to suppose that the Senate would now modify its views. I do not know of any, and I submit that the gentleman from Indiana will agree with me on reflection.

Mr. HOLMAN. I still adhere to the view as expressed by the majority of the House conferees in the last session of Congress, that in the present state of these grants the Senate only agreeing to forfeit unimportant fragments which the corporations do not want, no serious public injury would result from delay, and that it may be reasonably hoped public opinion will eventually compel the Senate to respect the just demands of the people rather than the demands of the corporations which are unjustly appropriating the public wealth.

But shall the House, the immediate representatives of the people, quietly submit to the domination of the Senate? Are we here only to record the edicts of that body? Let them take the responsibility of refusing to forfeit these grants, and let the people decide. I cherish the hope of seeing the day when that body will be elected as the members of this House are—by the people. I want to see that body responsible to the people of this country so that the public voice can be heard in our legislation. Sooner or later the Senate, if this republican form of government is to be maintained, will be made responsible to the people. As it is the great corporate powers hold this Government by the throat, and exercise a power in legislation greater than that of the people!

Mr. HERMANN. To that we all say amen.

Mr. HOLMAN. I hope that the aroused sentiment of our people in relation to these public lands which has been in a state of suspense for years will have a beneficial effect upon the Senate of the United States. My friend may not have noticed as carefully as I have the public opinion all along the line of the organizations of the farmers, the great power in this Republic, on this subject. They are feeling the effect of your class legislation. They understand very well that amongst the many evils that have grown out of this railroad land-grant system has been the artificial settlement of great agricultural districts of our country; that the Northern Pacific corporation alone, while it was disposing of this wealth you so lavishly gave away was through the capitalists who were obtaining the benefit of this wealth bringing over thousands and hundreds of thousands of foreigners to settle upon their lands to make them valuable and add by their industry to the profits of the railroads—these very lands you gave away on the monstrous theory of public benefit, enriching the

few for the benefit of the many—old-time feudalism of the monarchies!

I do not object to honest immigration. We have invited that from the beginning, but I do object to great grants of public lands to corporations for the purpose of colonization—a system which has wrought, together with your tariff policy, irreparable injury to the farmers of this country. These farmers demand the forfeiture of these lands not earned in conformity with the law. This demand is distinctly and emphatically made by them. I know that the Senate does not yield and never has yielded cheerfully to public sentiment when the interests of corporations were at stake.

John Quincy Adams, in 1842, when a member of this House, said this (I quote from the Congressional Globe):

> There was another branch, however, of the legislative department of the Government, which was not democratic. He alluded to the Senate, and pronounced its members to be representatives of corporations. It was known that the democracy here were not fond of corporations. The Senate of the United States was necessarily and essentially an aristocratic body in its feelings; and he hoped the balance would fall in favor of the House of Representatives.

If John Quincy Adams, forty-eight years ago, could charge that the Senate of the United States was a sheltering place for corporations and an aristocratic body, it would seem to be at least parliamentary and safe for a member of this House now, when the fact is still more manifest, to follow so illustrious an example.

THE DISCREDITABLE ATTITUDE OF THE HOUSE.

I regret that the House will stand in relation to this great measure in an attitude of absolute humiliation. Will there be any honorable pride felt in voting for this Senate bill? Gentlemen who have supported the measures of forfeiture heretofore declared by the House felt proud of their votes. They were voting justly for the people and against corporate greed; but in voting for this bill, gentlemen, you can feel no such pride.

The Northern Pacific Railroad corporation has kept in this Hall of the House of Representatives, yes, on this floor, as its representative for years, a former member of the House who voted for the bill making this grant in 1864. He has been urging on members this forfeiture as declared by the Senate bill, as far as it affected the Northern Pacific road, for more than two years. I speak of this lobby agent of that corporation because most of you know him and know the fact of his agency. Other agents of land-grant railroads swarm your lobby.

Is it a pleasant thing, gentlemen, to vote for a measure that gives away to corporations millions of acres of land which in law and justice belongs to the people, and that too at the dictation of the corporations themselves?

Does my friend from Illinois feel any satisfaction in the policies of these corporations in their relations to our Government? He has seen a high public official in your great Land Office, an officer fearless and incorruptible, standing up against the unjust and imperious demands of these corporations for more lands than the law gave them, driven out of office; if possible, dishonored. At whose dictation was this done? He has seen one of the most accomplished and best informed, one of the most truthful and efficient of all the clerks of that great office, dishonorably dismissed at the dictation of these land-grant corporations. What administration will resist the demands of these land-grant corporations in the adjustment of their claims on your public domain if Congress has not manhood enough to lay its hands upon them and determine their exact rights under the wretched laws under which they assert their claims?

Yes, gentlemen, General Sparks, an able and incorruptible public officer, and Mr. La Barns, an accomplished, truthful clerk, were unquestionably removed from your great Land Office because they stood between the people and these land-grant corporations, insisting on the impartial execution of the laws.

The gentleman from Illinois manfully resisted the arbitrary acts by which those two public officials were removed from office. I honor him for that, but the humiliating fact remains that this House of Representatives, which has declared on every occasion when it had an opportunity in the last eight years that Congress has the power and that it is its duty to declare these forfeitures, is now willing to accept the wretched and humiliating proposition of the agent of the Northern Pacific Railroad corporation to forfeit the fragment of its lands to the end that its more than 40,000,000 acres might be secure.

Mr. CANNON. I would like to ask my friend a question, as I have not been present during the discussion, being busy, and not being aware as to his position—if he is going to vote for the present bill? The present bill, I understand, forfeits the unearned land grants.

Mr. HOLMAN. I have endeavored to explain my position.

Mr. CANNON. But I did not have the good fortune to hear the gentleman.

Mr. HOLMAN. I have been standing by the position where the House has stood and the people have stood, where your constituents have stood, demanding the forfeiture of every acre of this land that Congress has the power to declare forfeited, and that embraces 53,741,596 acres. The question is, Shall we accept the proposition of these corporations, as proposed in this bill, and confirm their grants except the fragment they do not want? Shall we do that?

Mr. CANNON. I did not say how I shall vote; but I want to know the position of my friend, as he is on the Committee on Public Lands. Suppose his amendment is not adopted, will he still vote for this bill?

Mr. HOLMAN. Whether I shall vote for the Senate bill or not will depend largely upon the state of the measure when the vote is taken and whether or not the House will give a fair consideration to the amendment which I hope to have the honor to submit, and which the House has sustained over and over again in former years.

Mr. CANNON. If we should vote for the forfeiture of the unearned land grants, can my friend tell me how many million acres of land would have been saved to this Government if a bill containing a similiar provision had been passed four years ago?

Mr. HOLMAN. Eight years ago we would have saved on the Northern Pacific some 36,000,000 of acres, and have saved altogether perhaps 60,000,000 or 65,000,000.

Mr. CANNON. And if it should have been passed four years ago?

Mr. HOLMAN. Four years ago, with one or two very small portions of roads since completed, the lands to be forfeited on the principle of the Senate bill would be about the same then as now; there has been little change during the last four years. The proposition to declare a forfeiture of all lands conterminous with the uncompleted roads when the time for their completion expired would embrace the same amount of land now as it would have embraced four years ago. There has been no material change in four years.

Mr. CANNON. But failing to forfeit the unearned grants, and insisting upon larger forfeitures which we have not succeeded in passing, have we not heretofore, in the last four or eight years, pursued that policy that these land-grant railroads could have wished us to pursue if they could have carried it out?

Mr. HOLMAN. The Northern Pacific Railroad corporation especially was opposed to any forfeiture whatever and resisted any forfeiture during the whole of the Forty-seventh Congress. It was opposed to any forfeiture until it completed the Cascade branch of its road from the main line to Tacoma. As soon as that was completed, three or four years ago, it changed its position and now urges the forfeiture of its grant from Wallula to Portland, as that would virtually confirm the body of its grant. All that you would have gained by passing a bill four years ago instead of now, if lands "now unearned" alone are to be forfeited, would be the portion of the then uncompleted Cascade branch, comparatively a few acres. But in any view who is responsibe? When the Republican party under Keifer controlled the House in the Forty-seventh Congress the House refused even a vote on any forfeiture whatever. In the Forty-eighth, Forty-ninth, and Fiftieth Congress, under the Democrats, bills were promptly passed declaring the forfeiture of all lands not earned by these corporations in conformity with law, and the Senate refused to pass them, except as to land about which there was no dispute. Who is responsible; what party is responsible for this delay?

Mr. PAYSON. There were over 3,000,000 acres in that one piece.

Mr. HOLMAN. Oh, no; a portion of that Cascade branch, a material portion of it, both east and west of the mountain, was constructed before 1885. I passed over it in August, 1885. Little would have been gained over the present forfeiture by the forfeiture four years ago, so that the case would stand thus: If the Forty-seventh Congress had declared a forfeiture even on the basis of this Senate bill, over 55,000,000 acres would have been forfeited.

Of course we shall be told that there is a clause in this bill providing that it shall not be construed as waiving any further right to forfeit these land grants. If you intend to forfeit any more of these lands you must do it now, because you are notified by the Land Office that they will recognize the grants as confirmed except to the extent to which you declare their forfeiture, and will proceed to close the accounts and issue the patents.

Mr. COBB. Will the gentleman permit me to ask him a question before he sits down?

Mr. HOLMAN. Yes, sir.

Mr. COBB. Do I understand you to assert that as matter of law the passage of this bill would confirm to the railroads the lands that are in dispute?

Mr. HOLMAN. I ought not to answer that question either affirmatively or negatively at once. The case stands thus: Your Land Office has been in a state of suspense for years as to the issue of these patents, being apprehensive that Congress might ultimately declare a forfeiture of the lands. There has been suspense and hesitation on the part of the Land Office. When Congress shall have exercised the power of declaring a forfeiture of these lands to whatever extent it may be, it is well known—the gentleman from Illinois [Mr. PAYSON] has no doubt been informed as I have been—that then the Department of the Interior will understand that Congress expects the patents to issue for the remaining lands, and of course nobody hopes to set aside any of these patents after they are once issued. These patents, it is well-known, will secure to these corporations the "mineral lands." This perhaps is one reason why these corporations are pressing this bill.

Mr. COBB. Now I understand the position which the gentleman from Indiana takes to-day is that this is a question peculiarly for the Congress of the United States and not for the courts.

Mr. HOLMAN. It is more a question of public policy than it is a question of judicial interpretation. There is a clear reservation of the power to declare a forfeiture. When the sovereign legislative power which made the grants has declared the violation of the contracts by these corporations and by law has declared the land for-

feited, I do not believe the Supreme Court would assume the responsibility of denying the validity of the act.

The Supreme Court up to this time has simply said that inasmuch as the language of all the acts making these grants is "There is hereby granted," etc., the title of the land at once vested in the corporations, subject to the condition-subsequent that upon the failure of the corporation to complete their railroads within the time prescribed by the law the land should revert to the United States. The Supreme Court has held only this, nothing more. It has never gone one step beyond that position—that these grants vested at the time the acts were passed in the corporations, and can only be divested by act of Congress, the power that created them, on their failure to fulfill the conditions on which the grants were made; that is all there is in the decision in the case of Schulenberg *vs.* Harriman (21 Wall., 44), so often quoted, or in any decision since pronounced.

All I ask is that Congress shall declare forfeited all grants of lands to the extent that railroads were not constructed in conformity with law.

Mr. MCADOO. If the railroad companies have got a good legal title to the lands not earned in the time mentioned in the grant, why in the name of common sense have they employed the best legal railway talent in the United States to deluge this Congress with the legal question, when they are so certain in their own minds and so emphatic in their statements that the Supreme Court will confirm their grants?

Mr. COBB. Will the gentleman allow me one word further?

Mr. HOLMAN. Certainly.

Mr. COBB. I only wanted to say that I am in favor of forfeiting every acre of land that we can forfeit by this legislation. I do not want to be misunderstood; I am willing to go back and forfeit every acre of land the railroad companies claim to have earned since the date named in the act for the final completion of the road.

Mr. HOLMAN. That is what I am demanding.

Mr. COBB. That is what I am for.

Mr. PICKLER. Are any of the railroad companies objecting to the bill as proposed?

Mr. HOLMAN. Of course not; it is their bill. Why, they are here lobbying for it!

POSITION OF THE DEMOCRATS ON THE QUESTION.

It has been asserted that these land grants were acquiesced in by all parties, and that Congress acquiesced in the delay of these corporators in fulfilling their contracts; that therefore it would be inequitable to declare these forfeitures. This claim is utterly unfounded. While these grants were being made they met with the persistent yet fruitless opposition of the Democratic members of the House, and ever since the conditions on which the great grants were made were broken by these corporations bills have been pending in the House and have passed the House in every Congress since the Forty-seventh Congress down to the present session declaring the forfeiture of these grants to the full extent I am now demanding.

More than twenty years ago, in the midst of this carnival of land grants, when one of the bills was pending making a grant in Oregon, I expressed the views of the Democratic members of the House in the protest I then made against this policy, when I said:

I protest against this monopoly of the public lands in the name of every laboring man in America. I protest against it in the name of every laboring man who comes with his wife and children to our shores, fleeing from the curse of land monopoly in the Old World to rest under the shelter of equal laws in the New. I protest against this policy in the name of the shadowy future, the generations that are crowding upon us, for whom your policy will ripen like the fruit upon the Dead Sea, giving them a land teeming with wealth—wealth and corrupting luxury for the few; for the great multitude poverty and wretchedness; the melancholy lesson of history again repeated. I know that your policy will increase the wealth of this country. If it were not so these lobbyists would not be here. You will increase the aggregate of the wealth of the nation, but it will be the wealth which builds palaces and fills the whole land with the sigh of labor struggling for relief. The true wealth of a nation and its only glory is a virtuous, prosperous, and contented people, not great landed estates.

I prot st against this policy because it is at war with every just idea of republican government. It strikes a subtle and fatal blow at the just equality of our people; it is the appropriating to the few the wealth that belongs to a whole people; it is robbing the laboring man of his rightful heritage; it closes upon him the door to a career of honorable ambition; it will exclude multitudes from the pursuit of agriculture, of all employments the one most honorable in a free government where the plow is in the hands of its owner.

I protest against it, sir, if I may do so without irreverence, in the name of the common Father of us all, whose justice, benevolence, and mercy are outraged by granting to men who do not labor these fertile lands, this bountiful gift of His providence, and robbing the laboring man of the virgin fields which would have yielded to his free and hopeful labor the best fruits of the earth. I protest against it in the name of humanity, which it outrages by an unjust discrimination, and of the right of man to labor and enjoy the fruits of his labor without dividing with the crafty or being robbed under the color of an unnatural law. I protest against this the most hateful of the aristocratic policies of the effete monarchies, favoritism in government, oppressing multitudes for the benefit of the few. I protest against it in the name of the whole people, who demand from their Government equal and exact justice for all.

But the position of the two great parties on this subject is more clearly seen by the following facts. On the 18th day of January, 1869, while the land-grant legislation was going on, I submitted this resolution to the House:

Resolved, That grants of the public lands to corporations ought to be discontinued, and the whole of such lands ought to be held as a sacred trust to secure homesteads to actual settlers and to no other purpose whatever.

Mr. H. D. Washburn moved that it be laid on the table, and that motion prevailed, ayes 110, noes 55, a strict party vote, except that Elihu B. Washburn and Mr. Baker, of Illinois, Republicans, voted with the Democrats in the negative. Of the gentlemen now in public life WILLIAM B. ALLISON, CHARLES O'NEILL, Green B. Raum, and William Windom voted in the affirmative, all then and now distinguished members of the Republican party.

These un-American grants, this refusal of Congress to declare a reasonable and just forfeiture, this action of House, Senate, and Executive in confirming to these corporations their titles to these ill-gotten possessions, by the passage of this bill, if it shall pass and become a law, will, sooner or later, arouse the indignation and fury of the American people. There is not in all the history of the world a record more infamous than this system of land grants to railroad corporations. This final act of Congress in confirming these grants after the default of these corporations, when just ground for forfeiture exists, when common honesty and justice demand their forfeiture, will be execrated by multitudes of men, women, and children who will be in the early future deprived of even the hope of homes by this lavish and wicked favoritism to the rich and the powerful! The good St.-Pierre well said, "servitude and wretchedness, in the natural order of Divine Providence, are the penalty imposed on a people who permit a favored class to monopolize their lands."

THE UNION PACIFIC GRANT.

I have not gone into the details of these grants; I have made no mention of the Union Pacific railroads for the reason that the railroads of that system were constructed within the time prescribed by law, and because there was in 1862, when that grant was made, apparently a political necessity for a railroad to the Pacific Ocean. We were in the midst of the war for the Union and a measure that would more closely unite the States of the Pacific coast with those of the Atlantic was manifestly prudent and wise, but even then in the beginning you gave to a few gentlemen your bonds for $64,623,512, drawing 6 per cent., a sum sufficient to have constructed the railroads, and gave them in addition by the act of 1864 the right to issue their bonds with prior lien to yours for the same amount and 28,000,000 acres of land besides. This prodigal gift was naturally followed by the enormous fraud known as the Crédit Mobilier, by which the Government lost millions of dollars and public men in and out of Congress were covered with infamy and went to their graves dishonored. The final result is that the Union Pacific railroads now owe you the $64,623,512 of principal and $62,433,898.34 of interest this Government has paid on those bonds, in all $124,549,376.32, not a dollar of which has been repaid, and now threaten you that they will go into insolvency and defraud you of the whole sum unless you give them fifty years at 2 per cent. in which to pay it. This, of course, is a natural result of "subsidy," even where there is apparently a public advantage to be gained.

THE RICH MADE RICHER.

The Secretary of the Interior, in his report dated November 1, 1882, the last report I can find on the subject, says (page 10, Report of the Secretary of the Interior for 1882):

Six hundred and eight and ninety-six one-hundredths miles of road were reported as constructed under the land-grant system during the year, making 16,239.10 miles of land-grant railroad constructed in all the States and Territories up to the close of the fiscal year.

Sixteen thousand two hundred and thirty-nine miles of land-grant railroads! A magnificent gift to a few gentlemen, with millions of acres of land left "until the country is more fully settled and the lands more valuable." Your grants created the system. And yet gentlemen pretend to deplore the enormous centralization of wealth going on in this country! Did you expect any other result when you gave a few gentlemen lands equal to nine average States of this Union?

THE RESULT OF THESE SUBSIDIES.

Now, sir, what are the results of all this? Some of the results are even now very manifest. In a single generation you have substantially disposed of the lands of your public domain adapted to cultivation, on which a laboring man with moderate means could establish a home. Your public domain held by the nation through all former years, and until the Republican party came into power, as the reserved wealth of the nation for homes for landless and laboring men, is no more. Twenty-eight years ago, when the homestead law was enacted, that public domain was a living promise to labor and a guaranty against the oppression of capital for many generations to come. That golden promise, under your policy, has turned into ashes. The tens of thousands of men who with their wives and children lingered for weary months last year and for years before on the boarders of the Indian Territory, hoping to obtain homes in Oklahoma, attest the fact.

You are already despoiling the remnants of the once powerful Indian tribes of the reservations you guarantied to them by solemn treaty, to obtain lands on which your landless people may settle. You are paying from your Treasury millions of dollars annually for the lands you are thus acquiring, and instead of free homesteads, you have already inaugurated the policy of charging the settler $1.25 an acre for the land to reimburse the Treasury the amount you are paying the Indian tribes. But within five years this source of supply of lands for settlement will be exhausted. Of course there are hundreds of millions of acres of land unsettled and unoccupied between the States west of the Mississippi and the Pacific coast, but they are mainly lands unfit for cultivation without costly irrigation, and for that reason beyond the reach of

laboring men, or they are held by land-grant railroad corporations or by capitalists in great landed estates.

But again, all the great Pacific land grants—the Northern Pacific, the Union Pacific, the Atlantic and Pacific, the Southern Pacific, and all their great land-grant tributaries—were so located as to embrace the most fertile and valuable lands of the great regions of country through which they pass. If you will follow the marvelous meanderings of these railroads, especially the Northern Pacific, you will see how the great plains, fertile valleys, and valuable rivers of the West have been monopolized by these corporations.

If you will consider, gentlemen, great swaths, from 60 to 120 miles in width, stretching westward thousands of miles, with no restrictions as to meandering from a direct course, with every fertile region in view, you will see, with four great Pacific grants, to say nothing of the others, how the valuable lands of the West have passed into the ownership of these corporations if this bill to confirm the land grants shall become a law. But beyond this, taking advantage of the opportunity presented, capitalists of Europe and America, under the facilities offered by the pre-emption law which this House for many years has been seeking to repeal, long before our people could ordinarily arrange their affairs to seek homes in those remote regions, have monopolized millions of acres of these lands, not only the even sections which the United States reserved in these grants, but far beyond.

You may in portions of those regions of country travel, as I have done, for weary days through virgin lands without seeing a human habitation, yet every acre had the curse of monopoly upon it, not an acre left for the homestead settler. Of course, these railroads opened up the country, but in the natural order of things they opened up the country in the main to an accursed monopoly, not to free homes for our people. I will illustrate this by a statement I laid before the House some years ago, a very partial and incomplete statement of the holding of lands exclusively in the public-land States and Territories by foreign corporations and capitalists.

The list is as follows:

	Acres.
The Holland Land Company, New Mexico	4,500,000
Sir Edward Reid and syndicate, in Florida	2,000,000
English syndicate, in Mississippi	1,800,000
Marquis of Tweesdale	1,750,000
German syndicate	1,100,000
Phillips, Marshal & Co., London	1,300,000
Anglo-American syndicate, Mr. Rogers, president, London	750,000
Byron H. Evans, of London, in Mississippi	700,000
Duke of Sutherland	425,000
British Land Company, in Kansas	320,000
William Whalley, M. P., Peterboro, England	310,000
Missouri Land Company, Edinburgh, Scotland	300,000
Robert Tennant, of London	230,000
Dundee Land Company, Scotland	247,000
Lord Dunmore	120,000
Benjamin Newgas, Liverpool, England	100,000
Lord Houghton, in Florida	60,000
Lord Dunraven, in Colorado	60,000
English Land Company, in Florida	50,000
English Land Company, in Arkansas	30,000
Albert Peel, M. P. Leicestershire, England	10,000
Sir I. L. Kay, Yorkshire, England	5,000
Alexander Grant, of London, in Kansas	35,000
English syndicate, in Wisconsin (Clore Bros., agents)	110,000
Scotch syndicate, in Florida	500,000
A. Boysen, Danish consul, in Milwaukee	50,000
Missouri Land Company, of Edinburgh, Scotland	165,000
Sir William Heckley, of England, in California	125,000
Total	17,172,000

This is a very incomplete statement, but it illustrates the effect of such a system, for, as I have stated, the Northern Pacific, and most of the land-grant corporations became at an early day foreign corporations so far as ownership was concerned and invited foreign capitalists to the fertile fields of the West for speculation. But what is this 17,172,000 acres in comparison with the landed possessions of foreign capitalists, who, in the name of your land-grant corporations, hold more than a hundred million acres of your lands?

All men must see that irreparable injuries to our system of government will grow out of these grants which the early future will make too manifest. It is clear that if that magnificent region of country had been settled by the natural advance of our people westward, as all other sections of our Union had been settled, railroads and all else following in the natural order of things, there would have been lands for our people under the homestead law for generations to come. Could any appropriation of the public lands for the rapid development of wealth justify a departure from that old-established policy of our Government?

Our free institutions can not exist unless the great body of our people are freeholders, the independent masters of their own homes. Yet this land-grant railroad policy and the opportunity it has furnished for the acquisition of great landed estates by capitalists of Europe and America, which places them beyond the reach of laboring men, have doomed hundreds of millions of acres of your most fertile lands to the curse of monopoly. No rapid development, no rapid increase of wealth that centralizes into great estates, will compensate for this.

But the fatal effect of this system of giving away the public lands to railroad corporations is most clearly apparent in the condition of agriculture in all the States east of the Mississippi, and, to some extent, States west of that great river. All men understand that that greatest of our industries is very seriously depressed. At no time in the history of our country have our people engaged in agriculture been so completely discouraged. Of all our industries it is the least prosperous. It is and has been for years on an actual decline. Lands east of the Mississippi clear on to the Atlantic have enormously shrunk in value in the last fifteen years, and more during the last ten years than formerly. I think it is safe to estimate this shrinking in value at 40 per cent. in fifteen years.

This is appalling. It is obvious that one cause for this is found in the extraordinary policy of Congress in making these enormous gifts of public lands to railroad corporations. It is said that "a corporation has no soul to be damned," and, of course, no interest in public policy, no patriotism. Who would expect the foreign capitalists who own the Northern Pacific and most of the other land-grant railroads to be interested in the prosperity of our farmers?

To make these land grants valuable these corporations have induced men to settle on their lands and the Government lands within their grants. The result has been that within the last twenty years, increasing year by year, hundreds of thousands of men have been imported into the United States by these corporations to enter the Government lands under the homestead law and buy their lands on time. I state the number cautiously at hundreds of thousands!

The Northern Pacific alone has exceeded that number. The purpose and the interest of these corporations were to bring in men from abroad to occupy the lands, farmers, not mechanics or skilled laborers in any other field of industry. Of course, under such a state of things agricultural production has been overdone, produce of all kinds has enormously declined in value, and that great and naturally conservative portion of our people are justly in a state of revolt against an order of things which robs them of the fruits of their labor. I trust in God that the intelligent farmers of the United States will crush out the un-American policy which now employs the public resources in building up great private estates!

I should add, however, although not within the scope of this discussion, that two other causes have aided in the unexampled depression of agriculture in this country. I have often heretofore called attention to one of them; that is, local, State, and Federal taxation. These taxes have been and are exorbitant and oppressive in all sections of the Union. The farmers of this country bear the main burden of both local, State, and tariff taxation.

There is no question about this. Capital almost entirely escapes taxation, State and Federal. It is for that reason I always have favored a reasonable income tax. You can not collect for successive years in taxes annually a sum equal to more than one-fourth of the entire volume of money in this country without ultimately exhausting the resources of our people. I have often expressed that view on this floor. Of course the farmer feels the effects of this exhaustive process of taxation before any other class of citizens, as he bears the greater burden of taxation.

The causes I have named have produced the alarming depression of agriculture in this country. Coupled with the fact that while Congress has by these land grants to corporations opened up an opportunity and created a motive for the importation into this country of hundreds of thousands of laborers from Europe to compete with our farmers, Congress has at the same time by its extreme protective policy as to other industries in a large degree closed up the markets of the world against the products of our lands.

Entertaining these views now and having entertained them for many years, I can not consent that this system of land grants to corporations should receive any favor from Congress. The whole system from the beginning was un-American, unpatriotic, selfish, mercenary, and corrupting, and I demand, and I think the public judgment demands, that every acre of land of these imperial grants made by Congress to corporations to the utmost limit that law will permit shall be reclaimed from the curse of monopoly and restored to the people!

Sundry Civil Bill.

REMARKS

OF

HON. MARCUS A. SMITH,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

July 26 and August 1, 1890.

The House, being in Committee of the Whole, and having under consideration the bill (H. R. 10884) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1891, and for other purposes—

Mr. SMITH, of Arizona, said:

Mr. CHAIRMAN: In the Fiftieth Congress I gave much time and energy in efforts to secure an appropriation for the survey of reservoir sites and the construction of reservoirs for the reclamation of the desert lands of the United States.

While that most interesting debate, elicited by the great importance of the subject, was in progress on this floor, and as I remember near the close of the discussion, a proviso, in form of amendment, was offered by my distinguished friend from Kentucky [Mr. BRECKINRIDGE] at the instance and request of Mr. Symes, then a member of this body from the State of Colorado.

I even then saw the disastrous effects to flow from an ill-advised executive construction of that proviso. I feared that too great latitude would be given under the language employed, and that a wholesale reservation of the great arid belt, comprising two-fifths of the area of the United States, from settlement of any kind would result. Subsequent developments have more than justified the opinion I then entertained. Three million of people are now clamoring for the repeal of that proviso, for they have found that Congress, under the guise of proposed irrigation of these lands, has actually withdrawn them all from settlement.

Ever since my first appearance on the floor of this House I have found it necessary daily to use some effort to prevent if I could the repeal of the desert-land act. The direct attempt to repeal it was made in the Committee on Public Lands of the last Congress. Failure met the effort, but this House passed at that session, against the protest of Western Members and Delegates, a general land act, reducing desert entries to 320 acres. What the advocates for the repeal of this wise and humane law failed to do directly they accomplished by indirection under the proviso of the act now under consideration.

Fearing that the very hardship and injustice now so loudly and earnestly denounced would flow from this measure, I protested then as I protest now against this unwise legislation. I implored the gentleman from Colorado to have the amendment withdrawn. I protested before the House and with the conference committee, but without avail. I simply state these facts, Mr. Chairman, to remind the gentleman from Kentucky [Mr. BRECKINRIDGE] that there was at least one who was not silent when this proviso was passed. In view of his assertion that the Western members all favored the measure, I deem it due to myself to record this conviction.

The sundry civil act of October 2, 1888, contains the following provisions, which are found on pages 526 and 527 of volume 25 of the laws of Congress:

For the purpose of investigating the extent to which the arid region of the United States can be redeemed by irrigation and the segregation of the irrigable lands in such arid region, and for the selection of sites for reservoirs and other hydraulic works necessary for the storage and utilization of water for irrigation and the prevention of floods and overflows, and to make the necessary maps, including the pay of employés in field and in office, the cost of all instruments, apparatus, and materials, and all other necessary expenses connected therewith, the work to be performed by the Geological Survey, under the direction of the Secretary of the Interior, the sum of $100,000, or so much thereof as may be necessary. And the Director of the Geological Survey, under the supervision of the Secretary of the Interior, shall make a report to Congress on the first Monday in December of each year, showing in detail how the said money has been expended, the amount used for actual survey and engineer work in the field in locating sites for reservoirs, and an itemized account of the expenditures under this appropriation. And all the lands which may thereafter be designated or selected by such United States surveys for sites for reservoirs, ditches, or canals for irrigation purposes and all the lands made susceptible of irrigation by such reservoirs, ditches, or canals are from this time henceforth hereby reserved from sale as the property of the United States, and shall not be subject after the passage of this act to entry, settlement, or occupation until further provided by law.

Now, Mr. Chairman, it appears to me that under a liberal and proper construction of the terms of that act no objection could be successfully urged against it. But the decision of the Secretary of the Interior, based, as I understand, on the advice of the Attorney-General, goes far beyond the obvious intent of the law and the purpose actuating the members of this House in passing the bill. The difficulty is largely in the survey as shown by the map now before me. The arid land, or what is presumed to be the arid land, is here designated.

There is no pretense that all this vast domain has been surveyed, yet every inch of it has been reserved from settlement because, perchance, in the dim distance of future years some reservoir might be constructed which might be able to reclaim the entry.

The further difficulty is that no actual survey as far as I know, and certainly as far as this map discloses, has ever been made of actual reservoir sites, and the lands which could reasonably be reclaimed under them. The survey contemplated was an actual survey, not a wild general guess at long distance.

An actual survey would consist of several elements. The place for the reservoir, the amount of water it could be made to hold, the amount of land it would reclaim, the marking of the land by proper monuments and description, are each necessary to the survey contemplated by the act. If such surveys were made, and the site and the designated land reserved, there would have arisen little if any objection to this measure. Persons settling on such reserved land would do so at their peril. If loss followed, he who committed the trespass would have himself alone to blame.

Mr. Chairman, every day of my life I am becoming more impressed with the necessity of the knowledge of facts before legislation is attempted. A law might be very good for Oregon and very bad for Arizona, for the conditions are different. Wise legislation must, as far as practicable, yield itself to the conditions and circumstances of the different localities. Now, I venture the assertion that there are millions of acres of land in Arizona which can never be reclaimed by any reservoir that the vast wealth of our public Treasury could build.

Then, where is the sense in reserving such lands from the occupancy of any one who wants them? There are in that region vast valleys bound in by rock-ribbed mountains with no living stream to gladden and fructify the dormant power of its idle soil, with no water anywhere save occasional percolations from the mountainsides, and yet, under the construction given this law, all such lands are henceforth reserved. I might well have said henceforth and forever reserved.

We know that in a similar country "Jacob digged him a well" and lived. But under this act Jacob would now be deprived this pleasure in the Mojave Desert of free America. You have made the establishment of a home an impossibility. For if the industrious, enterprising pioneer goes into the dry sands and digs him a well, erects pumps, secures water, produces profitable products that can not be raised elsewhere in this country, he is met by a "ruling" on the act of October 2, 1888, and though 100 miles from any stream, the fruits of his labor, like the apples of the Dead Sea, turn to ashes in his hands.

Did that act ever design such absurd effect? Certainly not. The real spirit of the act would never touch him harshly or any such as he. Yet we find that he is knocked out by construction. The people of the West are opposed to this law. As evidence of the intelligent opinion of my constituents on this subject, I will, with the indulgence of the House, read for its consideration resolutions adopted by a mass meeting of the citizens of Pima County, Arizona, on the 17th of June last. The resolutions are as follows:

ARID LANDS OF ARIZONA.

At a mass meeting of the citizens of Pima County, held at the city hall in the city of Tucson on the 17th day of June, 1890, John A. Black was called to the chair and George I. Roskruge was appointed secretary. A committee which was appointed to draught resolutions reported the following, which were unanimously adopted:

"Whereas the Attorney-General has construed a clause of the provisions of the act of October 2, 1888, entitled "An act making appropriations for sundry civil expenses, etc.," under the head of 'Appropriations for the United States Geological Survey,' with reference to the designation or selection of sites for reservoirs, ditches, and canals for irrigation purposes; that thereby all lands capable of cultivation by irrigation are reserved from sale, and hence not open to entry under the desert-land act, homestead, pre-emption, or other acts; and

"Whereas that construction stops all settlement and reclamation of such lands and strikes a fatal blow to our prosperity, and leaves the Territory of Arizona in its natural unsettled desert condition, barring all inducements to investment; and

"Whereas many entries have been made in good faith since that act, and tens of thousands of dollars spent in the reclamation of lands and the construction of canals and ditches which is lost if this construction prevails: Therefore,

"*Resolved*, That we demand the immediate repeal of that provision of the law, or that Arizona be excepted from its provision. That we ask no Government aid, simply that the land laws, the desert and homestead acts particularly, be retained, and thereby all lands will be reclaimed that can be profitably, and all ditches, canals, and reservoirs will be built by private enterprise that would be profitable to the Government to do. We demand the repeal of this law, and then to be let alone in our struggle with the desert, as we have demonstrated that we can make the desert bloom without Government aid, if not injured by bad legislation."

The committee also recommended the adoption of the following:

"*Resolved*, That this meeting create a standing committee of fifteen, empowered to take such means as they may deem best to promote the repeal of this law."

The resolution was adopted.

On motion, a committee, consisting of Judge William H. Barnes, General Thomas F. Wilson, and Dr. F. H. Goodwin, was appointed to submit a number of names of citizens of the county to the chairman, J. A. Black, to enable him to appoint such persons as may be best qualified to carry out the objects of the meeting, and the following persons were appointed as such committee:

L. C. Hughes, William H. Barnes, Albert Steinfeldt, Thomas F. Wilson, John A. Black, F. H. Goodwin, George J. Roskruge, Ham Light, E. R. Richardson, Isaac N. Towne, J. J. Chatham, John Brickwood, James Finley, James K. Brown, and Walter L. Vail.

JOHN A. BLACK, *Chairman*.
GEORGE J. ROSKRUGE, *Secretary*.

Mr. Chairman, the names appearing on that resolution represent men of energy and the highest order of intelligence. They know what they are talking about far better than many who have addressed this House on the pending question. These are men who have had experience with the question at issue, and I commend careful consideration of what they have said.

And with equal force comes to you the following resolutions, adopted by the Phœnix Chamber of Commerce, in Maricopa County, Arizona. This chamber is composed of men of influence, wealth, and patriotism. Hear what they have to say:

PHŒNIX CHAMBER OF COMMERCE.
Phœnix, Ariz., July 9, 1890.

At the regular monthly meeting of the board of directors of the Phœnix Chamber of Commerce, held on the 9th day of July, 1890, the following resolution was unanimously adopted:

"Whereas the Attorney-General has construed a clause of the provisions of the act of October 2, 1888, entitled 'An act making appropriations for sundry civil expenses, etc.,' under the head of 'Appropriations for the United States Geological Survey,' with reference to the designation or selection of sites for reservoirs, ditches, and canals for irrigation purposes, that thereby all lands capable of cultivation by irrigation are reserved from sale, and hence not open to entry under the desert-land act, homestead, pre-emption, or other acts: Therefore,

"*Resolved*, That this organization most earnestly request that Congress take immediate action to repeal the said law, as under the decision of the Attorney-General all settlement and improvement of lands effected by this act are stopped. Numerous entries have been made in good faith since that act by bona fide settlers, and thousands of dollars spent in the reclamation of lands and the construction of canals, which will be entirely lost, bringing much hardship upon honest set-

tiers and prostrating the agricultural interests of our Territory, unless Congress repeals the law now in force."

HENRY E. KEMP, *President.*
LUTHER J. WOOD, *Secretary.*

Hon. MARK SMITH, *Washington, D. C.*

With equal indorsement of the men, and as a further evidence of the evil effect of this act, I beg to read the proceedings of a mass meeting held in the county of Yuma, Arizona, on June 24, 1890:

THE ARID LAND BILL—THE MASS MEETING.

In accordance with the following published call, a mass meeting of the citizens of Yuma County, Arizona, met at the county court-house on the evening of June 24, 1890:

"MASS MEETING.

"A mass meeting of the citizens of Yuma County is hereby called to meet at the court-house of the county, on Tuesday, the 24th day of June, 1890, for the purpose of expressing views and passing resolutions relative to existing arid land laws.

"F. S. Ingalls, chairman board of supervisors; C. V. Meeden and O. F. Townsend, members of board of supervisors; Samuel Purdy, district attorney; M. N. Nugent, sheriff; W. L. Hopkins, treasurer; Frank Avila, recorder; C. H. Brinley, probate judge; L. A. Hicks, county surveyor; J. L. Redondo, clerk of board of supervisors; J. W. Dorrington, member legislative council; Chas. Baker, ex-member of assembly, and many citizens."

The meeting was called to order by Hon. Samuel Purdy. Dr. J. H. Taggart and E. J. Trippel were elected chairman and secretary, respectively, by unanimous vote.

On motion of Mr. Purdy, seconded by Mr. Dorrington, a committee of six were appointed by the chair to draught resolutions indicative of the sense of this meeting in the matter of the obnoxious and injurious clause of the Congressional enactment of October 8, 1890, entitled "An act making appropriations for sundry civil expenses, etc., under the head of appropriations for the United States Geological Survey."

The chairman appointed upon such committee Messrs. Samuel Purdy, J. W. Dorrington, C. H. Brinley, C. E. Spencer, F. B. Wightman, and H. W. Blaisdell.

After a short recess, Mr. Purdy, as chairman, submitted the following resolutions in behalf of the committee.

"Mr. Chairman, your committee on resolutions present the following annexed hereto, and recommend their adoption.

"SAMUEL PURDY,
"*Chairman of Committee.*

"Whereas the Attorney-General has construed a clause of the provisions of the act of October 2, 1888, entitled 'An act making appropriations for sundry civil expenses,' etc., under the head of 'Appropriations for the United States Geological Survey,' with reference to the designation or selection of sites for reservoirs, ditches, and canals for irrigation purposes, that thereby all lands capable of cultivation by irrigation are reserved from sale, and hence not open to entry under the desert-land act, homestead, pre-emption, or other acts; and

"Whereas that construction stops all settlement and reclamation of such lands, and strikes a fatal blow to our prosperity, and leaves the Territory of Arizona in its natural unsettled desert state, barring all inducement to investment; and

"Whereas many entries have been made in good faith since that act, and tens of thousands of dollars spent in the reclamation of lands, and the construction of ditches and canals which is lost if this construction prevails:

"*Resolved*, That in our opinion the law of Congress of 1890 concerning arid land west of the one hundredth meridian, and withdrawing from entry all lands so classed, has proven detrimental in every direction, and embodies fatality if continued.

"It is our deliberate opinion, therefore, that said act should be repealed, for the reason that the general prosperity of this Territory will thereby be hastened; that the existing depression arising from the present uncertainty of former and future entries will be removed, and an additional inducement offered to those abroad who will be satisfied to locate here if their presence and investments are protected by a guaranty that their entries, made in good faith, will not be disturbed."

On motion, the resolutions were unanimously adopted.

On motion, it was ordered that five type-written copies be prepared at as early a date as possible, and that a copy be forwarded to the President of the Senate, the Speaker of the House of Representatives, the chairmen of the Senate and House Committees on Arid Lands, and to our Delegate in Congress. These copies shall also include the call for the meeting, the minutes of proceedings, and shall be signed by the chairman and secretary.

On motion the meeting adjourned *sine die*.

J. H. TAGGART, *Chairman.*
E. J. TRIPPEL, *Secretary.*

From these proceedings it will be observed that only one opinion prevails among the people who are on the ground confronting the difficulties of the situation with intelligent and tireless industry. There can be but one sensible opinion when we all have equal knowledge of the facts, and an equal desire to reclaim the waste places and make habitable lands which in places are as desolate as the sand dunes of Sahara.

Mr. Chairman, the people of the arid region have only just learned the effect given the act of October 2, 1888, but in the mean time hundreds of settlements have been made in good faith all through that vast domain. Of their little they have spent all, only to meet injustice in their innocent, nay, laudable ambition to secure what the bleeding heart of Burns desired, "the privilege of being independent." It is not fair to act thus by these people. You have no more right to rob them than they have to rob a mail-coach or railroad train, and to my mind there is very little difference in moral ethics between the highwayman who robs of money by force, and the legislator who by his vote deprives an innocent man of the fruits of his honest toil.

I received, a few weeks ago, a letter from a gentleman by the name of Watt, residing in Pima County, Arizona. I wish I had it here to read you a few facts from it confirmatory of the observations which I have already submitted. Going into the desert perhaps 50 or 100 miles from any stream on which he could rely for water, he at great expense of time, labor, energy, and money dug wells, erected pumps, and succeeded in reclaiming several hundred acres of land which promised full reward for his enterprise. All this was done subsequent to the act of October, 1888, and in entire ignorance of the possibility of the ruling which now prevents him from acquiring title. Is this fair? Is it honorable? Is it just? With many hundreds similarly situated, Congress will disgrace itself if it does not immediately make provision whereby all such can obtain certain and speedy relief. No argument can add force to the mere statement of such equities as these men have. I have confident hope that this Congress will not let these particular wrongs go forth unnoticed and without redress.

Mr. Chairman, I agree most heartily with the gentleman from Montana [Mr. CARTER] that this wholesale reservation, bounded by the red lines on this map, shows no survey as contemplated by law.

The act, I repeat, never designed such an absurd and tragic consummation. Every member then on this floor, except perhaps a limited few who saw and desired present results, knew that such was not the intent of the act. If it had ever entered into the mind of the majority to conceive such result the bill would never have passed. If it had even been suspected or vaguely suspicioned that this reservation was going to extend to lands that could never be reclaimed by any reservoir constructed by any human agency that act could never have passed.

I feared the result, but could find no one to join me in my apprehension. To be more accurate, I feared rather the possibility of the result. The fact is that no reservoir site in Arizona, so far as I am informed, has ever been really surveyed and marked, and the lands susceptible of reclamation marked on the ground or designated by other description. Yet 113,000 square miles in Arizona alone have been by an opinion of the Attorney-General—an ill-advised opinion—absolutely withdrawn from settlement. If that officer had given less attention to technicality, and had construed the law in the broad and liberal spirit which its very intent disclosed, the tragic results of which we now complain could never have followed.

Mr. Chairman, we are now brought to the practical solution of the question before us. What ought to be done? I am still heartily in favor of an appropriation and a liberal appropriation, for the survey and construction of reservoirs by the Government unless Congress will grant to the Territories and States the arid lands for purposes of education and internal improvement. In one or the other rests the life, prosperity, and progress of the West, and on one or the other depends the chance or power of a poor man to make a home for himself in the really arid portion of the Republic.

Permit me here to digress in order to answer as briefly as possible certain statements of the gentleman from Illinois [Mr. CANNON], chairman of the Committee on Appropriations. He complains that under our present land laws a man can take up in individual right as much as 1,200 acres. That is simply a mistake unless the party confines himself to purely desert land, on which he must file a pre-emption claim, a homestead claim, a timber-culture claim, and a desert-land claim. In a desert country he would be an idiot to attempt such a filing, for he could not comply except in most favorable localities with the timber-culture, homestead, or pre-emption laws.

It is simple idiocy in actual experience. Permit me to assure the gentleman that there is now no danger of anybody stealing much desert land in Arizona. There is no opportunity for land grabbing under the desert act unless there is a liar ready to commit perjury and water available to the wants of the land. The water sources in Arizona are already largely taken up. Irrigation must henceforth be carried on or instituted at tremendous expense. Those who are attempting to cultivate land by means of small streams, springs, or wells are absolutely prohibited from doing so.

What does anybody want with 640 acres of desert land? You who have not traveled over those wastes of sand and beheld nothing but mesquite, sage brush, and cactus for days, not a stream of water nor a cloud in the sky, speak very learnedly of the value of real estate in the Mohave Desert. Do you fear that somebody will get 1,200 acres of worthless desert land? They could have 12,000 acres of it and do themselves no good nor anybody else any harm. All this sentimental talk and poetical gush about homestead settlement on desert land is nothing more nor less than naked nonsense.

The gentleman from Illinois [Mr. CANNON] dwells with delight on that clause of the act which empowers the President to throw the lands in dispute open to homestead entry. What good does that do. Suppose he should, to-morrow, throw it all open to settlement under such law, what good would result from it? None whatever. It can not, and of course will not, be settled under the homestead law. Let us concede that the engineers have selected a certain reservoir site on a certain river or water-course, and have marked out the lands subject to reclamation under it. Let us further concede that the lands, by Executive proclamation, have been thrown open to homestead entry and have actually been entered under that law.

In what condition does the entryman find himself? What benefit has the law bestowed? How has it aided him to bring the water on the land? He is simply left in the beatified condition of a fool, unable to help himself, with no friend willing to help him. You will have to send some of your constituents there to try this experiment for mine have more sense than to undertake it.

The settler is on the desert until the water is on the land, and the poor, homeless man will never be there until the Government actually gives him a chance by constructing the reservoir at its own expense and distributing, under proper regulation, the water over the land. With the greatest personal respect for the honorable chairman of the committee [Mr. CANNON], he will, I am sure, pardon me for saying that it is simple nonsense to talk about reclaiming the desert lands of Arizona under the homestead law, independent of governmental aid. The gentleman seems to think that people are lying around Arizona only waiting a chance to steal a piece of vacant unproductive land.

Mr. CANNON. If my friend will allow me to take a minute of his time I will recompense him, because he has come to the point. There is any amount of this desert land that never can be and never will be irrigated for the want of water.

Mr. SMITH, of Arizona. Assuredly.

Mr. CANNON. So that water after all is a material thing. Now, I ask my friend if this Senate amendment is adopted if it does not in effect allow people under the four different ways of acquiring the public land to get 1,100 or 1,200 acres of reservoir site where the water originates, and thus to control the water in perpetuity?

Mr. SMITH, of Arizona. I see the point the gentleman makes. I have already answered beforehand the principal part of his question, and in response to the balance I will inform him that in Arizona every stream is already largely diverted, and vested rights exist in those using the water. These rights can not under the law be disturbed by any subsequent appropriation of the water, even though he could get 20,000 acres of land from the Government.

The irrigation of the remaining public land in Arizona will cost more per acre than an improved farm in Illinois is worth.

Mr. CANNON. But, if my friend will allow me, I know that irrigation is expensive, but it seems to me that in the fullness of time in the Western Territories and States, under apt legislation and apt grants to the States by legislation in the future, these reservoir sites will be reserved for public use in such a way that the States will have no power to alienate or dispose of the lands beyond the regulation of State sovereignty; and that by legislation of that kind, the reservoir sites will be reserved for the use of the people, rather than to allow them to be gobbled up for the use of the few. I think legislation is needed, but I do not see that this provision gives the legislation, nor do I believe that it is practicable to get the necessary legislation in this way by a rider upon this appropriation bill.

Now, I have taken two minutes of the gentleman's time, and I hope, Mr. Chairman, you will take two minutes from my time and yield it to the gentleman from Arizona.

Mr. SMITH, of Arizona. Now, Mr. Chairman, the gentleman from Illinois has again misunderstood me if he has inferred from any remark of mine that I offered any opposition to the reservation of reservoir sites from settlement, or of the land reclaimable by such reservoirs. But I do object to any such reservation of land unless the Government intends to aid by actually building the reservoirs. We have known these reservoir sites for years, but nobody seems to have taken a claim on them. I repeat that my objection to this bill is that under its provisions not one acre in the 113,000 square miles in Arizona can be acquired under any law whatever.

Mr. CANNON. If my friend will allow me right there. Is not that absolutely worthless for any agricultural purpose unless water can be placed upon it?

Mr. SMITH, of Arizona. Of course, it is. That is what I am trying to impress on the House.

Mr. CANNON. Precisely. Then what good would it do to open that land to settlement that can not be irrigated?

Mr. SMITH, of Arizona. Ah, there is the point, exactly. Nobody cares whether the land impossible of irrigation is ever open to settlement or not; for whether open or not nobody will ever try to live on it. But much of the land is capable of irrigation independent of reservoirs, and of these lands I am speaking—the only ground on which the poor man can hope to get a foothold. To these men we propose to offer a chance of which the present law deprives them by refusing to them any assurance of title. And the proposition of my friend from Illinois is equally vicious.

Mr. CANNON. If my friend will allow me. Is my friend a member of the Committee on Arid Lands or the Committee on Public Lands?

Mr. SMITH, of Arizona. I have not the honor of serving on either of those committees.

Mr. CANNON. I merely wanted to ask, if my friend had the information, how it happened that legislation apt and proper had not been presented, or reported, or considered by either of those committees.

Mr. SMITH, of Arizona. The gentleman, being of larger ability and much longer service here than I, is fully as competent as I am to answer the question he propounds, but I am free to say in response that I do not know why the Committee on Public Lands, or especially the Committee on Arid Lands—so ably presided over by my esteemed friend from California, General VANDEVER—have not long since taken more active steps in this matter. On my arrival here I straightway introduced a bill to repeal the obnoxious law now under consideration, and had the same referred to the last-named committee. Despite every effort, it still sleeps amid the noiseless records of that body. I fear the chairman of that committee and I entertain very different views on the question, and hence no favorable report on my bill has ever been made.

Now, Mr. Chairman, in the brief time remaining to me I desire to state my position on the pending measure. Under the present law all lands in the arid regions are reserved from settlement. The Senate has repealed this reservation clause together with the whole hydrographic survey item of the last sundry civil bill. Of these two evils I do not hesitate to give my support to the Senate amendment. Far better at this time to wipe the whole act from the statutes than to leave the law, as now construed, operative and binding on this great misgoverned area of our wide country.

I have used with due caution the expression "two evils," because I am convinced that neither the Senate amendment nor the present law is applicable to the conditions surrounding the people whom I have the honor to represent as Delegate on this floor. The present law is simply barbarous in the light of preceding legislation; the Senate amendment is, to say the least, inapt in the light of the natural problem confronting us. The hydrographic survey ought not to be discontinued, neither should the desert lands be reserved from desert-land entry. The proper and fair solution of the problem seems to me to be this:

The United States Government should continue the survey of the arid lands and reserve all proper reservoir sites, together with the lands to be reclaimed thereby, such reservation to take effect only on completion of the survey, and the lands reserved to be so marked and designated that the settler can make no mistake. Furthermore, the present law so far as it affects bona fide settlement on desert land subsequent to October 2, 1888, must be repealed. The title of such settlers must be protected unless Congress desires solemnly to record an unjustifiable outrage on innocent people.

Mr. Chairman, this is a serious question to the people who sent me here. They have commissioned me to protest against the wholesale reservation of the public land as well as against the threatened repeal of the desert-land act. You, in common with them, are interested in this legislation. Every school district and every voting precinct in the United States are, knowingly or unknowingly, likewise deeply interested. Our public land is, or should be, dedicated to the public good. The public can in this respect be no better served than by making the desert, the useless, waste, unprofitable desert, the fertile fields and happy homes of prosperous, patriotic people.

This can be accomplished by no mere hydrographic survey, neither can it obtain under the law as it now exists. Therefore the law as regards reservation of desert land should be repealed, and the Government should reclaim the lands by actual construction of reservoirs, or else refuse to contribute another cent to the survey. Of what value is the survey of reservoir sites if all ends there? With emphasis I repeat, of what earthly value can this survey be if the land remains reserved from settlement and the Government refuses to carry out the design of the survey, to wit, the construction of the reservoirs?

Under existing law a further prosecution of such survey is a criminal waste of public money. Under proper law there could possibly be no more humane, patriotic, and justifiable expenditure. But I have so often pressed these views on the House that I must refrain amplifying them at this time. But permit me, in conclusion, to beseech you with solemn earnestness to take no rash step in this important matter. The part of wisdom is to repeal so much of the act of October 2, 1888, as reserves from settlement the arid lands, and to confirm the title of all those who in good faith made settlement or honest claim thereon after said date.

Make liberal appropriation for survey of water-power for purposes of agriculture, with the understanding that Congress will actually build the necessary dams and ditches in order that the poor may have equal chances with the rich in the fruits of such expenditure, and nothing but good can result to the whole of our great country. Furthermore, I earnestly implore you to let the desert-land act remain as it is.

[Here the hammer fell.]

Friday, August 1, 1890.

Mr. SMITH, of Arizona. Mr. Chairman, I always feel safer in any position assumed by me on questions touching our public-land policy when I find myself in harmony with the distinguished gentleman from Illinois [Mr. PAYSON]. In this amendment proposed by him, as on many other occasions, he has shown that practical knowledge of conditions which is so much needed on this floor. I have been accorded the advantage of many conversations with the gentleman on the question now in hand, and I am constrained to give my full assent to his amendment, modified as I shall hereafter suggest.

I have always contended, and still contend, that the desert-land act must remain unmolested if rapid development of the West be desired. I had myself prepared an amendment to the measure now

before us, the purpose of which was to accomplish just what the Payson amendment proposes, except that the desert-land act was to remain unchanged by my amendment. On that particular question only do we seriously differ now. His amendment reduces desert entry to 320 acres, repeals the reservation clause in the act of October 2, 1888, and preserves all bona fide claims made subsequent to said date. To all this (save the objection already stated) I give my most cordial support and unqualified approval. In fact, to this end I have been working since the first day of the present session.

I am sorry that this House refuses to be convinced of the necessity of letting the desert-land act remain as now written. Under the operation of that beneficent law the West has revealed a marvelous development. No valid objection to the law has been made by any one throughout that long debate. There has been no charge of fraud committed under that act which is supported by any evidence worthy of serious consideration. I venture the assertion that more land has been stolen from the Government in one year under the pre-emption and homestead laws than has been stolen under the desert-land act within its whole history. But, because land has been stolen under the homestead act, are we to advocate the repeal of that law? Yet of just such logic as this is every argument made which inveighs against the desert-land act. If agricultural lands have been taken up under the desert-land act the fault lies in the execution of the land laws and not in the laws themselves.

Six hundred and forty acres have proven, since the passage of the act in question, a premium too small for wary capital to launch itself into the enterprise of irrigating these deserts. The poor and homeless are unable to build vast reservoirs and construct miles of canals and ditches. The very class for whom our Government should have the most solicitude will be most injured by the repeal of this act. The water must be brought to the land before the poor man can be benefited. It will never be brought on the land unless a course is pursued so liberal in its character that capital will seek the investment.

But I am asked why 160 acres of rich irrigated land is not enough for anybody. It is enough when you get it. But the question, the practical, important, present question is, how are you going to get the 160 acres of irrigated land? To further illustrate my point: Say, for instance, that ten men combine to build a reservoir and construct a canal for the purpose of reclaiming lands on which to establish homes. Under the present law 6,400 acres is the premium offered. Under the proposition to repeal the law, these parties would receive only 1,600 acres. The reservoir and main canal will cost virtually the same, whether the land be 6,400 acres or 1,600 acres.

It follows then of necessity that the less land you give to such enterprises the greater the price per acre to carry them out and less the tendency of people to undertake the job. When these ten men have reclaimed the 640 acres each they have land to sell—land which they must sell to repay the expenditure. Thus the large holdings are broken into smaller pieces, and the hitherto worthless desert becomes a scene of surpassing beauty, and happy homes gladden the landscape where once silence and desolation held their horrid reign.

Now, Mr. Chairman, I am convinced that the wisest course to pursue is to leave the desert-land act undisturbed and in all things else accept the amendment proposed by the gentleman from Illinois.

Mr. HERMANN. What gentleman from Illinois?

Mr. SMITH, of Arizona. Mr. PAYSON. It is his amendment that I am discussing, and not that of Mr. CANNON, the chairman of the Committee on Appropriations. The latter gentleman has advocated with his usual strength and with great plausibility a proposition which in the light of surrounding facts appears absolutely ridiculous, to wit: "Desert land should be taken up under homestead law." I have already asserted that the trouble about the desert act never originated in the law, but grew out of the manner of its execution. Lands agricultural in character have been taken up under the desert-land law. But the act was a violation of law as much as larceny or murder are violations of all civilized criminal codes.

But gentlemen seem to fear a monopoly of the desert lands. To hear them one would think that if the act is not repealed, and repealed immediately, some hungry land monopolist will pounce on the Mohave desert and water every inch of it and keep it all to himself. The people who live where I came from laugh at the preposterous absurdity. There is no scramble for possession of these arid mesas. There exists no necessity for apprehension. Millions of these acres will remain untenanted when this mighty Government shall have vanished from the face of the earth.

All possible encouragement should be given private enterprise, and when that ceases to be exercised the strong arm of the United States Treasury should be invoked to increase as far as possible the area of reclaimed land. It will never be reclaimed in any other way. The only chance the poor will ever have to lay hands upon that land is that it shall first be irrigated either by aggregated private capital or by direct Government aid.

In the Fiftieth Congress when this matter of irrigation was first under discussion on this floor, being pressed by the gentleman from Tennessee [Mr. MCMILLIN] as to the purpose of the proposed appropriation, I took the position, which I still maintain, that you are worse than wasting every cent of money put in this survey, or that will ever be applied to it, unless the Government intends to build the reservoirs and conduct the water to the land. If the Government does not do it nobody will, especially when met by the present reservation of all these lands from settlement. It strikes me that the Government would logically have to press the work to a finality, though Congress, I admit, has studiously avoided committing itself to that proposition. The Government will have to do the work or give the land to those who will do it, otherwise it will forever remain as it is.

The proposition is plain to any one acquainted with the physical features of the country. If gentlemen who talk so feelingly about homesteading the desert lands would go with me for 50 or 100 miles and see nothing but a vast plain of hot, glittering sand canopied by a cloudless sky, no growth nor water anywhere, nothing but dust and desolation, they would close up the fountains of their misguided eloquence and begin the exercise of positive, practical legislation. I refer to actual desert, not to those beautiful spots of irrigated valley lands which have already demonstrated the latent possibilities of that wonderful soil and climate which mark Arizona as the coming sanitarium of the world.

It is all very beautiful to talk about men reclaiming the desert under homestead law, but you may be assured the poor and homeless will never find a home on such land except through such legislation as I have suggested.

The amendment of the gentleman from Illinois [Mr. PAYSON] also requires that the entryman of desert land shall be a bona fide resident of the State or Territory in which the entry is made. I am not willing to give my assent to this proposition for reasons already stated.

I repeat that the greatest possible encouragement should be given to the reclamation of the desert. This is the first and most important step. No unnecessary embargo should be placed on it. Besides, I can see no reason why the son of the gentleman from Illinois [Mr. CANNON] or my friend from Pennsylvania [Mr. MUTCHLER] should be debarred the right to invest their money in so landable an enterprise by mere reason of non-residence. They certainly have as much right in the matter as I or my neighbor. I would not say the same of agricultural lands, for they are immediately productive, and grants of such land by the Government should be confined to men who actually go upon them and make homes. Therefore, I think the residence clause should be stricken from this amendment on the same principle and for the same reason that I hold that the inducement should be increased rather than lessened in respect of these lands.

As suggested by the gentleman from Montana [Mr. CARTER], the provision touching the right to the use of the water by persons conveying the same is merely declaratory of the law as the courts have construed it from the time when the question first arose. There is no objection to that provision, because it is in direct line with the decisions of the courts, uniformly followed and maintained by all of them.

From present indications in this House, and from all the legislation and all the discussion that have been had in the House in regard to the public lands since I have been a member of it, I am satisfied that these desert lands will never be reclaimed by the United States Government, and I am satisfied further that as long as the Government continues to put an embargo upon private enterprise they will never be reclaimed by anybody. That region will simply stand there a desert as it is, absolutely worthless to the United States, and I believe that the very best way for the Government to dispose of those lands would be by making a direct donation of them to the States and Territories, with proper restrictions upon the disposition of the lands and the expenditure of the money derived from them.

Mr. CANNON. My friend from Arizona commenced his speech by paying a deserved tribute to my colleague from Illinois [Mr PAYSON] and indorsing his amendment, but throughout the rest of his speech he was continually drifting away from that ground. Now, I would be glad to know what position my friend really assumes on this question?

Mr. SMITH, of Arizona. I have not drifted away an inch from the proposition first laid down by me. I have advocated the amendment of your colleague [Mr. PAYSON] except as to the quantity of land to be allowed each settler, and the residence clause of the amendment.

If the gentleman had honored me with closer attention he would recognize the injustice of his criticism. Those who have so kindly accorded attention have already discovered my position on this question, and I have not the time to repeat.

[Here the hammer fell.]

Mr. SMITH, of Arizona. Mr. Chairman, I crave but one moment's indulgence to say to the House that whatever of commendation I may have uttered in regard to the gentleman from Illinois [Mr. PAYSON] in connection with his knowledge of and attention to all questions touching the public lands applies with equal force to his predecessor, my friend from Indiana, Judge HOLMAN, who has likewise given the subject great attention.

Compound Lard.

SPEECH
OF
HON. JUSTIN R. WHITING,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, August 21, 1890,

On the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard.

Mr. WHITING said:

Mr. SPEAKER: I disapprove of this bill, for it singles out a large and legitimate industry and practically destroys it. It takes from the people a healthful and cheap food product and renders no equivalent. It destroys competition and builds up a monopoly.

This bill, Mr. Speaker, if enacted into law, would prove a substantial basis for the greatest lard trust the world has ever known. Would it benefit the farmer, as the advocates of this measure proclaim? I answer most certainly not. The farmer can not compete with these great lard-refining establishments, for the farmer throws away what the refiner makes into extra-choice, steam-refined family lard. Will the farmer sell his pork for more because of a high price of lard? Again I answer no. The man who sells the swine is benefited by the largest sale possible of the hog products.

Whenever the price of lard and hog products advances, the export and sale decrease because of the inability of the foreigner, as well also of many of our own people, to as freely use them when the price is high. This at once is followed by a low price for hogs.

No, Mr. Speaker, if it is the promotion of good, stable, honest industry that demands the consideration of this House, let us substitute for this bill the bill known as the Paddock general pure-food bill. It is general in its provisions. It discriminates against no special interest and does not create any monopolies; it protects the public against the adulteration and misbranding of every article of food, drink, and drugs, and prohibits the use of any ingredient that is injurious to health. It is general in its character, and by it honest competition is encouraged under the natural laws of trade.

Again, Mr. Speaker, I am unwilling to be classed among those who offer this bill as a peace-offering to the farmers and as an offset to the measures passed in the interest of the manufacturers and importers. As such it is a piece of impertinence, for the measure is purely and wholly in the interest of the "pork-packing farmer" in the cities, and not for the actual farmer.

The farmers, I think, are gunning for bigger game than the paltry sop this evidently unfair and unbusinesslike bill offers. Any law affecting either supply or demand must in the main work injury.

Compound Lard.

SPEECH
OF
HON. ORMSBY B. THOMAS,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, August 21, 1890,

On the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard.

Mr. THOMAS said:

Mr. SPEAKER: The legislation and relief proposed by this bill are so fair, just, and within the legitimate power of Congress to adopt that I am astonished that there should be any opposition whatever to it.

The undisputed fact is that the farmers and producers as well as the consumers of lard have been for many years defrauded in a most barefaced and shameful manner by a spurious article palmed off upon the public as pure lard and made to take the place of lard, when in fact it is a base adulteration.

The effect of this has been not only to injure and depreciate the price at home, but also to shut the doors of many of the great foreign markets against American lard, by which the farmers of the country have suffered the loss of millions of dollars, while those engaged in the fraud have become immensely wealthy.

There is not a farmer in the land who has not been directly or indirectly defrauded by this compound or spurious lard, and their appeals to Congress for relief are heard from every quarter of the country. By refusing to pass this bill you not only disregard these appeals, but you say in plain terms to the country that you will not, though it is within the power of Congress, relieve the producers of lard, a great commercial article, an article produced by the farmers of this country, from the losses which they have so long sustained and are still sustaining by reason of this outrageous and bold counterfeiting.

We know and the country knows that the remedy proposed is lawful and efficacious, because in a similar case it has worked well and stood the test of the courts. It is but a short time ago that upon every table was placed spurious butter, which, like this spurious lard, in smell, taste, and appearance was so like genuine butter as to deceive the most expert. This butter, like spurious lard, was or could be made of all sorts of vile compounds and cheap refuse, which the manufacturers were able to disguise by the use of chemicals, and thus prepared it was placed upon the market as genuine butter and was able to take the place of and to drive out real butter.

This exactly parallels in all respects this compound lard. The effect of the spurious-butter fraud, as everybody remembers, was to a large extent to drive out and destroy the butter-making interests of the United States, to the great detriment of the whole country, except those engaged in the fraud. Congress thereupon passed an act similar to this, taxing, very lightly, as does this bill, the spurious article, and putting the same under the internal-revenue system, and compelling it to be marked and branded so that people would know just what they were buying.

This remedy was complete, and the dairy interest was relieved of the fraud which was fast sending it to bankruptcy and ruin, and the public are protected in the use of good butter. This bill is based upon the same idea and it is intended to operate in the same way.

Mr. Speaker, this compound lard business is, if possible a greater fraud than the one which we have already so successfully legislated against. Every reason which impelled me to vote for the oleomargarine bill impels me to vote for this. The American people like fair play; they despise anything that is underhanded and fraudulent. This legislation directly affects the interests of the farmers of this land. Many who oppose this bill claim to be the friends of the farmers and of the farming interests of this country.

If you are really in earnest in such claimed friendship, now indeed is a chance to show that you are truly the friends of the farmer and that you are willing, even against the appeals of those who have grown rich by plundering them, to pass this most just legislation in the special interest of the farmer, legislation that will do no injury to the compound-lard interest if it is an honest and legitimate business, for all it does is to compel the manufacturers to inform the public of the exact composition of the article they seek to sell and prevents them thereby from palming off upon that public the spurious article under false and fradulent representations.

Mr. Speaker, I believe in letting every honest industry stand upon its own merits, and no honest industry will ask to stand in any other way. Sir, I am firmly of the belief that not only the financial interests of the people are promoted, but also good morals are aided and advanced when we engage in legislation to suppress frauds, and especially frauds in food productions which not only rob the honest producer, but impair the health of those who are in a manner placed beyond the power of detecting the imposition imposed upon them.

For these reasons I shall vote for this bill, believing it in the interests of honesty and fair dealing, and especially in the interests of the farmers of this country.

Compound Lard.

SPEECH
OF
HON. THOMAS R. STOCKDALE,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, August 21, 1890.

The House having under consideration the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard—

Mr. STOCKDALE said:

Mr. SPEAKER: I have tried for some time to get some gentleman to state or its supporters to confess the real object of this bill, and I have arrived at the conclusion, by their own statements, that the advocates of the bill support it purely on the ground and for the object stated by my colleague [Mr. CATCHINGS], to tax this country out of existence.

They say they do not want to put a tax on it, and if any other way could be arrived at to compel the people who manufacture it to brand the article for what it is they would be satisfied. That is a confession that there is no authority in the Constitution to compel a man to brand what he makes, unless it is arrived at through a subterfuge. You use the Constitution as a pretense; that is, you use the article of the Con-

stitution authorizing Congress to raise revenue, not for the purpose of revenue, but to get at another object, which is to burden one industry that another may flourish; to drive one class out to give place to another more favored class, which is, I say, using the Constitution in the letter to violate it in the spirit.

It would be, Mr. Speaker, more honest and becoming legislation before the country to say and do as Mr. Stevens once said, that "everybody knew they were legislating outside the Constitution," than to set up the fact that they want to do what the Constitution prohibits, but assume to legislate under a power that is granted by the letter of the instrument for a wholly different purpose to violate the spirit of it by doing something else not authorized by it. This confessedly does that. The advocates of this bill can not put it upon any other ground known to the Constitution. They can not put it upon the ground that this compound is injurious to health. All people agree that the insertion into this compound of cotton-seed oil makes it no less healthful, no less nutritious, and equally good in taste. It answers the purpose in every reasonable respect. Why, it is admitted they can not tell the difference between it and pure lard; and hence they want to put a tax upon it, as well as brand it, so as to destroy competition. The brand is already on it. If that be true, what does this bill mean? Why, simply this: That cotton-seed oil is the product of one part of the country and lard of the other, and the two when they meet and are sold belong to the people who have purchased and want to consume both. The lard is purchased from Illinois people and the Northwestern country and the cotton-seed oil from Mississippi people and the Southwest generally.

A man has a right, I take it, to go into Illinois and buy lard. He has a right to go to Tennessee or Mississippi and buy cotton-seed oil. What then? They are both his property. He undertakes to mix the two because it makes a product easy to handle in a warm climate and is cheaper to the consumer; it is as good for food; it is as wholesome, as nutritious, and as palatable as the lard alone. Both are his property, and he compounds them together. Has he not a right to do so and to sell them compounded or separately? But you say, no, he shall not do that; he shall not sell his own property. And that is Democracy, is it, my friends on this side?

I want to say to the Democrats who expect to vote for this measure, you ought to consider well before you support a doctrine that is so utterly obnoxious to every fiber of Democracy. Gentlemen who are prominent and assume to be leaders on this side of the House, let me ask where would you lead us if we would follow you now? Why, this bill is so extreme that the Republicans themselves are ashamed of it, and say they would not take this course if they knew any other means by which to accomplish their object. Even they who are accustomed to discriminating legislation want to avoid the charge of being so palpably unfair as to put a burden upon one industry for the benefit of another industry. How, then, can Democrats go to that extreme? Is this Democracy, I say? If so, the great teachers have been astray. Is it Americanism? Is it common honesty? Is it anything short of the despotism of Russia?

Here are two articles, equally wholesome, nutritious, and palatable, which can not be mixed together and sold as such without a tax; and not only not without a tax, but the men who engage in this perfectly legitimate business have to go like menials to the Secretary of the Treasury and ask his license to do a perfectly legitimate thing. In whose interest? Not in the interest of health, not in the interest of the Government, not in the interest of the people, but in the interest of a few manufacturers of lard. You want to prevent competition by getting the National Government to drive the competing people out of business; you want to drive from the market an article that we make, in order that an article which you make may sell higher. The gentleman from Iowa said that it was to prevent a species of robbery that is going on in Chicago and St. Louis; and by the controversies between the two gentlemen it seems there is more robbery and rascality going on in the city of Chicago to-day than there ought to be in the whole nation. What a place that is for the World's Fair! [Laughter.] What a place to exhibit all these specimens of morals before the world. Why, if half the testimony is true that has been detailed in this report, and I have read it over and over, if it be half true about the manufacture of lard, there ought to be more cotton-seed oil in it, because there ought to be something clean and wholesome in it. Why, one gentleman over there said yesterday that it was like the refinement of sugar, when you boiled it down with this filthy substance in it, and got it below and took the lard off the top, including every other anatomical part of the hog rendered into it. I will refer the House to the speech of my colleague [Mr. MORGAN] for information about the pure lard that this bill protects.

I would like to say a word about a portion of my own constituents. It has been said on that side that it is not to injure the producer of cotton seed, but it is to brand the thing what it is. Can it not be branded without coming to Washington to get a license? Can it not be branded without paying a tax annually? Can you not make it the subject of a license, and make a penalty for selling it without the brand, without all these onerous penalties that are intended evidently to prejudice the public against it.

My friend over there says the merchants will knock the head out and the brand off, and then sell it as lard. Whose business is that except the man's who buys it, if it is good and he gets it at 4 cents a pound cheaper? He has the right to buy it, and the consumer has the right to purchase it and save $4 on the hundred pounds.

Mr. CONGER. Will the gentleman permit an inquiry?

Mr. STOCKDALE. Yes, sir.

Mr. CONGER. Will you kindly tell us how it can be reached and the branding compelled without taxing?

Mr. McCLAMMY. And also tell us the necessity of reaching it at all.

Mr. STOCKDALE. In the first place it can not be done——

Mr. CONGER. That is exactly what I say——

Mr. STOCKDALE (continuing). Can not be done legitimately at all. You arrive at it in an illegitimate way. I say that any article that is produced by the citizens of any part of the country, wholesome and pure, which another man buys and combines with another article equally pure, and in this case purer, the result being equally good and wholesome, he has a right to sell it and the people have the right to buy it.

Mr. CONGER. Then you admit that it can not be done in any other way.

Mr. STOCKDALE. One moment and I will answer your other question. I say by what right do you undertake to say that he shall not do that? You asked me by what other means it can be arrived at. By that question you acknowledge that you have to arrive at it by an illegitimate means; that you use the letter of the Constitution in order to violate its spirit; and then how do you justify it?

Mr. CONGER. Can you tell us of any other legitimate way in which it can be done?

Mr. STOCKDALE. I do not want to teach people how to commit iniquities. [Applause on the Democratic side.]

Mr. CONGER. It can not be done in any other way except by taxing.

Mr. MORGAN. Can not the people of a State do it if they want it done?

Mr. STOCKDALE. Our friends on the other side do not want to leave it to the people. They are legislating for Illinois, for Chicago, and for St. Louis.

Mr. CONGER. And for Mississippi, too.

Mr. STOCKDALE. They are not legislating for the interests of the country, but legislating for the few and against the many, which has been the practice of this Congress from its beginning until now. [Applause on the Democratic side.] You talk about your love for the colored man. I represent a large number of them, and they are my friends and I am theirs.

Mr. McCLAMMY. And they all vote for you, too.

Mr. STOCKDALE. They are the people who make this cotton-seed oil. They sell more of it than the white people do, because they are very largely renters of land, and they sell their cotton and their cotton seed; the white people use theirs for feed and fertilizing. In the hills the white people care very little about this measure, so far as their interests are involved, but they look upon it as an outrage upon the whole negro population and on the citizens of the great Mississippi bottoms.

In the great Mississippi Valley, into which the colored people are going and which is the El Dorado of the colored race, they sell their cotton seed. It is a product that they raise. It is a product that the Northwest turns the back of its hand upon. You may say to us, "You make a good product and a wholesome product." We make a wholesome product. The two mixed can be made just as good and a little cheaper, but you say we shall not mix it. Why? That is easily answered. Yours is a Northern product and ours is a Southern product; reason enough for that side of the House. You are the people who took the tariff off of sugar, which is made almost entirely by the negro. You took the tariff off of rice; that is made entirely by the negro.

Mr. CONGER. By the negroes in Cuba.

Mr. STOCKDALE. And you say you are about to establish an industry in the tin-plate business, of which there is not a pound made in the United States. But my friend over there [Mr. NIEDRINGHAUS] says he is going to make it when he can make everybody else buy it from him. You want to make a law to prevent us from buying from anybody else. You want to create a new industry in the North and destroy one now existing in the South. The sugar industry is increasing since the war, when the industry was destroyed. You are willing to strike down that industry and create a tin-plate industry. You know where the sugar industry is, and you know where the tin-plate industry will be. One is an industry of the South and the other of the North. You are the people who taxed the negro's cotton $13.50 a bale, the first bale he ever made as an American citizen. He came to the market with his first bale in 1866, and was met by a United States officer with a brass tag, that he could afford to sell for $13.50, and the negro could pay it or go to the penitentiary or not ship his bale of cotton.

You let up in 1867 and charged him $11.50 to ship his bale of cotton. One hundred and thirty-four million dollars and over went out

of the pockets of the Southern people right after the war, when they were bleeding at every pore and every limb had a wound.

Mr. LACEY. I thought the consumer paid the tax.

Mr. STOCKDALE. You think it did not cost them anything. That is about as much substance as there is in your argument. You laugh and joke and jeer at what those colored people have been struggling for, to make homes for themselves and families, and think it no harm to rob them. Sixty-eight million dollars went into the Treasury, and is there now, and wrongfully there, and ought to be returned as a conscience fund. There were 5,000,000 and more bales made in 1866; also in 1867; and the tax of $13.50 in 1866 and $11.50 in 1867 makes $134,000,000. Then you had the Freedmen's Bureau and the Freedman's Bank, and you are claiming to be the friends of the negro with such a record before you! I say that I stand here as his friend and ask that this product of his be not taxed out of existence. I presume it is useless to ask you to do anything for the white people of the South, but I do ask you that his product be not taxed out of existence; and if you are in good faith in your professions of friendship to the colored people you would let up on them once at least.

The gentleman from Iowa told the tale. He was as earnest and eloquent as he always can be against this product, and put it upon the true ground. He says there are $28,000,000 of the products of cotton-seed oil that go into the product of the hog, and he says: "I do not intend to stand here without raising my voice against the scheme that will put $28,000,000 worth of cotton-seed oil into lard, whereby Iowa will lose $2,000,000 on her hogs." That is the doctrine. It is in the report. It decreases the price of hogs, and therefore you desire to destroy the cotton-seed combination, which is good, not because it injures anybody, but because you raise the price of your product by injury to the product of the colored race, to say nothing of the white people. Better that the South lose $28,000,000 than that Iowa should lose $2,000,000. It is not fair; it is not national. It is class legislation, and worse than class legislation.

The report says:

> The promoters of the bill are the growers of swine, and the manufacturers and consumers of pure lard. Its opponents are the manufacturers of the imitation compounds, and to some extent the producers of cotton-seed oil.

It is legislation to push back one set of citizens and to lift up another by the power of the Federal Government. It is not according to the Constitution. It is not according to the principles of American industry. Why, you talk about protection, and call this robbery. What does robbery consist of? This was denounced as robbery to-day. Why, you say it consists in combining cotton-seed oil with lard by men who have purchased and own both. You seek to deprive them of their industry, and say that it can not be continued. Is there any difference between that and the wool-growers asking here for a bill to provide that the manufacturers shall not mix cotton with wool, with silk, or with anything else without paying a tax or getting a license for it?

Probably there is not a gentleman in the House who has not cotton in the clothing he wears. Why not make a law against such a mixture? Why should not the silk manufacturers ask Congress to pass a law that there should be no cotton in silk; that there shall be no mixture of wool in silk; no mixture of anything? It is precisely the same principle, and whenever you open the door and permit this Government to enter into a policy whereby one class of citizens can come to Congress and successfully ask that their particular industry be protected, not against foreign powers or foreign labor, but against another legitimate industry within the borders of our own country, you strike down the very principles of the Government.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. HILL. Will the gentleman yield to a question before he takes his seat?

Mr. STOCKDALE. I will if I have the time.

Mr. HILL. If some manufacturers of cotten and woolen goods should be able to so mix the cotton with the wool that they could not be distinguished by the consumer and they sold interior articles for woolen goods that were not woolen, would not you think some remedy should be found?

Mr. STOCKDALE. That is the same principle that you have adopted.

Mr. HILL. Would you not think that some remedy should be afforded?

Mr. STOCKDALE. Not by the United States Government, for God's sake. If you do so you will have to go in and prevent the chicken-raiser—the great hen-raiser of Ohio—from mixing shanghais and bantams. That is the result of this doctrine. [Great laughter.]

Mr. HILL. We will have to go as far as we can.

Mr. CONGER. Does the gentleman think it honest to sell cotton-seed oil for lard?

Mr. STOCKDALE. It is not sold for lard. It is sold for what it is; and you propose to tax out of existence that industry. You propose to create one industry and to destroy another.

Mr. McCLAMMY. Does this come out of my time? If it does, I must object.

The SPEAKER *pro tempore*. The gentleman from North Carolina has the floor.

The Compound Lard Bill.

REMARKS
OF
HON. WILLIAM H. CRAIN,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, August 21, 1890,

On the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard.

Mr. CRAIN said:

Mr. SPEAKER: The bill under consideration, known as "the Conger bill," while assuming to prevent the manufacture of adulterated lard, is itself an attempt at fraudulent legislation.

Your committee believe—

Says the gentleman from Pennsylvania [Mr. BROSIUS] in his report upon the bill—

that while morals may not need trade trade must have morals.

I say that legislation, too, must have morals, and that the Conger bill is destitute of morals. Its pretended object being to compel manufacturers of "lard compound" to notify consumers of the constituent elements of that commodity, its real object is to strike down one industry in order to build up another upon its ruins. Not only is its object immoral, but its methods are also immoral; for certainly that is immoral which is contrary to truth.

Now, the gentleman from Pennsylvania [Mr. BROSIUS] asserts that among the objects of the bill is the raising of revenue. Is this true? Both parties agreed when this bill was introduced that there was a surplus in the Treasury, and the majority of the committee who reported the bill voted in favor of the McKinley bill, the alleged object of which was to reduce taxation. Just think of the contrast: the McKinley bill is to reduce taxation; the Conger bill to increase taxation. And this is the act of men who, like the Pharisees of old, stand upon the corners boasting of their superior virtue and morality. The truth is that these gentlemen seek to impose the taxes provided for in the bill for a twofold purpose, to mask their real object behind the Constitution, in order to get congressional jurisdiction, and to grind out an industry which is in their way.

I will not argue the unconstitutionality of the measure, but will content myself by saying that the framers of our organic law did not contemplate such an abuse of the taxing power as the supporters of this bill are guilty of, and I can not understand how democrats can vote for it who have made the welkin ring with their declamations for "a tariff for revenue only."

If lard compound be deleterious to health its manufacture ought to be abolished and not made a subject of revenue, and the very fact that the friends of this bill tax it is the best evidence that they regard it as innocuous. But they say it is in the interest of the farmers. What farmers? The farmers of what section? Class legislation is vicious. But what must be said of legislation for a class within a class? While it is alleged that the hog-raisers of the northwest will be benefited by this legislation what effect will it have among the cotton-producers of the south? The majority of this House whine about the poor, down-trodden negro; one of their number, more rhetorical than discreet in his utterances, contends for "a bullet for every ballot;" they pass an infamous bill for his alleged protection; and yet they strike him a heavy blow in the field of industry by depriving him of the benefit of a market for his cotton-seed and of the advantage of cheap "kitchen fat."

The gentleman from Pennsylvania sheds tears over the picture which he paints of a poor illiterate negro in the South paying 15 cents a pound for lard. His ignorance about the negro is a sufficient commentary on his vote upon the Lodge bill. Not one negro out of fifty thousand pays 15 cents, or 10 cents, or 5 cents a pound for lard. The negroes, like the poorer white farmers, use the surplus lard from their hogs, and when that is gone they cook with bacon grease.

But where do the consumers come in? Are they to be considered at all? It seems not. According to the census of 1880 there were 17,392,000 persons engaged in all occupations in the United States, and of this number there were only 4,225,945 farmers and planters, exclusive of farm laborers.

Now, at the ratio of three persons to each worker, the population being about 51,000,000, there would be 12,667,835 farmers and planters and their families in the farming class and 39,498,165 persons included in the category of consumers. But of the 12,667,835 farmers and planters at least one-third were engaged in raising cotton, and consequently they and their families will be injured by this bill, say 4,225,945 persons, so that only 8,451,888 persons would be benefited by it if all that is claimed for the bill be allowed, while 42,000,000 would be

injured. The ratio of increase of population since 1880 has been about 25 per cent., but the relative proportions are the same.

But while pretending to protect farmers, its advocates defeated the McRae amendment, which provided for the inclusion in the definition of lard that produced by the farmers and field-hands on the farms. Its supporters contend that the manufacture of "lard compound" has lowered the price of hogs and injured the swine industry. Now, who ever heard of a manufacturer of any product insisting upon raising the price of his raw material.

The hog is the raw material of the lard manufacturer, and when it walks or is carried into the slaughter-rooms no part of it ever comes out except in some kind of finished product.

Do not the manufacturers' buyers purchase hogs at the stock-yards at the lowest price for which they can obtain them? Then is it reasonable to suppose that the manufacturers urge the passage of this bill to benefit the farmers by raising the price of hogs? The question answers itself in its very absurdity and preposterousness.

But gentlemen say that the Farmers' Alliances are backing the bill. How easy it is to have these cut-and-dried circulars circulated and signed and sent to members of both Houses. I venture to say that not 1 per cent. of all the farmers who have advocated the passage of the bill have ever read it. And I venture the further statement that not a single Farmers' Alliance in a cotton-producing State (and I do not include Kentucky, Missouri, and Virginia, because their cotton productions are mere bagatelles) has insisted upon the passage of the bill.

The bill is sectional in its character, but the natural resources of the South are so great and her people are so patient and persevering that she will yet be the predominant section of the Union in population, in wealth, and in political power. She has survived the assaults of the battle-field; she will overcome those of the cotton-field.

But the bill goes further than legislative assemblies asked Congress to go. The Legislature of Iowa, whence its author comes, only requested that a statement of the contents of "lard compound" should be affixed to every package of it. Gentlemen have quoted from individual Alliance men in the South in favor of the bill, but they have totally disregarded the resolutions against it of the representatives of the cotton States at the meeting of the presidents of Farmers' Alliances at Atlanta, Ga., March 19, 1890.

Recurring to the effect of the manufacture of lard compound upon the value of hogs, from which I was temporarily diverted, I have to say that about ten years ago cotton seed was used for fertilization, cattle-feeding, or was thrown away. It will be satisfactory, then, to ascertain how the numbers and values of hogs in 1875 and 1881 compare with those of 1888 and 1890. According to the Agricultural Reports for 1887 and 1888, the mean price of hogs in 1875 per 100 pounds was $3.52. In 1888 it was $5.82 per 100 pounds. The Secretary of Agriculture attributes the fluctuations in price to the variations in the corn crop.

The statistician of the New York Produce Exchange gives the following statement:

January 1, 1881: Number of hogs, 36,247,603; value, $170,535,435; each, $4.70.
January 1, 1890: Number of hogs, 51,602,789; value, $243,418,336; each, $4.72.

While the number of hogs has increased very largely, the average value has remained the same; so that the allegations of the advocates of the bill are not sustained by the facts. An examination of the tables of statisticians will show that the value of hogs has fluctuated with the corn production of the West.

It is apparent, therefore, that the manufacture of lard compound has not affected the price of hogs. Indeed, the friends of the bill seem to lose sight of the fact that in the manufacture of lard compound quite a large percentage of prime steam lard is used after having been rendered pure.

But in discriminating by complicated restrictions and oppressive burdens in the shape of internal-revenue requirements and taxation, the advocates of the bill ask to crush an industry which utilizes only that which is pure and wholesome and to foster and encourage another which, while professing to produce a pure, clean product, actually uses in its manufacture constituents that are impure, unclean, and filthy. Cotton-seed oil is the product of a vegetable or plant of the field. Prime steam lard is made from the heads, guts, intestines, and genito-urinary organs of hogs, which are sometimes smothered before they reach the slaughter-house and are often diseased. In support of this statement I quote from various witnesses.

First, as to cotton-seed oil, read the reports of the respective boards of health of New York and New Hampshire, as well as the statements of leading physicians:

APPENDIX A.

Report of New York board of health.

CHEMICAL LABORATORY OF THE ALBANY MEDICAL COLLEGE,
Albany, May 6, 1889.

DEAR SIR: On the 26th of April you requested me to make such examination of "lard and lard compounds, or products into which cotton-seed oil enters as a component part," and of "cotton-seed oil as sold for edible purposes" as might be possible in the time intervening between that date and this day, and to report to you whether, in my opinion, such "lard, lard compounds or products are healthful or nutritious, or are in any degree deleterious or injurious to health," and "whether or not said [cotton-seed] oil is nutritious or healthful, or is in any degree deleterious or injurious to health."

The time at my disposal thus allowed me has not been sufficient to admit of the systematic collection of samples of the articles named or the elaborate analysis of such samples as had been collected, and this necessarily brief report, therefore, deals with the questions involved chiefly in a general manner, and is, in the main, based on information acquired in previous investigations and by former study of the subjects considered.

The main question, as I understand it, is whether cotton-seed oil, properly extracted and refined, is a wholesome and nutritious article of food, and whether it is a proper substance to mingle with lard obtained from the fat of hogs, or with other fats, in the manufacture of "lard compounds," table oil, and the like, for use as food or in the preparation or manufacture of food articles.

There doubtless exists on the part of many people a prejudice that lard should be made from hog-fat alone and table or salad oil from the fruit of the olive tree solely; but this opinion is in reality based on no good or sufficient reasons. Fats obtained from a variety of animals and a great number of plants have been used from time immemorial in the preparation of food, and it is unreasonable to suppose that those particular fats and oils which we in this country, or in this part of the country, have been accustomed to use are the only suitable ones to employ. All over the world vegetable oils are obtained by the expression of the seeds or fruit of plants and used as food. From the cocoanut, Brazilian nut, walnut, almond, and a wide variety of other vegetable products oils are extracted and employed in the preparation of food. In speaking of the vegetable oils Dr. Edward Smith, in his well known work on Foods, places cotton-seed oil at the head of the list, and says:

"There can be no doubt that we have in this product of seeds of plants, which seem otherwise to be useless, a great storehouse of most valuable nutritive material, and if we know but little of them in this climate it is because we have the olive-oil at hand and are bountifully supplied with many kinds of animal fats. It is, however, probable that the cheapness of some of these vegetable oils, in addition to their delicacy of flavor, will ere long force themselves into notice and obtain a place among our foods." This was written in 1873, when the manufacture of cotton-seed oils was still in its infancy.

Professor Wiley, chemist to the United States Department of Agriculture, in Bulletin No. 13, on Food and Food Adulterants, quotes from Allen's well known and standard work on Commercial Organic Analysis, as follows: "Refined cotton-seed oil is of a straw or golden-yellow color, or, occasionally, nearly colorless. The density ranges from .922 to .926, and the solidifying point from 1° to 10° C. Refined cotton-seed oil is usually very free from acid, and when properly prepared is of pleasant taste and admirably adapted for edible and culinary purposes, for which it is now extensively employed, both with and without its nature being acknowledged."

As regards the manufacture and refining of cotton-seed oil, it may be remarked that the methods employed are not materially different from the processes made use of in the preparation of olive-oil. That cotton-seed oil has for many years been exported to Italy and France, in which countries it is largely employed for mixing with olive-oil, is a well known fact.

Speaking of cotton-seed oil, Dunham J. Crain, United States consul at Milan, reported as follows, under date of November 10, 1883: "The seed-oil industry is assuming considerable proportions. Several kinds of this oil were exhibited at the Milan exhibition in 1881, and classed among alimentary oils. There were some beautiful specimens of sesame oil exhibited. * * * The importation of cotton-seed oil was arrested in 1882, since which the demand for oleaginous seeds has increased. It is therefore urged that a duty should be imposed on all imports of seeds and seed oils if it is to be continued on cotton-seed oil. It is claimed that the duty on cotton-seed oil has served no good purpose; that the mixing of cotton-oil with olive-oil was not prejudicial to health, and that the mixture is now made with oils from flax and nuts, and that the competition coming from cotton oil has been replaced by oils of other seeds and by nut oils. * * * It is felt that frauds will diminish and the public good be promoted when prejudices against good seed oils disappear and they are sold under their true names." (U. S. Consular Reports, XII, 567.)

I am clearly of the opinion that cotton-seed oil, whether used alone or commingled with other oils or fats, is a perfectly wholesome and nutritious food, and as easily digested and assimilated as any of the commonly employed fats. In support of this view, the opinion of numberless writers upon the subject, and of experts in chemistry and physiology, might be adduced, but I shall content myself with citing two or three. Battershall, in his treatise on Food Adulteration, remarks:

"As a result of the publicity lately given to the subject of food adulteration a popular impression has been produced that any substance employed as an adulterant of, or a substitute for, another is to be avoided *per se*. Perhaps the common belief that for all purposes cotton-seed oil is inferior to olive-oil and oleomargarine to butter is the most striking illustration of this tendency. Now, as a matter of fact, pure cotton-seed oil, as at present found on the market, is less liable to become rancid than the product of the olive, and for many culinary uses it is at least quite as serviceable. * * * The sale of these products under their true name should not only be allowed, but under some circumstances even encouraged."

Professor Wiley stated before the United States House Committee on Agriculture at the hearing on the compound-lard bill in 1888, in reply to the question whether from his knowledge of chemistry and of medicine there is any property in cotton-seed oil injurious to health, that there was not so far as he knew. In reply to the question, "Does that statement also apply to beef stearine used in connection with cotton-seed oil in the manufacture of refined lard?" he replied, "Yes, sir; so far as I know there is nothing in it injurious to health."

Concerning its digestibility and the ease with which it is assimilated, he instanced a case in which a pint had been given as a laxative and had undergone perfect digestion, showing, in his opinion, "that it was very easily acted upon by the intestinal juice" and "very easily assimilated," and he added that "it seems to act on the digestive organs like olive-oil precisely." In response to the question, "Are the nutritive qualities of cotton-seed oil equal to the nutritive qualities of pure lard?" he replied, "I should say that there would be little difference as far as nutritive properties are concerned."

Professor Wiley analyzed a large number of samples of so-called refined lards compounded chiefly of beef stearine, cotton-seed oil, and hog fat, and in response to the question, "Have you any belief that any of these articles or specimens * * * when used as foods is unwholesome or hurtful to the human system?" replied, "I have no reason to believe any of them is, any of the ingredients in the lards." And again, "As far as medical and chemical knowledge extends these substances are not injurious to health." In reply to the question, "What would you say of cotton-seed oil when used alone as an article of food?" he answered, "I should say that it was perfectly wholesome," and he gave it as his belief that it was as wholesome as olive-oil or hog lard or beef fat.

Professor S. P. Sharpless, State assayer for Massachusetts and a chemist who has given much time to the study of food adulteration, stated during the course of the same investigation that he knew of no property injurious to health in cotton-seed oil or the refined lards which he had examined. Professor R. Ogden Doremus, of New York City, states that refined lard made from steam lard, beef stearine, and cotton-seed oil is "pure and wholesome," and that, in his opinion, "cotton-seed oil is a wholesome article of diet," and Professor L. M. Norton, of the Massachusetts Institute of Technology, states that the compound lard made by a well known firm "is a perfectly good food material" and "is unobjectionable in every respect, and does not contain anything which can be injurious to health."

These are the opinions which seem to be almost universally held by those who have investigated this subject from a scientific standpoint. So far as I

know, there is no evidence worthy of the name which even remotely tends to show that cotton-seed oil is not a wholesome and nutritious food. It has, as a matter of fact, been used for years, both surreptitiously mixed with other oils and fats or openly employed on its merits as a palatable and useful food. Throughout the cotton-growing States it has been for a long time very largely used, and the medical faculty of the Arkansas University state that it is preferred to other fats in many respects, "agreeing with the most delicate stomachs, whether used in baking or frying," and that "not one instance has ever been given of health being in any manner impaired by the use, however free, of cotton-seed oil in food." They state that "thousands of hands employed in the cotton-seed-oil mills are in the habit of making their dinners on the crude oil by dipping their bread in it, and some of them actually drink it, and yet from this free use of it nothing has ever resulted but the best of health."

Such testimony as that given above is not easily overthrown. Writers of eminence in our scientific, medical, and agriculturnl journals have borne similar testimony, and large numbers of people in our midst to-day use, by preference, in their households a cotton-seed-oil lard in place of one made from the fat of the hog. In my own family I have employed such a lard with perfect satisfaction, and am convinced by actual trial that it is palatable, readily digestible, and a wholesome, nutritious article.

During the last few years I have chemically examined a considerable number of compound lards, sold as lard and under various trade names, containing cotton-seed oil, sometimes without a trace of hog fat, and I have also examined various qualities and grades of cotton-seed oil and of olive-oil containing it. Some of these examinations have been made within the last week, and I have discovered in these lard compounds and oils no substance injurious to health or in any way deleterious, and I am decidedly of the opinion that such lard compounds and cotton-seed-oil products as I have examined or of which I have knowledge are wholesome and nutritious articles of food.

Yours, respectfully,

WILLIS G. TUCKER,
Analyst, State Board Health.

Dr. LEWIS BALCH,
Secretary of the State Board of Health of New York, Albany.

I hereby solemnly attest that the above is a true copy of the report on file in this department.

[SEAL.] FREDERICK CARMAN,
Assistant Secretary.

ALBANY, N. Y., *February* 17, 1890.

APPENDIX B.

Affidavits of New Hampshire board of health and other New Hampshire physicians.

I, Granville P. Conn, of Concord, in the county of Merrimack and State of New Hampshire, depose and say: That I am a practicing physician and surgeon, resident in said Concord; that I took my degree at Dartmouth Medical College in the year 1856; that I have held the position of secretary of the New Hampshire Medical Society for the last twenty years, with the exception of the two years that I occupied the president's and vice-president's chair of that society. I am also one of the medical faculty of Dartmouth Medical College, and have held that position for some four years, or ever since the chair of hygiene was established.

I became a member of the New Hamphshire State board of health when it was established in 1881, and have been president of that board from that time to the present time. I was chosen vice-president of the National Association of Railway Surgeons at its meeting held last winter in the city of St. Louis. I am a member of the American Medical Association, the Medico-Legal Society of New York. I am honorary member of the State Medical Society of Vermont. I am a member of the American Public Health Association.

My attention having been called to the "lard bill" before the Legislature, I began investigating what they meant by the terms "refined lard," "lard compound," "pure leaf lard," and "pure lard." So far as I have been able to ascertain the definitions of these terms were admitted before the House Committee on Agriculture in Congress in an investigation in 1888. These compounds show that the "commercial lard" of to-day is a somewhat different article from the "lard" which our farmers were in the habit of putting up. The "lard" put up by farmers was the leaf only, unless mixed with the suet of the beef animal. This, so far as I know, represents what is purchased in New Hampshire.

The "commercial lard," to which my attention has been called, and as admitted before the House Committee on Agriculture, is an essentially different product, "refined lard" meaning the odds and ends and what was left after the better part of the leaf lard was extracted, and then mixed with stearine and cotton-seed oil. I understand "refined lard" and "lard compound" to be one and the same product. Beef stearine and cotton-seed oil are claimed to be adulterations, neither of which, from a hygienic point of view, is harmful. Beef stearine, or suet, has been mixed with lard for years, and among farmers is considered better for summer use that the pure leaf, in consequence of the melting point being a little higher.

Cotton-seed oil within the past ten years has almost entirely taken the place of olive-oil in our markets. It is still sold as olive-oil, but chemical and microscopical examinations show it to be pure cotton-seed oil. The conditions, both chemical and microscopical, are so nearly alike that there is really no difference in its nutritive value.

It is a well known fact that immense quantities of cotton-seed oil are sent to Italy, only to come back as olive-oil. In the South and West cotton-seed oil is taking the place of all forms of lard. These are well established facts, which no one who has investigated the problem will dispute. Cotton-seed oil and beef stearine would answer all of the purposes of lard, and would be entirely unobjectionable from a sanitary standpoint.

GRANVILLE P. CONN, *M. D.*

JULY 22, 1889.

STATE OF NEW HAMPSHIRE, *Merrimack, ss:*

Then personally appeared Granville P. Conn and made oath that the foregoing affidavit by him signed is true.

Before me.

J. H. ALBIN, *Justice of the Peace.*

I, Irving A. Watson, of Concord, in the county of Merrimack and State of New Hampshire, depose and say: That I am a practicing physician, and as such am a graduate of the medical department of the University of Vermont, of the class of 1871. From that time until 1881 I practiced my profession at Groveton, N. H. In 1881 I was appointed member of the New Hampshire State board of health, and have continued a member of said board to the present time. During all of said period I have served, and am now serving, as secretary of the State board of health, with my office located in the State capitol, Concord.

A short time since Mr. J. H. Albin, attorney for N. K. Fairbank & Co., brought to my office a sample of "refined cotton-seed oil" and a package of "lard compound," being branded as "lard compound," and purporting to be put up by said firm. Mr. Albin told me that the "lard compound" was made up of about 60 per cent. of "refined lard" and 20 to 25 per cent. of the "refined cotton-seed oil" like the sample, and 10 to 15 per cent. of beef stearine. He also called my attention to an investigation made by the House Committee on Agriculture in Congress, during the early part of the year 1888, copy of which proceeding he left with me, and said that this "lard compound" was the same preparation that was therein spoken of as "refined lard," put up by the said firm of Fairbank & Co.

I have used in my family several packages of refined lard put up by Fairbank & Co., and this lard has proved satisfactory. The package of lard compound which Mr. Albin recently left with me was used with the same satisfaction as the before-mentioned refined lard, and I was not able to discover any difference between them. The sample of refined cotton-seed oil I also tried as a salad oil, and found it to be as palatable and satisfactory, in every respect, as the usual table oils. I also caused some doughnuts to be fried in the refined oil, and found that it answered every purpose required of the best of lard in that respect. There were two plates of doughnuts upon the table, the one lot fried in the lard compound and the other in the refined cotton-seed oil, and I was unable to distinguish which was cooked in lard and which was cooked in cotton-seed oil.

From an examination of the testimony taken before the House Committee on Agriculture, before mentioned, I find that Fairbank & Co., for the purpose of manufacturing their lard compound, or refined lard, as it is termed there, obtain the best quality of commercial lard the market affords, and remove from it, as thoroughly as possible, all foreign substances by refining it. This lard, thus refined, is made the basis of their lard compound.

From a sanitary standpoint, in my opinion there can be no objection to the addition of the cotton-seed oil and beef stearine to this refined lard for the purpose of forming the lard compound put up by this firm. I am decidedly of the opinion that the cotton-seed oil and beef stearine are either of them infinitely more healthful than any refined lard, and that the lard compound, as prepared, is more healthful than the lard before refining.

In all my professional experience I have never known and have never read of an instance where a person's health has been impaired by the use of cotton-seed oil.

I believe that cotton-seed oil is a thoroughly healthful product, as much so as olive oil.

IRVING A. WATSON.

JULY 23, 1889.

STATE OF NEW HAMPSHIRE, *Merrimack, ss:*

Then personally appeared Irving A. Watson and made oath that the foregoing affidavit by him signed is true.

Before me.

J. H. ALBIN, *Justice of the Peace.*

I, John J. Berry, of Portsmouth, in the county of Rockingham and State of New Hampshire, upon oath depose and say:

That I am a practicing physician, and have been for ten years; that I graduated from the University City of New York, medical department, in 1878; that I located first in New York, then in Connecticut, and now in Portsmouth, N. H., and am now a member of the New Hampshire State board of health.

I have been house surgeon in St. Francis Hospital, and assistant surgeon in Chambers Street Hospital, and Hospital for Ruptured and Crippled, New York, in all three years. I am a member of the New Hampshire State Society, American Medical Association, and American Public Health Association. Have been health officer of Portsmouth; now associate editor of New England Medical Monthly.

I have used cotton-seed oil for medical purposes ever since beginning practice, and for many years for culinary purposes. Believe it to be wholesome, easily digested, and nutritious; believe the properties of cotton-seed oil of good quality to be identical with those of olive-oil, and the former to be superior to a poor sample of the latter. In my experience no distinction is made in medical practice between the two oils, it being generally understood that many brands of olive-oil, so called, are in reality wholly or in part cotton-seed oil. Chemical tests have established the truth of this supposition.

Externally applied, it is a bland, soothing substance, which acts as a protective dressing like the olive-oil. Internally it is used for various affections, and differs in its action in no respect from the oil of the olive; so far as I know physicians have no preference as regards the two varieties.

I have used it extensively in the preparation of salad dressings, as well as in other ways, and have invariably been pleased with it. Have eaten doughnuts fried in cotton-seed oil and have been unable to distinguish it from lard similarly used.

I have examined the specimen submitted. It has the ordinary appearance of good cotton-seed oil. Chemical tests show it to be such, and examination with the microscope attests the absence of foreign material as well as confirms the above tests. Had it used in the kitchen for salads and for frying purposes and was fully satisfied with the results obtained. In four tests recently made of four samples of olive-oil (so called) bought by me, I found only one pure olive-oil; the others were cotton-seed oil partly or wholly. This I determined by chemical tests.

JOHN J. BERRY, M. D.

Then personally appeared John J. Berry, and made oath that the foregoing affidavit signed by him is true.

Before me.

J. H. ALBIN, *Justice of the Peace.*

I, Lyman B. How, of Manchester, in the county of Hillsborough and State of New Hampshire, depose and say: That I have been a practicing physician twenty-six years. In 1868 I was elected professor of anatomy and physiology in the medical department of Dartmouth College, and have been professor continuously since that time. I also lectured in the Medical School of Maine during the last session. It has been my duty to lecture on food and its digestion. I am familiar with the controversy that has been raised over the merits and demerits of pure lard and the various substitutes for it that have been introduced.

I have used N. K. Fairbank & Co's "lard compound" for family cooking and also the Cotton-Oil Product Company's "cotton-seed lard," and I consider them just as wholesome as ordinary commercial lard, and I know of no objection to their use and sale.

I have had doughnuts fried simultaneously in the "lard compound" and the "cotton-seed lard." Four members of my family expressed a slight preference for those fried in the latter, while I inclined to those fried in the "lard compound." They were both very light and free from excess of fat and as nice as those fried in lard.

L. B. HOW, M. D.

JULY 23, 1889.

STATE OF NEW HAMPSHIRE, *Merrimack, ss:*

Then personally appeared the above-named Lyman B. How and made oath that the foregoing affidavit by him signed is true.

Before me.

J. H. ALBIN, *Justice of the Peace.*

I, George W. Pierce, of Winchester, in the county of Cheshire and State of New Hampshire, hereby depose and say: That I am a practicing physician, having graduated at the Berkshire Medical College of Massachusetts, in the class of 1854, since which date I have been in the constant exercise of my profession; that during the war of 1861–1865 I served as surgeon of the First Regiment of New Hampshire Cavalry, and from 1885 to 1887 as surgeon-general of the State of New Hampshire, and that I have been president of the board of health of Winchester since its organization, as well as being a member of the New Hampshire State Medical Society, a member of the Connecticut River Valley Medical Society, and a member of the Cheshire County Medical Society.

That for some time I have been cognizant of the fact that compounds of lard and lard or beef stearine and cotton-seed oil were upon the general market to be sold for culinary purposes. That such compounds have been sold and so used under my observation, and that in no instance has any injury or objectionable results followed such use. Had injurious or objectionable results followed such use I could not have failed in obtaining knowledge of the same.

The compound of lard, stearine, and cotton-seed oil as a food, in my belief, is a product that contains a greater variety of elements necessary to the maintenance of the human economy in a healthy state than either lard, beef fat, or cotton-seed oil alone, neither being in itself a perfect food product. Of the value of lard as a food I need not speak, nor of the value of beef fat for the same purpose, but of cotton-seed oil I can say that by itself it is a valuable food product.

I have used the same in my profession as a substitute for cod-liver oil, where the latter was not well retained by the stomach of my patient, with satisfaction to myself and apparent advantage to the patient. I have used it as a substitute for fresh cream in still other cases, where the cream did not seem to be well digested, with almost invariably good results, and I have fed the same to infants suffering from wasting diseases in doses of from one-half to one teaspoonful from four to six times each day, and have found the same to check the emaciating process quite as well generally as any other food to which I could resort.

I prefer pure cotton-seed oil for professional purposes to olive-oil, though olive-oil is now believed to be largely extended by an admixture of cotton-seed oil.

As an article for many culinary uses I prefer pure cotton-seed oil to either lard or medium grade butter, having used the same (cotton-seed oil) in my own family as a butter substitute in cooking meats and fish, as well as making gravies, etc. I am also acquainted with its use for similar purposes in the families of others of my acquaintance, and in no instance has my attention been called to any objectionable results from said use.

GEORGE W. PIERCE.

JULY 23, 1889.

Then personally appeared George W. Pierce and made oath that the foregoing affidavit by him signed is true.

Before me.

J. H. ALBIN, *Justice of the Peace.*

APPENDIX D.

Testimony of Mr. Hately, who appeared before the Senate committee of the Fiftieth Congress as a representative of the Chicago Board of Trade, and who is himself a pork-packer.

By Senator PLUMB:

Q. From what part of the hog do you get what is called white grease?

A. There is no such thing as white grease made in the packing-house now. In the march of events the progress in packing has been just as great as it has been in almost any other industry. It has not been a great many years ago since the whole entrails as they were taken from the hog—the greater portion of the fat on them—were taken away, carried out and buried. It has not been many years ago since some packers on the Mississippi River thought the head or feet or anything of that kind was of no value whatever. They only killed in the winter time, and one packer remarked to me: "What fools we were. We had big profits in those days if we had only known it. We used to take the heads and feet and guts and run them out on the Mississippi River and pile them up there, and when the ice broke up in the spring away they went."

Q. Then, what was called white grease now goes into the manufacture of lard?

A. Yes, sir. The lard system is now so entirely different that we could not make white grease.

Q. Then, what was formerly known as white grease now becomes lard by the process of manufacture?

A. Yes, sir. It never was really white grease at all. It was really only the lard, but not a product that would pass inspection.

By Mr. FOX:

Q. Mr. Fairbank said the lard was getting poorer and poorer and you contend that was not so. Is it not a fact that every time there is a corner on the Chicago Board of Trade and trade is strained they get more of the animal in because lard is scarce?

A. No, sir.

Q. Is lard to-day the same as it was ten years ago?

A. Yes, sir. It is a higher grade to-day than it was ten or twenty years ago.

Q. Although the gut grease, the white grease, does go into the product?

A. It is higher to-day than it was five or ten years ago.

Q. Although these other products do go in?

A. Yes, sir.

Q. Do you know anything about the heads going in, and what kind of lard the head makes? State what kind of lard the head rendered by itself makes.

A. It makes very good lard.

Q. What would it sell for?

A. I can not say what it would sell for by itself.

Q. Would it sell for as much as prime steam lard?

A. No, sir.

Q. Then it is a deteriorating element in prime steam lard, is it not?

A. It is not as valuable as the leaf alone.

Second, regarding the production of "prime steam lard," which is the industry fostered by the supporters of the Conger bill as against the cotton-seed-oil product, let us read from the able minority report of Mr. WILSON, of Kentucky, and then from the testimony of witnesses both for and against the Conger bill:

The first general knowledge of the adulteration of lard was obtained from the publication by the Chicago Board of Trade in August, 1883, of the charges and evidence in a trial before the directors of that body of the case of McGeogh, Everingham & Co. *vs.* Fowler Bros. The directors of the Chicago Board of Trade in the trial of this case had all the powers of a court in matters of administering oaths and taking evidence; and the official report of the proceedings is undoubtedly entitled to as much weight as the finding of a judicial tribunal. The testimony in this case disclosed, as we said before, for the first time to the public the presence of "agitators" of cotton-seed oil, oleo, stearine, tallow, bench-cuttings, floor-scrapings, heads, feet, marrow-bones, guts, etc., in the lard-tanks of the packing-houses at the Chicago Stock Yards. Circumstantial evidence indicated that lard, which was really a compositiou of the above-named ingredients, might be branded indiscriminately either "prime steam" or "pure refined," as the market might demand. It was further demonstrated by these proceedings that up to said date, *i. e.*, August, 1883, expert chemists were unable to determine with any degree of accuracy the presence of foreign fats in "regular" lard.

Samples drawn by Mr. C. H. S. Mixer, the official inspector of the Chicago Board of Trade, who appeared to testify before your committee here in 1888, and by his assistant, Colonel Taylor, and by these officers placed in the hands of several distinguished chemists for analysis, elicited reports from these gentlemen of the most diverse and contrary nature. Seventeen samples being thus submitted to five experts, no three of the five agreed in their analysis of scarcely any one sample out of the seventeen. It was shown that in the packing-house of these particular defendants the tank room where the lard was rendered contained thirty-two cooking-tanks; twenty were used for prime steam lard; two were used for tallow; six were called grease-tanks; four of these grease-tanks were used for rendering the intestines of hogs and "the refuse of the house generally;" two were called "pluck" tanks and were used for rendering hearts, livers, legs, etc. (See page 52 of the published proceedings, Chicago, Knight & Leonard, printers, 1885.) The product of these tanks was conveyed in pipes to another room, where the tierces and packages were filled.

The men who conveyed the materials to the tank-room were not allowed to see into which tank any materials they conveyed thither were dumped. The men inside the room, who filled the tanks, were not allowed to see where the pipes led to and consequently did not know what became of the contents; and the men who drew the different kinds of lard out of the pipes in the filling-room did not know where the pipes came from and what was mixed in said pipes, and consequently could not swear positively to the composition of the product drawn into packages for shipment. Then other employés were detailed to apply the stencils and brands.

From this description of the packing-house arrangements it can be readily seen that no evidence could be procured sufficiently definite to sustain the charges; and considering also the inextricable confusion of the so-called expert scientific testimony, the directors of the Chicago Board of Trade were deprived of any alternative and were obliged to find for the defendants in a sort of Scotch verdict, "not proven." The board of directors, however, did not refrain from annexing to their verdict a statement, which we copy as follows (page 271):

"Inasmuch, however, as these charges involve questions of the greatest concern to the members of this association and to dealers and consumers of pork products, not only throughout our own country, but in foreign lands as well, the board of directors, in view of the evidence submitted in this case, both on the part of defendant and for the prosecution, can not, with a due regard to their responsibilities to the public and to the members of this association, refrain from expressing their unqualified disapproval of and censure upon the defendants for the remarkable methods of conducting the business of manufacturing lard in their establishment, as developed by the evidence in this case.

"It appears and is admitted to have been the practice during at least several of recent months that beef product in several forms has been rendered in the same tanks and with hog product, this mixed product of certain tanks being conducted through an intricate machinery and pipes, in which also prime steam lard was at times conveyed to their so-called lard refinery, wherein both prime steam lard and the mixed product used for what is called refined lard is drawn off into packages for market; and this in a manner that, by accident or design on the part of the employés of the establishment, could easily contaminate the purity of their prime steam lard, which might thus become more or less adulterated, not only with the beef product so rendered with a portion of their hog product, but also with the cotton-seed oil and other unknown substances used in the manufacture of their so-called refined lard; and this board, in view of the existing methods of manufacturing prime steam lard in that establishment, recommend that without delay the parties so readjust their lard-manufacturing arrangements that all grounds for suspicion in this respect shall be effectually removed."

The above is what the Chicago Board of Trade found to be the fact as to methods of manufacture in one of the large packing-houses of that city, not in the factory of a manufacturer of "lard compound." It is evident that if the public is to be protected against the adulteration of lard the law and its regulations must embrace all establishments where lard is produced, as well as those where it is compounded.

The price of lard involved in this particular controversy was 12.02½ cents per pound, it being of course an artificial value created by the efforts of the plaintiffs in this case to engross the market, or, in modern parlance, "run a corner on the board." But the beginning of the depression of the value of American lard dates back from this period. From the publication of these proceedings arose the first damage to our foreign trade in lard, and here were sown the seeds of that distrust concerning the integrity of packing-house lard which seems now to have spread almost all over the civilized world.

Subsequent to these proceedings the Chicago Board of Trade adopted new rules for the manufacture of packing-house lard, making two grades, the definitions of which we quote as follows from the testimony of the official inspector, Mr. C. H. S. Mixer, already quoted herein (see page 347 of the proceedings before your committee in 1888, as aforesaid):

"*Choice lard.*—Choice lard to be made from leaf and trimmings only, either steam or kettle rendered, the manner of rendering to be branded on each tierce.

"*Prime steam lard.*—Standard prime steam lard shall be solely the product of the trimmings and other fat parts of hogs, rendered in tanks by the direct application of steam, and without subsequent change in grain and character by the use of agitators or other machinery, except as such change may unavoidably come from transportation. It shall have proper color, flavor, and soundness for keeping, and no material which has been salted shall be included. The name and location of the renderer and the grade of the lard shall be plainly branded on each package at time of packing."

Mr. Mixer explained before the committee that the business of an inspector under these rules was to examine lard with three tests in mind, *i. e.*, odor, sight, and flavor, from which tests the inspector approved or rejected the lard according to his own individual expert judgment. Mr. Mixer stated that in all probability an inspector could not detect 10 per cent. of adulteration in fresh-made lard. He said that the inspectors had no control over the packing-houses; that it was "their duty to deal with the result, and not the processes;" that more than half of the lard inspected in Chicago for the preceding ten years was made outside of the State of Illinois and at points where there was no local inspection. (See Mr. Mixer's testimony, pages 244–247 of the report of 1888.)

It may be well to call attention right here to the fact that there is not even a board of trade inspection of lard anywhere except in Chicago, New York, Cincinnati, St. Louis, and Kansas City. Dozens of other packing-houses, as for instance at Boston, Louisville, Omaha, Nebraska City, Sioux City, Indianapolis, Milwaukee, are operated where there is no local inspection of lard whatever. True, when lard packed at these points is sold in cities having so-called "official" inspection such lard is subjected to such inspection at the point of sale; otherwise there is absolutely no supervision of any kind over the packing-house lard of the United States.

It can be seen from Mr. Mixer's testimony that what is called "official" inspection in the so-called "pure-lard" manufacture is very superficial at best; and we call especial attention to the fact that the testimony of all packers who appeared before this committee in 1888 agrees that the production of so-called "choice" lard according to the preceding definition was and is very small all through the United States, and that in fact nearly all the lard produced in our

packing-houses was and now is of the grade known as "prime steam" lard. The importance of this point will be seen as we go on.

The fact is that the degrading of so-called "pure lard" by the filthy methods of some of the American packing-houses is responsible for the disturbance of our European trade in lard. This is shown by the many complaints that have come back regarding the packing-house lard. See the recent correspondence between Gebrüder Gause, large importers in Germany of American lard, and the New York Produce Exchange (Appendix B). This correspondence shows the worthlessness of the present methods of inspection applied to "pure lard" and the inferior quality of the product which can pass such inspection and still be known as "pure lard."

We get a complete description of the manufacture of "prime steam" lard from Bulletin No. 13 of the United States Department of Agriculture, division of chemistry, part 4, from which we quote as follows (page 406):

"*Prime steam lard.*—The prime steam lard of commerce is made as follows: The whole head of the hog, after the removal of the jowl, is used for rendering. The heads are placed in the bottom of the rendering tank. The fat is pulled off the small intestines and also placed in the tank. Any fat that may be attached to the heart of the animal is also used. The back fat and trimmings are also used.

"This lard is passed solely on inspection, the inspector having no authority to supervise rendering establishments in order to secure a proper control of the kettles. According to the printed regulations, any part of the hog containing fat can be legally used.

"Since much uncertainty exists in regard to the disposition which is made of the guts of the hog, I have had the subject carefully investigated. Following are results of the study:

"*Guts.*—The definition of the term as used by hog-packers is: Everything inside of a hog except the lungs and heart, or, in other words, the abdominal viscera complete. The material is handled as follows:

"When the hog is split open the viscera are separated by cutting out the portion of flesh surrounding the anus and taking a strip containing the external urino-generative organs. The whole viscera are thrown on a table and divided as follows: The heart is thrown to one side and the fatty portion trimmed off for lard. The rest goes into the offal tank or sausage. The lungs and liver go into the offal tank or sausage. The rectum and large intestines are pulled from the intestinal fat and peritoneum, and, along with the adhering flesh and genito-urinary organs, sent to the trimmer. All flesh and the above-mentioned organs are trimmed off and the intestine proper is used for sausage casings. The trimmings, including the genito-urinary organs, are washed and dumped into the rendering tank. The small intestine is also pulled from the fatty membrane surrounding it and saved for sausage casings. The remaining material, consisting of the peritoneum, diaphragm, stomach, and adhering membranes, together with the intestinal fat, constitute the 'guts,' which are seen undergoing the process of washing, which is usually conducted in three or four different tanks. As the 'guts' pass into the first tank the stomach and peritoneum are split open and also any portion of the intestines which sometimes adheres to the peritoneum. After receiving a rough wash, they are passed from tank to tank, when, after the third or fourth wash, they are ready for the rendering tank. The omentum fat is cut from the kidneys, and the kidneys, with a little adhering fat, go into the rendering tank. Spleen and pancreas go into the rendering tanks, as do also the trachea, vocal chords, and œsophagus."

That there can be no question about the correctness of the foregoing, we refer to extracts from statements made before your committee in 1888, in the appendix hereto.

In our opinion the greatest injury to the farmer and his hog crop comes from the unscrupulous methods of the packing-houses and stock-yard buyers, methods which the honest farmer would not employ and could not if he would. A considerable proportion of the lard consumed in this country is purchased direct from the farmers and from the small butchers. Such lard is, as a rule, pure, sweet, and clean, prepared only from suitable parts of the animal and rendered in an open kettle. But when the farmer offers it for sale he is met at once by the competition of the prime steam lard, made by the packing-houses in large tanks under high steam pressure, in which practically the whole hog is stewed up. This method of manufacture injures the farmer in at least three ways.

1. It competes with and limits the sale and depresses the price of his home-made lard.

2. It degrades the standard of American lard, to the injury of our foreign commerce.

3. It transforms into so-called "lard" those portions of the animal which ought to be thrown away or sent to the glue factory, or soap factory, or fertilizer factory, or properly branded so as to enable the purchaser to know what kind of so-called lard he is purchasing.

It is evident that, if lard were now made by the packers as it always used to be made and as it is now made by the farmers, more hogs would be required to supply the present demand for lard and the price of hogs would be higher.

Now listen to the testimony of W. G. Bartle:

Statement of W. G. Bartle before the House Committee on Agriculture of the Fiftieth Congress.

Mr. W. G. BARTLE, of St. Louis. I am now nearly sixty-one years of age, and have been engaged in the pork-packing business, directly and indirectly, for forty years. I succeeded John J. Roe in 1870, and have been running the house known as W. G. Bartle & Co. since 1867. Prior to that, from 1860 to 1867, it was Hamilton & Bartle.

During my experience in the business of pork-packing I have been the owner of two large farms, and have been engaged in farming, and shipping cattle quite extensively to the Eastern and Southern markets.

(He went to Kansas City.) I went to the stock-yards in the first place and saw the character of the hogs that were brought there and offered for sale. From there I went to the pork-house of a certain concern there. They were cutting up hogs at the time. They commenced slaughtering at 9 o'clock. I walked up the chutes and saw the character of hogs they were slaughtering. They were what I expected to find, a great many of them diseased hogs, of which the markets of the West are now full, from what is known as cholera. Whilst looking at the hogs the foreman of the establishment came to me and we got into conversation. I said to him that I had got out of the business and that I believed that I was away behind the age.

I told him that I had been in the habit of making considerable white grease, for which I had been denounced. "Yes," he says, "there ain't much white grease made now, these days, and it is quite unnecessary to make it." He said: "I was foreman for a certain party (naming him), and one winter (that party) purchased 2,200 smothered hogs, all of which I put into the tanks, and they went into prime steam lard." I have never in all my packing experience made use of smothered hogs by putting them in the lard tanks. I have made them into white grease and sold the product as white grease. Now the character of the hogs, from disease, etc., is worse than formerly.

Piggy sows are sold on the market; they will even drop their pigs in the cars or in the pens and they are driven at once to the scalding tubs and pass on the slides as other hogs do. They go through the process of curing, and are made into breakfast bacon, sugar-cured hams, and everything else. No one, either at the hotels or anywhere else, can be free from eating that kind of unsound food. There are also the stags, rough and coarse, and often a good many boars that go into the packers' hands, and it is impossible for the packer to purchase what he wants without taking them. They come in car-load lots, and if you do not take them all you can not get any. Pregnant sows are docked about 40 pounds and stags are docked about 80, and sometimes when they are very coarse they and boars are docked more than that, or probably a low price per pound put upon them.

I think there is a great evil, commencing with the farmer, and that if strict inspection could be enforced it would relieve the packer and would be of great benefit to the farmer, because a lot of that kind of truck only cheapens the price of good articles. Such articles are unsightly and unfit for use, and the packer well knows it.

The farmer has now found it profitable to breed sows so that they will have their pigs in the spring of the year. Winter pigs are considered poor property. At this season of the year we are not troubled so much with piggy sows as we are in the early part of the winter packing season, because they now can make it profitable to keep the sows, as grass is coming on to nourish the sows, so as to raise the pigs. The farmer has found it profitable to him to put up the sows after having raised, say, three or four litters of pigs. They then become too heavy to be profitable as breeders, and they are put in the pen for fattening purposes, and after a time the boar is turned with them, as they take on fat more kindly and grow better. Hence the condition in which they come into market and are offered for sale.

I will also state to this committee how I happened to come here. I have a farm in the State of Missouri, on which I reside most of the time, coming to St. Louis probably once in two weeks, and staying a day or two and going back. Mr. Halstead Burnet, of St. Louis, told me of this attack that had been made. I paid no attention to it previous to that. I had leased my establishment, which is a central block in St. Louis; it is on the South side of Choteau avenue and Third street; it is a double block, and my establishment is on the south side of that double block, with railroad facilities and everything of that sort, which I must say is kept very clean.

It is a short distance below the Southern Hotel, and business could not be conducted in it if it was not kept clean. I consider this attack upon the refiner as unjust and unwarranted, knowing what I do of the way in which refiners conduct their business. I thought that it ought to commence at the root, and show up the kind of truck they have to make refined lard out of, which I think has been gone over here pretty fully, and so it is unnecessary for me to make any further statements about that. I certainly can, as a pork-packer and an experienced farmer, verify the statements that have been made in my presence here in regard to making prime steam lard.

I do not know anything else to state to this committee.

Mr. CROMWELL. When you said you had leased your establishment, to whom did you mean you had leased it?

Mr. BARTLE. I leased it to N. K. Fairbank & Co. I came here and paid my own way. I want it understood that I am not an employed witness here in the interest of any one, either Messrs. N. K. Fairbank & Co. or the pork-packers. I could go further into this and show you how it would redound to the benefit of the farmer to put the stock into good condition before bringing it to market, and impose a penalty upon the shipper who ships diseased animals, and also upon the packer who buys them, because they are unfit for human food. There is the place where this evil commences. There is no packer that is an exception to the rule.

Mr. Whittaker himself buys in the same market as I do, and he is compelled to pack the same character of stock that I do. So is Mr. Squire. They are also dealers in the National Stock Yards, and have to buy as I do. They are compelled to pack the same kind of stuff, and I know their hogs must die in transit; they must die after they get to the pens, sometimes in the first stages of disease or probably when they get there they may be in the last stages. That is the reason there are so many smothered hogs. As a practical farmer I think I can give you the reason why there is so much disease.

In old times, when I first commenced buying, which I did in 1846, when a mere boy, I made a purchase of eighteen thousand hogs my first year. The hogs in the country would run in the timber; they would make their beds in the leaves, six or eight in a place, and the pigs would run until they were ten months old, or probably older. They would then be matured and would be capable of standing the harsh food that they had to eat; that is, pure corn. Now at four months old they are put in pens, the corn is thrown in there indiscriminately, and they can eat the whole day, gorge themselves, and disease is bred which I think is so prevailing at the present day. Then there is the overcrowding of them in cars, which is another great evil, and is a sin. They are loaded until they are almost like sardines in a box, and young hogs, light in the bone and forced as they have been, are frequently smothered.

I had the good, bad, and indifferent. But I claim that I had to take the piggy sows, objectionable stags, and everything, just as other packers had to do. I was not an exception to the rule. Neither is Mr. Whittaker, Mr. Squire, or any one else. But the making of prime steam lard in these days I say is detestable, and there has been enough of filth flung in that direction to disgust anybody. But I am sorry to say that the description given of the way it is made is the truth.

The CHAIRMAN (to Mr. Cromwell). Do you desire to ask Mr. Bartle any further questions?

Mr. CROMWELL. No, sir; I will not interrogate him; he makes his own statement.

Under cross-examination by Judge Wilson, of counsel for advocates of the bill, he said: "The fact is when two or three thousand hogs are coming and going through the pens amongst other hogs you can not tell the cholera hogs until they are gutted; then the color of the hogs will show."

Q. What did you do with them?

A. They went into bacon, just the same as the rest of them, and they are doing it now. The yards are almost full of them. There is more this season than I have ever known. In Central Missouri there is scarcely a drove of cattle that has not got hogs following it simply because they have become diseased and have had to be shipped to market. I myself have had to ship several lots, and I have two hundred on hand now in Missouri.

Q. This is the kind of information that the committee ought to have.

A. Yes, sir; I want to give them a plain and unvarnished statement.

Q. This is something that the country ought to know, and so I hope you will give it to us just as fully as you can.

A. I will try to do so. It is very hard for a packer to detect the presence of cholera when they are all crowded together, especially a man buying two or three thousand every day. They are crowded in close pens in the yard, and mixed up with other hogs, and it is very hard to distinguish even the boars and the stags. Sometimes you know them when you are watching; in that way you can get a pretty good idea. That is, only after they have passed into your possession. Before that it is very hard to detect.

Q. So that the root of all this evil lies with the farmer; that is your idea?

A. That is the exact point.

Q. The hogs become diseased when they are in the possession of the farmer; he sends them to you and you buy them; then you convert them into meat and put them on the market, you knowing that the hogs were diseased when you converted them into meat, just as the farmer knew that they were diseased at the time he sold them to you; is that so?

A. Yes, sir; that is unavoidable. The same thing applies to cattle with Texas fever.

Q. Who was it suggested it to you to come here and testify?

A. I will state to you how it came. It will be necessary to do that to show it

up. I was on the Board of Trade when Mr. Halstead Burnet told me the manner in which their business was attacked.

Q. Who is Mr. Burnet?

A. Halstead Burnet is a member of the firm of N. K. Fairbank & Co. I had said nothing to him in regard to it, and I went across the street to a lunch-house kept by a man by the name of Hellary, and there I remarked to a pork-packer named George Day, an old pork-packer of St. Louis, that I thought they ought to commence further back. In the first place they should commence with the farmer, and at the stock-yards and packers; that I thought there was more filth in prime steam lard than there was in anything that the refiner could do to purify that, to add to its purity. Then I was called upon afterwards. Mr. Burnet came and asked me if I would have any objections to going to Chicago with him that night. I told him I would not. I came to Chicago, but unprepared at that time to come to Washington. But I came here of my own accord, of my own free will, in my own way, and I would not take 5 cents from anybody to come here to testify for anything. I came here perfectly independent.

Mr. WILSON. That is not responsive to my question, but I did not interrupt him. I am not making any imputations against you, Mr. Bartle; I simply ask you who it was suggested that you visit this packing-house. You say it was Mr. Burnet, of the firm of Fairbank & Co.

Mr. BARTLE. I feel a deep interest in remedying this evil by commencing at the root, where it comes in.

The CHAIRMAN. Some of your statements are very astonishing to me. I have had some experience, as you know, not only as a packer, but as a farmer, and have lived in the midst of a farming country. What may be true of Morgan County is not true of Northeast Missouri. There is not one farmer in a hundred that I know of within the last ten years who will spoil a nice lot of hogs by putting into it stags, boars, and piggy sows, because the loss falls on him.

Mr. BARTLE. It is getting worse every year. We had a number of books that we kept for the benefit of buyers. These books gave the name of the owner of the hogs, the number of the pens they are in, the dock taken off, the number of sows and stags, the price, and the amount carried out. We kept three of those.

Q. You say you think the proportion of that kind of hogs used in the manner you have described is growing?

A. Yes, sir.

Q. Is it not true that this rule of docking has been increased and more rigidly enforced in the last few years than formerly?

A. I think on stags it has, but on sows it has been 40 pounds for a long time; they would sometimes agree as to stags, and there was no general rule; it was usually 40 or 50 pounds, and sometimes 60, according to whether it was a young stag or an old one. But I know this, that a first-class packer don't want stags if he can help it.

The CHAIRMAN. As a rule, in the part of the State of Missouri where I live, you can not sell a boar to a butcher or packer at all; I know that to be the case in my town. In the last ten years I have paid high prices for fatted hogs and kept them until they were three or four years of age, and I have been invariably compelled to send them to rendering establishments, where dead animals from the stock-yards are rendered. I have never in the last ten years sold one to a butcher or packer; they will not buy them at all. I have seen hogs shipped at the stock-yards at Hannibal, and I do not believe that they would average one of that character to a hundred hogs, because the dealers are all particular about it, and so are the farmers who offer their hogs for sale.

Q. Now will you be kind enough to state at what time in your packing establishment in St. Louis, during your experience as a packer, you commenced in the house of John J. Roe & Co. to render your smothered hogs?

A. No, sir.

Q. I say, can you tell about what time you commenced to do that?

A. When there was any that came in they were rendered in the same manner that we continued to render them afterwards, in No. 2 tanks, and they went in the direction I tell you, as white grease. But it is only of late years that there has got to be so many of them, which I tried to explain.

Q. Here is what I want to get at: You stated that before you went into business on your own account you bought hogs at the stock-yards for Francis Whittaker & Sons and John J. Roe & Co.?

A. I think I bought all of Whittaker's hogs for seven years.

Q. During that time what was done with the smothered or down hogs at the stock-yards?

A. Those I bought for Francis Whittaker he rendered out. The year that there was so much loss on the Hannibal and St. Jo road, so many hogs frozen, I bought him several thousand; I had them piled up mountain high.

Q. That was during the war?

A. Yes, sir. I even took my own teams from my business to haul dead hogs, and they were rendered out at his Rocky Branch establishment.

Q. Not at his packing establishment?

A. At his slaughter-house. I bought them for almost a song; I used to pay so much apiece for them.

Q. What I want to get at is, when you were buying hogs in the ordinary way, by the car-load, when you went on the market to buy a car-load of hogs, did you buy the hogs in the pen or did you buy the dead hogs that came in the car?

A. Never.

Q. Do you state—because this statement of yours will go out to the entire country—to this committee and the country that during the time you were packing hogs in St. Louis, with a large Southern trade, as I know that house had, you made no effort to separate that class of hogs from what you were putting into the food product that was being sold under your brand?

A. Yes; I did. I watched the pen always, and would never touch a lot of hogs that I thought had the cholera. But, as I may state to this committee, it is impossible for you to detect them when there are only a few in the lot.

By Mr. WHITING:

Q. I would like to ask, for information: In the manufacture of this refined lard, they buy pure steam lard?

A. They buy pure steam lard.

Q. Do they purify that any before they put in cotton-seed oil?

A. Yes, sir.

Q. So that a large portion of what is known as Armour & Co's or Fairbank's refined lard is made of steam-refined lard, which is somewhat purified?

A. Yes, sir; it goes through a process which takes out the dregs and settlings that may be in it.

Q. They think that is necessary in order to put a good article on the market?

A. I think so.

Q. And the prime steam lard, in your opinion, is not a good marketable, edible fat?

A. I say it is not.

Mr. LAIRD:

Q. Who asked you to come here—that is, who of the gentlemen present, counsel of Mr. Fairbank or any one?

A. There is no one here who knew anything about my coming here; I do not think a single person knew of it.

By Mr. CROMWELL:

Q. In answer to Judge Wilson's questions I understood you to state that you might justify legislation under the conditions he stated?

A. Yes, sir.

Q. I want to know if you know of any fact or any reason that has occurred within your knowledge and observation, in your forty years' experience, for placing an inspector in any establishment or any manufactory of refined lard?

A. I do not.

Q. Or for placing the manufacture of refined lard under any supervision whatever?

A. I do not.

Q. Do you think there should be any legislation against refined lard, if it be made solely of refined steam lard, in addition to cotton-seed oil and pressed beef fat? Do you think there should be any legislation if it be made solely of those three ingredients?

A. Well, I do not know how to answer that question. I came here to state what lard was before it came into the hands of the refiner. From what knowledge I have of refining I can not see that there would be any necessity, if the articles that they get are pure when they get them and compounded and put together; I can not see where there would be any injurious effects at all.

Q. Refined steam lard which they subject to this refining process is better after that process than before, is it not?

A. I am satisfied it is.

Q. Then if the cotton-seed oil is properly refined and pure, if the pressed beef fat is of good quality, is the composition, the result, a wholesome and nutritious one.

A. I should say it was.

By Mr. OLIVER:

Q. Judge WILSON has asked you a hypothetical question as to the effect on the market of a discovery that refined lard contained the percentage of elements that he named. What would be the effect upon people if they knew that pure lard contained gut-fat, pigs'-feet grease, etc.?

A. I think if they discovered that they would not buy it.

Now hear the statements of other witnesses on the same subject, and also a letter from German importers at Berlin:

APPENDIX A.

[Excerpts from report of hearings before the House Committee on Agriculture and before the Senate Committee on Agriculture. Government Printing Office, 1888.]

Statement of Michael Ryan (page 47).

Q. What kinds of brands of lard do you manufacture?

A. Principally prime steam lard.

Q. Out of what do you make it?

A. Prime steam lard, or, as we sometimes call it, hog round lard, is made from the trimmings and the leaf, the gut-fat and the heads of the hog; all parts of the hog go into this prime steam lard in equal proportions.

Statement of Joel A. Sperry (page 61).

The steam lard which we make is composed of the trimmings from the hams, which is fat, off the shoulder and off the side, and the lard that is taken off the guts.

(Page 63.) There are a good many concerns, I think, that make but one article of lard; they make what we call the run of the house, which is the product of the hog, all of it.

(Page 66.) There are certain brands of steam lard on the market now that I would not buy with out I had a sample and test, because I know there is no dependence upon it.

(Page 67.) Q. What sort of pearl-ash do you use?

A. It is the best.

Q. It makes prime steam lard?

A. Yes, sir.

Q. That means clarified then, does it?

A. It is simply this: It is lard where it is drawn off and rendered in tanks. Of course, rendering 3,000 or 4,000 pounds of lard by running steam into it, that accumulates a certain amount of water, and the refuse and scrap that is left when that lard is thoroughly cooked settles, and in drawing that off at times you have got to draw it down so that you don't leave any lard upon this water and sediment. You can't get all off many times, though, and there will be a little scrap that will go off with this, and that gets into the lard. It is not perceptible, but you put it into a receptacle and boil it over this water with a little pearl-ash in it, and that separates it all, and after it has stood it settles, and you can draw the water off, and it takes every particle, and when you put up 100 tierces of lard it will be all alike and clean.

Statement of John Whittaker (page 71).

Q. What has been spoken of here as prime steam lard, as I understand you, is the unmixed fat of the hog.

A. Prime steam lard is the usual proportions of fat coming from the ordinary good hog.

Q. There is nothing else mixed with it?

A. No, sir.

Q. So that any man who buys prime steam lard gets nothing but the fat of the hog?

A. That is according to the rules of the Board of Trade, and I think those rules are generally lived up to.

Statement of Abram S. Jewell (page 99).

Q. Speaking now of packers, do you know whether packers ten years ago used gut fat in the manufacture of lard?

A. I think they did. I think it is used now in what they call hog round lard.

Q. How recently did the packers begin to use gut fat?

A. That I can not tell.

Q. In the past few years, however, was it not?

A. Yes, sir. There has been a great improvement in the last twenty years in the manufacture of lard, and in fact in preparing the hog for the market. It is reduced to a science now, and many portions of the hog that forty years ago were thrown away are now utilized, some in one form and some in another. But when it comes on our market, it comes on in a uniform manner, when before it came very ununiform. As I said, the process of producing lard from the hog is reduced now to a science.

Q. But it has only been in recent years that the gut fat has been employed in the manufacture of lard by the packers?

A. I should think so. I can't tell you how long since it has been used.

Q. In recent years?

A. I couldn't tell you how long ago it first began to be used.

Q. Respecting the heads, how long have packers been employing the head fat and putting that in the tank?

A. About the time they began rendering lard by steam.

Q. Is that also so about the feet?

A. The same in regard to feet. Before they commenced using steam to render lard the head and feet were never used as lard.

Q. But since they have introduced the steam process they employ the head and feet?

A. Yes, sir.

Q. As well as the entrail fat?

A. Yes; fat from the entrails.

Statement of U. S. Epperson (page 102).

We manufacture prime steam lard in the manner very accurately described by Mr. Whittaker, of St. Louis, yesterday.

Prime steam lard is the standard lard of commerce, deliverable on board of trade contracts.

We refer at this point to the statements of John C. Hately and William G. Bartle, quoted in previous report upon this same bill; *i. e.*, Report 970, part 2, Appendix D.

We call especial attention to the following remark from Mr. Hately, which appears on page 337 of the report of 1888:

"It has not been a great many years ago since the whole entrails as they were taken from the hog, the greater portion of the fat on them, were taken away, carried out and buried. It has not been many years ago since some packers on the Mississippi River thought the head or feet or anything of that kind was of no value whatever. They only killed in the winter time, and one packer remarked to me: 'What fools we were. We had big profits in those days if we had only known it. We used to take the heads and feet and guts and run them out on the Mississippi River and pile them up there, and when the ice broke in the spring away they went.'

"Q. Then what was called white grease now goes into the manufacture of lard?

"A. Yes, sir. The lard system is now so entirely different that we could not make white grease."

The testimony of James Matthews (page 159) and of John Callahan (page 163) seems practically in accord with that of the packers. Some attempt was made at one time to discredit the testimony of these men, because having been employed in the packing-house of one of the proponents of this bill they were induced by some of the opponents to appear in Washington and make their statements before your committee. No serious attempt, however, was made to contradict or impeach their testimony. Both appear to be good, honest, ordinary every-day laborers. But there should have been no more objection to their appearing before the committee than there was to Professor Sharples, who appeared as the paid expert of these same proponents. We must allow that the workingman is honest as well as the professional man.

Statement of N. K. Fairbank (page 291).

That process reduced the quality of prime steam lard, and it got it to such a point that the people began to complain of a bitter taste in it.

Now in the great packing-houses of the West they do not stop to clean the guts or make sausage cases of them. There are only certain particular entrails used for that purpose, and all of the gut fat. They just wash around, not thoroughly, and then throw all into the tank.

Q. Guts and all?

A. Guts, head, feet, and everything. The lard tank to-day in a packing-house is a sewer for cleaning out everything in the shape of grease. To-day there is not a packing-house that makes—I won't say a tierce—but there is no such thing as white grease from packers on the market.

Q. That is worked up into lard?

A. It all goes into the lard, all the product that we used to buy as white grease. There is no such thing as No. 1 lard any more. It all goes in, and is all prime steam lard. The quality of it had deteriorated to such an extent that we had to get something to mitigate it, to do away with the taste and smell.

APPENDIX B.

BERLIN, *September* 13, 1889.

The SECRETARY OF THE PRODUCE EXCHANGE,
New York:

We, the undersigned, beg to call your attention to irregularities in the lard trade which are apt to shake our confidence in the respectability of New York shippers and damage our trade with your market.

For years we have purchased from New York commission merchants large quantities of Western steam lard on condition that every lot be accompanied by certificates of inspection by a properly appointed inspector and approved as choice quality. These certificates are frequently issued in such frivolous manner that they give no guaranty whatever of the quality of the goods. We are informed that your inspectors do not personally inspect the goods when the same are delivered by respectable packing-houses, but grant any certificate required without examination. Such appears to have been the case with a lot of 350 tierces choice Western steam lard marked K. U. X. Y. Z. F. G., branded Jacob Vogel & Son.

Messrs. ——,* of your city, have shipped for our account by steam-ship Gellert and also with the lot of 100 tierces marked F. H. 100, branded Jacob Vogel & Son, shipped by steam-ship Ems. According to the certificate of Mr. Charles H. Munday, which please find inclosed, these lots have been approved as choice Western steam lard, but the goods do not correspond with this definition, "choice quality."

A number of tierces contain a dirty yellow malodorous substance which seems to be gut-lard or ordinary lard drawn too close on the tank bottom. This fat can not be sold here as lard or for any edible purposes.

We have sent Messrs. —— a claim for the loss we have suffered on this shipment and would request you to point out the justice of proper certification in such cases, which would otherwise shake the confidence in American lard, which, owing to frequent similar occurrences in the past, is not what it ought to be in this market.

The trade here accepts refined or compound lard on faith in the brands, but in the case of steam lard, which forms the bulk of our importations, we look to the inspection certificates for a protection, which is only too illusory, and when we are deceived through fraud or carelessness we are placed in this position, that the American shipper creeps behind his certificate, while our buyers hold us responsible for the quality delivered.

We can not too strongly point out to your honorable board the necessity of providing easy means of redress, as well as strict control of your public inspectors, as otherwise our Government might feel compelled to provide supervision on sanitary grounds.

We are only asking for delivery of that which we buy and pay for, and feeling confident that commercial honor is the first requirement on your exchange, as well as our own, we ask your prompt attention to the case in hand, signing most respectfully,

GEBR. GAUSE.

It is evident, Mr. Speaker, that this bill will pass, because the vast majority of the Republicans are in favor of it, and they are aided by nearly all the Democrats from the West, including the greater number, if not all, of the Missouri delegation on the Democratic side; but the knowledge of this fact does not deter its opponents from entering their solemn protest against it.

The bill is outside of the spirit of the Constitution; it is deceitful and fraudulent legislation; it is sectional; it is oppressive in its requirements; it seeks to protect the Western hogs and to crush the cotton-seed-oil industry; it injures the consumer by increasing the price on articles of home consumption; it declares that lard compound is deleterious, but fails to prove the charge; it insists that "lard compound" is a fraudulent label and then compromises by allowing the manufacturers to use either brand, "lard-compound" or "compound lard;" it strives to sustain a filthy, unclean product against a pure, wholesome commodity, and while it objects to the picture of the hog's head on the label of "lard compound" it puts in prime steam lard the hog's head itself as well as the guts and unclean parts of the hog.

* The name is omitted because the shipper was not to blame for the poor quality of lard delivered by the packer or for the inspector's carelessness.

Compound Lard.

SPEECH
OF
HON. EDWARD LANE,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 21, 1890.

On the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard.

Mr. LANE said:

Mr. SPEAKER: The special order under which the House is now proceeding embraces three measures, that is to say, the meat-inspection bill, the pure-lard bill, and what is known as the option or Butterworth bill. These three measures come from the Committee on Agriculture and are presumed to be in the interest of the farmers of the country. I favor all three of these bills, but do not concede to them the importance claimed for them by some gentlemen on the floor of the House.

In regard to the first bill I wish to say that, when we consider the fact that at various times contagious diseases are certain to prevail among food cattle, it is certainly essential that such inspection should be provided as will prevent the sale for food of diseased meat. If State or municipal laws are inefficient, national law should be provided. Inspection of cattle previous to slaughter should in all cases be enforced, and, where such is impossible, inspection of the flesh should be made previous to sale.

Prior to 1881 the pork of this country had access to all foreign markets, but in that year the German and French Governments forbade the importation of our pork into their markets; and prior to 1884 the markets of the world were open to the sale of American cattle, but in that year the British Government excluded our cattle, except on condition that they should be slaughtered within ten days after they reached port. We learn by official reports that our shipment of pork had reached $104,000,000 annually, but on the passage of these laws by the French and German Governments it fell immediately to less than $60,000,000, and that the shipment of cattle prior to this time amounted to $17,000,000 annually, and under these new conditions it fell to $10,000,000. These losses since that time to our people amount to over $450,000,000.

These discriminations were made against our meat product by the foreign Governments on the ground that such meats were diseased and unfit for food. Under this bill it is to be hoped that when the proper inspection is made it will enable our people to insist that it shall be accepted as pure and healthful, and in case it is refused the bill empowers the President to declare our ports closed against everything such countries produce and desire to ship into this country. The bill will also to some extent protect home consumers in the use of healthful meats, which is very much desired. I hope the law will prove beneficial to all the people, and if it fails in its purpose it can be repealed.

The pure-lard bill, or what is known as the Conger bill, is the second in the special order, and its friends claim that it is in the interest of pure and healthful food, and if this is true there should be no serious objections to this law. There is in this day and age a great deal of sham and shoddy in the world, and people can stand a good deal of this, but, when the substance on which human nature feeds and subsists itself is so doctored and compounded that we do not know what we are eating, it is time that humanity should have some relief, even if it is by force of law.

Mr. Speaker, during this debate I have heard and read so much about the adulteration of lard and the handling of pork that I am almost ready to forswear my religion and become a Jew. I know that counterfeiting has been practiced since the dawn of civilization, but I had no idea until I heard this debate and read the testimony taken by the committee that such systematic fraud had been practiced on the consumers of the country in the sale of compound lard. Not only has a fraud been practiced on the consumers of the country, but also on the farmers who are engaged in raising hogs for the market. I knew that the manufacturers of the country, by the assistance of Congress, were obtaining protection that must be paid by the farmer, that the farmer was being discriminated against, but

I did not dream to what extent these manufacturers of the so-called compound lard were imposing on the farmers of the country.

We raised in this country last year 51,602,780 hogs, and from the testimony taken before the committee it is estimated that because of this compound-lard process these hogs depreciated 70 cents per hog, some witnesses putting it as low as 40 cents and others as high as $1. The testimony further shows that this compound lard is made of 60 per cent. cotton-seed oil mixed with 20 per cent. of tallow or stearine and 20 per cent. of lard for "flavor." It is further shown by the testimony that sometimes they put as much as 35 per cent. of water into it, and then this compound is sold as pure refined family lard or prime refined leaf lard, and some gentlemen call this vile mixture pure and healthful food, or at least good enough for poor people to eat; and, to listen to the story of these honest manufacturers of this villainous compound as they speak through their representatives on this floor, one would be led to believe that they were engaged in this business solely in the interest of the poor.

They say that cotton-seed oil is healthful and so is tallow. That may be so in their natural condition, but the samples of this compound lard brought before the committee and analyzed by the chemist are of such a vile character that they are a stench to the nostril and revolting to the stomach. But some of these compounds are so mixed that no one but an expert can tell the counterfeit from the true article, and people are thereby deceived. Counterfeiting in any form is a fraud, but if a person passes on me a counterfeit bill and I pass it again on some person else I am not harmed thereby; but when I purchase an article of food to sustain life and I am deceived, then I do sustain a great injury. Nor does the fact that cotton-seed oil is not injurious to the human system help the matter.

I have no objection to the manufacture and sale of cotton-seed oil, and I think that if any person wishes to use it for food he should be permitted to do so. Far be it from me to dictate by legislation what any man should eat or drink. I think these are personal rights, to be settled by each individual, and not by law. If any person wishes to purchase and use as food cotton-seed oil, let him do so, and mix it with lard or tallow in any proportion that his appetite may demand, or even if he wishes to purchase it in the compound form let him do so; but what I insist is that the consumer should not be deceived in what he purchases; that every tub should stand on its own bottom.

It is shown in the testimony before the committee that a single city in this country in 1886 shipped of this character of lard 267,500,000 pounds in excess of receipts. This is the fraud I complain of and which I think should be stopped. The amount of this fraudulent lard made in the United States annually is 320,000,000 pounds.

Mr. Speaker, I represent an agricultural district largely engaged in raising hogs. Last year Illinois raised more hogs than any other State in the Union except Iowa, the number being 5,433,250. Now, if there is a loss of 80 cents per hog, as is shown by the testimony, it would make a loss of $4,346,600 to the farmers of Illinois.

My people favor this law, Mr. Speaker, and I think it is the duty of a Representative on this floor to truly represent his constituents without regard to his own views when the enactment of such law does not conflict with the Constitution. I would prefer that this result could be reached through our State legislation. But it seems, in order to stop this fraud and secure, not free trade or fair trade, but an honest trade, Congress must take charge of this matter and stop this falsehood, deceit, and fraud hitherto practiced on the producer and consumer of swine.

But, Mr. Speaker, I regard the option or Butterworth bill as more appropriate legislation than either of the other two. Option dealing is a vice, and statute law should make it a crime. The necessity for relief to our farmers is apparent to everybody. Great distress is near at hand unless a remedy is soon found, and I am quite sure that this bill will not furnish adequate relief, but it is a step in the right direction. The state of the markets on grain and stock threaten the heart of the grain and stock producing interests of the West.

We see an effect. What is the cause?

We learn from the public press that a committee of the United States Senate is insulted and treated with contempt by those engaged in dealing in stock.

We are informed that demagogues are busy inflaming the public mind against men engaged in the laudable attempt to destroy the price of grain.

We are taught that the Federal Constitution is too narrow to relieve the known distresses of those engaged in agricultural pursuits and that State constitutions are not broad enough to reach the disease.

If this be true, we must either prepare for a worse condition of the grain and stock market or we must amend the fundamental law.

If the States can not regulate this by uniformity of legislation, then the power should be, by amendment, conferred on the Federal Government. We are suffering from a cause that only criminal laws can wipe out.

There is great depression in all the products of the farm, and the option dealer and his friends cry overproduction, but statistics prove that the amount of grain produced has no effect on the market.

The bull and bear raise and lower prices according as they command capital. Whether wheat is 50 cents or $1 per bushel cuts no figure. Supply and demand have no perceptible effect on prices. If the bull is successful markets are good; if the bear triumphs there is a crash.

Option-dealing or selling what one does not have and has no intention of possessing, or, putting it in its true light, betting on the price of grain and stock at a future date, is vicious, because there is an incentive on the part of one party to the bet to destroy the worth of an article.

Option-dealing is nothing but gambling pure and simple, that and nothing more.

If a man bets $5,000 that certain lots will depreciate 30 per cent. in three months, he must to gain his wager create a panic in lots in that neighborhood which might get him into trouble, and yet so-called respectable men bet on the price of grain, and the result on the real owner of grain is disastrous.

I may be wrong in my conclusions, but the depression of farm products has led me to the conclusion that the tendency of grain-gambling is to drive the American farmer from the farm.

There is an evil, a vice, damaging the crop and stock interest of the West and South, and this vice should be made a crime.

The grain gambler should be on a level with the poker-chip man, the keno-caller, the faro-dealer. The grain man is quasi-respectable everywhere, the common gambler ostracized everywhere; and yet, so far as the consequences to the people of this country are concerned, the common gambler is harmless as compared to this output of respectable grain-monte population which has swarmed on us in the last decade.

The common gambler has no capital and has a bad reputation. His life brings poverty on himself and disgrace to his family. His victims are few and are to blame for being caught. The gambler dies unregretted, unwept, and dishonored. The grain-monte man has capital, power, influence, position, and the result of his life is injurious to that pursuit in life which makes America the pre-eminent nation of earth.

Rob us of grain and stock and we are paupers. Debase this industry and we are a nation of serfs; uplift it and we are the most prosperous of all people. If we are to have an American farmer we must have compensation for labor. Slaves, peasants, serfs, are the only farming class that can be made to toil for others at wages or profits less than the cost of a crop, and the continuance of the option dealer will result in driving Americans from the farm and filling their places with an alien tenant class, a class that will be brought here, not to be citizens or own land, but to eke out a livelihood as tenants from one generation to another.

If these things make no impression on the public mind it will be because the people who gain wealth by other pursuits are indifferent to the fate of the American farmer and stock-raiser, and because they are content to live, exist, grow rich, and die surrounded by a mass of humanity from across the ocean who have but one idea in life, a bare living; and yet, when the American ceases to farm and lands are tilled by tenants, the effects of this will affect all other trade and business. To drive the option dealer from options forces the capital engaged in it, beyond the real visible supply, to engage in honest pursuits and results in benefit to the country at large.

It is conceded that we must find some means to check this growing evil. It is hinted, if not asserted, that the powers granted to Congress do not include the power to regulate this phase of so-called commerce and that the power of the State does not reach out beyond its territorial limits.

I think, Mr. Speaker, that the power of Congress is ample for this purpose and that its power should be invoked in the interest of agriculture, and I hope that the proposed measure will secure the desired result. When we look at the great interest and value of farm products these products are entitled to our highest consideration. The value of some of the farm products of last year in this country are as follows: Potatoes, $94,000,000; hay, $408,000,000; tobacco, $43,000,000; cotton, $292,000,000; corn, $597,000,000; wheat, $342,000,000; oats, $10,012,000; hogs, $243,418,336; horses, $978,516,562; mules, $182,394,099; sheep, $100,659,761; milch cows, $353,152,133; oxen and other cattle, $560,625,137.

This does not include many other crops, as rye, buckwheat, etc., but I respectfully submit that the interests I have mentioned are sufficient to be protected from gamblers and robbers. Henry Ward Beecher said that—

> Gambling with cards or dice or stocks is all one thing; it is getting money without giving an equivalent for it.

Mr. Speaker, gambling is a vice which is productive of every possible evil. It is the offspring of avarice, the brother of iniquity, and the parent of mischief. It has brought disgrace to many a worthy family, is the cause of the loss of honor to man, and finally leads to suicide. It is only a question of time with all gamblers; though good fortune may attend them for awhile, the reverse is sure to follow, and the greater master a gambler may be in his art the worse man he is.

The statute of Illinois provides that whoever deals in options in any grain or stock or spreads false rumors to influence or affect the prices of the market shall be fined in a sum not less than $10 nor more than $1,000 or be confined in jail not exceeding one year, or both, and that all option contracts shall be absolutely null and void. The supreme court of that State has held this statute valid

in both civil and criminal proceedings. It is not held that future delivery of grain or other commodity is prohibited by this statute, but simple speculations in differences in market values. The bill under consideration only requires a person engaged in the option business to take out a license, as such dealer, from the Government, for which he is to pay $1,000 annually, and in default of such license if he carries on the business he shall be subject to a fine of not less than $1,000 and not more than $5,000 or imprisonment, or both fine and imprisonment.

The evident intention of the law is to tax the business out of existence, as State banks have been. I hope the bill will have the desired effect, and I will give it my support, but I would much prefer that these matters should be attended to in the several States by local statutes, but it seems it can not be done, and therefore the appeal is made to Congress to grant the desired relief.

Mr. Speaker, it is claimed that these three acts are in the interest of the farmer and are passed for his protection, and that this is about all that will be done for him at this session of Congress. Congress has been in session now nearly nine months, and the passage of these three acts is but a mere bagatelle in the way of benefits as compared to the increased burdens imposed on the farmers and laborers of the country by the tariff bill passed by this House at the present session. This class of men can not be deceived any longer, and the sham and humbug of passing these acts as compensatory for the passage of the tariff legislation is too apparent to mislead any person.

I do not insist that tariff legislation is the only legislation that injures the farmers, but I do insist that it is the chief cause to-day of the depression in the fields of agriculture, and it threatens to pauperize labor. It is the greatest political question to-day in this country, and it will ever so remain until the Government ceases its paternalism of the manufacturers of this country. It is the greatest question for the reason that it involves the principle of personal liberty in its broadest sense. A protective tariff creates monopolies, centralizes wealth, and restrains freedom. It is the variation and diffusion of freedom which produces the greatest sum of human happiness, energy, and the greatest sum of human skill, the greatest sum of human benefits, and their most equitable distribution. The moment a political privilege of any kind is created, freedom recedes just so far as the privilege operates. When a tariff law takes one-third of the earnings of the labor of one man and gives it to another without his consent, it encroaches on his personal liberty, and to that extent encroaches on the principles of a free Government. Liberty and liberty alone gives to man all for which existence is valuable, and where there is liberty there slavery can not be, and there is no liberty when a man can not sell the proceeds of his labor.

I do not think, Mr. Speaker, that the cause of agriculture's depression is due to either of the causes mentioned in these bills, and I wish briefly to submit some views on this question to the House and the country. I believe that it is admitted on both sides of this Chamber, at least in the public press, that agriculture in no civilized country under the sun has been placed by the Government in such a state of oppression as in this land.

I know that some persons claim that the Government is not responsible for this oppression, but the trouble is overproduction and that the farmers of the country are complaining at imaginary evils. I do not believe this. The American farmers are becoming conscious of their wrongs and from all parts of the country they are coming together. They are joining hands in organization and co-operation, and they demand that their rights shall be respected and that justice shall be done them. They are insisting upon their rights to the profits of their industry and they declare they will no longer bear most of the burdens of society and government. They are possessed of good practical sense and have discovered the cause of their oppression, and the farmers will not allow themselves to be degraded to the condition of serfs, and from my heart of hearts I wish them success.

On the farmer depends the prosperity of the whole country, for in the end he feeds the world. When the farmer is not prosperous the local merchant and mechanic can not prosper. The country towns depend on the farmer for trade and support, and when he fails they of necessity fail also. Our fathers regarded agriculture, commerce, and manufacturing as the three great pillars of the state, but two of these, agriculture and commerce, are practically dead and manufacturing alone flourishes at the expense of everything else.

The principle of our so-called protection has driven our merchant marine from the high seas, and we pay annually to British ships for carrying our products more than $150,000,000. If it was not for this protective system to-day American ships, sailing under American flags, manned by American seamen, would be carrying the products of our farms over seas and into every port, and bringing back to us in exchange fruits of other climates, impossible to produce here, and raw material which American labor could form into the finished product to be again sent forth to enrich ourselves and to bless mankind. Before the adoption of this policy our ships carried nearly 70 per cent. of the commerce of the world and the Stars and Stripes were seen floating from our mast-head against every sky and in every sea and ocean of the world.

This, Mr. Speaker, is the sad condition of American commerce to-day. It has nearly disappeared from the face of the earth and ceased to be God's missionary to carry to other nations the fruits of our soil and the wealth of our mines and shops.

Now let us see how agriculture fared in this country for the past decade. On a former occasion during this session I gave to the House in detail facts and figures showing the decline in prices of farm values and the decrease in the price of the products of the farm, which amounted to many millions of dollars' loss to the farmers of this country, and more especially in the West and Northwest. But farm values have declined in the manufacturing States also.

In the Philadelphia Press of October 7, 1889, was a special dispatch from Lancaster, as follows:

Real estate is not bringing large prices in Lancaster County this year, and in some instances the depreciation is startling. A farm was sold in Strasburgh Township last week for $173.50 per acre for which $289 per acre had been offered at public sale last year, the offer being refused and the farm withdrawn. A farm in Rapho Township for which $18,000 was paid can not find purchasers now at $10,000.

In the Philadelphia Press of December 3, 1889, in an editorial entitled "The fall in farm values," the editor says:

In the New England States it has reached the point where farms are constantly offered for the cost of the buildings and fences upon them, so that the land is practically given away if any one will pay for the bare cost of improvements. The collapse has not been complete in the Middle States, but we do not suppose any well informed person will place the loss in farm values, as compared with the prices fifteen years ago, at less than 30 per cent. We should be glad to believe it was no greater. In only too many instances it reaches 50 per cent. Bankers know only too well how frequently this shrinkage has sunk below the line which once represented the mortgage value. * * * We do not believe any economic question is of greater weight and interest than this change in farm values. It demands and deserves the closest and most careful investigation. Unless the Pennsylvania farmer wishes to see the forest invade the farm, as it has in New England, the cause for this great depreciation must be investigated and a remedy proposed.

In The New Era, the leading Republican paper of Lancaster, Pa., of October 3, 1889, is this editorial item:

The sale of a hotel and grounds in the village of Rothville for $2,500, on last Saturday, for which $7,500 was bid and refused five years ago, seems to indicate that there has been a decline in the price of real estate in Lancaster County, despite the contrary assertion of a learned contemporary.

The New Era also says editorially, in its issue of December 10, 1889:

That agriculture here in the East is in a depressed condition is only too true. That farm lands have depreciated only an idiot will deny. The correct thing to do seems to be to learn how this all came about. We can not apply a remedy until we know what the disease is. It is silence, not publicity, that can deceive the public.

In another item in the same issue the editor says:

More farms have been sold out by the sheriff in Berks County during the past two years than during the previous twenty years. That shows the extent to which the farming interests have suffered in recent years. It would seem the part of wisdom to ferret out the causes that have led to this condition of things, instead of trying to hide them.

A great amount more of similar testimony could be furnished in regard to other States, but I deem this sufficient. Judge Nott, of the Court of Claims of this District, has published a little book in which he discusses the reason for the decline of farm values in New England, in which will be found this statement:

Midway between Williamstown and Brattleborough I saw on the summit of a hill, against the evening sky, what seemed a large cathedral. Driving thither I found a huge, old-time, two-story church, a large academy (which had blended in the distance with the church), a village with a broad street, perhaps 150 feet in width. I drove on and found that the church was abandoned, the academy dismantled, the village deserted. The farmer, who owned the farm on the north of the village, lived at one side of the broad street, and he who owned the farm on the south lived on the other, and they were the only inhabitants. All of the others had gone to the manufacturing villages, to the great cities, to the West. Here had been industry, education, religion, comfort, and contentment, but there remained only a drear solitude of forsaken homes.

John G. Whittier, the poet, wrote to Judge Nott the following letter in regard to this book and it is published in the same:

DANVERS, MASS., *December* 1, 1889.

MY DEAR FRIEND: I thank thee for thy noble "testimony" in regard to the sad decline of New England agriculture. Every year when I go to the New Hampshire hill country I find more and more abandoned farms, and the sight takes away much of the pleasure of a sojourn in view of the mountains.

I hope thy article, with which I fully agree, will be widely read. It should be published in pamphlet form and scattered broadcast.

I am very faithfully thy friend,

JOHN G. WHITTIER.

It is painful to pursue this subject further. We are simply destroying agriculture and commerce and building up manufacturing—in other words, enriching the few and pauperizing the many. The Jackson Iron Mining Company of Michigan paid (as appears from the testimony taken in open court) in twenty years $5,355,000 in dividends on a capital of $300,000, or on an average of 89½ per cent. per annum, and the plant increased in value $1,500,000. Andrew Carnegie admits that he drew $1,500,000 in dividends in a single year, nearly $5,000 a day, out of the Edgar A. Thomson Steel Works.

Many other similar instances could be given, but I deem it unnecessary. This money was so much taken from the farmers and laborers of the country by this infamous tariff system of protection which we have in this country. Is it any wonder that the farmers are poor and the values of their property decreasing?

I will give a few items more to show how the farmers are robbed. I will take, for example, binder-twine. It takes 50,000 tons of twine a year to bind the wheat and oat crops of the country. It is worth at manufacturers' price 13 cents a pound, or $260 per ton of 2,000 pounds. The value of the 50,000 tons, at the manufacturers' price, therefore, is $13,000,000, and this is what the wheat and oat crops of the country pay every year for the twine used in harvesting them.

The protective duty on this twine is 40 per cent., and on the manila it is made of 20 per cent.; so that it will be strictly within limits to say that one-half the cost of this binding-twine is the real value of the article, and the other half is protection, or, to put the matter in a different shape, that the wheat and oats farmers of the United States are made to pay a penalty of $7,400,000 a year for the crime of raising those crops. And the curious part of the business is that the Government which extorts this tax from him has no earthly use for it, since it has more money than it knows what to do with. It wrings the tax from him and hands it over to the twine-manufacturer and hemp-raiser to "protect" them in their business.

Now, what was the loss to the Illinois farmers last year on this one item alone. The wheat crop of Illinois last year was 38,014,000 bushels, and the oat crop 145,364,000 bushels. This would make 183,378,000 bushels in all, and it requires about a half a cent's worth of twine to bind a bushel; so the farmers of Illinois were out the sum of $916,890, one-half of which sum was handed over to the favored persons engaged in the praiseworthy business of making twine, and this is the policy which the Republican Senators and Representatives in Congress from Illinois favor and support as a means of "protecting American labor" and "developing American industries."

I will take one other item, that of tin-plate. This article enters largely into the home of the farmers and laborers of the country, the tin can, the tin pail, the tin roof, tin spoons, etc. These are all used by the poor people of the country, while the rich, in place of tin-plate, use silver, china, and slate. There is not a particle of tin-plate manufactured in America, and is not likely to be soon.

There was shipped into this country last year of tin-plate 727,945,972 pounds, valued at $21,002,209.15, and the duty the Government received last year on this article was $7,279,459.72, and the duty is increased by the McKinley bill to $16,014,811.38—more than double—and the statement I find in the tariff bill is that—

It is believed that the proposed increased rate will be sufficient to protect domestic manufacturers.

How absurd this sounds when there is not a domestic manufacturer of this article in the United States. But it is said that, if such an industry will be started, it will furnish employment to 20,000 men, which would cost the poor people of the country $16,000,000. It would be better for the people to employ these 20,000 men at $600 per annum and board them in idleness at some first-class hotel, and this would leave $4,000,000 in the pockets of the people. This is certainly protection run mad. And so I might go through the whole list of the protected industries, and they would all appear in the light of those I have examined. But for some reason or other all these increases are on articles used by the farmers. For example, cotton-ties are increased from 35 per cent. to 103 per cent., and this loss falls on the producers of cotton.

But, Mr. Speaker, this is not all. There is a rebate also that the people have to pay. The people pay $16,000,000 annually as a tax for the importation of tin into this country and when it is manufactured into the finished product and exported from this country a rebate is paid the manufacturer of the tin, which amounted last year to $1,494,790.10. It was simply a robbery of the people to that extent and a clear bonus to the manufacturers. Last year a rebate on salt was paid of $56,438.80, and nearly all of this was paid to one firm. There was a rebate of $34,851.04 on lumber, old boxes that were re-shipped from this country in order to save the merchant shipper from buying new lumber here. There was a rebate paid by the Government last year on old bottles of $43,884.88, mostly filled with beer, which were exported. The total amount paid by the Government in drawbacks or rebates in 1887 was $7,286,831.88.

On what principle can the payment of this vast sum of money be justified? The great beneficiaries of this bonus are the Standard Oil Company and Armour & Co. The former export their oil in tin cans incased in wooden boxes, on both of which they receive 90 per cent. of export duty as a drawback or rebate, and Armour & Co. receive the greater part of the rebate on salt exported by them and used in connection with their exports of meat. For this bonus it is presumed that they will contribute liberally to the Republican campaign fund next year. The people are taxed on imports and rebates, taxed to keep out commerce, and taxed to subsidize ships to bring in commerce. Taxed to prevent foreigners from doing business with us, and then taxed so that we may do business with them. Taxes on our nursing bottles and our tombstones. Taxes, taxes, taxes.

Now let us see what the Illinois farmer is taxed for protection, so called. The average duty now is 47 per cent. on all protected articles and by the McKinley bill it is raised to 52 per cent., and the administrative tariff bill passed at this session of Congress is supposed to raise the tariff 10 per cent. more, so it will make in all 62 per cent. Now, when an Illinois farmer buys an article protected by this tariff he pays a tax to the amount of the tariff to the home manufacturer of such article, and he can not get the necessaries of life without paying the taxes.

The population of Illinois by the last census is 3,879,203, and it is not too much to say that a little over 10 per cent. of the population are farmers, or say about 400,000. Now, whenever the farmer buys a protected article worth $1 he pays for it under the McKinley bill $1.60. Say that they would each purchase $100 worth per annum this would make a loss to him of $60, which is a very low estimate. This would make a net loss to them of $24,000,000. This is perhaps one-third too low, and it would be $32,000,000, so the protective policy would cost the farmers of Illinois annually about $32,000,000, and they do not get one cent in return for this. Is it any wonder that the farmers are organizing in self-defense against this robber tax?

THE FALLACY OF THE HOME-MARKET PLEA.

But our Republican friends tell the farmers, as an off-set to this robbery, that they have the "home market," and they have deceived them from year to year with this false sophistry. The farmer has the home market not because of any protective law, but because no law could take it away from him. Mr. Blaine is quite right when he says that the McKinley bill does not open a market for another bushel of corn or a barrel of pork. Does any person think that if Massachusetts could bring her breadstuffs from England 10 per cent. cheaper than from the farmers of Illinois, she would not do so? If he should, he would find himself greatly mistaken.

The facts are all against the home-market argument. In 1860 we sold 90 per cent. of our farm products at home; in 1870, 80 per cent., and in 1880, only 70 per cent. In 1860 we were compelled to send only 10 per cent. abroad; in 1870, 20 per cent., and in 1880, 30 per cent. How is that for a home market, with an increasing tariff all the time? From another point of view the home market is a mere theory, and an empty one at that. One operative attending a machine will manufacture for five, but he will only eat bread for himself. Pennsylvania mainly eats her own bread and meat, but she not only produces steel rail iron and coal for herself, but for twenty other States also. Let two other States do the same, and no market for the goods could be found in the Union.

We already make more goods than our people will use at present prices, while we yearly export increasing quantities of our grains and meats. In 1860, under a revenue tariff, we exported $295,000,000, and in 1870, after ten years of protective tariff, there was only $391,000,000, and in 1880 our exports amounted to $686,000,000. Instead, therefore, of the ratio of home consumption increasing, it really became less, and a larger per cent. of our agricultural products sought a foreign market. Therefore, instead of our farmers securing a home market, our farmers are year by year becoming more dependent on Liverpool and London. Rhode Island never has paid and never will pay the American farmer more for his grain than he gets in Liverpool.

It is not the home market of 60,000,000 of people that the farmers want, but the market that lies beyond it of 200,000,000. Our balance of trade with Great Britain in 1889 was $204,712,607, and the balance of trade has been in our favor since 1856, with the exception of a single year. Here is a table showing the facts:

Table showing the value of the exports of merchandise from the United States to the United Kingdom and the value of the imports of merchandise into the United States from the United Kingdom during each year ending June 30, 1850, to 1889, inclusive.

Year ended June 30—	Exports to the United Kingdom.			Imports from the United Kingdom.	Excess of exports.	Excess of imports.
	Domestic.	Foreign.	Total.			
1850..	$68, 365, 073	$2, 271, 115	$70, 636, 188	$74, 632, 158	.....	$3, 995, 970
1851..	97, 959, 004	2, 887, 930	100, 846, 934	92, 749, 219	$8, 097, 715	.....

S. G. BROCK, *Chief of Bureau.*

BUREAU OF STATISTICS, TREASURY DEPARTMENT, *May* 9, 1889.

What would the farmers of this country do if it was not for this $200,000,000 a year in gold secured from this so-called free-trade England in order to keep up our balance of trade?

No, Mr. Speaker, there is nothing but fraud in the plea of the home market for farmers, and under this false doctrine and other sham arguments the American farmers have been robbed of from $400,000,000 to $500,000,000 of their hard earnings annually in the last decade. The extraordinary thing about it is that the farmers of the United States have themselves made this thing possible. First, by their votes. This robbery could not exist a month if it did not receive either the active support or the tacit toleration of agriculture. Secondly, by sending their mighty surplus to pay for our imports from Europe. Without this as a prop the fabric of protection would have crumbled long ago from its own weight.

In times of financial stringency and disaster the country has grown into prosperity again through the productiveness of agriculture. When will princely manufacturers acknowledge their obligations to agriculture? Should they not cease to look upon agriculture as a proper subject for legal robbery? And how long will the tillers of the soil continue to listen to the sophistries of protection when it comes as a pauper to their homes which for a quarter of a century it has robbed under legal forms? Will they still continue to tolerate a fiscal policy which covertly robs one class for the enrichment of another, and whose only language is give more, more, more?

The system of protecting our "infant industries" began in this country a hundred years ago at an average of 8 per cent., and it was gradually increased to 24 per cent. Over fifty years ago we were assured by the great Clay that if the people would tolerate the protection to our infant industries for three years more from that time they would be able to take care of themselves. Yet after fifty years more it has gradually increased from time to time until it is 62 per cent., and we still have the infant industries with us, and while they are still in their cradles with the nursing-bottle in their mouths and their swaddling clothes on they say that if we meddle with the protective system they will get out of their cradles and kick the top of our heads off.

There is nothing equal to the cheek of these gentlemen. They insist that the home market is good enough for the farmer, but they want the markets of the world for their wares, and they are willing to sell to foreigners at a much lower figure than to the farmer at home. The facts contained in the following list of prices for the home and foreign markets are abundantly sustained by testimony before Congress, and it fully shows the love of these infant industries for the home farmer. The lists show the price at which articles are sold by the manufacturers of this country in the home and foreign markets:

	Foreign price.	Home price.
Advance plow	$9.00	$18.00
Do	4.00	8.00
Hay-tedder	20.00	45.00
Mower	40.00	65.00
Horse-rake	17.00	25.00
Cumming feed-cutter, No. 3	60.00	90.00
Ann Arbor cutter, No. 2	28.00	40.00
Ann Arbor cutter, No. 1	16.00	28.00
Clipper cutter	9.50	18.00
Lever cutter	4.25	8.00
Cultivator	22.00	30.00
Sweep	60.00	90.00

The following table shows another class of articles and the home and foreign prices:

	In home market.	To foreigners.
CULTIVATORS—PROTECTED 45 PER CENT.		
Wheel hoe-cultivator, rake, and plow	$11.00	$8.40
All-steel horse hoe cultivator, with wheel	8.00	6.75
All-steel plain cultivator, with wheel	7.20	4.50
RAKES AND TEDDERS—PROTECTED 45 PER CENT.		
Lock-lever rakes	15.00	14.21
Self-dumping rakes	18.00	17.12
Hay-tedder	26.00	25.25
Potato-digger	8.00	6.75
PLOWS—PROTECTED 45 PER CENT.		
Two-horse:		
Chilled, 9-inch cut	5.60	5.04
All steel, 9-inch cut	8.40	7.56
Chilled, 10-inch	6.30	5.67
All steel, 10-inch	10.50	9.45
Three-horse:		
Chilled, senior	7.70	6.93
Chilled, junior	7.35	9.61
All steel, senior	14.00	12.00
All steel, junior	14.60	12.60
Four-horse:		
Two-gang plows, all steel	58.80	52.92

These are the prices that the foreign farmer has to pay for one plow, and the prices which the American dealer in plows has to pay in large lots at the factory. The foreigner pays no more freight than the American dealer; sea freights are cheap. Farmers know the prices they have to pay the local dealers.

But, to make this matter more certain, while I was in the Senate the other day Senator CARLISLE presented to that body an authenticated letter written by the American Screw Company, as follows:

We hand you herewith "American list for exportation, iron wood screws," subject to a discount of 57½ per cent. "Terms cash, or thirty days. Freight paid to New York." This quotation is made conditional that the export shipment be of sufficient value to entitle us to drawback and that the export shipment be made by us.

* * * * * * *

Yours, very truly,

AMERICAN SCREW COMPANY,
FRANK HORR.

Then there can be no doubt that the very manufacturer that the farmer is taxed to protect against the pauper labor of Europe is selling farm implements from one-half to one-third cheaper to the foreigner than to the home farmer. Mr. Speaker, I could pursue this question of the home market to an indefinite length and show that it is a fraud and a sham from start to finish, but will not do so, but will say that my prayer is that the Lord will deliver the American farmer from the fallacy of the home market and the Republican protective system.

THE FALLACY OF OVERPRODUCTION.

Some claim that the cause of the decline of American agriculture is overproduction. There is no question that there is a decline. Others again claim that it is due to other causes, as to railroads, trusts, and combines. Whatever the cause is, it can be mathematically demonstrated that it is not overproduction. The following table, compiled from the reports of agriculture as to wheat, speaks for itself on this question:

Table showing production, area, etc., of wheat.

Years.	Total production.	Total area of crop.	Total value of crop.	Average value per bushel.	Average yield per acre.	Average value per acre.
	Bushels.	*Acres.*		*Cents.*	*Bushels.*	
1880.....	498, 549, 868	37, 986, 717	$474, 201, 850	95.1	13.1	$12.48
1881.....	383, 280, 090	37, 709, 020	456, 880, 427	119.3	10.2	12.12
1882.....	504, 185, 470	37, 067, 194	444, 602, 125	88.2	13.6	11.99
1883.....	421, 086, 160	36, 455, 593	383, 649, 272	91.0	11.6	10.52
1884.....	512, 765, 000	39, 475, 885	330, 862, 260	64.5	13.0	8.38
1885.....	357, 112, 000	34, 189, 246	275, 320, 390	77.1	10.4	8.05
1886.....	457, 218, 000	36, 806, 184	314, 226, 020	68.7	12.4	8.54
1887.....	456, 329, 000	37, 641, 783	310, 612, 960	68.1	12.1	8.25
1888.....	415, 868, 000	37, 336, 138	385, 248, 030	92.6	11.1	10.32
1889.....	490, 560, 000	38, 123, 859	342, 491, 707	69.8	12.9	8.98
Total	4,496,963,588	372, 791, 619	3,718,095,041	.....	.....	.....
Annual average ...	449, 695, 359	37, 279, 162	371, 809, 504	82.7	12.1	9.97
Annual average for preceding ten years	312, 152, 728	25, 187, 414	327, 497, 258	104.9	12.4	13.00

Now, it will be noticed by this table that in 1880 we had only 50,000,000 of people in the United States; now we have 65,000,000. The 50,000,000 of people then produced 498,549,868 bushels of wheat, or about 10 bushels per capita, whereas now 65,000,000 of people

produce but 490,560,000 bushels of wheat, or about 8 bushels per capita. Here, in ten years, there are an increase of 15,000,000 in population and a decrease of 8,000,000 bushels of wheat product.

Nor is there an overproduction of corn to which the decline can be attributed. The following table shows the condition of the corn crop and prices since 1880:

Years.	Population.	Corn crop.	Bushels per capita.	Price per bushel.
		Bushels.		*Cents.*
1880	50,155,783	1,717,434,543	34.2	39.6
1881	51,728,018	1,194,916,000	23.1	63.6
1882	53,448,114	1,617,025,100	30.3	48.4
1883	55,012,502	1,551,066,895	28.2	42.4
1884	56,522,347	1,795,528,000	31.8	35.7
1885	57,935,095	1,936,176,000	33.4	32.8
1886	59,312,120	1,665,441,000	28.1	36.6
1887	60,860,858	1,456,161,000	23.9	44.4
1888	62,512,404	1,987,790,000	31.8	34.1
1889	64,082,054	2,112,892,000	33.0	28.3

It will be seen by this table that in 1888 the United States produced 1,987,790,000 bushels of corn, worth $677,561,580. In 1889 they produced 2,112,892,000 bushels, worth $597,918,829, a loss of over $80,000,000 to our farmers on corn alone. In 1888 corn was worth 34.1 cents per bushel; in 1889, 28.3, a loss of over 5 cents a bushel.

The following table will show more fully that overproduction is not the cause of the depression in grain or stock.

	Bushels.	Dollars.	Cents per bushel.
CORN.			
1888	1,987,790,000	677,561,580	34
1889	2,112,892,000	597,918,829	28
Increase in quantity	125,102,000		
Decrease in value		79,642,751	
WHEAT.			
1888	415,868,000	385,248,030	92
1889	490,560,000	342,491,707	69
Increase in quantity	74,692,000		
Decrease in value		42,756,323	

Stock.	1888.	1889.	Increase or decrease.
Horses	$982,194,827	$978,516,562	—$3,678,265
Mules	179,444,481	182,394,099	+ 2,949,618
Milch cows	366,226,376	353,152,133	—13,074,243
Oxen and other cattle	597,236,812	560,625,137	—36,611,675
Sheep	90,640,369	100,659,761	+10,019,392
Swine	291,307,193	243,418,336	—47,888,857
Total	2,507,050,058	2,418,766,028	—88,284,030

In 1857 wheat was worth $1.50 and corn 80 cents per bushel, and flour $13 per barrel. The entire crop of grain of 1889 was not worth as much as the crop of 1859 by over $100,000,000, although it was much greater. The Committee on Ways and Means of the House, that is, the Republican members, say in their report:

A critical examination of the subject will show that agriculture is suffering chiefly from a most damaging foreign competition in our home market.

Now, what was that foreign competition mentioned by the committee? Last year there was imported into this country but 1,946½ bushels of wheat, 22,324 bushels of oats, 2,388 bushels of corn, and 16 bushels of rye. What a sham it is to claim that this small amount in any manner comes in competition with our farm products. This argument will not do with sensible men. The chief reason of the depressed condition of agriculture is that our protective tariff prohibits us from buying from other nations, and for that reason they will not trade with us, and this is but just. There is a high protective wall around China and a wall all around our penitentiaries, and the people therein are not allowed to trade with the outside world.

But I submit, Mr. Speaker, that a free people should not be treated as either of these classes are, for it is neither humane nor just, and especially so when it is done so that a few shall thrive and grow rich at the expense of agriculture. I think the time has come when the toiling millions of the United States who are engaged in agriculture will not and ought not to submit to the perpetual paying of bounties to other people without getting some bounties themselves.

The cost of production of wheat, corn, and oats last year in Illinois was many millions of dollars greater than the value of the crop when produced. This will be seen by an examination of the report of the commissioner of agriculture of Illinois for the past year. Why not give the Illinois farmer a bounty of 4 or 5 cents a bushel on these grains, as well as to the manufacturers or the producers of sugar in the South. I will content myself on this branch of my subject by reading an extract from the Philadelphia Evening Telegraph of April 18, 1890, a Republican newspaper. It is as follows:

Of all the silly things that Mr. McKINLEY has yet done in connection with the tariff question, his report to the House in favor of the Ways and Means Committee bill is the most grotesque. What possible sense is there in trying to fool the farmers of the United States by the statement that their industry is being prostrated on account of the crowding of American markets with foreign agricultural products? In order to back up this utterly absurd declaration Mr. McKINLEY is driven to quote the importations of sugar, tea, coffee, fruits, tobacco, animals, and fibers, the latter including wool, hemp, jute, etc. What does the sugar industry in nine-tenths of the United States amount to? It is practically unknown in thirty-six of the forty-two States. How much tea and coffee are raised in this country? The importation of animals, as everybody knows, is chiefly confined to first-class breeding-stock brought in by fancy farmers. The carpet men have clearly shown that the class of wool most needed in this country is not and can not be grown here profitably.

THE DOGMA OF PROTECTION OF AMERICAN LABOR.

Mr. Speaker, there is nothing more familiar than to hear the advocates of a high protective tariff claim that it is in the interest of American labor. If a high protective tariff would help the farmer or laborer then there might be some justification for it, but it does neither. There is no protection on labor. The protection is on the product of labor, of which the laborer never receives one cent.

If high protection is a great benefit to the wage-worker, as its advocates claim it is, why do not the American workingmen get a larger share of the price of manufactured articles than they do? This is a question that the average wage-worker may well ask himself. For, in spite of all that is told him about the superiority of his condition over that of his foreign rival, the actual fact is that, proportionately to the value of each country's industries, he gets less money for his work than either the English or French workman, a statement that may seem improbable, but the statistics prove it.

By the census of 1880 the total value of manufactured articles in the United States is given as $5,370,000,000, the value of raw material consumed in the factories as $3,397,000,000, and the total amount paid for labor as $948,000,000. In other words, labor gets but 18 per cent. of the value of the finished goods. Now, according to recent figures published in The London Times, in England 56 per cent. goes to labor, and in France 41 per cent. Here is a state of things that can be accounted for by only one cause: the higher cost of raw material in the more highly protected countries. Make the relative proportion of that cost smaller, and labor's share in the profits of industry becomes by that much the larger. Therefore—and is not the conclusion inevitable?—the American workingmen have a direct personal interest in cheapening the cost of raw material to the manufacturer. And this cost can be lowered only by removing or reducing the import tax which is levied under the specious misnomer of "protection."

When Mr. Blaine was Secretary of State the first time he embodied the following in his report to Congress after he had made a full examination of the whole question:

From these returns it is seen that each American spindle consumes sixty-six pounds of raw cotton, while each British spindle consumes only thirty-two pounds, or less than one-half the American consumption per spindle. It thus appears that each American operative works up as much raw material as two British operatives, turns out nearly $1.50 worth of manufactures to the British operative's $1 worth, and even in piece goods, where the superior quality and weight of the American goods are so marked, the American operative turned out 275 to 250 yards by the British operative.

Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor.

In the two prime factors which may be said to form the basis of the cotton-manufacturing industry, namely, raw material and labor, we hold the advantage over England in the first and stand upon an equality with her in the second.

I repeat there is no tariff on labor. There is absolutely free trade in labor, the one thing that the manufacturer has to buy and the one thing the laborer has to sell.

It is true that the wages of labor are some higher here than in England, but the State Department in 1878 issued a volume on The State of Labor in Europe, wherein it is shown that rent, clothing, and all articles of food except meat and bread are so much cheaper in England than in this country that it makes up a great part of the difference, and protection has nothing to do with it.

If protection regulated the price of labor then it would be the same or nearly so in all the States, as protection is uniform. The difference of wages between the United States and England is not so great as it is between the States of the Union and even in different parts of the same State.

The following table shows the difference in wages in this country:

Table showing the relative average wages in the several States, computed from returns relating to wages taken from the Tenth Census reports of the United States, estimating three hundred working-days in the year.

States.	Wages.	Per cent. higher—	Than those in—
South Carolina	$0.43		
North Carolina	.50		
Georgia	.70		
Maine	.88		
Vermont	.92		

Table showing the relative average wages in the several States, etc.—Cont'd.

States.	Wages.	Per cent. higher—	Than those in—
New Hampshire	$1.01½		
Ohio	1.06		
Michigan	1.09		
Indiana	1.10		
Wisconsin	1.11		
Rhode Island	1.13		
Pennsylvania	1.15		
Iowa	1.15		
Massachusetts	1.21		
New Jersey	1.22		
New York	1.28		
Connecticut	1.28		
Colorado	1.53		
Illinois	1.32	25	Ohio.
Do	1.32	50	Maine.
Do	1.32	47	Vermont.
Do	1.32	10	Massachusetts.
California	1.59	377	South Carolina.
Do	1.59	57	New Hampshire.
Do	1.59	70	Maine.
Do	1.59	30	Massachusetts.
Missouri	1.27	44	Maine.
Do	1.27	5	Massachusetts.
Do	1.27	20	Ohio.

It will be seen by the foregoing table that the wages in Illinois ($1.32) are 25 per cent. higher than in Ohio, 50 per cent. higher than in Maine, 47 per cent. higher than in Vermont, and 10 per cent. higher than in Massachusetts. Wages in California ($1.59) are 319 per cent. higher than in North Carolina, 57 per cent. higher than in New Hampshire, 70 per cent. higher than in Maine, and 30 per cent. higher than in Massachusetts. Wages in Missouri ($1.27) are 44 per cent. higher than in Maine, 5 per cent. higher than in Massachusetts, and 20 per cent. higher than in Ohio.

But, Mr. Speaker, I go further than this. I affirm without the fear of successful contradiction, that no protected employer ever in his life paid out of his own money 1 cent of wages to a protected workman. Every cent of wages paid in every protected industry is paid by the people, through the employer, who merely acts as their agent.

The labor in all protected industries is absolutely free of all cost to the employer, under all circumstances, and he usually steals from his workmen one-quarter to nine-tenths the money intrusted to him by the public to pay wages.

WOOLEN GOODS.

Value of product, 1880	$160, 606, 721
Total wages paid (1,990 mills)	25, 836, 392
Value without wages	134, 770, 329

Wages increased the value 19 per cent.

We imported in 1887 manufactured woolen goods valued at $44,235,243. Merely to have increased the price of these foreign goods by an amount equal to the difference in wages, a tax of 7 per cent. would have been ample. To give the woolen mills their labor free of all cost, a tax of 19 per cent. was not necessary. The foreign product included cost of foreign wages. An additional burden of 19 per cent. would more than cover the whole amount of wages paid in this country. An addition of 19 per cent. to the foreign value, even after deducting foreign wages, would exactly cover the whole amount of American wages, and give our woolen mills their labor free of cost.

Every $1,000 worth of American cloth made in an American mill was protected $670 (average). The wages paid raised its value $190, so that it was worth $1,190. It was sold for $1,670, the $670 being given the mill-owner in trust for wages. The mill-owner stole $480 and paid $190. For every $1 paid he stole $2.52.

If he handed the same amount of wages to his workmen last year that he handed in 1880 he stole $65,107,707 of the wages instrusted to him for his workmen, and also had their labor free.

The net amount stolen annually from wages by the woolen mills, after deducting all the tax on raw material in all woolen industries, amounts to over $28,000,000 to the 1,990 owners, and they had the labor of 86,000 workingmen free.

The same principle is true of all other protected industries, and if I had the time I could produce the figures that would conclusively prove it. The figures can be found in the American Statistician, and the results easily reached. It does not matter what industries are taken, they are all nearly alike.

No honest argument has ever been made to the effect that protection increases the price of wages. Our wage system is a pauper system, and every laborer in the protected industries is paid by a tax on himself and other laborers and farmers of the country. It is a fouler blot upon civilization than slavery ever was, for that did raise the African savage, while this degrades the white man. It will prove a greater curse if allowed to spread all over the land without legal control, until 100,000 tariff lords own, body and soul, 10,000,000 unpaid workers, supported by public charity and dependent upon their lords' nod whether they shall live or be turned out of his pauper-house to die of starvation.

The arrogance of the slaveholder was as water to wine compared with the arrogance of these tariff lords and their subsidized newspapers. They decline to argue. They assert the most ridiculous propositions and denounce as liars and slanderers, paid with British gold, whoever gainsays them. They demand that any false statement they may make concerning the tariff shall be accepted as holy writ and that he who questions it shall be declared an enemy of his country and of his race. It is a game of unlimited bluff, far beyond the slaveholder's wildest dream, for none may see or call these players. They will not permit any one to even question the divine nature of this doctrine of unlimited theft from wages. Truly the New England manufacturer was shrewd and cunning when he pulled down slavery to build up protection.

Imagine a Southern planter, the owner of 100 slaves, receiving yearly from his State treasury $466,998 bounty because he furnished them with work, $44,843 being for the support of his slaves and $422,155 being for himself, to pay for his philanthropy, in addition to having the product of their 31,200 days' labor.

But the sugar-refiner of Brooklyn, New York, Jersey City, or Philadelphia receives exactly this sum yearly, under exactly the same conditions, for every 100 workmen employed.

The cotton-mill-owner, the woolen-mill-owner, the iron-master, the protected employer of high and low degree, receives a proportionate amount under precisely similar circumstances for every protected pauper in his public pauper-house called a protected industry.

Is it any wonder that the protected employer is fighting tooth and toenail to prevent the slightest encroachment on his pauper labor or even on his stealings? It is the old slavery question revived, but this time it is a fight to maintain and increase Northern pauper labor instead of Southern slave labor. As in 1840 to 1850 no one proposed to interfere with slavery as it was, only to limit it, so now no one proposes to interfere with New England's pauper labor, but merely to confine it to its present boundaries, merely to set some limit to its extensions, merely to put a check upon greater stealings from the money handed to the "employers" in trust for their workmen. The man who proposes in any way to reduce it or interfere with it as it now stands or to deprive the protected mill-owner of either one day's free pauper labor or one dollar's stealings from wages is denounced as a crank and fanatic.

Every protected employer stands shoulder to shoulder, for the interest of one is the interest of all. That is what explains their efforts here about the Capitol and in the committee-rooms to secure an increase of taxes on the people from 47 per cent. to 62.

But, Mr. Speaker, I have said enough. The facts I have given are incontestable and should satisfy any unprejudiced mind, and the practical question now is, What will be done about it? The farms of this country are mortgaged for the vast sum of $3,500,000,000, which every sensible man knows can not be paid, and, as a result, the farms are passing under the sheriff's hammer from the farmers to the rich corporations of the country.

The farmers have promised to pay 8 per cent. per annum on their mortgage indebtedness, while they do not realize 3½ per cent. annualy from their farms. It is not apparent at a glance what the result of this operation will be. The Consolidated Coal Company and other coal barons are running the coal mines of the country on starvation wages. The coal-miners of Pennsylvania last winter were starving for bread while the farmers of Kansas were burning corn to keep themselves warm, and it was impossible for the people of the different sections of the country to exchange their corn for coal because railroads refused to carry them for reasonable rates on the ground that they could not afford it, while the facts show that the railroads last year made over $18,000,000 over and above interest, wages to laborers, and all other expenses.

Country merchants are on the verge of bankruptcy because the farmers have no money to carry on trade with them. A financial panic at this moment threatens the people, while at the same time the country is infinitely rich in all material resources and fairly teeming with milk and honey. We have untold wealth. Vanderbilt and 3,000,000 of tramps together are worth $200,000,000, but what part of that belongs to the tramps? The public press tells us the other day that Carnegie gave to the bride of Stanley, the explorer, an uncut diamond as a wedding gift more costly than the Queen of England or the King of Belgium could afford. It was purchased with the $1,500,000 that he annually robs the farmers and laborers of this country of because of the fraud of protection.

But now, what are the farmers and laborers going to do about it? On the 15th of February last I submitted to this House and the country an argument and some facts in regard to the depression in agriculture. The Progressive Farmer, a newspaper published in my State, presumably in the interest of the farmers, did me the honor to publish a part of my speech. The editor of the paper in commenting on the speech editorially, among other things, said:

We took up the speech with an eager gladness we seldom feel on receiving such a document; we read it with the most studious care; we laid it down with unspeakable sadness. It is an eloquent portrayal of the farmer's wrongs, a vivid picture of his condition, a full and complete justification of his efforts at organization, but it scatters abroad the firebrands of partisan hate and prejudice, has a tendency to divide the farmers rather than unite them, and makes the success of a particular political party the paramount object to be sought. In other words

and they appear in almost every sentence of the speech, Mr. LANE is willing the farmers should organize provided they organize in the interest of his political party.

Mr. Speaker, I believe I am willing to admit the "soft impeachment" of my esteemed friend. Where else but to the Democratic party could the farmers and laborers go for relief from the burdens that now oppress them? That party has been the advocate and defender of personal liberty and the equal rights of all men before the law for more than a century. It was founded by the sage of Monticello, defended by the hero of New Orleans, and preserved by the seer of Graystone. Among its acknowledged leaders to-day are to be found Grover Cleveland, JOHN G. CARLISLE, and ROGER Q. MILLS. Only under the leadership of such men is there deliverance.

There is place for but two political parties in this country. There are but two sides to every question. Protection is right or wrong; there is no middle ground. Nearly two thousand years ago the blessed Master said that "he that is not with me is against me," and that is true to-day. There are but two sides to this Chamber, and every vote that is given on the passage of a law must be yes or no. There is no place for a third party, and the farmers and laborers of the country should not be deceived into believing that there is. It will surely lead to defeat. Whatever redress is sought in the legislation of this country must be in one or the other of the existing parties. If the principles of the Republican party are correct then it should succeed, and if not it should fail. The same is true of the Democratic party.

The platform and principles of the Democratic party for the last thirty years, reaffirmed from year to year, read as follows:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into money without loss.

Asserting the equality of all men before the law, we hold that it is the duty of the Government in its dealings with the people to mete out equal and exact justice to all citizens of whatever nativity, race, color, or persuasion, religious or political; that justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interests of one faction of our common country; that every citizen and every section of the country have a right to demand and insist upon an equality of rights and privileges and a complete and ample protection of person and property from domestic violence and foreign aggression.

These just principles of government are in harmony with an address made by Thomas Jefferson to his fellow-citizens, and, after recounting the blessings of our country, he uses these words:

With all these blessings what more is necessary to make us a happy and prosperous people? Still one thing more, fellow-citizens, a wise and frugal government which shall restrain men from injuring one another; shall leave them otherwise free to regulate their own pursuits of industry and improvement; and shall not take from the mouth of labor the bread it has earned. This is the sum of good government, and this is necessary to close the circle of our felicities.

Now, what are the platform and principles of the Republican party as stated in the Chicago platform of 1888? I quote as follows:

We condemn the proposition of the Democratic party to place wool on the free-list and we insist that the duties thereon should be adjusted and maintained so as to furnish full and adequate protection to that industry.

The Republican party would effect all needed reduction of the national revenue by repealing the taxes upon tobacco, which are an annoyance and burden to agriculture, and the tax upon spirits used in the arts and for mechanical purposes, and by such revision of the tariff laws as will tend to check imports of such articles as are produced by our people, the production of which gives employment to our labor, and release from import duties those articles of foreign production (except luxuries) the like of which can not be produced at home. If there shall still remain a larger revenue than is requisite for the wants of the Government we favor the entire repeal of the internal taxes rather than the surrender of any part of our protective system at the joint behest of the whisky trusts and the agents of foreign manufacturers.

Here you have it in a single word, "protection." This, I hold, connected with the financial policy of the Republican party, has been the ruin of agriculture and the enslavement of labor.

Is the laborer and farmer protected? And, if not, why not?

Why in all reason and justice should the man who manufactures the plow-share be a pet of the Government while the man who holds the plow is an outcast? Why should the man who spins cotton be regarded as a beneficiary of the Government while the man who raises the cotton is about to be taxed out of existence? Why should the manufacturer of the shovel and pick be protected while the man who uses them must compete with all the imported pauper labor of Europe?

The farmer has a right to demand a fair field and an even chance in the race of life. He demands no more. Not a farmer in this country is asking a bounty from the Government. The farmers of this country know that whoever lives on bounties at the public expense is a pauper. No sophistry can conceal this fact, and the farmers of the country are not willing to accept the position of a panper. They have too much independence of character and pride for that, and I hope the day is far distant when they will surrender that pride and character. They prefer loss to dishonest gain, the former may vex them, but the latter would bring to their sense of honor a lasting shame.

Wealth accumulated by unjust taxation is a violation of the rights of man and the justice of God. Honesty is to be preferred to great riches, and is more satisfactory than fame. The farmer has no desire for unrighteous gain at the cost of others, and in his mind no device of statesmanship or trick of politics should supplant the principle of justice and fair dealing among men.

If I apprehend his character, and I think I do, he would prefer to live in a log cabin sustained by his own strong arm than to occupy a palace purchased with ill-gotten gains. The farmers are perfectly willing to bear their own burdens, but they have a right, as they are doing, to denounce all attempts to weigh them down with burdens not their own. They should not be required to pay tribute to other industries, and for this reason they are organizing in defense of their homes and firesides. With a sense of the wrong that has been done them and smarting under its injustice, the danger is that they may make a mistake and injure themselves and their friends. It is better to "bear those ills we have than fly to others that we know not of." Any division now in the ranks of labor will only tend to keep the dominant party in power.

The Democratic party advocates the equality of all men before the law, with equal and exact justice to all and special privileges to none. It is opposed to subsidies, bounties, and monopolies, and it invites co-operation with all men of similar views. The signs of the times indicate that a victory for tariff reform is near at hand, and the farmers and laborers of the country uniting in the Democratic party will assure its success; division is failure.

It can not be that the people of the United States will submit longer to legalized robbery. It was tolerated in England for generations and millions of her people died of starvation before deliverance came; but it came at last. We boast of our free institutions of liberty and equality, but who can call himself a free man save in mockery when by force of law the proceeds of his labor are unjustly taken from him to enrich another?

The struggle for human liberty did not end when the battles of the Revolution were fought and won, nor can it end until every American freeman has the God-given right assured him to enjoy all the fruits of his own labor.

Compound Lard.

SPEECH

OF

HON. JOHN H. BANKHEAD,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 21, 1890.

On the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard.

Mr. BANKHEAD said:

Mr. SPEAKER: It is a well settled principle of legislation that the title of a bill should disclose the purpose of the measure. The title to this bill should therefore be amended so as to read as follows: "A bill to create a trust in lard made from the fresh fat of slaughtered swine and prevent all competition therewith." The bill under consideration undertakes to define and regulate the manufacture and sale of compound lard under the pretense that as a food product it is a fraud, made so by false brands and sold for what it in fact is not. No witness who has testified before the Agricultural Committee has stated that the compound lard is unhealthful, unclean, or in any way unfit for human food.

I desire to examine this bill calmly and without prejudice, as one of the representatives of 65,000,000 of people, all of whom have a right to have their interests considered. In doing that I will not discuss the constitutional question that may be involved. I will leave that to those who have made the Constitution a life-long study. I shall deal with the question from the standpoint of a business man and one who believes he is in sympathy with the masses of the laboring people of this country. If I can expose the dagger concealed in this bill, with which it is intended to assassinate the compound-lard and cotton-seed-oil industry, and thereby paralyze one of the greatest agricultural industries of the country and increase the price to the consumer of one of the most wholesome and purest food products, I will be entirely content to leave the constitutional question to those who better understand that branch of the subject.

Every section of the bill is wholly bad. It is special legislation of the most wicked and vicious character and is intended to favor and foster one interest at the expense of another, both being agricultural products and entitled to the same consideration. The bill makes no pretense of correcting the evil complained of, namely, to prevent the adulteration of lard and compel the lard-packers to give to consumers a pure and wholesome article of food; but every word in the bill is aimed at the cotton-seed oil industry, at a pure vegetable oil, known to be perfectly pure and wholesome, and because the agricultural product known as cotton-seed oil comes in competition with the agricultural product known as hog lard, and because the former is produced in that unfortunate section geographically known as the South, and the latter is almost exclusively produced in the North and West, making the bill, besides its other objectionable features, sectional in its character. It is very nearly related to that legislation which in

posed a tax of 3 cents per pound on the lint cotton grown in the South after the close of the war and by which one hundred and twenty millions of dollars were wrung from that unfortunate and oppressed people under the forms of law. No less sectional in its purpose is the bill now before the House.

The cotton-planters could stand the tax of 2 mills per pound levied by this bill, and perhaps would not complain, as they are growing accustomed to being discriminated against; but the restrictions thrown around the manufacture and sale of compound lard by the seventh section of the bill will, and were intended to, so embarrass the business as to practically destroy the industry and prevent competition with lard made from the fat of swine. I have no means of knowing the exact amount of compound lard sold by the retail trade in this country, but I think it would be safe to say that two-thirds of the product ultimately passes through the stores of the retail dealers.

Now, let us examine the bill and see if we can discover the dagger that I said was concealed in it, and with which the friends of the hog intended to assassinate the compound-lard industry. Section 7 provides that retail dealers in compound lard must sell in quantities not exceeding 50 pounds, such sales to be in original stamped packages when the quantity sold is not less than 3 pounds and from original stamped packages when the quantity sold is less than 3 pounds; and when the sale is from an original stamped package they shall pack the said compound lard so sold by them in suitable wooden, tin, or paper packages, which shall be marked and branded as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe. It further provides a penalty of $1,000 and one year's imprisonment for each violation of the above provision.

These absurd and unreasonable requirements are intended to so hamper and embarrass the retail merchant that he will give up his trade in compound lard rather than take the risk and expense of sales under these terms. If a customer comes into the store of his grocer and says, "Put 10 pounds of lard in this bucket," the merchant must say, "No, I can not sell you 10 pounds from that tierce. You must take one of these original stamped packages. The Conger bill will not permit the sale of lard from tierces in 10-pound packages. If you do not take the can, I can not sell to you." The customer replies, "I prefer to buy lard from the tierce and have it put in my own can that I keep for that purpose. I do not like to buy lard in cans that may get me into trouble with the revenue officers. My wife or daughter may forget to destroy the stamp, and in that event the revenue officer might come nosing around and find it; and then you know it would cost me a year's labor to get out of the trouble." The merchant has bought a tierce of compound lard which is also an original package. Why not let him sell 10 or 20 pounds from it if his customer prefers it?

What protection does the Government receive from this provision? Is the consumer protected by it? Why should the merchant be required to sell less than 3 pounds when taken from a tierce or other original stamped package and why must he pack less than 3 pounds in a stamped package? Why is he required to keep on hand wooden, tin, or paper packages, stamped as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, and why is he required to pack the small amount of 2 pounds of lard in these expensive packages? Does not every business man know that these unusual and expensive requirements are intended to prevent as far as possible the sale of compound lard and competition with the so-called pure lard? "But," says the merchant to his customer, "I can sell you lard made from the fat of slaughtered swine in any quantity you desire and pack it in your own bucket. The law does not throw any restrictions around that, and I can sell it in any way you call for it." The customer replies, "No, I do not want any of your so-called pure lard. I have read the testimony taken before the Agricultural Committee in the Fiftieth and Fifty-first Congresses, and if all consumers of lard have not read this testimony of pork and lard packers themselves, I hope they will."

The distinguished farmer, Mr. BROSIUS, of Pennsylvania, who opened this discussion, said:

> What the people have been consuming in the past no history relates, and what they may be fed on in the future, if this imposition is not curtailed, baffles the utmost resources of prophecy. What compound essences and super-refined quintessences may be used in this conscienceless race for the markets no mortal can tell.

Unfortunately for the gentleman from Pennsylvania and those who represent the hog-lard interest, so carefully guarded by this bill, those who consume lard made from the fat of slaughtered swine are left in no doubt as to the character of what they consume. If there is a dead rat in the well it may not be known until it is drawn out. Neither did the consumers of hog lard know what vile stuff they consumed until this investigation commenced and lard-packers were put on the stand. Hear what Mr. W. G. Bartle, a pork-packer for forty years, says under oath before the Agricultural Committee, who bring in this bill and urge its passage:

> Mr. W. G. BARTLE, of St. Louis. I am now nearly sixty-one years of age, and have been engaged in the pork-packing business, directly and indirectly, for forty years. I succeeded John J. Roe in 1870, and have been running the house known as W. G. Bartle & Co. since 1867. Prior to that, from 1860 to [illegible] was Hamilton & Bartle.
>
> During my experience in the business of pork-packing I have been the owner of two large farms, and have been engaged in farming, and shipping cattle quite extensively to the Eastern and Southern markets.

(He went to Kansas City.) I went to the stock-yards in the first place, and saw the character of the hogs that were brought there and offered for sale. From there I went to the pork-house of a certain concern there. They were cutting up hogs at the time. They commenced slaughtering at 9 o'clock. I walked up the chutes and saw the character of hogs they were slaughtering. They were what I expected to find, a great many of them diseased hogs, of which the markets of the West are now full, from what is known as cholera. Whilst looking at the hogs the foreman of the establishment came to me and we got into conversation. I said to him that I had got out of the business and that I believed that I was away behind the age.

I told him that I had been in the habit of making considerable white grease, for which I had been denounced. "Yes," he says, "there ain't much white grease made now, these days, and it is quite unnecessary to make it." He said: "I was foreman for a certain party (naming him), and one winter (that party) purchased 2,200 smothered hogs, all of which I put into the tanks and they went into prime steam lard." I have never in all my packing experience made use of smothered hogs by putting them in the lard tanks. I have made them into white grease and sold the product as white grease. Now the character of the hogs, from disease, etc., is worse than formerly.

Piggy sows are sold on the market; they will even drop their pigs in the cars or in the pens, and they are driven at once to the scalding tubs, and pass on the slides as other hogs do. They go through the process of curing, and are made into breakfast bacon, sugar-cured hams, and everything else. No one, either at the hotels or anywhere else, can be free from eating that kind of unsound food. There are also the stags, rough and coarse, and often a good many boars, that go into the packer's hands, and it is impossible for the packer to purchase what he wants without taking them.

Mr. Speaker, let us hear another witness on this question. I know that it will not be very pleasant reading for the friends of the hog and the consumers of hog lard, but a war is being waged against an agricultural product in which my constituents are deeply interested. Cotton-seed oil has been assailed as a fraud, and I am only defending and trying to protect the interest of my people and refute, if I can, a base slander. Let us hear another witness who testified before the same committee, himself a pork-packer and knowing what he is talking about:

Testimony of Mr. Hately, who appeared before the Senate committee of the Fiftieth Congress as a representative of the Chicago Board of Trade, and who is himself a pork-packer.

By Senator PLUMB:

Q. From what part of the hog do you get what is called white grease?

A. There is no such thing as white grease made in the packing-house now. In the march of events the progress in packing has been just as great as it has been in almost any other industry. It has not been a great many years ago since the whole entrails as they were taken from the hog—the greater portion of the fat on them—were taken away, carried out and buried. It has not been many years ago since some packers on the Mississippi River thought the head or feet or anything of that kind was of no value whatever. They only killed in the winter time, and one packer remarked to me: "What fools we were. We had big profits in those days if we had only known it. We used to take the heads and feet and guts and run them out on the Mississippi River and pile them up there, and when the ice broke up in the spring away they went."

Q. Then, what was called white grease now goes into the manufacture of lard?

A. Yes, sir. The lard system is now so entirely different that we could not make white grease.

Q. Then, what was formerly known as white grease now becomes lard by the process of manufacture?

A. Yes, sir. It never was really white grease at all. It was really only the lard, but not a product that would pass inspection.

By Mr. FOX:

Q. Mr. Fairbank said the lard was getting poorer and poorer and you contend that was not so. Is it not a fact that every time there is a corner on the Chicago Board of Trade and trade is strained they get more of the animal in because lard is scarce?

A. No, sir.

Q. Is lard to-day the same as it was ten years ago?

A. Yes, sir; it is a higher grade to-day than it was ten or twenty years ago.

Q. Although the gut grease, the white grease, does go into the product?

A. It is higher to-day than it was five or ten years ago.

Q. Although these other products do go in?

A. Yes, sir.

Q. Do you know anything about the heads going in and what kind of lard the head makes? State what kind of lard the head rendered by itself makes.

A. It makes very good lard.

Q. What would it sell for?

A. I can not say what it would sell for by itself.

Q. Would it sell for as much as prime steam lard?

A. No, sir.

Q. Then it is a deteriorating element in prime steam lard, is it not?

A. It is not as valuable as the leaf alone.

Q. As the ribs, sides, and back?

A. No, sir; not as valuable now as any portion of the lard. There is no portion of the lard of the hog as valuable as the leaf at present.

Q. Would gut fat rendered by itself bring as much as prime steam lard?

A. No, sir.

Q. Then that is another deteriorating element in prime steam lard?

A. No, sir.

Q. You say the guts are stripped and the guts go to the sausage-makers?

A. Yes, sir.

Q. Can you tell me how many hogs are slaughtered in Chicago daily?

A. About four and a quarter million hogs are slaughtered yearly.

Q. How many would that make a day? Does it ever run as high as 40,000 hogs a day?

A. Yes, sir.

Q. Do you know how many intestines there are in a hog?

A. I don't know.

Q. Do you think there are from 30 to 35 feet?

A. I can not say.

Q. As a matter of fact, Mr. Hately, there are about 30 or 35 feet, are there not?

A. I think there might be.

Q. Would you be surprised to learn that the quantity you have stated would make 275 miles of sausages manufactured every day in Chicago?

A. I would not be surprised if there were a thousand.

Q. Do you know how many guts go to the sausage-maker from hogs slaughtered in Chicago every day?

A. No, sir.

Q. Do you mean to say that, with regard to the lard as made in Chicago, the fat is always pulled from the gut, and that none of the guts go into the tank?

A. I did not say that.

Q. Does not this process take place: Instead of the fat being pulled from the

gut, is not the gut split open and the ordure pulled out, and the entire thing put into the tank?

A. There are certain guts that are cut open in that way that can not be voided. They are not used by the sausage-maker. The guts are thoroughly washed and are just as wholesome as the sausage we eat.

Q. Does the gut go into the tank?

A. Yes, sir.

Mr. FOX. That is what I understood Mr. Fairbank to say.

I am not surprised that the packers of so-called "pure" lard want protection against compound lard, into which cotton-seed oil largely enters, after reading the mass of testimony taken by this committee. But, Mr. Speaker, no witness has been found who remotely intimated that cotton-seed oil is not a pure, perfectly wholesome, and desirable article of food.

I submit here, Mr. Speaker, a report from the New York board of health, which will give some idea of the high value placed on cotton-seed oil:

Report of the New York Board of Health.

CHEMICAL LABORATORY OF THE ALBANY MEDICAL COLLEGE,
Albany, May 6, 1880.

DEAR SIR: On the 26th of April you requested me to make such examination of "lard and lard compounds, or products into which cotton-seed oil enters as a component part," and of "cotton-seed oil as sold for edible purposes" as might be possible in the time intervening between that date and this day, and to report to you whether, in my opinion, such "lard, lard compounds or products are healthful or nutritious, or are in any degree deleterious or injurious to health," and "whether or not said [cotton-seed] oil is nutritious or healthful, or is in any degree deleterious or injurious to health."

The time at my disposal thus allowed me has not been sufficient to admit of the systematic collection of samples of the articles named or the elaborate analysis of such samples as had been collected, and this necessarily brief report, therefore, deals with the questions involved chiefly in a general manner, and is, in the main, based on information acquired in previous investigations and by former study of the subjects considered.

The main question, as I understand it, is whether cotton-seed oil, properly extracted and refined, is a wholesome and nutritious article of food, and whether it is a proper substance to mingle with lard obtained from the fat of hogs, or with other fats, in the manufacture of "lard compounds," table oil, and the like, for use as food or in the preparation or manufacture of food articles.

There doubtless exists on the part of many people a prejudice that lard should be made from hog-fat alone and table or salad oil from the fruit of the olive tree solely; but this opinion is in reality based on no good or sufficient reasons. Fats obtained from a variety of animals and a great number of plants have been used from time immemorial in the preparation of food, and it is unreasonable to suppose that those particular fats and oils which we, in this country, or in this part of the country, have been accustomed to use are the only suitable ones to employ. All over the world vegetable oils are obtained by the expression of the seeds or fruit of plants and used as food. From the cocoanut Brazilian nut, walnut, almond, and a wide variety of other vegetable products, oils are extracted and employed in the preparation of food. In speaking of the vegetable oils Dr. Edward Smith, in his well known work on Foods, places cotton-seed oil at the head of the list, and says:

"There can be no doubt that we have in this product of seeds of plants, which seem otherwise to be useless, a great storehouse of most valuable nutritive material, and if we know but little of them in this climate it is because we have the olive-oil at hand and are bountifully supplied with many kinds of animal fats. It is, however, probable that the cheapness of some of these vegetable oils, in addition to their delicacy of flavor, will ere long force themselves into notice and obtain a place among our foods." This was written in 1873, when the manufacture of cotton-seed oils was still in its infancy.

Professor Wiley, chemist to the United States Department of Agriculture, in Bulletin No. 13, on food and food adulterants, quotes from Allen's well known and standard work on Commercial Organic Analysis, as follows: "Refined cotton-seed oil is of a straw or golden-yellow color, or, occasionally, nearly colorless. The density ranges from .922 to .926, and the solidifying point from 1° to 10° C. Refined cotton-seed oil is usually very free from acid, and when properly prepared is of pleasant taste and admirably adapted for edible and culinary purposes, for which it is now extensively employed, both with and without its nature being acknowledged."

As regards the manufacture and refining of cotton-seed oil, it may be remarked that the methods employed are not materially different from the processes made use of in the preparation of olive-oil. That cotton-seed oil has for many years been exported to Italy and France, in which countries it is largely employed for mixing with olive-oil, is a well known fact.

Speaking of cotton-seed oil, Dunham J. Crain, United States consul at Milan, reported as follows, under date of November 10, 1882: "The seed-oil industry is assuming considerable proportions. Several kinds of this oil were exhibited at the Milan exhibition in 1881, and classed among alimentary oils. There were some beautiful specimens of sesame oil exhibited. * * * The importation of cotton-seed oil was arrested in 1882, since which the demand for oleaginous seeds has increased. It is therefore urged that a duty should be imposed on all imports of seeds and seed oils if it is to be continued on cotton-seed oil. It is claimed that the duty on cotton-seed oil has served no good purpose; that the mixing of cotton-oil with olive-oil was not prejudicial to health, and that the mixture is now made with oils from flax and nuts, and that the competition coming from cotton-oil has been replaced by oils of other seeds and by nut-oils. * * * It is felt that frauds will diminish, and the public good be promoted when prejudices against good seed-oils disappear and they are sold under their true names." (U. S. Consular Reports, XII, 587.)

I am clearly of the opinion that cotton-seed oil, whether used alone or commingled with other oils or fats, is a perfectly wholesome and nutritious food, and as easily digested and assimilated as any of the commonly employed fats. In support of this view the opinion of numberless writers upon the subject, and of experts in chemistry and physiology, might be adduced, but I shall content myself with citing two or three. Battershall, in his treatise on Food Adulteration, remarks:

"As a result of the publicity lately given to the subject of food adulteration, a popular impression has been produced that any substance employed as an adulterant of or a substitute for another is to be avoided *per se*. Perhaps the common belief that for all purposes cotton-seed oil is inferior to olive oil and oleomargarine to butter is the most striking illustration of this tendency. Now, as a matter of fact, pure cotton-seed oil, as at present found on the market, is less liable to become rancid than the product of the olive, and for many culinary uses it is at least quite as serviceable. * * * The sale of these products under their true name should not only be allowed, but under some circumstances even encouraged."

Professor Wiley stated before the United States House Committee on Agriculture, at the hearing on the compound-lard bill in 1888, in reply to the question whether, from his knowledge of chemistry and of medicine, there is any property in cotton-seed oil injurious to health, that there was not so far as he knew. In reply to the question, "Does that statement also apply to beef stearine used in connection with cotton-seed oil in the manufacture of refined lard?" he replied, "Yes, sir; so far as I know there is nothing in it injurious to health."

Concerning its digestibility and the ease with which it is assimilated, he instanced a case in which a pint had been given as a laxative and had undergone perfect digestion, showing, in his opinion, "that it was very easily acted upon by the intestinal juice" and "very easily assimilated," and he added that "it seems to act on the digestive organs like olive oil precisely." In response to the question, "Are the nutritive qualities of cotton-seed oil equal to the nutritive qualities of pure lard?" he replied, "I should say that there would be little difference as far as nutritive properties are concerned."

Professor Wiley analyzed a large number of samples of so-called refined lards compounded chiefly of beef stearine, cotton-seed oil, and hog fat, and in response to the question, "Have you any belief that any of these articles or specimens * * * when used as foods is unwholesome or hurtful to the human system?" replied, "I have no reason to believe any of them is, any of the ingredients in the lards." And again, "As far as medical and chemical knowledge extends these substances are not injurious to health." In reply to the question, "What would you say of cotton-seed oil when used alone as an article of food?" he answered, "I should say that it was perfectly wholesome," and he gave it as his belief that it was as wholesome as olive oil or hog lard or beef fat.

Professor S. P. Sharpless, State assayer for Massachusetts and a chemist who has given much time to the study of food adulteration, stated during the course of the same investigation that he knew of no property injurious to health in cotton-seed oil or the refined lards which he had examined. Professor R. Ogden Doremus, of New York City, states that refined lard made from steam lard, beef stearine, and cotton-seed oil is "pure and wholesome," and that, in his opinion, "cotton-seed oil is a wholesome article of diet," and Professor L. M. Norton, of the Massachusetts Institute of Technology, states that the compound lard made by a well known firm "is a perfectly good food material" and "is unobjectionable in every respect, and does not contain anything which can be injurious to health."

These are the opinions which seem to be almost universally held by those who have investigated this subject from a scientific standpoint. So far as I know, there is no evidence worthy of the name which even remotely tends to show that cotton-seed oil is not a wholesome and nutritious food. It has, as a matter of fact, been used for years, both surreptitiously mixed with other oils and fats or openly employed on its merits as a palatable and useful food. Throughout the cotton-growing States it has been for a long time very largely used, and the medical faculty of the Arkansas University state that it is preferred to other fats in many respects, "agreeing with the most delicate stomachs, whether used in baking or frying," and that "not one instance has ever been given of health being in any manner impaired by the use, however free, of cotton-seed oil in food." They state that "thousands of hands employed in the cotton-seed-oil mills are in the habit of making their dinners on the crude oil by dipping their bread in it, and some of them actually drink it, and yet from this free use of it nothing has ever resulted but the best of health."

Such testimony as that given above is not easily overthrown. Writers of eminence in our scientific, medical, and agricultural journals have borne similar testimony, and large numbers of people in our midst to-day use, by preference, in their households a cotton-seed-oil lard in place of one made from the fat of the hog. In my own family I have employed such a lard with perfect satisfaction, and am convinced by actual trial that it is palatable, readily digestible, and a wholesome, nutritious article.

During the last few years I have chemically examined a considerable number of compound lards, sold as lard and under various trade names, containing cotton-seed oil, sometimes without a trace of hog fat, and I have also examined various qualities and grades of cotton-seed-oil and of olive-oil containing it. Some of these examinations have been made within the last week, and I have discovered in these lard compounds and oils no substance injurious to health or in any way deleterious, and I am decidedly of the opinion that such lard compounds and cotton-seed-oil products as I have examined or of which I have knowledge are wholesome and nutritious articles of food.

Yours, respectfully,

WILLIS G. TUCKER,
Analyst, State Board Health.

Dr. LEWIS BALCH,
Secretary of the State Board of Health of New York, Albany.

I hereby solemnly attest that the above is a true copy of the report on file in this department.

[SEAL.] FREDERICK CARMAN,
Assistant Secretary.

ALBANY, N. Y., *February* 17, 1890.

APPENDIX B.

Affidavits of New Hampshire board of health and other New Hampshire physicians.

I, Granville P. Conn, of Concord, in the county of Merrimack and State of New Hampshire, depose and say: That I am a practicing physician and surgeon, resident in said Concord; that I took my degree at Dartmouth Medical College in the year 1856; that I have held the position of secretary of the New Hampshire Medical Society for the last twenty years, with the exception of the two years that I occupied the president's and vice-president's chair of that society. I am also one of the medical faculty of Dartmouth Medical College, and have held that position for some four years, or ever since the chair of hygiene was established.

I became a member of the New Hampshire State board of health when it was established in 1881, and have been president of that board from that time to the present time. I was chosen vice-president of the National Association of Railway Surgeons at its meeting held last winter in the city of St. Louis. I am a member of the American Medical Association, the Medico-Legal Society of New York. I am honorary member of the State Medical Society of Vermont. I am a member of the American Public Health Association.

My attention having been called to the "lard bill" before the Legislature, I began investigating what they meant by the terms "refined lard," "lard compound," "pure leaf lard," and "pure lard." So far as I have been able to ascertain the definitions of these terms were admitted before the House Committee on Agriculture in Congress in an investigation in 1888. These compounds show that the "commercial lard" of to-day is a somewhat different article from the "lard" which our farmers were in the habit of putting up. The "lard" put up by farmers was the leaf only, unless mixed with the suet of the beef animal. This, so far as I know, represents what is purchased in New Hampshire.

The "commercial lard," to which my attention has been called, and as admitted before the House Committee on Agriculture, is an essentially different product, "refined lard" meaning the odds and ends and what was left after the better part of the leaf lard was extracted, and then mixed with stearine and cotton-seed oil. I understand "refined lard" and "lard compound" to be one and the same product. Beef stearine and cotton-seed oil are claimed to be adulterations, neither of which, from a hygienic point of view, is harmful. Beef stearine, or suet, has been mixed with lard for years, and among farmers is considered better for summer use than the pure leaf, in consequence of the melting point being a little higher.

Cotton-seed oil within the past ten years has almost entirely taken the place of olive-oil in our markets. It is still sold as olive-oil, but chemical and microscopical examinations show it to be pure cotton-seed oil. The conditions, both chemical and microscopical, are so nearly alike that there is really no difference in its nutritive value.

It is a well known fact that immense quantities of cotton-seed oil are sent to Italy, only to come back as olive-oil. In the South and West cotton-seed oil is taking the place of all forms of lard. These are well established facts, which no one who has investigated the problem will dispute. Cotton-seed oil and beef stearine would answer all of the purposes of lard, and would be entirely unobjectionable from a sanitary standpoint.

GRANVILLE P. CONN, *M. D.*

Mr. Speaker, I am satisfied that those who have looked impartially into this question are convinced that the only deleterious component of compound lard is the so-called pure lard that enters into it. Certainly the cotton-seed oil is not. It is cotton-seed-oil-producers who have a right to complain because impure, unclean, and unhealthful hog lard is mixed or compounded with their cotton-seed oil. Let us see if this bill does not surround compound lard with such restrictions that it can not be shipped in commercial shape or as other articles of merchandise are shipped.

Let us see if the restrictions and disabilities are not such as to prevent the transportation of compound lard by railroads. The bill provides in section 7 that no person shall ship, transport, or remove any compound lard in any package, incased in any cask, package, bag, bale, or any inclosure whatever. If so, the compound lard so shipped shall be forfeited and the party fined $500. What can be the purpose of the provision? Can any one be so blind as not to see the object? Does anybody suppose that a merchant will order one hundred 3-pound, fifty 5-pound, and twenty-five 10-pound packages of compound lard from a St. Louis firm to be shipped to Alabama, when the law requires the St. Louis shipper to put all these packages into a freight-car loose, to be destroyed or stolen in transit? The merchant knows the risk is all his, because the law requires compound lard to be so shipped. You kindly consent that the railroad company may close the car-door and that is all.

Why do you not permit these original packages to be put in cases and the case marked and branded? Why not put it in commercial shape, as all other merchandise is packed? You do not require each package of smoking tobacco or bottle of snuff or box of cigars to be shipped as an original package, loose. Why do you not require every article under revenue regulation shipped in the same manner that you prescribe for compound lard? Your purpose is to increase the risk and surround the trade with such unreasonable and unbusinesslike conditions as to deter the merchant and prevent the sale of compound lard.

Why do you not lay aside the mask behind which you are hiding? Why do you not come out like men and fight us in an open field? Why are you not willing to put your hog against our cotton-seed oil, and let a discriminating public decide between them? You are guilty of false pretenses. You are pretending to protect the consumer against a fraud, when there is no fraud. Your sole object is to prevent competition; you can not meet us in the open markets of the world and sell your so-called pure lard against a pure, clean, and wholesome compound lard made largely from one of the principal agricultural products in this country. You know that compound lard is more cleanly and wholesome than the so-called pure lard made from the fat of slaughtered swine. You will not deny that it is the competition with compound lard that you are trying to get rid of by this bill. Why not justify your action by declaring that you are the Lord's anointed, and therefore have the right to tax and oppress all mankind for your special benefit? That would be more manly and in accord with your past history.

But there are other serious objections to the bill. You put the sale of compound lard under the surveillance of revenue officers and license them to invade the privacy of the family in this unholy pursuit after blood-money. You must know, gentlemen, how obnoxious this system of surveillance is to the proud American farmer and laboring man. When the package is empty, the stamp must be utterly destroyed, says the law. If the honest old farmer or his hard-worked wife should neglect or forget to destroy this stamp and the revenue officer goes nosing around the kitchen, as he has the right to do under this bill, and finds the innocent package with the stamp uncanceled, the owner is seized and dragged away from home and business, carried before a United States commissioner, bound to appear at the next term of the United States district court, fined $50, and imprisoned six months.

And this is the relief you offer the farmer and farm laborers and working people generally, all of which is intended to embarrass and to increase the risk in the manufacture and sale of compound lard. This wholesome, desirable food product that goes on the table of more than one-half of the people of this country is put under the same bans and restrictions that tobacco, snuff, and cigars are subject to, except that you permit these articles of luxury to be incased and shipped in a decent, businesslike way, while you require the compound lard, the poor man's food, to be shipped so as to expose it to the greatest possible danger and increase the risk and raise the price as much as possible.

The bill is a long step toward a system which will bring every section of the country and every diverse interest before Congress, each clamoring for protection against some other domestic industry. Mr. Speaker, the honest farmers do not demand this class of legislation. They are fair-minded men. They want equal and exact justice done to all interests and every section of the country. What farmer has been here to lobby for this bill? What farmer has haunted the committee-rooms and corridors of the nation's Capitol in advocacy of this measure? Who are they? Name some of them, that the honest farmers may know who is so solicitous about their interest and welfare, who it is that urges the passage of this monstrous proposition. I will give their names and let the farmer say if, in his opinion, these gentlemen are sincere in their professions or care one snap of their finger for the interest of the farmer, or have a desire to furnish a good, wholesome article of pure lard at a less price than is now paid.

The distinguished farmers, so called, whose names I print with my remarks are those who have lobbied for this bill, and they are the so-called farmers who will be benefited by it. Their hired agents have haunted this Capitol for two sessions of Congress, and they are now about to receive their reward. A great trust is about to be organized in pure lard, so called, for the benefit of the "farmers," so called. But here is a list of some of these distinguished friends of the farmer, and I am indebted to Hon. JOHN H. WILSON, a member of the committee, who submits a very able report on this subject. He says:

Who first proposed any legislation in Congress upon the subject of lard? The earliest known bill was presented by Hon. Mr. DAWES in the United States Senate December 19, 1887, Fiftieth Congress, first session (S. 650), by request of John P. Squire, a pork-packer in Boston. (See page 49 of the hearings of the Fifty-first Congress.) The proceedings before the committees of both Houses show that the prominent advocates of lard legislation who appeared before the said committee as promoters thereof were as follows:

Page 47, Mich. Ryan, pork-packer, Cincinnati.
Page 61, Joel A. Sperry, pork-packer, New Haven, Conn.
Page 68 and 266, John Whittaker, pork-packer, St. Louis, Mo.
Page 101, E. A. Bartman, pork-packer, Bridgeport, Conn.
Page 230, William S. Harvey, pork-packer, Kansas City, Mo., and Philadelphia, Pa.
Page 102, U. S. Epperson, pork-packer, Kansas City, Mo.
Page 246, O. W. Thomas, pork-packer, Louisville, Ky.
Page 265, Mr. Morrison, pork-packer, Cincinnati, Ohio.
Page 247, W. W. Kimball, pork-packer, Boston, Mass.
Page 258, C. G. Cryer, pork-packer, Baltimore, Md.
Pages 119 and 277, W. L. Hill, pork-packer, Boston, Mass.
Page 330, John C. Hately, pork-packer, Chicago.
Page 348, William Kirkwood, pork-packer, Chicago.

Among the prominent petitions, letters, resolutions, statements, etc., favoring the bill we also note:

Page 8, Cincinnati Board of Trade.
Page 8, Chicago Board of Trade.
Page 15, Francis Whittaker & Sons, pork-packers, St. Louis, Mo.
Page 16, St. Louis Live-Stock Exchange, East St. Louis, Ill.
Page 107, Louisville Board of Trade.
Same page, Boston Chamber of Commerce.
Page 116, Plumb & Winton, pork-packers, Bridgeport, Conn.
Page 168, William Ryan & Sons, pork-packers, Dubuque, Iowa,
Also, John P. Squire & Co., Boston, Mass.
Des Moines (Iowa) Packing Company.
International Packing Company, New York City.
Chicago Live-Stock Exchange.
James E. Booge & Sons, pork-packers, Sioux City, Iowa, etc.

The foregoing seems to us to be as choice an assortment of pork-packers, combines, and stock-yards representatives as can be gathered in the length and breadth of these United States. These are the men, we take it, who, when they can, squeeze the last cent of money out of the hog-raiser and the hog-seller. These are the men who through their "eveners" and adjusters at the stock-yards and at the packing-houses "dock" the honest farmers most arbitrarily on every drove of hogs they buy, and these are the men who appear before the Congress of the United States as manufacturers of "prime steam" lard, as explained in the foregoing pages, which they say the Government must not touch, and as advocates for the enactment of this particular measure which they say is solely in the interest of the downtrodden farmers.

The object of this report is to state as distinctly and frankly as possible our mistrust and suspicions concerning the ultimate results which may accrue if this bill (H. R. 283) becomes a law. We are free to say that we hesitate to believe a bill which will benefit the agricultural interests of the United States, the farmer and the hog-raiser, can emanate from such a source. If there is any possible chance of any lard legislation of this kind adding 32 cents to the value of every hog in the United States, we are satisfied in our own mind that that 32 cents will accrue to these gentlemen of the slaughter-houses and of the stock-yards, and not one cent of it will ever reach the farmer, in whose interests it is claimed this bill is proposed.

This is distinctively a Republican measure. I confess, Mr. Speaker, that I can not understand how our Democratic friends on this side of the House can support such a bill. They must know that the purpose of the bill is to protect one agricultural product at the expense of another agricultural product. They must know that the bill strikes a blow at one section of the country in favor of another section of a common country. They must know that it is in direct violation of the ever-living principles of our party. They must know that it is un-Democratic and un-American. My brethren of the household of the faithful, you stand on dangerous ground. You are warming into life the adder that will sting you and the dearest right and interest of the people.

In the name of the American farmer and wage-earner, I protest. In the name of the wife who is tired and worn with the cares and burdens of life, at whose apron strings hungry and crying children are pulling for a biscuit seasoned with compound lard, I enter a solemn protest. In the name of justice and fair play, I protest. As I hope to see the principles of our Government handed down to those who are to come after us as they came to us from the fathers of the Republic, I protest against this wicked, vicious, and dangerous doctrine.

Will this kind of legislation never cease? Will the time never come when the people of the South will feel that their rights and interests will be protected as those of other sections of a common country are

protected? Can we never feel that we are in our father's house and entitled to all the benefits and privileges that our brethren enjoy? Can we never claim that under its roof we are the equals of anybody else in the same house? Will you never tire in your efforts to oppress the South? Will the time never come when you will treat us as brethren, owing allegiance to the same flag and holding a common interest in the Government with yourselves?

You say the farmers demand the passage of this bill. What farmers? Do you not know that four-fifths of the farmers and farm laborers in this country are buyers of lard, and not sellers? You do not reach the lordly cotton-planter who owns his broad acres of waving corn and cotton, for he does not sell cotton seed. It is the poor tenant who rents his land or works on the share system, the common farm laborer, who will suffer by this class of legislation. I venture the assertion that there is not a Representative on this floor who claims to represent an agricultural district at least half of whose constituents are not buyers of both pork and lard. To say the farmers of this country are demanding this class of legislation is to insult their intelligence. It is to say to them as you have been saying for years: "You do not know what you want or what your interest is." Suppose a few farmers who sell lard do want this bill; is that any reason why the millions of men, women, and children in the country who will be injured by it should not be heard?

Who is looking after the interests of the miners and mechanics and wage-earners, whose number exceeds ten times those who sell lard? Have they no friends here and have they no interests to be protected? Have they no rights? Do they not pay taxes, and must the Government not rely on them to fight her battles and defend her honor? Then why should they not be heard? Do they demand that their food shall be increased in price in order that a few pork-packers in the great cities of the country may be able to organize a great lard trust, and mercilessly drive up the price of lard until none but the rich can buy it? Mr. Speaker, I stand for the laboring people of this country, and will never, by word or deed, deprive them of a single blessing or add one drop of sweat or stroke of toil to their efforts to better their condition and that of their families.

Gentlemen are growing very anxious about the farmers. You pretend to favor this bill in the interest of the farmers. If you are sincere in your protestations in behalf of the agricultural interest of this country, at a time when you could have rendered effective service why did not your political friends protect the great toiling population of this country from the unjust burdens cast upon them by the act of 1869, which converted a contract to pay the bonded indebtedness of the United States in paper money into a contract requiring it to be paid in coin? The wealth of the bondholders was appreciated in value by this act over $500,000,000. Why did you not interpose in their behalf when your party clandestinely demonetized silver, by which the obligations of the Government were made payable in gold, the volume of circulating medium reduced, money made dearer, and property and labor made cheaper? You ought to have thought of them when you were voting for the McKinley bill, by which you increased the price of nearly every article consumed by the farmers and laboring people of this country.

Can you not get your mind on the interest of the real farmers, laboring men and women, and hungry children when you come to vote on this bill? Can you not for once in your life lose sight of the wealthy pork-packer, who contributes to your campaign fund, long enough to cast one vote for the people? Gentlemen across the aisle, do not worry about the poor farmer. He has no confidence in your promises. They are made only to be broken. The pathway of your march over the rights and interests of the people is strewn with broken promises and unfulfilled pledges. Do not grow restless, farmers ALLEN, BROSIUS, and BUTTERWORTH; the real farmers of this country are preparing to take care of themselves. They are on your track. They are studying the science of government, political economy, and other important questions as never before. They are organizing, and will move with great force when the word "Forward!" is passed down the line in 1892.

I am satisfied that my advice on this subject will not be taken. It is and always has been the policy of the Republican party to promote class legislation; and it has so happened in all cases, as in this, that the class benefited is comprised of the rich and powerful, who do not need to be aided at the expense of the poor and toiling millions of this country.

Mr. Speaker, in conclusion, it seems to me that the American Congress would present a much grander and nobler spectacle if it were engaged in passing a resolution of thanks to those men who by their investigations have discovered and given to the world a cheap, wholesome, and nutritious food. None of the great inventors of modern times have so benefited mankind as those who discovered that cotton-seed oil compounded with stearine and hogs' lard made the best article of food and the cheapest cooking fat ever used. Mr. Speaker, the farmers have asked for a measure of relief, and this bill has been offered them. They come before this Congress and ask to be relieved of some of the burdens they have been bearing so patiently and so uncomplainingly for so long, and they are offered a measure filled with additional taxes on the necessaries of life. I doubt if they will accept this additional insult without resentment.

Compound Lard.

SPEECH
OF
HON. MARRIOTT BROSIUS,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 23, 1890,

On the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard.

Mr. BROSIUS said:

Mr. SPEAKER: It was not my purpose to add anything to the remarks I had the honor to submit at the beginning of the discussion, but some observations made by the opponents of the bill make it necessary for me to trespass a little further upon the patience of the House.

COTTON-SEED OIL.

It is urged strenuously in opposition to the bill that the "compound-lard" industry has given a great impetus to cotton-seed-oil production and added greatly to the value of that product, and that the passage of this bill will seriously impair that industry. Whatever specious show of logic this contention may have, it has no standing in morals. No trade has a right to rise on the ruins of its fellow, wrought not by legitimate competition in a fair field, but by cunning and the subtle devices of the wicked.

No title to prosperity can be based upon a fraud. The claim of cotton-seed oil to a market under the name and brand of "refined lard" is no more defensible on moral grounds than the claim of a man to the goods he has obtained by false pretenses. Whatever prosperity in the oil trade is due to deceit and imposition ought to be impaired, and the honest residue will remain unaffected, enjoying a higher degree of self-respect than heretofore.

It is sad and depressing to contemplate that, in a christian nation, which sends missionaries to the heathen of other lands, tillers of the soil insist upon the right to use the arts of the devil, agencies which every honest man must stamp as immoral. Are cotton-planters becoming insensible to the obligations of morality? Are the cotton-seed-oil-producers conspiring with the spurious-lard-compounders against commercial honesty and business integrity? Are they like the sanctimonious pirates who went to sea with the Ten Commandments, but scraped one out of the table—"Thou shalt not steal"—because that was a commandment that commanded them against their functions?

Nor is there any need for such devices in marketing the products of the cotton plant. There is no product of the soil so entirely and completely utilized for purposes of profit as the cotton plant; there is not an atom of waste in it.

Let me read the story of the transmutation of cotton seed. It is like a fairy tale:

Was there ever—

Says The Bankers' Monthly—

such a history as that of the cotton seed? For seventy years despised as a nuisance, and burned or dumped as garbage; then discovered to be the very food for which the soil was hungering, and reluctantly admitted to the rank of utilities; shortly afterwards found to be nutritious food for beasts as well as for soil, and thereupon treated with something like respect. Once admitted to the circle of farm industries, it was found to hold 35 gallons of pure oil to the ton, worth in its crude state $14 to the ton, or $40,000,000 for the whole crop of seed.

But then a system was devised for refining the oil up to a value of $1 a gallon, and the frugal Italians placed a cask of it at the root of every olive-tree, and then defied the Borean breath of the Alps. And then experience showed that the ton of cotton seed was a better fertilizer and a better stock food when robbed of its 35 gallons of oil than before; that the hulls of the seeds made the best of fuel for feeding the oil-mill engine; that the ashes of the hulls scooped from the engine's draught had the highest commercial value as potash, and that the "refuse" of the whole made the best and purest soap stock, to carry to the toilet the perfumes of Lubin or Colgate.

Is it necessary to mask such a commodity to get it on the market, and are farmers in the South willing to proclaim from the housetops that they need devices of fraud and covin to promote their trade? Do they demand the intervention of this oil miracle to push their sales? Gentlemen will recall the famous lines of Crashaw, describing the miracle of Cana:

The conscious water saw its God and blushed.

Here we are introduced to another miracle by the farmers of the sunny South—and I speak of it with all reverence—which may be described in a line which is in no danger of becoming celebrated:

The conscious oil of the cotton seed saw Fairbank's chemist and bleached.

THE FARMERS.

The tillers of the soil, of all men on earth, ought to spurn the arts of the knave who goes about "to cozen fortune and be honorable without the stamp of merit."

The farmers of this country have keenly regretted and often charged that other classes were wearing "undeserved dignities." They have lamented, with the prince in the play, "that estates, degrees, and offices were derived corruptly, and that honor was not purchased by the merit of the wearer."

There was no command laid upon the farmer to be rich or learned,

but he must be honest. His situation invites it. His intercourse with nature promotes it. God's myriad ministers of truth are speaking hourly to him in the voices of the field, the woods, and the air. He sees no base deceit in nature's commerce with him in taking the seed and returning the harvest. He hears no lie from the ceaseless tongues which warble the music of nature's sublime symphonies. He lives and moves and has his being in a glorious temple of truth and beauty, where every inspiration is uplifting and every influence ennobling, and God knows he ought to be honest.

REDEEM COTTON-SEED OIL.

I am inclined, moreover, to believe that the sooner cotton-seed oil ceases to be used as an adulterant the better for the producers. This oil is said to be little inferior to olive oil as a dressing for salad. In nutritive value it is equal to any oil. We import 893,338 gallons of olive oil at a cost of $696,065. I have no doubt it will at an early day, with superior methods of refining, largely supersede olive oil, and command as high a price and ultimately give the cotton-grower the benefit of the money we are now sending abroad for olive oil. This, however, can not occur while the oil is degraded by use as an adulterant and palmed off as lard.

The subjoined statement conveys some idea of the cotton-seed-oil product and its value:

STATISTICS OF COTTON-SEED OIL.

Total annual production, about 28,000,000 gallons, or	pounds	210,000,000
Value on present market		$10,000,000
Used in production of compound lard	pounds	70,000,000
Value of which is about		$3,500,000

The manufacture of cotton-seed oil in recent years has been from 175,000,000 to 200,000,000 pounds and more. It is probably a fair estimate to place the current season's manufacture at about 225,000,000 pounds; in 1888-'89, at 210,000,000; in 1887-'88, at 185,000,000, and approximately 175,000,000 for several years previously. We are unable to estimate satisfactorily the proportion of the product used as a lard mixture.

The export valuation of cotton-seed oil has been approximately as follows, per pound, for years ending June 30:

	Cents.		Cents.
1888-'89	6.45	1883-'84	5.80
1887-'88	5.75	1882-'83	7.00
1886-'87	5.15	1881-'82	6.15
1885-'86	4.50	1880-'81	5.70
1884-'85	5.50	1879-'80	6.15

Export of cotton-seed oil in 1888.

To—	Gallons.	Value.
Belgium	368,489	$146,598
Denmark	2,550	1,026
France	1,062,140	445,609
Germany	143,258	61,454
England	250,527	109,178
Gibraltar	386,244	123,690
Italy	284,956	104,199
Netherlands	1,797,800	803,820
Portugal	179,000	72,600
Sweden and Norway	22,030	9,680
Total	4,396,994	1,876,835

NO DISCRIMINATION.

It is said that the bill discriminates invidiously against this particular industry. If it does so, it is because this particular industry in its mode of prosecution is particularly obnoxious to commercial morality and injurious to public interests. A difference in the character of industries justifies a distinction in the manner of treatment. All men are endowed with equal rights, but some men are sent to jail and others invested with high honors and civic distinctions.

The opposers of the bill would not object to it if it applied to all lard-manufacturers. This is of course a stupendous concession to the weakness of their case. It means that the principle of the bill is right, but they do not want to be singled out and have their sins set before them in the eyes of the world. They want their betters to share the ignominy of their wrongs. Their anticipated miseries, they think, will be more easily borne if shared by others. All wrongdoers seek this kind of consolation. It is the same thought which is so aptly expressed in King Lear:

> When we our brothers see bearing our woes,
> We scarcely think our miseries our foes;
> How light and portable my pain seems now,
> When that which makes me bend makes my neighbor bow.

CLEANLINESS NEXT TO GODLINESS.

But the claim that the steam-rendered lard of commerce should be subjected to similar regulation because it contains impurities is unworthy those who make it. There is no more reason for including genuine lard than flour, corn-meal, or other unadulterated products of the farm, field, or factory. That lard at some stages in the progress of its rendering may be repulsive to the eye, I do not doubt, but it does not follow that it is not clean when the process is completed. You might as well complain of the foulness of the lily that lifts its silver cup of beauty and purity from the muck-pile.

This not a question of cleanliness, but rather of godliness. Cleanliness does not go before, nor is it equal to, but is next to godliness. We may be clean if we like, but we must be godly, in the lard business as well as in all others. This bill seeks to prevent fraud, imposition, covin, and deceit in the production of a food product and placing it upon the market, all of which are in a degree ungodly. We would like manufacturers of lard as well as other people to bear in mind that it is as true to-day as in the elder time that "righteousness exalteth a nation, but sin is a reproach to any people."

NO ASSAULT UPON FAIRBANK.

I desire in this connection to observe that my friend from Illinois [Mr. MASON] is in error when he says I assailed the personal character of Mr. Fairbank in my opening address on this bill. I did not mention Mr. Fairbank's name, save in connection with his own testimony; I assailed the fraud which I think he is perpetrating upon the people. He may not think it a fraud, but that fact can not curtail my thinking upon the subject, and I must characterize the business as I think it is, and if he follows it he can not escape that modicum of character which men acquire from their business.

If I thought I had abused the liberty of this floor to assail Mr. Fairbank or any other man, I would reproach myself until I had made a retraction as distinct and public as I made the offending utterance; for I hold that to take advantage of the exemption from responsibility enjoyed by a member of this House for words spoken in debate to assail private character is more reprehensible and wears a darker livery of culpability even than making lard out of cotton-seed oil.

If my friend from Illinois [Mr. MASON] will do me the honor to re-examine my remarks, I think and hope he will see that I did not exceed the just limits of decorous debate on a question of public importance.

THE TRAIL OF THE SERPENT.

I quite agree with my friend that Chicago is a great city and contains multitudes of the children of men, but when I reflect that one-half the bogus butter and three-fourths of the adulterated lard consumed in the United States are made in that city I am almost cruel enough to harbor the suspicion that the queen city of the West is growing in grease faster than in grace.

When I reflect how many of her people were engaged for several years in making and selling a compound of oil, suet, and lard under the name and brand of "choice refined family lard," I may be excused for suspecting that beneath the spreading vines and scented flowers which adorn the door-way to the temple of her virtue, there may still be found the "trail of the serpent."

Now, Mr. Speaker, it seems to me this House ought to be ready to vote upon this bill. No feature of the question has escaped the discussion. We have but to realize two things to make the way clear for the passage of the bill.

THE PEOPLE FOR THE BILL.

The first is that the people of this country demand it. From the sunny slopes of the South, the illimitable plains of the West, and the fertile hillsides of the East, comes the voice of the people in united, concerted, and enthusiastic acclaim for this legislation.

THE MILLENNIUM ADVANCES.

The other is that every act of legislation that strikes down a wrong, every law that stabs to the heart a national vice, overthrows a seated iniquity, which tarnishes the fair fame and dims the glory of our people, visibly advances that national millennium in which we will be liveried in the white and seamless robe of national honor and commercial integrity.

A SPLENDID RECORD.

Within the compass of a few fleeting days we have cast down the lottery monster gorged with the blood of its victims, and mounted another guard over the exposed point on the frontier of our foreign commerce in meat products. Let us now scuttle and destroy the pirate craft of this lard compound, "rigged with curses dark," which has scourged the sea of our national honor. And then let us, at least, cut off the arms of the mighty gambling octopus that has too long fattened on the substance, if not the souls, of our people. When this is done we will have completed for the first session of the Fifty-first Congress a record of unrivaled splendor in remedial legislation on lines of commercial integrity and national honor.

Compound Lard.

SPEECH
OF
HON. DARWIN S. HALL,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 23, 1890.

The House having under consideration the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard—

Mr. HALL said:

Mr. SPEAKER: So far as this Conger lard bill is concerned, as a farmer and a representative of the farming and business interests of the Third Congressional district of Minnesota, I am for it. I am in favor

of it as a separate and distinct proposition. The Agricultural Committee has seen fit to report this bill as one of special interest to the producer.

The interests of agriculture come especially within the purview of this committee. This bill requires cotton-seed oil to sail under its true colors, and not be sold as pure lard. This is only fair to those who raise hogs, and is a matter in which all our farmers are interested. This cheap oil, which comes in competition with lard and is used to adulterate with lard, is to be branded, so that all may know what they are buying, and if they prefer cotton-seed oil to pure lard, nothing prevents any one from buying it, but they can not, under this bill, defraud the public by a spurious article, and it is only just to the consumer and the producer.

This committee seen fit to bring forth this bill stamped with its approval. I believe this is an honest committee; they bring forth this bill and antagonize the Big Four dressed-beef, oleomargarine, and compound-lard combine. Then I say Stand by the committee! When I hear John Bull and the Cobden Club lobby cry out that they will manufacture all the iron, pottery, and in fact everything we need in Minnesota, and that no more factories need be built in Red Wing, Faribault, Hastings, Glencoe, and elsewhere, I do not have to pause long and consider a proposition of that kind. I am opposed to it from the start; and when I see who advocates it I continue to think less of it. So with this substitute which is proposed at this time.

I am not opposed to the Paddock bill, with which I understand this substitute is identical. Let that bill come in and stand on its own merits, and I, with many others, will support it; but do not bring it in at this time to defeat this bill which has been so carefully considered and recommended by the Committee on Agriculture.

I live in a State which has felt the heavy hand of the Big Four dressed-beef, oleomargarine, compound-lard combine. I was a member of the State senate of Minnesota when we passed the "Scheffer law," requiring all live-stock for food to be inspected on the hoof before being slaughtered for that purpose. It would seem reasonable that every State or locality should prescribe what sanitary and police regulations are necessary to provide pure food for her people. No live man can tell whether the dressed quarters of meat from refrigerator cars are from lumpy or cancer jawed diseased animals. We proposed to see the live animals standing which our people were to eat, and passed a law requiring it. Yes, passed a law, meeting every kind of opposition from the "combine," be it said to the praise of the Minnesota Legislature and the governor who approved it.

Did our troubles stop here? Not much. Money is all-powerful, as was discovered later by the farmers and business men of Minnesota. The combine carried the matter to the Supreme Court of the United States. Was the decision in favor of a State's inspecting by their own officers food coming in from another State? Was the decision in favor of local police regulations of that kind? Not by a large majority. The law was declared unconstitutional by the highest court in the land.

I desire to cast no reflections upon the court, made up as it is of men learned in the law, of high character, etc., which would preclude any thought of questioning the honesty of that decision. Though a farmer myself and never having had a lawsuit in my life, I have the greatest deference for learning and belief in the judiciary. But, Mr. Speaker, let me say to you that this Supreme Court decision declaring "inspection on the hoof unconstitutional" raised a deep-down, ugly-spirit feeling of resentment akin to "original package;" though slumbering, it is vindictive, ready to flame at the slightest breeze.

Now, as this substitute empowers a State to police and regulate its own sanitary affairs as to food adulteration, I am for it on its merits, but not as a substitute for the bill reported by the committee. Let us stand by the committee; then after we have passed that, let us take up the Paddock bill, perfect it, if it needs improving, and pass that also. I believe this Congress has tried honestly and fairly to do justice to every industry and individual in the land.

It is said that protective tariff is entirely in the interest of the Eastern manufacturer; that there is a strong lobby at the Capitol working for protection and the Eastern manufacturer; that the West needs no protection; that protection is against the producer.

First, if the East is so strongly in favor of protection why do they send, right from their manufacturing centers, so many Democrats to Congress opposed to protecting our industries and in favor of free trade? I will tell you; they know free trade means free raw material. That is what they want, free wool, free coal, free iron, and free wheat, barley, and corn. Then they want a commerce, and if wheat is high in price here they will buy it in India or Russia or elsewhere. Do you not see it?

"Free raw material and a commerce" is their watchword. With that condition of things how would factories build up in the West? How much of our commodities would they want of us in the West, which they would have to secure by rail, when they could get all things so much cheaper by subsidized steam-ship lines, by water?

If there ever was a lot of men who believe honestly and truly that the building of factories in the West is that which is necessary to make its prosperity permanent and substantial, it is the Western members of the Fifty-first Congress.

They believe the East occupies very much the same relation to the West as England does to this country; that the Eastern manufacturers are nearly all free-traders at heart, knowing they could stand free trade, but that every new Western industry and enterprise must fall. Honestly believing this they have manfully stood shoulder to shoulder battling for the new Western enterprises and for the localities they represent.

In protecting the interests of this country the producer has not been forgotten; the Republicans believe that the large importations of farm products into the United States is detrimental to the agricultural interests, with no corresponding benefit to the consumer; therefore this Republican Congress has taken steps to reduce the importations, believing this market should be saved for our own people. And I can say to the gentlemen on the other side of this House who oppose this measure that the farmers understand this. "Do not lay the flattering unction to your souls" that you will deceive them longer with honeyed words and shouts of the demagogue.

The interests of the farmer and the business man, of the West especially, are identical. What is an advantage to one benefits the other, and you can not array one against the other. You can not tear down the Republican party in the North by your efforts in that direction. It does not deserve to be torn down. Has not the Republican party honestly carried out its pledges to the people? Has not this Congress enacted honest and just pension laws for those who saved the nation, those who made it possible to have a united government for you to enjoy, and did not you on the other side of this Chamber oppose it by all possible means?

Have we not passed an honest and fair silver bill which you opposed, which your Democratic President, Grover Cleveland, opposed, and which no Democratic Congress ever passed. What has the Democratic party done during all its years of power? Did it give the poor man a homestead in the West? No, opposed it by every possible means. The Democratic party takes no responsibility, it believes in a do-nothing policy, but waits for the Republicans to act that it may denounce them. The Republicans bravely grapple with the questions of the hour. They assume the responsibilities of enacting what they believe to be just and wholesome laws for the benefit of the whole people.

The Republican party has never tried to injure the credit or destroy this nation. They believe the fundamental principle which underlies the entire national fabric is the intelligence and education of the masses. This Republican Congress has done more toward enacting laws for the benefit of the farmer and laborer than any other Congress since the foundation of the Government, and I defy a contradiction of this statement. The Republican party call things by the right name. They did not try to defeat the silver bill by insisting that the Government buy all the old silverware of Europe, and the tons of silver bullion from the wealthy mine-owners and pay $1 for 71 cents' worth of silver. They did not try to defeat pension legislation by insisting that unreasonable pensions should be paid to every widow and orphan of soldiers, and soldiers themselves, sick or well, rich or poor, as the Democrats now try to defeat this bill by proposing a substitute. Again, I say I propose to, and believe this House will, stand by the committee and thus add one more evidence of a desire to benefit the agricultural and business interests of the country.

The Late Representative Nutting.

REMARKS

OF

HON. THOMAS J. HENDERSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 5, 1890.

The House having under consideration resolutions of respect to the memory of Newton W. Nutting, late a Representative from the State of New York—

Mr. HENDERSON, of Illinois, said:

Mr. SPEAKER: The intimate and friendly relations existing between the late Judge Nutting and myself were such during his entire service as a member of this body that I can not well refrain from adding on this occasion some tribute to his memory.

My acquaintance with him began soon after he took his seat in the Forty-eighth Congress. As a member of the Committee on Rivers and Harbors, which had for its consideration matters of improvement of great interest to his constituents, I was early brought in contact with him, and had ample opportunity to study his character and to know something of his devotion to his public duties, and I can bear testimony to the intelligent, able, and faithful manner in which he represented the interests of the people of his district and State, even in the first term of his service here.

For some reason Judge Nutting was not returned to the Forty-ninth Congress, but was again elected to the Fiftieth Congress, in which he, with myself and others, was appointed a member of the Committee on

Rivers and Harbors, one among the most laborious, responsible committees of the House. And it was in our service as members of that committee that I learned to appreciate the high character of Judge Nutting for ability, energy, and industry, and for his fidelity to duty.

For many months we were almost daily associated together in the work of the committee, and I believe it would be the universal testimony of every member of the committee who served with him that he was one of the most attentive, careful, industrious, painstaking members of the committee, and that he brought to the discharge of his duties a high degree of intelligence and an unswerving integrity.

While he was a quiet, modest man and assumed no superiority of ability or merit over his associates, he was nevertheless an intelligent and capable man, and always desired to be well assured as to the rightfulness of his own action. He therefore investigated questions conscientiously and carefully before forming an opinion; but, when formed, he was firm and courageous in maintaining and defending it.

In his intercourse with his fellow-members he was courteous and gentlemanly, and commanded their respect, no less by his affability than by his close attention to his public duties.

He was a true patriot. He loved his country devotedly and rejoiced in its prosperity and greatness. His love of country was in no manner narrow or sectional. While proud of his own great State, he believed in our nationality, and was broad-minded and generous in his views and disposed, so far as it could be properly done by national legislation, to promote the prosperity of the entire country.

But the labor of his life, honorable and useful as it was, is ended. To us who served with him in this Hall, and especially to those who served with him in the committee-room and knew him so well, his death was full of sadness.

When I first heard, Mr. Speaker, that Judge Nutting was afflicted with the fatal malady which cut him down in the vigor of his manhood and his usefulness, I was deeply distressed. And it was a continuing sorrow to all of us, as we watched his patient suffering from that terrible disease, which he no doubt realized would soon terminate his life. I never saw more patient endurance nor a calmer resignation to meet the end when it came than he exhibited up to the hour when I last met him.

He has truly left behind him the example of a noble life and is worthy of the honor we this day pay to his memory.

Samuel J. Randall.

REMARKS
OF
WILLIAM S. HOLMAN,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 14, 1890.

The House having set apart June 14, 1890, for a suitable commemoration of the life and public services of Samuel J. Randall—

Mr. HOLMAN said:

Mr. SPEAKER: After many years of close association with Samuel J. Randall in the House of Representatives, in entire sympathy with him on most of the questions of public policy which have agitated our country during the last twenty-five years, and highly appreciating his integrity as a man and his ability as a statesman, I wish to add some words of affectionate remembrance to the record which Congress will order to be made in commemoration of his public services.

Mr. Randall entered the House of Representatives in the midst of the late war a Democrat with unfaltering devotion to the cause of the Union. His political associates were in the minority and did not in any material degree influence the course of legislation. In a time of war legislative majorities adopt the methods of the camp; it is a period for action, and not for debate. I had been a member for several years before Mr. Randall entered the House, and while in the earlier period of his service he took but little part in the business of the House, yet he displayed from the beginning the vigilant attention to current legislation, the solicitude for the public welfare, the sincere patriotism, so indispensable to an honorable career in a Government like ours.

Mr. Randall soon became familiar with the rules of legislative procedure, but it was some time before he displayed the thorough knowledge of public affairs and capacity for leadership which in later years were to place him in the foremost ranks of our public men. It was not until the last session of the Forty-third Congress that an occasion arose in the House demanding united action and skillful leadership on the part of the minority, when the measure of that period, known as the "force bill," was being pressed to its passage by the powerful majority. Mr. Randall had already acquired such standing in the House as an accomplished master of parliamentary law, as a gentleman prudent in method and unfaltering in purpose, that his political associates without hesitation recognized his leadership. This parliamentary contest involved the gravest interests and was one of the most prolonged and exciting that has ever occurred in our history. The measure was defeated.

This event secured to Mr. Randall the confidence and kindly feeling of all of his political associates, and especially of Representatives of the States of the South. That he was not elected Speaker of the House at the opening of the Forty-fourth Congress was attributed to the fact that Mr. Kerr, his strongest competitor, a gentleman of high attainments and great ability, had, as a legislator, rendered the country and the States of the South services of especial value during the period of reconstruction. It soon appeared that this result was best for the country and best for Mr. Randall's permanent reputation.

As soon as the Forty-fourth Congress was organized Mr. Randall became the chairman of the Committee on Appropriations. By courtesy the chairman of the Committee on Ways and Means, the older committee, has been nominally the leader of the House, but ever since the Committee on Appropriations was established its chairman has been the real leader of the House; this was never more manifest than in the Forty-fourth Congress.

It was during the Forty-fourth Congress that Mr. Randall, as chairman of the Committee on Appropriations, won his great reputation and changed the administration of the Government. The late war and the inevitable inflation of the currency had led to an alarming extravagrance in every department of Government. It seemed almost impossible to reduce the profligate expenditures of a period of war to their proper and natural condition in a time of peace. The party in power, whatever might have been the views of its leading men of the necessity of retrenchment, was absolutely powerless. The great army of superfluous employés found shelter under the Senators and Representatives from their respective States and districts; years had elapsed since the close of the war, yet the appropriations demanded by the great Departments of Government were substantially unchanged.

Mr. Randall and his committee determined to reduce the appropriations to the sums actually required by the Departments for the efficient performance of the duties imposed on them by law.

With the House Democratic, Senate and Executive Republican, there was a fierce conflict from the beginning. That first session of the Forty-fourth Congress, a long session for that period, was almost entirely employed on the appropriation bills. Months were occupied on the leading appropriation bills by the conferees of the two Houses, especially on the bill involving the number and compensation of the employés of the great Departments.

Such a struggle to reduce the public expenditures to the actual necessities of the public service has never occurred in our history. There was no thought of embarrassing any of the Departments of the Government, but a determination that the expenditures should be reduced to the reasonable requirements of the public service. After months of controversy between the two Houses over the great appropriation bills, the appropriations of the first session of the Forty-fourth Congress were reduced $29,131,362.51 below those made by the corresponding session of the preceding Congress. The result was exceedingly gratifying to Mr. Randall's political associates and arrested the attention and received the approval of the country in a very marked degree.

Before the meeting of the second session of the Forty-fourth Congress, the lamented death of Michael C. Kerr, Speaker of the House occurred, and on the first Monday of December, 1876, Samuel J. Randall was elected Speaker. As the member present who had served in the House for the longest period, I administered to him the oath of office. I will never forget the unconscious expression of absolute confidence of Samuel J. Randall, then in the vigor of perfect manhood, when he took up the gavel and entered upon the duties of that great office, which he filled with ever-increasing honor until the close of the Forty-sixth Congress, when the Republican party obtained the control of the House.

The expression of public confidence in the Democratic party in the great political contest of 1876 was in a large measure due to the statesmanship displayed by Mr. Randall during that memorable session. I succeeded Mr. Randall as chairman of the Committee on Appropriations, and on the line of policy which he had marked out the appropriations made by the second session of that Congress were $34,574,059.67 less than those of the corresponding session of the preceding Congress, making the appropriations of the Forty-fourth Congress $63,705,423.18 less than those made by the next preceding Congress, a sum exceeding the entire expenditure of Government during any year preceding the late war.

It was noticed by all men who carefully observe the course of our public affairs that this radical retrenchment of expenditures increased the efficiency of the administration of the Government because it purified and elevated the morals and spirit of the public service in every one of its departments. Public spirit took the place of mercenary designs.

I have dwelt on this portion of the public record of Samuel J. Randall because his successful efforts in reducing the expenditures of the Government secured to him the confidence of the country and were the foundation of his great reputation, and for another reason; when, at a later period, the question of revenue reform arose Mr. Randall was not in accord with his political associates; he, in common with most of the

statesmen Pennsylvania has produced, was an earnest friend of a tariff for protection, while his political associates generally favored a tariff for revenue; but as the champion of pure and honest government he was the great leader of his party to the last, and here rests his great and well earned reputation as a statesman. He believed that however the wealth of the country might increase, if the Government remained frugal, the Republic was secure; that frugal government could alone secure honest government; that without frugality in the administration of Government, corruption of its great departments was inevitable, and he struggled to the last for frugal and honest Government.

Mr. Randall as Speaker of the House was courteous and firm and always impartial; if ever arbitrary it was in support of his leading idea of American statesmanship, the maintenance of purity and honesty in the administration of the Government.

His rugged and inborn integrity kept him always in line of public duty. He was an intense partisan, but from this line of public interests and duty the interests of his party could not swerve him the tithe of a hair.

Whatever may be said of the temptations to which public men are exposed it is absolutely safe to assert that no man ever approached Mr. Randall with a suggestion in public affairs not honorable to his country and to himself.

The iron firmness he displayed in carrying out the act of Congress in the contested Presidential election of 1876 was a true index to his character. In the tumults of that period, fiercely assailed by his political friends, he did not falter a moment in the enforcement of the law. No statesman of our country has ever displayed greater fortitude in the fulfillment of a public duty.

Until the question of the tariff, which for years had been suspended by pressing demands for revenue incident to the late war, came to the front, as was inevitable sooner or later, Mr. Randall was not only the leader of the House, but, beyond that, largely influenced the course of public events. On the question of tariff as a protection to American labor, Mr. Randall was immovable; he stood firmly by his constituents and his State.

His differing with the body of his political associates on that one issue stood in the way of his reaching the first office in the gift of the Republic. It was an obstacle that could not be surmounted, although he was urged for that great office by a large body of political friends. On that issue he ceased to be Speaker of the House, yet retained by universal consent the high position of chairman of its greatest committee while his party remained in power.

While it is easy to delineate the character of Samuel J. Randall, yet it is impossible to express in words the magic power by which he influenced the opinions and conduct of great bodies of men. It can only be said Samuel J. Randall was a born leader. Men gathered around him and felt perfectly safe in following his leadership. An absolute certainty of the integrity of his purpose and soundness of his judgment perhaps explains all this. His speeches, always brief, delivered in a clear and distinct voice, were marked by positiveness and force rather than polish of expression. He made no effort at elegance of style, no embellishment and no ambiguity, but a clear, strong, and forcible statement of the matter in hand, and always addressed to the point at issue. Almost always he carried the House with him.

In domestic and social life he was all gentleness and affection. His face, perfect in its classic outline, although strong and massive, expressed kindness and benevolence; his manners were engaging; he was the very soul of magnanimity, as was often seen in his controversies in the House. Incidents that occurred in the Forty-eighth Congress illustrated his character as displayed outside of severe public duty. On the 3d day of April, 1884, General Grant for the last time entered this Hall and took a seat in the space outside of the seats on the east side of the Chamber, the Democratic side of the House. Some years had elapsed since General Grant had honored the House with his presence. Mr. Randall and other members gathered around him. It was more than a year before his death, yet in the face and deportment of General Grant there was an expression of weariness and despondency. Mr. Randall promptly moved that the House take a recess to enable the members "to take by the hand" the illustrious visitor, and Mr. Randall and Mr. CARLISLE, the Speaker of the House, escorted him to the open space in front of the Speaker's seat, and then all the members shook hands with the illustrious citizen.

How pleasant it was to see the careworn and despondent expression of his face disappear before the cordial greeting of the representatives of the people of his country! And I must recall the event later on, when on the 3d day of March, 1885, in the midst of one of the fiercest tumults I have ever witnessed in this Hall, hundreds of members at the same time fiercely demanding recognition for special measures (as at 12 o'clock the next day Congress expired), Mr. Randall, with a force absolutely irresistible, carried through the bill restoring General Grant to the head of the Army, with honorable retirement, and who of all the members of the House and of all our people, when General Grant died a few months later, did not rejoice that that was done? Who shall say how this last expression of a nation's gratitude and affection consoled the last hours of the great chieftain? And who shall say how these and countless other generous and kindly acts of Samuel J. Randall during his well employed life consoled his spirit as in his last hours the shadows gathered around him?

Mr. Randall was devoted to his home. He loved his wife and children and friends, and found his chief enjoyment in the sacred circle of his fireside. The last time I saw Mr. Randall I was impressed more than ever with this trait of his character. He was pale and emaciated, and I felt was conscious that he would never again appear on the great theater where he had won the admiration and confidence of his countrymen; yet he displayed an anxious solicitude for his country, and my heart was touched by the interest he felt and expressed in the welfare of his friends. Samuel J. Randall is dead. A great and good man is fallen. But how consoling the divine assurance that what we call death only opens to the immortal spirit of the just and the good the highway to a life immortal.

Forfeiture of Land Grants.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 16, 1890.

The House being in Committee of the Whole and having under consideration the bill (S. 2781) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. STOCKDALE said:

Mr. CHAIRMAN: I desire to speak briefly on this bill. The general subject of land forfeitures has been so fully discussed in this and the Fiftieth Congress in the presence and hearing of the House that I shall spend but little time upon that. In the Fiftieth Congress a bill passed the House of Representatives by a very large majority forfeiting all the lands not earned within the time prescribed by the granting acts. That bill went to the Senate and was defeated there, as many similar bills had been before. The present forfeiture bill, in its main features the same as the one introduced by the chairman of the committee to which I belong, proposes to forfeit all the lands not earned at the time of the passage of the bill. And section 7 of this bill provides as follows:

SEC. 7. That nothing in this act shall be construed to waive or release in any way any right of the United States to have any other lands granted by them, as recited in the first section, forfeited for any failure, past or future, to comply with the conditions of the grant

So that there is no good reason why we shall not forfeit what lands we can get at once and then proceed for the forfeiture of the balance about which there is a contest, if Congress so desires. When I came into the Fiftieth Congress I was very much impressed with the idea that all these lands opposite roads and parts of roads not completed within the time specified in the granting acts should be forfeited. I was impressed also with the idea, which many other gentlemen seemed to entertain, that it could be done, at least as to all the lands not earned within the periods prescribed by the granting acts. I find, however, upon examination that that proposition has failed in the Senate of the United States for several Congresses back.

I find that if the first bill of this sort introduced had passed there would have been saved to the public domain some eight or ten million acres more of these lands than can now be saved, probably far in excess of that. But the House has been pursuing a policy of passing bills that will not pass the Senate, and hence forfeiture is postponed, and in the mean time the railroad companies go on selling the lands. It is said that we have no right to know here that the Senate will not pass these bills. The answer is that the Senate has uniformly and persistently refused to pass such bills for years, and adheres now to that policy by passing a bill similar to this. On this subject I desire to quote some remarks of the gentleman from New Jersey [Mr. MCADOO], who was very severe in his strictures upon this bill. He said:

Bill after bill taking back these lands which have been forfeited by the railroads and making them again what they were, the property of the people, met with a stone wall of defiance and opposition in the United States Senate. We went again to the people on that issue. We still maintained our policy. We still remained true to the issue which we had presented. The Forty-ninth Congress came in, being elected largely on that issue. A distinguished gentleman from Indiana was the chairman of the Committee on Public Lands, Mr. Cobb. Millions of acres held improperly by the railroads were again forfeited, and the struggle went on in the House, but the Senate again stood in the path like a stone wall, refusing to make concessions to the demands of the people.

Again, he says:

We were told that there would be less acres for us to forfeit in the next Congress, and that we had better make a compromise such as is held out to us now, but refused and maintained our stand. It was, in my judgment, a wise, righteous, statesmanlike stand, to take back these lands.

Now, Mr. Chairman, upon that point I desire to say that it seems to be the unanimous opinion of all the gentlemen who speak in opposition to the forfeiture of these lands, so far as they have not been earned up to this time, that the Senate of the United States stands like a stone

wall in opposition to the forfeiture of lands out of time, and that no such legislation can be passed.

What then? Must we forever drive against that stone wall until the last acre of these lands has been disposed of by the railroads to the settlers for whom we all say they should have been reserved by the Government? And all the forfeiture bills provide, as they should, that lands sold to settlers by the railroad companies shall be confirmed to the settlers, and therefore the delay in passing this forfeiture bill suits the railroad companies well. If they can keep up this disagreement between the House and the Senate and have no forfeiture until they can sell all these lands to people who will move on them in good faith to live, that is as good a thing as the railroad companies want, for all the bills provide for confirmation of title to the bona fide settlers, which serves the same purpose as confirming it to the railroad companies if we persist in this delay.

I may be in the attitude assigned me by the criticisms upon my course by some Western journals; it may be that I am not sufficiently national and too much devoted to my own district, as those journals say. Probably I am influenced in that way to some extent; and I must say the chief topic I shall discuss at present is in connection with a road in my own district, the Gulf and Ship Island road.

In 1856, August 11, a land grant was made to the State of Mississippi for the construction of a road from the town of Brandon to the Gulf of Mexico in the State of Mississippi. That road has been graded as far as the junction with the New Orleans and Northeastern Railroad, about 70 miles; the iron has been laid upon that road a part of the way. A bill forfeiting all lands not earned within the term of the granting act would wipe that road out of existence, for the time was fixed at ten years from the date of the act—wipe it out in the county of Harrison that has already subscribed and paid $50,000 towards its construction.

The money has been expended upon it in seeking a junction with the New Orleans and Northeastern road. The Senate amendment which was put on this bill allowed to that road twelve months in which to build it to a point where it would cross the Northeastern Railroad, giving them all the land south of a line drawn east and west through that point. Under such a provision all the lands north of that line embraced in this grant will be forfeited, and that is one strong reason in my estimation for wanting a forfeiture bill passed at this session. That land has been tied up long enough and ought to be opened to homestead entry.

I am sorry to differ somewhat with my colleague [Mr. HOOKER], who favors giving the whole grant to the road, from the Gulf to Brandon. I am in favor of the forfeiture of all the lands belonging to the Ship Island Railroad grant north of the line at Hattiesburgh at least, and want it done at this session of this Congress. The company propose to depart from the grant at that point and build the road east of it. The lands in Covington and Simpson Counties will, if this road retains the grant, be given for the building of a road in a part of the State where the land is not situated and in which the people along the line of the grant will have no interest, and they will be deprived of the homestead privilege with reference to those lands to which they are entitled. I do not mean to say that people along the line of the grant have any special claim on the land. All citizens have equal rights to it, but it is unfair to appropriate lands in one county or locality to build a road in another.

Therefore I desire this bill to take effect, and to take effect now. I am not willing, Mr. Chairman, to wait until the Senate comes to our terms, because, according to the testimony of the gentleman from New Jersey [Mr. MCADOO] and my colleague on the committee, the gentleman from Missouri [Mr. STONE], there is no hope of that. We can not be expected to convert the whole Republican party; that would exhaust the plan of salvation. [Laughter.] But I want the forfeiture of these lands now from Hattiesburgh north. Then if they can show that the road will be built to that point within twelve months and that the people want it, the committee of conference can grant them twelve months within which to finish the road to the city of Hattiesburgh; and the House may approve their action, and I have no doubt will if the conference committee become satisfied that it ought to be done.

Again the gentleman from New Jersey says:

> If I thought that this bill would take back any considerable portion of arable lands for the honest people of this country I would be for it. But when you take from the small minimum amount of lands to be taken back by its operation the arable portion you will find that the arable portion is already occupied by those persons claiming title under the railroads; that it is to be sold for $1.25 an acre, and you will find there is not a thousand acres of this land capable of being entered for settlement by parties coming immediately on the ground.

Upon that declaration I claim his vote for this bill. I can show the gentleman one little grant in the State of Mississippi, lying mostly in the district I have the honor to represent and the balance in the adjoining district, represented by my colleague [Mr. HOOKER], where this bill will give back to the public domain more than a thousand acres of land "capable of being entered for settlement by parties coming immediately on the ground," and more than a hundred times that amount, even if the Gulf and Ship Island shall make such a showing as will entitle them to the land south of Hattiesburgh. There are about 90 miles of the grant north of Hattiesburgh, six sections to the mile, 345,600 acres, every acre tillable land, some of it poor, indeed, but with a subsoil capable of any degree of fertilization, and much of it the very best of timber land.

Taking this as a specimen of the gentleman's knowledge on this question, his assertions are without force.

The gentleman from New Jersey said:

> What, then, should be the policy of this side of the House under the circumstances? We can lose nothing, Mr. Chairman, by refusing to pass this bill. The men who are on the land are American citizens. They claim their title from the railroads; and the only thing we may possibly lose would be the small amount of money that would be paid into the public Treasury, supposing that we delay the taking back of the land and thus eventually put it out of our power to do so.

Again I say the gentleman is not informed, for we will, as I have shown, lose over 300,000 acres in three counties of Mississippi, and I am not willing for the people to be deprived of homesteads in that amount of land in order that the people who have failed to get any forfeiture shall maintain their stand. They can stand if they wish, but I want land for homesteads for our people, and want it now. That is not all; as soon as this forfeiture is effected the odd sections within said grant, held at $2.50 an acre by the Government, will be thrown open to homestead entry and which will add perhaps 250,000 acres more to the area open for homesteads, making in all nearly 600,000 acres of land for homesteads—3,750 homesteads. I would prefer to give that many people homesteads rather than to preserve the dignity of gentlemen who are willing to lose all the lands rather than recede from their stand.

My colleague on the committee, the gentleman from Missouri [Mr. STONE], in speaking of this bill, said:

> This bill, infamous as it is, will go upon the statute-book of the nation.

As I understand the objection which my colleague on the committee makes to this bill, it is that it will go upon the statute-book alone instead of coupled with the amendment that he proposes.

The first section of his amendment is, *verbatim et literatim*, the first section of this bill. Therefore, so far as that first section is concerned, the substitute proposed by the minority is *pari passu* equally infamous with the bill itself, which we support. The substitute proposes in the next place that these lands be forfeited by a judgment of the United States court back as far as the point to which the road was built, when the time fixed by the granting act expired. In this difference between leaving that proposition as a separate measure and putting it in this bill consists all the "infamy" of this proceeding.

The gentleman from New Jersey was pleased to denounce this measure as a sort of "compounding of a felony." Now, whether the expressions of this kind were oratorical flourishes or intended to apply in earnest I can not say; but by their own admission these gentlemen have been passing these bills knowing that the Senate will not pass them, knowing that these lands are going from the public domain year by year by sales which there is no pretense we can get under, and which these gentlemen do not ask to be set aside, but provide in every bill to confirm the title to the purchasers. The gentleman from New Jersey says it is a crime to let corporations have our lands, and in the next sentence says he would maintain his stand on the great question if all the lands be lost. There we differ. I would rather have the land for our people. The gentleman from New Jersey says truly that they were urged to accept such a bill as this years ago but, declined, seeing the railroads going ahead building roads further and further, earning lands and selling them daily, constantly lessening the amount that could be recovered by forfeiture, knowing that the Senate would defeat the House bills, just what the railroads wanted. Now, in view of these declarations of gentlemen who understand the subject of land grants and land forfeitures so well (and they do understand these questions well) I ask who has been "compounding a felony" when those whose lead we followed in the Fiftieth Congress passed bill after bill here, knowing that the Senate would not pass them and knowing that the lands were being taken away that might be returned to the public domain? And these gentlemen are trying to lead us again into the same folly. I do not charge them with trying to defeat forfeiture. I say the railroads do not want anything better than that policy until they can dispose of all their lands, and I do not propose to play into their hands and injure my own people in order to win the plaudits or escape the censure of members of this House on either side.

It is said here in this debate that the Senate can not afford to go to the country upon that sort of an issue, of not forfeiting the grants. I do not know upon what that declaration is based. As to the Senate not being able to go to the country upon an issue of that sort, I am sorry to say that they have gone to the country upon such an issue year after year until the Republicans have increased their majority there from nothing to ten, and if these gentlemen pursue the policy which they are now urging upon this House the Lord knows what their majority will reach in the next few years.

This House can not go to the country, gentlemen say, upon the issue of forfeiting what lands we can get, but must stand on the old ground. I say, sorry as I am to acknowledge it, that after issue upon issue has been raised upon your plan, and we have gone to the country upon them, the Republicans have got a majority in this House honestly of six—otherwise ten.

A MEMBER. Eighteen.

Mr. STOCKDALE. And it will soon be twenty or twenty-two. But the land-grant question is not responsible for that; but they had six to start with.

The gentleman further says:

> And I take it that the result of the election which brought into being the Democratic majority in the Forty-eighth Congress was largely owing to the failure of the Forty-seventh Congress to forfeit the public lands which had been granted to the railroad companies.

Well, if that were true, what followed? The House passed such a bill as suited my friend. The Senate stood, as he says, a stone wall in the way, but was willing to pass such a bill as this, which would then have forfeited some fifteen or twenty millions of acres. The House refused—took a stand, as my friend says.

The Democratic majority was reduced in the House from sixty in the Forty-eighth Congress to about forty in the Forty-ninth. The House again passed the same sort of bill; the Senate again stood as a wall against it, but was willing to pass a bill like this, which would have restored to the public domain a large amount of land, less, of course, than would have been restored in the Forty-eighth, but the House refused; and the next Congress, the Fiftieth, its majority was reduced from forty to fifteen. In the Fiftieth Congress the House passed the same sort of a bill; the Senate again refused, but tendered a bill like this; the House again refused, and here we are in the Fifty-first Congress with a majority of six against us—I do not count those elected here—and during the same time the Senate increased its Republican majority, as I have said.

Therefore I say by what logic can it be urged upon anybody now who wants to forfeit the lands which are left that we can not go to the public on that issue? It is not an issue against the forfeiture of lands at all. It is begging the question in the argument to put it in that way; the people are getting too intelligent to be deluded by promises and failures. The question is whether we shall have the seven millions of acres now, or whether, by pursuing the policy which has been pursued heretofore and continuing that same policy for a few years longer, we will be left without any lands to forfeit, because the acres have been constantly decreasing, as gentlemen say they have been warned of and heeded not, and thus after awhile, according to these gentlemen, we will have consistency, but the railroads will have the lands.

We will have stood by the policy which was promulgated years ago and which has been followed until now, until the public domain that should have been forfeited when it contained 20,000,000 acres or more has been whittled down to 7,000,000 acres or less. Gentlemen say, "No, let us stand on the policy heretofore adopted until it is all gone." And the railroads will have the lands and we will have the policy. That is the sum and substance of their logic.

There is no reason why a separate bill should not forfeit these lands as well as by tacking it onto the present bill. The gentleman from Missouri says, if you put it in a separate measure and let this bill go to the Senate, this bill will be sent to the committee and passed and the bill forfeiting the balance of the land will be pigeon-holed. Suppose that to be true. Then we see the policy intended by this amendment. We will send this bill to the Senate with the substitute or amendment of the gentleman from Missouri tacked onto it, and if the Senate will do what he says it will do it will pigeon-hole the forfeiting clause of that bill that sends it to the court, and this bill with it. So that the whole measure will fail again, as heretofore, and the railroad companies will go on building and selling the land for two years longer.

Gentlemen say that the people are demanding the forfeiture of these lands, and this will drive the Senate to accept such a proposition. Why, it did not drive them to accept it when we had a majority in the House and they had no majority, and later a majority of two, but stood like a stone wall in the way, as the gentleman says. Why shall it force them now when they have increased their majority to ten during the time they were refusing to pass these House bills and are a unit on the question now? It did not drive them to accept our propositions then, and it will not drive them to it now. It is simply a question, then, whether we will have 7,000,000 acres now which we have within reach or none at all.

The declarations of gentlemen on the other side that the bill to authorize the courts to forfeit the lands earned after the expiration of the time fixed by the granting act, if passed in a separate bill here, will die a natural death in the Senate only strengthen the reasons for passing this one separately, for those declarations are an admission that they want to make this bill carry that one through the Senate; but, as I have shown, the Senate will not consent to that, and the result will be, as it has been for many years, that the whole question will go over to the next Congress, and the railroads will win again. I am opposed to that and want the forfeiture now. They ought to be separate bills.

Mr. MCRAE. They have been introduced, and were reported separately and unanimously, and the gentleman himself agreed to it.

Mr. STOCKDALE. The bill introduced and urged before the committee by our colleague [Mr. STONE] provided in its first section precisely what the bill under consideration provides in its first section, to wit, the forfeiture of all lands opposite to and conterminous with roads not now completed; and it provided further that the Attorney-General be required to bring suit in the United Sates courts for the forfeiture of all lands opposite roads or portions of roads not completed within the time allowed by the granting act. The committee preferred to report the bill under consideration, and agreed, as my colleague on the committee says, that the Stone bill be reported as a separate bill, and I have no objection to its being considered in the House.

I concede the right of my colleagues on the committee to offer it as an amendment to this bill; but I do not concede that it is good policy to adopt the amendment. That would convert this bill into the Stone bill as first offered to the committee, and send it to the Senate with the two propositions coupled in the same bill, and, as I contend, in the light of the history of former proceedings, would defeat both; and my opposition to that measure being ingrafted on this bill by adding it as an amendment is not to be construed as opposition to it as a separate measure. I simply oppose its being put on this bill to ride it to death, for, as I have repeated, I want forfeiture now.

The two provisions are separate and distinct in their operations and ought to stand, each on its own merits, so that one can not delay the other. We can get the lands opposite roads not now built back into the public domain at once. Let us do that, and let the proposition to forfeit the land back to where they were built when the time in the granting act expired stand on its own merits.

Mr. PAYSON. Built out of time. That is a good technical expression.

Mr. STOCKDALE. I know that is the expression, but I never thought it a good one.

Mr. PAYSON. That makes it understood.

Mr. STOCKDALE. It makes it briefer. We will say, then, "built out of time."

The point I desire to make now, Mr. Chairman, upon this bill is that these two propositions, being separate and distinct, have no business in the same bill. They are separate bills now on the Calendar. They are entirely distinct in their effect, and there is no reason why they should be consolidated in this bill, and defeat both. There is no reason why another session or another Congress should pass without forfeiture of these lands. Here is a proposition that can be concurred in by both Houses and 7,000,000 acres of land forfeited and restored to the public domain at this session of Congress, upon a separate proposition, without an amendment to this bill. Why is it brought in as an amendment to this bill? I say that it was consented that it might be offered as an amendment, but it was understood that the majority of the committee would oppose the amendment. I am opposing it now and opposing it for the reason that I want the land forfeited, and the effect of this amendment is to oppose it. I do not say I will oppose it when it comes up as a separate bill.

Referring to the local road in which I am most interested, I say that I want the lands of the Ship Island grant forfeited, and forfeited now. If the company can show progress enough to insure the building of a road to Hattiesburgh, the conference committee can consider it. I have time and again received instructions to have this forfeiture made. I have received letters and petitions from the people in that region to have those lands forfeited and to know when it will be done. I would rather obey the instructions of the people who want homesteads than to obey the instructions of the railroads or play into their hands by delaying forfeiture or to obey the instructions of my colleagues who may denounce the bill I support. I would give more weight to the little letter written in my district by the poor man's hand stiffened with toil, asking me to get him a home, than I would to all the criticisms here.

It is no more local, no more wanting in nationality than was the position of my friend from New Jersey [Mr. MCADOO] who evoked applause when he spoke of his opposition to the Oklahoma bill, saying that he opposed it, not because he was opposed to these people out there having opportunities to get homes, but because he wanted to wait until the congested population of the Eastern States might want an outlet. He would hold all these lands until his people get ready to settle them. I say so far as the lands in Mississippi are concerned my people want them now and if my vote can do it they shall have them. The sooner that honest settlers get these lands the better. But my friend has said that the railroads have not given them the facilities they claimed. The gentleman says:

> The bleaching bones of the emigrants, the lonely unmarked graves, the wheel tires off the old wagons, the skeletons of their cattle and horses, mark the death trail of those brave and hardy men and women who carried civilization into that country long before the echoes of the Rocky Mountains were awakened by the screech of the locomotive. And when these very roads had gotten this grant of almost imperial power from Congress, which virtually gave up to them the government of that country itself when they gave this imperial heritage of our people for a mess of pottage, long before they had gotten the grant, and long after they had gotten it on the statute-book, these brave men and women, with their children and their little all, surrounded by hostile savages, in the midst of a strange and unknown country, plodded their way and painfully walked, staining their pathway with their blood, marking it with their graves, and made fertility and beauty blossom out of the wilderness long before the locomotive of the land-grant railroad had reached the West.

I have this to say about that. If it be all true I do not want the lands in Mississippi to go the same way, as they will do if this delay policy be pursued. Let us have forfeiture now.

I am sorry that the gentleman did not make his speech before my colleague [Mr. HOOKER] had made his, in which he described so beau-

tifully and eloquently the iron bands that stretched from the Atlantic to the Pacific and brought these great facilities to the people. He would have said, had the railroads been there in time, the bones of these emigrants would never have bleached there. Their oxen never would have died. There would have never been any graves along the pathway to the great West, because the dashing iron horse would have gone from the congested regions described by my distinguished friend from New Jersey [Mr. MCADOO]; it would have swept across the great valley and mounted the frowning Rocky ranges and gone careering down the western slope to the Golden Gate, and not a grave, not a bleaching bone, not a drop of blood, not a dead ox would have been on the way. Now, I am not so enthusiastic on the subject of railroads as my colleague; but he drew the picture grandly, and he is in favor of making the roads build the last mile and take the last acre of the land, and that is a heroic policy, but does not suit me exactly now. I want those lands for our people who have no homes.

If my friend from New Jersey [Mr. MCADOO] will send these people down into our country we will give them better lands than there are in the West and for about the same price that they could get them from the Government, and not a man will die and not an ox will perish.

I want this forfeiture and I want it now, a plain, straight forfeiture of the public lands, to give my own people homes upon which to live, which will be better than rhetoric and better than oratory in my judgment, and I am sure it will be in theirs.

May it be local, may it be wanting in nationality, make the most of it. I am here to represent the people who sent me, as well as to be a national Representative. I look after their interests first. Mississippi is a part of the nation, and a very considerable part, in my judgment, and I want these gentlemen to come and help us forfeit these lands for the people of Mississippi, strengthen them and strengthen the nation. Why, I am about the most national man on this floor.

Mr. Chairman, as there is but little time I do not propose to consume it further, and if I have any time remaining I will reserve it.

The CHAIRMAN. The gentleman has occupied twenty-five minutes.

The Eight-Hour Law.

SPEECH

OF

HON. THOMAS C. CATCHINGS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 28, 1890,

On the bill (H. R. 9791) constituting eight hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government of the United States or by contractors doing work or furnishing material for the Government, and providing penalties for violation of the provisions thereof.

Mr. CATCHINGS said:

Mr. SPEAKER: This bill should pass without opposition. It is believed that it voices the sentiment of the great majority of the American people with regard to the hours of labor. We know that the laboring classes themselves, through their agents and representatives, have earnestly and eloquently pleaded before the Committee on Labor for such a measure as this. Indeed, the bill under consideration is substantially similar to one draughted and presented to the committee by Mr. J. L. Kennedy, president of Columbia Typographical Union, No. 101, who spoke in advocacy of it with great earnestness and intelligence.

I do not think, Mr. Speaker, that any man can claim sincerely that the workmen in this country are allowed a fair division of the fruits of their labor. We have levied high duties upon almost every commodity imported, under the pretext that it was necessary to do so if wages were to be maintained above the rates in foreign countries. These duties invariably far exceed in amount the difference between wages paid here and abroad, but the workingman, for whose benefit they were imposed, does not receive this excess. The manufacturer quietly pockets it, and continues to prate about the necessity of a high tariff in order that he may pay higher wages to his mechanics and employés.

But he not only does not pay his workmen this increased price which he obtains for his goods by reason of the duty levied to cover the difference in wages, but he does not give them credit by it in the shape of shorter time for labor. Wages and hours of labor remain the same as before, and the only man who profits by the high tariff is the manufacturer.

We can not by law regulate the price which the manufacturer shall receive for his goods nor prescribe the rate of wages that he shall adopt, for the question of prices and of the relations between employer and employé does not come within the jurisdiction of Congress except where the United States itself becomes an employer.

But, while we can not legislate so as to materially affect the question, we can lend to the cause of the laboring man the moral support of this great Government by voluntarily fixing eight hours as the limit of working time in any one day, beyond which no man shall be allowed to work for the United States except in some emergency and providing that in such emergency extra pay shall be given for the excess of time employed in labor.

The labor problem has taxed the best thought of statesmen and political economists for many years, and men have differed and do now differ as to many of the issues presented by it. But the steady drift of opinion all over the civilized world has been in favor of shorter hours of labor, and I do not at this time recall the name of any public man or student of the question who does not believe that all other propositions looking to lightening the burdens and ameliorating the condition of the laboring man are of secondary consequence compared with that which demands a reduction of the time of labor.

It has been a matter of dispute as to what number of hours should constitute a day's work, but all have agreed that there should be some fairer division than that formerly made. And very substantial gains in this respect have been made by the friends of labor, for there has been for many years a steady and progressive curtailment of the hours of labor. This has been accomplished by the organized efforts of labor associations and the intelligence upon the subject acquired by the public through its constant and thorough discussion.

We are beginning to realize that the most profitable laborer is not the cheapest, nor the one who gives the most of his time to his employer. He is the best and most economical laborer who brings with him to his day's work peace of mind, a buoyant spirit, and a sound and vigorous body. Such a man will do more work and better work in eight hours than would one lacking these qualities in a much longer time. As the hours of labor have been shortened from time to time, we have learned by experience that the output has not been at all diminished, that the employers have not had their profits cut down, and that laborers have correspondingly gained in intelligence and in contentment and comfort.

I believe that the day is rapidly approaching when in all mechanical pursuits the eight-hour limit will be universally adopted, and I do not hesitate to make the prediction that no man's business will be in the least degree injured, that prices will not be increased, and that a so much more cordial and kindly relation will be established between employé and employer that all will wonder that it had not been sooner adopted.

Mr. Wright, in speaking of the effect of the ten-hour law in Massachusetts, says:

> We have large mills, employing in the aggregate several thousand persons, which have voluntarily adopted ten hours in eleven-hour districts, bearing witness emphatically that they find the product of ten hours a day, in the long run, so nearly or quite the same as that of eleven hours that their mills are as profitable to them under the shorter as under the longer time. In addition to this fact, and as partly explaining it, may be recorded the words of great wisdom spoken by the managers:
>
> "Skill in the management and thoroughness in discipline are more important than the eleventh hour in the product of a mill; and thorough discipline is much more attainable under ten than under eleven hours; for men and women are flesh and blood, and they can not be held up to such steady work during eleven hours as during ten; and overseers are flesh and blood and can not hold them up. The question is not merely, nor even mainly, an economic question. It is chiefly a humane question. Nor yet is the mill more than a man; and, if it ever comes to be, then society will begin to die."

I have no doubt myself that the result would be even more satisfactory if eight hours instead of ten should be made the standard of a day's work.

Aside from this view of the question, another benefit of the greatest consequence would result. There are more than a million of men in this country without employment, who would willingly work if they could. Being idle, they are a direct charge upon those who do labor, and, moreover, in the very nature of things, they indirectly, if not directly, breed discontent, destroy largely that reverence and regard for our free institutions, without which they can not exist, and beget false and harmful theories of governmental and social obligations.

These men could all be given employment if the hours of labor should be sufficiently shortened, for with the mills and factories and various industries operated on full time, a greater number of employés would be needed if no one was to work longer than eight hours.

But the greatest good would come from the increased intelligence and the greater domestic happiness which would speedily manifest themselves among the laboring classes.

If a man devotes his whole time to labor, what opportunity has he for reading, studying, and acquiring that information which will enable him most intelligently to perform the duties of citizenship? In this Republic there is no distinction among men in the eye of the law. Each man is a sovereign and is expected to bear his part of the burden of maintaining the Government and to contribute his share of the intelligence needed to control and direct it.

It is to better qualify our citizens for discharging these duties that the public-school system has been established in every State and municipality of the Union.

But the education acquired in the school-room will be of little value unless in afterlife the opportunity is afforded to enlarge its scope by study and reflection. And how can the man who is required to toil ten or twelve or fourteen hours a day have this opportunity? He be-

comes a mere machine, and when his day's labor is ended, instead of sitting with his family or friends reading his paper, his magazine, or his book and exchanging thoughts and ideas with them or supervising the education and moral training of his children, he, from sheer exhaustion, is compelled to forego all these pleasures and seek in slumber rest for his weary body. The children of such a laboring man derive but little profit from his advice and experience, for he has neither time nor physical ability to give attention to them, and so they too often grow up untrained and unfitted for the best work in life.

We should pass this bill and to that extent hasten the coming of the shorter day's labor, if for no other purpose than to give our laboring men more leisure to devote to the proper rearing and training of their children, so that they may become better qualified for the duties of American citizenship.

Every sentiment of humanity, every impulse of patriotism, pleads the cause of the laboring man, and the day of his rescue is surely drawing nigh. Let this great Government, by passing this bill, give public and official evidence of its sympathy for this class of its citizens in their struggle for better and higher opportunities in life.

Compound Lard.

SPEECH

OF

HON. WILLIAM S. FORMAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 21, 1890.

The House having under consideration the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard—

Mr. FORMAN said:

Mr. SPEAKER: This is one of the measures reported by the Committee on Agriculture, which if passed it is believed will alleviate to some extent the difficulties under which at least one section of the country now labors.

The story of the universal depression of agricultural pursuits has been so often rehearsed upon this floor during the present session of this Congress that I shall not detain you further upon that point. I take it for granted that if there is a single member of this House who refuses to believe that agriculture is languishing, that the farmers all over the land are in real distress, it would require a miracle such as befell a noted personage at Damascus to improve the vision of such a member to such an extent that he might see the situation as it is.

This House has been in continuous session for three-fourths of a year. In this time you have passed the tariff measure, formed and fashioned by its true friends, the manufacturers of this country, whose princely contributions made it possible to inflict upon the people a Republican President and burdened the country with the present House of Representatives.

You have passed a bankruptcy bill which places an effective club in the hands of the wealthy wholesale merchants to be held over the heads of the already impoverished retail dealers for the purpose of forcing the collection of commercial debts, a bill for the protection of wealth and the accommodation of scoundrels.

You have, in answer to the demands in the West for the free coinage of silver, again demonetized it, providing for the cessation of its coinage after July 1, 1891. But in order to keep peace with the bullion-producer you have offered him a market for his product. But the bondholder still has the consolation that his debt shall be paid in gold.

You have sought to fasten upon the country an election bill taking from the States the sacred right of conducting their own elections, for the sole purpose of perpetuating your rule in spite of and against the protest of the people whose necessities you have shamelessly disregarded.

For the purpose of conciliating the prohibition element of your party, you have passed the original-package act, which, as has been boldly stated by the gentleman from Iowa, Mr. REED, authorizes the State under its police power to institute a search in every man's home upon the mere suspicion that he has therein concealed something which the State arbitrarily concludes is not for his personal benefit.

You have doubled the pay of your partisan supervisors of the census, after many had been appointed, and these positions were being diligently sought after by hungry politicians.

In violation of your solemn promise to the soldiers of the late war, you have passed a pension bill, demanded by nobody, and then refused and failed to make an appropriation for the payment of its beneficiaries. But, sir, were I to entertain this House with a description of the unwise measures to which you have given your support, it would require more time than is now at my disposal.

And now, when nine weary months have passed into the history of this House, when every member desires to shake the dust of this city from his feet, and those on this side of the Chamber wish to return to their people and give an account of the proceedings here, and you on that side are ready with apologies for the transactions of this body, when you have no quorum, except when obtained by repeated calls of the House, when everybody else has been heard and there is little hope of this or of any other bill demanded by the farmers becoming a law, then agriculture, that long-suffering, much-abused, yet important industry, is to be given her day in court, and this committee is at last grudgingly given an opportunity to be heard.

This, sir, it has been charged, is a measure growing out of a fight between the producers of compound lard and the cotton-seed-oil men on the one side and the great American hog on the other. Like the gentleman from Tennessee who has just taken his seat, my sympathies run with the hog. He is an important article of commerce of the section I represent, and I find that lard is being adulterated and counterfeited to such an extent that the animal mentioned is fast losing his prestige, both at home and in foreign countries. It seems by investigations made by the Committee on Agriculture, conducted during the sessions of the Fiftieth Congress, as well as the present, that certain manufacturers have been engaged in making a mixture of lard, beef stearine, and cotton-seed oil, which, prior to such investigation was placed upon the market under the attractive title "pure refined lard," but more recently, and since this question has been discussed, it has been branded "lard compound."

This bill proposes to compel the manufacturers of this article to brand it "compound lard;" that it shall be placed under governmental supervision and be taxed to the extent of 2 mills per pound.

These manufacturers tell us with apparent sincerity that this slight tax of one-fifth of 1 cent per pound, or 1 cent upon 5-pound packages, will ruin their business, close their doors, throw thousands of laboring men out of employment, stop the demand for cotton-seed oil, and that the cotton-seed of the Southern planter will be rendered worthless.

If I had the remotest idea, sir, that such an array of evils would follow the passage of this bill I would hesitate before giving it my support. But it will be seen by Dr. Wiley's report, No. 13, part 4, that the manufacturers of this compound have not been actuated altogether by motives of kindness and philanthropy, but have realized upon their investments a profit of at least 17 per cent. The proposed tax would be but $160,000 upon the annual output, while the profits are estimated at something near $5,000,000 per annum.

It is not my purpose to strike a single blow at the South or any other section of the country, and in advocating and voting for this measure I am not doing so, no matter what construction may be placed upon my conduct by those who represent the great cotton States. I believe the fact to be, sir, that when once placed upon a fair basis and raised to the dignity of an article of commerce this alleged delicious vegetable oil, pure, healthful, and fragrant, extracted from the seed of this wonderful plant whose every part except the leaf affords an article of profit to its producers, and which brings millions of dollars into our common country, and enables these planters of the South to buy the flour, pork, lard, mules, and horses raised by the North, causing a unity of interest and solidifying our land, once raised to the dignity of a commercial article, sold on its merits for what it is, not masqueraded, not debased, not used to adulterate butter, lard, and olive-oil, not belittled, not degraded, not dishonored, and treated as an outcast and a thing not to be sold for what it really is, but put upon the market as a commercial article, worthy to be tested, tried, and used by the housewives of America, sold to our wage-workers at a reasonable price upon its own merits—does any man with common sense doubt that once tested, if these merits be what are claimed for them, it will find a ready sale to the rich and poor alike, and that the beneficiaries will rise up and bless those who afforded them the opportunity to buy it?

Sir, one of the oldest and most conservative of all the farmer organizations is the National Grange of Patrons of Husbandry. At its national meeting at Sacramento in November, 18~9, with representatives from forty States in this Union, including Georgia, Alabama, Tennessee, North and South Carolina, Mississippi, and Texas, the following resolutions were adopted:

FOOD ADULTERATIONS.

[Resolutions of the National Grange of Patrons of Husbandry.]

Whereas the adulteration of food, drugs, and liquors exists to such an alarming extent as to invade every article of diet, drug, and drink; and

Whereas these adulterations are often harmful to health and always injurious and are frauds when sold under a deceptive title; and

Whereas one of the products of the hog, one of the largest agricultural interests, on which depends in a great measure the market for our Western corn, is adulterated to such an extent as to be excluded from several of the European markets, thereby greatly injuring one of our principal agricultural industries; and

Whereas this body did at its last session indorse two bills then before Congress, one to prevent the adulteration of lard and the other to prevent the adulteration of all food, drugs, and liquors: Therefore,

Resolved, That the National Grange, Patrons of Husbandry, in annual session assembled, do reaffirm its former resolution upon the question of adulteration; and

Resolved, That we urge upon Congress the importance and necessity of promptly enacting laws to prevent the false branding and adulteration of all food products, including liquors and drugs.

Resolved, That we urge upon various members of the Grange to present this matter to their respective State Granges and urge action thereon.

Resolved, That the Secretary be directed to send a copy of these resolutions to each Senator and Representative in Congress, with the request that said bill shall receive his support.

Mr. Brigham, the master of the National Grange and chairman of the legislative committee, appeared before the Committee on Agriculture and gave this measure his unqualified approval.

Ralph Beaumont, esq., the chairman of the legislative committee of the Knights of Labor, says the members of this order do not want cheap lard. They have tastes that require as fine food as those who are more fortunate in the possession of this world's goods, and they are in favor of legislation that will make their surroundings such that they can live off from the fat of the land, and they want the "pure and unadulterated fat at that."

Again, in a letter of later date, he says:

OFFICE OF LEGISLATIVE COMMITTEE,
ORDER OF KNIGHTS OF LABOR OF AMERICA,
Washington, D. C., February 10, 1890.

DEAR SIR: In regard to your letter requesting me to inform you as to the position of the Knights of Labor on the question of pure food and the bill now pending in favor of pure lard before Congress, I desire to say that we heartily indorse the measure. We believe that it is a measure that ought to pass, and if there is anything that this committee can do to promote its passage it shall cheerfully be done.

I remain, yours respectfully,

RALPH BEAUMONT.

A. J. WEDDERBURN, *Washington, D. C.*

The manufacturers of this compound say that this bill is unnecessary inasmuch as 90 per cent. of this product is made by Armour & Co. and N. K. Fairbank & Co., and that they brand it "lard compound." But what assurance has the American public that when this agitation shall cease the brands may not again be changed to "pure refined lard" or that other manufacturers less scrupulous may engage in this business and refuse to brand their product what it really is. If we want to use in our families this alleged unclean fat of the hog, let us have it, and let us provide the means whereby we shall know that we are getting just what we want and just what we are paying for.

It is alleged by the opponents of this bill that by this measure we are prostituting the taxing power of the Government, since by it we are raising revenue not needed for governmental purposes. At the beginning of this Congress, when it was admitted that a large surplus lay idle in the Government vaults, I confess that this argument had some force, but now, when we are confronted with a large deficit instead of a surplus, this argument is fully answered.

I feel, sir, that in supporting this bill I do no violence to that Democratic principle which holds in abhorrence the doctrine that the Government can legitimately tax one industry for the benefit of another. We propose no such thing in this bill; but we do propose to place a villainous fraud, a sham, and a counterfeit under the regulations and restrictions of the Internal Revenue Department for the prevention of imposition, and to tax it to a reasonable extent. We propose this that the farmers' product may meet this deception upon its merits, and that the consumer may not be deceived when purchasing one of the staple food products of America.

Pensions.

SPEECH
OF
HON. WILLIAM D. OWEN,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, August 8, 1890.

On the subject of pension legislation.

Mr. OWEN, of Indiana, said:

Mr. SPEAKER: In the battle of the ballots this fall pensions and honest elections will be the issues. The tariff, in spite of the politician, is passing to secondary importance. We are rapidly moving to a final adjustment of matters growing out of the war. The victories of the Union Army will never reach a full fruition until the rights of a citizen at the ballot-box in Mississippi or South Carolina are as sacredly guarded as in Indiana or Massachusetts, and the justice and generosity of the nation can not be quieted until every man who bore his life beside his musket in defense of his country is carried on her pension-roll.

I have gathered into a brief review the more important of the pension legislation of the past thirty years. It is due the House that such a collection be made, and it is proper that the soldier understand how this legislation has been enacted and how the two great parties have stood on the various votes. The straggling votes of a few men in either party count for little. The member of Congress who supports for President a man who vetoes pensions is not a safe man if his vote is to decide an important pension measure. You can only rely on his vote when the bill would pass whether he voted for it or not. One can always support a man on the general principles he holds; it is never safe to trust him on his exceptions to his party.

What has been the spirit of the two great parties on this question? Has the trend of a particular party been friendly or unfriendly to pensions? If one party were entirely absent and the other had complete control of Congress, what would it have done on this question? Let us learn the truth by going to the record and examining the pension legislation since 1861.

THE BEGINNING OF PENSIONS.

Our Government was practically without a pension system when the war came, and out of the necessities of that war was passed the foundation act of our present system on July 14, 1862. It was necessarily crude and defective, but it was a patriotic move in the right direct on. A great system of legislation is inaugurated along general lines, and by experience its inequalities are remedied and proper amendments are made, and wise adaptations are given it as unprovided-for developments may indicate.

When the Republicans turned Congress over to the Democrats on the 4th of March, 1875, after fourteen years of continuous control, in addition to countless minor acts were fifteen great measures of pension legislation on the statute-books.

Each one of these acts was to remove some friction in the law or to add a proper amendment looking to the building up and making better this patriotic department of our Government.

The great system under which the Pension Office is now run, with its army of clerks, its platoons of special examiners in the field, its payment of $100,000,000 yearly to the veterans, is all under the law which was founded by the Republican party and amended from time to time and finally codified in 1874.

The Democrats have had control of this House since 1875 until this session with the exception of one Congress. What have they done in these twelve years to broaden and liberalize these laws?

1875 TO 1885.

They broadened a law and gave a separate pension for the loss of both a hand and a foot by act of February 28, 1877. It reached two hundred and twenty-one soldiers.

By act of March 3, 1877, pensions were granted in certain cases to soldiers who had engaged in rebellion against the United States.

On March 8, 1878, they amended the Republican law of February 14, 1871, granting pensions to the survivors of the war of 1812. It reduced the term of service from 60 to 14 days. It provided that a widow's pension should cease if she should marry.

The act of June 18, 1878, makes the pension of a lieutenant-commander in the Navy the same as that of lieutenant commanding.

The act of June 20, 1878, limits the fee of claim agents to $10.

The act of June 17, 1878, increased the pensions of soldiers and sailors who had lost either both hands, both feet, or the sight of both eyes to $72 per month. These were all receiving $50 per month. It affected about two hundred pensioners.

The act of February 19, 1879, provides for paying three months' extra pay to the officers and soldiers engaged in the military service of the United States in the war with Mexico. A very large proportion of these were in the South.

The act of June 9, 1880, was intended to prevent the reduction of the pensions of certain petty officers in the Navy.

The act of 1883, making the soldier's enlistment *prima facie* evidence of soundness.

This completes the pension legislation of the Democratic Congress up to the 4th of March, 1885, except the arrears act, concerning which I speak in detail.

THE ARREARS REPEAL.

The opposition to pensions first developed in the vote on the arrears bill in 1879, when the Democrats had control of both branches of Congress. When the war broke out in 1861 such a thing as arrears of pensions was unknown. In 1862 a law was enacted giving a soldier arrears of pension back to date of injury, provided he applied within one year from date of incurrence. The following year the law was changed granting arrears, provided application was made within three years after the incurrence. In 1868 the time was extended five years longer, and then in the codification of the laws in 1874 five years further of extension was allowed, so that any soldier applying for his pension up to 1879 would receive his arrears back to the time of his service. All these bills had passed in Congresses overwhelmingly Republican. In 1878 Mr. Cummings, a Republican, introduced a bill repealing all limitations and granting the soldier arrears whenever he might apply for his pension. Congress was now Democratic and the committee having it in charge refused to report the bill, and Mr. Haskell, a Republican, moved on the 19th of January, 1879, to discharge the committee and for the House to consider and pass the bill. It passed, receiving 164 votes to 61 against it, as follows:

Democrats for the bill	48
Democrats against the bill	61
Republicans for the bill	116
Republicans against the bill	None.

This was a universal arrears bill. It was introduced by a Republican, moved by a Republican, and carried by Republican votes.

But since July, 1880, no arrears have been allowed the soldiers. How did this change in the law come about?

W. A. J. Sparks, a Democratic member of Congress, late Cleveland's Commissioner of Lands, as chairman of the subcommittee having charge of pension appropriations, brought in the pension appropriation bill and added thereto this proviso:

Provided, That the application for such pension has been or is hereafter filed with the Commissioner of Pensions prior to the 1st day of July, 1880, otherwise the pension shall commence from the date of filing the application.

This Sparks proviso repealed the Cummings act after July 1, 1880. Under the Cummings act every soldier would be receiving his arrears to-day, but the Sparks amendment on an appropriation bill repealed that law and cut him off after July 1, 1880, and that is the reason the soldiers have not received arrears for ten years.

THE WIDOWS' BILL.

The next great pension measure voted on was the widows' bill, to increase their pensions from $8 to $12 per month.

Let us get at the evidence as recorded on this bill. When the bill was up for consideration my colleague, General BROWNE, offered as an amendment the bill he had introduced to repeal the Sparks arrears limitation. A filibuster ensued which prevented the House from taking a vote on Mr. BROWNE'S amendment. On February 2, 1886, Mr. Matson moved to suspend the rules and pass the bill with an amendment relating to date of marriage and without the Browne amendment. It was not possible for General BROWNE'S motion to be voted upon, because after a motion has been made to suspend the rules and pass a bill no amendment is permitted.

The vote to increase the widows' pensions from $8 to $12 was passed by 198 yeas and 66 nays; as follows:

Democrats for the bill	80
Democrats against the bill	66
Republicans for the bill	118
Republicans against the bill	None.

Now, as two-thirds of the Democrats did not vote for the bill, under the rules of the House it could not have passed. It took Republican votes to save it, and it got them every one. If there ever was a pension measure that appealed to humanity and kindly patriotism it was the widows' bill, and yet 66 Democrats voted against it, enough to defeat it if only Democrats had been in Congress. The Republican vote saved the bill.

SUSPENDING THE RULES.

Under the rules a few members could have the roll called, move to adjourn, offer obstructing amendments, and in other ways delay and defeat legislation however meritorious. One parliamentary way of overthrowing the filibuster is to suspend the rules, as the bill can then be passed at once. So when two-thirds of the members will vote for a bill that will incur this kind of opposition it is customary to suspend the rules and pass it. Since 1875 a majority of the pension measures have been passed under a suspension of the rules.

AMPUTATION BILL.

The amputation bill of August 4, 1886, was the next important measure. It passed the House without a recorded vote. On going to the Senate it was amended, and when it came back to the House General CUTCHEON called it up and moved its passage, and Mr. Morrison, the distinguished leader of the Democratic party in the House at that time, made objection and defeated the passage of the bill. At another time Mr. Matson moved to take it up under suspension of the rules, and it was passed by the following vote:

Democrats voting for the bill	78
Democrats voting against the bill	51
Republicans voting for the bill	91
Republicans voting against the bill	None.

So two-thirds of the Democrats did not vote for the bill, and it was passed by Republican votes.

After the Democratic party casts enough votes against a measure to defeat it they can not in any fairness claim it as their legislation. If the Republicans, being in the minority, cast enough votes to overcome the defeat, and especially if all their votes are cast for the measure, then by all fairness and parliamentary usage the measure is Republican legislation. For this reason the widows' increase bill and the amputation bill belong to the Republican party.

MEXICAN BILL.

At this time a bill was passed granting a service pension to all the survivors of the Mexican war. Two-thirds of the beneficiaries under this bill lived south of Mason and Dixon's line. It passed by a substantially unanimous vote, three Democrats and two Republicans voting against it.

WIDOWS' ARREARS.

We next have the granting of arrears from the death of their husbands in cases of all widows of the late war whose pensions have been or may hereafter be granted. The question is, who is responsible for the widows' arrears bill? Although a widows' arrears act had several times been introduced in Congress, no bill had ever been reported favorably to the House. When Mr. Foran, a Democrat, having in charge the appropriation bill for pensions, asked its passage by the House, the gentleman from Iowa, [Mr. CONGER], a Republican, moved to amend by adding to the bill that "arrears of pensions from the death of their husbands be granted in all cases of widows of the late war whose pensions have been or may hereafter be granted." Mr. Foran made a point of order against the amendment, but it was so clearly germane to the bill that the Chairman held it was parliamentary. The bill as amended passed the House without a recorded vote. In the Senate, Mr. COCKRELL, of Missouri, moved to strike out the amendment, and the vote in the Senate is recorded:

Democrats for striking out the amendment	20
Democrats against striking out the amendment	1
Republicans for retaining the amendment	22
Republicans against retaining the amendment	None

And so the widows' arrears bill passed the Senate by Republican votes, and had there been no Republicans in the Senate the bill would have been defeated by a vote of 20 to 1.

I have now made an examination of the pension legislation in Congress from 1861 down to 1875, when the Republicans ceased to have a majority on this floor, and also during Democratic control on this floor, from 1875 to 1885, two years of which time the Republicans had a majority here. And, lastly, our attention has been directed to the legislation during the Cleveland Administration.

We come now to the pension legislation since 1889, that on the return of the Republican party to power in the White House and on this floor. And in this time more has been done for the soldier than in any Congress since the war; yet a distinguished Democratic soldier attacked the Administration this week, alleging that this Congress had not carried out the principles announced by the party. A good way to ascertain the correctness of this charge is to turn to the Republican national platform of 1888 and read its pension plank. Here is that plank in full:

The gratitude of the nation to the defenders of the Union can not be measured by laws. The legislation of Congress should conform to the pledge made by a loyal people, and be so enlarged and extended as to provide against the possibility that any man who honorably wore the Federal uniform shall become an inmate of an almshouse or dependent upon private charity.

Have we made good this declaration of principle? What have we done? Our disability bill presents a pension to every man who wore the blue and is to-day suffering from a disability. If it gave the pension according to the platform it would only be given to those dependent on charity; but performance has gone beyond the principles announced, for we have provided for every disabled soldier, whether dependent or otherwise. That which under the platform would have cared for 30,000 to 40,000, under the party's legislation puts 350,000 veterans on the pension-rolls. But our legislation went further; it places every father and mother of a deceased soldier if in needy circumstances on the pension-list, and it widens even this by putting the widow there whether the soldier died from his service or not, and adds to this the children under sixteen years of age.

It is the wisest, most patriotic, and most beneficent pension legislation ever enacted in our Government. How did the vote stand on this bill? It was a bill arranged by a conference committee composed of members of the two Houses, and when they came into Congress and asked us to adopt it the record discloses the following vote:

Democrats for the bill	28
Democrats against the bill	56
Republicans for the bill	117
Republicans against the bill	None.

This bill was the test of loyalty to the soldiers' interest, and twice as many Democrats voted against it as voted for it. If only Democrats had been in Congress would the bill have passed? If there had been no Republicans here how the soldier would have been slaughtered! The Democratic vote defeated this greatest of pension legislation two to one, but a hundred and seventeen Republicans were on the floor and saved the day.

The Democracy of 1890 is the Democracy of 1861 and 1875, and 1885. Whether the Republicans are in power or out of power when anything is done for the soldier we have to do it.

We have learned in this investigation that the Republican party is the author and founder of our present great system of pension legislation; that every pension measure, except one, which has passed this House, has been passed by Republican votes, and would not have passed if there had been none but Democrats in Congress, and that in all these twenty-nine years of pension legislation there has been but one Republican vote against a pension bill.

The last pension measure of general importance voted on by Congress was the prisoners-of-war bill. This bill proposed to give to soldiers who were prisoners of war for thirty days or more, $2 a day for every day they were held as prisoners of war. This bill was called up under suspension of the rules, and following is the vote:

Democrats for the bill	24
Democrats against the bill	78
Republicans for the bill	119
Republicans against the bill	None.

The Democrats voted against the bill three to one. It lacked five of having the necessary two-thirds, and was defeated.

Compound Lard.

"None the less a robbery because it is done under the forms of law and is called taxation."

A blow straight into the sweating face of the black man.

SPEECH

OF

HON. WILLIAM ELLIOTT,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 23, 1890.

The House having under consideration the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard—

Mr. ELLIOTT said:

Mr. SPEAKER: This pernicious piece of legislation is demanded because of the discovery and wonderful development of an industry most useful to mankind, and especially beneficial to the cotton-farmers of the South: that of making oil from cotton seed. Among the many uses to which this pure and wholesome product has been applied is that of making an article called and branded "lard compound."

The manufacture of this article has of late years increased enormously, consuming about one-third of the cotton-seed oil made in the South. Being not only purer and more wholesome, but cheaper than manufactured hog's lard, the manufacturers of the latter have become alarmed lest their profits be reduced, and the decree has gone forth that "lard compound" must be legislated out of existence.

FALSE PRETENSE OF RAISING REVENUE.

Our people will naturally inquire, What has the Congress of the United States to do with the encouragement of one home industry and the destruction of another? How, they will ask, does Congress acquire jurisdiction over the matter? They will be surprised to learn that it is all done under the taxing power of the Government under the clause of the Constitution that gives Congress the right "to lay and collect taxes, duties, imposts, and excises," and that the object of the bill is to raise additional revenue for the Government. That this is a mere pretense does not admit of serious question.

No member has had the hardihood to assert that we do need additional revenue. Even the title of the bill stamps it as a false pretense. It is "A bill *defining lard, also* imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard." Its primary purpose is "defining lard;" its secondary purpose is "also imposing a tax," etc. To what a depth of hypocrisy, to what degradation of our beautiful system of Government have we come when, to accomplish a purely selfish and unlawful purpose, the Congress of sixty-five millions of people is asked to descend into the arena of trade contention, and, under the great taxing power of the Government, solemnly send forth to the world its act under the imposing title, "defining lard."

Nothing is better known than that there is now, and has been for years, many millions of surplus in the Treasury. The real revenue bill for the support of the Government has long since passed this House and gone to the Senate. Its title is, "A bill to *reduce* the revenue," etc., not to increase it; and the Ways and Means Committee, in reporting it, say "the estimated surplus for the year will be $92,000,000;" that the bill "will secure a reduction of the revenue both from customs and internal-revenue sources"—"from imports at least $60,936,536, and probably more, and from internal-revenue $10,327,878, or, in the aggregate, $71,264,414."

It can not be pretended, therefore, that additional revenue is needed, and the advocates of this measure stand convicted of a pretensive and dishonest abuse of the taxing power to accomplish a purpose that can not otherwise be reached. If anything were needed to settle the matter beyond dispute it is that the bill is reported, not from the Committee of Ways and Means, but from the Committee on Agriculture.

THE REAL PURPOSE.

But we are not left to argument to determine the purpose of the bill. Its advocates on the floor of the House have not even thought it necessary to try to conceal it. They openly admit that its real purpose is to destroy one industry for the benefit of another. The gentleman from Pennsylvania [Mr. BROSIUS], who opened the debate in its favor, said:

Enough of the history of this interesting commodity. Let us now inquire what effect it has had upon honest trade.

Further on he speaks of the necessity for legislation to—

Protect * * * manufacturers and dealers in the genuine article * * * from the competition of imitators.

Again, he says:

The extent of the injury must be left to conjecture. Accessible data are not accurate enough to determine it with scientific exactness. That it is considerable is demonstrably clear. Wells, in his Recent Economic Changes, says:

"Cotton-seed oil is now equivalent to 70,000,000 pounds of lard, and it has contributed to notably reduce the price and place of that important product in the world's markets."

The statements subjoined, of intelligent men long engaged in the manufacture of pure lard, remove all doubt upon the subject. Their testimony shows that this notorious compound is ruining the pure-lard business.

And he finally asks:

Will the proposed legislation remedy the evil?

Even the majority of the Committee on Agriculture do not attempt to disguise its real purpose. At the very outset in their report they say:

The Committee on Agriculture, to whom was referred the bill (H. R. 11568) defining "lard" and regulating the manufacture and sale of compound lard, having considered the same, respectfully report, etc.

The "taxing" feature of the bill, made to play so subordinate a part in its title by being sandwiched between hog's lard and compound lard, has already slipped from its greasy and unsavory contact and disappears altogether from sight. They give as one object for passing the bill:

To relieve the manufacturers of pure lard of the unfair competition of an imitation article made of cheaper ingredients and sold at a lower price.

PROVISIONS OF THE BILL.

If any doubts could remain that the advocates of the bill intend to destroy the compound-lard industry the harsh and harassing features of the bill will quickly remove them. No person can manufacture or sell, either at wholesale or retail, compound lard without paying an internal-revenue tax to the Government. The wholesale dealer can not sell in quantities less than 50 pounds, nor the retail dealer in quantities more than 50 pounds. The following extract from the excellent report of the minority of the committee shows the wonderful ingenuity exercised, not in regulating, but destroying the industry.

Retailers are required to repack all compound lard they sell, and put the same into other than original packages. This provision practically prohibits the manufacturer from making any package of less than 50 pounds; for, as the retailer could not utilize the original package, being bound by the law to repack, he would not buy a large quantity of 3, 5, and 10 pound pails of the manufacturer for the sake of wasting his time emptying the pails and throwing them away when empty. (Section 7, lines 14-20.)

In view of the fact that lard and lard compound are now sold for domestic use almost entirely in small tin pails (original packages), it must be apparent that the effect (and object) of this law is to forever destroy the sale of lard compound. The retailer would be compelled to buy and sell only the hog-packer's lard, as he could procure that in 3, 5, and 10 pound pails (original packages), and sell it without let or hindrance in the same pails (original packages).

4. Now, suppose that a dealer takes out both licenses, *i. e.*, wholesale and retail; still it is unlawful for him to sell an original package, *i. e.*, one of the ordinary pails or tubs of lard weighing from 20 to 50 pounds, because the wholesaler's license does not permit him to sell a quantity less than 50 pounds under any circumstances and the retailer's license requires him to repack any sale of any quantity less than 50 pounds.

If the bill were really intended only to compel the honest branding of a counterfeit article, every facility would be provided so that a retailer could sell lard compound in the original package. When a manufacturer puts up a package and brands it in big letters according to the law it is in the interest of honest dealing that the package should go into the hands of the consumer with all the original marks and brands and stamps upon it. If the manufacturer puts up a 3-pound tin, or a 20-pound pail, or a 40-pound tub, all covered and plastered over with internal-revenue stamps and brands, and the consumer is allowed to buy the goods in such packages, he can not possibly be deceived about his purchase. Look, then, at the inconsistency, requiring a retailer to break open such a package and dip the lard out with a ladle, or a knife, or perhaps a stick, and take it out of this stamped package and put it into some other package in a clumsy way as best he can. These restrictions will destroy the cotton-seed-oil business absolutely if the bill is passed in its present form.

5. The manufacturer shall pack all compound lard in vessels not before used for the purpose, each containing not less than 3 pounds. (Section 7, lines 1-4.) He shall mark each separate vessel or package with the words "Compound lard" in letters not less than three-fourths of an inch in length, together with his name. (Section 7, lines 51, 52.) No compound lard shall be sold at retail or otherwise except in packages marked and branded as provided in the bill. (Section 7, lines 15-24.)

In addition to the license taxes a tax of 2 mills is placed on each pound of compound lard under the same regulations as apply to tobacco and snuff, and the other usual onerous features of the internal-revenue system are made applicable.

The criminal features of the bill are most severe and plainly stamp the legislation with its true character. Any manufacturer carrying on business without a license or one having a license who uses a material not mentioned in his license may be fined $5,000.

A wholesale dealer may be fined $2,000 and a retail dealer $500 for selling without a license. A manufacturer or dealer failing to keep books prescribed, or failing to enter each sale, may be fined $1,000 for every such failure. Every agent or officer of any railroad or other carrier failing to enter compound lard as such in his books, bills, manifests, way-bills, and bills of lading may be fined $500 for each failure. Persons selling the article in any other form than as prescribed may be punished for each offense by a fine of $1,000 and imprisonment for a year.

Each person who ships or removes the article in a package not having all the required marks, brands, and stamps, or if the same are defaced or are wholly or partially concealed from view, or ships it in any package incased in any other package whatever, may be fined $500 in addition to forfeiting the property. Every customs officer permitting imported compound lard to pass from his custody without complying with the law shall be fined not less than $1,000 nor more than $5,000 and be imprisoned from six months to three years, and any person selling the same shall be fined not less than $500 nor more than $5,000 and be imprisoned from six months to two years.

Any manufacturer who defrauds, or attempts to defraud, the United States of any tax due shall forfeit his factory and apparatus and all raw and manufactured material found on the premises, and shall be fined not less than $500 nor more than $5,000 and be imprisoned from six months to three years, and any one violating any other provision of law not specially punishable shall pay a penalty of $500 and forfeit all compound lard owned by him, if a manufacturer or dealer. These are *some* of the pains and penalties provided.

Taken in connection with the other features of the bill, they proclaim in the plainest manner the intention of its framers and advocates to be the destruction of the industry for the benefit of another by making it impossible for any merchant to engage in it. This intention is further plainly shown by the following bald sham and pretense: For years this article has been branded and sold as "lard compound," and in that time its sale has increased enormously, its consumers well knowing its character, and no deception whatever being practiced. You gentlemen denounce the use of the name "lard compound" as an outrage and enormity, and how do you propose to correct it? Why by simply declaring it to be "compound lard," and not that horrible iniquity "lard compound." You can hardly find words strong enough for denunciation of the crime of selling "lard compound," and in the same breath you declare precisely the same material, under the name of "compound lard," to be a sweet and lovely thing, and gravely legalize its sale, but under such restrictions and penalties as to destroy the industry, and you know you mean to do it if you can.

WHAT IS "LARD COMPOUND?"

Any one hearing this discussion, Mr. Speaker, and noting the punishment inflicted, would naturally conclude that "lard compound" is vile and filthy stuff. Far from it. What is it made of? Of lard, beef fat, and cotton-seed oil, all agricultural products. The minority report says:

In the process of manufacture the best obtainable grades of commercial lard are purchased, and, before mixing with the other ingredients, are thoroughly cleansed and refined.

Is it wholesome? Not even the advocates of the bill charge that it is not. The gentleman from Pennsylvania [Mr. BROSIUS] says:

That any of the ingredients used in the compound lard are deleterious does not appear.

And this is said after the manufacturers of so-called pure lard have for two years been making every attack on the industry that lavish expenditure and intense zeal could muster. Instead of the above very halting and hesitating language the gentleman may as well have candidly admitted that it had been clearly proved in the investigation that the article was perfectly pure and wholesome. The bill itself admits this, because while it is aimed solely at this product and provides that its manufacture be licensed, yet it prohibits a license being granted for any compound in which the ingredients are "deleterious to health."

But what does the testimony say? It is literally overwhelming as to its purity and wholesomeness. I will give a part of it.

Willis G. Tucker, analyst of the New York State board of health, in an official report, says:

The main question, as I understand it, is whether cotton-seed oil, properly extracted and refined, is a wholesome and nutritious article of food, and whether it is a proper substance to mingle with lard obtained from the fat of hogs, or with other fats, in the manufacture of "lard compounds," table oil, and the like, for use as food or in the preparation or manufacture of food articles.

There doubtless exists on the part of many people a prejudice that lard should be made from hog-fat alone and table or salad oil from the fruit of the olive tree solely; but this opinion is in reality based on no good or sufficient reasons. Fats obtained from a variety of animals and a great number of plants have been used from time immemorial in the preparation of food, and it is unreasonable to suppose that those particular fats and oils which we, in this country or in this part of the country, have been accustomed to use are the only suitable ones to employ. All over the world vegetable oils are obtained by the expression of the seeds or fruit of plants and used as food. From the cocoanut, Brazilian nut, walnut, almond, and a wide variety of other vegetable products, oils are extracted and employed in the preparation of food. In speaking of the vegetable oils Dr. Edward Smith, in his well known work on Foods, places cotton-seed oil at the head of the list, and says:

"There can be no doubt that we have in this product of seeds of plants, which seem otherwise to be useless, a great storehouse of most valuable nutritive material, and if we know but little of them in this climate it is because we have the olive oil at hand and are bountifully supplied with many kinds of animal fats. It is, however, probable that the cheapness of some of these vegetable oils, in addition to their delicacy of flavor, will ere long force themselves into notice and obtain a place among our foods." This was written in 1873, when the manufacture of cotton-seed oils was still in its infancy.

Professor Wiley, chemist to the United States Department of Agriculture, in Bulletin No. 13, on Food and Food Adulterants, quotes from Allen's well known and standard work on Commercial Organic Analysis, as follows: "Refined cotton-seed oil is usually very free from acid, and when properly prepared is of pleasant taste, and admirably adapted for edible and culinary purposes, for which it is now extensively employed, both with and without its nature being acknowledged."

* * * * * * *

I am clearly of the opinion that cotton-seed oil, whether used alone or commingled with other oils or fats, is a perfectly wholesome and nutritious food, and as easily digested and assimilated as any of the commonly employed fats. In support of this view the opinion of numberless writers upon the subject, and of experts in chemistry and physiology, might be adduced, but I shall content myself with citing two or three. Battershall, in his treatise on Food Adulteration, remarks:

"As a result of the publicity lately given to the subject of food adulteration, a popular impression has been produced that any substance employed as an adulterant of, or a substitute for, another is to be avoided *per se*. Perhaps the common belief that for all purposes cotton-seed oil is inferior to olive oil, and oleomargarine to butter, is the most striking illustration of this tendency. Now, as a matter of fact, pure cotton-seed oil, as at present found on the market, is less liable to become rancid than the product of the olive, and for many culinary uses it is at least quite as serviceable. * * * The sale of these products under their true name should not only be allowed, but under some circumstances even encouraged."

* * * * * * *

Professor S. P. Sharpless, State assayer for Massachusetts and a chemist who has given much time to the study of food adulteration, stated during the course of the same investigation that he knew of no property injurious to health in cotton-seed oil or the refined lards which he had examined. Professor R. Ogden Doremus, of New York City, states that refined lard made from steam lard, beef stearine, and cotton-seed oil is "pure and wholesome," and that, in his opinion, "cotton-seed oil is a wholesome article of diet;" and Professor L. M. Norton, of the Massachusetts Institute of Technology, states that the compound lard made by a well known firm "is a perfectly good food material" and "is unobjectionable in every respect, and does not contain anything which can be injurious to health."

These are the opinions which seem to be almost universally held by those who have investigated this subject from a scientific standpoint. So far as I know there is no evidence worthy of the name which even remotely tends to show that cotton-seed oil is not a wholesome and nutritious food.

* * * * * * *

Such testimony as that given above is not easily overthrown. Writers of eminence in our scientific, medical, and agricultural journals have borne similar testimony, and large numbers of people in our midst to-day use, by preference, in their households a cotton-seed-oil lard in place of one made from the fat of the hog. In my own family I have employed such a lard with perfect satisfaction, and am convinced by actual trial that it is palatable, readily digestible, and a wholesome, nutritious article.

Dr. Granville P. Conn, of Concord, N. H., professor in Dartmouth College, president of the State board of health, vice-president of the National Association of Railway Surgeons, and a member of many medical societies, says:

Beef stearine and cotton-seed oil are claimed to be adulterations, [adulterants?] neither of which, from a hygienic point of view, is harmful. Beef stearine, or suet, has been mixed with lard for years, and among farmers is considered better for summer use than the pure leaf, in consequence of the melting point being a little higher.

Cotton-seed oil within the past ten years has almost entirely taken the place of olive oil in our markets. It is still sold as olive oil, but chemical and microscopical examinations show it to be pure cotton-seed oil. The conditions, both chemical and microscopical, are so nearly alike that there is really no difference in the nutritive value. It is a well known fact that immense quantities of cotton-seed oil are sent to Italy, only to come back as olive oil. In the South and West cotton-seed oil is taking the place of all forms of lard. These are well established facts, which no one who has investigated the problem will dispute. Cotton-seed oil and beef stearine would answer all of the purposes of lard, and would be entirely unobjectionable from a sanitary standpoint.

GRANVILLE P. CONN, M. D.

Dr. Irving A. Watson, secretary of the New Hampshire State board of health, says:

I am decidedly of the opinion that the cotton-seed oil and beef stearine are either of them infinitely more healthful than any refined lard, and that the lard compound, as prepared, is more healthful than the lard before refining.

In all my professional experience I have never known and have never read of an instance where a person's health has been impaired by the use of cotton-seed oil.

I believe that cotton-seed oil is a thoroughly healthful product, as much so as olive oil.

IRVING A. WATSON.

I, John J. Berry, of Portsmouth, in the county of Rockingham and State of New Hampshire, upon oath depose and say:

That I am a practicing physician and have been for ten years; that I graduated from the University City of New York, medical department, in 1878; that I located first in New York, then in Connecticut, and now in Portsmouth, N. H., and am now a member of the New Hampshire State board of health.

I have been house surgeon in St. Francis Hospital, and assistant surgeon in Chambers Street Hospital, and Hospital for Ruptured and Crippled, New York, in all three years. I am a member of the New Hampshire State Society, American Medical Association, and American Public Health Association. Have been health officer of Portsmouth; now associate editor of New England Medical Monthly.

I have used cotton-seed oil for medical purposes ever since beginning practice, and for many years for culinary purposes. Believe it to be wholesome, easily digested, and nutritious; believe the properties of cotton-seed oil of good quality to be identical with those of olive-oil, and the former to be superior to a poor sample of the latter. In my experience no distinction is made in medical practice between the two oils, it being generally understood that many brands of olive-oil, so called, are in reality wholly or in part cotton-seed oil. Chemical tests have established the truth of this supposition.

Externally applied, it is a bland, soothing substance, which acts as a protective dressing like the olive-oil. Internally, it is used for various affections, and differs in its action in no respect from the oil of the olive; so far as I know physicians have no preference as regards the two varieties.

I have used it extensively in the preparation of salad dressings, as well as in other ways, and have invariably been pleased with it. Have eaten doughnuts fried in cotton-seed oil and have been unable to distinguish it from lard similarly used.

In four tests recently made of four samples of olive-oil (so called), bought by me, I found only one pure olive-oil; the others were cotton-seed oil partly or wholly. This I determined by chemical tests.

JOHN J. BERRY, M. D.

Dr. George W. Pierce, of Winchester, N. H., says:

The compound of lard, stearine, and cotton-seed oil as a food, in my belief, is a product that contains a greater variety of elements necessary to the maintenance of the human economy in a healthy state than either lard, beef-fat, or cotton-seed oil alone, neither being in itself a perfect food product. Of the value of lard as a food I need not speak, nor of the value of beef fat for the same purpose, but of cotton-seed oil I can say that by itself it is a valuable food product.

I have used the same in my profession as a substitute for cod-liver oil, where the latter was not well retained by the stomach of my patient, with satisfaction to myself and apparent advantage to the patient. I have used it as a substitute for fresh cream in still other cases, where the cream did not seem to be well digested, with almost invariably good results, and I have fed the same to infants suffering from wasting diseases in doses of from one-half to one teaspoonful four to six times each day, and have found the same to check the emaciating process quite as well generally as any other food to which I could resort.

I prefer pure cotton-seed oil for professional purposes to olive-oil, though

olive-oil is now believed to be largely extended by an admixture of cotton-seed oil.

As an article for many culinary uses I prefer pure cotton-seed oil to either lard or medium grade butter, having used the same (cotton-seed oil) in my own family as a butter substitute in cooking meats and fish, as well as making gravies, etc. I am also acquainted with its use for similar purposes in the families of others of my acquaintance, and in no instance has my attention been called to any objectionable results from said use.

GEORGE W. PIERCE.

This testimony, coming from scientific men far removed from any local or sectional influence and no doubt selected for that very reason, is simply overwhelming, and, considered in connection with the admissions of the advocates of this bill and the statements of the bill itself, leave no possible doubt in the mind of any reasonable person on two points: first, that this lard compound is both wholesome and pure (as far as anything can be pure which has manufactured lard in it) and, second and much more important, that cotton-seed oil is not only pure, wholesome, and nutritious, but that its discovery is a great boon to mankind, and especially to the poor.

And I have given the testimony at some length, Mr. Speaker, because the study of this question has been in the light of a revelation to me, and I believe it to be my duty to proclaim what I believe to be the solid truth to the people who have honored me as their representative, and a part of whose property is substantially confiscated by this bill. When the Congress of the United States so far forgets its duty and its constitutional jurisdiction as to descend to the destruction of one honest home industry for the benefit of another utterly dishonest and disgusting, as I will show, then the only thing left to be done by the people injured is to quietly and peaceably take the law into their own hands and refuse to have aught to do with the unclean thing, notwithstanding its attempted purification by Congress, and thereby foster and encourage their own wholesome products.

WHAT IS "PURE" LARD?

To show what the manufactured so-called pure lard, which this bill is intended to protect, is, I quote the following from the testimony taken by the committee:

Testimony of Mr. Hately, who appeared before the Senate Committee of the Fiftieth Congress as a representative of the Chicago Board of Trade, and who is himself a pork-packer.

By Senator PLUMB:

Q. From what part of the hog do you get what is called white grease?

A. There is no such thing as white grease made in the packing-house now. In the march of events the progress in packing has been just as great as it has been in almost any other industry. It has not been a great many years ago since the whole entrails as they were taken from the hog—the greater portion of the fat on them—were taken away, carried out, and buried. It has not been many years ago since some packers on the Mississippi River thought the head or feet or anything of that kind was of no value whatever. They only killed in the winter time, and one packer remarked to me: "What fools we were. We had big profits in those days if we had only known it. We used to take the heads and feet and guts and run them out on the Mississippi River and pile them up there, and when the ice broke up in the spring away they went."

Q. Then, what was called white grease now goes into the manufacture of lard?

A. Yes, sir. The lard system is now so entirely different that we could not make white grease.

Q. Then, what was formerly known as white grease now becomes lard by the process of manufacture?

A. Yes, sir. It never was really white grease at all. It was really only the lard, but not a product that would pass inspection.

* * * * * * *

Q. Do you know how many guts go to the sausage-maker from hogs slaughtered in Chicago every day?

A. No, sir.

Q. Do you mean to say that with regard to the lard as made in Chicago, the fat is always pulled from the gut and that none of the guts go into the tank?

A. I didn't say that.

Q. Does not this process take place: Instead of the fat being pulled from the gut, is not the gut split open and the ordure pulled out, and the entire thing put into the tank?

A. There are certain guts that are cut open in that way that can not be voided. They are not used by the sausage-maker. The guts are thoroughly washed and are just as wholesome as the sausage we eat.

Q. Does the gut go into the tank?

A. Yes, sir.

Mr. FOX. That is what I understood Mr. Fairbank to say.

STATEMENT OF N. K. FAIRBANK (PAGE 291).

That process reduced the quality of prime steam lard, and it got it to such a point that the people began to complain of a bitter taste in it.

Now in the great packing-houses of the West they do not stop to clean the guts or make sausage cases of them. There are only certain particular entrails used for that purpose, and all of the gut fat. They just wash around, not thoroughly, and then throw all into the tank.

Q. Guts and all?

A. Guts, head, feet, and everything. The lard tank to-day in a packing-house is a sewer for cleaning out everything in the shape of grease. To-day there is not a packing-house that makes—I won't say a tierce—but there is no such thing as white grease from packers on the market.

Q. That is worked up into lard?

A. It all goes into the lard, all the product that we used to buy as white grease. There is no such thing as No. 1 lard any more. It all goes in, and is all prime steamed lard. The quality of it had deteriorated to such an extent that we had to get something to mitigate it, to do away with the taste and the smell.

STATEMENT OF MR. CHARLES H. S. MIXER, OFFICIAL INSPECTOR OF THE CHICAGO BOARD OF TRADE.

Q. Will you please tell me whether or not this choice lard is often seen on the market?

A. No, sir; it is not often called for.

Q. Is it ever delivered on future contracts?

A. No, sir.

Q. Prime steam lard is the lard of commerce?

A. Yes, sir.

Q. The choicest part of a hog is rendered out and sold at a higher price than prime steam lard?

A. I have not seen a lot of it in two years.

Q. As a matter of fact, is not the leaf rendered separately and sold for separate purposes? Could I, if I were a family man living in Chicago, get pure leaf lard?

A. Yes, sir; but I think you would have to go and buy the leaf yourself and have it rendered. It is not, commercially speaking, in the market. It is not made; there is no demand that calls for the making of it.

MR. W. G. BARTLE, OF ST. LOUIS.

I am now nearly sixty-one years of age, and have been engaged in the pork-packing business directly and indirectly for forty years. I succeeded John J. Roe in 1870, and have been running the house known as W. G. Bartle & Co. since 1867. Prior to that, from 1860 to 1867, it was Hamilton & Bartle.

During my experience in the business of pork-packing I have been the owner of two large farms and have been engaged in farming and shipping cattle quite extensively to the Eastern and Southern markets.

(He went to Kansas City.) I went to the stock-yards in the first place, and saw the character of the hogs that were brought there and offered for sale. From there I went to the pork-house of a certain concern there. They were cutting up hogs at the time. They commenced slaughtering at 9 o'clock. I walked up the chutes and saw the character of hogs they were slaughtering. They were what I expected to find, a great many of them diseased hogs, of which the markets of the West are now full, from what is known as cholera. Whilst looking at the hogs the foreman of the establishment came to me and we got into conversation. I said to him that I had got out of the business and that I believed that I was away behind the age.

I told him that I had been in the habit of making considerable white grease, for which I had been denounced. "Yes," he says, "there ain't much white grease made now, these days, and it is quite unnecessary to make it." He said: "I was foreman for a certain party (naming him) and one winter (that party) purchased two thousand two hundred smothered hogs, all of which I put into the tanks, and they went into prime steam lard." I have never in all my packing experience made use of smothered hogs by putting them in the lard tanks. I have made them into white grease and sold the product as white grease. Now the character of the hogs, from disease, etc., is worse than formerly.

* * * * * * * *

But the making of prime steam lard in these days I say is detestable, and there has been enough filth slung in that direction to disgust anybody. But I am sorry to say that the description given of the way it is made is the truth.

Under cross-examination by Judge Wilson, of counsel for advocates of the bill, he said: "The fact is when two or three thousand hogs are coming and going through the pens amongst other hogs, you can not tell the cholera hogs until they are gutted; then the color of the hog will show."

Q. What did you do with them?

A. They went into bacon, just the same as the rest of them, and they are doing it now. The yards are almost full of them. There is more this season than I have ever known. In Central Missouri there is scarcely a drove of cattle that has not got hogs following it simply because they have become diseased and have had to be shipped to market. I myself have had to ship several lots, and I have two hundred on hand now in Missouri.

Q. This is the kind of information that the committee ought to have.

A. Yes, sir; I want to give them a plain and unvarnished statement.

* * * * * * * *

Q. Here is what I want to get at: You stated that before you went into business on your own account you bought hogs at the stock-yards for Francis Whittaker & Sons and John J. Roe & Co.?

A. I think I bought all of Whittaker's hogs for seven years.

Q. During that time what was done with the smothered or down hogs at the stock-yards?

A. Those I bought for Francis Whittaker he rendered out. The year that there was so much loss on the Hannibal and St. Jo road, so many hogs frozen, I bought him several thousand; I had them piled up mountain high.

By Mr. WHITING:

Q. I would like to ask, for information: In the manufacture of this refined lard, they buy pure steam lard?

A. They buy pure steam lard.

Q. Do they purify that any before they put in cotton-seed oil?

A. Yes, sir.

Q. So that a large portion of what is known as Armour & Co's or Fairbank's refined lard is made of steam-refined lard which is somewhat purified?

A. Yes, sir; it goes through a process which takes out the dregs and settlings that may be in it.

Q. They think that is necessary in order to put a good article on the market?

A. I think so.

Q. And the prime steam lard, in your opinion, is not a good marketable, edible fat?

A. I say it is not.

Q. Refined steam lard which they subject to this refining process is better after that process than before, is it not?

A. I am satisfied it is.

Q. Then if the cotton-seed oil is properly refined and pure, if the pressed beef fat is of good quality, is the composition, the result, a wholesome and nutritious one?

A. I should say it was.

By Mr. OLIVER:

Q. Judge Wilson has asked you a hypothetical question as to the effect on the market of a discovery that refined lard contained the percentage of elements that he named. What would be the effect upon people if they knew that pure lard contained gut-fat, pigs'-feet grease, etc.?

A. I think if they discovered that they would not buy it.

We get a complete description of the manufacture of "prime steam" lard from Bulletin No 13 of the United States Department of Agriculture, division of chemistry, part 4, from which we quote as follows (page 406):

"*Prime steam lard.*—The prime steam lard of commerce is made as follows: The whole head of the hog, after the removal of the jowl, is used for rendering. The heads are placed in the bottom of the rendering tank. The fat is pulled off of the small intestines and also placed in the tank. Any fat that may be attached to the heart of the animal is also used. The back fat and trimmings are also used.

"This lard is passed solely on inspection, the inspector having no authority to supervise rendering establishments in order to secure a proper control of the kettles. According to the printed regulations any part of the hog containing fat can be legally used.

"Since much uncertainty exists in regard to the disposition which is made of the guts of the hog, I have had the subject carefully investigated. Following are the results of the study:

"*Guts.*—The definition of the term as used by hog-packers is everything inside of a hog except the lungs and heart, or, in other words, the abdominal viscera complete. The material is handled as follows:

"When the hog is split open the viscera are separated by cutting out the portion of flesh surrounding the anus and taking a strip containing the external

urino-generative organs. The whole viscera are thrown on a table and divided as follows: The heart is thrown to one side and the fatty portion trimmed off for lard. The rest goes into the offal tank or sausage. The lungs and liver go into the offal tank or sausage. The rectum and large intestines are pulled from the intestinal fat and peritoneum, and, along with the adhering flesh and genito-urinary organs, sent to the trimmer. All flesh and the above-mentioned organs are trimmed off and the intestine proper is used for sausage casings. The trimmings, including the genito-urinary organs, are washed and dumped into the rendering tank.

"The small intestine is also pulled from the fatty membrane surrounding it and saved for sausage casings. The remaining material, consisting of the peritoneum, diaphragm, stomach, and adhering membranes, together with the intestinal fat, constitute the 'guts,' which are seen undergoing the process of washing, which is usually conducted in three or four different tanks. As the 'guts' pass into the first tank the stomach and peritoneum are split open and also any portion of the intestines which sometimes adheres to the peritoneum. After receiving a rough wash they are passed from tank to tank, when, after the third or fourth wash, they are ready for the rendering tank. The omentum fat is cut from the kidneys, and the kidneys, with a little adhering fat, go into the rendering tank. Spleen and pancreas go into the rendering tanks, as do also the trachea, vocal chords, and œsophagus."

Such is the filthy mixture, Mr. Speaker, which the advocates of this legislation desire to protect and, by destroying a wholesome and cheaper product, compel the American people to use. In justification of our opposition to it we need not protest that we oppose legislation in the interest of pure food, because it is clear that we are on the side of pure food. Neither do we favor manufacturers being permitted to sell food products under false names. We are not only willing, but anxious, to adopt the Paddock bill, which requires that all food products shall be labeled just what they are in all cases in which Congress can take jurisdiction, so that the people may have the right to buy just what they want. If the advocates of this bill were sincere in the cause of protecting the people and preventing frauds they would support that bill, which does not harass merchants and customers with odious internal-revenue regulations and subject them to constant danger of disgracefully heavy punishment.

PRETENSE OF HELPING THE FARMER.

The most aggravating pretense of this bill is that it is intended to help the farmer. In general, it may be said that farmers are not apt to be prominent in investigations before Congress which require the presence of lawyers and witnesses from long distances at Washington year after year and session after session. We hear of no farmers combining to defray these enormous expenses and we read no testimony from farmer witnesses. But we need not deal in conjecture. The following extract from the minority report of Mr. WILSON, of Kentucky, effectually disposes of this sham:

We have alluded to the claim that this supposed 32 cents per hog benefit to accrue from the enactment of this bill (H. R. 283) would go into the hands of the farmers. Who first proposed any legislation in Congress upon the subject of lard? The earliest known bill was presented by the Hon. Mr. DAWES, in the United States Senate, December 13, 1867, Fiftieth Congress, first session (S. 650), by request of John P. Squire, a pork-packer in Boston. (See page 49 of the hearings of the Fifty-first Congress.) The proceedings before the committees of both Houses show that the prominent advocates of lard legislation appearing before said committees as promoters thereof were as follows:

Page 47, Mich. Ryan, pork-packer, Cincinnati.
Page 61, Joel A. Sperry, pork-packer, New Haven, Conn.
Pages 68 and 266, John Whittaker, pork-packer, St. Louis, Mo.
Page 101, E. A. Bartman, pork-packer, Bridgeport, Conn.
Page 230, William S. Harvey, pork-packer, Kansas City, Mo., and Philadelphia, Pa.
Page 102, U. S. Epperson, pork-packer, Kansas City, Mo.
Page 246, O. W. Thomas, pork-packer, Louisville, Ky.
Page 265, Mr. Morrison, pork-packer, Cincinnati, Ohio.
Page 247, W. W. Kimball, pork-packer, Boston, Mass.
Page 258, C. G. Cryer, pork-packer, Baltimore, Md.
Pages 119 and 227, W. L. Hill, pork-packer, Boston, Mass.
Page 330, John C. Hately, pork-packer, Chicago.
Page 348, William Kirkwood, pork-packer, Chicago.

Among the prominent petitions, letters, resolutions, statements, etc., favoring the bill we also note:

Page 8, Cincinnati Board of Trade.
Page 8, Chicago Board of Trade.
Page 15, Francis Whittaker & Sons, pork-packers, St. Louis, Mo.
Page 16, St. Louis Live-Stock Exchange, East St. Louis, Ill.
Page 107, Louisville Board of Trade.
Same page, Boston Chamber of Commerce.
Page 116, Plumb & Winton, pork-packers, Bridgeport, Conn.
Page 108, William Ryan & Sons, pork-packers, Dubuque, Iowa.
Also, John P. Squire & Co., Boston, Mass.
Des Moines, Iowa, Packing Company.
International Packing Company, New York City.
Chicago Live-Stock Exchange.
James E. Booge & Sons, pork-packers, Sioux City, Iowa, etc.

The foregoing seems to us to be as choice an assortment of pork-packers, combines, and stock-yards representatives as can be gathered in the length and breadth of these United States. These are the men, we take it, who, when they can, squeeze the last cent of money out of the hog-raiser and the hog-seller. These are the men who through their "eveners" and adjusters at the stock-yards and at the packing-houses "dock" the honest farmers most arbitrarily on every drove of hogs they buy, and these are the men who appear before the Congress of the United States as manufacturers of "prime steam" lard, as explained in the foregoing pages, which they say the Government must not touch, and as advocates for the enactment of this particular measure which they say is solely in the interest of the down-trodden farmers.

DISHONEST USE OF THE TAXING POWER.

There are so many objections to this bill, Mr. Speaker, it is difficult to know which to specify. Probably the most serious one is the dishonest use of the taxing power, the power to tax, to take from the honest, law-abiding citizen a part of his property, the fruit of his toil and labor is "the strongest, the most pervading of all the powers of government." It is justified solely upon the ground that taxation is necessary to support government for the protection and good of the people themselves. Whatever is necessary for this purpose all good citizens willingly pay, because it is in fact the people's own Government and they must support it. It is not only the duty, but the privilege, of freemen to do this. It gives them the right to control the Government because it is theirs, made for them, supported by them, and conducted by their servants for their benefit.

Whatever is taken from the people, knowingly taken, beyond the needs of the Government, is dishonestly taken. In the case of taxes on imports gentlemen defend themselves on the ground that the taxes are not paid by our people, but by foreigners. But this is a case of internal taxation and there is no escape from the inevitable result that some of our own people must pay this tax. English-speaking people have always regarded this power with the greatest jealousy, and have hedged it around with all manner of guards. In framing our Constitution our forefathers took care to provide that "all bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills." This was done solely because we are the representatives of the people, elected directly by them for short terms, and responsible to them; and the people were not willing to intrust this great power to any but their immediate representatives. We also know that under the Constitution we have no jurisdiction over the subject of this bill unless it be under this power to tax. Under these circumstances, knowing that we need no more money from the people, knowing in fact that there is now in the Treasury a surplus in the enormous sum of $90,000,000, what are we asked to do? To commit two outrages on the Constitution and on the people, to tax the people unnecessarily and for the purpose of accomplishing an unconstitutional and illegal result. Either would be bad enough in itself. What amount of money will be collected under the bill no one knows, for the committee, although it is a revenue bill, has forgotten to make even a suggestion on that point. But unless the industry in question is destroyed it will be an enormous sum, many hundreds of thousands of dollars. This of itself should be sufficient to deter us; but what shall be said of us when this is done with the express and avowed intention of usurping another power for the oppression of a part of the people themselves? If this is not a dishonest use of the taxing power the imagination can not conceive of one. And the case is worse against us because in cases of this sort, coming under the taxing power, we are subject to no control from the judicial department of the Government, and are especially put on our honor, as we are on our oaths, not to betray the people's trust and violate their Constitution. The advocates of this bill well know that while in other cases of violation of the Constitution the Supreme Court can set aside an act of Congress as unconstitutional, yet in this case the court is powerless to interfere on the ground that the act is intended for some other purpose than raising revenue, because the court can not inquire into the motives of Congress.

In his recent work on Constitutional Law, volume 1, page 280, Mr. Hare says:

It is inherent in the power of taxation that it should be for the public good, and a law taxing one set of men for the benefit of another, or in furtherance of an industrial enterprise in which they were engaged, would be regarded as confiscation in all civilized countries. As was well observed in The Loan Association vs. Topeka, 20 Wallace, 655, "to lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and build up private fortunes, is none the less a robbery because it is done under the forms of law and is called taxation. Such an enactment is not legislation; it is a decree under legislative forms."

Who can doubt for a moment that if this bill, should it ever become a law, could be fully and freely passed upon by the Supreme Court, the court would declare as to it that it "is none the less a *robbery* because it is done under the forms of law and is *called taxation?*" It is a sad spectacle, Mr. Speaker, to see gentlemen led away by local interests to violate the spirit of the Constitution simply because there is no power to restrain them. If this example be set by the representatives of the people, by those specially selected by the people to represent their interests in legislation, how can we hope for the preservation of the principles of constitutional government?

DESTRUCTIVE OF LOCAL SELF-GOVERNMENT.

We all know that the fundamental principle of our Government is that of local self-government, of home rule, only such powers being given to the General Government as can by it be better administered for the benefit of the people, all other powers being reserved to the States or to the people. The manifest and admitted intention of this was that the people of the several States should administer the affairs of their every-day life in such manner as best suited their local surroundings and necessities. Should this principle ever be destroyed there will be an end of all free government in this country, because the people of one section will be subject in all respects to the arbitrary rule of those of another section having antagonistic interests.

While we would still have the *form* of free government we would, in fact, have a despotism—just as the Supreme Court of the United States declares above that what is in *form* taxation is nevertheless *robbery*. At the bottom of all good government lie knowledge of the people and their wants and interest in their welfare. Without reference to the special subject of this bill, what do the people of Iowa,

whence the bill emanates, know of the local surroundings and needs of the people of South Carolina? How many of them have ever been there? How have they qualified themselves to legislate for the local interests of that State? How would they like the conditions to be reversed and have South Carolina regulate the affairs of Iowa, and in a matter, too, in which their local interests are directly antagonistic?

All the sectional troubles of our country have sprung from the violation of this principle of home rule, coupled with ignorance. And the worst of it is, Mr. Speaker, that this danger to our institutions is in exact proportion to the territorial grandeur and the material prosperity of our country. The greater our area of territory, our variety of climate, soil, and production, the more wonderful the extent and success of our industrial pursuits, the greater is the opportunity for such legislation and the temptation to yield to it. The present case is an apt illustration.

A few years ago there was no such thing as cotton-seed oil; cotton seed commanded no price anywhere. Now a mighty industry has sprung up, in which probably $30,000,000 is invested, yielding an income of at least $12,000,000 to the people of ten great States, all of them in one section of our country. Competition has been brought about with the products of many other great States—all in another section—and immediately this sectional struggle is precipitated, in utter violation of the principles of our Government and to the great danger of good feeling between the sections. Which one of the fathers of the Constitution, when laying the corner-stone of free government by home rule, ever dreamed that the day would come when the Congress of the United States would become embroiled in a contest affecting our own people exclusively, over an animal on the one side and the seed of a plant on the other?

If this vicious system of legislation, inaugurated for the first time in the oleomargarine law, is to become permanently introduced into our legislation, where is it to stop? In our tariff laws there are said to be four thousand subjects of taxation, the large majority of them produced in this country. If we are thus at liberty to abuse the taxing power, what is to prevent Congress from passing similar laws as to each one of these articles produced in this country, and thus not only destroy the industries of one section of the country, but subject the people to all manner of harassing regulations and severe punishments in each and every thing used in their daily life? The gentleman from Pennsylvania [Mr. BROSIUS] in his speech said:

> This is paralleled by a case Professor Perry tells about in his Political Economy. The professor met the manufacturer and asked him, "What are you running on now?" "On these knit goods," he said. "I thought you worked cotton," said the professor. "I do," he said. "Are not knit goods woolen?" said the professor. "Oh," said the honest manufacturer, "we put the figure of a sheep on every piece we make, but every fiber of it is cotton."

Perhaps the gentleman meant this as a kindly warning—possibly as a threat—but what is there to hinder the gentleman and his friends, in the interest of the wool-growers of the country, to pass such a law as this and tax all cotton mixed with wool in manufactured articles? The cases are "paralleled," as he truly says: why not place them side by side in our statutes?

WAR ON COTTON.

Judging by the course of the Republican party towards the cotton industry, there is no reason to suppose that they will not burden it in every imaginable shape and form. That is what has been done heretofore and the present session displays a more rigorous policy in the same direction. Common gratitude to the cotton-planters of the South would seem to dictate a different policy. What has cotton done for our country? In the year ending June 30, 1889, we shipped to foreign countries $237,775,270 worth of cotton. Our total exports were $742,491,375, thus making our export of cotton nearly one-third of the whole. During the same year the balance of trade against us was $2,730,277; that is to say, we had to send abroad to pay for our purchases of foreign goods, over and above our merchandise exported, that sum in gold. If it had not been for our export of cotton, we would have lost in gold in that one year not $2,730,277, but the enormous sum of $240,505,547. This would have produced the most appalling financial calamities. What have you done for the cotton-planter in return? In your tariff bill, with a grand flourish of trumpets, you have increased the duties on wheat, oats, and other agricultural products, when you know that substantially none of those products is brought into this country, and hence the increased duties are a mere sham and protect nobody. But how is it with cotton? During the same year there was imported into this country from abroad 7,973,039 pounds of cotton, worth $1,194,505. Yet you do not propose placing any duty on foreign cotton, because to that extent the cotton-manufacturers of the country would be compelled to pay more for their raw material. For the year ending June 30, 1890, our exports of cotton have gone far beyond those of the year before, and amount to 5,020,913 bales, valued at $250,968,792. The cotton-planter therefore sells about five out of every seven of his bales of cotton in foreign markets, in open competition with the cheapest labor of the world.

How do you reward him for the benefits he confers on the country and compensate him for the loss of the protected market of this country? For years past you have made him pay 35 per cent. duty on cotton-ties—all of them imported—when you did not need the revenue; in fact, when the Treasury was bursting with its surplus. This would seem to be bad enough, but in your new tariff bill this duty has been increased threefold and is placed at over 103 per cent., thereby increasing the tribute forced from the planter to $878,449.80 instead of $296,454.40 annually. And this is done with the avowed intention of inducing some manufacturer to engage in the business of making cotton-ties.

As to jute bagging you have for years by a prohibitory duty given the manufacturers of it a complete monopoly of the market, by which they were enabled two years ago to rob the farmer of at least $2,400,000, and in your tariff bill you have fixed the duties precisely as they have asked for them, notwithstanding the farmer appealed to you for some relief. To sum it all up, the cotton-planter sells five out of every seven bales in a free-trade market, and the other remaining two he sells in this country at the price fixed abroad. You leave all foreign cotton to come into this country as freely as the air. You created the jute-bagging trust, which two years ago exacted just twice the value of bagging and this year you will make him pay a little—only a little—more than two prices for his cotton-ties.

"Well," some one may say, "this is pretty bad, but the poor planter now has his bagging and his ties—at double prices, to be sure—and there is nothing else he can be taxed upon, and this must be the end of it at last." Little allowance would such a person make for sectional greed and devilish ingenuity. There is still the cotton seed. A few years ago it was worthless, but by a happy discovery it is made to produce most excellent oil, cheap and wholesome, and that again goes to make cheap and wholesome lard; and, as there is nothing so abhorrent to a Republican as cheap products, cotton-seed oil must also be taxed out of use.

"But," the cotton-planter will say, "for seventy-five years you have been telling us and our fathers that your high protective duties would build up a home market for our cotton; we are still selling five out of every seven bales abroad; for the same period you have been assuring us that payment of high duties for a time would soon bring down the prices of what we buy, but we are still made to pay two prices for our bagging and ties. Again, you have been preaching to us that we must follow the example of the rich and prosperous North and build up factories in our midst and thus increase our population and create our own home markets; and now that we are doing this very thing you propose putting a new tax on us. Why should you do it? You do not need the money; this is not a foreign product, to be taxed out of the country, it is a home product and, under your theory, should be protected, not taxed. And how are you going to tax it when it is not to be imported, but is made here?" And, gentlemen, you will have to admit that every word of it is true, and that, having exhausted all the possibilities of protecting your own against foreign manufactures by a prohibitory tariff, you are now taking the bold step of protecting them against Southern manufacturers by internal-revenue taxation. To suppress a rival of one of your products you have in an instant abandoned every principle of your protective policy.

Upon first impressions—

Said Justice Field, in Powell *vs.* Pennsylvania, 127 U. S., 689—

> Upon first impressions one would suppose that it would be a matter for congratulation on the part of the State that in the progress of science a means had been discovered by which a new article of food could be produced, equally healthy and nutritious with and less expensive than one already existing and for which it could be used as a substitute. Thanks and rewards would seem to be the natural return for such a discovery, and the increase of the article by the use of the means thereby encouraged. * * *
>
> The right to procure healthy and nutritious food, by which life may be preserved and enjoyed, and to manufacture it, is among those inalienable rights which, in my judgment, no State can give and no State can take away, except in punishment for crime. It is involved in the right to pursue one's happiness.

INJURY TO THE COLORED PEOPLE OF THE SOUTH.

Mr. Speaker, there must be intense and blinding zeal at the back of this legislation. It is difficult to say whether the bill is distinguished most for its flagrant disregard of constitutional obligations and private rights or for its stupid political blundering.

It is a blow straight into the sweating face of the black man. You gentlemen proclaim from every housetop that your tariff legislation is in the interest of the laboring man. For all the years of his freedom, under this false cry, you have made the colored laborer of the South pay high prices for everything he consumes, forgetting all the time that none labors harder than he and that his muscle makes the wonderful harvest that brings each year from foreign countries $250,000,000 of gold to save you from financial ruin. Have you no sense of gratitude for the blind political devotion which he gave you for so many years? Is your legislation against him at this session prompted by revenge because he is deserting your ranks and joining the Democracy? One might well think so.

Rice and sugar are the only two articles produced by him which have received protection heretofore, and now you make sugar free and materially reduce the duty on rice. You still keep him under the heel of the jute-bagging trust to swindle him at pleasure. You have increased the duty on his cotton-ties threefold. You have defeated the Blair bill, which for years you have promised him, but with no real intention of passing. All this you have done at this session, and such is the record you have made at the first session of Congress at which for years you have had control of every department of the Government. And now you propose, by the most vicious legislation of all, to go into

every cotton field of the South and into every humble home and take from him and his family a part of their hard-earned income to increase the enormous profits of the manufacturers of the North.

It has been very easy for you when out of power to proclaim your devotion to the colored man. Now that you are in power your acts stamp your words as idle promises. It has been estimated that the annual addition to the income of the cotton farmer of the South by the discovery of cotton-seed oil is $12,000,000, and that one-third of this, or $4,000,000, goes into the manufacture of lard compound. You propose, then, to destroy just that much of the value of the cotton-grower ($4,000,000) and to check forever the enormous development of the industry in that direction. To show how much the colored man is interested in the cottou crop as a planter on his own account with the assistance of his white friends, it has been stated by a distinguished Senator, himself a cotton-planter, that the average crop of each farmer does not exceed five bales. This is the class of men at whom this bill is aimed, and its passage will put a nice finishing touch to your session's work.

Compound Lard.

SPEECH

OF

HON. HENRY P. CHEATHAM,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 23, 1890.

The House having under consideration the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of compound lard—

Mr. CHEATHAM said:

Mr. SPEAKER: I do not like to say a word against the report of any committee of this House, nor to differ from the leaders of my party, but I am compelled in this case, representing the constituency I do on this floor, to raise my voice against the adoption of this measure.

I wish to indicate, Mr. Speaker, in brief, why it is that the compounding of cotton-seed oil with the other ingredients that go to make up this article of commerce helps the Southern States. Ten or fifteen years ago bacon and lard sold in those States, especially in North Carolina, at prices ranging from 25 to 30 cents a pound, such enormous prices that the poor people could scarcely buy it, the reasons therefor, or at least some of them, being, first, and mainly, on account of their individual poverty and, secondly, on account of the poverty of the communities in which they lived, and, indeed, of the very air which they breathed. Money was scarce and labor had little or no market.

Now, there were two particular things that combined to produce this poverty. They are these: About the time referred to there was a fearful and disastrous epidemic prevailing among the hogs of our section, commonly known as the hog cholera, which in many ways embarrassed and destroyed the flattering and bright hopes of thousands of farmers and mechanics. It devastated the Southern farms, and especially those of the poor men who ordinarily raised their own meat and lard, but who saw their little stock of hogs entirely wiped out by this dreadful and apparently incurable disease. And yet the producers and manufacturers of pure lard, about whom we hear so much in this debate, in the North and West, took advantage of the calamity which thus befell us, and reaped a rich reward in the increased prices they forced us to pay. This, however, we all must admit, is generally the case the world over in business circles. They compelled us to buy their product at their own rates. But after Providence, in its kindness and mercy, placed us in a better shape, taking us out of that suspended and deplorable condition of things, and after the hog cholera had disappeared, when the fattening pens of the country had again been rebuilt and were filled with hogs, the farmers once more commenced to flourish and to prosper, and meat and lard fell to prices ranging from 8 to 10 cents per pound.

But this condition did not last long. A movement was soon inaugurated which led to an organization among some of the principal landowners, and a measure was lobbied and railroaded through the State Legislatures commonly known as the "no-fence law." The enactment of this law brought about a radical change in the affairs of the people, compelling the poor farmers of both races, who had hogs from which they expected to raise their meat and cows on which they depended for their milk and butter, to sell or get rid of them, and thus place their food supplies at the mercy of the men who manufactured this commodity or who raised large quantities of pork. Now, I do not think any one can deny that this class of men took the lead in the movement referred to and maneuvered and almost forced the passage of the "no-fence law."

By reason, therefore, of the hardships caused by the passage of this act, many of the poor people of the country were forced to sell out—compelled, almost, to give away their stock. The result was that as the stock of hogs was reduced the price of lard went up again to 20 and 25 cents per pound.

And go now into certain sections of the cotton belt, especially in my own State, and the disastrous effects of this harsh system are visible on all hands. There you will see the stock of hogs of the poor farmer huddled in pens or tied out on some green spot to find food as best they may, and their cows tied down in the little "meadow patch," both hogs and cows reduced to the smallest number; and few farmers have stock enough to supply their families with meat or lard during the year. In addition to this, by reason of unfortunate crop failures, which have followed each other in almost uninterrupted succession for ten years past, the Southern farmers have been thrown helplessly upon the mercies of the brokers and commission merchants of their sections, and in thousands of cases they have been compelled to mortgage everything, from the farms and stock and growing crops, even to their household and kitchen furniture, for the necessaries of life. Many of them are hopelessly involved, and by reason of the accumulation of indebtedness they have no comfort in the present or hope for the future.

Besides, owing to the disadvantages of the great mortgage and lien system existing in the South, which has brought suffering and even crime to the homes of thousands of our people, which has not been productive of improvement in the condition of the people, but which has begotten suspicions and ill-feeling at home as well as a want of confidence between the moneyed men of the North and the property-owners at the South and has impoverished our people generally, it has become almost impossible for them to get enough, through the system in vogue of the pure-lard men, to provide the necessaries of life for their families. Nevertheless, it is remarkable to see how God, in His own wise way, brought a speedy and timely relief in this new chemical discovery for the benefit of those people, producing to them a substitute from which they could get that of which they were formerly deprived by those high rates. Such was the condition of things until there was introduced in our midst this compound of the cotton-seed oil. And to-day in the Southern States you can get lard, the best and most healthful in the world, suitable for all purposes of domestic consumption, at from 8 to 10 cents per pound.

Our people are, therefore, anxiously waiting to see if their friends in the North will take away from them the last blessing they have in the form of cheap food; a blessing, let me say, which materially affects the colored people's condition at the South, four million of whom were emancipated from the curse of slavery at the close of the late war to live upon their own resources and to commence the race of life without a penny to buy food or raiment, and without even rented homes to shelter them from the heat of summer or the cold of winter. At the same time they were subjected to all kinds of fraud and rascality, perpetrated upon them, in many instances, by those who pretended to be their friends from the North and who claimed to be sent amongst them for the purpose of seeing that all differences and controversies should be settled fairly and squarely between them and their former masters. In nine cases out of every ten, however, these deceptive and heartless friends, for a few dollars and for the purpose of currying favor with their white brothers, would compromise the poor, ignorant negro's interests, to settle the demands and costs of their law courts, and, in fact, seemed determined to carry out literally the divine injunction which says:

> For unto every one that hath shall be given, and he shall have abundance: but from him that hath not shall be taken away even that which he hath.
>
> And cast ye the unprofitable servant into outer darkness: there shall be weeping and gnashing of teeth.

These gentlemen were placed at the head of what was then known as the Freedmen's Bureau, the object of which was a good one (to protect the rights of the freedmen); but in nearly every case coming before that bureau it but resulted in deplorable and unfair treatment to him. Notwithstanding all this and many other unfriendly and uncalled-for brutalities with which the colored people of the South have had to contend and to encounter, they have not at any time become wholly discouraged, nor have they allowed themselves to give up in despair. On the contrary, they have earnestly and incessantly toiled, especially in the great cotton belt of the South, in the hope of a better condition of things. And, although the grand boon of freedom brought with it many responsibilities and hardships, it was still received with hearts overflowing with fervor and gratitude to those who gave it.

The very fact that great sacrifices were necessary to secure and perpetuate the enjoyment of freedom and the rights of citizenship gave a stimulus and impetus to a determined, industrious, and self-reliant policy in business. And in order to give an idea of what the colored people have acquired through their skill, intrepidity, and industry since the war their many adversities to the contrary notwithstanding, I will here read by States the following statistics, which indicate the total wealth of the colored people in each State named:

Alabama	$9,300,125	Missouri	$8,100,340
Arkansas	5,010,315	Maryland	9,900,735
District of Columbia	5,300,033	North Carolina	11,010,652
Florida	7,900,040	South Carolina	12,500,000
Georgia	10,415,330	Texas	18,010,371
Kentucky	5,900,000	Tennessee	10,400,211
Louisiana	18,100,525	Virginia	5,006,721
Mississippi	13,400,213	West Virginia	4,900,000

The amount of property owned by the colored churches in the United States is $16,310,441 and the total amount of property owned by them in all the States is about $263,000,000, and I think there is but little doubt that the most of the wealth acquired by the colored people in the South since their emancipation is due to the success of the cotton farms, as their staple product.

The project of manufacturing lard out of cotton-seed oil, on account of its superfine qualities, has brought it in competition with the great hog's-lard market of the North and West, thereby causing a decline in those lard markets, which justly places it in the reach of even the humblest and poorest farmer everywhere. It is now one of the most essential necessaries of life, and therefore at this time ought not to be burdened with a tax.

That which most oppresses the laboring classes of the South, and which hinders their advancement more than any other cause, is the price they are compelled to pay for their food supplies. Raising as they do inadequate supplies and dependent largely upon other portions of the country, this becomes a source of no little anxiety and concern. Their food accounts are really matters of most serious import, needing, as they invariably must, their constant watchfulness and attention. And when it becomes apparent to both rich and poor that lard made of cotton-seed oil and other pure and nutritious ingredients is as palatable, serviceable, and healthful as hog's lard or any other lard, and at the same time will save the workingman at the end of the month five or ten dollars in his market accounts, he will, in nine cases out of every ten, buy the compound brand. If he is a poor man he will make a payment of that difference of five or ten dollars on his little home every month, while if he is a rich man he will have that five or ten dollars credited to his regular bank account. Thus it is clear that both classes are materially benefited by this cheap commodity.

The cotton-planter is not only benefited by these cheap rates in lard, but he likewise finds at home a ready and profitable market for his cotton seed. This part of his product, as is well known, was prior to this chemical discovery of but little value to him. In fact, it was used only for compost purposes. It has been estimated that the cotton seed from one bag of cotton will average from $5 to $6 in value, although heretofore the same quantity of cotton seed only brought about $2 per bag. Hence it will be readily seen that the difference in value of cotton seed, taken from any one of these farms in the State, will purchase for that family a quantity of lard sufficient for one year's use.

I do not object to branding all compound lards, thereby letting them show exactly what they are, but I do seriously object to the passage of any measure the sole purpose of which is to tax one commodity out of existence for the good of one whose market price is more expensive to the consumer and whose quality is in no way superior to the commodity taxed. The gentleman from Iowa [Mr. CONGER] has seen fit to put upon exhibition here samples of the compound lard in question, and although he and other gentlemen who favor this bill seek to disabuse our minds of its high reputation and actual worth, it nevertheless shows, upon a fair examination and upon its merits, that it has forced its way into the markets of the country and justly antagonizes and competes with hog's lard or any other lard compound in the markets of the world.

Up to the present time I had hoped that the tariff provisions in the platform of the Republican party meant to protect all of our home industries, especially when competing with those coming from abroad. But I did not think it was meant to discourage any home industry, no matter in what section of our country the same had been established, nor to discriminate absolutely against one section of the United States to its disparagement and commercial loss to benefit another part of it. The leading incentive of the great tariff system of America has always been to stimulate and protect home industries, and this has become the spirit of the age. If this "lard-compound" industry was flooding the markets of our country from some foreign land and on account of its nutritious and healthful composition it hindered the sale of similar commodities manufactured here, Congress would have both a legal and moral right to enact a law restricting by taxation the privilege to sell in the markets of this country. But as against two honest and lawful home industries, both contending and rivaling each other for supremacy in the markets of the United States, it is hard to satisfactorily explain to the people of this country reasons for this discrimination, unless it is for the purpose of unfairly preventing and neutralizing the existence of one of the most popular and aggressive enterprises of its kind, that the so-called pure-lard industry may have the entire and exclusive sway in the food markets of this country.

Mr. Speaker, I do not oppose this measure because I wish to injure or paralyze the pure-lard enterprise, nor simply because it is my prerogative to do so. I am actuated by a higher motive. I am pleading for the honest and hard-working and business men in the South, who have spent their time, talent, and money upon this enterprise, and for suffering and impoverished humanity everywhere, whose wants and necessities are so readily and well provided for under the operations of this great industry—lard compound. I am opposed to this bill because it can be clearly seen that it proposes to establish by legislation the standard of a product which it could not have otherwise attained, and defends the cause of an article which needs no defense, especially if the product is as pure as it is claimed to be by the gentlemen on the other side.

Now, Mr. Speaker, if these gentlemen will make careful research of the history of the large packing-houses of the cities of Chicago, New York, Cincinnati, St. Louis, Kansas City, Boston, Louisville, Omaha, Nebraska City, Sioux City, Indianapolis, Milwaukee, and others, they will find that it is not the lard compound that so seriously attacks their product or that degrades the standard of American lard.

Permit me to read from the minority report of the committee, which I think will bear me out in this statement:

From the arguments presented before the committee in favor of this bill the inference is drawn that the immediate result of its enactment will be to increase the value of every hog in the United States 32 cents in the farmer's hands.

The statements and inferences above referred to are not clear to our mind. We think, as we said in the first place, that there are exceedingly important points with reference to the lard question that have been overlooked in this controversy. We think we have stated the case of the advocates of this bill compactly and fairly. Brushing aside all the cobwebs that surround this question, let us admit that the agricultural interests of the hog-raising States are entitled to the enactment of any measure that will increase the value of their hogs, and then let us devote ourselves to a careful consideration of all the facts in regard to the lard trade of the United States, with a view to ascertaining whether the measure before us (H. R. 243) can be of benefit to our farmers in the direction indicated.

The first general knowledge of the adulteration of lard was obtained from the publication by the Chicago Board of Trade in August, 1883, of the charges and evidence in a trial before the directors of that body of the case of McGeogh, Everingham & Co. *vs.* Fowler Bros. The directors of the Chicago Board of Trade in the trial of this case had all the powers of a court in matters of administering oaths and taking evidence; and the official report of the proceedings is undoubtedly entitled to as much weight as the finding of a judicial tribunal. The testimony in this case disclosed, as we said before, for the first time to the public the presence of "agitators" of cotton-seed oil, oleo, stearine, tallow, benchcuttings, floor-scrapings, heads, feet, marrow-bones, guts, etc., in the lard-tanks of the packing-houses at the Chicago stock-yards. Circumstantial evidence indicated that lard, which was really a composition of the above-named ingredients, might be branded indiscriminately either "prime steam" or "pure refined," as the market might demand. It was further demonstrated by these proceedings that up to said date, *i. e.*, August, 1883, expert chemists were unable to determine with any degree of accuracy the presence of foreign fats in "regular" lard.

Samples drawn by Mr. C. H. S. Mixer, the official inspector of the Chicago Board of Trade, who appeared to testify before your committee here in 1888, and by his assistant, Colonel Taylor, and by these officers p aced in the hands of several distinguished chemists for analysis, elicited reports from these gentlemen of the most diverse and contrary nature. Seventeen samples being thus submitted to five experts, no three of the five agreed in their analysis of scarcely any one sample out of the seventeen. It was shown that in the packing-house of these particular defendants the tank-room where the lard was rendered contained thirty-two cooking-tanks; twenty were used for prime steam lard, two were used for tallow, six were called grease-tanks, four of these grease-tanks were used for rendering the intestines of hogs and "the refuse of the house generally," two were called "pluck" tanks and were used for rendering hearts, livers, legs, etc. (See page 52 of the published proceedings, Chicago, Knight & Leonard, printers, 1883.)

The product of these tanks was conveyed in pipes to another room, where the tierces and packages were filled. The men who conveyed the materials to the tank-room were not allowed to see into which tank any materials they conveyed thither were dumped. The men inside the room who filled the tanks were not allowed to see where the pipes led to, and consequently did not know what became of the contents; and the men who drew the different kinds of lard out of the pipes in the filling-room did not know where the pipes came from and what was mixed in said pipes, and consequently could not swear positively to the composition of the product drawn into packages for shipment. Then other employés were detailed to apply the stencils and brands. From this description of the packing-house arrangements it can be readily seen that no evidence could be procured sufficiently definite to sustain the charges; and considering also the inextricable confusion of the so-called expert scientific testimony, the directors of the Chicago Board of Trade were deprived of any alternative and were obliged to find for the defendants—in a sort of Scotch verdict, "not proven." The board of directors, however, did not refrain from annexing to their verdict a statement, which we copy, as follows page 271):

"Inasmuch, however, as these charges involve questions of the greatest concern to the members of this association and to dealers and consumers of pork products, not only throughout our own country, but in foreign lands as well, the board of directors, in view of the evidence submitted in this case, both on the part of the defendant and for the prosecution, can not, with a due regard to their responsibilities to the public and to the members of this association, refrain from expressing their unqualified disaproval of and censure upon the defendants for the remarkable methods of conducting the business of manufacturing lard in their establishment, as developed by the evidence in this case.

"It appears, and is admitted to have been the practice during at least several of recent months, that beef product in several forms has been rendered in the same tanks and with hog product, this mixed product of certain tanks being conducted through an intricate machinery and pipes, in which also prime steam lard was at times conveyed to their so-called lard refinery, wherein both prime steam lard and the mixed product used for what is called refined lard is drawn off into packages for market; and this in a manner that, by accident or design on the part of the employés of the establishment, could easily contaminate the purity of their prime steam lard, which might thus become more or less adulterated, not only with the beef product so rendered with a portion of their hog product, but also with the cotton-seed oil and other unknown substances used in the manufacture of their so-called refined lard; and this board, in view of the existing methods of manufacturing prime steam lard in that establishment, recommend that without delay the parties so readjust their lard-manufacturing arrangements that all grounds for suspicion in this respect shall be effectually removed."

The above is what the Chicago Board of Trade found to be the fact as to methods of manufacture in one of the large packing-houses of that city, not in the factory of a manufacturer of "lard compound." It is evident that if the public is to be protected against the adulteration of lard the law and its regulations must embrace all establishments where lard is produced, as well as those where it is compounded.

The price of the lard involved in this particular controversy was 12.02½ cents per pound it being of course an artificial value created by the efforts of the plaintiffs in this case to engross the market, or, in modern parlance, "run a corner on the board." But the beginning of the depression of the value of American lard dates back from this period. From the publication of these proceedings arose the first damage to our foreign trade in lard, and here were sown

the seeds of that distrust concerning the integrity of packing-house lard which seems now to have spread almost all over the civilized world.

Subsequent to these proceedings the Chicago Board of Trade adopted new rules for the manufacture of packing-house lard, making two grades, the definitions of which we quote as follows from the testimony of the official inspector, Mr. C. H. S. Mixer, already quoted herein (see page 347 of the proceedings before your committee in 1888, as aforesaid):

"Choice lard: Choice lard to be made from leaf and trimmings only, either steam or kettle rendered, the manner of rendering to be branded on each tierce.

"Prime steam lard: Standard prime steam lard shall be solely the product of the trimmings and other fat parts of hogs, rendered in tanks by the direct application of steam, and without subsequent change in grain and character by the use of agitators or other machinery, except as such change may unavoidably come from transportation. It shall have proper color, flavor, and soundness for keeping, and no material which has been salted shall be included. The name and location of the renderer and the grade of the lard shall be plainly branded on each package at the time of packing."

Mr. Mixer explained before the committee that the business of an inspector under these rules was to examine lard with three tests in mind, *i. e.*, odor, sight, and flavor, from which tests the inspector approved or rejected the lard according to his own individual expert judgment. Mr. Mixer stated that in all probability an inspector could not detect 10 per cent. of adulteration in fresh-made lard. He said that the inspectors had no control over the packing-houses; that it was "their duty to deal with the result, and not the processes;" that more than half of the lard inspected in Chicago for the preceding ten years was made outside of the State of Illinois and at points where there was no local inspection. (See Mr. Mixer's testimony, pages 244-247 of the report of 1888.)

It may be well to call attention right here to the fact that there is not even a board-of-trade inspection of lard anywhere except in Chicago, New York, Cincinnati, St. Louis, and Kansas City. Dozens of other packing-houses, as for instance, at Boston, Louisville, Omaha, Nebraska City, Sioux City, Indianapolis, Milwaukee, are operated where there is no local inspection of lard whatever. True, when lard packed at these points is sold in cities having so-called "official" inspection such lard is subjected to such inspection at the point of sale; otherwise there is absolutely no supervision of any kind over the packing-house lard of the United States.

It can be seen from Mr. Mixer's testimony that what is called "official" inspection in the so-called "pure" lard manufacture is very superficial at best; and we call especial attention to the fact that the testimony of all packers who appeared before this committee in 1888 agrees that the production of so-called "choice" lard according to the preceding definition was and is very small all through the United States, and that in fact nearly all the lard produced in our packing-houses was and now is of the grade known as "prime steam" lard. The importance of this point will be seen as we go on.

The fact is that the degrading of so-called "pure lard" by the filthy methods of some of the American packing-houses is responsible for the disturbance of our European trade in lard. This is shown by the many complaints that have come back regarding the packing-house lard. See the recent correspondence between Gebrüder Gause, large importers in Germany of American lard, and the New York Produce Exchange (Appendix B). This correspondence shows the worthlessness of the present methods of inspection applied to "pure lard," and the inferior quality of the product which can pass such inspection and still be known as "pure lard."

We get a complete description of the manufacture of "prime steam" lard from Bulletin No. 13 of the United States Department of Agriculture, division of chemistry, part 4, from which we quote as follows (page 406):

"*Prime steam lard.*—The prime steam lard of commerce is made as follows: The whole head of the hog, after the removal of the jowl, is used for rendering. The heads are placed in the bottom of the rendering tank. The fat is pulled off of the small intestines and also placed in the tank. Any fat that may be attached to the heart of the animal is also used. The back fat and trimmings are also used.

"This lard is passed solely on inspection, the inspector having no authority to supervise rendering establishments in order to secure a proper control of the kettles. According to the printed regulations any part of the hog containing fat can be legally used.

"Since much uncertainty exists in regard to the disposition which is made of the guts of the hog, I have had the subject carefully investigated. Following are the results of the study:

"*Guts.*—The definition of the term as used by hog-packers is everything inside of a hog except the lungs and heart, or, in other words, the abdominal viscera complete. The material is handled as follows:

"When the hog is split open the viscera are separated by cutting out the portion of flesh surrounding the anus and taking a strip containing the external urino-generative organs. The whole viscera are thrown on a table and divided as follows: The heart is thrown to one side and the fatty portion trimmed off for lard. The rest goes into the offal tank or sausage. The lungs and liver go into the offal tank or sausage. The rectum and large intestines are pulled from the intestinal fat and peritoneum, and, along with the adhering flesh and genito-urinary organs, sent to the trimmer. All flesh and the above-mentioned organs are trimmed off and the intestine proper is used for sausage casings. The trimmings, including the genito-urinary organs, are washed and dumped into the rendering tank. The small intestine is also pulled from the fatty membrane surrounding it and saved for sausage casings.

"The remaining material, consisting of the peritoneum, diaphragm, stomach, and adhering membranes, together with the intestinal fat, constitute the 'guts,' which are seen undergoing the process of washing, which is usually conducted in three or four different tanks. As the 'guts' pass into the first tank the stomach and peritoneum are split open and also any portion of the intestines which sometimes adheres to the peritoneum. After receiving a rough wash they are passed from tank to tank, when, after the third or fourth wash, they are ready for the rendering-tank. The omentum fat is cut from the kidneys and the kidneys, with a little adhering fat, go into the rendering-tank. Spleen and pancreas go into the rendering-tanks, as do also the trachea, vocal chords and œsophagus."

That there can be no question about the correctness of the foregoing, we refer to extracts from statements made before your committee in 1888, in the appendix hereto.

In our opinion the greatest injury to the farmer and his hog crop comes from the unscrupulous methods of the packing-houses and stock-yard buyers, methods which the honest farmer would not employ and could not if he would. A considerable proportion of the lard consumed in this country is purchased direct from the farmers and from the small butchers. Such lard is, as a rule, pure, sweet, and clean, prepared only from suitable parts of the animal, and rendered in an open kettle. But when the farmer offers it for sale he is met at once by the competition of the prime steam lard, made by the packing-houses in large tanks under high steam pressure, in which practically the whole hog is stewed up. This method of manufacture injures the farmer in at least three ways:

(1) It competes with and limits the sale and depresses the price of his home-made lard.

(2) It degrades the standard of American lard, to the injury of our foreign commerce.

(3) It transforms into so-called "lard" those portions of the animal which ought to be thrown away or sent to the glue factory, or soap factory, or fertilizer factory, or properly branded so as to enable the purchaser to know what kind of so-called lard he is purchasing.

It is evident that if lard were now made by the packers as it always used to be made, and as it is now made by the farmers, more hogs would be required to supply the present demand for lard and the price of hogs would be higher.

The bill introduced by Mr. McCLAMMY (H. R. 7346) is designed to bring about just this result and put an end to the filthy practices by which the farmer is defrauded out of the value of his swine, and by which the consumer is defrauded when he attempts to purchase "pure lard."

We next call attention to a fact not brought out in the lard testimony, but revealed by public investigations into the manufacture of oleomargarine, *i. e.*, that the leaf-fat of the hog, averaging 9 pounds per head, is all used of late years in the manufacture of so-called "neutral lard" for oleomargarine, and that it brings from 2 to 3 cents per pound more than the price of prime steam lard. Mr. Hately's estimate that the depression in the value of hog lard (from the competition of lard compound) to the aggregate of 32 cents per head is, therefore, subject to the following correction:

Total weight of lard per hog	pounds	32
Less weight of the leaf	do	9
		23
Loss on 23 pounds at 1 cent	cents	23
Gain on leaf for oleomargarine, 9 pounds at 2½ cents	do	23

If figures will not lie, it is thus evident, taking Mr. Hately's own theory for supposed depression in value of lard, amounting to 32 cents on each hog in the United States, that this depression can be disproved from his own premises.

The claim that the depreciation in the value of swine and lard is due to the manufacture of lard compound is not to our mind established. The investigation of expert and disinterested statisticians shows that such depreciation is due to very different causes. Statistics and diagrams prepared by the official statistician of the New York Produce Exchange, and printed in part 2 of the report (No. 970) on this bill (H. R. 283), show that the price of swine, and consequently the price of lard, is dependent upon the price of corn. No reference was made in that report, however, to the investigations of the United States Department of Agriculture on this subject. We therefore submit, as Appendix C, extracts from the report of the statistician of that Department for February, 1884, and from the report of the Bureau of Animal Industry for 1887-'88 to the same effect. The inevitable rule is that when there is a large crop of corn its price will be low; that more of it will be used for feeding swine; that a large increase in the production of swine will result, and that the price of swine will correspondingly decrease.

Next. If there is one argument reiterated again and again by the pork-packers in the hearings before your committee in 1888, it is the argument based upon the fact that at that time, and for several months previously, lard had been selling at less than the price of short ribs. While the opponents of the bill denied that the price of hog lard was in any way injured or damaged or depressed by the cotton-seed product, the advocates of the bill pointed persistently to the fact that lard had previously sold at more than the price for short ribs, and that legislation of the character of this bill (H. R. 283) was imperatively required because lard was selling in 1888 at less than the price of short ribs.

On the other hand, as we write this report the force of even this argument has entirely vanished. Current quotations for lard on all the prominent exchanges of this country and in all provision markets show that to-day lard is selling at 1 cent per pound more than the price of short ribs. If there is any merit in the argument previously offered by these gentlemen, it might about as well be claimed to-day that the market for meat in the form of short ribs is depressed because of the competition of cotton-seed oil, which is the *reductio ad absurdum*. At any rate, the tables seem to be turned.

We have alluded to the claim that this supposed 32 cents per hog benefit to accrue from the enactment of this bill (H. R. 283) would go into the hands of the farmers. Who first proposed any legislation in Congress upon the subject of lard? The earliest known bill was presented by Hon. Mr. DAWES, in the United States Senate, December 13, 1887, Fiftieth Congress, first session (S. 650), by request of John P. Squire, a pork-packer in Boston. (See page 49 of the Hearings of the Fifty-first Congress.) The proceedings before the committees of both Houses show that the prominent advocates of lard legislation appearing before said committee as promoters thereof were as follows:

Page 47, Mich. Ryan, pork-packer, Cincinnati.
Page 61, Joel A. Sperry, pork-packer, New Haven, Conn.
Pages 68 and 266, John Whittaker, pork-packer, St. Louis, Mo.
Page 101, E. A. Bartman, pork-packer, Bridgeport, Conn.
Page 230, William S. Harvey, pork-packer, Kansas City, Mo., and Philadelphia, Pa.
Page 102, U. S. Epperson, pork-packer, Kansas City, Mo.
Page 245, O. W. Thomas, pork-packer, Louisville, Ky.
Page 265, Mr. Morrison, pork-packer, Cincinnati, Ohio.
Page 247, W. W. Kimball, pork-packer, Boston, Mass.
Page 258, C. G. Cryer, pork-packer, Baltimore, Md.
Pages 119 and 277, W. L. Hill, pork-packer, Boston, Mass.
Page 320, John C. Hately, pork-packer, Chicago.
Page 348, William Kirkwood, pork-packer, Chicago.

Among the prominent petitions, letters, resolutions, statements, etc., favoring the bill we also note:

Page 8, Cincinnati Board of Trade.
Page 8, Chicago Board of Trade.
Page 15, Francis Whittaker & Sons, pork-packers, St. Louis, Mo.
Page 16, St. Louis Live-Stock Exchange, East St. Louis, Ill.
Page 107, Louisville Board of Trade.
Same page, Boston Chamber of Commerce.
Page 116, Plumb & Winton, pork-packers, Bridgeport, Conn.
Page 108, William Ryan & Sons, pork-packers, Dubuque, Iowa.
Also John P. Squire & Co., Boston, Mass.
Des Moines (Iowa) Packing Company.
International Packing Company, New York City.
Chicago Live-Stock Exchange.
James E. Booge & Sons, pork-packers, Sioux City, Iowa, etc.

The foregoing seems to us to be as choice an assortment of pork-packers, combines, and stock-yard representatives as can be gathered in the length and breadth of these United States. These are the men, we take it, who, when they can, squeeze the last cent of money out of the hog-raiser and the hog-seller. These are the men who through their "sveners" and adjusters at the stock-yards and at the packing-houses "dock" the honest farmers most arbitrarily on every drove of hogs they buy, and these are the men who appear before the Congress of the United States as manufacturers of "prime steam" lard, as explained in the foregoing pages, which they say the Government must not touch, and as advocates for the enactment of this particular measure, which they say is solely in the interest of the down-trodden farmers.

The object of this report is to state as distinctly and frankly as possible our mistrust and suspicious concerning the ultimate results which may accrue if this bill (H. R. 283) becomes a law. We are free to say that we hesitate to believe a bill which will benefit the agricultural interests of the United States, the farmer and the hog-raiser, can emanate from such a source. If there is any

possible chance of any lard legislation of this kind adding 32 cents to the value of every hog in the United States, we are satisfied in our own mind that that 32 cents will accrue to these gentlemen of the slaughter-houses and of the stock-yards, and not one cent of it will ever reach the farmer, in whose interests it is claimed this bill is proposed.

It will be seen, Mr. Speaker, from an examination of the expert testimony submitted with this portion of the report, that the serious injury to the hog-raisers of this country by reason of the diminished price of our pork products, arising from the exclusion of our product largely from foreign markets, is due to the filthy and nauseating processes by which much of the so-called "refined lard" is prepared, and has no connection with the "compound lard" proper, which is a pure, wholesome, and cheap food product composed of cotton-seed oil and leaf-lard.

In view of these facts, Mr. Speaker, and recognizing the importance of this product to the poor people of the Southern States, while, as I have already said, I regret to oppose the report of the able committee which presents this proposition, I shall feel compelled to vote against the bill.

Adjustment of Accounts Under the Eight-Hour Law.

SPEECH
OF
HON. CHARLES A. HILL,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 28, 1890,

On the bill (H. R. 11120) providing for the adjustment of accounts of laborers, workmen, and mechanics arising under the eight-hour law.

Mr. HILL said:

Mr. SPEAKER: I am heartily in favor of this bill. It provides for the adjustment of the accounts of laborers, workmen, and mechanics under the eight-hour law by sending all such claims to the Court of Claims for adjudication. These claims against the Government have been pending many years and are nearly all outlawed. This bill removes the bar of the statute of limitations and permits them to be now heard. They are predicated upon a law of many years' standing.

In 1868 Congress enacted and the President approved a law of scarcely three lines in length which provided—

That eight hours shall constitute a day's work for all laborers, workmen, and mechanics now employed or who may hereafter be employed by or on behalf of the Government of the United States.

That law has never been repealed, but it has been evaded and not enforced. It speaks for itself and is plain and unambiguous. Whether employed by the day, week or month, eight hours was made a day's work for a Government employé. In May, 1869, President Grant issued his proclamation to enforce compliance with its provisions, which I will read:

Whereas the act of Congress approved June 25, 1868, constituted on and after that date eight hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government of the United States, and repealed all acts and parts of acts inconsistent therewith:

Now, therefore, I, Ulysses S. Grant, President of the United States, do hereby direct that from and after this date no reduction shall be made in the wages paid by the Government by the day to such workmen, laborers, and mechanics on account of the reduction of the hours of labor.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this 19th day of May, in the year of our Lord 1869 and of the Independence of the United States the ninety-third.

U. S. GRANT.

By the President:

HAMILTON FISH,
Secretary of State.

The law, however, was still evaded or misunderstood by the Government officials; and again, in 1872, President Grant issued his second proclamation on the subject, which I will also incorporate in my remarks.

THE PRESIDENT'S SECOND PROCLAMATION.

Whereas the act of Congress approved June 25, 1868, constituted on and after that date eight hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government of the United States; and

Whereas on the 19th day of May, 1869, by Executive proclamation, it was directed that from and after that date no reduction should be made in the wages paid by the Government by the day to such laborers, workmen, and mechanics on account of the reduction of the hours of labor; and

Whereas it is now represented to me that the act of Congress and the proclamation aforesaid have not been strictly observed by all officers of the Government having charge of such workmen, laborers, and mechanics:

Now, therefore, I, Ulysses S. Grant, President of the United States, do hereby again call attention to the act of Congress aforesaid, and direct all officers of the Executive Departments of the Government having charge of the employment of laborers, workmen, and mechanics, employed by or on behalf of the Government of the United States, to make no reduction in the wages paid by the Government by the day to such laborers, workmen, and mechanics on account of the reduction of the hours of labor. (U. S. Stats. at Large, volume 17, page 235.) Dated May 17, 1872.

Prior to the issue of the President's first proclamation, a period of over ten months, the law of 1868 was almost entirely disregarded by the Government officials whose duty it was to pay or employ these laborers, workmen, and mechanics; and to remedy this, Congress, in 1872, enacted a law, as follows:

ACT OF MAY 18, 1872.

SEC. 2. That the proper accounting officers be, and are hereby, authorized and required, in the settlement of all accounts for the services of workmen, laborers, and mechanics employed by or on behalf of the Government of the United States, between the 25th day of June, 1868, the date of the act constituting eight hours a day's work for all such laborers, workmen, and mechanics, and the 19th day of May, 1869, the date of the proclamation of the President concerning such pay, to settle and pay for the same without reduction on account of the reduction of the hours of labor by said act, when it shall be made to appear that such was the sole cause of the reduction of wages, and a sufficient sum for said purpose is hereby appropriated out of any money in the Treasury not otherwise appropriated. (See Statutes at Large, volume 17, page 134.)

Appropriation act, approved May 18, 1872.

It will thus be seen, Mr. Speaker, from the proclamations of the President as well as from the act of Congress, that it was the intention of the act of 1868 that a workman should receive a full day's pay for eight hour's work; or, in other words, that there should be no reduction in wages because of the reduction in the hours of labor. This conclusion is fortified by the debates in Congress when the eight-hour law was under consideration, but I will not take the time of the House in reading them.

As a rule they have not been so paid. Some of the Departments have conformed to the law, others have not. Various schemes and devices have been resorted to to compel laborers, workmen, and mechanics to work more than eight hours for a day's pay, and they have succeeded. The employés were obliged to conform to the wishes of the Government officials or lose their places. In other cases they have been compelled to sign contracts to that effect in order to obtain employment, and if such contracts were fairly and voluntarily entered into they would, no doubt, be bound by them, and in such cases this bill will furnish them no relief. But if exacted as a condition of employment it should and does give relief.

This nation is too great and ought to be too just to take advantage of the necessities of the laboring man. It ought rather to set an example not only to its own citizens and corporations, but to all nations and peoples of the world in its generous care and treatment of the wage-worker. This law of 1868 was no doubt designed for that very purpose. It said in express words that eight hours should be a day's work, and, Mr. Speaker, I believe in that declaration. It was right then, and it is right now. As a rule the American people work too many hours and take too little sleep and recreation. In the long run this will tell upon nations as well as upon individuals. It ruins individuals physically and it will ruin nations as well.

Mr. Speaker, we have heard much in this Hall and out of it of the rights of the laboring man. Here is a chance to practice what we preach. They say this bill will take $4,000,000 out of the national Treasury. What of it? It should not be there now. It ought to have been paid out to these laborers and mechanics long ago. They earned it, but by a violation or evasion of the law the money has been withheld.

Let us "do justice though the heavens fall." We have sent contractors and others who have claims against the Government to the Court of Claims for relief. Let us deal as justly by the workingmen. This nation is too great and ought to be too just not to deal honorably and fairly by even the humblest of its citizens.

I hope that the bill will pass.

The Eight-Hour Law.

SPEECH
OF
HON. DAVID B. HENDERSON,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 28, 1890,

On the bill (H. R. 9791) constituting eight hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government of the United States or by contractors doing work or furnishing material for the Government, and providing penalties for violation of the provisions thereof.

Mr. HENDERSON, of Iowa, said:

Mr. SPEAKER: I want to thank the Committee on Rules for helping us to get before the House for action the measures reported from the Committee on Labor, the measures so earnestly urged by the laboring men of the country. I congratulate the toilers in the shops of the land because we have a House of Representatives that is awake to the duty, the high duty of protecting the interests of those who earn their daily bread by the toiling hand.

In this country there is work for all and living compensation for the work when done. Many of us left our native lands and came here to better our conditions, and we have bettered them. But let us not content ourselves by seeing our workingmen better fed and better clothed

and better educated than they are in other lands. Let us keep in mind that the American standard of citizenship and of living is higher than that of other country, and that it must be kept higher. Let us remember that we have something else to do here than to see that workingmen are protected and well paid, and that the cheap products of other lands are not let in to rob our workingmen, but let us see to it that he has not only time for work, but time for education, time to enjoy his family and friends, and time for recreation, for without these man is a mere toiling animal, and not a man in the high sense possible in this country.

I believe that eight hours of intelligent, faithful work is all that this Government should ask of its workers, and the Government will get more from a happy, vigorous, contented worker in eight hours than it will in ten or twelve hours from men who are deprived of what life is for—health, happiness, contentment, and the proper enjoyment of life's holiest relations. I have talked with men on street-car lines who rarely saw their own little ones, leaving for their work before they were up and returning at midnight when they were sleeping, and Sunday was the severest of their working days. I have seen this done on lines where their stock was at 200 per cent. premium. This is brutality and worse than highway robbery.

The time has come for a fair division of profits between capital and labor; and the money invested will prosper better if contented with a fair share, and let the laboring partner, for in equity he is such, get his fair share. Let the Government set the example. I beg of members not to fear this legislation. It will make our people happier and our Government stronger. Let us pass this bill feeling that it is right, and let us pass the other measures before we stop the good work. Let us make the alien-contract law so strong that not a loop-hole shall be left. Our first duty as lawmakers is to our own workingmen; let the Old World look out for hers. I am unalterably opposed to letting the foreign laborer steal the work of our people either by bringing in contract labor or, what is just as bad, the product of the outside workers.

The Eight-Hour Law.

REMARKS
OF
HON. JOHN DALZELL,
OF PENNSYLVANIA.
IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 28, 1890,

On the bill (H. R. 9791) constituting eight hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government, etc.

Mr. DALZELL said:

Mr. SPEAKER: I am in favor of the passage of this bill. I believe it to be a measure in the direction of good health, good morals, and mental improvement. I believe that every hour that can be saved reasonably from labor in the interest of the laborer's growth socially, mentally, and morally is an hour added to the world's advance. Upon the virtue and intelligence of the citizen rest the foundations of good government; and neither virtue nor intelligence has room for growth where the whole of life is spent in the task of living.

Intelligent citizenship, useful manhood, fidelity to the requirements of the various relations of life that every man occupies, call for other training than that which only trains his muscles. The man whose daily round embraces naught but work, food, and sleep may develop into a magnificent brute; he will fall far short of the qualities requisite to a conservative American citizen. Hence I believe that legislation looking to the reduction of the working hours of our citizens who labor is legislation in the direction of the purity and the security of our institutions.

Of course this proposition must be subject to limitations. To decrease the hours of labor universally is to work a change in the economic situation far-reaching in its effect. I have not the figures at the present, but I learn from an authentic source that in 1886 there were eleven millions of our people whose hours could be affected by a reduction in the hours of labor. To make a reduction covering all these persons, involving as it does a virtual increase in wages and a probable if not necessary increase in prices, would affect society and trade to an incalculable extent. True as that is I am convinced that an eight-hour labor day is as certain to come as it is certain that a ten hour labor day years ago succeeded a twelve-hour labor day. And I am furthermore convinced that the change will be made with much less resultant shock to society and trade than is now imagined. Communities readily adapt themselves to new conditions.

But the bill under discussion does not compel us to face the problem of an universal eight-hour labor day; it relates only to Government work and Government workers, and I am persuaded that the reduction to eight hours is reasonable, feasible, and will be productive of good results.

Legislation on this subject is no experiment in the world's history. Legislation in Great Britain between 1825 and 1844 lessening the hours of labor demonstrated the fact that thereby the product was increased, wages were advanced, and the advantage to the community and to the laborer was a common one. This legislation stands by the verdict of experience as a contribution to the common weal and furnishes to us as legislators a safe guide for our footsteps.

Statistics carefully gathered in our own country add new proof to the verdict of English history. The result of Mr. Carroll D. Wright's inquiries published in 1881 shows that Massachusetts mills under a ten-hour law produced as much per man, per spindle, and per loom as the mills in adjoining States, using the same machinery and employing the same class of labor, but working eleven and eleven and a-half hours a day.

Mr. WRIGHT says:

We have large mills, employing in the aggregate several thousand persons, which have voluntarily adopted ten hours in eleven-hour districts, bearing witness emphatically that they find the product of ten hours a day, in the long run, so nearly or quite the same as that of eleven hours that their mills are as profitable to them under the shorter as under the longer time. In addition to this fact, and as partly explaining it, may be recorded the words of great wisdom spoken by the managers:

"Skill in management and thoroughness in discipline are more important than the eleventh hour in the product of a mill; and thorough discipline is much more attainable under ten than under eleven hours; for men and women are flesh and blood, and they can not be held up to such steady work during eleven hours as during ten; and overseers are flesh and blood, and can not hold them up.

"The question of ten hours is not merely, nor even mainly, an economic question. It is chiefly a human question. Not yet is the mill more than the man, and, if it ever comes to be, then society will begin to die."

In view of the results attested by experience why should not the United States assume the lead in a movement which is to result in equal advantage to the community at large and to the laborer in particular? The highest function of government is the security of the individual weal, and thereby of the commonwealth.

In advocating this bill I claim no credit on the ground that I am showing myself a friend of the laboring man. I may be permitted to express my lack of faith in those who continually pose as the special friends and champions of labor. Such men, if unselfish friends at all, are not the only friends that labor has. He loses his right to be called intelligent who fails to recognize the fact that the welfare of labor is the welfare not of a class, but of the whole. Besides, while of course there is a distinction made between those who labor with their hands and those who do not, it must be remembered that we are all laborers in one way or another. Labor is our common heritage. None are exempt from the primal curse, or the primal blessing, "In the sweat of thy face shalt thou eat bread all the days of thy life." And whether the bread be earned by the toil of muscle or the toil of brain, before open furnace doors, in the heat of the blast, tilling the soil, in the mine under the earth or on its surface, facing the storms in all the various occupations that call for exposure; whether it be in the office, behind the counter, in preaching, or teaching, or legislating, we are brothers all subject to a common experience of trial and aiming at the same result, that those who follow us should start a step in advance of where we started.

By such results, and by such only, does civilization advance.

And so it must be apparent that the cause of the laboring man is the cause of us all. Only when we are true to each other are we true to ourselves.

It is, in my judgment, for the common interest that this bill should pass.

The Tariff.

SPEECH
OF
HON. JOHN A. CALDWELL,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES.

Wednesday, May 21, 1890,

[On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.]

Mr. CALDWELL said:

Mr. SPEAKER: The Republican Administration is but eighteen months old and a Republican Congress has been in session but nine months, yet they have brought better days for farmers, notwithstanding Democratic obstruction and reckless assertions.

If free trade is good for farmers, why are British farmers so much worse off than American farmers?

Let us carefully consider the new Republican measures for the better protection of agriculture.

The attacks of free-traders on the McKinley bill have been almost entirely confined to the assertion that it will injure agricultural interests. They do not attempt to show how this is going to happen. Free-traders never allow themselves to be pinned down to facts and instances. They revel in generalizations and their stock doctrine is that protection increases the cost of farmers' supplies.

Now, this is a plain, manifest falsehood. Protection has exactly the opposite effect: it cheapens the price of farmers' supplies. To assert differently is as foolish as to deny the multiplication table. We have been living now for nearly thirty years under the protective system. If protection has oppressed the farmer by increasing his expenses, then clearly he ought to be paying more to-day for his necessaries than he paid, say, ten years ago; certainly, he would be paying more than the British farmer pays, for the British revenue system has been a free-trade system even longer than ours has been a protective system. But the fact is that the American farmer pays in the American market less money for all his supplies than he had to pay in 1880; he paid in 1880 less than in 1870, and in 1870 less than in 1860, when we were living under a free-trade revenue; and he pays to-day in the American market, protected as it is from foreign assault, less money than the British farmer pays in the British market, open though it be to the production of the whole world.

AMERICAN AND BRITISH PRICES CONTRASTED.

Here is a table showing comparatively the prices for farming implements here and in England. The English figures are taken from our consular report:

Prices of agricultural implements in America and England.

Articles.	American prices (Chicago).	Prices in England.		
		John G. Rollins.	J. & F. Howard.	Samuelson & Co.
One-horse steel plow	$10.00	$14.85	$15.60	.....
Two-horse steel plow	20.00	25.29	.....	.....
Potato-digger	11.00	12.45	13.20	.....
Two-horse mowing-machine	60.00	75.00	76.64	$72.80
Horse rake	25.00	39.49	38.40	.....
Reaper	.....	119.55	124.80	.....
Reaper and binder	130.00	.....	249.60	.....
Hay tedder	45.00	64.00	60.00	.....

This table completely destroys the free-trade argument. We have been protecting all the machines mentioned and England has not, and if protection raises prices and free trade lowers them, as the Democrats allege, how under the sun can it happen that farming implements here are cheaper than in England? In an address delivered at the Farmers' Congress in Chicago, in 1887, Hon. Thomas H. Dudley, of New Jersey, formerly our consul at Liverpool, made this pertinent statement:

Something over three years ago I attended the National Agricultural Exhibition of France. It was held in Paris, and a grand exhibition it was, quite worthy of the great nation it represented. I spent four days at the exhibition. There were 14 or 15 acres of ground covered with farming implements, tools, machinery, etc. All the exhibitors had their price-lists upon their exhibits, and I was careful to obtain copies of them. The lowest-priced horse-rake was 250 francs, or $50 of our money. You can buy one just as good in any town in the United States for $27. The lowest-priced mower was $102 in our money, and was no better than we sell for $60, if as good. The lowest-priced reaper, without the binder, was $185, no better than ours for $110. The plows, harrows, and cultivators were 20 per cent. above the price that they are selling for in the United States. There was not a hoe, fork, shovel, spade, or rake on the ground but was dearer in price and inferior in quality to ours.

I therefore repeat what I have said before, that under our protective tariff the prices of all manufactured commodities, instead of being enhanced, have actually been reduced, and that nine-tenths of all manufactured commodities now used by our farmers and laboring people in the United States are as cheap as they are in England, and in many instances cheaper.

WHAT A FREE-TRADE WITNESS SAYS.

Mr. Dudley's statements are not in the least singular. They are corroborated by a score of Mr. Cleveland's Democratic consuls in their official reports. One of these, Consul Schoenhof, a free-trader, whom President Cleveland appointed to be consul at Tunstall, England, testifies directly in support of Mr. Dudley. In speaking of prices in England, one of his official reports says:

So far as clothing and dry-goods in general are concerned, I find that cotton goods are fully as cheap in the United States as here. Shirtings and sheetings, if anything, are superior in quality for the same money with us, so far as I can judge from the articles exposed for sale in the retail stores. Articles of underwear for women, made of muslin, are far superior in workmanship and finish and cheaper in price in the United States. * * * Nor can I find that men's shirts, when chiefly of cotton, are any cheaper here. Of boots and shoes, if factory made, the same may be said.

Articles made to order, he says, are cheaper in England, owing to the low prices paid for hand labor. But he then says:

The difference in the price of ready-made things is not so marked. * * * In workmanship and finish I find corresponding articles of the wholesale process of manufacture superior in the United States. This is true of clothing as well as of collars, cuffs, and like articles.

This testimony is unanswerable. It proves beyond all cavil that the American farmer purchasing protected goods pays for them as little as or less than the British farmer pays who purchases in a free market. If, in addition to this, it can be shown that the American farmer is now paying less than he ever did before, there is nothing left for the free-trade argument. It falls, riddled with the bullets of hard fact, and the demonstration is complete that, whatever protection may do, it certainly does not prejudice the agriculturist in supplying his necessities. Consider, then, the tables presented here, showing comparatively the prices of 1880 and 1890 in the American market for goods required by farmers:

FARM IMPLEMENTS.

Articles.	Price in 1880.	Price in 1890.
Self-binder	$315	$150
Corn-planter and check-rower	80	40
Fourteen-inch steel-beam walking-plow	28	14
Riding-cultivator	45	25
Walking-cultivator	35	20
Mowing-machine	85	50
Strowbridge seeder	35	14
Wood pumps	15	6
Farm wagon	85	50
Two-seated spring-wagon	100	75

Buggies and carriages all reduced about one-half. Harrows generally reduced one-half. Corn-shellers reduced one-half.

GROCERIES.

Articles.	Price in 1880.	Price in 1890.
Sugar, granulated, per pound	$0.12½	$0.07
Sugar, standard A	.11	.06½
Sugar, C	.10	.06
Kerosene oil, 150 test, per gallon	.25	.13
Kerosene oil, 175 test, per gallon	.35	.15
Salt, per barrel	2.25	1.25
Flour, per cwt	4.50	2.50
Coffee, Java	.33	.33
Coffee, Rio	.25	.25
Canned tomatoes, per can	.15	.10
Boston butter cracker, per pound	.12½	.19
Soda crackers, per pound	.10	.06½
Soap, per cake	.07	.05
Crockery	.....	(*)
Teas	.....	(†)
Tobacco	.....	(‡)

*25 per cent. reduction. †30 per cent. reduction. ‡35 per cent. reduction.

DRY GOODS.

In dry goods we find the same downward range of prices, showing that the benefits of labor-saving machines and large production go to all consumers. Here are a few figures:

Articles.	Price in 1880.	Price in 1890.
Unbleached muslin, per yard	$0.08	$0.06
Calico, per yard	.07	.05
Gingham, per yard	.12½	.10
Worsted dress goods, per yard	.15	.12½
Do	.35	.25
Do	.65	.50
Do	1.00	.75
Laces and embroideries	.....	(*)
Silks and velvets	.....	(†)
Carpets	.....	(‡)
General reduction on stock of dry-goods store	.....	(‖)

*33⅓ per cent. reduction. ‡23 to 33 per cent. reduction.
†25 to 33⅓ per cent. reduction.

CLOTHING.

On clothing comparative figures can not well be given, because qualities vary. There has been, however, since 1880 a general reduction on ready-made clothing ranging from 30 to 50 per cent., and there has been a decided improvement in the stability of ready-made clothing.

The average reduction in the retail price of foot-wear since 1880 is 33⅓ per cent.

The old-time watch-maker has gone to join the old-time shoe-maker. Who gets the benefit of inventive genius there? The silver watch which retailed in 1880 at $20 now retails at $12. The set of knives and forks sold in 1880 at $6 now retails at $3. Everything in the store has suffered a reduction of from 33⅓ to 50 per cent.

HARDWARE.

Articles.	Price in 1880.	Price in 1890.
Barb wire, per pound	$0.10	$0.04
Fence staples, per pound	.10	.05
Iron nails, per keg	6.00	.....
Steel nails, per keg	.....	2.80
Plain wire, per pound	.06½	.03½
Wash-boiler	2.25	1.75
Stovepipe joint	.25	.20
Horseshoes, per keg	8.00	4.50
Tool steel, per pound	.20	.12½
Plow steel, per pound	.13½	.08½
Cook stove	33.00	24.00

HARDWARE—continued.

Articles.	Price in 1880.	Price in 1890.
Mattock and handle	$1.40	$0.85
Wrench	.75	.40
Blossburgh coal, per cwt.	.80	.45
Bull ring	.40	.25
Putty, per pound	.10	.05
Window-glass		(*)
Shot, per pound	.12½	.08
Iron, per pound	.05	.03
Four-tined fork	.75	.50
Rest spring, pair	1.75	1.00
Lantern	1.50	.75
Common clevis	.20	.10
Milk pans, per dozen	2.25	1.00
Buggy springs, per pound	.20	.10
Swedes iron, per pound	.12½	.06
Cartridges, per box	.35	.15
Wire cloth, per foot	.06	.03
Post auger	2.25	1.25
Cast washers, per pound	.05	.03
Slop-pail	1.00	.65
Tin-cup	.10	.05
Zinc, per pound	.15	.10
Pipe-collars	.10	.05
Door-knobs	.20	.10
Cast butts, with screws	.20	.12½
Chain, per pound	.22	.12
File	.65	.25
Tin, per sheet	.35	.20
Door-latches	.25	.10
Basket	.85	.45
Roof-saddle	1.00	.65
Door-key	.10	.05
Covered pail	.20	.10
Wheelbarrow	2.25	1.65
Oil-can	.85	.40
Plane	1.00	.60
Pie-plates, per dozen	.70	.35
Mortise lock	.90	.35
Cistern pump	4.25	2.25
Universal wringer	7.00	3.00
Pocket and table cutlery		(†)

* Reduced 25 per cent. † Reduced one-half.

WHERE THE TROUBLE REALLY LIES.

No honest or sensible person will undertake to deny the correctness of these figures, and their effect is utterly ruinous upon free-traders. They can point, it is true, to the fact that the farmers have been having a pretty hard time of it for the last three or four years, but it compels them to abandon their favorite explanation of that fact. It is an easy fact to explain and an easy one to rectify. The whole trouble is right here: Democratic hostility to silver has forced down the value of that metal and has enabled England to buy it of us at low prices for gold or its equivalent, and to sell it, coined, to India at high prices in exchange for wheat. The price of wheat during the Cleveland Administration fell heavily and bore down all agricultural values. In addition to this, the low tariff of 1883 on agricultural products resulted in the importation from Canada of an immense amount of those products, and by such importations American farmers have been undersold in their own markets. These facts account fully for the present agricultural depression, a depression which Republican measures have already checked and which the McKinley bill will effectively cure.

MORE PROTECTION NEEDED—THE SILVER BILL AND THE NEW TARIFF ACT FURNISH THE REMEDY.

Not in many years has a law been enacted so fruitful of good to the farmers as the recent silver bill. This bill remonetized the white metal, gave it a market at home, supplied it with a large and legitimate mission in our currency, and, of course, enhanced its value. As silver rose—that is, as the metal wherein English transactions with India are conducted, became scarce—wheat rose too. The values of all other cereals advanced sympathetically. Already, therefore, the condition of husbandry interests has been greatly improved by Republican sagacity.

But so long as American markets were open to the products of Canada and the Bermudas the American farmer was placed at a serious disadvantage. Mr. MCKINLEY and his Republican associates gave their most careful attention to this situation. They consulted with the farmers of almost every agricultural State. They listened to the arguments of many thoughtful men representing agricultural associations, and in the end they adopted the remedies suggested by the farmers themselves. It was ascertained from Government statistics that the importations of farm products into the United States had increased from $40,000,000 in 1850 to $256,000,000 in 1889. Canada during the last year had sent over the border eggs to the value of $2,159,725; horses, $2,113,782; sheep, $918,434; poultry, $110,793; wool, $216,918; barley, $6,454,603; beans, $435,534; hay, $822,381; malt, $105,183; potatoes, $192,756; planks and boards, $7,187,101. This little table shows some of the figures of agricultural importations in 1889:

IMPORTATIONS OF FARM PRODUCTS INTO THE UNITED STATES DURING 1889.

Horses, sheep, and cattle	$3,917,031
Barley	7,691,763
Other grains	169,199
Potato-starch and dextrine	230,000
Eggs	2,419,004
Flax	2,060,664
Hemp	2,047,927
Hay	1,082,685
Hops	1,100,408
Meats and dairy products	1,769,892
Flaxseed and seeds	4,557,198
Tobacco	8,603,168
Potatoes, vegetables, and beans	2,295,499
Lumber	9,768,644
Wool	17,432,758
Total	65,132,519

While this ever-increasing importation has been going on in general farm products, Russia and India have gradually become wheat-growers and are to-day seriously menacing our control of the wheat market. This is largely due to the greater cost of farm labor here than in those countries. The same labor that in India costs $30 per year and in Russia $60 costs in this country $220. A greater degree of protection to the American farmer is, therefore, clearly imperative, and this the McKinley bill affords. It aims, by increasing the tariff duties on farm products, to shut out all such importations as much as possible, so as to leave the American market for the exclusive advantage of our own farmers. How far it goes in this direction is witnessed by the following table:

Articles.	Imported in 1889.	Late duty.	McKinley bill.
Horses and mules	$2,146,514.50	20 per cent.	$30 per head. *a*
Cattle	542,704.71	20 per cent.	Over one year, $10 per head; under one year, $2 per head.
Hogs	4,770.80	20 per cent.	$1.50 per head.
Sheep	1,189,192.58	20 per cent.	$1.50 per head.
Barley	7,678,763.58	10 cents per bushel.	30 cents per bushel.
Buckwheat	25,469.85	10 per cent.	15 cents per bushel.
Oats	10,178.19	10 cents per bushel.	15 cents per bushel.
Oatmeal	85,905.00	½ cent per pound.	1 cent per pound.
Butter	17,689.41	4 cents per pound.	6 cents per pound.
Cheese	1,132,143.28	4 cents per pound.	6 cents per pound.
Milk	5,684.87	10 per cent.	5 cents per gallon.
Beans	759,892.28	10 per cent.	40 cents per bushel.
Beans, peas, and mushrooms prepared or preserved	(*b*)	35 per cent.	40 per cent.
Pease:			
Green or dried	(*c*)	10 per cent.	40 cents per bushel.
Split	52,738.00	30 per cent.	50 cents per bushel.

Stemmed	476,679.25	40 cents per pound	50 cents per pound.
Cigars, cigarettes, cheroots, of all kinds	3,657,316.02	$2.50 per pound and 25 per cent	$4.50 per pound and 25 per cent.

a Provided that horses valued at over $150 shall pay an ad valorem duty of 30 per cent. b No data. c Included with beans.

CANADIAN FARMERS WORRIED.

Of the effect of these higher duties there can be no doubt. The Canadians themselves testify clamorously of the disadvantages they will suffer under the McKinley bill. The New York Sun, a Democratic newspaper, contained a dispatch from Ottawa on September 15, 1890, which was one long wail over the new tariff. "It will practically close the American market," said the Sun, "against $14,000,000 worth of products exported to that value annually from Canada to the United States during the past few years. This is equal to 33½ per cent. of the total yearly exports from Canada to the American market. The proposed increase in duty on agricultural products will strike a severe blow at Canada, as out of the total value of exports of agricultural products last year ($13,414,111) $9,125,707 went to the United States."

Professor Goldwin Smith, a distinguished Canadian, in a score of recent speeches has called attention to the effect upon Canadian farmers of our new agricultural schedule. He said in one of these:

They will be very much injured if the McKinley bill shall be adopted. The agricultural schedule will bear very hardly on the Canadian farmers who particularly desire to find a market in the United States for their eggs, their barley, and their horses. The European market is of little value to them for their horses. If there shall be a slow market in England all of the profits will be consumed on a cargo of horses and great loss will entail. I do not see how the Canadian farmers can export their product to the United States if the McKinley bill shall become a law.

HOW THE BRITISH FARMER FARES—THE FREE-TRADE ORGAN DECLARES THAT BRITISH AGRICULTURISTS ARE SUFFERING FEARFULLY.

The facts herein recited enable the Republican party to go to the farmers of the land confident of their approval in the ensuing elections. Everything that human wisdom could do has been done to remove the difficulties under which they have been laboring and to provide them with better, wider, and richer opportunities than they have ever before enjoyed. That these opportunities have been contracted is no fault of Republican policy. So far from being due to protection, the truth is that it has been due to the lack of protection. It has come about because of the Democratic policy degrading and cheapening silver and because the duties on agricultural importations have been lower than is fair and just. The remedy which has been provided by the Republican party in this Congress is the only remedy that American common sense can possibly approve. For what advantage is to be gained by opening the gates a foot when an opening of an inch has already proved so unfortunate?

What advantage is to be gained by invoking a policy here that has produced results in Great Britain so much worse than those with which we are afflicted? For the past two years the British press has been filled with sorrowful stories of poverty among the agricultural tenantry. Ireland is on the verge of another famine. On September 14, 1890, the regular London correspondent of the New York Times, the principal organ of the Democratic free-traders, telegraphed that the coming winter "threatens to be the worst for poor people that we have seen in a long time. Although the English wheat yield has been helped somewhat by the recent fine weather, this is hardly more than a drop in the bucket. Potatoes have gone, or are rapidly going, all to pieces throughout these islands, and the average of the other food crops is depressingly low. The price of bread in the provinces has already been advanced, and will soon be put up again, and the price of coal is higher than it has been in many years at this season. These are the two great staples of existence among the poor in the winter, and when they are dear human life is correspondingly cheap. What further complicates the outlook is the belief that, owing to the bad harvests and stringency among the farmers, there will be a larger influx than usual of agricultural laborers into London, nominally to seek employment, but really to find company in which to suffer."

This is the testimony of a free-trader to the ruinous results of free trade. It recalls the knowing words of that American Solomon, President Lincoln, who once remarked of this same free-trade company: "A political party may fool part of the people all the time and all the people part of the time, but no political party can fool all the people all the time." On the very day when the Times gave this doleful evidence of what its pet policy had done for the British farmer, it quoted spring wheat as selling in the Chicago market at $1.11, just 42 cents higher than on the day of Grover Cleveland's departure from the White House!

The Eight-Hour Bills.

SPEECH
OF
HON. AMOS J. CUMMINGS,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES.

Thursday, August 28, 1890.

The House having under consideration the bill (H. R. 9791) constituting eight hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government of the United States, or by contractors doing work or furnishing materials for the Government, and providing penalties for the violation of the provisions thereof—

Mr. CUMMINGS said:

Mr. SPEAKER: The eight-hour law was born on June 25, 1868. It was the child of a four-year agitation among workingmen. They sought a shortening of the hours of labor without reduction of wages. The question was agitated in nearly every Northern and Western city. All mechanics were working at least ten hours a day, and some twelve hours. Others labored between sunrise and sunset. Bakers, car-drivers, and conductors frequently worked fourteen, sixteen, and even eighteen hours a day. The agitation was productive of good results. Congress finally passed an eight-hour law. The act was plain, simple, and concise. It read thus:

Be it enacted, etc., That eight hours shall constitute a day's work for all laborers, workmen, and mechanics now employed, or who may hereafter be employed, by or on behalf of the Government of the United States.

That was all there was of it. The act was silent upon the question of wages. Congress certainly meant to shorten the hours without wage reduction when it passed the bill. No one questioned it then, and no one ought to question it now. An amendment offered in the Senate reducing the wages of those who worked only eight hours was rejected. This clearly shows that the intention was to reduce the hours of labor without decreasing the pay. And after the passage of the act every mechanic and laborer in the employ of the Government was entitled to the shorter hours without wage reduction.

Men employed in the Government buildings in Washington promptly got the benefit of the new law. In other departments the officers of the Government either ignored or evaded the law. This was notably the case in navy-yards and arsenals. The men were required to work ten hours each calendar day to earn their daily wages, or to submit to a reduction to correspond with the reduction of hours. They were thus deprived of the benefits which Congress intended to confer. Instead of striking against the injustice, the men strenuously protested. They performed ten hours' work and received whatever compensation the officers saw fit to give them.

Meantime they appealed to the Government for redress. They protested against the action of the officers depriving them of a fifth of their wages. They got no satisfaction from the Secretary of the Navy. Then they appealed to Ulysses S. Grant, President of the United States. On May 19, 1869, the President issued a proclamation directing that no reduction should be made in the wages paid by the Government, by the day, to workmen, laborers, and mechanics on account of the reduction in the hours of labor.

Although this proclamation was broad enough to include all workmen in the Government employ, it had no direct effect outside of the Navy Department. The Secretary of the Navy, however, obeyed the President's mandate. For nearly nine years the employés of the Navy Department were paid full wages for eight hours' work.

Meantime mechanics in the Post-Office, War, and other Departments were deprived of the benefits of the law. They also appealed to the President. Their appeal was heard. On May 11, 1872, President Grant reiterated his first proclamation.

It was done so emphatically that the question ought to have been thoroughly settled. In it he again called attention to the act of Congress and directed all officers of the Executive Departments of the Gov-

ernment having charge of the employment of laborers, workmen, and mechanics to make no reduction in the wages paid by the Government by the day to such workmen, laborers and mechanics, on account of the reduction of the hours of labor.

Before this proclamation was issued Congress had been deluged with petitions and memorials protesting against the action of the officers of the Government. In these petitions and memorials the men asked for the payment of the money illegally and wrongfully withheld from them. Seven days after his second proclamation the President approved an appropriation act passed by Congress containing a section requiring the accounting officers of the Government to pay workmen, laborers, and mechanics the money wrongfully withheld from them under the eight-hour act between June 25, 1868, and May 19, 1869. A sufficient sum for the purpose was appropriated. The passage of this act proved that Congress meant to give the workmen the benefit of the law without reduction of wages.

This act covered only the ten months and twenty-three days between the passage of the eight-hour act and the date of the President's first proclamation. It should have covered the whole period from the passage of the eight-hour law to the date of the law granting relief. The employés of the navy-yards were paid the several amounts which were deducted from their wages. Payment, however, was not so general in the other Departments of the Government. For nearly nine years the employés in the Navy Department were required to work only eight hours a day to receive full wages.

President Grant's second term expired March 4, 1877. Then one Rutherford B. Hayes got into the Presidential chair. He was no friend of labor. Within four months a new blow was struck at the eight-hour law.

On June 30, 1877, Secretary of the Navy Thompson issued an order requiring the men to work ten hours a day. If they chose to work only eight hours a day they were to suffer a corresponding decrease of wages. The men submitted to these rules under protest. They worked thus three months and twenty-five days until October 25. Then the Secretary modified his order. He required the men to work ten hours one-half of the year, from March 21 to September 21, and eight hours a day from September 22 to March 20, without change in the rate of wages. Then he revoked both orders and directed the commandants of the several yards to hire the men on the basis of eight hours a day If they worked extra hours he promised them extra pay. Under the last order the men in all the navy-yards and naval stations in the United States worked ten hours per day one-half of the year for five years, but never received the promised extra pay.

So much for the workmen in the navy-yards. Now, let us see how the law was carried out in the arsenals. There the overzealous public officials not only violated it, but virtually compelled the workmen to give their assent to imperative orders requiring them to work ten hours a day without increase of pay under penalty of dismissal. In some of the arsenals their signatures to the alleged agreement were demanded. They protested, but signed. Their necessities alone compelled them to do so. This forced contract, it is alleged, debars them from recovering what is due them under the law. In other words, because army officers, educated at the expense of the people, saw fit to violate the law and forced those concerned to give their assent, said assent legalizes the violation of the law.

Officers educated at West Point are said to have a fine sense of honor, but was this honorable? Is it honorable to rob a man of his work and force him to assent under penalty of starvation for his family? This is what was done. R. B. Hayes's Secretary of War, to be sure, issued an order requiring the men to work ten hours per day, but the order did not require them to contract in writing to do so. The forced contract was the work of the overzealous officials in charge of the arsenals. It could have no more effect upon the legal rights of the workmen than a deed drawn from a real-estate holder under threats of violence would affect his title. No court would hold such a deed valid, and no court ought to hold such a contract valid.

Meantime Rutherford B. Hayes disappeared from the Presidential chair. With him went his Secretary of the Navy and his Secretary of War, both of whom had been conspicuous for their violations of the eight-hour act. Men of honor, who had a due regard for law, succeeded them. Robert Lincoln, the son of the great emancipator, became Secretary of War, and William Eaton Chandler, of New Hampshire, became Secretary of the Navy. Their names should live in the hearts of all workingmen employed by the Government.

On March 23, 1883, Secretary Chandler recognized the injustice of Secretary Thompson's orders. He issued an order to carry out the eight-hour act in accordance with the terms of the proclamations of Ulysses S. Grant and the acts of Congress. Secretary Lincoln was not far behind him. In December following he put a stop to the violation of the law in the arsenals. He directed his subordinates to require the men to work only eight hours per day to earn their daily wages.

From that day to this, the orders of both Secretaries Lincoln and Chandler have been obeyed. But the men have never received a dollar for the extra two hours of work they performed for half a year for nearly five years. Every four days they were robbed of a day's wages. It is for this that they are now making their claims against the Government. Secretary Thompson in his modified order expressly promised that they should be paid for the extra hours of work. The eight-hour act itself virtually requires it.

A bill for their relief was introduced in both Houses at the beginning of the Forty-eighth Congress. It was favorably reported by the committees of each House. The same course has been pursued in every Congress since. Seven committees have made favorable reports on the bill, yet no final action has been taken, except in the Senate, where a bill was passed in the last Congress.

You men of the House can not escape the responsiblity. The Government owes the money and you know it. A citizen who would act as the Government of the United States is acting in this matter would lose the respect of all honest men. No citizen could act so. The courts would not permit him. These workmen have been robbed by Government officials in the face of the act of Congress, of the President's proclamation, and of the plain promises of the Secretary of the Navy. They must receive their wages or the Government is disgraced. Overzealous Government officials for years thwarted the plain letter and spirit of the law passed by Congress. They have been forced at last to do justice to the men. It is high time that this House took action.

I care not how much money this bill takes from the public Treasury. It takes from the Treasury only what has been earned by these men and what no man can deny belongs to them. It is high time they receive it. Corporations seem to have little difficulty in getting favorable and final action on matters affecting their interests in this House. But in seven years the friends of this measure have not been able to get a vote on it. These workmen are denied the pittance that the Government owes them for honest toil under the express promise of the Secretary of the Navy and the plain intention of Congress in passing the law. It did not take the members of this House long to secure the money due them on account of the Silcott defalcation. They went into court to get it. Three months was all they had to wait.

These workingmen's claims are fully as just as, if not more just than, the Silcott claims. Yet they have been begging for a hearing in the Court of Claims for ten years and this House has failed to give it to them. All that they ask is that their claims may be presented to that court for adjudication. This House has been in session nearly nine months. It has passed bridge bills and railroad bills, public-building bills and Rock Creek Park bills, a remorseless tariff bill and a treacherous silver bill, a judicial bill and a revolutionary force bill. It has even "compounded a felony" with a railroad for an enormous steal, to use the words of my friend from New Jersey [Mr. McADOO]. It is now granting over a hog bill, but not one hour has it given to the Committee on Labor until this week to consider measures affecting these or any other workingmen. A resolution expressing the sympathy of the House with the eight-hour movement introduced six months ago still sleeps in committee.

The rules provide for a morning hour in which committees may call up for consideration any bill they have reported. But for six months the morning hour, with the call at the door of the Committee on Labor, was sunk beneath the waves of partisan and corporate legislation and the workmen are still clamoring for their pay. It is not right; it is not fair; it is not decent. Men who share the responsibility for this injustice sit upon this floor. Contractors and others have been allowed to go to the Court of Claims by the vote of this House, and the same right is now asked on behalf of these workingmen. When the vote is taken upon this bill, it will be interesting to compare the vote with the vote upon the bills allowing contractors to go to the court with their claims.

"Cursed be he that keepeth back the hire of the laborer," said the wise man.

Such, Mr. Speaker, are the plain facts as to what is known as the eight-hour back-pay bill. They speak more forcibly than words on behalf of the bill now before the House. It is drawn in the light of experience. There is nothing vague or shadowy about it. Its terms are explicit. There can be no dodging of the issue by overzealous public officials.

The bill carries pains and penalties. It expressly provides that eight hours shall constitute a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government, except in cases of extraordinary emergency. In such cases the laborers shall receive extra pay for the extra hours. It further provides that all contracts made by or on behalf of the Government for the performance of any work or the furnishing of any material manufactured within the United States shall be made on the basis of eight hours constituting a day's work.

It clinches this by providing that it shall be unlawful in such cases to require or permit any laborer to work more than eight hours per calendar day. Then come the pains and penalties for the violation of the act. Any officer of the Government, or any person acting for him, or any contractor or other person violating any of the provisions of the act shall be punished for each offense by a fine not exceeding $1,000, or imprisonment for not more than six months, or by both fine and imprisonment.

Here is something tangible—a substance, and not a shadow. Pass the bill as it is drawn, and there is no getting away from it. Amendments to this bill and to all other labor bills deserve the most careful scrutiny. These bills in the interest of workingmen, for some occult

reason, develop a crafty enmity. In the last Congress the back-pay bill was not allowed to come to a vote.

In this Congress it is still under consideration. The outcome, even now, is uncertain. Bills may be so deftly amended as to take all the life out of them. Unseen influences appear to be working against them. The session is drawing to a close and the pressure for precedence is very great. The McKinley bill and other privileged measures affecting the business interests of the country have the right of way. Hasty legislation has characterized the proceedings of this House under its exceptional rules.

Let those interested in the labor bills remember that haste is not always speed. The tariff bill went from the House to the Senate scarce half made up. It was hurried there with such speed that no action was taken upon nearly two hundred amendments proposed by the Committee on Ways and Means itself. The hasty action of the House has unsettled the business interests of the country.

Look at the state of affairs. At uncertain periods the Secretary of the Treasury is obliged to come to the relief of the financial community with the resources of the Federal Government, and at very certain periods is obliged to go into the market to buy silver.

Observe the advantages enjoyed by the speculator, or any other person who first learns when the honorable Secretary will appear with financial aid and how much will be granted. What an opportunity there is for those close to the throne to make money. Here we are, prepaying our national obligations with a premium of 25 or 30 per cent. and prepaying interest on them a year in advance. All this at a time when money is worth 20 per cent. to the people themselves. Under such action the bondholders virtually turn around and loan to the people the people's own money at these high rates of interest. In the jostle of such mighty temptations what chance has helpless labor?

We boast of the superiority of American institutions. Is there an effete despotism in Europe where such practices would be tolerated for a moment, much less borne for years? It looks as though the main purpose of a republican form of government had been changed. Instead of legislating on the broad platform of equal rights and privileges for all, it is pandering to organized wealth and making the rich richer at the expense of those not organized for selfish advancement. To this practice the present tariff legislation and the vitiating of all labor legislation may be traced. If this condition of things continues, as now seems probable, Henry George ought to supplant his Progress and Poverty by a work on the progress of poverty alone. Was there ever a Government said to be "of the people, for the people, and by the people" where the people paid so much and got so little? It has really become a Government of committees and executive tyranny. Amid this bewilderment labor has to struggle for itself. It is continually hamstrung by the piques and prejudices of those in authority, who appear to regard only the wealthy and the powerful.

Mr. Speaker, let there be no hamstringing of the just labor bills before this House. In that schedule I place the one now under consideration, and with it the eight-hour postal bill and the eight-hour back-pay bill. I know they are threatened with all the jugglery and legerdemain that canting legislation can practice, and I hope that in this instance it will be detected and exposed. Twenty-two years of executive trifling ought to be enough to arouse the most patient of laborers and demand the most explicit legislative direction. Let us see if it can be had.

Contract Labor and German Immigration.

SPEECH
OF
HON. FREDERICK G. NIEDRINGHAUS,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 30, 1890.

The House having under consideration the bill (H. R. 9632) to amend "An act to prohibit the importation and migration of foreigners and aliens under contract or agreement to perform labor in the United States, its Territories, and the District of Columbia"—

Mr. NIEDRINGHAUS said:

Mr. SPEAKER: I was in hopes that I would have been allowed thirty minutes, as was agreed with my colleague [Mr. WADE] on yesterday, but being cut down to fifteen minutes I shall of course have to curtail what I intended to say.

Upon the whole I am in favor of this bill, except one clause, which I consider to be an injustice to one class of our working people, and I will at the opportune time offer an amendment striking out on the tenth page, in the fifteenth line, the words "regularly ordained ministers of the gospel."

It may appear somewhat peculiar to some of my colleagues here that I make this proposition. I am not, Mr. Speaker, opposed to ministers of the gospel. They have certainly done a great deal of good in this country. They have been the main pioneers of our civilization, so to speak. They have denied themselves the home comforts and have gone forth and followed the American people over hill and dale into the very deserts of the continent, speaking words of peace and consolation.

But, Mr. Speaker, it is not more preachers or longer sermons we want, but that the preachers be better paid and that the sermons be more conscientiously carried out. [Laughter and applause.] I am therefore, as a protectionist, naturally in favor of protecting the American preacher. [Laughter.] I am sorry to differ from the committee on this point, who seem to believe otherwise, but they, perhaps, have forgotten that ministers of the gospel are not imported under contract, for if my early teachings were correct they are called by the Lord God Almighty Himself.

Mr. BUCHANAN, of New Jersey. This bill does not interfere with that call. [Laughter.]

Mr. NIEDRINGHAUS. They hear that call and they follow; they are constrained to follow; and ministers of the gospel that come in such a spirit we are willing to receive and listen to them with profit and delight. But my friend from New Jersey [Mr. BUCHANAN] says the bill is not intended for this class of people. That is just the point I was going to make. I presume it is not intended to apply to ministers of the gospel, but rather to lecturers for fashionable churches. [Laughter.] Now, I am confident that neither the German-Americans nor the Irish-Americans ask for any such provision, and consequently we have to fall back upon England. Now, the idea of sending to England for Englishmen to come over here to teach the American people the way they should go! I am opposed to fashionable churches, anyhow. [Laughter.]

Mr. BUCHANAN, of New Jersey. What kind does the gentleman frequent? [Laughter.]

Mr. NIEDRINGHAUS. Well, I will tell you an experience, if it is to go no further. I attempted to get into a fashionable church some months ago with my little family, but after waiting a long time in the corridor we utterly failed. As we left, with disappointment and disgust, my little daughter said, "Papa, didn't they know you are a member of Congress?" [Laughter.] "Well," said I, "my child, I do not think they did." So in our humiliation and suffering as a member of Congress (and if one member suffers all suffer with him) [laughter], we went our way until finally we reached a large statue with an open Bible, and I said to my wife, "We will try here; there appears to be a free gospel." [Laughter.]

I do not want to have it said in times to come, when my descendants may with pride point out the fact that one of their ancestry once occupied a seat in the American Congress, that that was during the dark days when ministers of the gospel were imported from England under contract.

Now, Mr. Speaker, the gentleman from New Jersey [Mr. BUCHANAN] has ably defended the working people generally, and my friend from New York [Mr. QUINN] has spoken a good word for his Irish kinsmen, who also make up a large and honored portion of my constituency. I consider it therefore my duty to speak a good word for my own kinsmen—for the German-American and for the German. But before I enter upon that I would like to draw the attention of the House to an expression which I find on page 5087 of the CONGRESSIONAL RECORD of May 18, uttered by my friend, the gentleman from Kentucky, whom I had not the honor of knowing at the time, never having heard his name mentioned until I saw it in the RECORD. [Laughter.]

Several MEMBERS. Who is it?

Mr. NIEDRINGHAUS. Mr. CARUTH. [Laughter.] The gentleman from Kentucky wound up his remarks on that occasion by saying, "I agree that we are paying $5,000 too much to the gentleman from Missouri," referring to me. Now, I agree with him entirely, and if he had stopped there I would not have said a word, because I know that I am drawing more money than I am worth at this sort of business [laughter], but he kept on and said: "He is, I believe, originally from Westphalia, Germany."

Now, I do not know what race my friend from Kentucky claims to be a member of. [Laughter.] He appears to have forgotten or to have overlooked the fact that, outside of the infusion of Latin blood, the American people are as purely Germanic to-day as I claim to be, and also the fact that Westphalia was the original home of the Saxon. One-third of this race to-day is Germanic, of immigration covering a period of perhaps two hundred years. In the sixteenth century a large emigration left Germany for religious reasons and for liberty, and settled in the Carolinas and in Georgia, and their descendants are to-day sitting in this House. I can recognize their German ancestry in their physiognomy, in their intelligence and force of character; and I am glad to meet them, although a little sorry that they are sitting on the other side of the aisle. [Laughter.]

About the same time some German emigrants found their way to the Hudson and to Maryland and New Jersey, the stream of immigration continuing at a more or less extent, until at the end of the forties, mostly upon political grounds, German immigration increased to a very large degree, and has continued to the present day; so that at the present time we have in this country thirteen millions of German-American citizens and their descendants of recent immigration, and among them three million American citizens who have the right of suffrage. I do not know whether my friend from Kentucky [Mr.

CARUTH] has any of that class of citizens in his district or not. If he has, perhaps he would not have put that slur upon them.

I presume that my friend from Kentucky [Mr. CARUTH] has read what is stated about me in the Congressional Directory, and that at one time I worked for $4 per week because I could not get any more.

A MEMBER. Who wrote that?

Mr. NIEDRINGHAUS. Well, now, I wrote that myself [laughter], and I did it for this reason, that at some future time some poor, discouraged, struggling young man might read it and take courage. When I looked around, as I entered this Hall, and saw on one side of me an eminent judge and on the other side an ex-governor of a State, and then again at that account of myself, it made my hair stand on end. [Laughter.] I felt that I was out of place, as my friend from Kentucky firmly believes. [Laughter.]

It is true, sir, that I came from Germany when a boy, but under the free institutions of this grand and glorious Union, which give an equal chance to all, I have been enabled to make a living, and a little over, and have at the same time succeeded in building up such a character and standing with the people among whom I have lived for the last thirty-five years that they have seen fit to send me here as their representative and for which they are responsible.

How much time have I left, Mr. Speaker?

The SPEAKER *pro tempore*. The gentleman has two minutes.

Mr. CALDWELL. I ask unanimous consent that the gentleman may be allowed to proceed.

The SPEAKER *pro tempore*. How much time does the gentleman desire?

Mr. NIEDRINGHAUS. Say ten minutes.

Mr. PAYSON. I have no objection to that, Mr. Speaker, if the bill can be discussed; but there are a good many provisions to it that ought to be considered, and while the historic allusions in which the gentleman is indulging are very entertaining, they do not go to the subject of this bill.

Mr. NIEDRINGHAUS. Well, they concern a class of people of which this nation is largely made up. [Laughter.]

Mr. PAYSON. The gentleman of course understands that I do not mean any discourtesy.

The SPEAKER *pro tempore*. The gentleman from Illinois objects.

Mr. NIEDRINGHAUS. How much time have I left then, Mr. Speaker?

The SPEAKER *pro tempore*. The time of the gentleman has expired. [Laughter.]

Mr. NIEDRINGHAUS. Give me five minutes more.

The SPEAKER *pro tempore*. The gentleman from Missouri asks unanimous consent that he be allowed to proceed for five minutes.

Mr. PAYSON. Before that question is put, Mr. Speaker, I want to make a suggestion, which I trust the gentleman will not regard as discourteous. What he has already said may necessitate some reply from the gentleman from Kentucky [Mr. CARUTH], who has already rushed to his feet in defense of his nationality [laughter], and in order to economize time I must insist that the debate shall be confined to the pending bill.

The SPEAKER *pro tempore*. Is there objection to the request that the gentleman [Mr. NIEDRINGHAUS] be allowed to proceed for five minutes?

There was no objection.

Mr. NIEDRINGHAUS. Mr. Speaker, I was going to speak of the economic influence of the German race, as well as their social influence upon this nation, but I will print what I have to say on that subject at some future day.

And now, from a political standpoint, the Germans have certainly been patriotic people. In the war of Independence they furnished as large a percentage of soldiers to the Army as any other nationality, and at the beginning of the last war they rushed to arms with a zeal and enthusiasm as is hardly ever witnessed to defend this great and glorious Union, the country of their choice, because they found here their very ideal of a country, an El Dorado such as they had dreamt and sung about in the early days of their youth. For such a Union they were ready to offer their very lives. Thousands of them have fought, bled, and died, and their bones are to-day bleaching on Southern soil.

Under the leadership of a heroic Lyon, Blair, Houser, Dr. Pretorius, the Filleys, Sigel, Stannard, Cole, Parsons, and others, who towered high above their fellow-men at that time, they saved the city of St. Louis and the State of Missouri from desolation and untold amount of bloodshed.

In moving on in the line of duty they may have trod upon soil very sensitive—I intended here to make a stronger remark, I will, however, abstain.

By their zeal and loyalty they earned the peculiar title of "D. D.," of which they were frequently reminded with emphasis!

But when, on the last morning at Appomattox, the two armies met for the last time, when the shout of joy went along the line that deliverance and peace had come, when the greatest general of this age told the belligerents to go home and take their horses with them (such an ending as the world had never seen), I thought that perhaps my kinsmen had also been forgiven. I was therefore surprised to find that a remnant of the same spirit was still lurking in the grass.

I do not, however, wish to be misunderstood by the American people, nor by my direct kinsmen, in whose defense I am speaking, and I owe it to all, under these peculiar circumstances, to say, that as a German-American citizen I have never been more cordially received and generously treated anywhere than by the members of the Fifty-first American Congress, and whether I remain in politics or not I shall forever cherish the memory of my colleagues, irrespective of party. [Applause.]

Germany has been one of the best friends America ever had, and while, during our late civil strife, this nation almost lay prostrate, bleeding out of a thousand wounds, the British lion lay waiting for the prey, Germany, and especially its people, never lost faith in this nation and doubted not for a moment the final outcome; they extended us their full sympathy and credit. When, therefore, the question comes up before the American people as to what element they can afford to extend a welcome hand, I can justly assert that upon the whole no better class of people come to these shores than the German. They have certainly been a large factor in the development of this country.

The same can also be said of the Irish people, but I will not dwell upon that point, as some of my Irish-American colleagues on this floor are more abundantly able to handle that qestion.

Now, as to the bill in the main, Mr. Speaker, allow me here to say that it is a most necessary and wise provision for the protection of honest American labor, and I am proud as a Republican that my party has always been in the lead when the security and protection of American labor has been threatened. The unlimited and unsatisfying greed of heartless corporations and individuals have at various times and would yet, without the strong arm of the National Government upon them, contract for and import an undesirable element of labor into quarters where not needed except for oppression, where the home labor fully supplies the demands; and, in consequence, the American laborer finds himself without work and the means of livelihood, and our very institutions are thereby brought into disrespect.

This degrading practice, I hold, has been carried on mainly by parties who never did a real, honest day's work, and who are therefore unable to sympathize with the honest American laborer in whatever branch he may make himself useful.

It has been truly said upon this floor, Mr. Speaker, that when we speak of labor we do not speak of a class, but of a condition which we have all either occupied or experienced, or else in which we or our descendants will be placed, sooner or later; a fact I need not here discuss, as, no doubt, Mr. Speaker, all my colleagues will agree with me. Our interest, therefore, Mr. Speaker, in the question of American labor is mutual, and the honoring and protecting of the same is our sacred duty; and if I could not leave my children one cent I still leave them a legacy in our American institutions which honor and protect labor.

From an economic standpoint, we must admit that the Germans have taken an active part in the development of this country; in every branch of industry, as well as in education, has their co-operation been felt. Many important branches of industry have been inaugurated and carried on by them, thereby largely adding to the treasure of the country. They have in many instances been satisfied with the poorest of American soil, yes, have converted the wilderness into a garden, and by industry and economy have founded thousands of happy homes.

The main question that has of recent years been agitated in private and public, and by the press in connection with immigration, is the social question. It has been claimed that the institutions so dear to every American heart are threatened by certain influences of the German element; many suggestions have been made as to how to regulate or check this tide of immigration by demanding all sorts of qualifications, the most recent being that on landing the emigrant should understand the Constitution of the United States. Now, just imagine, Mr. Speaker, if you please, a German emigrant, with his wife and children, who has perhaps saved and economized for years for the purpose of eventually casting his lot with the American people, and finally, when enabled to make the voyage, as he comes in sight of Sandy Hook, and soon the statue of Liberty, his heart beats high with joy as he puts his foot on American soil, "the land of the free and the home of the brave," just imagine Uncle Sam, in his characteristic costume, stepping up to him with a great big book, the Constitution of the United States, and demanding of him its interpretation!

Now look at him; there he stands with his wife and children, a farm hand he may be, and, if his pilgrimage occurs in winter, in order to keep his feet warm, perhaps in wooden shoes. He and his sons are ready to do the hardest kind of work, and his daughters willing to bake your bread and cook your meals. I have often reflected as to what we would eat and drink were it not for the German and Irish people. There he stands, confronted by Brother Jonathan, demanding him to fathom what at the beginning of this session the lawyers and doctors upon this floor could not solve. I am, however, glad to know that the Committee on Immigration will not inflict this hardship when they will finally report their bill.

It is true the German emigrant brings with him some customs that are, in the strict New England puritanical sense, un-American. While he is a law-abiding citizen he likes personal liberty as to eating and drinking. Although upon the whole religious, his religion may, in form and expression, differ in many respects. His idea of the Sunday may be peculiar; and I do not doubt that the Savior himself would at

one time have found New England an uncomfortable place with regard to that question!

There is still a great deal of piety in the German people. If you, Mr. Speaker, will follow me as I wander through the German quarters where they are settled around their respective churches of all denominations you will find that they are in their places in church on Sunday mornings, and if you watch them you can not but admit that they are a good and devout people. Being mostly working people, we will follow them to their homes. There we find them gathered at a plain home dinner, after which they indulge in social talk, a pipe, and perhaps, in some instances, a glass of beer or wine. If the family has grown children, sons or daughters, they are living out, but make their Sunday visit, and if after pay-day, add their mite to the family treasures, may be with the view of buying a home (home, this great Germanic ideal).

Now, Mr. Speaker, if ever you want to find a happy home, here you find it. It is true when in early spring the sun coaxes out foliage and flower the nature-loving German, like a bird after a long winter roost, feels a desire for the open air, for some grove or hamlet where he and family may spend a day of real rest. I have often seen them pass my house in all sorts of vehicles, but all full of merriment and joy for what the day might have in store for them. Still it was Sunday, when, Mr. Speaker and members of this House, you might go to Sunday-school and church, and as wagon after wagon passes with its happy load, will you stand by grudgingly, because these people enjoy what you may be able to enjoy every day of the week? I say no; follow them with your good wishes and observe them in their pleasure as they are once more being brought in contact with nature and nature's God.

It is said of our ancestry that they worshiped in groves; yes, the very oak, which is perhaps only true indirectly, which I can explain by reciting an expression of a young man in search of gold and while crossing the Sierra Nevadas on the west coast of Mexico. "On entering the dense forests I experienced," he said, "the most elevating and solemn sensation in my life here in this solitude. I felt myself as in the very presence of God, and a spontaneous longing for what is pure and good took possession of my soul."

This is the same feeling that was experienced by our German ancestry and is still felt by my kinsmen to-day, as they are brought into contact with nature. This is pure devotion, after an unwritten creed, but still true religion; and he returns home, after such a day's experience, a better man. This country need not fear any danger for its institutions from that quarter, and we may as well allow the German-American some latitude and also his choice as to his diet if he pays for it and respects the rights and peace of his fellow-men.

There is still another point in connection with German immigration very frequently discussed by the press, and that is as to how soon this element should become americanized. Steps are being taken in many localities with the view of bringing this about very speedily, which I think is a mistake. The transition should progress very slowly, so that it may be done with the least injury and greatest good to the whole nation.

In order to give the immigrant the full benefit of the advantages which this country offers, and in order to make him feel content and at home and to become acquainted with American institutions, duties, and privileges, he needs German-American friends, he needs the German press, the school, and the church, at any rate in the first generation.

As soon as a German becomes americanized his wants become greater, which should not be stimulated until he is ready to meet them. Family ties are in this way saved from disruption, and the process of americanizing the race goes on almost unobserved and still very rapidly. The application of any special method of hastening the process would, therefore, be a great mistake, and what is true of the German people is perhaps true with regard to other nationalities; but the final result will be one undivided American nation, bearing upon its face and in its character the good qualities of all the nations of the earth.

Political Murder.

SPEECH

OF

HON. CHRISTOPHER A. BERGEN,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

September 2 and 3, 1890.

The House having under consideration the report in the investigation of the matter of Clayton *vs.* Breckinridge—

Mr. BERGEN said:

Mr. SPEAKER: The investigation of this matter was instituted on the petition of one of the first citizens of Arkansas. The resolution of the House passed upon that petition naturally divided itself into two parts, having relation to the ballots cast and to the methods of election employed. The investigation was called for from the whole country, both to determine if the present incumbent had been elected and if assassination had been employed to secure him in his seat. It was no slight matter in the judgment of the country that a man of intelligence, who had honorably contended for his seat in Congress, while he was engaged in the contest, disputing the right of the sitting member, should have been stricken down with death. That he was foully shot; that he was sneakingly assassinated; that he was stealthily stolen upon and his life taken from him is admitted by all and goes without question, and in this investigation that it was also done by the partisans of the respondent is no longer an open matter, but stands proved indubitably. Everybody who has been associated with that assassination, by every portion of the evidence that has been adduced, has been traced in one way or another to a friend of Mr. Breckinridge; and it was a pitiable sight to see in the court-room at Little Rock our brother surrounded by this coterie of suspects, constantly in association with them and constantly consulting with them evidently as to what evidence should be adduced.

The inquiry which has been made by the committee has not extended over the whole territory. That was found impracticable, and by common consent it was confined to those particular polls and districts which were brought in question by the attorneys in the case. My colleague from Missouri [Mr. WILSON] says because this is not strictly a contested-election case it is not a matter in which attorneys could be engaged and counsel could be had, or any consideration paid to the wishes of the parties most materially interested. The petitioner appeared for himself. One of the best lawyers of Arkansas and of the country, he presented the matters complained of. For the respondent there appeared Mr. Harrod, Judge McCain, and Ex-Attorney-General Garland. It is placing things on wrong bases to say that the Committee on Elections could disregard the parties in interest. Mr. Breckinridge would have resented, justly resented it, had the committee ignored his wishes, had it disregarded his counsel, had it rejected his witnesses.

At the inception of my remarks, I wish to state that the investigation was pursued with the greatest liberality to all. No one was denied a hearing. No one was shut out. Every one was allowed and encouraged to appear and testify, and the grandest scope and largest liberty was given to appearances made. Everything was done with a view to bring in witnesses. It is true that it urged them to bring in the witnesses as fast as they could, but it is not true that the committee left the city of Little Rock or the State of Arkansas with one witness unsworn who was presented for the purpose.

I enter with hesitation upon a discussion of this case. From its inception it has been unhappy and peevish, and for nineteen months has been the sensitive spot in our national life. The case involves much of personality, and is calculated to excite a great deal of animated discussion. I shrink from that because on the other side of this House are many men whom I respect, and to whom, whilst I believe the Democratic party is responsible for the situation, because they are members of that party, I would not assign a single act which would commit them to so wrong a deed. The case bristles with that life, that spirit, and that hate which brought on the most animated political discussion that has been had anywhere in the land.

This district is naturally, it is supposed, about 4,000 or 4,500 Republican. It has been represented on this floor during the three terms of its existence by a Democrat. The parties who came into this contest were well fitted to contend against each other. They were men of ability and of experience; men who were shrewd and capable in the management of political affairs, and they undertook a canvass one against the other. It was an exciting campaign. Trouble after trouble followed, and when the election was over, who was elected and what was the real and proper result were questions that were settled in no man's mind; but there was one thing that was not expected by any fair-minded person, and that was that the assassin could operate to make a seat firm and fixed. His hand, like the tyrant's, never produces peace.

Under the circumstances thrown about the case I should have great difficulty in confining my remarks to the idea that the investigation is of a contest for office principally. To do so would be to dwarf the subject in hand and belittle what is evidently the most stupendous effort yet recorded in our history if anything against the existence of this honorable body, its rights and prerogatives.

At Little Rock good feeling prevailed in the subcommittee; and I refer to this now because I am surprised to find in the minority report a reflection upon the majority, both of the subcommittee and the main committee. This course on the part of the minority is entirely uncalled for, and I believe without precedent. I suppose there is an explanation, but I doubt very much if it will ever get to the floor of this House. We of this side are in honor bound not to exact it, and the other side does not seem disposed to impart the information. I have said the subcommittee worked with unanimity and without discord. Not that there were no differences of opinion. My friends from Pennsylvania and Missouri [Mr. MAISH and Mr. WILSON] differed from the majority, no doubt, upon many matters; but that one single thing was excluded from the investigation that was sought to be proved by Mr. Breckinridge or his counsel is a statement that goes beyond the fact, and no one knows it

better than those gentlemen that were on the committee and Mr. Breckinridge and his counsel.

It is stated also that the committee went to Arkansas and there undertook an investigation, but left it, as it were, half finished. The statement is that when it returned to Washington the examination of witnesses was to be as open here as it had been in Arkansas. Let us look for a moment at the reasonableness of the suggestion. Some things need only to be stated to show how ridiculous and improbable they are. The subcommittee had gone 1,500 miles to Arkansas to take the testimony of the witnesses there. It would cost $300 apiece to bring them from there to Washington. It was evidently to avoid this expense that the House had sent the committee to Arkansas. Besides it must not be forgotten that the members of that committee claim to be honorable men and that they must have acted under a sense of responsibility to this House, to constituencies, and to the country to exert a proper watch upon the public funds; yet, in the face of all this, respondent solemnly asserts over his signature that the taking of evidence under promises from the committee was to be as open here as there, and the processes of the House equally at his disposal; nor does he show that there was a single protest from himself or the minority of the committee at the proposed waste of public treasure.

It pains me exceedingly that a question of personal veracity should have been raised between the minority and majority of this committee, and also that this question should have been brought into a matter in which Mr. Breckinridge is entitled to have no personality except his own. It is exceedingly unfortunate that what took place the last night that the committee was in Little Rock was not reported by the stenographer in full. But, whether reported or not, it does not become an honorable man, whether it involves a seat in this House or his reputation as a man of truth and of honor, to deny what actually did take place; and when a gentleman stands on this floor and, for the sake of politics, or for the sake of anything else, denies what has been established and what is true in his own conscience, he forsakes that dignity which attaches to manhood always, and his action is most unbecoming, most disrespectful to this House, and most dishonoring to himself. I can not believe that what I am about to state will be denied by my brother from Pennsylvania [Mr. MAISH] until he takes the floor and denies it here. I know, he knows—he was present—the chairman of the committee knows, and perhaps two hundred people in Arkansas know what took place. It was not done in a corner. It was done in open session of the committee, in the presence of the stenographer, in the presence of all the counsel, and in the presence of the people.

It was, if I remember right, the fifteenth day the committee had been in Little Rock, perhaps the fourteenth. It had been taking testimony on both sides from the time it arrived. There was no rule that first one side should conclude its evidence and then the other side commence, but both sides were allowed to bring in their witnesses as they could get them. Each side, therefore, had fourteen days, with the processes of this House at its command as free as the air we breathe, to bring witnesses before the committee and offer the evidence it wished to adduce. It was night, it was getting late, it had been prearranged that the committee should soon leave. Two or three days before it had been announced that it would probably leave at such a time. There was nothing new in that; everybody was expecting it to go. There were no witnesses in the court-room not sworn and an application had been made on the part of Mr. Breckinridge's counsel that the committee would authorize the taking before a notary of the testimony of some additional witnesses that they thought they had in Arkansas. The committee at first stated that all the indulgence that was reasonable and proper had been already given, and declined the proposition. Then a member of the committee said to the counsel, "How many witnesses have you got?" They said they could not tell. This member then asked, "Have you two hundred?" They could not tell. "Have you one hundred?" They could not tell. Then seventy-five and fifty were mentioned as the possible number, and finally the counsel said that they thought they had twenty-five witnesses, and named some of them, Governor Hughes among them. The member then said that he understood the committee had come to Arkansas to take this evidence, and he did not think it ought to leave till it was taken. Thereupon the chairman of the committee announced that the committee would not leave Arkansas until all the evidence in that State that was offered was taken.

Mr. OUTHWAITE. Will the gentleman yield for a question?

Mr. BERGEN. Yes, sir.

Mr. OUTHWAITE. I simply want to ask upon what page of the record I may find the remarkable statement the gentleman has just made. I have not seen it in the record and I would like to know the page upon which it can be found.

Mr. BERGEN. I think the gentleman will find it in the brain of Mr. MAISH, in the brain of Mr. LACEY, in the brain of Mr. Breckinridge, and in the brain of his counsel who were there.

Mr. OUTHWAITE. But I can not get into the brains of those gentlemen. I can only be guided by the record, and I should like to know whether the statement which the gentleman has just made is to be found in the record. You had control of the record. The gentleman from Iowa [Mr. LACEY] had control of the man who made it up, and I would like to know if those proceedings were put in the record, and if so, where they can be found. All of the members of the House can not get into the brains of the several gentlemen you have named, so they must be guided by the record.

Mr. BERGEN. The gentleman seems to have forgotten that there is something in the record——

Mr. OUTHWAITE. Oh, I do not care about something else in the record; I want to know whether this is in the record; and, if so, where.

Mr. BERGEN. Mr. Speaker——

Mr. BRECKINRIDGE, of Arkansas. Will the gentleman permit me just one word?

Mr. BERGEN. Certainly.

Mr. BRECKINRIDGE, of Arkansas. While I am unwilling to interrupt the gentleman, though he states matters of fact about which I may differ with him, I wish to say in this connection, as he has referred to what is "in my brain," that I think he is totally inaccurate in that respect, as about a number of other things which he has gone over, and which at the proper time will be replied to. I do not wish silence to be construed as concurrence by any means in statements as to matters of fact which I dissent from.

Mr. BERGEN. What I have referred to, Mr. Speaker, could not well be a matter of record except, as I have said, such portions of it as might have been taken down by the stenographer. I have here, however, in support of the statements which are put forth in the record and copied in the report of the majority in this case, the affidavit of the stenographer.

Mr. OUTHWAITE. That is the report by the stenographer of what occurred?

Mr. BERGEN. Yes, sir.

Mr. OUTHWAITE. Now, where is there any report of that which you were giving to the House a few minutes ago as having occurred at that time and which you stated ought to be in the brains of certain gentlemen who were there present, but which is not in the record and not in this affidavit? Where is that?

Mr. BERGEN. I am sorry that I am so incapable of making the gentleman comprehend. At the beginning I said that this was left out by the stenographer; that it was unfortunate that it was left out. The place where it would seem it ought to come in is between the answer of Mr. McClure and the answer of Mr. McCain to the question of Mr. LACEY as just cited.

Mr. WILSON, of Missouri. Allow me to ask when was that supplied—that unfortunate omission?

Mr. BERGEN. I do not know that there is any supply of any unfortunate omission.

Mr. WILSON, of Missouri. You say it was unfortunately omitted. Now when was that unfortunate omission supplied?

Mr. BERGEN. I know of no unfortunate omission supplied.

Mr. WILSON, of Missouri. You said it was unfortunately omitted; that is, that latter part you read.

Mr. BERGEN. My statement is unfortunately omitted; the conversation that was had by the committee with the counsel of Mr. Breckinridge as to the adjournment is what was unfortunately omitted. I do not consider this, which is a part of the record, certified to by the stenographer and which appears in the report of the majority, is omitted at all.

Mr. OUTHWAITE. Does the stenographer, in that certificate or affidavit which he sends here, swear that he has sent what occurred at the conclusion of the taking of the testimony there?

Mr. BERGEN. As he reported it; as much as he reported of it.

Mr. OUTHWAITE. Why did he not report it all as it occurred?

Mr. BERGEN. You have asked that question; I can not answer it.

Mr. OUTHWAITE. That stenographer came from some place in Iowa, did he not—from Mr. LACEY's district?

Mr. BERGEN. Yes, from Iowa.

Mr. ROWELL. Does that affect his credibility or his ability?

Mr. OUTHWAITE. It goes to show that he is not one of the official stenographers of the House.

Mr. BERGEN. He was the official stenographer of the subcommittee.

Mr. STRUBLE. And under oath?

Mr. BERGEN. And under oath—sworn to take down the proceedings correctly; but evidently he did not understand that what transpired between the committee and the counsel had to be reported any further than its result.

Now, Mr. Speaker, why the change? Why does the majority portion of the committee make seemingly this charge in the report? It was not entertained in Arkansas. All were good fellows together there; everything went on harmoniously and pleasantly. Nobody wanted to get out of Arkansas more than my brother from Pennsylvania; it was a perfect godsend to him when the time was fixed to go. He was as happy as the rest.

But this whole matter changed when the balance of the minority of the Elections Committee and Mr. Garland got hold of the record. Then is when this discovery—if it has ever been discovered—dawned

upon the mind of the respondent that there was some mistake made in Arkansas in regard to what ought to have been proved, and the pretense now is that he can go back there and prove anything he pleases, and because he can do that he wants this House to order that this investigation has not been made in good faith and that the committee has not finished its duties there.

Mr. Speaker, I submit this branch of the matter. It is unworthy, as I have said, of the dignity of a case managed by able men. It is unworthy the position of such gentlemen as have been engaged by Mr. Breckinridge as counsel. It is unworthy of a member of this House. If they have seen that they have made mistakes, they should admit it like men and foot the consequences, or come in and plead for consideration on that account; not come in on this floor and undertake to defame the characters of honorable members of this House having charge that they may divert the issue and bolster up a cause that is without merit.

But, Mr. Speaker, I would call attention to some of the provisions of the statutes of Arkansas in regard to elections, to wit:

SEC. 2157. The judges of election appointed by the county court or chosen by the assembled electors under the provisions of this act shall, if practicable, be of different political parties, so that each party may be represented, and they shall in addition be able to read and write.

SEC. 2668. The sheriff of each county shall appoint as deputies a suitable number of persons in the election districts in his county to attend to each election in such district, to preserve order, and to do and perform such other things in relation thereto as may be required of them by the judges.

SEC. 2675. All elections by the people shall be by ballot. Every ballot shall be numbered in the order in which it shall be received, and the number recorded by the election officers on the list of voters opposite the name of the elector who presents the ballot.

SEC. 2676. It shall be the duty of the county court in each of the counties of this State to provide, at the expense of the county, a good and sufficient ballot-box, with lock and key, for the several townships or places of voting in their respective counties, for the safe-keeping of the ballots that may be given on the day of election held in such township.

SEC. 2677. It shall be the duty of the sheriff in the several counties in this State to deliver to one of the judges of the election in each township the ballot-boxes so provided by the county court of his county.

SEC. 2678. If any sheriff shall fail to deliver, or cause to be delivered, the ballot-boxes, as provided in the foregoing section, he shall, upon conviction thereof, before any court having competent jurisdiction, be fined in any sum not exceeding $10 for each failure.

SEC. 2682. It shall be the duty of the clerks of election to register the names of each and all electors in the order in which they may present their ballots, placing opposite each name its appropriate number, as required by section 2675.

SEC. 2683. At the closing of the polls the poll-books shall be signed by the judges and clerks, and after the signing the ballot-box shall be opened and the ballots therein contained shall be taken out, one by one at a time by one of the judges, who shall read distinctly, while the ballot remains in his hands, the name or names contained thereon; and that the same method shall be preserved as to all ballots in the box.

SEC. 2689. That the judges shall certify under their own hands the number of votes cast for each person, and the office for which such votes were given, which shall be attested by the clerks.

SEC. 2690. After canvassing the votes as aforesaid, the judges of election, before they disperse, shall put under cover one of the poll-books, seal the same, and direct it to the county clerk.

It may be said, Mr. Speaker, that it is apparent that there was a uniform purpose on the part of the county judges in making their appointments of Republican election judges to avoid the law rather than to comply with it. This appears, not only in the particular polls investigated, but at almost every poll in the district where the subject is touched upon in the evidence. Take for instance the evidence of Judge Dent, who was county judge of Woodruff County. He says he appointed but two that could read and write, and one of them did not serve. At two polls he appointed no Republicans. Now, bear in mind that they were men that could not read and write, and the judge knew it when he made the appointments. In some cases the scheme seemed to be to appoint those too ignorant to act or those so situated that they could not accept and who would therefore resign, and then fill their places by a packed posse at the polls with Democrats.

Of course it is rather laughable to the other side of the House to hear us speak of these things as discovered. What is news to some is commonplace to others, and what we might think a serious matter they might think trivial in the light of past experience.

I will next refer to the returns from the polls which the Elections Committee has advised the House to reject.

The first I wish to direct attention to are those from White River. The judges here were two Democrats and one Republican. The Republican was a colored man who could not read or write. One judge, a Democrat, was substituted without submission to the voters assembled. I do not remember reading the statute of Arkansas on that subject to the House, but it provides that when for any cause there shall be a vacancy in an election board it shall be filled by the electors present. The Republican supervisor was not allowed in the room when the election was held during the day at this poll, nor until evening, while counting. That is in violation of the United States law. This supervisor was put out of the room while trying to get in, trying to fulfill his duty as he was sworn to do. The Democratic justice of the peace used his office to misdirect the supervisor and told him that his duties were outside to keep the peace. The ballot-box was kept out of sight. The voting was through a window which was 6 feet 3 inches high, so that no one could see the ballot-box. Neither supervisor was with the box at the dinner hour, and only one clerk. There is not the same number of tickets returned as returned counted or as names appear on the poll-book. The returns were not put under cover, sealed, and so preserved. Sixty-two persons appeared before the subcommittee and swore that the tickets numbered as if their ballots by the returns were not their ballots. These were Breckinridge tickets, and they had voted for Clayton. Two also appeared and swore that they voted for Clayton who were not on the poll-books. The judges at this poll were all indicted and tried in the United States court and convicted as charged.

Mr. OUTHWAITE. With what were they charged and of what were they convicted?

Mr. BERGEN. The indictment contains six counts.

Mr. WILSON, of Missouri. What was the final result of those cases; were the men punished?

Mr. BERGEN. Well, I will read that. You need not be disappointed. I have something to say on that subject.

Mr. WILSON, of Missouri. They were there together. Tell it all.

Mr. BERGEN. I refer to page 603 of the testimony in answer to the gentleman from Ohio. I read from the sixth count of the indictment, upon which these gentlemen were convicted by the jury:

That the said Rufus J. Martin, David N. Hignight, and Robert Anthony, judges of election aforesaid, on the day and year last aforesaid, did willfully, unlawfully, and feloniously fail and neglect after the close of the polls at said election to sign the poll-books of said election, count—

I am afraid the gentleman from Ohio will omit that word in his mind. They failed to "count"—

examine, and cast up the ballots cast at said election, and cause to be enumerated the number of votes for each person as shown by the ballots, and set down the same in the list or poll-books aforesaid, and publicly proclaim the same to the people present, and to certify under their hands the number of votes given to each person and the office for which such votes were given, and to put under cover one of the poll-books, seal the same, and direct it to the clerk of the county court of said county before they dispersed, contrary to the form of the statute in such case made and provided and against the peace and dignity of the United States of America.

Mr. OUTHWAITE. Of what were they convicted?

Mr. BERGEN. Of that.

Mr. OUTHWAITE. Of doing that before they went to supper.

Mr. BERGEN. They were convicted.

Mr. OUTHWAITE. Now, what was the penalty?

Mr. BERGEN. They were convicted of feloniously neglecting to do all those things after they closed the polls.

Mr. OUTHWAITE. But they did it all right after supper.

Mr. BERGEN. But the law prescribes that they shall do it before they disperse, before they leave. If they disperse and leave the ballot-box to be tampered with, put in the hands of third parties, what is the use of the statute? They absolutely ignored the statute, purposely ignored it. What for? They must have had a purpose. When was all this tampering done? Sixty-two witnesses swear their votes were changed. When was that done?

Mr. OUTHWAITE. It was never done at all.

Mr. BERGEN. It was done after they had gone to dinner, when the box was in the hands of third parties. That is when it was tampered with.

Mr. OUTHWAITE. Never done at all. Now, what was the penalty?

Mr. BERGEN. May I have the gentleman's word that it was not done?

Mr. OUTHWAITE. Yes.

Mr. BERGEN. Sixty-two people swear it was done.

Mr. OUTHWAITE. No; they do not.

Mr. BERGEN. And I will put sixty-two people under oath against the word of the gentleman from Ohio, much as I respect the gentleman.

Mr. OUTHWAITE. What was the nature of the penalty for that enormous offense?

Mr. CASWELL. Those sixty-two people knew the facts, and the gentleman from Ohio does not know them.

Mr. BERGEN. Yes; for he was not there. He did not see it. That is what I mean when I say I will put the testimony of these people against his word.

Mr. OUTHWAITE. What was the penalty? What did the Federal Republican judge impose upon these men in view of the enormous crime they had prepetrated?

Mr. BERGEN. Mr. Speaker——

Mr. OUTHWAITE. Well, it was $10 fine. If the gentleman can not tell, I will.

Mr. LACEY. Do you think that was enough? Do you not think it was trivial and shameful?

Mr. OUTHWAITE. I think this Federal judge, who has since been promoted by this Administration, would be likely to be severe enough.

The SPEAKER *pro tempore* (Mr. BUCHANAN, of New Jersey). Does the gentleman from New Jersey yield?

Mr. BERGEN. Oh, yes; I want these gentlemen to have all the chance that is possible. I have got something to say about the fine. The gentleman from Ohio need not be afraid about that. I am very anxious, Mr. Speaker, to tell what the fine was. It was $10 and costs.

Mr. WILSON, of Missouri. Who assessed that fine?

Mr. BERGEN. The judge of the court.

Mr. WILSON, of Missouri. Who was that? Was it not Judge Caldwell?

Mr. OUTHWAITE. Ten dollars was the limit under the law, was it not?

Mr. LACEY. No; it ought to have been the penitentiary. That is what it ought to have been.

Mr. OUTHWAITE. You know more about it than the judge does.

Mr. WILSON, of Missouri. Was that not Judge Caldwell, who is now a United States circuit judge and a Republican of very high standing?

Mr. BERGEN. I think it was Judge Shiras, if I remember right.

Mr. WILSON, of Missouri. It was Judge Caldwell.

Mr. OUTHWAITE. Was not that his opinion of the case crystallized into a fine of $10, in view of all the facts?

Mr. BERGEN. If the gentleman will keep his peace for a moment I have something to say, as I said before, on this matter of $10 fine and costs.

Mr. WILSON, of Missouri. We were there together and heard all about it. Now, tell it all.

Mr. BERGEN. In the first place, Mr. Speaker, $10, when they get down to Arkansas, in the matter of a fine against a man who has committed crimes against the ballot-box, become so big and immense to the eye that one would think it was impossible for him to make $10 there in a lifetime.

Mr. WILSON, of Missouri. Is that your opinion of Judge Caldwell?

Mr. BERGEN. But, Mr. Speaker, the gentleman tells us that there was not administered against these men adequate punishment for the crime committed. The judge at that court did not propose to visit the different parties who appeared before him with adequate punishment for the many crimes they committed.

Mr. WILSON, of Missouri. Why not?

Mr. BERGEN. It seems to have been the custom in these cases to make a man pay a fine of $10 upon every conviction. That was the most that they would stand, seemingly, in Arkansas and let live; and Judge Caldwell wanted to live. [Laughter.]

Mr. WILSON, of Missouri. Will my friend allow me to ask him another question? Did not Judge Caldwell assess that fine of $10 because he regarded the defendants as unintentionally and ignorantly doing what they were charged with doing?

Mr. BERGEN. There is nothing in the record to show that.

Mr. WILSON, of Missouri. Nothing in the record to show that?

Mr. BERGEN. I do not suppose it is true, and I do not believe it.

Mr. WILSON, of Missouri. But he assessed a fine of $10 against these men because they had done something they did not know that they ought not to have done.

Mr. BERGEN. If the gentleman wants to know why I think Judge Caldwell put it at $10 for I will tell him. He had fined a Democrat $500. It appears when he made the fine $500——

Mr. WILSON, of Missouri. Against whom?

Mr. BERGEN. That the Democrats as a party paid it, and he wanted the defendant individually to suffer something from the punishment he placed upon him. If $500 exacted sympathy he thought may be $10 would not. [Laughter.]

Mr. WILSON, of Missouri. Now, I would like to ask the gentleman if he would make an explanation as to whether that $500 fine was not in an altogether different matter?

Mr. BERGEN. It was another case. There were ten cases and eight of them were convictions.

Mr. WILSON, of Missouri. Was not that $500 fine assessed against a man on an entirely different statement of facts?

Mr. BERGEN. Certainly; there is no dispute about that. The Democrats, Mr. Breckinridge, and the chairman of the Democratic committee paid the fine.

Mr. WILSON, of Missouri. But that was not on this charge.

Mr. BERGEN. That was on another.

Mr. WILSON, of Missouri. That was where a man had brought up a shotgun and charged around and finally a negro man took care of him.

Mr. BAKER. Was that in connection with the same contest?

Mr. BERGEN. Oh, yes; it was part of the same contest. It was part of this same election. It was somebody else who had done something else in this same election of Mr. Breckinridge.

Mr. WILSON, of Missouri. Does my friend charge that in the case where this man was fined $500 (the case of this man Dansby) it affected the result one solitary vote?

Mr. BERGEN. The Dansby case?

Mr. WILSON, of Missouri. The Dansby case.

Mr. BERGEN. Why, certainly. Do not anticipate me, judge.

Mr. WILSON, of Missouri. You brought up the Dansby case in connection with these ten-dollar fellows.

Mr. BERGEN. Now, what I have stated seems in strange contrast with this, which I find in the minority report of the committee. I will read from page 12 language which is employed by the minority of the committee, signed by Mr. MAISH:

> The point is that every Democrat was, by these same juries of the Federal courts, acquitted of any offense and of every charge that involved, directly or indirectly, the corrupting of the ballot, or affecting the free casting, fair counting, and honest returning of the vote.

I have just read the indictment in one case, which conclusively proves the inaccuracy of that statement. It was put into this record at the demand, I think, of the respondent and his counsel. Perhaps it was a blunder. Would he remit the case that it may be taken out? For these reasons which I have gone through, before and after these interruptions, the returns from this White River poll were considered by the committee as unreliable, and the parties, under the practice and the law which has prevailed in this House in all cases, to be relegated to other proof of the vote cast. I do not see how it could have done otherwise.

Mr. WILSON, of Missouri. I rise to an inquiry, and I will ask the gentleman if he will state who are the parties in this case.

Mr. BERGEN. I reply that I agree with the gentleman from Missouri exactly, that this case is wrongly named Clayton vs. Breckinridge. It is a case that comes into this House on petition. It is an investigation had under a resolution of the House, and if we would have the name of petitioner and respondent, of course it would not be styled Clayton vs. Breckinridge. I suppose it would be correctly styled "In the matter of Clifton R. Breckinridge, sitting member."

Mr. WILSON, of Missouri. Now, if it does not interrupt my colleague, I would like to ask him another question. I was glad to hear the gentleman speak of the poll he mentioned. If you concluded the returns were unreliable, do you not think it was our duty to the House as its representatives to poll the whole vote of Breckinridge as much as that of Clayton?

Mr. BERGEN. We did. Did you not?

Mr. WILSON, of Missouri. Why, certainly we did not.

Mr. BERGEN. Why, you were there. Why did you not?

Mr. WILSON, of Missouri. The committee did not.

Mr. BERGEN. I was one of five and you were one of five.

Mr. WILSON, of Missouri. Read your report.

Mr. BERGEN. Nobody interfered with you.

Mr. WILSON, of Missouri. How could we do it? Could two overrule three? What figure could the minority cut there? All we did was to sit there and protest against what the majority did. I say, was it not your duty as a subcommittee to follow up the result, and when you set aside the poll, find who voted for Breckinridge as well as who voted for Mr. Clayton and report it all to this House?

Mr. BERGEN. We were not there to make findings. We were there to make an investigation. The gentleman makes an incorrect statement, and I think he will agree that it is incorrect when he says that he entered a protest. I heard of no protest from the gentleman from Missouri while the investigation was going on in Arkansas. The whole matter went on harmoniously and pleasantly so far as members of the committee were concerned. Everybody came before the committee that was subpœnaed, and the gentleman from Missouri made all the investigation he saw fit, just as I made all I desired. To say that any member of the committee did not have free opportunity to investigate fully is, I think the gentleman from Missouri will admit, to make an incorrect statement.

Mr. WILSON, of Missouri. If the gentleman will pardon me, the investigation was in charge of the majority of the committee, and the question I ask him is this: When we set aside the returns of any precinct, ought we not to have polled all the votes, those on the Breckinridge side as well as upon the other?

Mr. BERGEN. Now, the gentleman is taking a great deal of my time and is acting very unreasonably, I think, in that respect.

Mr. TRACEY. I think it would be only fair for the gentleman from New Jersey to answer that question.

Mr. BERGEN. I have answered it, and I will answer it by asking my friend another.

Mr. WILSON, of Missouri. There is a little too much of the Yankee about that. [Laughter.]

Mr. BERGEN. I will ask my friend this question: Did you cause any witnesses to come before that committee that were not examined?

Mr. WILSON, of Missouri. But was it not our duty to call the witnesses?

Mr. BERGEN. Did you call any that were not examined?

Mr. WILSON, of Missouri. It was the business of the committee to call them.

Mr. BERGEN. How could we subpœna them? We did not know them. Did not Mr. Breckinridge have two or three counsel there, and was not the room filled with his friends every day and hour?

Mr. WILSON, of Missouri. And were not we, the committee, charged with the investigation of the facts?

Mr. BERGEN. We were; but, on the theory which the gentleman undertakes to maintain here, suppose that we had gone there and discovered that fifty men whose names appeared upon the poll-books could not be found—a very likely thing under the management of the Democracy there—suppose, I say, we could not find those men, then, according to my friend's theory, we would have to stop and come home and report that we could not finish and that our investigation was therefore void.

Mr. WILSON, of Missouri. That is a violent supposition.

Mr. BERGEN. Not so; and, on the other hand, the committee did go there and did examine all the witnesses that were brought before it.

Every witness that came before it was allowed to testify fully. The examination proceeded in this way: If a witness was presented by the petitioner he examined him first, then the witness was cross-examined by Mr. Breckinridge, and afterwards by the committee. If a witness was presented on the side of Mr. Breckinridge he was examined upon that side first, then cross-examined, and then examined by the committee. That was the usual course of procedure, and if the gentleman from Missouri or his friends desired subpœnas for witnesses they were at his command.

Mr. WILSON, of Missouri. We had no friends.

Mr. BERGEN. No friends! If Mr. Breckinridge or his friends had asked for subpœnas, or had asked to have other witnesses brought in, they would have been brought in. They controlled their own subpœnas by request.

Mr. WILSON, of Missouri. We were there not representing any side, and it was our duty to make a full examination.

Mr. BERGEN. I can not allow any further interruption, Mr. Speaker. [Cries of "Regular order!" on the Republican side.]

Mr. WILSON, of Missouri. Our client was the House of Representatives. I have no friends and no enemies.

Mr. KELLEY. I would like to ask a question to clear this matter up in my own mind. I would like to ask the gentleman from New Jersey if there was any action of the committee, the majority of the committee, the whole committee, or the minority of the committee, that prevented anybody, either Mr. Breckinridge or his attorneys, from subpœnaing any witnesses that they desired to bring in to testify before the committee to prove the things they claim they had not an opportunity to prove?

Mr. BERGEN. Not at all. On the contrary, they were at liberty to bring any witnesses they pleased and to prove everything they could prove. Blank subpœnas were given to them to fill out themselves to bring in their witnesses, and there was no limitation put upon them.

Mr. WILSON, of Missouri. I want to make one other remark, but unless by the gentleman's consent I will not interrupt him.

The SPEAKER *pro tempore*. Does the gentleman from New Jersey yield?

Mr. BERGEN. I can not yield further now, much as I would like to accommodate my friend from Missouri.

Let us next turn to Cotton Plant poll. Here all the judges and the clerks were Democrats. The Republican supervisor was away prior to 1 o'clock. The township is two-thirds colored. There are four colored Democrats. The returns from that township are: Breckinridge, 186; Clayton, 132. They were never sealed. Forty-eight persons appeared before the committee and swore that they had voted at that election; that the tickets numbered to correspond with their names on the poll-books, which were for Breckinridge, had not been cast by them, and that they had voted for Clayton. Twenty-nine others, whose names were not on the poll-books, appeared and swore that they had been at the poll and voted, and had voted for Clayton.

For these reasons the committee in its report has thrown out the returns from this poll and put the parties upon original proof as to the ballots cast.

Augusta City is another poll which must be considered. All the three judges and two clerks were Democrats. There was a Republican supervisor, but he was ordered out of the room in which the election was held by the Democratic county clerk and put out by the Democratic sheriff of the county. There was great excitement and threatened riot, and for two hours the voting was partially stopped.

The supervisor was then admitted into the room with the box, but again ordered out of its presence to vote. He was not allowed to stay with it when the polls were closed; nor was it counted immediately on the closing of the polls, without separation of the officers, but was put with the Democratic county clerk, who kept it until the next morning, and it was then counted about 9 or 10 o'clock. He was separated from it in the first place till late in the morning, in the second place during the time he went to vote, and in the third place from the time he went to supper until the time it was counted the next morning—all night.

Eight persons who voted at this poll appeared before the committee and swore that the tickets claimed to have been voted by them, being Breckinridge tickets, had not been cast by them, that they had voted for Mr. Clayton; and seven others whose names were not on the poll-book appeared and swore that they had been at the election and had voted for Clayton.

The returns, ballots, and poll-book were not sealed and safely kept, as required by law, but carelessly kept so any one could get to them.

The county clerk was indicted for interfering with the supervisor; he pleaded guilty and was sentenced. The sheriff was indicted and charged in two counts. To these he pleaded guilty and was sentenced. The election judges were indicted and charged in three counts; they pleaded guilty and were sentenced.

For these reasons the committee in its report has rejected the returns from this poll and counted the ballots proved to have been cast for each candidate by original evidence.

Riverside is the fourth precinct which is to be taken into consideration. The judges were two Democrats and one Republican, a colored man who could not read or write. The two Democrats handled the tickets; the Republican was not allowed to touch them. There was an old colored supervisor. He did not understand how Democratic tickets got in for Republican. That was a mystery to him. I read from the testimony as it appears on page 126:

Q. Did you see the man record the votes and put it down as it was read?
A. I tried to see them.
Q. But you could see?
A. You see if one man had got to watch two or three judges, and when you consider how many there was there, you can see what one man has got to do. There was one colored judge and one white judge, and the colored judge was stringing the ballots as they took them out, and one of the judges was taking them out of the box.
Q. Stringing them on what?
A. Stringing with a needle. One of the white judges took them out of the box and called them off, and when he passed them to the other white judge, he called them off and the two clerks recorded them and they were passed over to the colored judge and he strung them. And you see I had got all them men to watch, and one man can't see over so many parties.
Q. You tried to?
A. Yes, sir; I tried to.
Q. You don't say this thing could not have been done, do you?
A. I tried to do my duty as well as I could.
Q. But you don't mean to say you could not have been deceived about that now?
A. No, sir.
Q. You were superintending the polls during the time, were you?
A. Yes, sir.
Q. You were superintending the polls and tried to watch the tickets as they went in. Could you swear there were no tickets went in except tickets that were handed up there and voted?
A. To the best of my knowledge.
Q. Can you swear you didn't see it?
A. I can't say just what a man didn't do, because men have got to be mighty slick nowadays. I want to give you to understand that all those men were intelligent, old men, and used to being around such places as that. I didn't see anything dark that day, but if they did, they were old hands at it, and they didn't intend for a bloke like me to catch on. That was my first time to ever be an official at an election.
Q. Who were the judges of election?
A. S. M. Jones and Mr. Jelks and Claib Penn. Penn is colored.
Q. Can he read?
A. No, sir.
Q. Can he write?
A. No, sir.

He had to do all the watching, and consequently could not see all that went on.

Twenty-nine persons appeared before the committee and swore that the tickets returned, corresponding to their numbers on the poll-list, being Breckinridge tickets, had not been voted by them, and that they had voted for Clayton. Five others appeared and swore that they had voted at that poll, although their names did not appear on the poll-book, and that they had voted for Clayton. Under these circumstances the returns have lost their reliability, and the parties are put upon original proof as to the vote cast.

This concludes the case so far as the committee has agreed upon the polls to be rejected. Nor is there any dispute as to the number of votes proved in the usual way to be counted at the several precincts. To conclude the case as made in this connection, the official returns gave Breckinridge a majority of 846; deduct the returns from the polls so rejected, and a majority of 442 still remains to him; deduct also the difference between Mr. Clayton's and Mr. Breckinridge's vote as proved before the committee and there still remains a majority of 12 for Mr. Breckinridge, without Plummerville.

Plummerville, Howard Township, is a vote which was not included in the official returns. An election was there held, and it is conceded on all hands that the box was stolen, that its contents should be added, and that it contained at least 433 majority for Clayton. Deducting from this the 12 remaining to Breckinridge as stated, and we have 421 as Clayton's actual majority. It will be noticed that this is 38 less than claimed for him in the committee's report. I think that these 38 votes were included by inadvertence; they are not proved to have been cast except as the voters' names appear on the poll-lists; and as these poll-lists have lost their probative quality, I have rejected them in my calculations.

Before I turn from this branch of the case I want to call attention to an error in calculation made by the minority of the committee on its own basis. It has counted for Plummerville box the votes produced, and in all the other cases the contents of the boxes as claimed. Now, it is admitted in the report of the minority that there was a Republican majority in that box of 547. On the basis of 433, a difference of 114, the minority arrived at the conclusion that Breckinridge was elected by 77 majority. This plain error, if corrected, would have given the difference of 37 as a majority to Clayton. Take the calculation of the minority of the committee, but pursue it on the basis which they establish for their own direction, and you elect Clayton by 37.

But the principle is all wrong. When a box is rejected only those votes which are shown to have been cast by original proof are accepted in the count. The principle on which my calculation is based is that which has been repeatedly stated by this committee and is the uniform rule of the House resting on long-established authority, Democratic as well as Republican. I refer to Paine on Elections, section 596; and as Democratic authority I refer to the case of English *vs.* Peelle in the Forty-eighth Congress, page 170.

The poll at Kingsland, Prairie Township, in Cleveland County, should

be thrown out. Dansby's intimidation of voters, with other things that took place there, justifies it. The testimony shows that the supervisor was threatened and prevented from coming to the count; that voters were threatened and went home without voting, for safety; that canvassers were forcibly deprived of party tickets; that the judges were all Democrats; that though possessed of police powers they employed no means to prevent these outrages; that many frauds were committed.

But to do so would not affect the result, and it was consequently allowed to stand by the committee.

Freeman Township is a place where no election was held. The judges appointed were two Democrats and an ignorant colored man who could neither read nor write. One of the Democratic judges had the box and did not bring it till 2 o'clock, and then without the key. But I will dismiss this on reading a brief extract from the evidence of the colored judge:

Q. What did you do at 2 o'clock, when the other judge came?
A. He come and set it down on Mayberry's table, and said to Esquire York, if he would break the lock or get the key he would hold the election.
Q. After 2?
A. Yes, sir.
Q. Why didn't you break it?
A. Well, the squire tried to get a key there in the store, and couldn't find any key to fit it, and he thought it was wrong to break a lock; didn't know whether it was a penitentiary offense or not.
Q. These men down there thought it was a penitentiary offense to break a lock?
A. That was his idea about it. He didn't know about that.
Q. There was nobody there had courage to break that lock for fear of the penitentiary?
A. It would seem so, sir.
Q. It remained locked all afternoon?
A. Yes, sir.
Q. And so there was no election held?
A. There was no election held at all.
Q. You folks were arrested for that?
A. Yes, sir.
Q. All three of you?
A. Yes, sir.
Q. And plead guilty?
A. Yes, sir; plead guilty.
Q. And paid a fine?
A. Yes, sir.
Q. And paid it up like men?
A. Yes, sir; I had to pay it; I was——
Q. Then there were two judges there from 8 o'clock until 2?
A. Yes, sir.
Q. But no ballot-box, no poll-book, no tally-sheet of no kind, and until the other judge came you couldn't do anything; the other judge thought you couldn't do anything until the ballot-box came, till Mr. Trice came with the box?
A. Yes, sir; he said he didn't think it would be legal to vote without tally-sheets.
Q. And he had been voting at that time; but that was the first time he had served?
A. I have been on that there business, but I were only one.
Q. You have got rich in valuable experience?
A. Yes; I have now.
Q. You have some experience that you never had before?
A. Yes, sir.
Q. And then, about 2 o'clock, the ballot-box and the other judge with the ballot-box appeared?
A. Yes, sir.
Q. But he had no key?
A. He had no key.
Q. And there was nobody there would venture to open it?
A. No, sir.
Q. Or to break it open?
A. Yes, sir; asked Squire York, the regular supervisor, and said if he would break it open he would hold the election.
Q. Was there anything said there about it being unlawful to break the lock?
A. I think York said he did not know. It looked, too, he might know, being a squire, whether it was a felony to break that lock or not; but I did not know.
Q. The voters had pretty largely disappeared at that time any how?
A. It seems so. It was raining pretty hard, and there was 40 or 50 come after that.
Q. And some did not come?
A. It seems they started and heard there was no election.
Q. Where they had started to come?
A. Yes, sir; and they turned back before they got there.

The SPEAKER *pro tempore* (Mr. BURROWS). The time of the gentleman has expired.

Mr. OUTHWAITE. I ask unanimous consent that the gentleman from New Jersey be permitted to continue for at least ten minutes longer.

Mr. BERGEN. Mr. Speaker, I would like to proceed without limitation, as other members of the committee were allowed to proceed.

Mr. BRECKINRIDGE, of Kentucky. I hope the gentleman will be permitted to proceed until he concludes his remarks.

Mr. OUTHWAITE. Well, I will make the request for unanimous consent that he proceed without limitation.

Mr. CRISP. To be taken out of the time on that side.

Mr. BERGEN. Of course.

The SPEAKER *pro tempore*. In the absence of objection the gentleman will be permitted to continue his remarks without limit.

There was no objection.

Wednesday, September 3.

Mr. BERGEN. Mr. Speaker, when I was interrupted yesterday I was calling attention to places at which no election had been held in the district, especially referring to Freeman Township. There are two other places at which no elections were held—Montgomery precinct, in Monroe County, and Northwest precinct, in Stone County. But I want to leave this branch of the case, and turn my attention to another.

Let me come to the 29th of January. It was two months—nearly three—after the election. Benjamin had been mobbed and was dead. The negro, Joe Smith, had been killed. His murderer was known, was there, was at large, and not indicted. Wahl, the supervisor, had been shot. Alexander, the constable, had been run out and was dead. Threats had been made on the life of Clayton and he had been warned not to go to Plummerville. He had gone to Plummerville and was engaged in taking proof as to the vote at that box. He went there under an assurance that his life would be spared. Three days had gone by in taking evidence relating to the tickets cast, and not a word was said, not an inquiry made as to the stealing of the box. All knew that it had been stolen. That was admitted by everybody. No inquiry had been made as to who did the deed. Night came and he was in his room. He had been moved from an inner room to a room in which there was a window, and where he was exposed. He had previously been forced to leave the hotel and take rooms at this cottage by the woods. He was there shot.

When Mr. Clayton was assassinated then was a supreme moment for Mr. Breckinridge. A throb of horror like an electric wave surged through the whole nation. He no longer had on his hands a contest, but he had an infinitely higher responsibility to himself and his party. I do not assume to criticise his course. It was his to do as he saw fit. By resigning he would have disowned all advantage gained. His opponent had been stricken down by one single shot. Could he be magnanimous, nay, heroic, and disown the advantage gained by resignation? One stroke of the pen would accomplish it. In doing so he would, too, have been considerate enough for the better element of his own party, not have drawn it into the position of defending and palliating the greatest stroke ever made at liberty and government as here established, next to the assassination of Lincoln and of Garfield. I am told that this was the course advised by some of the great leaders of his party. But their counsel did not prevail. An examination into the methods employed at this election shows why. To do so would have made him disown that element of his party which had reached its climax in effort to serve him at the fatal shot. It was a struggle which none may covet. On the one hand were his hopeful friends and an expectant nation—members I believe of the other side of this House—on the other hand were immediate sordid gain, the man who had fired the gun, the associates in the crime, and all that element of his party avaricious and constantly gaining in power which had counseled the deed and promoted it. They had risked their lives, their all, for him, and now was he to desert them when they most needed his help? This was the problem, and he stood with them who at death's door had stood with him.

The controversy was hopeless for Mr. Breckinridge if Mr. Clayton proved his vote according to his notice of contest. I have shown how rotten the election was. This, of course, was known to those who had worked with Mr. Breckinridge, his partisans, his friends; nobody knew better than they. They had conducted it. Many slurs have been cast against the petitioner. They are meant to divert from the issue, but are straws to the wind. What was the condition of that election in the minds of the respondent's friends? It is idle to cast slurs at this man or that who in Arkansas may have taken part in it. And what was the situation to these men? Did they fear conviction? Oh, no. There is no fear of conviction in Arkansas for offenses against Republicanism. Men there commit crime and go without accusation, without punishment, if the crime is political. Why, then, should there be any fear of a conviction for this crime? There was not a particle.

There was a deep-seated scheme. It ran back to a month before, when the attempt was made on the life of Wahl. Wahl's life was wanted. Why? Because he had testified against the ballot-box thieves? Yes; but not because of their fear of conviction for stealing the ballot-box. The only thing in the way of Breckinridge's success was the life of Clayton. Life in Arkansas is but an incident. It disappears whenever it stands in the way of something more needful.

I have said there was no fear of conviction. I have already made reference to the fact that the persons who were arraigned in the United States court were only fined $10 and costs and that those men who stood in that community subject to the accusation of murder never have been accused or indicted. With all the facts that have been laid before the country and this House relating to the subject of the different murders committed, not a single indictment has been found in the State of Arkansas in its State courts, and, of course, murder is not within the jurisdiction of the United States courts.

Mr. BRECKINRIDGE, of Arkansas. Has the gentleman communicated to the State authorities any evidence upon which indictments could be found?

Mr. BERGEN. No; but they have to me. There is plenty of evidence.

Mr. BRECKINRIDGE, of Arkansas. Has the gentleman indicated it in his report or in any other manner? If the gentleman knows of

such evidence I trust he will formulate his information and name the men, in order that the State authorities may have the benefit of that information.

Mr. BERGEN. Mr. Speaker, I have heard of the game of bluff and it is never better practiced than it is in the State of Arkansas and, I should judge from the remarks of the gentleman, never better than by himself. The State of Arkansas stands to-day with the knowledge that men in and about Plummerville committed these crimes, yet there is not an indictment against one of them.

Mr. OUTHWAITE. Can the gentleman name the men that ought to be indicted for the murder of Clayton?

Mr. BERGEN. The gentleman from Ohio calls upon me to name the men who ought to be indicted for the murder. It does not rest with me, even if I name the men, to command the courts of the State of Arkansas to pursue them. That State has her legal officers, a whole machinery of law, and everything is in the hands of her Democracy; but she does not pursue these criminals. Such pretenses as the gentleman's question suggests are mere makeshifts. The country knows some things: that murder has been committed; that the people there admit that it has been committed; that the ballot-box thieves are charged with the crime from the governor down, and yet no indictment has been found; that these thieves are Democrats, and the officers of the law are Democrats; and that this is ample proof of want of bona fides.

Mr. OUTHWAITE. I ask you again to name the men that your committee discovered to be guilty of the murder of Clayton and that ought to be indicted for the crime.

The SPEAKER *pro tempore*. Does the gentleman from New Jersey yield?

Mr. BERGEN. I do not, Mr. Speaker. I am speaking in others' time, and I want to get through.

Mr. PEEL. You can not name anybody. You have been there trying to get information, but you could not find any, and you can not name anybody.

Mr. BUCHANAN, of New Jersey. Mr. Speaker, I demand order.

The SPEAKER *pro tempore*. The gentleman from New Jersey declines to yield.

Mr. BERGEN. Success was wanted for Mr. Breckinridge, and was to be had easiest and first, in the minds of this portion of the Democracy, by the death of Mr. Clayton.

It was to be had, if necessary, at the price of blood; and it was so had. They had already threatened the life of Wahl and of Hobbs for one box. It would now take Clayton's life to capture the district. Wahl's life was wanted, because it was seen that suspicion would settle at once upon the ballot-box thieves; and Wahl knew some of them; he had already given some testimony which showed that he had knowledge who they were. There is no accuser like self. So Lady Macbeth could exclaim, "Out, damned spot, out." These men stood with this knowledge; their hands are black with blood.

This conspiracy was powerful and extensive. It embraced the sheriff, the deputy sheriffs, the clerks, and all the lower Democratic element throughout the Second district of Arkansas. It was political, exclusively Democratic. It terrorized the courts. It could command the respondent even and the governor to devise theories as to the perpetrators of the deed that were most ridiculous and mythical, and that, too, in the light of the information and belief they possessed that the ballot-box thieves were right there in their midst and had committed the murder. And the air was pregnant with like rumors.

So the governor immediately after the assassination issued his proclamation offering a reward, and the next day wrote to Sheriff Shelby, using this pleading language: "Arkansas can not afford to rest quietly under this foul stain, and it is not right that the officers should do so, nor do I believe you will in this case," hoping to make this case an exception; and again in his message the same day to the Legislature, then in session:

> At the time the deceased was thus murdered in cold blood he was engaged in taking testimony in reference to a contest for a seat in Congress, in which he was the moving party. He was, therefore, in the exercise of an inalienable right of citizenship, which none could have any disposition to *thwart*, except the most abandoned of men.

Evidently the governor then thought that Clayton was murdered to "thwart" his "contest for a seat in Congress." Is it any wonder that the people whom he specially represented—the Democratic party—should be thought responsible for the crime? If Clayton was "thwarted" the advantage accrued to that party.

Look at the theories of the murder which are set forth in the minority report. They are on page 51, and described as six in number. This is the report of the Democratic minority of the Election Committee. The first is, and therefore the most important, "that he was killed by the men who stole the ballot-box." The second, "that he was killed by men who were under indictment"—*i. e.*, the ballot-box thieves, practically the same thing. The third, "that he was killed by men who wanted to stop inquiry into the right of Mr. Breckinridge to hold his seat." Three matters of inquiry of the first importance as to the killing of Clayton are thus set forth by the Democratic minority of the Elections Committee. Yet they paid no attention to them.

Is there a particle of proof throughout this whole record that the minority of this committee gave special attention to the inquiry into these matters? Not a particle. From the beginning of this investigation until to-day it has been the part of the Democracy to excuse, extenuate, and overlook in order to find some reasons why this assassination was brought about other than upon any one of those three theories which they set out as most important to be examined, and, because the majority has adopted all three of the theories as true, more feeling has been exhibited against it than from anything else within my experience in this House.

The other three theories named by the minority of the committee are mythical, and shown to be so by the report.

Clayton did not die from an accident nor from rivalries in the Republican party.

The Hooper theory is one that has been much pressed. It was fascinating. The portals of the grave had closed on him and it could all be built in the imagination. He had lived in Arkansas. The troublous times of reconstruction could be drawn into it. He had had a grievance with somebody else there then. He must have revenged this on Clayton by mistake. He lived in California at the time of the murder, far from the scene. Was he absent from his home? He was a boastful braggart. The offer of $5,000 reward brought out that he rattled to Sater. Sater is a vagrant who wanders all over the country in search of a living. The $5,000 were tempting. Shelby, the sheriff, helped him with the thought that they could divide the sum.

The respondent, the governor, Sheriff Shelby, are happy, and they go to work. Once in a month they get a spasm and write a letter. The papers are filled with their diligence; the country is kept on the *qui vive*. Fifteen months pass and the investigation is about to begin. All is now to be made plain. The mystery is solved. The Plummerville thieves are saved. The discovery is first made known to the public that Hooper did it.

But the investigation proceeds, and it is disclosed that Hooper at the time of the murder was bedfast with dropsy and had not been out of his house for weeks.

There is a collapse.

Still the respondent can not give up his fancy. He clings to it in desperation. That there is a widow in weeds and an orphan family makes no difference—children that love their father's name, sons and daughters that will endure everything to preserve it. The scandals of this infamy he would link to them to enduring fame. But there comes an end, and he abandons it in this language to the committee: "The Hoopers had nothing to do with it (the killing of Clayton); let us admit that, and thus dispose of all suspicion relating to the militia trouble." Yet what does he insist? He insists, after abandoning this theory, that this committee has been negligent in not permitting him to examine some witnesses in the State of California or bring them from California here to give testimony in this matter. Now, here is another——

Mr. BRECKINRIDGE, of Arkansas. Will the gentleman allow me to interrupt him as to a matter of fact?

Mr. BERGEN. I will yield for a question.

Mr. BRECKINRIDGE, of Arkansas. Is the gentleman aware——

The SPEAKER *pro tempore*. Does the gentleman from New Jersey [Mr. BERGEN] yield?

Mr. BERGEN. I am anxious to get through; the gentleman will have his own time.

Mr. BRECKINRIDGE, of Arkansas. It is only on a question of fact that I desired a word; but I do not wish to interrupt the gentleman.

Mr. MAISH (to Mr. BERGEN). You will have plenty of time.

Mr. BERGEN. No, I have already taken too much time.

The SPEAKER *pro tempore*. The gentleman from New Jersey declines to yield.

Mr. BERGEN. There is another theory. It is "the widow story." Some widow—Mrs. Randolph—wrote to W. H. Howell that a man whom they both knew said he knew all about the stealing of the ballot-box and who killed Clayton. On that the governor of Arkansas undertakes an investigation. It involves a long delay. Mr. Breckinridge advises the governor. Howell is sent for four days into the country; and then this too is abandoned. All the while the ballot-box theory is avoided, the theory that the ballot-box thieves committed the murder.

What was the difficulty? Was there any difficulty in finding out who they were? Twenty deputy sheriffs, Democrats, were deputized the day before the election to go from Morrilton to Plummerville, ostensibly for the purpose of keeping peace, but, as proved, evidently to see that things were regular according to Democratic ideas. The sheriff says they were not to guard the box; that was not what they were sent for. By the law of Arkansas they were under the direction of the election judges. The judges had the right to command them into their presence for their protection, for the protection of the poll, for the protection of everything that was done there. They were subject to the absolute control of the judges of election.

The sheriff knows who these deputies were. They were at Plummerville during the day. Some were seen there just before the ballot-

box was taken. Some were seen to go away as the ballot-box went. All were gone when the ballot-box was gone. Some dropped their hats on the road in their haste. One, though he had matches in his pocket, never thought of it till he had gone a mile after he lost his hat. He was so wrapped up in the idea of getting away from Plummerville that he forgot he had matches in his pocket that would enable him to find it. They were seen to carry the box, and it went with them.

One of them during the day had gone away to Morrillton by mistake. He returned to Plummerville at night when the box was to be stolen, and he disappeared as the box disappeared. He changed his hat before he left Morrillton, before he came back to Plummerville. What for, except to disguise himself? Some went by train, some went on horseback, and the horses were seen to fly. There was a big crowd in Plummerville before dark before the ballot-box was stolen. There were no negroes there; but when the ballot-box was stolen the town was deserted. They were members of the Democratic club of Morrillton.

Mr. Speaker, I would exempt in my criticism respectable citizens of the State of Arkansas, who are Democratic, as well as Republican. There are many in the State of Arkansas, first-class gentlemen, who support the Democratic ticket. I make no charges against these gentlemen, except that it was their duty to stand up against the mob and they did not do it. There is a monster which has settled upon this State that is controlling its best elements to-day to the ruin of its vital interests. It is easy to see its power both before the election and afterwards and throughout the whole course of the history of these transactions. It is the under portion of the community dominating the upper element. When this murder had been committed, was there any one in the State that undertook to investigate or find out the facts? No. The whole official force, instead of undertaking to investigate, undertook to conceal the crime, to look away from it, to see if there were not some way in which somebody else than the real criminals, or something else could be turned to, almost to the extent of questioning the fact of the murder itself.

So even at the time of the coroner's inquest Mrs. Craven, at whose house the murder had been committed, was not sworn as a witness; she was there; she must have known something of the facts: she ought to have known something; and yet Armstrong, the attorney of Mr. Breckinridge, could not have her give her account of the affair then. Ol. Bentley, the man who had been appointed deputy sheriff, has been accused over and over again as having done the murder or being one of those who did it; he was the man who impaneled the coroner's jury. Three days afterwards he sent a constable to make an examination, and then no further examination was made by his order. He is the brother of George Bentley, who was shot—another of the departed, of the dead—in connection with the case. Sheriff Shelby was back in the county, 25 miles away, collecting taxes. He was telegraphed to, but he did not return to the scene of the murder to investigate; and he keeps Ol. Bentley as his deputy. A few of these men were prosecuted in the Federal courts, but none were prosecuted in the State courts.

The State courts are under the power of this monster. The county judges pretended ignorance of the law that they might throw bait to this under-stratum and answer its purposes. When there is a judge on the bench like Judge Cunningham, who undertakes to advise the grand jury to make an investigation, he is forced to resign and go out of the State and go to Oklahoma; the supreme court even is now under its power.

Mr. Speaker, I call attention to a recent Arkansas case, the case of Jones vs. Glidewell, just decided, a most remarkable case. By this case it was—

> Held that a wide-spread, systematic plan, whereby all negro voters in the county, under threats of * * * social ostracism and of expulsion from the community, were compelled to vote open tickets, for the purpose of disclosing to their fellows any negro who might try to vote for a Democratic candidate, will avoid the election, though there is no proof that a majority voted against their wishes by reason of the plan, and though it was also partly designed as a means of testing the returns of the election officers.

In this citation from the syllabus of the case I have left out the terms "personal violence," because they are not properly inserted. The syllabus as printed is misleading. My authority for this statement is this language from the opinion:

> There is proof here of the same spirit of intolerance, of the same efforts on the part of the blacks to enforce unanimity in politics through the influence of the church, ostracism from society, and indignities which fall little short of intimidation as defined in that case. (Patton vs. Coates, 41 Ark., 111.) But there is lacking in this case the element of threats and acts of violence, without which the judgment avoiding the election in that case would not have been reached.

This case is to be found in the thirteenth volume of the Southwestern Reporter, page 723.

This decision only applies to colored voters. The same principle applied to the white voters throughout the land would invalidate the ballot of every voter who happens to belong to a political or campaign club. Of course all such would be intolerable in such clubs if they would not agree in advance to vote the party ticket.

Mr. HILL. I did not catch the title of the case. Will the gentleman state again what decision that is?

Mr. BERGEN. Jones vs. Glidewell, reported in 13 Southwestern Reporter.

Mr. HILL. What State?

Mr. BERGEN. The State of Arkansas.

I hesitate to note that public sentiment in Arkansas is of that severe mold that the courts have had to be warped by it. Such is the fact, however, as appears by this case. All that now has to be done, according to this decision, and it is a mere suggestion to this mob power, is to order that all colored voters shall vote at a separate precinct, and then hold that race distinction was so pressed on them that they did not dare to vote the Democratic ticket, and throw all out.

Mr. OUTHWAITE. Can you give an example of that thing, any time that it has ever occurred?

Mr. BERGEN. This case of Jones vs. Glidewell did it.

Mr. OUTHWAITE. Read the testimony and show it if you can.

Mr. BERGEN. Oh, well, the gentleman is unfair to ask that in my time.

Now, Mr. Speaker, this was a political murder. It was so understood by the whole community. Mr. Beckinridge's friends as well as his enemies so understood it. The governor so understood it. The Legislature so understood it. Mr. Breckinridge himself so understood it and has so acted from the beginning. The Democratic party—its worst element—did it, and afterwards assumed the responsibility; it had to. The burden of proof was against it. It undertook to explain it away. Common sentiment demanded that it should. The chairman of its executive committee offered $200 reward.

But it has not undertaken to expose who committed the deed. It was not undertaken on its part at Little Rock; and ever since then time has been spent in its excuses in trivial matters and assignments of causes for delay. It has constantly thrown straws like this Hooper story, like this widow tale and the orphan spook to complicate the case in sentiment and turn attention from the real issue. Fines imposed by the court have been paid by its executive committee, paid by contributions from the body of the party, paid by the respondent. The officers of the law were under its command, members of it, and they have in fact avoided all investigations, have been indifferent, and have adopted every suggestion that could enter their minds to divert public attention in other directions than to those persons who everything in the case shows should have been accused of the crime.

When William the Silent was in power he was assailed. Gérard went to him secretly, stole in upon his peace without warning of purpose, aimlessly to all appearance. In that awful hour he fired the shot which cost the life of both. He had pursued his object for seven years. He wanted the life of the prince. He got it. Was it said that he had some personal animosity? Was it argued that it was a piece of revenge? Oh no; it has not so gone into history. It was a political crime, and those who prompted the assassin are the persons who are responsible in history for the commission of the deed.

Was Mr. Breckinridge in this? I trust not; I believe not. I would feel very sad to make any statement here on this floor that would be so terrible as that. But it was in his power to save the life of Clayton. Did he do it? It is said that he gave the order. I trust he did.

When Cæsar was struck by Casca there stood in the crowd one person. That person was Brutus. They had been rivals, but Cæsar trusted Brutus. Brutus had often saved Cæsar. Cæsar could not die until he saw that Brutus also aimed a dagger to his heart, and then he cried out "*Et tu, Brute?*" and died.

It is said that if Mr. Breckinridge is declared not elected he will be returned within a week. Let it be so if it be the will of the people of the district. But let it be upon a free ballot and a fair count, and that is all that is asked.

The secret of this whole contest is the race problem. I can not in the very limited time that I shall allow to myself further go into a discussion of this matter. The simple question that comes to the people of one section is whether one white man of the other shall have as much power as four of them. This will not be permitted. It can not be permitted. It is nullification as hideous and as horrible as that which reared its head in the days of Jackson, and it will be as certainly stamped down in this day as that was under his iron heel. The Constitution, which provides that the colored man may vote, will be defended until that provision, like every other in it, shall have its proper result.

I appeal to members of the other side of this House. I ask them to correct this evil, not by undertaking here or anywhere to set aside the provisions of this Constitution, but by those means which are in their power, those conciliatory measures which are always in the possession of the right-minded, to control men who naturally seek their advice and protection.

They have as a party, in this House, excused almost every crime that is in the penal code. Intimidation has been proved in election case after election case, and they have defended it. Frauds have been shown, and they have excused them. Ballot-boxes have been stuffed, have been stolen, have been broken open, have been substituted, and they have excused the deeds. Boards of election have illustrated their own perfidy by their perjury, and they have excused them. Returns have been tampered with, have been altered, have been stolen, and have been destroyed, and they have overlooked all. Murders have been committed, and they have excused them.

The question now is whether as a party they will stand in this House and solidly support a position that it is right to strike down him who is a contestant to make a seat secure.

And when the blood of thy martyr Stephen was shed, I also was standing by, and consenting unto his death, and kept the raiment of them that slew him.

May this never come from my friends of the other side of this aisle, lest they, like Saul, shall also some day first see a vision.

The Wrong and Injustice of the McKinley Bill.

SPEECH
OF
HON. JASON B. BROWN,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 8, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize the duties on imports, and for other purposes.

Mr. JASON B. BROWN said:

Mr. SPEAKER: That the present distressful condition of our country is sufficient to cause serious apprehension and alarm, no one can gainsay or deny. On every hand we see labor prostrate, all kinds of industrial, agricultural, and other business enterprises, save those that receive the fostering and protective care of the Government, on the decline. Those pursuits of life the great majority of our people are engaged in, agriculture and labor, which, for the good of the entire country ought to be the most prosperous of all, are bearing unjust burdens and meeting with untold disasters never before known in our country's history. There is no want in our natural resources, nor in the intelligence, enterprise, or industry of our people to justify this present calamitous condition of affairs. We must look elsewhere for the producing cause of this condition.

It being impossible to trace this cause to any want of natural advantages or to any defect in our system of government, if properly administered, or to any infirmity of the great body of our people, this destroying cause must be, inevitably and logically, directly traceable to some serious, if not criminal misconduct upon the part of those to whom the people have intrusted the management of the affairs of Government.

The great object of just government is to cause all of its burdens to be borne equally by all the people who owe it allegiance. As these burdens come in a large measure from the exercise of the taxing power, the Democratic party has, from the founding of our Government, demanded that that power should be so conducted that the weight and responsibility of taxation would fall upon all of the people alike in proportion to their ability to bear it; and in all cases, if such should occur, where it was inevitable that a discrimination should be made, that such discrimination should be made against the strong and in favor of the weak, against the rich and in favor of the poor.

That our Government was intended to be one of perfect equality among the people is found in the introductory portion of our Constitution, which declares that the Constitution was ordained and established to form a more perfect union, establish justice, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity. These great objects could not be attained without the people furnishing proper and necessary means for government support. The Constitution charges Congress with the duty of obtaining such means of support from the people, and directs Congress in reference to the manner in which the same shall be obtained. It provides that Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States.

This provision of the Constitution is put into execution by Congress passing what are called revenue bills. The Constitution provides that all bills for raising revenue shall originate in the House of Representatives, giving the Senate power to propose amendments. The giving to the House of Representatives exclusive jurisdiction to originate revenue bills undoubtedly was because the entire membership of the House of Representatives was to be elected by the people every two years, thereby making its membership more directly representative of the people and more immediately responsible to them than the Senate; that any abuse occurring in the raising of the revenue could be more easily and speedily corrected if the originating of it was exclusively with the House of Representatives than otherwise. The intention clearly was to keep the matter of raising revenue, which could only be done by some form of taxation, as nearly in the people's hands as possible. This was manifestly upon the theory that the nearer the people come to engage in the exercise of the taxing power the more justly and evenly would that power be imposed upon them.

These clauses of the Constitution, when construed together as they should be, clearly and unmistakably assert the following propositions: That the taxes, duties, imposts, excises, or money raised, no matter by what form of taxation, should be revenue for the Government, not bounty for a private use; that the power of Congress, by virtue of these constitutional provisions, is expressly limited to raising revenue for some public purpose, such as paying the debts of the United States or providing for the common defense and general welfare of the United States; but that in no instance should these provisions be employed by Congress to give any class of industry, occupation, or people an advantage over another, no matter whether it be under the guise of protection or otherwise.

Such was the almost uniform understood meaning of these provisions of our Constitution, and the practice of Congress and all the departments of the Government under them until 1861, when the present high protective tariff act which still exists, with some modifications since made, was passed. It was passed upon the statement then made that its necessity was only temporary, and upon the express promise that as soon as the necessity—which was the war—passed away it would be repealed, and the former tariff would be restored.

Twenty-five years have come and gone since the claimed necessity for the present high protective tariff law which places an average of 47 per cent. duty on foreign imports has passed away, and we now not only find this law in force, but we also find the advocates of high protection demanding more. One would naturally suppose that the beneficiaries of the present high protective tariff, who have received, and are still receiving, such great rewards from it, would be satisfied with it. A law which has so enormously enriched them at the expense of every other industry and enterprise in the country ought to quench their thirst for greed and gain.

But it is not so. The fact that the present tariff enabled them to filch from the pockets of American consumers at least four and one-half dollars of bounty, for which they paid nothing, for every dollar it put into the public Treasury—and the people having so patiently submitted to it—has incited them to demand of the Republican party a scheme by which they can carry on their system of robbery and plunder upon the agricultural and laboring people of the country upon a more enlarged scale.

In the Republican national convention at Chicago, which nominated President Harrison, the protective-tariff robbers demanded of the Republican party that it should give them a greater opportunity to satisfy their lust for gain, and compelled it to put into its platform these words:

We are uncompromisingly in favor of the American system of protection. The protective system must be maintained.

With this party pledge obtained, the protective-tariff conspirators, according to agreement, furnished the necessary funds to the Republican election managers with which to organize the floaters into blocks of five and to put each block in the hands of a trusted man, and to see that none escaped, but that all voted the Republican ticket. Having succeeded in electing the Republican ticket by the most corrupt, disgraceful, and dishonest methods ever known in American politics, these same greedy and unconscionable protectionists are now demanding the fulfillment of the political bargain and compact they made with the Republican leaders. To make that bargain and compact good, they demand the passage of "a financial monster, the McKinley bill."

Their demands have been heard by the representatives of the Republican party in the lower House of Congress who have passed this monstrous measure. The Republican party of the Senate has likewise passed it with some amendments, adding to its enormity, if such were possible. These amendments will soon be disposed of, and it will go to the Republican President, be signed and enforced by him as the law of the land, ostensibly to raise revenue, but really to pay those who made his election sure.

The people will have to submit to this great outrage, wrong, and injustice, no matter how severe the affliction may be, until the time comes when by an election they can and will rectify this wrong by restoring the Democratic party to power, and thereby bringing about a complete change in the administration of public affairs in the interest of the people.

The title of the bill is—

A bill to reduce the revenue and equalize the duties on imports, and for other purposes.

The meaning of the words "and for other purposes," mentioned in the title, can be easily and readily understood by an examination of the body of the bill, wherein its unjust and unfair discriminations in favor of all protected industries and against all unprotected industries are plainly seen. This bill ought to be entitled "A bill to increase taxes and enrich cormorants."

Upon its slightest examination it is plainly seen that its enactments place additional burdens upon all classes of people, farmers, laborers, workingmen, and all others, save those who are capital-owners of the several protected industries for whose benefit it is to become a law. It lays its hands most heavily upon all classes of our people who are not possessed of riches, but who are compelled to labor, engage in agriculture, professional life, or small business enterprises of some kind in order that they may support themselves and families.

Its extraordinary length renders it impossible for me to take it up in detail and point out its several unjust discriminations against the poorer classes, against persons of moderate means, who in many instances are compelled to buy more of the high-taxed articles mentioned in it than are those who clothe themselves in untaxed "purple and fine linen." Upon this point I will content myself by quoting somewhat at length from the minutes of the hearing which was extended to importers, manufacturers, and others by the Senate Finance Committee when it was being considered by that committee. A large delegation of gentlemen from New York, Chicago, Cincinnati, Boston, Philadelphia, and elsewhere who are engaged in the business of importing, and many of whom are also manufacturers, appeared before that committee and gave reasons why it should not be passed.

Mr. James M. Constable, chairman of the delegation, in addressing the committee and introducing the members of the delegation, said:

Gentlemen: I have been selected upon this occasion to present to your honorable body the various gentlemen who wish to be heard in regard to their interests. I believe I have been honored in that way because I am the oldest man in the importing trade, although not the oldest in years.

We come here to protest against the passage of the so-called McKinley tariff bill. The papers say, although they do not always speak the truth, that we are all from the city of New York. Gentlemen, it is not so; we are from every large importing center of this country, from Chicago, Cincinnati, Boston, Philadelphia, and New York.

We come here to protest against the passage of this McKinley bill because we think it is legislation in favor of one class of citizens against the other, namely, against the importers for the benefit of the manufacturers; we are here to protest in the name of the poor man of the country against the enormous increase in duties proposed, which will compel him to pay an increased price for every article he consumes. If this bill should go into operation a great many of the gentlemen present and the interests which they represent would have to retire from business. There was a speech made at the dinner of the Home Market Club, in Boston, the other day by Mr. Proctor. He said that he was in favor of a tariff that would give the greatest benefit to the greatest number of people. Gentlemen, we hope you are like-minded. If you are, this tariff bill will never become a law.

Mr. Henry W. Curtis said:

Senators, it was my pleasure a few weeks ago to appear before this committee or a portion of your body, and at that time one of the first questions which were put to me by the Senator from Iowa was: "Who are you?" I rise as a representative of the silk interest and I do hope that you will not feel that you are looking upon importers alone, for I represent a house (indeed all of the commission importing houses are to-day more largely interested in domestic silks than they are in foreign) which has its largest interest in domestic manufacture.

* * * * * * *

I am a thorough-going, out and out protectionist Republican, and I do not know that there is anything more distasteful to me than a free-trader, unless it is a mugwump. I want to impress upon the gentlemen of the Senate present the fact that, while we are here as representatives of the business interests of New York in the importing of merchandise, we also represent the manufacturers of domestic goods.

We represent $500,000,000 of capital employed in domestic mills, and the employment of thousands and hundreds of thousands of operatives.

* * * * * * *

I am going to call your attention to a few facts and figures covering the articles which have been committed to my care. I do not propose to occupy your time in reading all of these somewhat lengthy schedules. If the gentlemen of the committee so desire, it will be my pleasure to leave them with the committee. Take the matter of silk and cotton velvet, of the cheaper grade.

Silk and cotton velvet costing 93 pfennings a meter pays 50 per cent. duty at the present time, and will, under the McKinley bill, pay 118 per cent. A silk velvet costing 8 francs 25 centimes pays to-day 30 per cent., and under the McKinley bill it will pay 54 per cent. This illustrates to you the point that the McKinley bill bears the hardest upon the people who can afford it the least.

Take the item of pie e-dyed cotton-back satin, an article which is used almost entirely by the poorest classes and gives the Sunday attire to our working girls, the poor woman's luxury. You take a sixteen cotton-back satin, costing 70 centimes per meter, and to-day it pays 50 per cent. duty, while under this bill it will pay 75 per cent. That is an increase of 46⅔ per cent. in the amount of that duty.

Now, take another article in the same line, costing 1 franc 35 centimes the meter, and it pays 60 per cent. As you go up in value you go down in duty. The same is true of the 24-inch satin now paying a duty of 50 per cent., which would be raised to 73½ per cent., while the same goods, costing 1 franc 19 centimes, would pay 54½ per cent. under the McKinley tariff bill.

* * * * * * *

You take that same article, costing $1.25 a yard, and it will pay 56 per cent. duty under the McKinley bill. So I might go on through this whole schedule. If it is the pleasure of the committee, I can in a very few minutes have prepared for them another schedule covering the higher grades of silk, running from $1.50 to $2 a yard, which will show that this bill raises, in many instances, the duty not at all, and in some cases even decreases the duty.

* * * * * * *

Mr. VANCE. Will you allow me to ask you if you have examined all these schedules, and if the discrimination against cheaper goods runs all the way through.

Mr. CURTIS. Yes, sir.

Mr. VANCE. The higher the price of the goods the lower the duty, and the lower the price the higher the duty, all the way through?

Mr. CURTIS. Yes, sir.

* * * * * * *

Mr. VOORHEES. What reasons of trade are there why these cheaper goods pay higher rates of duty than the higher-priced silks?

Mr. CURTIS. It is a stunner to us, sir.

Mr. VOORHEES. That is what I supposed. It was a stunner to me, and I wanted to see whether it was to you.

* * * * * * *

Mr. HARRIS. You import about as much as you sell of the domestic product?

Mr. CURTIS. About as much as we manufacture.

Mr. CARLISLE. Do I understand you to state that the line which you import does not come into direct competition with the domestic manufacture?

Mr. CURTIS. No, sir; the foreign goods are driven out of this market by the domestic goods.

Mr. CARLISLE. That is, foreign goods of the same quality and class?

Mr. CURTIS. Yes, sir.

Mr. MCPHERSON. Then this bill forces upon the domestic manufacturer more protection than he needs and more than he wants.

Mr. CURTIS. I should say so.

Mr. VOORHEES. In other words, you have got enough.

Mr. CURTIS. As a protectionist I want to stand at the 50 per cent. duty as being all of the protection that we want. I would not have it any less than 50 per cent. I do not see how you can do anything else than retain it at that rate, in the face of the request of the American Association of Silk Manufacturers, of the importers, and of the Secretary of the Treasury.

Mr. Isador Strauss said:

It is my privilege to appear before you as the representative of at least nine-tenths of the importers of pottery and glassware of the city of New York, through whose hands probably three-fourths of the imports of this line pass.

* * * * * * *

By the McKinley administrative bill, restoring the duty on packages, etc., these industries receive an additional protection to that which they succeeded in procuring in the former tariff bill of from 11½ to 15 per cent., or, in other words, goods paying a duty of 55 per cent. to-day will have to pay from 66½ to 70 per cent., and goods paying 60 per cent. to-day from 68 to 75 per cent., the heavier rates in every case falling on the cheaper goods used by the poorer classes.

Nothing, however, in the McKinley tariff bill brought greater consternation among the dealers in this branch than the exorbitant and in many cases prohibitive rates proposed on different articles of glassware.

* * * * * * *

Why now a compound duty should be proposed on a line of goods where such a thing has never before existed, is inexplicable to us. In articles of woolen manufactures where compound duties have existed it was always claimed, as I understand it, that the specific duty was to reimburse the manufacturer for the duty that was exacted on the raw material, and the ad valorem duty was alone construed as protection. Why a specific duty should be levied on articles of the direst necessity which are not consumed to any extent by the richer people in cities who have gas at their disposal, but on the poorer classes in the city and the country who depend upon a lamp for their light, ranging from 72 to 450 per cent., certainly deserves explanation.

The glass-manufacturers of the country have for years been supplying at least from 80 to 85 per cent. of the entire consumption. The lowering of the tariff on glassware by the act of 1883, through adding 5 per cent. to the rate, but in reality reducing it from 10 to 25 per cent. on low-priced bulky goods through the abrogation of the duty on packages and inland freight, I am safe to say, did not add one item to the list of articles that were being imported and did not detract one dollar from the protection of domestic manufactures, simply because the domestic manufacturers have the market so completely in their control that if the duty were to-morrow reduced by one-half it could not make an inroad into their production by any appreciable percentage.

We are and have been exporting pressed glassware and chimneys to some extent to Central and South America and Germany.

There are certain articles of glassware which the whole world draws from one locality, and if you were to raise the duty to 500 per cent. it would simply result in advancing the price to the consumer or compel him to do without it.

Mr. Louis Windmüller said:

Mr. Chairman and gentlemen of the committee, it is proposed in Schedule K, 375, etc., to raise the duty on wool of the third class, when costing 13 cents and less, to 32 per cent.; when over 13 cents per pound, to 50 per cent. By the administrative bill, packing charges are to be added, so that most wool of this class will cost over 13 cents and would have to pay 50 per cent.

Present duties are:

Two and one-half cents per pound when costing 12 cents or less, equal to 24.6 per cent.; 5 cents per pound when costing over 12 cents, equal to 30.75 per cent.

* * * * * * *

To raise the duty on carpet-wool increases the cost of an article made exclusively for our home market. There is hardly a cottage in the United States without a carpet or rug of some kind. It will add in every household to a tax which is wholly unnecessary and benefits nobody.

No wool is raised in this country for that purpose. If any is so used, when domestic wool is cheap, it will not amount to 2½ per cent. of the product, and that comes from sheep raised in Texas on the Mexican border. If you increased the duty to 100 per cent. you could not induce our farmers to raise sheep for this coarse wool. It would be tantamount to asking them to deteriorate their stock, and to act contrary to their own interests. Sheep bearing coarse carpet wool will produce 2½ to 3 pounds, worth 18 cents per pound, while merino sheep, requiring no more labor, will bring 5 to 6 pounds each, worth 35 cents per pound.

Most of the carpet wool imported into this country comes from the steppes of Russia and Asia, where civilization is unknown. To stimulate the production here, at the expense of our carpet industry, seems like fostering parasites on healthy and growing trees.

Mr. Ernest Werner said:

Gentlemen of the committee, I will not make any remarks upon this very important section of the tariff other than the few condensed statements which I have drawn up in the shape of a short brief. They will concern section 392, with regard to the woolen schedule.

Mr. HISCOCK. Are you a woolen importer?

Mr. WERNER. No, sir; I am a dealer in woolen goods, domestic and imported. My remarks refer entirely to the importation of woolen cloth, cassimeres, etc.

The proposed woolen schedules (H. R. 9416) will establish absolutely prohibitive rates on all goods for men's wear worn by the masses.

The tariff of 1883 was practically prohibitive on woolen cloths, cassimeres, etc., costing less than 80 cents per pound (rate 35 cents per pound and 35 per cent. ad valorem).

Mr. James H. Thorp said:

The article of silk plush used in the construction of furniture, upholstering purposes, box and album coverings, and in various other ways, now pays the Government a duty of 50 per cent. ad valorem. The proposed change in the McKinley bill will make the duty vary from 73 to 148 per cent., and the latter increase upon the lowest grades which are used in the cheapest work. This will be prohibitory, giving the control of prices to two or three American manufacturers.

Mr. Daniel McKeever said:

Mr. Chairman and gentleman, I desire to say a few words to you on the subject of goods for men and women's wear, Schedule K, section 394. Coat linings are one of the necessary things for people who think they have to wear a coat. I present here, and will leave with the committee, two samples, both made of the same material and both costing the same in England. They cost 10 cents a yard. They are 32 inches wide. The rate of duty is 78½ per cent at present. One of the articles they propose to raise to 102 per cent., and the other one, under the McKinley bill, to 135 per cent.; in one case 50 per cent. and the other 100 per cent. more than the present duty on precisely the same thing.

In the summer or in warm weather we wear a light coat and we want a light lining. In winter time we want a heavy lining. One of the samples here weighs 3½ ounces to the running yard and the other 3.8 ounces. The extra weight is simply to give more warmth to the poor man, because gentlemen who can afford a very fine coat will not buy a 10-cent article. This addition is made by mak-

ing goods that are over 4 ounces in weight pay 44 cents and 20 per cent. ad valorem. There is no difference whatever in the samples except a slight difference in the weight, and both cost 10 cents a running yard. One is advanced from 78½ to 102 per cent. and the other from 78½ to 155 per cent. Mr. McKINLEY has evidently made up his mind that the poor man, if he wants to wear any clothing, shall pay very heavily for it.

Mr. SHERMAN. What is this made of?

Mr. McKEEVER. Of mohair, with worsted filling and cotton warp.

I now present sample No. 2, costing 9½ cents a yard, 32 inches wide. The present rate is equal to 80 per cent. ad valorem. It is proposed to raise that to 115 per cent.

I also present another sample costing 15½ cents, the present duty being 63 per cent., and it is proposed to raise it to 122 per cent. for the reason, again, that the goods will run 4 ounces to the square yard and are used for linings in these heavy winter coats.

Mr. VANCE. Can you give us the reason why these gentlemen ask for this increased duty?

Mr. McKEEVER. I can not, sir.

Mr. VANCE. Is there any economical reason or reason of trade?

Mr. McKEEVER. The only reason is one that applies to everything in the bill, that the idea has been to make the poor consumer pay twice as much for his goods as the wealthy consumer would have to pay.

Mr. VANCE. Is not the tariff as established by the present law sufficient to enable the home manufacturers to compete successfully with the foreign manufacturers?

Mr. McKEEVER. Yes, sir; it ought to do so. The samples which I have here are protected to the extent of 78½ per cent., and that ought to be enough. But the absurdity of the proposed bill arises from the fact that in the two samples, both costing 10 cents and both made of the same material and used for the same purposes, it is proposed to raise one to 102 per cent., an increase of 30 per cent., and the other to 155 per cent., an increase of 100 per cent. The only reason given for that is that one happens to be one-fourth of an ounce more to the running yard than the other. This other sample which I submitted, costing 15½ cents per yard, pays to-day a duty equal to 63 per cent., and it is proposed to raise it to 122. I now submit samples 3 and 3 a, costing 21½ cents. You will find that these samples bear out the same argument as is shown by the others. It is raised from 60 to 72 per cent. The one costing 31½ cents is raised from 60 to 83 per cent.

The next question to which I wish to call the attention of the committee is paragraph 348, relating to cotton corduroy. Of course you gentlemen are aware that there is no duty on cotton in this country; but there is a protection in this way. Cotton has got to be shipped away and reshipped here manufactured, and that, together with the matter of freight, insurance, etc., equals a duty of 35 per cent. on those goods. It is proposed to make a specific and ad valorem duty so that an article costing 11½ cents is raised from 35 per cent. to 70 per cent., an increase of 100 per cent. ad valorem. As we go along from goods costing 15½ to 17 cents we find that the duty is raised from 35 per cent. to 64 per cent. These are cheap goods. When we come to something costing 36 cents, the rate is only increased from 35 per cent. to 41 per cent. As a matter of fact, these goods are not made in this country. I may make that statement, because the production is so small that it does not amount to enough to be worth mentioning.

I now come to section K, paragraph 413, relating to velvets, plushes, or other pile fabrics in the piece. These are goods that are used for women's cloaks. A mechanic, whose wife can not afford a sealskin garment, wants to have the next best thing she can get. Here is an article in which a garment retails for about $15 or $16. It is a very good imitation of regular seal. The completed garment retails for about $15 or $16. The cost of that in England is $2.50 a yard, and the present duty 50 per cent. It is proposed to raise that duty to 225 per cent., an increase of 350 per cent. I have been informed that there is only one mill in this country which makes this, and if any industry needs such protection as that it ought to die.

Mr. ALLISON. How many yards make a pound of that?

Mr. McKEEVER. These goods run a pound and a half in the rough to the running yard. They cost in England $2.50 a yard, and, according to the duty proposed, they would cost $5.25 by weight and 15 per cent. ad valorem, which figures are equal to a duty of 225 per cent. That is for the poor man. Now, take a better grade of these goods, worth $6.50 a yard, and the duty at present is 50 per cent. It is proposed to raise it so that it only equals 90 per cent.

Mr. VANCE. How much is the increased duty on them?

Mr. McKEEVER. The duty is increased from 50 to 90 per cent. in one case and in the other one from 50 to 225 per cent. In other words, a man or a woman who can only afford to buy a $15 cloak would be compelled to pay a 225 per cent. duty.

Mr. VOORHEES. The amount of it is that a fellow has no business to be poor.

Mr. McKEEVER. That is very true; but unfortunately the Almighty has arranged things a little differently from what we would like to have them.

Here is an article in astrakhan goods, costing 50 cents a yard. It comes under paragraph 392.

Mr. ALLISON. Is that cotton?

Mr. McKEEVER. No, sir; it is worsted. The present duty on that is 74 per cent. I understand that these goods are not made in this country.

Mr. ALLISON. Is that article known in the trade as astrakhan?

Mr. McKEEVER. Yes, sir. The present duty is 74 per cent. and they propose to raise it to 165 per cent., an advance of 123 per cent. The goods are 52 inches wide. These goods are made of the hair of the alapaca, goat, or other animals.

Mr. ALLISON. Are they made on knitting machines?

Mr. McKEEVER. No, sir; they are regular worsted cloths. These goods are used exclusively for outer coverings. The man or woman who can not afford to pay $100 for an astrakhan cloak wants a $10 or $12 article, which this represents. Here is another one of the same generic class which costs 14 cents; on it the duty at present is 72½ per cent. and it is proposed to raise it to 160 per cent.

Mr. VOORHEES. This is very generally worn?

Mr. McKEEVER. They are very generally worn by the poor consumers throughout this country where they need warm garments. They weigh from 24 to 26 ounces per yard. They are a heavy, coarse fabric. They have paid a duty heretofore, as I say, from 72½ to 74 per cent., and it is proposed to raise it to 160 and 165.

Now, when you get into finer goods costing $2.50, also a heavy goods, but used by the better class of consumers, on which the duty to-day is 61 per cent., they propose to raise it to 100 per cent., thus discriminating again against the poor consumer.

First. I respectfully submit that the rates of duty provided in bill H. R. 9416 on plushes, etc., under section 348, is unnecessary, prohibitory in many instances and discriminates against the poor consumer.

The American manufacturer of the goods covered by section 348 has his raw material free, whereas the foreign manufacturer is obliged to pay the expense of bringing it to his factory and then shipping it to this country.

At present the duty on this class of goods (section 348) is from 35 to 40 per cent. ad valorem, which, in the proposed rates, will run from 80 per cent. down to a little over 30 per cent., but here is where the discrimination comes in, because the lower rates would be assessed on the finer goods, while the higher rates would be levied on the poor man.

The samples representing goods covered by this section, which I have the pleasure of leaving with your committee, will fully, I think, exemplify this.

Second. I respectfully submit that the rates provided for under section 394 on stuff goods is equally as discriminating as section 348.

If your committee will kindly refer to the samples which I handed in they will more fully exemplify my claim.

I beg to call the committee's attention to samples of black mohair serge, marked 1 and 1 A and both costing in England 10 cents per yard, both made of exactly the same materials, both used for the same purpose, coat linings, and both to-day paying the same rate of duty, which is equal to 78½ per cent. ad valorem.

It is proposed to raise the rates on one of the samples to 102 per cent., while on the other it would be 155 per cent.

The reason of the difference between the percentage rates on these two samples is occasioned by the provisions on page 84, lines 1 to 5 of section 394, that goods weighing over 4 ounces to the square yard shall pay certain rates.

One of the samples presented weighs to a running yard one-fourth of an ounce more than the other.

This extra weight is simply put in the goods to make the winter garment, which is intended for the poor consumer, warmer, and there is no reason, right, or justice why the poor man should be compelled to pay 50 per cent. extra on an article in order to keep warm.

I would also call your attention to what is termed the dividing line between the two rates of duty on line 24 of section 394.

In this bill the dividing line is made 15 cents per square yard.

From the year 1867 (if not previous) the tariff bills have made the dividing line of this class of goods 20 cents, and there should be no question that the rates provided for by the act of 1867 are high enough for to-day.

* * * * * * *

Third. I also call your attention to samples of astrakhan, which I submitted, covered by section 392.

These goods are not made to-day in this country, although their protection is 80 per cent., and it is proposed to increase this just 100 per cent.

This class of goods is used altogether by the laboring man, mechanic, or farmer, and the same discriminations previously referred to apply here. Hence the present rate of duty should not be increased.

Fourth. I submitted samples of a silk plush that are dutiable under section 413.

The samples I submitted show that it is proposed to raise the rates of duty on the lower grade from 50 to 225 per cent., while the finer the goods the less in proportion is the duty.

You will observe here the same discrimination against the workingman, and I would respectfully submit that the lines in this section from line 6 to line 12 be stricken out, and the words "50 per cent. ad valorem" be added to line 5, so that it would read: "Velvets, plushes, or other pile fabrics in the piece, 50 per cent. ad valorem."

Mr. P. B. Worrall said:

Mr. Chairman and gentlemen of the committee, the article of which I have to speak in the first instance is that of cotton colored velvets, paragraph 348, Schedule I. Cotton colored velvets are used almost exclusively by the laboring classes. They pay at present an ad valorem duty of 40 per cent. This duty is large enough for revenue, as the goods are not made here. There is not a single solitary piece of these goods made in this country that I know of, and there can be no reason for establishing the industry here because——

Mr. VANCE. Do you say that none of the articles mentioned in paragraph 348 are made in this country?

Mr. WORRALL. This particular article of black and colored cotton velvets are not made here and they do not require the protection which the bill proposed gives them. The goods for which we now pay 5 pence per yard in England now pay an ad valorem duty of 40 per cent. and under the proposed rate they pay 70 per cent., as the duty proposed in this bill is 10 cents per square yard and 20 per cent. ad valorem. You go along to the higher class until you get to those costing 15 pence in England. These goods absolutely pay the same rate of duty now as is proposed by this present bill. The same remarks made by Mr. McKeever with reference to the mohair goods, plushes, astrakhans, etc., will apply very well to these goods. As there is no one to take into consideration except the consumer of the goods, we do not see why the duty should be advanced, and no reason has been given for it.

* * * * * * *

I will show you what the proposed tariff is upon goods of this character, universally made in this country. Formerly these goods were imported from England. In the last few years the American manufacturers have driven the foreign goods almost entirely out of the market.

This is what we call a cotton-warp cassimere, and the woof is made from wool which is imported largely from Australia. This is a piece of merchandise. It is 45 inches in width and at present costs 18½ cents a yard. The present duty is 68 per cent. and the proposed duty is 104 per cent. That represents a very large class of merchandise that is almost universally worn.

Mr. ALLISON. How much of that is wool?

Mr. WORRALL. The weft is wool.

Mr. VOORHEES. These tremendous increases are a surprise to me. What reason is assigned in the trade, that is, in the business, to justify them?

Mr. WORRALL. It is nothing but prohibition. It is not protection.

* * * * * * *

Now, there is one extract that I am going to read to you, gentlemen, made by a man who is our strongest competitor in the manufacture of these articles in the United States of America. He stated to his stockholders in the latter part of March, I think—I have no hesitation in giving you the names, it is Mr. Whitman, treasurer of the Arlington Mills. At a special meeting of the stockholders, held on the 29th of March, 1890, he said:

"I have been your treasurer for a consecutive period of twenty years. During this period the average earnings have been 20.8 per cent. upon the capital. The earnings of last year were nearly three and a half times those of the year previous, and there is every indication that the coming year will be one of the most profitable in the company's history."

This is a statement of an American manufacturer to his stockholders under the present tariff.

Mr. VANCE. A manufacturer of what article?

Mr. WORRALL. He is a manufacturer of these very articles, these cotton warps, wool weft, mohair, and men's dress goods.

The duties proposed by Mr. McKINLEY in this bill are absolutely prohibitory, and I believe that if that bill were to become a law it would result in the undoing of the manufacturers of the country; in other words, I believe that they would be protected to their death.

* * * * * * *

There is but one other article I will speak about, and that is the article of French cassimere. You will find here the samples of the goods with the classification under the present rate of duty and that under the proposed rate of duty. On the lower grade of goods they are increased 32 per cent., and on the better class the duty is increased 20 per cent., and this principle would seem to run through the entire tariff bill.

Mr. David Carlisle said:

I appear before you at the request of my fellow-members of the Linen Trade Association of New York to ask you not to disturb an existing industry by put-

ting a prohibitive duty on linens, as proposed in the bill now before you for consideration. The only offense with which we can be fairly charged is that we have sold our goods (which are necessary to every American household) at too close prices.

The new tariff bill proposes to increase the duties on our goods from 35 per cent., which is the existing rate, to rates varying from 62 to 78 per cent., which would mean an increased cost to the American consumer of $8,000,000 to $9,000,000 per annum.

This increase has been asked for by some gentlemen who say that with adequate protection they will build mills or turn idle machinery to the manufacture of linens in this country. They must desire the United States Government to guaranty them a handsome profit, as one mill has been making these goods for twenty years under the existing rate, and these gentlemen do not agree among themselves, as before previous committees they never asked for more than 50 per cent. duty.

Mr. A. M. Warner said:

Mr. Chairman and gentlemen of the Finance Committee, with your kind permission I will begin with a political disclaimer. We have been accused of being free-trade Democrats, but for myself I am proud to say that I have always been a Republican. I remember the day on which the Republican party was born, and on that day I was a Republican. In my boyish glee I erected over my father's house a flag, and on the flag I wrote a name. I remember well that it was at that time obscure and unknown. To-day it is honored and glorified above and beyond the names of all who have brought honor and glory to the Republic. It has been translated from among mortals and written in letters of unfading light among the stars.

* * * * * * *

One of the principal materials is silk plush. Of this the larger part comes from Germany, and it costs in that country from 21 to 22 cents per yard. Many millions of yards are imported and made up here every year, furnishing employment to large numbers of people, but not a single yard is now being made or ever has been made in this country. On this article the present duty is 50 per cent., but by the House bill it is proposed to raise the rate to 100 per cent. or more. If this rate becomes a law it will entirely cut off the supply for three years or more, as it will be that length of time before the goods can be made here and delivered in any reasonable quantities, and even then only at such exorbitant prices that the trade will not use them and the common people can not buy them.

Another quality of this article comes from England and costs there about 56 cents per yard, and it is proposed to raise the rate of duty from 50 to 150 per cent. Of this quality there are three or four small makers in this country, but there is only a solitary one who is regularly in the business, and I regret to say that it is universally understood by the trade throughout the country that this enormous advance is for the personal and private benefit of this single maker.

These two changes will impose an extra expense upon every family in the United States as consumers and will benefit only the smallest possible number of producers.

Another material, from which are made large quantities of covers for stands, tables, pianos, mantels, and other articles for home use, is wool felt. This article is made in Germany at a cost of about 44 cents per yard. The present rate of duty is about 95 per cent., and by the bill now pending it will be raised to 125 per cent. There are in this country only three leading makers of wool felt, and very naturally they have formed a "combine," and I will say in passing that this particular "combine" is the most rank, radical, and rapacious "combine" in the whole category of "combines." For five years they have held the price of this article at 95 cents per yard with so tenacious a grip that houses in New York carrying $10,000,000 in capital have had to succumb to their power. This article is also used very largely for women's wear, and not a felt skirt has a poor working girl thrown around her form in five years on which she has not had to pay a round sum as tribute to these protected monopolists. This combine is not only fostered and protected by the present tariff; it is directly created by it and could not exist for one moment without it; yet the pending bill will raise the rate 30 per cent. higher.

* * * * * * *

One more article and I shall have finished. This is an article known as embroidered or tamboured covers. They are made in various sizes from 1 yard square to 3 yards long. They have been protected by a tax of 80 or 85 per cent. for more than twenty-five years, yet during this entire time not a single dollar's worth has ever been made or ever attempted to be made in this country. Some of these goods are in the very lowest quality known to the trade, and they are scarcely fit to cover the coarse pine table in the poor man's chamber, and none but the very poorest class of people ever buy them; on this article the rate is advanced from 80 per cent. to about 105 per cent. for no reason whatever. No one desires to make them and no one has ever proposed to make them. No one wants this advance and no one has asked for it. I therefore submit that it is contrary to the existing needs of taxation, and also that it is entirely contrary to the accepted ideas of protective policy.

Mr. Ad. Rosenfeld said:

The present duty on linen collars and cuffs is 35 per cent. ad valorem. If the McKinley bill becomes a law the duty will be 35 per cent. ad valorem and 30 cents for each dozen collars and 60 cents for each dozen cuffs.

The quantity of imported collars and cuffs sold here amounts to about $200,000, while the quantity sold by domestic manufacturers amounts to at least $10,000,000, just fifty times as much; so we think that these figures prove for themselves that the domestic manufacturers are sufficiently protected under the present law.

The duty on imported shirts is at present 25 per cent. ad valorem. If the McKinley bill should become a law, the duty on them will be 50 per cent. ad valorem. The quantity of these goods imported amounts to about $15,000 a year, while the quantity made and sold by domestic manufacturers amounts to at least $25,000,000.

I might quote much more from this valuable document showing the injustice done by this bill to the consumers of such articles as cotton hosiery, window-glass, pocket and table cutlery, buttons, laces, lace curtains, embroideries, spectacles, and many other of the articles of every-day use, and show that in each instance the duty is laid heaviest on the articles the poorer classes are compelled to buy.

The foregoing uncontradicted and unquestioned statements of these very capable gentlemen show many but by no means all of the iniquities of this monstrous measure. They have clearly pointed out many of the articles of life's prime necessities which the great mass of the people, including the poorer classes, are compelled to have, upon which the duties are largely increased and placed at exorbitant rates, but they have not pointed out all of them. They have shown many instances where articles of luxury and costly and extravagant articles of various kinds which can only be obtained by the rich, those who are in affluent circumstances, are subjected to very low rates of duty, but they have not shown all of such cases.

One article of every-day use which necessarily finds its way into every household of the land, the humble homes of the poor as well as the extravagant residences of the rich, which strikingly illustrates the wicked and wrongful, if not criminal discrimination this bill makes against the great masses of the people who are not connected with protected industries, is that of tin-plate.

Tin-plate is not and never has been manufactured in the United States. All of this article that is consumed in this country is imported, and its increased price to the consumers of it, because of the duty laid on it by reason of the tariff, goes directly into the Treasury of the United States, and does not go as bonus into the coffers of some protected monopolist. With no domestic tin-plate industry to protect, with the admission everywhere that increased revenue is not needed, with the solemn declaration contained in the title of this bill that it is "to reduce the revenue and equalize duties on imports," yet, without justification or excuse, it increases the tariff tax on tin-plate from 1 cent per pound to 2.2 cents per pound, an increase of 120 per cent. over the present rate.

The pretext for this is that in some future years some protected monster may, with the assistance of this bill, give birth to an infant tin-plate industry; that preparation for the event must be made now. In order that the people may be well prepared to nurse, nurture, raise, care for, and protect this infant, when born, they now, notwithstanding they are already over-tax-ridden, must pay nearly $16,000,000 per year to give assurance that the infant will be born, and when born that they will furnish it a princely estate. The rule is that one must take care of and support his own offspring. Not so with this royal infant, "tin-plate industry," yet to be born, unless something interrupts the happening of the event. Notwithstanding he will have none of the blood of the people in him, that his parentage will not be of kin to the people, either by blood or marriage; yet they must toil and enslave themselves that he upon his coming into the world may live in royal splendor. Was ever such an outrage proposed? Was ever such an injustice demanded?

The importation of tin-plate last year amounted in value to $21,002,209, and the tax collected from the consumers of it by reason of the already high and unnecessary tariff upon it was $7,279,459. This bill instead of making a reduction of the tariff tax upon it or putting it on the free-list as ought to be done, adds about $9,000,000 more of tariff taxes to it, so that in the future the great body of the people who belong to the poorer classes, and who by either compulsion or desire use tin-plate of any kind, will pay a tariff tax upon it of about $16,000,000 a year.

But this great act of injustice in increasing burdens, and the manner in which the increase is made, does not stand alone in this measure. This bill provides for the reduction of taxes on spirituous liquors of many kinds. It seems impossible of belief, but the fact is that this bill reduces the tariff taxes to be derived from imported brandy, whisky, champagne, and other imported liquors, in the sum of nearly $220,000 per annum. The cost of these articles of luxury to the consumer is cheapened to that extent and the Government loses that amount of revenue each year.

If the outrage ended here it might be endured; but it does not. While this bill is cheapening the cost of these articles it increases the cost of wool and woolen goods in the sum of nearly $15,000,000 a year, on which there is now a tariff exorbitantly high; and in so doing it largely and wrongfully discriminates against the consumers by putting the greater share of the increase upon the coarser and cheaper articles, which are used by the poor and by the laboring people.

On chemicals, metals and their manufactures, wood and its manufactures, agricultural products and provisions, cotton goods, flax, hemp, and jute and their manufactures, wool and its manufacture, silk and silk goods, paper and books, this bill increases taxes nearly $42,000,000, while on earthenware, crockery, and glassware, wine and spirits, and a few other articles it reduces taxation only in the sum of $759,000.

It remains to be seen whether the people will longer continue the party in power who is responsible for such unjust, unwise, and unpatriotic legislation, which is the sole cause of all the grounds of complaint that the great mass of the people, farmers, workingmen, and, in fact, all except those who are the favorites of such legislation, are now so justly making.

Several attempted defenses for this unwise, unjust, and unequal system of Federal taxation have been urged by its advocates. Chief among them, and perhaps its earliest, is that it is necessary to give life and strength to our manufacturing industries and high and remunerative wages to our working people; not only to those employed in such industries, but to working people generally.

Senator FAULKNER, of West Virginia, in his very recent and remarkably able speech delivered in the Senate against this bill, has so completely shown that a high protective tariff does not benefit the laboring people that I quote from that portion of his speech. He said:

Mr. President, the advocates who seek to perpetuate this system of legislation, appreciating their inability to arouse the interest or stimulate the philanthropic sentiments of the American people in behalf of the beneficiaries of this great public wrong, endeavored to divert attention from the true methods

which prompted their zeal in behalf of protection for protection's sake, by assuming the disinterested rôle of the champions and protectors of American labor against the low-priced pauper labor of Europe.

Such an appeal, coming from the source that it does, should excite suspicion. The experience of the past has demonstrated that there are but two members that compose this partnership. Labor is not one of them.

The power of the Republican party results from the magnificent organization, the cohesive force of mutual interests, and the unlimited means of the protected manufacturers. So long as its policy is controlled by the capitalist it can not champion the cause of labor.

The value of this argument in the political market is rapidly depreciating in recent years. Education, experience, the study of these economic questions, and their practical operation, is rapidly convincing the American laborer that between him and capital there is such a conflict that, in the language of the Republican John Jarrett, before the Senate Committee on Labor and Capital, "wages of labor can only be maintained at a living standard by the workingmen belonging to labor organizations. The advance in prices did them no good; the manufacturer took it all."

The Republican party, through whose legislation these great monopolies have been enabled to concentrate the wealth of the country in a few States in one of its sections, and who are the authorized representatives of the wealthy and creditor classes, which division among the people of the United States has been the natural outgrowth of the policy enforced during the last thirty years by that party, can not convince the American laborer that his interest is safe in its keeping, by declaring that high custom-duties must be imposed upon commodities of prime necessity, that labor may be fully and justly rewarded.

The statistics of the increase of the value of labor during periods of high and low tariffs conclusively demonstrate that labor does not reap the benefits that should flow from the sacrifices made by the consumer (of which he is the largest element), and none know this better than those who cry the loudest for protection to American labor.

Mr. President, experience teaches all who will stop to reflect upon this subject there are two great questions entering into and determining the price of labor, first, the demand and supply, and, second, the efficiency of the labor.

It would be useless to consume the time of the Senate in discussing the spirit of these propositions—that the extent of the demand and the number of efficient laborers seeking employment must to a great extent be the measure of the value of the services rendered. The history of the price of labor in all the great and varied industries throughout the length and breadth of our country, from Maine to California, conclusively shows that these two elements, more than any other questions tend to establish the value of labor.

The difference in price for the same class of laborers between the North and the South, and between the East and the West, fully sustains the correctness of the first proposition.

Senator FAULKNER then proceeds to show from tables made up from the bureau of statistical information of the State of Illinois, which it is not convenient to reproduce here, that there was an average decrease of the weekly wages of employés in the following protected occupations, namely: Brush-makers, cloak-factory workers, coal-miners, confectioners, iron and steel workers, iron-molders, organ-builders, paper-mill operatives, salt-laborers, shoemakers, tinners, and zinc-factory men from the year 1880 to the year 1886 of 18 per cent.; while during the same period there was an average increase of the weekly wages of employés of the following unprotected occupations, namely: Bricklayers and stone-masons, electrotypers, hod-carriers, slate-roofers, press-feeders, stair-builders, steam-fitter helpers, stone-block-pavers, stone-cutters, street-railway employés, wooden-block-pavers, and wood-turners of 24 per cent.

Senator FAULKNER, continuing, said:

The Commissioner of Labor concurs in this view in his report of 1883, in which he states that in 1875 the per cent. of wages paid to the value of production in over two thousand establishments was 24.68, and that in 1880 it was only 20.23, a decrease of one-sixth in five years.

It is equally true that in considering the value of labor we should take into consideration its efficiency, or in other words, its capacity to increase productions.

A superficial examination of the relative cost of labor per day in America and England would at once suggest the conclusion that the price of labor is much higher in this country than abroad, but when we take into consideration the efficiency of the American laborer and compare the relative value in price, measured by the value of the product of the two, we at once realize that there is little if any difference.

Mr. EVARTS, then Secretary of State, in presenting to Congress the reports of the United States consuls in relation to the state of labor in Europe, in a letter dated May 17, 1879, sums up the information embodied in the numerous reports, and in reference to the relative value of work performed by the American and European workman, he says:

"The average American workman performs from one and a half to twice as much work in a given time as the average European workman. This is so important a point in conection with our ability to compete with the cheap-labor manufacturers of Europe, and it seems, on first thought, so strange, that I will trouble you with a somewhat lenghy quotation from the reports in support thereof."

And on page 37 he suggests the reasons for the difference in efficiency in favor of the American workmen. He says:

"There is something in the Republic which gives an individuality to the people of the United States possessed by no other people to such a degree Our inventive genius in mechanical appliances is original and at least twenty-five years ahead of Europe. Our people accept innovation, are prepared for it by anticipation. Europeans do not. One workman in the United States, as will be seen from the foregoing extracts, does as much work as two workmen in most of the countries of Europe; even the immigrant from Europe attains this progressive spirit by a few years' association with American workmen. We have no oppressed and stupid peasantry, little more intelligent than the tools they handle. All are self-thinking, self-acting, and self-supporting."

Mr. Blaine, while occupying the same position, in transmitting similar reports to Congress, refers to the subject of wages in the cotton factories in the following language:

"Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proven from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world."

Mr. Frelinghuysen, in transmitting a similar report, in referring to the cost of labor for weaving and printing cloths in England, remarks:

"Your readers will gather from the figures given in the foregoing table of costs that, in the matter of wages, America is as cheap as England."

The correctness of the conclusions reached by an analysis of the reports of our consuls in Europe is confirmed by an examination of the estimates as to the number of hands employed in the manufacturing industries in England and America, and the value of the product turned out by them.

The number of hands employed in the United States in such industries is 5,250,000. The number of hands employed in such industries in Great Britain is 5,140,000. The value of the product in the United States is $8,000,000,000, while the value of the product in Great Britain is but $4,000,000,000. The foregoing are estimates made by Senator FAULKNER.

Continuing, the Senator said:

The utterances upon this subject to which I have referred are the mature judgment of leaders of the Republican party after a careful investigation of the facts, and made in their official character to Congress upon a subject that would necessarily enter into its consideration in framing legislation bearing upon these economic questions.

No element that composes our great population has given more anxious and careful consideration to the effect of the tariff on wages than the laboring masses. The organizations which have sprung up throughout the whole country have tended to educate those directly interested in the subject in the practical effects of its operation. The day has passed when the American laborer can be misled by the catch-words, "Protection for American labor."

The address issued by the Workingmen's Tariff Reform Association of Philadelphia to the workmen of the United States shows a keen appreciation of their relations to a high tariff and boldly proclaims who in fact are the beneficiaries of this legislation. It declares:

"LABOR'S SHARE.

"The wages of labor in the manufactures are but little more than 17 per cent. of the product. In other words, the amount that falls to labor out of the total value of the products is only $17 out of every $100. Now, does it not stand to reason that if a tariff be at all necessary an average tariff duty of 17 per cent. would be amply sufficient to protect American labor against foreign labor, even if the latter got no wages at all? Yet the average of tariff duties now is 47 per cent., although the difference in the wages between this and other countries is not 5 per cent. calculated upon the relative productiveness of labor. Why, then, is this extra 30 per cent. put on? We see it can not protect labor. It does protect the manufacturers not merely against foreign competition, but most effectually against all our efforts to compel them to treat us justly. It is this 30 per cent. extra that secures to them all the benefit from protection and makes it impossible for us to even wring from them a share of it. It makes them free from competition and fortifies them against our just demands, and it yet leaves them free to draw their labor freely from the markets of the world, and the inevitable and natural result is cheap labor and dear goods."

Mr. President, manufacturers should not present themselves to the public as philanthropists; if they do, the facts of history would overthrow the claim. Until a Democratic House originated a law which prohibited it, they hesitated not to import the panper labor of Europe, by contracts made abroad, with mortgages upon its future earnings, place it side by side with the American labor, with no other purpose in view than to reduce its value.

Before the passage of this law, strikes were far more numerous than now. Then, the laborer was in the power of the capitalist; he could be turned out of employment, his family reduced to a state of starvation, and himself to that condition of desperation that would make him yield to the demand of his employer; for, if he refused to accept the wages offered, the markets of Europe were open, and they could be drawn on to supply his place. Thanks to a Democratic House of Representatives, this can no longer be done, and labor may now treat with capital upon a more equal footing.

The information furnished us by the Government shows that the view taken by the Workingmen's Tariff Reform Association as to the per cent. of labor in the protected manufactures is true; and those statistics further show a serious depression in the value of labor under the protection given to the manufactured commodities since the war.

The census of 1880 shows that the value of the manufactured product of this country in 1860 was $1,885,861,676, and the wages paid to produce those commodities amounted to $378,878,966, or 20 per cent. of the product. We learn from the same authority that in 1880 the value of the manufactured products was $5,369,667,706 and the value of the wages paid was $947,919,674, a fraction over 17 per cent. after twenty years of high protection. The wages in 1860 under one of the lowest tariffs this country has ever known, it being lower than the rates fixed by the revenue tariff of 1846, which, averaging under that tariff but $19 on the $100, were 3 per cent. higher than those paid during the period of twenty years when a high protective tariff was in force, the low tariff during that time enabling the manufacturers to keep wages at the higher figure.

In considering the value of wages to workmen in England and America, the question is suggested whether the higher prices paid for labor in this country are not neutralized by the increased cost of living, caused by the enhanced prices given to articles of universal use, by the high duties imposed upon their production or importation by the tariff act.

We must not forget, sir, that the laborer is a consumer, and one of the largest class of consumers, of those commodities which are highly protected. He consequently pays his full share of Federal taxation, and far beyond his equitable proportion of the bounties to the manufacturers. Every article of clothing purchased by himself or by his family, whether it consists of woolen or cotton goods, the tools of his trade, the china, crockery, and glassware used in his kitchen or placed on his table, his knives and forks, the stove on which he cooks his meals, the skillets and pots in which they are prepared, the tin bucket in which he carries his dinner, every article that adds to his comfort, is taxed from thirty-eight to eighty dollars on the $100. This necessarily reduces the value of his labor, which is sold in a free market with no assistance by artificial means of increasing its price.

In estimating therefore the value of labor between two countries the cost of living is an essential element, and between England and the United States it is one that tends largely to equalize wages.

Labor and capital are both necessary to the successful operating of almost all enterprises, agricultural, business, or otherwise. Especially is this so in conducting manufacturing enterprises. With the loss of either the capital put in or the labor employed the enterprise will stop and disaster follow. This being so, labor and capital should go hand in hand on terms of perfect equality. In the organization of manufacturing industries and in the prosecution of the business and labor necessarily employed and incident thereto, labor and capital should, so to speak, form an equal partnership, and the proceeds, profits, and revenues derived from the prosecution of the business ought to be divided between the capital put in and the labor employed as evenly as possible. That such is not and has not been the case in protected industries is apparent to every one.

The entire labor-cost of all manufactured products averages about 24 per cent. of the entire cost of the production. The average protective tariff duties laid upon like productions, imported from abroad, is 47 per cent. and this bill proposes to increase it. I will not stop to discuss the question whether the tariff increases the price of the domestic manufactured article, as well as the imported manufactured article, to the consumer or not. Everybody knows that it does.

The fact that the capital side of the manufacturing industries is here crying for more tariff is conclusive evidence to the minds of all reasonable persons that the manufacturers desire it to enable them to enhance the prices of their productions to their consumers, no matter what pretext they may offer for it. It is now admitted by the advocates of this bill that its object is to check importations, so that the American market will be reserved, as they say, from competition with the cheap productions produced abroad.

The tariff, enacted avowedly to give the labor side of manufacturing industries high wages, enables the capital side of such industries to market their productions for a price which includes the entire cost of the production and a fair profit besides, except the labor-cost; and, in addition thereto, for enough to pay the entire labor-cost of the production and 23 per cent. more. And this occurs annually. That these enormous profits and proceeds are not given to the working men and women and boys and girls who constitute the labor side of these enterprises, every intelligent person well knows.

The great wealth now enjoyed by those who invested capital in these enterprises and the luxurious manner in which they live, which is apparent to every one, while the working people connected with them are in substantially the same situation they were when they began, which is equally well known, too plainly shows that the tariff neither invites nor compels anything like a fair or even division between capital and labor of the great profits and proceeds which capital and labor united in these enterprises accumulate.

Upon the subject of tariff protection causing a decline in the prices of manufactured commodities and an increase in the wages of workingmen, and that one occupation ought not to have a guaranty upon the part of the Government over another, Senator PLUMB, of Kansas, a leading Republican member of the Senate, spoke, on the 1st of August last, so patriotically and correctly that I quote at length from his speech. He said:

Mr. President, the argument by which this increase of duty is justified is that under high protection prices have gone down, and logically, therefore, the higher the duties the lower the prices to consumers. The argument for putting up duties 300 per cent., 200 per cent., 100 per cent., 25 per cent. or 10 per cent. would, of course, be stronger if it were proposed to put them up ten times more.

The whole tendency of civilization is the reduction of the prices of everything which results from human labor, and to claim that the tariff has been the sole or the main factor in the reduction of prices of manufactured goods is to ignore all the forces of civilization. The American people are entitled to have cheap goods if competition can bring that about.

Now, these people have been making this class of goods for many years, and every time we have touched the tariff we have put up the duty for them. They have had the benefit of years of experience, of ample capital, of unrivaled natural facilities, and of the best market in the world. When is the time coming when the people at large can get some benefit out of the establishment of these industries? Just as fast as we get to that point where we may expect that natural competition will do its work and prices will go down to the consumer, these people come in and say "We need more duties," and up the duties go, whereby the progress of prices downward is arrested. I say the people of the United States ought to have their inning some time, and I think that time has come now.

These duties, Mr. President, do not strike luxuries. I know the time has been, within the recollection of all of us, when painted or decorated ware upon the table of any person except a person over-rich was a rarity. But the people have progressed in their tastes and in their ability to buy, until now the articles of chinaware which we are providing for in the schedule under consideration go of necessity upon the tables of all, rich and poor. What was once an article of luxury has become a necessity.

Therefore, whatever we add to these duties is added to the burden which the great mass of the people have to bear, and it is not a burden, I beg you to observe, to be borne in accordance with the ability to bear. It is practically a per capita tax. A man on his farm uses nearly as much chinaware of this kind as Vanderbilt in his palace. It is not imposing duties upon the theory which has been heretofore advocated in regard to these tariff duties, putting them upon the luxuries, but it is putting them upon the necessaries of life, whereby the burden is borne by all the people of the United States, while according to the further terms of this bill the men who are wealthy and who use articles which are indeed articles of luxury escape high taxes.

* * * * * * *

Mr. President, I believe in so distributing the duties which become necessary for the purpose of raising revenue to carry on the Government as to equalize the conditions existing between the manufacturers of this country and those abroad. If I were in doubt I would resolve that doubt in favor of American manufacturers, but if I knew what the exact facts were I would put them on the same footing precisely, feeling perfectly assured that the American, with his better skill, his keener intellect, would win in the race and that, while he was winning, the people would get the manufactured goods which they were necessitated to buy at a fair and a reasonable price.

That, Mr. President, is as far as I would be willing to go; and I believe that is in the interest of the manufacturers themselves. I believe the country needs competition in manufacturing as in everything else, in order that we may have the best skill, the most enterprise contributing to bring about the best products at reasonable prices. But by putting up duties, giving the manufacturers to understand that, when their profits are slack or whenever their greed increasing with their increasing wealth they want more, all they have to do is to come to Congress and get it, what expectation or reasonable hope have we that we are ever to have the best possible application of skill and enterprise, and with commensurate results?

It is not a question of comparison between the days when crockeryware was scarce and high and the present, because, as I said before, there has been a constant downward trend of the price of everything that has been the result of skilled labor and of the use of machinery, and the people are entitled to have such lower prices than prevail to-day as a more active competition will bring.

The farmer and the merchant take their chances of the course of trade and business. The farmer takes his chances not only of the price in the market of his productions; he also takes the chances of the season. If he has a short crop he must suffer accordingly. If there is an overwhelming crop at home or abroad his prices must go down, and he has got to take what comes, whether it be ruin or prosperity.

The manufacturer is differently situated. He is not willing to take any chance. If there are large importations or other special conditions which reduce the prices of the goods he makes he comes to Congress and says, "Put up the duties in order that this emergent condition may be represented in a permanent law of the land and I may be assured good profits." He wants it to be understood, and so far he has been led to believe, that his profits are to be uniform; at all events they are not to decrease; and when they are not satisfactory he comes to Congress and asks that duties be increased, too often I fear, too often I know, for the good of the people. He may not have been wise in his methods; he may not have been skillful; he may not have been forceful; he may have been the victim of circumstances which would have borne down any man. Is the law to blame?

The law must deal with general conditions, and not with special ones. Whenever the law establishes a duty which will give to the average manufacturer equal opportunity with the foreign competitor it has done all it ought to do. Beyond that he should take his own chances, just as the farmer does, just as the merchant does. Merchants go down; farmers fail everywhere. They do not expect to be exempt from chances of this kind. The manufacturer is the one person who insists that he is never to fail so long as laws can be written and passed putting duties enough upon the articles which he manufactures to enable him to make a profit.

* * * * * * *

Every merchant who goes into business at every cross-roads takes the chances of the bankrupt stocks which may turn up in his field of competition after he has bought his regular supply. He has got to take that chance. But the manufacturer insists he will not take any chances, and so the Carnegies and Joneses, of Pittsburgh, and the Dolans and Dobsons, of Philadelphia, have prospered and grown rich beyond the dreams of avarice at the expense of the people of the United States, while they were not filling the market which we expected they would fill and had a right to expect they would fill when we gave them the duties which the present law imposes, to be increased by the bill before us, upon the articles which they produce.

An attempt is constantly being made by the capital side of a large majority of the protected industries of various kinds to show that the per annum per cent. upon the capital invested is small. In all such cases a premeditated effort to deceive is attempted by causing the original sum put in to be lost sight of. The stock it represents has been "watered" many times, and the annual per cent. is often based upon an amount three, four, or five times as large as the amount originally put in, all accumulated out of the earnings of the business. In such cases, instead of getting 6, 8, or 10 per cent. on $100,000 capital actually put into the business, that sum, by the earnings of the business, has since been made to represent three, four, or five times that amount. So that, instead of the annual interest being 6, 8, or 10 per cent. on the capital originally and actually put into the business, it is 30, 40, and 50 per cent. annually, and oftentimes more than that on the whole amount of the capital actually put in.

On the 25th day of July last, Senator MCPHERSON, of New Jersey, stated to the Senate of the United States that factory stock was selling in the State of Rhode Island for $2,050 upon the par value of $100 per share and paying 20 per cent. annual dividends upon that increased amount; that in Massachusetts factory stocks were selling from $2,000 all the way down to $600 per share upon a par value of $100 per share. No one did or could deny these truthful statements. These are some of the fruits of protection.

Let me call attention to some of the trusts that have been formed under the benign influence of a protective tariff and the protection now extended to each class of commodities manufactured by them.

Salt trust, 50 per cent.; earthenware trust, 56 per cent.; Bessemer-steel trust, 84 per cent.; plow-steel trust, 45 per cent.; general steel trust, 45 per cent.; nail trust, 45 per cent.; general iron trust, 45 per cent.; copper trust, 24 per cent.; zinc trust, 52 per cent.; tin trust, 32 per cent.; lead trust, 74 per cent.; glass trust, 55 per cent.; soap trust, 25 per cent.; linseed-oil trust, 54 per cent.; rubber-shoe trust, 25 per cent.; envelope trust, 25 per cent.; paper-bag trust, 35 per cent.; cordage trust, 25 per cent.

These are but a few specimens of the well fed children of the protective tariff.

Let us see whether the protective tariff fairly distributes the wealth of the country among all the people or whether it centers it in the hands of a favored few. The total wealth of the United States, real and personal, in round numbers is $60,000,000,000. How is this vast sum of money and property distributed among the people? During our recollection, as late as 1847, there was but one man in the United States reputed to be worth $5,000,000.

Now, according to a very carefully prepared statement by Thomas G. Shearman, a very careful and accurate gentleman, published in the September number, 1889, of The Forum, of the number of persons in the United States who own more than $5,000,000 of money and property each, there are two hundred persons worth $20,000,000 each, making $4,000,000,000. There are four hundred persons worth $10,000,000 each, making $4,000,000,000. There are one thousand persons worth $5,000,000 each, making $5,000,000,000. There are two thousand persons worth $2,500,000 each, making $5,000,000,000. There are six thousand persons worth $1,000,000 each, making $6,000,000,000. There are fifteen thousand persons worth $500,000 each, making $7,500,000,000, in all making the vast sum of $31,500,000,000 of the wealth of our country owned by less than twenty-five thousand people. We have a population of 65,000,000 of people, and more than

one-half of the entire wealth of our whole country is owned by less than twenty-five thousand of our people. Can the monarchies of the Old World make a greater boast?

Let it not be said that the high protective tariff distributes the wealth, prosperity, and happiness of the country among the larger number of the people. On the contrary, it is a demonstration that it creates classes and delivers into their hands the wealth of the country which rightfully belongs to the masses.

It is claimed by the advocates of this bill, and those who are for high protection generally, that a high protective tariff benefits the farmer in many ways, the most important of which is that it furnishes him a splendid home market in which he can sell his products for highly remunerative prices. The farmer's experience has taught him otherwise. If the statement was that the protective tariff furnishes the manufacturers a splendid home market in which they can sell their products for highly remunerative prices it would be absolutely correct.

According to the census of 1880, all persons engaged in gainful occupations numbered 17,392,099. Of this number 3,837,112 persons were engaged in manufacturing, mechanical, and mining interests. It is safe to say that this number included all persons who were engaged in protected industries of any kind. This would leave the number of persons engaged in occupations and industries not protected by the tariff at 13,554,987.

The large number of persons not engaged in protected industries would be much more likely to afford a market for the small number of persons who are engaged in protected industries than that the small number of persons engaged in protected industries would be able to furnish a market for the large number of persons not engaged in protected industries. It is readily seen that 3,837,112 people having a market of 13,554,987 people to sell their products to would be less likely to have a surplus of products than would 13,754,987 people having but 3,837,112 persons to sell their products to.

But for other and more convincing facts and reasons it is manifest that a protective tariff, no matter how high, will not furnish a home market sufficient to consume all of the products of the unprotected industries, especially those of the farm and field. Agricultural products constitute generally about three-fourths of our annual exports. We send abroad annually about $500,000,000 of the products of the farm and field. This is done after our farmers have supplied the home market. Surely this large amount of agricultural products would not be sent abroad to be sold in the open free-trade markets of the world if they could be marketed at home. This is the surplus that the farm and field produces each year, and it is dependent alone for its disposition upon the foreign markets.

There was imported into the United States during the last fiscal year $745,131,652 of foreign merchandise of all classes. The surplus of five classes of agricultural products alone, to wit, breadstuffs, provisions, raw cotton, unmanufactured tobacco, and live animals paid for $503,049,648 of it, leaving only $242,082,004 to be paid by all our other exports. The farm and field sent abroad last year of breadstuffs and provisions alone the sum of $227,998,505.

The home market will do for the manufacturers, but it will not do for the farmers.

But it is insisted by the advocates of this bill that if it is passed it will check foreign importations of agricultural products and thus save the agricultural market to our farmers. The report of the Committee on Ways and Means of the House of Representatives, speaking upon this point, says:

> The committee have given months of investigation to the existing conditions of agriculture and matters connected therewith. This great industry is foremost in magnitude and importance in our country. Its success and prosperity are vital to the nation. No prosperity is possible to other industries if agriculture languish. In so far as the fostering care of Government can be helpful, it must be faithfully and forcefully exerted to build up and strengthen agriculture.
>
> That there is widespread depression in this industry to-day can not be disputed. Every remedy within the scope of practical legislation known to your committee has been recommended in the proposed measure to meet the urgent requirements of the situation.
>
> The enemies of the protective system have no word of criticism for the real causes of agricultural depression, no suggestion of relief from the real burdens which are weighing it down to-day; but, seizing the present as a favorable time, they solemnly charge that the decline in our market is solely due to the tariff.
>
> They are pleased to ignore the fact that one of the purposes of a protective tariff is to hinder a still larger importation of foreign produce, and thus save the market from still greater depression.
>
> The friends of larger foreign importations feel no apprehension or alarm at the rapidly increasing volume of foreign agricultural produce pouring into our markets. These and all other actual perils they pass by. They are silent to this danger which offers real harm to American agriculture and clamor against its only safeguard and protection.
>
> But your committee, sensible to the importance of this industry, prompted by the single motive to lift it to the highest level of profitable employment, believe that they offer in the bill presented all the relief which tariff legislation can give to it.
>
> A critical examination of the subject will show that agriculture is suffering chiefly from a most damaging foreign competition in our home market. The increase in importations of agricultural products since 1860 has been enormous, mounting from $40,000,000 to more than $356,000,000 in 1889. This is an increase of nearly 900 per cent, while the population increased for the same period less than 300 per cent. During the past ten years this growth in importation has been most rapid and has been marked by a significant and corresponding decline in prices of the home-grown product.
>
> * * * * * * *
>
> We advance the rates upon the products of the soil which either do supply or can be bought to supply the home consumption. Horses, cattle, hogs, sheep, bacon, barley, beans, pease, beef, mutton, pork, buckwheat, butter, cheese, eggs, hay, hops, milk, poultry, flaxseed, vegetables, potatoes, flax, hemp, hides, wool, tobacco, and many other products are advanced with a view to save this entire market to the American farmer.

The report of the committee, in placing our agricultural imports for the past year at $356,000,000, has evidently taken the statement of Secretary Rusk of the Agricultural Department. But Mr. J. R. Dodge, statistician of that Department, only places them at $239,464,443, and Col. R. P. Porter, Superintendent of the Census, places them at $233,000,000. Which one of these gentlemen is correct, if any, is not known. But placing our agricultural imports at such figures was evidently intended to deceive. In all of these estimates sugar and molasses, rice, tea, and coffee, and many other articles which do not and can not compete with our agricultural products at all, are included. Upon this point I submit, as conclusive as to what the truth is, the following extract from the very able and accurate speech delivered in the Senate on the 28th of July last, by Senator VEST. He said:

> In order, however, to dispose of the fraudulent exhibits made by these gentlemen, so that no one can hereafter give any weight to what they have published, I call attention to Table A, page 110 of the Annual Report of the Treasury Department on Commerce and Navigation for 1889, which gives the total value of articles of food and animals imported during that year as $239,140,245, being 32.10 per cent. of our entire imports. Of this amount sugar, molasses, sugar-candy, and confectionery amounted to $93,334,511; coffee, $74,724,882; tropical fruits, including nuts, $18,746,417; tea, $12,650,640; fish, $4,809,357; spices, $3,157,866; cocoa, $2,142,061; olive oil, $696,065.
>
> It will certainly not be contended that any of these articles compete with the farm products of this country, and if their aggregate amount, $210,315,909, be deducted from the annual imports of articles of food and animals as stated above, namely, $239,140,245, the entire sum of such imports which really compete with the crops of the American farmer is $28,824,336.
>
> So that instead of exaggerating the amount of imports in 1889 competing with those of our farmers $175,000,000, as I have before stated, these official champions of a high tariff have, according to the Government reports, falsely swollen the sum more than $205,000,000!
>
> What must be thought by honest men of a cause which demands such work as this or of public officers who will lend themselves to it?

This bill provides for an increase of the tariff on corn, wheat, potatoes, hay, and many other agricultural products. Upon this point, as on almost every other, it is a fraud, a sham, a cheat, and a disreputable device, intended to deceive and mislead. Upon these false and hypocritical provisions the dishonest teacher in the Republican party will attempt to impose upon the great agricultural and labor interests of the country. But he will not, aided by these provisions of this bill, accomplish his fraudulent and dishonest purpose. When this bill and the methods of its defense by its advocates are truthfully placed before the people, as they surely will be, it will fail, as fail it must, and in its failure it will wreck and ruin its party and its advocates.

Last year we imported 2,401 bushels of corn, worth $1,216, and during the same time we exported thirty thousand times as much. In round numbers we exported during last year 70,000,000 bushels of corn. We exported 312,186 bushels of corn meal and imported 396 bushels. Last year our wheat imports were 130,649 bushels, while our exports of wheat were 46,414,129 bushels. We imported 1,155 barrels and exported 9,374,803 barrels of flour. Rye, exports, 287,252 bushels; imports, 16 bushels. Bacon and hams, exports, 400,224,646 pounds; imports, 272,130 pounds. Beef, mutton, and pork, exports, 286,991,121 pounds; imports, 215,575 pounds. Lard, exports, 318,242,990 pounds; imports 1,073 pounds. Our hay imports were 105,395 tons, but we raised at home over 50,000,000 tons of hay.

So long as our farmers have so great a surplus of their products it will be impossible to protect them in their home market from foreign competition, for they practically have none.

But, if we are to judge the future by the past, the farmer is to have hereafter a greater amount of his productions dependent upon the home market and a less amount of them taken by foreign markets than heretofore. Let a few figures state this proposition.

The Chief of the Bureau of Statistics, in his report for the year ending June 30, 1889, states that the value of our foreign commerce declined steadily, from $1,545,000,000 in 1881 to $1,314,900,000 in 1886. In 1889 it lacked $63,000,000 of being equal to that of the year 1881. And during all of this time we had constantly increasing productions.

The statistics show that in 1881 our exports were $902,000,000, while in 1889 they were but $742,000,000. This shows a decrease in the short period of eight years of $160,000,000. In 1880 we sold to France over 68,000,000 pounds of pork, but last year only 82,000 pounds, or scarcely more than $5,000 worth.

This large falling off of our exports during so short a time is almost exclusively from farm and field products, and is because of the excessive duties imposed by our tariff on foreign importations. And, if this ruinous system of tariff taxation is to continue, the tillers of the soil may well make their calculation now to lose one-third of their foreign exports in every period of seven or eight years.

The same report shows that in 1880 our exports of breadstuffs alone were not far from $288,000,000, while last year they were but $123,000,000, showing a difference in the foreign export of that farm product alone in those two years of $165,000,000.

During this time what were other countries doing? In 1880 Russia exported to the European markets but a little more than 35,000,000 bushels of wheat, while last year she sent to the same markets more

than 126,000,000 bushels. British India during the same period increased her exports in wheat in about the same proportion. The Argentine Republic in 1880 exported to the European markets the insignificant amount of 42,000 bushels of wheat, while last year she sent to the same markets 8,000,000 bushels. Our wheat exports have fallen from 144,000,000 bushels in 1880 to less than 50,000,000 last year. In 1880 we furnished nearly 70 per cent. of all the foreign wheat sold in European markets, while last year we furnished scarcely 22 per cent. of it. This is the way and manner in which the high protective tariff has benefited the farmers, and it is the manner in which it will continue to benefit them.

This unconscionable, ruinous, and criminal protective tariff, the petted child of the Republican party, has compelled the great countries in Europe who do not raise wheat, and who formerly took our surplus, to now draw largely for their supply of that article from the cheap-labor countries of Russia and British India. The Republican policy of protection has had much to do in compelling foreign countries, who were formerly the best purchasers of our surplus agricultural products, to develop cheap-labor countries and take their inferior agricultural products in preference to ours, which are known throughout the civilized world to be of the best quality.

This miserable pretense of increasing tariff duties on agricultural products for the benefit of the farmers is only in the vain hope of keeping from their sight the dreadful fact that for every dollar they have paid into the public Treasury for revenue they have by tariff compulsion paid into the pockets of protected cormorants from three and a half to four and a half dollars of bonus, wrung from them by the unjust, wrongful, and unequal tariff which is the pride and the glory of the Republican party.

During the last ten years the net profits of manufacturing establishments, railroad companies, insurance companies, national banks, and telegraph companies have been nearly $15,000,000,000.

From whom and from what industries has this vast sum of money been drawn?

According to our last published census, namely, that of 1880, the total value of our imports of all kinds for the year 1882 was $433,173,335.

The duty upon them received by the United States was $194,464,758. The value of our home products for the same year was $2,440,502,649. The increased cost of these articles to American consumers, because of the tariff, was $556,938,637.

These estimates and figures are taken from the last published census, that of 1880, and are based on the rates of duty imposed by the last tariff act, that of March 3, 1883, and the estimated price for which our manufactured articles were sold to home consumers is put upon the basis that they were sold 25 per cent. less than the tariff of 1883 increased their price. This surely is a safe basis of calculation for the owners of the protected industries.

During the ten succeeding years the United States would get as revenue on imports ten times as much, namely, $1,944,647,580, and during the same period the home manufacturers would get on the same class of articles manufactured by them a bonus of $5,569,386,370 by reason of the tariff enabling them to advance the price that much above the entire cost of production of every kind. Bear in mind that this calculation is based upon the assumption that they did not advance the price within 25 per cent. of that permitted by the tariff. If they advanced the price to the tariff limit of course they got more than $1,000,000,000.

But it has been and to some extent it is still claimed that this tariff was necessarily imposed, and is now being maintained, so that the manufacturers can give high wages to the workingmen, thereby enabling them to accumulate property, live comfortably, and not be brought into competition with the cheap labor of other countries, and that in point of fact this largely increased price of the product over the ordinary cost of production is due entirely to the American labor account and that labor receives the entire tariff increase. Let us see. By the last published census the whole number of men and women, boys and girls, counting boys under sixteen years of age and girls under 15 years of age as one-half a hand, employed in our manufacturing industries was 1,327,881 and the wages they received per annum was $463,606,049, scarcely averaging to each person employed, including high-salaried officers, $1.12½ per day.

But take the entire labor-cost per annum of $463,606,049 that manufacturers pay for labor from the yearly increase of prices for their products of $556,938,637, which the tariff has enabled them to impose upon American consumers, and it is found that each year they receive $93,332,588 more than the entire labor-cost of that year of their $2,440,502,649 of productions. During the last ten years the tariff has paid the manufacturers their entire labor account, it has reimbursed them for every dollar they have paid out for wages and labor of every kind, and has given them $933,325,880 besides.

If the tariff is for the great and exclusive benefit of the men and women and boys and girls who work in protected industries, why has not the tariff given this vast sum of money to them, instead of having enabled the owners of the enterprises in which these laboring people earned it to keep it themselves, without having given one farthing in remuneration for it?

Bear in mind that my last statement of what the manufacturers' enormous profits during the last ten years was, is on their labor account alone, their entire profits during that period, as I have already stated, being $5,556,386,370. It is safe to say that the basis upon which these calculations are made will hold good for the purpose of estimating the profits which have accrued to the owners of American manufacturing industries for the last twenty years; and, if so, we find that during that period they have received as profits exclusively more than $11,000,000,000.

From whom have these vast profits been derived and what industries, if any, have suffered because of them?

According to the last published census there were in the United States 17,392,099 persons having occupations of some kind. All of those persons engaged in manufacturing, mechanical, and mining industries were 3,837,112, or about 21 per cent., and these are all of the persons who are engaged in enterprises that receive protection from the protective-tariff laws. The remainder of our population who are engaged in occupations, including 7,670,493 persons who are employed in agriculture and a large number who are engaged in trade and transportation and professional life, are not recipients of favors bestowed by the protective-tariff system.

It can not be shown, no attempt has been made to show, that any or all of the industries that are not the recipients of protected-tariff favors have made or are making anything like the enormous profits that it must be admitted the protected industries have made and are making. Hence it must follow that the protected industries draw their support from those that are not protected.

But an answer to this may be attempted by saying that in turn the unprotected industries draw their support from the protected ones. But such an answer, if attempted, would not hold good, because it is impossible for the small number of persons engaged in protected industries to maintain the large number of persons who are engaged in other occupations.

The present deplorable condition of agriculture, labor, trade, and all occupations and business other than those protected by the iniquitous and criminal protective tariff, too plainly show that the protected industries are feeding and fattening off of those that are not protected. The continued increase in value of all investments in protected industries and the continuing decrease in value of property, labor, and all else that is invested in industries which are not protected by the high-tariff laws too plainly affirm the truth of the proposition that a protective tariff is the destroyer of all save those who are its immediate beneficiaries to admit of doubt.

Alex. J. Wedderburn gave testimony before the Ways and Means Committee of the House of Representatives while that committee was considering this bill. From information, facts, and figures furnished him on the 25th of January last by Hon. J. R. Dodge, statistician of the Department of Agriculture, he conclusively showed that during the last ten years in the six New England States, Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, and the States of New York, New Jersey, and Pennsylvania, States in which the great protected industries are located, agricultural lands, farms, houses, and homes, and the product of agriculture, had all steadily declined from year to year; that the average price of agricultural lands in these States in 1870 was $50.35 per acre, while in 1880 it was but $41.24 per acre; that in 1870 these States had 62,744,384 acres of agricultural lands, suitable for cultivation, of the value of $3,159,030,197; that in 1880 these same States had 67,985,640 acres of agricultural lands suitable for cultivation; that is, these States had in 1880 of agricultural lands 5,241,256 more acres than they had in 1870. But these lands were in 1880 worth only $2,803,443,402, notwithstanding the large increase of acreage. From 1870 to 1880 the farmers of these States had increased their farming lands 5,241,256 acres; but in the total value of all their lands, including this increase of acreage, they lost during that period the sum of $355,586,795. The decline in these lands has been constantly going on from 1880 to the present time.

Mr. Wedderburn also shows with equal accuracy that, with this large increase of acreage in these States of agricultural lands, there was from 1870 to 1888, inclusive, an annual decrease in the value of the agricultural products raised upon them; that in 1870 the value of the crops raised was $869,793,467, while the value of those raised in 1888 upon these same lands, and more than 5,000,000 acres more, was but $693,917,636, making a difference in the value of the crops raised in 1870 and those raised in 1888 of $175,876,104 against the farmers.

What the loss is in value of crops for each year during the period from 1870 to 1888 is not given; but it is safe to say that the loss to the agricultural interests of these States during the period mentioned, namely, the loss in the value of lands and the loss in the value of crops from year to year raised on them, is not less than $1,000,000,000, probably more. This loss occurred in these nine Eastern agricultural States, the most of them being Republican in politics and States in which the majority of the great protected industries of the country reside, flourish, and grow fat as well as insolent and intolerant.

These agricultural lands were in close proximity to great protected industries. Surely if a protective tariff, through the agency of great manufacturing industries which it builds up, is to lend a helping hand

to agriculture it would have done so to these lands, its nearest and most convenient neighbors.

But these nine States are not more than one-fourth in number of the agricultural States of the Union, and many of them are small. They but faintly represent the great agricultural interests and enterprises of their sister States of the great Mississippi Valley and the boundless West. If these Eastern States, living in the very market-places of the great, never-failing, and all-enduring home market which it is claimed by the advocates of this bill that protection will surely afford, have suffered in loss and damage to agriculture, as I have shown, who can estimate, who can compare, who can comprehend, who can imagine the incomparable and incomprehensible loss that agriculture has sustained in the great Northwest and in the Mississippi Valley?

The agricultural people throughout the whole Union have seen their labor go unpaid, their lands, homes, and property depreciate in value; they have seen the products of their labor, farms, and fields hawked about in the market-places at home and abroad and finally sold at the lowest possible prices. They are conscious that they are compelled to buy the necessaries of life in the highest possible protected market and pay whatever prices for them the protective industries demand, while the fruits of their own labor are aimlessly drifting about in the wide open market of free trade and finally sold for whatever price the autocrat of protection is willing to pay.

The dreadful, distressful, and deplorable condition of agriculture and labor everywhere makes it a demonstration that, under the accursed power and influence of protective-tariff legislation, the enormous gains, revenues, proceeds, and incomes which the protected industries are daily accumulating are being not only cruelly but dishonestly wrung from those occupations and enterprises which are the basis of civilized life, labor and agriculture.

Although the passage of this bill, entailing, as it will, its many wrongs and injuries upon the country, is a foregone conclusion, the people who will be its greatest sufferers are not without hope. They take great encouragement from the fact that during its pendency in Congress the chief advocates of a high protective tariff have been forced to admit that an exclusive home market is not sufficient for the best interests of the many great occupations and industries which are not the beneficiaries of protective-tariff laws.

On the 14th day of July last, Secretary Blaine, the great leader of his party and its greatest protection advocate, writing to his close and intimate personal and political friend, Senator FRYE, in reference to this bill, said:

> But there is not a section or a line in the entire bill that will open a market or another bushel of wheat or another barrel of pork.
>
> * * * * * * *
>
> Our foreign market for breadstuffs grows narrower. Great Britain is exerting every nerve to secure her bread supply from India, and the rapid expansion of the wheat area in Russia gives us a powerful competition in the markets of Europe.
>
> It becomes us, therefore, to use every opportunity for the extension of our market on both of the American continents.

No words can be plainer than these are, that the great agricultural interests of our country demand that the European markets shall be open to them. But if it were possible, by the use of language, to make this proposition plainer, Secretary Blaine did so in his speech delivered at Waterville, Me., on the 29th day of last month. He said:

> I wish to declare the opinion that the United States has reached a point where one of her highest duties is to enlarge the area of her foreign trade. Under the beneficent policy of protection we have developed a volume of manufactures which, in many departments, is over the demands of the home market. In the field of agriculture, with the immense propulsion given to it by agricultural implements, we can do far more than produce breadstuffs and provisions for our own people; nor would it be an ambitious destiny for so great a country as ours to manufacture only what we can consume or to produce only what we can eat. We are already, in many fabrics and in many products, far beyond that, and our great demand is expansion.
>
> * * * * * * *
>
> As I have already intimated, I am here to speak of the expansion of our foreign trade.
>
> * * * * * * *
>
> By no figure of speech can we flatter ourselves into the belief that our trade with our American neighbors is in a prosperous condition.

Here is the broad declaration made that "the expansion of our foreign trade" is needed. The Democratic party, as well as all other advocates of tariff reform, so declare. But is this effort, if it be an effort, of Secretary Blaine and his associates in the leadership of the Republican party an honest one to expand our foreign trade or is it merely a device, a scheme by which the attention of the country is to be drawn away from a consideration of this bill?

Is it a frank, fair, and open effort to devise some just plan by which relief can be brought to our many suffering non-protected industries or is it a covering to be cast over this bill to hide its shame and disgrace from the public eye? Secretary Blaine, in his speech referred to, very nearly, if not completely, answers this question.

He said:

> What I mean to speak of briefly is a system of reciprocity—not in conflict with a protective tariff, but supplementary thereto—presenting a field of enterprise that will richly repay the effort and energy of the American people.

Secretary Blaine says that our foreign trade is to be expanded by reciprocity. Reciprocity means mutual action and reaction; such reciprocal rights, advantages, or obligations. When applied to business or trade between different powers or countries, it means that there shall be a mutual agreement and consent to the same by such powers or countries. Mutuality is the basis on which reciprocity rests. There can be no profitable interchange of commodities by two or more countries unless there is the mutual consent of each country to the same.

Secretary Blaine says that this reciprocity must not be in conflict with a protective tariff, but supplementary thereto. Why is reciprocity needed, if needed at all? It is because our high protective tariff for the last twenty-five years has destroyed the good and profitable trade relations that we formerly had with foreign countries. This being so, can it be supposed that we can restore profitable foreign trade relations by reciprocity or otherwise so long as we maintain a high protective tariff?

In answer to Secretary Blaine's declaration that reciprocity must not conflict with our protective tariff, but be supplementary thereto, Senator VOORHEES well and beautifully said:

> As well might he have announced that he was in favor of such a system of summer rains as would nourish the parched and burning fields of the husbandman, but at the same time not be in conflict with an absolutely clear, cloudless, and scorching sky overhead. The principles of reciprocity and the principles of a protective tariff can no more go together in harmony, and are no more of kin, than the sublime truths of the Declaration of American Independence and the dark edicts of Russian despotism.

But Secretary Blaine has forced his reciprocity idea upon his associates, and what is it? Within a few days of his Waterville speech Senator ALDRICH reported from the Senate Finance Committee an amendment to this bill, which the Senate afterward adopted. Here it is:

> That the exemptions from duty of sugar, molasses, coffee, tea, and hides, provided for in this act, are made with a view to secure reciprocal trade with countries producing these articles; and for this purpose, on and after the 1st day of July, 1891, whenever and so often as the President shall be satisfied that the Government of any country producing and exporting sugars, molasses, coffee, tea, and hides, raw and uncured, or any of such articles, imposes duties or other exactions upon the agricultural or other products of the United States, which in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States he may deem to be reciprocally unequal and unreasonable, he shall have the power and it shall be his duty to suspend, by proclamation to that effect, the provisions of this act relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, for such time as he shall deem just, and in such case and during such suspension duties shall be levied, collected, and paid upon sugar, molasses, coffee, tea, and hides, the product of or exported from such designated country.

It is seen that this amendment only applies to such countries as have sugar, molasses, coffee, tea, and raw and uncured hides for sale to us. It applies to no other country whatever. And in consideration that we receive such articles, or any one of them, free of duty, that the country or countries from which we so receive them shall receive all our agricultural or other products without the imposition of duties or other exactions upon them. That perhaps would do very well if we could enforce it regardless of the wishes of countries exporting these articles, or any one of them, with which we desire to deal. But is it to be supposed that any country, having a variety of exports, will buy our agricultural and other products, and admit them to its ports free of duty, because we merely allow these articles of sugar, molasses, coffee, tea, and raw hides or any one of them to enter our ports free of duty, while we exact a duty upon everything else it brings or offers to bring to us?

It is evident that this scheme of partial reciprocity is intended to apply solely to those countries having no exports other than these mentioned or some of them. We all very well know that such countries are not, and never have been, the best purchasers of our agricultural products. Many of them raise agricultural products quite extensively and others are so connected with countries other than ours that they purchase such supplies quite extensively from them.

If this scheme, when adopted, as it will be, extends our foreign trade at all, it will not extend it in the interest of agriculture to any material extent. I fear that the underlying motive for it is to further advance the interests of protection. If we are to have reciprocity, why not have it on a broader scale? Why not, at least, extend it to France and Germany, who would furnish a market for the farmers of the West for at least $250,000,000 worth a year of our pork, wheat, flour, corn, and other agricultural productions?

But the proposition contained in the Senate committee amendment conferring on the President the exercise of power belonging exclusively to Congress is radically wrong. The Constitution provides that all legislative powers shall be vested in Congress, consisting of the Senate and the House of Representatives; that bills for raising revenue shall originate in the House of Representatives, but that the Senate may propose or concur in amendments; that Congress shall have power to lay and collect taxes, duties, imposts, and excises. Congress must exercise these powers. It can not rightfully confer the exercise of any of them upon any other department of the Government.

This amendment proposes to leave it to the President alone to say whether foreign countries are or are not imposing duties or exactions upon our exports, and when we will and when we will not lay and collect taxes, duties, imposts, and excises upon sugar, molasses, coffee, tea, and raw hides, or any of them. These powers belong exclusively to Congress. Congress has no authority to impose any of them on the President, and it would be unwise to do so if Congress had that authority.

If we are to have reciprocity let it be broader and more liberal than the plan proposed, and let it be plainly provided for by a law of Congress which is self-executing, not one depending for its enforcement upon the opinion of the President.

Sir, the people of this country well know that it is not necessary to be driven to accept either partial or complete reciprocity to relieve them from the great distress and pall of gloom which now overhangs them. The evils of high protective-tariff laws can be escaped from without resorting to experiment. The people know that complete and unlimited reciprocity is free trade, and that they do not desire. They know that partial reciprocity in the plan proposed will not reduce tariff taxation on the necessaries of life and will not cheapen the cost of living to them. They know the remedy, and they in their own good time will have it. They know that a reduction of the tariff to a revenue standard, an economic conduct of Government, the laying of the lowest duties on articles of necessity, and putting many of them on the free-list, and the laying of the highest duties on articles of luxury will bring them that substantial relief so much needed.

For the success of these and kindred measures the Democratic party, aided by good men everywhere, will contend until the last vestige of the robber tariff is gone, until the exercise of the taxing power on the broad basis of equality and justice is an assured fact, until the righteous doctrine of tariff reform, equal and exact justice for all and exclusive privileges to none, is so firmly embedded in the management of our public affairs that nothing can eradicate it.

The Tariff.

SPEECH

OF

HON. GEORGE W. ATKINSON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 21, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. ATKINSON, of West Virginia, said:

Mr. SPEAKER: I hold in my hand a paper on the constitutional basis of a tariff for protection, which portrays the practical effects of such a tariff in the development of the country's resources, and especially of Southern industries, under the stimulating influence of protective duties. I consider this paper a noteworthy contribution to the discussion of the subject from a liberal-minded Democrat of Southern birth and of Virginia lineage. It is a dignified, thoughtful, and instructive discussion of a subject in which farmers, mechanics, manufacturers, producers, and consumers are alike deeply concerned.

The writer of the article, Mr. George Baber, a Kentucky Democrat, has the courage of his convictions, and represents the progressive element of the Democratic party in the South. The paper should be read and dispassionately considered by Democrats throughout the South and West, where misrepresentations of the protective system are so studiously made in subserviency to reckless party aims.

The title of the paper is

PROTECTIVE DUTIES VS. TAXES.

Mr. Speaker, I ask permission to have the article referred to printed in the RECORD. It is as follows:

This paper is designed to show that a protective tariff is a constitutional policy, a part of the original purpose of the Government, and a wise measure of economy—important to the whole country, but vitally so to the Southern States of the Union; and that, properly construed, it is no part of the system of taxation for which the fundamental law provides.

I.—THE CONSTITUTIONAL BASIS OF PROTECTION.

The advocates of free trade and the opponents of protective duties allege that the tariff is solely a tax—a tax which, to the full amount of the duty laid on importations, increases the cost of such commodities to American purchasers, and, to that extent, creates a burden that is mainly, if not exclusively, borne by the consumers. This assertion was distinctly made by President Cleveland in his annual message of December, 1887, when he employed the following terms:

"But our present tariff laws, the vicious, inequitable, and illogical source of unnecessary taxation, ought to be at once revised and amended. These laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty. So it happens that, while comparatively few use the imported articles, millions of our people, who never use and never saw any of the foreign products, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles."

This quotation from Mr. Cleveland, whose authority is accorded the highest credit among the enemies of protection, contains the sum and substance of the free-trade theory. It is accepted by the advocates of that theory as a clear and accurate statement of their views. It is a primer of elementary free-trade principles, and as such will be examined in the light of the Constitution and of the actual results of the protective system. It is believed that the theory is inconsistent with sound political economy, unsupported by practical experience, and at variance with the fundamental law. So far from being solely a tax, or a burden, the tariff is neither. It creates a home market, and to that extent becomes a safeguard to the people against oppressive charges for the comforts of life, in fact, an indirect but positive measure of relief to consumers of both domestic and imported commodities, inasmuch as it multiplies and diversifies domestic industries, engenders competition among producers, and cheapens prices to purchasers, while furnishing opportunity to capital and employment to labor.

The origin of the protective system is contemporaneous with the Government, and may be easily traced. The eighth section of the first article of the Constitution, on which all tariff legislation rests, declares that "Congress shall have power to lay and collect taxes, duties, imposts, and excises to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States." This section narrates the several things which Congress may do in framing a tariff. It discloses the discrimination which the Constitution establishes between taxes on one side, and on the other the duties, imposts, and excises that may be laid and collected by Congressional authority.

Appealing to popular prejudice against taxation, the free-traders habitually construe the words "taxes, duties, imposts, and excises" as synonymous terms, this construction being essential to their theory; but it is believed that such construction is not sustained by any fair rule of interpretation. Taxes, duties, imposts, and excises are not employed in the Constitution as synonymous words, else they would present a tautological and meaningless array of terms by no means characteristic of the learned framers of the Constitution; but the very order in which they appear is such as to indicate distinctive meanings as well as the various objects to which they relate.

The duties, imposts, and excises which Congress may lay and collect are not taxes in the accepted use of the term, nor are they levied as such upon individuals. The taxes, however, which Congress may lay and collect, being apportioned among the several States on the basis of population, are levied upon individuals. They are laid upon neither foreign manufacturers nor importers of foreign goods, nor upon property of any kind anywhere, but pro rata upon citizens of the United States. They can not be laid upon citizens of a foreign land, inasmuch as such persons being beyond the territorial limits of this country, the Federal Government possesses neither the right nor the power to collect taxes from them.

While, then, the taxes which Congress may lay and collect are assessed upon only the citizens of the United States, the duties and imposts for which provision is made are to be differently laid and otherwise procured. They are to be laid with uniformity, throughout the United States, upon foreign importations. Duties and imposts, therefore, are not taxes within the meaning of the Constitution. They are not laid upon the people. They constitute, in fact, only a commercial license collected from foreigners, which leaves the whole field absolutely free to our own citizens, but the payment of which, at ports of entry, must precede the introduction of certain foreign commodities or manufactures into American markets—upon the principle that all goods imported into the country for sale ought to bear their proportion of the revenue necessary to support the Government. They are intended to equalize two unequal, conflicting and competing conditions having reference to the comparative costs of similar productions in American and in foreign markets. They are designed to cover the difference between these two conditions, maintaining a system of living wages and thereby insuring a fair advantage to the products of American labor.

As was said by the late Samuel J. Randall, in Congress, May 18, 1888, "If a tariff does not in itself give higher wages to labor, it does preserve from destructive competition a system in which labor can and does receive better wages, or a larger share of the fruit of its own toil, than in any other system. No two industrial systems, side by side, with labor in one receiving double the wages of labor in the other, could long exist under free trade between them." Therefore, duties and imposts are laid in conformity with certain percentages enumerated in tariff schedules, based upon original costs of the imported commodities at the places of manufacture, the percentages indicating the difference between wages in America and abroad in the production of the same articles, and being practically the charges for the admission of such commodities into this market—said charges being proportioned to the ability of the commodities to afford revenue and in the ratio of their costs to the foreign manufacturer.

Duties are graded with reference to certain classifications relating at once to the value and to the character of the importations upon which they are laid, and showing the importance of this market to the importer. Imposts, whether laid with regard to any particular classification, and whether pertaining to the separate valuation or cost of commodities at places of export, or to the quality of the commodities themselves, or with regard to quantity and to weight, are, like duties, always levied with reference to relative costs of production and with a view to protecting the American market against unequal competition from abroad.

II.—MEANING AND PURPOSE OF CONSTITUTIONAL TAXES.

The taxes which Congress may lay and collect are inland taxes. Being apportioned among the several States on the basis of population, they are head taxes and can not be modified here and there, as occasion may require, to remove incidental oppression, as may be done in reference to tariff duties, by either so increasing or reducing the schedules thereof as to insure a judicious use of the constitutional power to regulate commerce with foreign nations. The taxes, when laid, must remain as unchangeable rates everywhere, and proportionately oppressive, whether higher or lower.

The excises named in the Constitution were also intended to act as inland taxes, relating to business pursuits, especially to the manufacture and sale of tobacco and of alcoholic liquors. They are a species of taxation seldom laid, and never except for purely revenue purposes, such as necessitated, in 1791, the internal-revenue system which was repealed in 1802 at the instance of President Jefferson, which was restored during the war of 1812-'15, and which, being again revived for war purposes between 1861-'65, has been fitly called a war tax.

As already indicated, the taxes on one hand and on the other, the duties, imposts, and excises which Congress in its discretion may lay and collect, differ in respect to uniformity. Unlike duties, imposts, and excises, the taxes authorized by the eighth section of the Constitution need not be uniform as regards ability to bear them, nor can they be, inasmuch as they are apportioned upon the basis of population, irrespective of the ability to pay. It is apparent, therefore, that taxes are not synonymous with duties, imposts, and excises. The constitutional discrimination between these significant terms is too obvious to be ignored. It arises from the fact that duties and imposts are external taxes, relating solely to imported commodities and not intended to be levied upon the people.

But the taxes named in the Constitution, being levied on the people or apportioned on the basis of population, are used in contradistinction to revenue derived from importations. It was never intended that customs officers should collect taxes from any portion of the American people. It was the fundamental error inculcated on this point by Mr. Calhoun, Mr. McDuffie, and Mr. Hayne, in opposition to the views of Mr. Lowndes, of the same State, that led the masses of South Carolina into the acts of nullification, whereby, in 1832-'33, they endeavored to thwart the tariff law of 1828—acts of nullification that in-

voked the proclamation of President Jackson against the free-trade rebellion of that day.

The South Carolinians, imbued with the theory of free trade, erroneously declared that duties upon importations were unconstitutional and unjust taxes upon themselves. Being an exclusively agricultural community, without facilities for manufacturing, or even a desire to procure them—maintaining a system of labor based upon slavery instead of wages, and with which manufacturing was incompatible—the people held, with Adam Smith, Richard, Ricardo, and other European philosophers of the mercantile school, that "America should become a great and sole producer of agricultural products;" and hence they believed it was their interest to exchange the surplus of their single industry for low-priced foreign goods; cheap in cost of production abroad, admitted here free of duty, and without competition or rivalry in the home market. They believed they could thus buy cheaper than they could make. They knew nothing, in fact, of the possibilities of that home market which, under the nurturing influences of the tariff, caused our forges and factories, in 1889-'90, to produce $4,000,000,000 worth of manufactured merchandise, all of which found purchasers and consumers in the United States, excepting about $200,000,000 worth, which was exported to foreign markets. Having no manufactures of their own, and being averse to educated and skilled labor, they could see no virtue in the tariff. Deluded by the theory of free trade, they regarded all duties as so much added to the price of imported manufactures, and therefore an unnecessary burden; in fact, an obstruction to commerce, and a tax to be resisted by South Carolina.

But imposts and duties had then, as now, a radically different purpose from that which the South Carolina nullifiers ascribed to them, and which, with equal error, was imputed to them by President Cleveland in his message of December, 1887, when, in terms almost identical with those used by the nullifiers, he held that "our present tariff laws are the vicious, inequitable, and illogical source of unnecessary taxation," the "primary effect of which," as contended by him, "is to raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties."

But imposts and duties are not taxes levied upon the people; and as shown every day by the prevailing prices in American markets for the necessaries of life, whether of foreign or of domestic production, imposts and duties do not "raise the price to consumers of all articles imported and subject to duty by precisely the sum paid for such duties," it being universally true that, as a result of the protective system, "when a domestic manufacture has attained perfection or has been established, and has engaged in the prosecution of it a competent number of persons, the marketable product invariably becomes cheaper to the consumer than the foreign article for which it is a substitute," and with which it is thrown into competition.

The reason of this is that the internal or domestic competition which arises from the multiplication of rival industries in the production of the same article, under the protective system, inevitably averts every thing like monopoly, and by degrees reduces the price of the article to the minimum of a reasonable profit on the capital invested. This fact has been abundantly illustrated, inasmuch as under the auspices of the protected policy there have been developed, and there now exist in the United States, at least 300,000 manufacturing establishments as legitimate competitors in our own home market—a fact that disproves the whole free-trade theory on the subject. As said by a distinguished Democratic statesman, the late President Buchanan:

"This is the true American system. It protects all interests; it abandons none; it never arrays one against the other."

Imposts and duties contain, therefore, no element of taxation in the constitutional meaning of the term. The objects on which they are placed and the uniformity with which they are laid are such that they neither operate as taxes nor beget oppression. They operate evenly and equally upon all the imported commodities that are affected by them, and likewise upon all purchasers of such commodities, whether the purchasers be rich or poor. They operate equally because laid uniformly as parts of a system that must, in itself, be uniform and applicable alike to all custom-house regulations.

While this is true of duties and imposts, the taxes laid within the discretion of Congress may be grossly unequal, because governed by no such rule of uniformity. In the apportionment of taxation among the States objects are not taxed in accordance with any schedule of percentages based upon cost of production, but individuals are taxed, and that, too, without reference to their ability to pay.

These definitions are not merely theoretical. They are substantial. They rest upon business principles, involving essential distinctions in political economy as affected by legislation. They mark the difference between the conflicting policies of free trade and protection, demonstrating that, in the proper use of terms and as exemplified in the experience of mankind, the imposts or the duties laid upon commodities that come in competition with similar articles of American production constitute neither a tax nor a burden upon consumers.

The framers of the Constitution, when conferring upon Congress an unlimited power to lay duties and imposts, did not intend thereby to make provision for a system of taxation upon the American people. Such a purpose was foreign to their plans, duties and imposts being no part of the taxing system devised by the framers. On the contrary, they are a wise provision for raising necessary revenue from external sources, for encouraging American labor, and, therefore, a potent means for developing, diversifying, and preserving American industries, whereby the independence of the nation is maintained and its constant growth insured. This conclusion, based upon indisputable facts, destroys the rule of synonyms as applied by free-traders in construing the eighth section of the Constitution, points out a flagrant perversion of terms, and effectually exposes a fundamental fallacy of free trade.

III.—VIEWS OF THE EARLIER STATESMEN.

The power to "regulate commerce with foreign nations" by levying duties and imposts was lodged in the respective States under the old Articles of Confederation, but experience proved it to be unsusceptible of effective use. When, therefore, the Federal Constitution was framed, the delegation of this power to the General Government became, with the concurrence of all the States, a conspicuous feature of that instrument; and the history of the time, no less than the opinions frequently uttered by the statesmen of that day, may be quoted to show that the power thus delegated was intended to be applied not for purposes of revenue only, but also for the protection and encouragement of domestic industries in competition with the cheaper products of foreign labor.

The annals of the period abound with events that illustrate the transition from the old to the new system of government. For instance, among the first petitions laid before Congress in 1789 was that signed at Baltimore, Md., by a large body of tradesmen and mechanics, who, in view of the embarrassed condition of the manufacturing interests, and in view also of the lack of adequate legislation by the States under the old régime, said:

"The happy period having now arrived when the United States are placed in a new situation, when the adoption of the General Government gives one sovereign Legislature the sole and exclusive power of laying duties upon imports, your petitioners rejoice at the prospect this affords them that America, freed from the commercial shackles which have so long bound her, will see and pursue her true interest, becoming independent in fact as well as in name; and they confidently hope that the encouragement and protection of American manufactures will claim the earliest attention of the supreme Legislature of the nation, as it is a universally acknowledged truth that the United States contain within their limits resources amply sufficient to enable them to become a great manufacturing company, and only want the patriotism and support of a wise and energetic government."

In pursuance of these considerations the Baltimore petitioners besought Congress to "impose on all foreign articles which can be made in America such duties as will give a just and decided preference to their labors, and thereby discountenance the trade which tends so materially to injure them and impoverish their country," thus asserting the protective principle with clearness and force. Petitions similar in purpose and in expression to this one were addressed to Congress by mechanics, tradesmen, agriculturists, and manufacturers of Massachusetts, of Georgia, and of New York, and, in compliance with them, the First Congress enacted July 4, 1789, a law for laying duties on goods, wares, and merchandise imported into the United States, the preamble of which was in the following words, namely:

"Whereas it is necessary for the support of the Government, the discharge of the debts of the United States, and the encouragement and protection of manufactures that duties be laid on goods, wares, and merchandise imported."

Mr. Madison, who was recognized at the beginning of the Government, as ever thereafter, as the highest authority upon all constitutional questions, supported with zeal in the Congress of 1789 this first enactment for the "encouragement and protection of manufactures," and while the measure was under consideration he addressed that body in the following terms:

"The States that are most advanced in population and ripe for manufactures ought to have their particular interests attended to in some degree. While the States retained the power of making regulations of trade, they had the power to protect and cherish such institutions. By adopting the present Constitution they have thrown the exercise of this power into other hands. They must have done this with an expectation that these interests would not be neglected here."

This utterance was an unequivocal expression of opinion that, under the new Constitution, Congress possessed the power, and was in duty bound to exercise it, to levy duties and imposts not for revenue only, but likewise for the encouragement and protection of American industries in contradistinction to the products of foreign labor. Mr. Madison held it to be the duty of Congress to lay on such industries the "fostering hand of the Government." While this authoritative expounder of the Constitution was President he sent to Congress, soon after the war of 1812-1815, a special message in which, referring to the results of that struggle and to the legislative needs of the country, he said:

"But there is no subject that can enter with greater force and merit into the deliberations of Congress than the consideration of the means to preserve and promote the manufactures which have sprung into existence and attained an unparalleled maturity throughout the United States during the period of the European wars. This source of national independence and wealth I anxiously recommend, therefore, to the prompt and constant guardianship of Congress."

Years after his retirement from the Presidency, when, in 1828, the constitutionality of protective duties was questioned by a few gentlemen who antagonized the tariff of both the years 1824 and 1828, Mr. Madison again expressed his views in emphatic terms on the subject, using, in a letter addressed to his distinguished friend, Joseph C. Cabell, of Virginia, the following language:

"A further evidence of the constitutional power of Congress to protect and foster manufactures by regulations of trade—an evidence that ought to settle the question—is the uniform and practical sanction given to that power for near forty years."

This significant expression from Mr. Madison was in keeping with the views of all of his great contemporaries, being strikingly harmonious with the declarations which had been made by the illustrious statesman and financier, Andrew J. Dallas, who, when Secretary of the Treasury of the United States, had repeatedly offered in his official papers conclusive reasons in favor of a tariff for protection. In one of those papers Mr. Dallas said:

"There are few, if any, governments which do not regard the establishment of domestic manufactures as a chief object of public policy. The United States have always so regarded it. In the earliest acts of Congress which were passed after the adoption of the present Constitution the obligation of providing by duties on imports for the discharge of the public debts is expressly connected with the policy of encouraging and protecting manufactures."

In the same paper from which the foregoing quotation is made, evidently aiming to render more clear the reasons for encouraging and protecting manufactures by duties on imports, and thereby show their essential relation to all other industrial interests, Mr. Dallas said:

"The interests of agriculture require a free and constant access to a market for its surplus and a ready supply of all the articles of use and consumption on reasonable terms; but the national interest may require the establishment of a domestic in preference to a foreign market, and the employment of domestic in preference to foreign labor in furnishing the necessary supplies."

A more distinct assertion of the power of Congress to lay duties for the purposes of protection could not have been made by Mr. Dallas. So well understood and so fully accepted were similar views of constitutional power, repeatedly uttered by Mr. Madison, Mr. Jefferson, Mr. Dallas, Mr. Monroe, and their contemporaries, during the forty years which succeeded the First Congress, that President Jackson, in addition to his open advocacy of the protective tariffs of 1824 and 1828, assumed that the correctness of those views was established beyond dispute; and he referred to the constitutional power and duty of Congress to establish a tariff for protection in the following words, which are quoted from his famous annual message of December, 1830:

"The power to impose duties on imports originally belonged to the States. The right to adjust those duties with a view to the encouragement of domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other. The States have delegated their whole authority over imports to the General Government without limitation or restriction, saving the very inconsiderable reservation relating to the inspection laws.

"This authority having thus entirely passed from the States, the right to exercise it for the purpose of protection does not exist in them (the States), and consequently, if it be not possessed by the General Government, it must be extinct. Our political system would thus present the anomaly of a people stripped of the right to foster their own industries and to counteract the most selfish and destructive policy which might be adopted by foreign nations. This surely can not be the case; this indispensable power, thus surrendered by the States, must be within the scope of the authority on the subject expressly delegated to Congress."

These expressions from President Jackson are clear and convincing. They appear in marked contrast to the utterances on the same subject that have come from Mr. Cleveland, from Mr. CARLISLE, from Mr. MILLS, and from Henry George, the free-trade leaders of to-day, whose theories are the same as those which inspired South Carolina's ordinance of nullification in 1832-'33, and which were formulated in the first article and eighth section of the Confederate constitution of 1861, wherein, after defining the authority of the Confederate congress over foreign commerce, there appears the following inhibition:

"Nor shall any duties or taxes on importations from foreign nations be laid to promote or to foster any branch of industry."

The inhibition thus expressly laid upon the Confederate congress is identical with that which the exponents of a tariff for revenue only, or of free trade, are now endeavoring by an illogical construction of the Federal Constitution to lay upon the Congress of the United States, a construction which was distinctly

condemned by the founders of the Government, a construction against which the Democrats who are consistent followers of Jefferson and Madison, of Dallas and Jackson, most earnestly protest, and to which the American people can never submit except at the expense of the country's prosperity and power.

IV.—SOME RESULTS OF THE PROTECTIVE POLICY.

And now the questions arise: Has the protective system been productive of beneficial results during the century that has elapsed since the establishment of it by the Congress of 1789? And has it become so interwoven with the common weal as to be an essential part of the American policy of government? Or have the results of protection verified the predictions of its enemies? The constitutionality of the system has been affirmed by Washington, by Madison, by Hamilton, by Jefferson, by Lowndes, by Monroe, by Jackson, by Richard M. Johnson, by Felix Grundy, by Martin Van Buren, by James Buchanan, and by Samuel J. Randall; nor can it be fairly questioned, in view of their frequent expressions of opinion and of the plain provisions of the Constitution itself. The only remaining problem to be considered relates to the wisdom or to the expediency of the system as illustrated during the present century; and in determining this question the results of the system furnish the surest test of its value.

The growth of American industries since 1789, when the first tariff was enacted by the American Congress for the "encouragement and protection" of American manufactures, has been simply marvelous, and that growth, as the free-traders themselves admit, has been chiefly due to the protective system; but meantime there has been no legalized nor even visible oppression inflicted under its auspices with a view to either the upbuilding or the enrichment of any particular interest to the detriment of another, nor to increasing the power of any particular class at the expense of the masses.

In fact, property is more equally and equitably distributed in America to-day than at any other period since the adoption of the Constitution. The immediate benefit conferred upon any protected article has been always conveyed either directly or indirectly to all classes of consumers and shared more or less by all kinds of domestic production. Protection has given inspiration and thrift to labor and to capital everywhere. In fact, the hand of taxation has never been laid upon the people through the tariff, nor have their energies been either cramped or restrained by hostile legislation in the adjustment of protective duties.

With the exception of a brief period, running between 1833 and 1842, and again between 1847 and 1862, the country has maintained a tariff framed with special care to subserve the policy of protection through the collection of duties and imposts. And yet, in spite of all contrary theories, what is the practical result? Has the country's progress been retarded? On the contrary, have not all the activities of the nation been developed in an extraordinary degree by the protective policy?

The answer to these inquiries is found by reference to the country's internal resources, whereby it appears that the result has been the establishment of a varied and growing home market, the extent of which can be estimated only by the consumption of home productions in supplying the wants of the American people. The recent report of the minority, signed by JOHN G. CARLISLE, R. Q. MILLS, BENTON MCMILLIN, C. R. Breckinridge, and ROSWELL P. FLOWER, of the Committee on Ways and Means of the present House of Representatives, contains, on page 25, the following statement, namely:

"The imports of merchandise into the United States during the last fiscal year amounted to the sum of $745,131,652, and we paid for them mainly by sending to other countries our surplus agricultural products. We exported and sold in other countries during that year breadstuffs worth $123,876,061, provisions worth $104,122,444, raw cotton worth $237,775,270, unmanufactured tobacco worth $18,901,068, live animals worth $18,374,805—making in all $503,049,648 for these five classes of articles, which all came from our farms. Agricultural products constitute generally about three-fourths of our annual exports, while a very large part of the other fourth consists of petroleum and other oils, coal, and manufactured goods made from free raw material, such as cotton goods, leather, etc."

These facts, which the opponents of protection must accept as correct, furnish, though not so intended by the minority report, a conclusive reply to the free-trade theory. The logical conclusion from them demonstrates the wisdom of protection. They show that our great Republic, the thriftiest land on earth, embracing a population of nearly 65,000,000, has flourished beyond measure, notwithstanding the fact that its imports for the last year amounted to only $745,131,652, and its exports of breadstuffs, provisions, raw cotton, unmanufactured tobacco, and live animals—which all came from our farms—amounted to only $503,049,648.

These facts indicate that in all matters of material wealth this country has attained the highest point of national independence yet known in the history of civilization. They point to the vast volume of unexported products derived from the employment of American labor. They show, also, the value and extent of the home market which protective duties have developed. They prove that the American people, in spite of a flood-tide of largely burdensome immigration from foreign shores, have become self-supplying and well-nigh self-supporting by reason of the development of their own resources. What these resources are may partially appear from statistics which show that the total production, in bushels, of the products of our farms, in 1861, was 2,066,029,070; in 1887, 2,460,457,000, and, last year, nearly 3,000,000,000. The value of the farm animals in the United States in 1861 was estimated at $1,721,795,243, and in 1890 at more than $2,507,050,058.

It appears, also, that the production of manufactures and of agriculture, the total of our transportation business and of all other resources that serve to magnify and enrich a free land—the quantities no less than the values—have doubled in the last ten years. Now, the difference between the extent and value of production on one hand, and the extent and value of imports and exports on the other, illustrates at once the importance of the home market, the aggregate consumption of home productions, and, consequently, the country's internal prosperity, no less than its independence of all foreign markets for supplies.

These indisputable facts vindicate the policy of protection for American industries. They show what the tariff has done and may do for American resources in competition with the products of foreign labor. It may, indeed, be truly said that "it is not in the figures of exports, but in the figures of production that we see the nation's progress." And, as a further illustration of the advantages to be derived from a thrifty home market, the observation of a profound student of political economy is pertinent, namely, that "upon the importations of any considerable period, as, for example, since the enactment of the Morrill tariff in 1861, a careful reckoning can not fail to show that the saving to the American people, by reason of the stimulated home competition in the cost of the foreign commodities consumed here, far exceeds the duties paid into the Treasury."

Contemplating the beneficent consequences of the protective system and discussing the actual conditions of material and industrial growth, North and South, East and West, Mr. Edward Atkinson, the able statistician, has, in spite of his free-trade tendencies, summarized the whole matter in the course of an article in The Century Magazine, wherein he substantially concedes that there has never been a period in this nor in any country equal to the present in America, as indicated by the following obvious facts, namely:

First. So large a production made and distributed at so low a cost in ratio to the capital invested, either in production or in the mechanism of distribution.

Second. So low a rate of profit sufficing to satisfy capital and to induce further investments in any and all arts.

Third. So high a general rate of wages earned in so small a number of hours of work per day.

Fourth. So large a purchasing power in each unit or dollar of wages or earnings when expended for the necessaries or the comforts of life.

Fifth. In no previous period has the workman received so large a proportion of the joint production of labor and capital, or its equivalent, either in money or in goods.

V.—RESULTS OF FREE TRADE AND OF PROTECTION CONTRASTED.

The most impressive argument in support of protective duties, in contradistinction to non-protective duties, is furnished by the country's experience under the free-trade tariff which prevailed between 1847 and 1861 and under the distinctively protective system which, having been based upon the Morrill bill of 1861-'62, has been ever since maintained. The condition of the Treasury and of the public credit at the expiration of the two periods illustrates the practical effect of the differing policies. For instance, Bolles's Financial History of the United States from 1861 to 1865 (pages 4 and 5), describing the financial situation at the beginning of the civil war, states the following memorable facts, namely:

"The credit of the Government had been undermined by the preceding Administration. The revenues had withered away without concern, the public indebtedness had been increased, and money could be borrowed only at very high rates. When Congress met in December, 1860, the Treasury was empty, bankrupt. There was no money to pay the public creditors who were then pressing for payment. There was not money enough even to pay members of Congress. In the middle of January, 1861, General Dix, who had been appointed Secretary of the Treasury, wrote to the chairman of the Ways and Means Committee, saying: 'Within the last few days the amount of overdue Treasury notes presented for redemption has exceeded the power of the Treasurer to place drafts in payment on the assistant treasurer at New York, where the holders desired the remittances to be made, and an accumulation of warrants to the amount of $350,000 has occurred on this account on the Treasurer's hands, which he has been unable to pay.'"

In contrast with the situation in 1861, as thus portrayed by the historian, appears the existing financial condition of the country. At the end of nearly thirty years of tariff protection and in spite of the appalling expenditures caused by the civil war between 1861 and 1865, the following undeniable statement is made by the majority report in support of the pending tariff bill as submitted by Mr. MCKINLEY, from the Committee on Ways and Means of the present House of Representatives, namely:

"We are advised from the annual report of the Secretary of the Treasury that the ordinary revenues of the Government, actual and estimated, for the fiscal year ending June 30, 1890, will be $385,000,000, and that the expenditures for the same period, actual and estimated, will be $293,000,000, leaving a surplus of $92,000,000. The estimated amount required for the sinking fund will be $48,321,116.99, leaving an estimated net surplus of $43,678,883.01. The excess of revenues over expenses estimated for the fiscal year ending June 30, 1891, we are advised from the same source, will amount to $43,569,522.30, which, with the amount of cash now on hand and available, reaching nearly $90,000,000, the committee believe will justify a reduction of the revenue in the sum contemplated by this bill."

The foregoing facts, indicating the prosperity of the country and the solidity of the public credit, may well awaken the pride of every American citizen, in contrast to that sense of humiliation which must have filled every patriot's heart in view of the bankruptcy that illustrated the free-trade experiment which culminated in 1861, when the Government, so far from having a surplus in its Treasury, was compelled not only to borrow $5,000,000, but to pay 12 per cent. interest on the loan.

VI.—SOUTHERN INDUSTRIES AND PROTECTION.

As additional illustrations of the effect of the protective system in stimulating labor, promoting investments of capital, and developing long hidden wealth in the Southern States, where has ever existed a vital need for such a stimulus, there are abundant facts and figures to be quoted in contradistinction to the imaginary evils which free-trade representatives of that section so vigorously portray when assailing the tariff, both in and out of Congress, on the hustings and in the press, where they frequently show a greater aptness for denunciation than for argument. It is authoritatively stated that in the last four years 140,000 new manufacturing and mining enterprises have been organized in the Southern States, while since 1880 the railroad mileage in that section has been increased by at least 21,000 miles.

It is estimated that since 1880 the sum of $800,000,000 has been expended in building new roads and improving old ones; and during the present year there have been established 90 flour and grist mills, 94 foundries and machine shops, 35 iron blast furnaces, 15 potteries, 65 cotton-seed mills, 16 rolling mills, 370 woodworking factories, 53 electric-light works, 50 ice factories, 100 street-railway companies, 45 water-works, and 73 mining companies. These facts are full of significance. But, furthermore, as a practical demonstration of the value of protection, see the ratio of increase for one decade that is disclosed by the following figures relating to the multiplication of cotton mills, and to the production of cotton, of iron, and of coal under the shelter of a tariff for protection.

Cotton mills in 1880		142
Cotton mills in 1889		345
Increase, 142 per cent.		
Cotton consumed in 1880	bales	180,000
Cotton consumed in 1889	bales	497,000
Increase, 174 per cent.		
Pig-iron produced in 1880	tons	211,000
Pig-iron produced in 1889	tons	1,306,000
Increase, 555 per cent.		
Coal produced in 1880	tons	1,963,374
Coal produced in 1889	tons	12,947,000
Increase, 502 per cent.		

TOTAL VALUE OF PRODUCTS.

Value of products in 1890	$3,347,445
Value of products in 1889	30,947,760
Increase, 813 per cent.	

Thus has the South been drawing inspiration from the much-abused system of protective duties. That system has multiplied investments in every field of Southern endeavor. It has drawn millions of money into the South and put it into co-operation with unshackled labor. It is turning the old into the new. President Harrison disclosed the philosophy of the situation when, in his inaugural address, discussing the effects of a tariff for protection, he said of the Southern States:

"Mill fires were lighted at the funeral pile of slavery. The emancipation proclamation was heard in the depths of the earth as well as in the sky; men were made free and material things became our better servants. The sectional element has happily been eliminated from the tariff discussion. We have no longer States that are necessarily only planting States. None are excluded from achieving that diversification of pursuits among the people which brings wealth and contentment. The cotton plantation will not be less valuable when the product is spun in the country town by operatives whose necessities call

for diversified crops and create a home demand for garden and agricultural products. Every new mine, furnace, and factory is an extension of the productive capacity of the State, more real and valuable than added territory."

Thus, rising to her feet with the aid of a tariff for protection, the new South represents the pluck, the vigor, the intelligence, and the patriotism of men who are building afresh from the ashes of a desolated fabric. Before the war the South knew but little of factories, of mills, and of furnaces. Scarcely a mine, whether of iron, of copper, of lead, or of coal, in all her borders, had been touched by the hand of toil. Immense districts, filled with great resources, were inhabited by a population that seemed content to enjoy—

> The silence that is in the starry sky,
> The sleep that is among the lonely hills.

But look now at Virginia, West Virginia, Eastern Kentucky, Tennessee, Arkansas, Alabama, Georgia, and even Florida and the Carolinas! A better life has been brought to light through trial and distress. New activities have been awakened by the vitalizing power of protective duties. The ruins of the old South have been made to enrich great fields of free and enlightened enterprise. Surely, no such results can be ascribed to measures of taxation. The effects of protection oppress no one. They burden no interest. They can be credited to no other source than a system of public beneficence. They come from neither the old condition of unpaid labor nor the theories of free trade. They are due, in fact, to that policy which has carried skill, enterprise, and capital into all the South and vindicated the wisdom of the fathers in so framing the Constitution as to authorize legislation not to tax, but to encourage, to establish, and to protect American industries. As said with singular pertinency to the South by Ellis H. Roberts, in his work on Government Revenue:

"The protective clauses of a tariff serve to recruit the armies of labor out of the listless and careless, and to make the streams which have been lazily humming the melodies of drowsiness vocal with the glad choruses of iron and steel and woolen and cotton and silk. The idle Naiads are changed into ministers of progress and the creators of every blessing of civilization."

Referring to the great development of Southern resources, not as a result of taxation, nor of oppression, but by reason of the policy of protection, it is appropriate here to quote a statement recently made by The Courier-Journal, of Louisville, Ky., an aggressive enemy of protection, which, in the course of a criticism of the alleged exclusion of the South from the tour of observation planned for the delegates to the late Pan-American Congress, said:

"The tabooed section has since 1870 increased in population from 12,000,000 to 28,000,000, more than doubled its cotton crop, selling in Europe $25,000,000 worth of the fleecy fiber in a single year, has now more than 40,000 miles of railroad, has increased the annual value of its manufactures a dozen times over in twenty years, while its advance in mining is equally great."

The foregoing statement is true. It is also a telling contribution to the argument in support of the protective system. It illustrates the character of the pending controversy between facts and theories, between maxims and markets, and shows the worthlessness of mere abstractions in contradistinction to a practical policy.

VII.—SUMMARY OF THE PROTECTIONIST'S REASONS.

Among the various reasons on which may rest the convictions of an American citizen, especially a citizen of the South, in favor of a tariff for protection may be enumerated the following, which contains a summary of the foregoing discussion of the subject:

1. The protective policy has built up towns and cities throughout the South and North.
2. It has doubled our foreign trade since 1860 and stimulated domestic production beyond calculation.
3. It has expended, diversified, and multiplied the useful industries throughout the Union.
4. It has increased our manufactures fivefold in twenty years.
5. It has vastly improved the condition of farm laborers, in respect alike to wages and to the marketable value of their products.
6. It has unlocked our natural resources, created capital, and given it opportunity for profitable investment.
7. It has applied our own labor to the development of our natural resources.
8. It has created a diversity of employments for American skilled and unskilled labor.
9. It has reduced, through home competition, the price of every manufactured article.
10. It has turned capital into ten thousand useful channels of enterprise.
11. It puts 90 per cent. of the annual product into the pockets of labor.
12. It has raised American wages to double the average wages paid in Europe.
13. It has enhanced the value of farming lands by promoting the establishment of manufactures in the vicinity of them.
14. It has made the United States the greatest workshop on the face of the earth.
15. It has increased the production and wonderfully reduced the price of steel rails in the United States, and promoted the construction of railway lines of transportation everywhere.
16. It has benefited the farmer by preventing his customers from becoming his competitors.
17. It has provided occupations or the means of livelihood for more than 8,000,000 immigrants in recent years.
18. It has saved millions of American laborers from the results of immoderate and direct competition with each other and with cheap foreign labor.
19. It has constantly diverted the energies of the American people into new pursuits and opened up new avenues to the employment of labor and to the investment of capital.
20. It has blessed labor with the ability to create a demand for more labor by being able to buy what it produces, and by the savings of wages to build homes that are owned by the laborers themselves.
21. It has prevented an inundation of foreign goods like that which swept away our manufacturing industries between 1815 and 1820.
22. It has fostered our woolen industries so that they make four-fifths of all the woolen goods used by the American people, and increased the product of American wool from 60,000,000 to 300,000,000 pounds per year, and will soon enable us to make all or nearly all of our woolen goods.
23. It has guarded American farmers from competition with India wheat, produced by laborers at one-eighth of what is paid for labor in the United States, and will soon give them a market at home for all their products.
24. It has trebled the number of hands employed in woolen industries, quintupled the aggregate wages of the country, and quintupled the capital invested therein.
25. It has opened to the industrious, enterprising, and inventive skilled workman opportunities that are presented to the laborer in no other country.
26. It has fixed the standard of comforts among workingmen immeasurably higher than it was thirty years ago in America or is to-day in any land of Europe.
27. It has reduced pauperism in America so that, as compared with what is known as pauperism in England, it is hardly known in America. With a population one-third larger than the whole of Great Britain, the United States has fewer paupers than Scotland alone.
28. It has so diffused capital by the diversification of industries and the payment of profitable wages that the working people of the United States now have on deposit, in saving-banks, building associations, and other savings institutions, not less than $6,000,000,000, a fact that can not be claimed for the working people of all Europe.
29. It is the present foundation and guaranty of security to the numerous enterprises that have awakened the resources and are infusing thrift into the States of the long prostrated South, and the chief ground of hope for the restoration of that portion of the Union to prosperity.

This policy of industrial growth and of national independence has not only developed the country's resources, but crowded the country's Treasury; and yet a full Treasury has caused no public hardship. According, in fact, to the teachings of a famous statesman, it may be easily proved that "the most productive system of finance will always be the least burdensome" to the people among whom its revenues are kept in the process of redistribution. Thus the friends of protection may feel secure in a policy that has achieved such signal results. The predictions of its enemies have utterly failed. It is crowned with triumph everywhere. It is the very bed-rock of national prosperity, and its permanency is assured.

GEORGE BABER.

WASHINGTON, D. C., *September* 1, 1890.

Benefits which have Resulted from Republican Administration.

SPEECH

OF

HON. LOUIS E. McCOMAS,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 30, 1890.

On the bill (H. R. 1120) providing for the adjustment of accounts of laborers, workmen, and mechanics arising under the eight-hour law.

Mr. McCOMAS said:

Mr. SPEAKER: The benefits which have resulted from a Republican administration of public affairs are forcibly illustrated by a comparison of the financial operations of the Treasury Department under the present and last Administrations.

The following facts are from official records:

INTERNAL REVENUE.

The largest annual increase in the receipts from internal-revenue taxes in any one year during Mr. Cleveland's Administration was $6,567,958.88.

The average annual increase during his four years was $4,618,328.28.

Without any change in the law the increase in collections for the first full year of Harrison's Administration was $11,700,262.37, with an actual decrease in the cost of collection of more than $85,000.

A gain of from $5,000,000 to $7,000,000 a year may therefore be fairly credited to Republican honesty and efficiency in this one branch of the Treasury Department.

The average cost of collections under Cleveland was 3.36 per cent., while the cost under Harrison has been only 2.9 per cent. Had the percentage of cost during the last fiscal year been as great as the average during the four years of Cleveland's Administration the expenses last year would have been increased $691,181.80.

PUBLIC DEBT AND SURPLUS—FIRST EIGHTEEN MONTHS UNDER CLEVELAND.

Prior to March 4, 1885, it had been the practice of Republican Administrations to apply the surplus revenues, from time to time, to the purchase or redemption of United States bonds, leaving in the Treasury as small a cash balance as might suffice for the current operations of the Government. As a result of this policy, there was in the Treasury March 1, 1885, an available cash balance, exclusive of fractional silver and minor coins, of only $21,631,381.67. At the same time there were outstanding bonds of the 3 per cent. loan of 1882 amounting to $194,190,500, all of which were redeemable at the pleasure of the Government, and, consequently, were subject to call and redemption at any time.

It was, therefore, entirely within the power of the incoming Democratic Administration to continue the policy of its predecessors or to accumulate the surplus revenues in the Treasury. It chose the latter course. During the eighteen months from March 4, 1885, to September 1, 1886, only $62,138,400 of the 3 per cent. bonds were called and brought to maturity, while during the same period the surplus increased from $21,631,381.67 to $76,527,561.24. These purchases were made at constantly increasing prices, 4 per cents. advancing from 125 to 129 and 4½ per cents. from 107 to 109.

FIRST EIGHTEEN MONTHS UNDER HARRISON.

The surplus March 1, 1889, was $48,096,158.50. There were no bonds of the United States which could be called for redemption, and the purchases in the latter part of the Cleveland Administration had not only greatly reduced the supply of bonds in the market available for purchase, but had so enhanced the price that the first purchases by the present Administration were at 129 for fours and 109 for four-and-a-halfs. Notwithstanding these unfavorable conditions, there were purchased during the first eighteen months $151,145,050 of the two classes of bonds, at a cost of $179,197,161.46, with a saving to maturity of the bonds of $44,025,540.72, and there were also redeemed at par

about $20,000,000 of 4½ percents, making a total reduction of the interest-bearing debt of about $171,000,000, as compared with a reduction during the corresponding period by the last Administration of about $62,000,000, and with a total expenditure of about $200,000,000 as compared with $62,000,000. At the same time the prices of the two classes of bonds purchased were reduced from 129 to 124 for fours and from 109 to 101½ for 4½ per cent. bonds. Indeed many of the fours were purchased at 121 and of the four-and-a-halfs as low as 103.

The official records show that the Republican Administration has purchased $109,000,000 more of bonds than were purchased under Cleveland during the corresponding period, thereby making a reduction in the interest charge of over $4,000,000 annually, with a total saving of interest to maturity of the bonds of more than $32,000,000. And, what is of even greater importance than the saving of interest, the money thus used has been kept in circulation among the people, instead of being hoarded in the Treasury.

The average monthly investments by the Treasury in United States bonds during the last eighteen months has been over $11,000,000, while during the corresponding period of Mr. Cleveland's Administration the monthly average was less than $3,500,000.

PUBLIC MONEYS.

In September, 1887, resort was had by the Democratic Administration to deposits of public moneys without interest in national banks, as a means of giving to the people the use of the surplus. When this plan was adopted the balances held by national banks were about $25,000,000. These balances were soon increased to $60,000,000, and were maintained at about that point for a year. Had this money been invested in United States bonds, the people would not only have had the benefit of its use, but the Government would have saved during the year about $1,500,000.

The amount of public moneys held by national bank depositaries—

On March 5, 1889, was	$43,008,587.20
On August 28, 1890, was	25,873,805.24
A reduction under Republican Administration of	17,134,781.96

This amount, being in excess of the needs of the public service with those depositaries, was withdrawn and used in payment of United States interest-bearing bonds, purchased either from the banks relinquishing the deposits or from others, and resulted in a saving to the Government by reason of the purchase of these bonds and the subsequent stoppage of interest of about $400,000 per annum. This withdrawal also increased the amount of money in active circulation, for in no case was a bank allowed to hold public funds to the amount of the market value of the United States bonds furnished as security therefor. On four-and-a-halfs a balance equal to par was allowed, and on fours a balance equal to 110 per cent., so that for each $100,000 withdrawn from the banks payment from the Treasury was made for a like amount of bonds, with premium at an average rate of 105½ for four-and-a-halfs and 127 for fours, thus returning to the channels of trade the amount of the deposit and from $5,000 to $17,000 additional on each $100,000. The increase of circulation by these operations was about $2,000,000.

INCREASE IN THE VALUE OF SILVER.

The wisdom of the Republican policy adopted both by this Administration and by the Republican party in Congress with regard to silver is already apparent in the increased prosperity of the country. The late Administration was content with denouncing the silver-coinage act and demanding its repeal without offering anything in its place. The present Administration earnestly urged the passage of measures providing for a largely increased use of silver in our circulation. The leading features of this administrative policy have since been enacted into law.

Some of the results of this friendly executive and Congressional policy towards silver, as compared with the results of Democratic hostility towards it exhibited by Mr. Cleveland's Administration, appear in the following facts:

The value of silver at the date of the passage of the Bland act (February 28, 1878) was $1.20½ per ounce, and the commercial value of the silver in the silver dollar was 93¼ cents. The price of silver fell rapidly and almost constantly from that date to the close of the last Administration.

When President Harrison was inaugurated (March 4, 1889) the value of silver was only 93.32 cents per ounce, and the bullion in the silver dollar was worth only 72.18 cents. By reason of the friendly treatment of silver by this Administration and of anticipated legislation on the subject, the price rose 3.89 cents per ounce between March 4, 1889, and December 1 of the same year.

On December 1, when the silver policy of the Administration was announced in the President's first annual message to Congress and in the report of the Secretary of the Treasury, the price of that metal was 97.27 cents per ounce, and the bullion value of the silver dollar was 75.23 cents.

From December 1, 1889, to July 14, 1890, when the new silver law was passed, the price of silver advanced 10.69 cents per ounce, reaching 1.07\frac{96}{100}$, and the bullion value of the silver dollar rose over 8 cents.

From the passage of that act to August 30 the price of silver advanced from 97.27 cents per ounce to 1.19\frac{47}{100}$ per ounce, and the bullion value of the silver dollar rose from 83½ to 92.4 cents.

Since the inauguration of President Harrison, therefore, silver has advanced 26.2 cents per ounce, and the bullion value of the silver dollar has increased 20 cents, showing that under the operation of the new law and friendly management silver has advanced about as much in seven weeks as it declined in the ten and a half years following the passage of the Bland act.

The stock of full legal-tender silver money in the United States is $374,578,266. The Republican silver policy has increased the intrinsic value of these dollars, since the inauguration of President Harrison, $74,915,653. The value of our subsidiary silver coin has also been increased $15,323,000, making a total increase in the metallic value of our silver coin of $90,238,000.

INCREASE IN VALUE OF WHEAT CROP.

When Congress met last December the price of wheat in Chicago was 79 cents per bushel. On July 14, 1890, the date of the passage of the new silver act, it had advanced to 88 cents per bushel. On August 30 it had advanced to $1.01½ per bushel, making a total advance of 22 cents per bushel since the opening of the Republican Congress.

Taking the wheat crop of 1889 (490,560,000 bushels), the value of which was a little less than 70 cents per bushel, the price has advanced 31½ cents per bushel, making a total increase in value of $154,526,400.

THE CORN AND OAT CROPS.

The corn crop for the year 1889 amounted to 2,112,892,000 bushels. The advance in price since December 2, 1889, is 17 cents per bushel, making the total increase in the value of that product, based upon last year's crop, $427,860,630.

The price of oats has advanced since December 2, 1889, about 23 cents per bushel, which, on the crop of last year, would make a total increase of $108,969,675.

The total increased value of the crops of wheat, corn, and oats since December 2, 1889, based upon the value of the crop for last year, has therefore amounted to $691,356,705.

Nearly all other farm products have advanced in value in a like manner. If to these is added the increased value of other products of industry the grand total would largely exceed $1,000,000,000.

The Revenue Law.

SPEECH

OF

HON. WILLIAM M. EVARTS,

OF NEW YORK,

IN THE SENATE OF THE UNITED STATES,

Wednesday, September 3, 1890.

The Senate having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes—

Mr. EVARTS said:

Mr. PRESIDENT: I had not intended to take any part in the general debate upon the tariff question, but some incidents have been thrown into the debate by movements among the friends of the tariff that lead me to speak somewhat, though I hope not at great length, on that topic thus introduced on the floor. This makes it quite necessary for me to explain somewhat precisely my views about the tariff, and about those who oppose the system.

Mr. President, there are some things that may be conceded as affecting the general condition of our country and the general character of the chief representatives of the great opposing parties. If we are to believe what is called out, as through a hoarse trumpet in a storm, all the imputations that are hurled in this House, and in the other House, and in the press, and at the hustings, we should have a very ill opinion of this people of ours from top to bottom. From the other side of this alley the staple of all their oratory is that the supporters of protection of American industries are robbers, and that we know it, and that we hide and skulk behind evasions, prevarications, and fraud.

Again, it may be thought upon the other side of the alley, were they to judge by some round statements on our side, that we conceived them all to be mountebanks and hypocrites on the subject of free trade, and that they had in view other results, and those political only, than protection of the people against our robberies; and that they were not entitled to a fair hearing on the principles or on the arguments which they adduce in the debate. So, too, of our people at large it would seem to be propounded on the Democratic side of the Chamber that all the manufacturers were plunderers, trampling upon industry and growing rich by filching from labor its dues, while the merchants of this country were nobles and princes full of bounty and generosity and growing rich only perforce because they could not help it.

Mr. President, neither the manufacturers nor the merchants of this land pay the slightest attention to debates of this character. If the

Senators were right they would welcome with a hearty shake of the hand only the merchant and would turn the manufacturer out of their doors. But where is there, even on the lowest plane of political debate, any such pretense or any such notion affecting the tongue or the brain of the common people of this country respecting these classes of their fellow-citizens? So, too, we have as an undercurrent in every phase of debate on the other side of the Chamber an invitation to envy and hate between different portions of this happy, prosperous, and united country.

The farmers are aroused to envy the shop-workers. These hostilities between the rich and the poor are evoked and patronized by the Democratic party in these debates as if there were such classes in this country, as if by institutions, by laws, or by the operation of laws there had been produced such relations among our people, as are described as downtrodden slaves of labor on the one side, and, on the other side, as bloated and cruel oppressors who by directing these combined industries bring out in concert with labor the immense results which are seen and known by all men, and which make our country exalted from one end of it to the other under our and their eyes.

But in contradistinction to all this disparagement by the Democratic party let us notice the estimate in other lands of this country of ours. Labor, not aristocracy, seeks its home here. And as for the wonderful advantages which have been bestowed upon our land we are pointed at as the nation that can protect its industries without aid from and without warfare towards the rest of the world, and at the same time able to gain our share of foreign commerce and our profits of that trade whenever and wherever we are ready to take the appropriate steps to enter into the competition.

Why, Mr. President, this idle talk about poverty on the one hand and wealth on the other in this country, and that the class embraced in the former is reduced by law to the position of victims to the latter, is a new doctrine and a new policy, and it seems to be the woof and warp of the politics of the Democratic party for the interests that engage their attention in the pending debates.

Mr. President, the so-called millionaires of this country are but the gilded fringe upon the garment with which the body of our people is clothed, upon the seamless garment of liberty and honor and dignity and comfort. So much for the actual condition of our country, which seems to me to furnish no possible basis for the view taken on the other side of the Chamber—not the least that I can see. Let us understand, then, what the duty, what the authority, is on the subject of the tariff. Full legislation on the tariff is vested in the two Houses of Congress. Congress has the sole authority over this question, both in all the minute details of equitable adjustment among competing and conflicting interests and also in its relation to the larger and whole interests that affect in any way the people at large, the system of our society, our separate communities, and our independence.

It has been a favorite suggestion on the other side of the alley to inquire if this boundless realm of ours, all of which is ours, has freedom of exchange among its citizens, near and distant, and if the results have been so great and good, why would it not then be a good thing to enlarge this freedom in trade to embrace foreign nations that could be touched under the operation of our laws only in this one particular of sharing our industry and leaving us to take care of our people in all the rest of their welfare the best way we could?

Why, Mr. President, the essential point in the customs duties and their arrangements is that they concern a relation of foreign affairs, our relation to the other nations of the world. An English philosopher in political writing, made more famous as a great poet, to be sure, has said that to Rome war stood for trade, overrunning province after province, expropriating directly their accumulated treasures, and pouring them bodily into the lap of the Mistress of the World. Sir, let us understand that with us, in our system and age of civilization, trade between nations stands for war in a sense never to be overlooked and never safely to be misunderstood.

If you are willing that our shores should be ravaged by foreign incursion in the guise of trade and our industries sacrificed if everything else should be spared, then allow by the change of our laws this destructive intrusion which you would invite, but do not imagine that after that incursion has been made your "government of the people, by the people, and for the people" will be the same thing in all the other ample and magnificent relations of our institutions, of education, of suffrage, of dignity, of the decencies, of the moralities, and the conduct of the state, which make up the very fabric of the life of the nation.

Mr. President, I can not dwell upon this generalization. Let us look a little at the pretensions that, under the operations of the tariff laws, inequalities are produced and classification of citizens is promoted. Is the Democratic party, are the Senators of that party now in my sight, ready to turn their backs on the civilization our age has reached by long stages and painful steps? Are they ready to forego all the triumphs of concerted labor and aggregated wealth? Are they ready to give up the results of the railroads and the manufactures and the happy homes of these industries because it does involve unquestionably the organization of labor in its own protection and the organization of industry in order that it may be carried on at all? No. We are to be treated, forsooth, to the childish imagination that we are to have all these solid good things of the earth and to reach after the moon besides.

It is not that the tariff law organizing industry draws the distinction between wealth and labor. By no means. The imperishable principles of human nature work in all the forms of human endeavor. The boast of our land is or has been until lately that all the faculties and efforts and hopes and aims implanted in man's nature were free and to remain free in this land and that thus free there could be no formation of grades in our society nor could the diversities of personal fortune create broad differences in a free people not crushed by institutions, not divided into castes, not cursed with slavery. The great praise and the crowning glory, the vital and invigorating springs of our political, social, and industrial systems as fostered and administered by the Republican party, is that it gives to every one as well as may be what Providence may design for each or the vicissitudes of life may leave for all these efforts and these energies, for these hopes and these aspirations. Who wishes to encroach upon this possession of our people?

Why, Mr. President, this question is so serious that it deserves to be debated with candor and coolness. If, when on this side of the Chamber considering with circumspection and patriotic zeal the system of commercial and industrial regulations that form the body of the tariff and the revenue laws, we are charged with being engaged in drawing lines by law between the workmen and those who direct their industries and we are guilty of this charge, let some proof be adduced to maintain this allegation. But if there has been going on an open experience not hid from observation, not narrow or fugitive, whenever the Whig or Republican party has had possession of the Government to develop all these industries by the protection of American labor, we must appeal to that testimony and with that demonstration we are satisfied. Where do you wish to go for evidence? Do you want to clip something out of the last issue of The Grocer or The Economist to teach these American people what the effect of protection upon their interest is, has been, and will be?

When, therefore, we are discussing items, let us confine ourselves to the considerations that belong to the items. A committee of the Senate is, as we all know, framed in almost equal proportions from the two sides of this Chamber. They have given a careful, a prudent, a circumspect, a resolute, a comprehensive, examination into every item of the bill that comes under discussion and have reported the result. When, therefore, we are discussing items, let us confine ourselves to the considerations that belong to items. Are we to be diverted from them and drawn into the discussion of protection and free trade on the petty scale of casual observations at the hustings or in the press?

No, Mr. President, this general topic is to be treated upon a higher plane and upon a broader scale than belong to arguments drawn from maladjustment of particular rates or special instances of uncircumspect conclusions. We are to look at the influence of protection by and large and in the ever-widening circles in which its effects are shown. We may usefully consult the views of other nations as to our wealth and prosperity. Do they think that we are growing poorer or that we are not growing rich fast enough? Is it in our interest that England advises us to go back to agriculture, for which God fitted us, as she maintains, and gave us this broad land in order that we might confine ourselves to agriculture? This is the doctrine of the English advisers. If this would not bring us to the condition contemptuously described as a people *fruges consumere nati*, it would at least place us on the level of a people *fruges producere nati!*

All this is very fine, no doubt. But, Mr. President, we have no such derogatory estimate of the farmers of our land. Nor do we draw any such lines between the pursuits of agriculture and of those who work in skilled labor or those engaged in the manifold honorable pursuits of life, but none of them more honorable than that of agriculture. Are the Senators on the other side of the Chamber able to point at any stage in the history of this country in which they think we have by institutions or by laws under them been impoverished or retarded or repressed in these aspirations of the free exercise of power and energy implanted in our people? Where is it? One might think that in the terrors and horrors and wastes of civil war this nation might have waned and withered and some who had sought its asylum have left its shores for their calmer homes abroad.

No, Mr. President, no greater lesson can be told, no firmer conviction can be burned into the American mind, no nobler or wider evidence and weight in this controversy could be imagined by the wit of man than that while the million on the one side and the million on the other were engaged in the waste of life and of treasure—waste in this economic view that I speak of, but in other aspects of glorious gain—the nation itself was pressing forward to its goal.

No, Mr. President, you can not mistake that, when the great industrial people of this country had no retarding power hanging on their flank and the war in their front, they were able to go across the continent with wealth and prosperity and to heap up an aggregation of wealth for the two decades, including the unhappy period of the war, which has not been witnessed in the prosperity of any other nation in peace or in war.

What is it then that feeds these boundless springs of the American people and renders them superior to all these entanglements and em-

barrassments of criticisms and restrictions? What but labor? It has been said, I think, by the Senator who last addressed us, that all those who are engaged in the cultivation of farms were earning their bread by the sweat of the brow, while other more favored classes were not under that injunction.

Mr. President, this relation of the first duty inculcated upon our race was not to the farmer, but it was to the whole race: "In the sweat of thy face shalt thou eat bread," and has there been any wiser lawgiver in Greece, or Rome, or England, or the United States to elevate, protect, enlarge, and dignify a nation in respect of wealth and prosperity, than that success in life turns upon labor—labor in the lot that Providence had placed men in, labor according to the skill of the brain, or the cunning and vigor of the fingers and the arm, labor on the farm, labor in the workshop, labor in the study of the clergyman and in the office of the lawyer, labor by public men, labor in art, labor in literature, labor in charity? It is all the same thing. Labor has made everything and labor will make everything.

The maxim that labor conquers all things is as true now as it ever was for all the nations of the world. What doctrine, then, is to be taught from the other side of the Chamber that can supersede this great inculcation? Give every man his due according to his honest labor and his honest strength.

Are we then so unworthy in our treatment of these practical questions—are we, as it were, to imitate the moaning of the wind and the baying of the moon, that, besides all these great glories that come from labor and from labor only, we also want them without the sweat of the brow and without the frugality, and without the thrift, and without the energy, without the persistency which builds up great nations as it builds up great and honest men?

When we come, then, to consider, as is the duty under our Constitution, the arrangements for our intercourse with foreign nations in the way of industrial exchange, we find that we can not extend our Constitution nor our duties to our people under it over the people of England and France and Germany. We can not demand that they shall have suffrage and that they shall be citizen laborersinstead of abject laborers. Our authority goes no further with our laws than to our confines. But there is one head of our relations to foreign nations which we do and must control. It is for us to determine upon what terms and to what extent our domestic labor shall be transfused with the mass of labor abroad.

But to suppose that if we only do so and so in our tariff legislation no consequences will come from this single confusion of interest about industry, and that this will not disturb the framework of our Government in regulating the general interests of our people, is a dreadful mistake.

Mr. President, did it ever occur to the votaries of free trade in this Chamber, or to those who have their faces turned that way and who go as far as they think prudent, how it happens that this market of ours is the prize, the object, the *desideratum* of all the civilized and competing nations? Why is it that they count upon the advantages from our market that they propose to themselves? Is it because there are 65,000,000 people here? Why, there are 250,000,000 in India, all under the Government of Great Britain.

There are 45,000,000 of people, I think, in the collected group of civilized nations to the south of us on this hemisphere. Is it this difference of 20,000,000 in our population—more than that—that makes our market more inviting? No; it is because under our protection of our industry and our labor, and their development, and through and through our great population we are consumers and buyers, and on a prodigious scale of expenditure, so that we would be better customers to them under the system of free trade than other nations collectively tenfold our population. And now we are asked to forego our system of protection in order that we may buy cheaper abroad with what comparatively little means we would have left. This is the doctrine, this is the logic of the Democratic party.

Where are all these draining nations that are looking upon this market to be reached at almost any cost standing upon this question? What party receives their praise and co-operation? Do they and those who approve their doctrines wish to diminish the purchasing power of our people by free trade? They certainly would do so, for our purchasing power rests on the protection that has nursed and expanded our means, but this would not be the first instance in which the greed for gold has killed the golden goose and left cupidity the victim of its own ignorance and folly.

Mr. President, what shall we then do in this matter? Those on the other side admit that tariff legislation is a prodigious power; they say it crushes, it dwarfs, it impoverishes. Very well; it is a powerful engine, then. What on the other side have they to propose in its place? If there was any credence to be put in the monstrous pretension that every burden upon imported goods was not only paid by the consumer of those goods, but that it also transferred an equal burden to the shoulders of all our countrymen that bought other things, then this Democratic party ought to turn and flee from the system of customs dues to support our Government.

If this burden be spread over all the products of our industry affected by the tax laid on the imported goods, it can not make much difference between crushing a nation with 4 cents instead of 5. No, Mr. President, this vague and general proposition will stand no examination. No one in the councils of our nation has ever dared to propose to the American people that they should avoid this imagined burden of customs duties by paying direct taxes for the support of the Government to the tax-gatherer and have him come around from door to door making levies to sustain the Federal Government, as he now does to support the State, the county, and the town exactions.

What do the Senators mean? What do they believe? If they say that they are in favor of protection up to the point of useful protection and that we are going beyond it, then the fundamental question of protection to our industries is approved and Democratic policy stultified by its advocates, and our answer must be Well, you can not agitate a country on the schedules of a tariff. The great principle agitated before this people in 1888 was whether a proper revision and adjustment of this tariff was to be trusted to the party that was in favor of protection or to a party that was in favor of free trade.

That question, and it was a great question, was agitated and passed upon by the people. The preparation of the schedules of the tariff is in the hands of the protectionists' party—the Republican party—and by them is to be performed. This is now being done in your face and under your criticisms, and under our responsibility at future elections. Upon our great body of the Republican party rest the duty and responsibility of promoting the welfare and guarding the interests of our whole country, and we do not intend either to prove unfaithful or unequal to our trust or to part with any portion of that duty reposed in us.

No. Government is carried on by parties. Under our Constitution we can pass no separate laws on the subject of customs duties to suit Northwestern farmers or Southern cotton-growers. We can pass no separate laws for the New England manufacturers or for the Western farmers or for the Pacific agriculturists. All must have one law, all one tariff, and administered in the hands either of those that love and protect our industries or of those who oppose or are indifferent to these stupendous interests.

So, too, Mr. President, it is quite right on the arena within the party or the arena within the Senate to have these doubts and difficulties, these supposed ill adjustments, these imputed injuries, all bearing upon the question of the schedules resolved and settled. But when this is over and the great fabric of protection to American industry at the hands of the Republican party is spread for the scrutiny of all the people everywhere, this party of ours, in the vote upon confirming the completed structure and in the response made to the people of delegated power, conscientiously exercised to secure and promote their prosperity and advancement, will be a united party, just as the Democratic party is a united party in this body, at the hustings, and everywhere, a party enlisted to disturb and destroy our tariff system.

I pass by as deserving of no attention, bearing on the far-reaching and essential question of remaining masters of our own resources by means of this carefully adjusted and unified fabric of protection of ours or the general unity of its support, some suggestions made here of adhesion to the policy of fostering our industries by certain communities in those particular instances which bring advantage to them and of attacking and embarrassing it in all the rest.

If my great State of New York had been pinched in a very tender point in a matter that congruity with any other arrangement for the good of the whole country rendered necessary, the State would have been heard and seen graciously making its contribution and readily yielding its fragmentary and uncertain local interests to acquire complete and stable national industrial independence for all the people of our country, and the State would have taken her part with the others in the other House and in this Chamber. Whatever is the law of the whole country, whatever is the best product of the friends of industry, for the Republic through and through, is our industry and our policy and our law.

Mr. President, it has pleased our friends on the other side of the Senate to say that they would have been delighted to see that free speech and free argument and sober argument and candid argument was made and listened to upon this side, when any part of the country represented on this side, feeling oppression under our general tariff regulations, should seek relief from such oppression by having Senators on this side introduce communications presented to them, as was done by the Senators on the other side.

Mr. President, there are no prepossessions in the Republican party except to do its duty according to that authority that is stated after an unexampled national experience and after an unexampled popular decision as to which party should have the control of this very valuable and, as it would seem, almost universal interest of the tariff.

Mr. President, we have noticed that there was a very great concurrence in European minds, especially in those of European manufacturers and European merchants, in their views with those which are expressed on the other side of this Chamber. It would not be polite, it might not be true, to say that the Democratic party was on the side of England, our great industrial rival, but it certainly is both polite and true to say that England is on the side of the Democratic party.

This distinction is obvious and valuable! I do not bring it forward for the purpose of reproaching the Democratic party in the least for

any alliance which it may seek or accept; that is not my matter; but I want it confessed, when it is understood, that the policy on the other side of this alley, if there be any policy in it, is to open our labor interests to transfusion with the ill requited and consequently degraded labor abroad. That is the inducement presented to our people, having possession of our own wages and our own expenditures and our own cost of products, with everything to match. This is the whole argument and result, the whole delusion, I should call it, sought to be practiced upon our people by the Democracy. Then, after this transfusion of our people upon the lower plane of European labor had become complete, it would be said to our wage-earners, "No doubt your wages have fallen, but why should they not fall?" If upon that query they should answer that they are not quite satisfied, that they have been accustomed to better rates of living, which required higher wages to procure accustomed comforts, then this mocking question, why should they not be satisfied with their lower wages? needs to be followed up with a little larger unfolding of the compensatory benefits that they may avail themselves of. It may then be said to them by the orators of free trade, "True, you will do much better by ridding yourselves of the extravagant superfluities that you now enjoy and think essential to your comfort; true, you will not have so much money to spend for apparel and personal gratification or adornment, but if you dress in the clothes of the Irish peasant or the Scotch Highlander you can dispense with a portion of that formerly needed. You would then be better off in the balance of your pecuniary transactions. What if you do not have enough to go to the theater, or indulge your children with the holiday attire that belongs to them, or to keep the 'gude wife' out of the field, the factory, or the mine; these are but a vain show; they do not build up a nation. Oh, let them look, and let them dress, and let them feel like the wives and the children of the laborers of Europe, and then soon they will become accustomed to their wages and satisfied with the common lot of labor, which must endure all things and find a purchaser for itself or starve."

Mr. President, I have not misstated; I have penetrated but not distorted or exaggerated the argument upon the other side. There are other things in this connection that might be added. Perhaps it was in a somewhat radical discussion of the inequalities of life that some one said he would rather have rich men in England than have riches here and rich men here. That has not been the thought and feeling and habit of the American people. They did not want to go over to England to get rich, as you and we know. They never thought of it until you put it into their heads that riches were not welcome in this country for our own people. They want to get rich here. They want to be fortunate and prosperous in this land of liberty; they wish to be able to spend and scatter the bounty reaped from fertile lands, thriving industries, and free institutions; they desire to enlarge and ennoble the common possessions of the people; build up the churches, build up the school-houses, endow the colleges, open art galleries, found libraries, establish hospitals, rear monuments, adorn and embellish towns, the little towns, the larger towns, the cities, and the great cities, and do it for love. Yes, for love of America and the glory of the Union and the Constitution and our Independence.

No, you will make no headway with these people in saying that if they wish to grow rich they must leave our shores and turn out, instead of a Chief-Justice of the United States, if they are lawyers, a lord chancellor, and if they are great merchants and great manufacturers, the cotton-spinning lords and the ale and porter lords of the House of Peers. But I was very much struck with an observation made by the Senator from Kentucky [Mr. CARLISLE] the other day, for logic sometimes will come out. He looked with concern, he read a menace, he feared a danger that somebody was coming over here with English wealth to manufacture here and take off dividends. In the language of the Senator, he said he did not like to see our wealth drained—look at it!—drained of dividends.

Well, Mr. President, money has no ear-marks. Wealth embedded in our land and in the structures upon it, and in the machinery made by our hands, and in the employment of operatives engaged in carrying on great industries, drains only from us the dividends or surplus profits to the foreign capitalist. This comes out of us only after it has paid all the tribute and served all the ends of our national welfare that any patriot or political economist could require for such enterprises. But what would the Senator who regarded with so much concern and alarm the transfer of English wealth to engage in manufacture and drain us of dividends—if our tariff was passed—what would he say if it was defeated and if the Democratic doctrine of free trade were to obtain and this same English wealth should not need to be brought here, but would be kept on the other side by the owner, who would manufacture and send his manufactures here?

What would the English manufacturer drain us of in that case? Of dividends? No, of the whole cost of the exported fabrics, the whole labor employed on them, and deprive us as well of the imported wealth that would have remained implanted in our soil, stimulated our enterprises, and contributed to our prosperity. In the one case, English money would pay our labor, bear its share of our public burdens, increase our resources, advance our institutions, promote our prosperity, extend our commerce, become an instrumentality of our own; in the other case it would serve all these great ends of England and at our own dear cost.

Mr. CARLISLE. Mr. President, I dislike to interrupt the distinguished Senator in his speech, and I shall not undertake to make any comment upon his last proposition, which assumes that if we had free trade or low rates of duty all our manufacturing and mining industries would cease in this country. But, on the other point, the inference to be drawn from what the Senator says is that there would be no injury to this country by having English capital come here and be invested in our industries and take dividends to England, because the work would all be done here and thereby employment would be given to our labor. I submit to the Senator that that is the same thing which is now taking place in Ireland. The work is all done upon the land in Ireland, but the English landlord takes the profits away and expends them in England, and that is exactly what Irish people are complaining of.

Mr. EVARTS. On the contrary, the Irish landlord is the landlord of the farmer and he takes the crop.

Mr. CARLISLE. He takes the proceeds of the crop, not the corn.

Mr. EVARTS. Well, he takes the fruits of it all and leaves——

Mr. CARLISLE. That is what they will take here.

Mr. EVARTS. The policy pursued by England with respect to Ireland has been to stifle and strangle Ireland's manufactures, in possession and in prospect, in order that English manufacturers should not only find customers, poor ones to be sure over there, but also that English labor and English industry may be built up out of this patronage of impoverished Ireland.

Mr. CARLISLE. If the Senator will allow me, we are not on the question of England's attitude towards Ireland with respect to manufactures, because we will assume what the Senator says to be true on that subject, that England by her revenue system has suppressed and destroyed the manufacturing industries of Ireland; and therefore the only industry which is allowed in Ireland in which her people can engage is the agricultural industry substantially; and all that industry upon the farm is carried on, of course, by the people of Ireland giving the employment of their labor to the English landlord, and when the crop is raised and sold he takes the proceeds to England and expends them.

Now, that is a parallel case to the one supposed by me the other day, where the labor would all be done in these manufacturing establishments in this country by American labor, but the dividends, the accretions to the wealth, that which would otherwise enter into the fixed capital of the country and become a part of the wealth of this country, would go to England in the form of dividends and become a part of the national wealth of that country.

Mr. EVARTS. That I have admitted, but I was contrasting the small measure of that drainage with the drainage that would obtain by manufacturing abroad and taking from us the price of all imported goods, with all the products, and all the English wages, and all the transportation, and all the interest, and all the profits of labor.

Mr. President, I did not misuse at all the value of the loss of dividends; but what is the loss of dividends to the loss of the plant and of the profitable employment of labor by the incursion through free trade of foreign manufacturers? That is the point; and if the Senator can find any error in that simple rule of subtraction I will say further what needs to be said about it.

Mr. President, the Senators on the other side, and perhaps some on our side, have fallen into the notion of the old Confederacy, that when anything was done or proposed to be done to strengthen the loins of the whole Confederacy, and that did not suit a neighborhood, or a State, or a border, they would not give their consent. Therefore, as we know, the old Confederacy, with its local attachments and preferences, broke up the unity of purpose in the conduct of the war that was the only means of attaining and maintaining their collective independence.

Now, Mr. President, who is there in this great Union of ours who repents of the wisdom of his forefathers in the foundation of the Union or of his own father who fought to preserve it? Who wishes to undervalue it because it bears on the Northwest or the Southwest, or on New England or California, or on the products of the mills or the mines, or the wide harvest-fields? No, we take the whole. We glory in the whole. We understand that our interchange of perfect freedom in trade in this vast community of ours rests upon the same considerations of our unity as against the rest of the world to which our fragmentary or border interests are made to bend and accommodate themselves. Union inside; independence outwardly. These are the words to conjure with to this people.

Let no one lose sight of this unity of trade within; this unity of burdens however shared; this unity of front and circumvallation towards other nations that would reduce our happiness for the sake of their own. Let no one overlook this stupendous fact that can never be impeached. If we ever depart from these foundations upon which our domestic and foreign policy rests, our condemnation will be that we do not understand our Union and do not value our independence. No doubt foreign nations would like to have found that under stress of political exigency we did not value our Union nor preserve it. They would not like so well perhaps to see, after all this loud mouthing on the other side of the ocean

on this subject has been used to its utmost to mislead and confuse and confound the suffrage of our country upon its economic policy with the calm a firmer adhesion than ever on our part to the principles of industrial independence as manifested in this tariff bill.

No, Mr. President, you can not fritter away the greatness of our constitutional rights and powers and duties over industrial questions, over commerce, and over manufactures. You can not throw down the defensive barriers and expose our people to inundation of foreign interchanges. You can not escape the demand of patriotism, of statesmanship, and of plain common sense, that, while in the nature of things some misfortunes and inequalities may befall individuals or even portions of our people, yet poverty can never overtake them by the aid of law framed under our auspices. Not for a moment can that be done in the name of either philanthropy or of economy. The arguments that favor all the industries in the world are of no value to us if they leave out all that we most value these industries for.

Why, Mr. President, we are entertained on the other side of the Chamber with these sayings, "Look at the cunning skill of our artificers, how they outstrip the skill of Europe; look at our energy; look at our pride; look at our virtue, and do you say that we can not compete with foreign industries? If you do as we advise, you will outrun Europe and Asia in industry and trade by these skillful hands, these cunning brains, these educated purposes and wills of the American people." Then when we ask what is the obstacle now between us and this prize of the cheap labor and the poverty of the world they answer, "It is high wages, high labor, and this compact of the tariff and labor and wages." They would say to us, "Only give up the one thing, high wages, well paid labor, and the tariff and you will be masters of the commerce of the world." What a satanic allurement to be laid before our people! What should it profit this nation to gain the whole world of commerce and lose its own soul, the soul of its institutions, the manhood of its laboring men, our liberty, our equality, and our fraternity? What shall it profit the Republican party if it should gain the whole possession of the suffrage and lose its own soul in parting with, now or ever, the protection of the rights of the people in all their forms before the law and under the Constitution and our duty to preserve them?

Mr. President, with these desultory observations on the general subject of protection, I approach now a topic thrown in connection in popular debate with the tariff, and which has found entrance into the discussions of the Senate upon the measure now before it, of some movements taken or to be taken towards enlarging our foreign trade. The Republican party has striven for I do not know how many years, certainly under the able guidance in this body of the Senator from Maine [Mr. FRYE] ever since he has had a seat on this floor, to extend our foreign commerce. We have been forced to accept the situation in which we find ourselves placed in regard to ocean navigation, whether the calamity of the war gave the first and greatest blow to our possession of the seas or whether it was the change of bottoms from wooden and sailing ships to iron steam-ships under the policy adopted by the great commercial nations for freighting the commerce of the world.

The situation alone concerns us. The old system by which we established commerce in remote ports and had frequent intercourse with foreign and distant nations in our sailing ships and by our articles of exchange was simpler than it now is; our opportunity for competing in the commerce of the world was more favorable to our success then than that which now prevails in the system of foreign commerce. We used to have a great American house, founded, I think, under the auspices of Baltimore people, at Rio de Janeiro, the great firm of James Burkhead & Co., one of the best houses, perhaps, in the world at that port, perhaps surpassing the strength and vigor of any English house. We had the great house of Alsop, at Valparaiso and Lima, and the great house of Russell & Co., in China. These were our merchants abroad and our exchanges were made through them. We competed with marked success, and to the disadvantage of all other competitors, for this trade.

But at that time every ship carried its own news. There was not only no postal steamer, but there was no telegraphic communication. The ship carried out its cargo, and its news, and its calculations, and its instructions. It had in its bosom a supercargo that carried the superintendent wishes of the owner.

All this was the system, and on that scheme we profited immensely by the cunning brain and the skillful and sturdy wills of our navigators. The world has changed since then. All these remote points are now reached by telegraphic communications, direct or indirect. The orders, the letters, and the advices and the instructions for future conduct are all carried now in these fleet ocean steamers or by telegraph.

Where do the ocean steamers start from? Where do they go? They start from England, from Germany, and from France, and they go all over the world. Under our weak and wicked policy as respects navigation and foreign trade, other nations have outstripped us. No steamers start from our ports. No steamers of American build or American ownership, under the American flag, penetrate any foreign port. What are we going to do about it?

Are we going, with all our wealth, with all our strength, with all our pride, with all our duty, to surrender to our victors in the race?

Mr. President, this effort to extend our foreign trade has been the persistent effort of the Republican party, and has been thwarted, has been harassed, has been ridiculed, has been denounced, and the ships have not gone out from our ports and will not go out. They do not go out solely because of this Democratic opposition. We are not responsible for it. Who hate it? Who oppose it? Who thwart it? Why, people who do not value those things.

We have built our railroads, and our system of transportation has perhaps reached its culminating point except as we progress or advance on the same lines and by the same methods through new regions. We have one great field yet before us—our own. We share it with other nations, but it is our own—the ocean. It needs no pathways to be opened. But it does need that the ships, the harbingers of trade, the forerunners of commerce, the vehicles of exchanges, should find their share of these open pathways and pursue them. That we are trying to accomplish.

Why, Mr. President, what would you think if the great cities of Rochester and Buffalo, in our State of New York, had postal communication with Boston and not with New York City? Where would the trade of those two cities go? To Boston, most certainly. Well, Mr. President, if the only mail communications with these remote and important points of commerce are with England, and not with the United States, how can commerce come here? How did it get here before, when our ships sailed the sea? Our prosperity was established by the presence of our ships upon the ocean. That is the way it was done, and that is the only way it can be done; believe me, the only way it can be done. That is the beginning.

Now, the favorite doctrine on the other side of the Chamber has been within my hearing ever since I have been in the Senate—how often?—"The way is for you to break down the tariff." How often have we heard it? "The tariff is the obstacle; open your ports to importation and against your industries. Open them; that is the way; and we will not favor this expedient of ocean commerce, because it may open trade and thus make a breach in our policy to open this country to the industries of all the world." This I have heard here year after year, and everything in the direction of increasing our navigation has been slain before our eyes in one or the other of the Houses of Congress upon this pretext.

Mr. President, I had occasion to look into this matter in my place as Secretary of State in obedience to a resolution of Congress calling upon the President for information on this very point, as to the proper method of opening our foreign commerce. I had occasion to present to the President a communication, which he transmitted with his own very interesting observations on the general subject to the two Houses of Congress. I will ask that the Secretary of the Senate do me the favor to read what I then said on this same question, which will show that these are not new ideas with me.

The Secretary read as follows:

To the President:

The Secretary of State, to whom was referred the resolution of the Senate of the 5th instant, requesting the President to transmit to the Senate "any information which may have been received by the Departments concerning postal and commercial intercourse between the United States and South American countries, together with any recommendation desirable to be adopted for facilitating and improving such intercourse," has the honor to lay before the President copies of dispatches from the diplomatic agents of the United States accredited to the governments of South America touching the subject-matter of the resolution; and also, as coming within the purview thereof, copies of a report and its annexes, presented to this Department by Mr. J. W. Fralick, upon his return from an extended journey through the leading states of South America, all of which papers are specified in the subjoined list.

With reference to the request of the Senate for "any recommendations desirable to be submitted of measures to be adopted for facilitating and improving" postal and commercial intercourse, the Secretary of State, without entering into an extended discussion of the very important and interesting topics suggested by the papers submitted, respectfully calls attention to certain manifest conclusions which all these reports tend to support.

I. It seems to be very evident that the provision of regular steam postal communication, by aid from Government, has been the forerunner of the commercial predominance of Great Britain in the great marts of Central and South America, both on the Pacific and Atlantic coasts of the continent. It is no less apparent that the efforts of other European nations, Germany, France, and Italy, to share in this profitable trade have been successful in proportion with their adoption of regular steam postal communication with the several markets whose trade they sought.

II. These papers show, also, that the enterprise and sagacity thus shown by European nations have actually reversed the advantage which our geographical position gives us in relation to this extensive commerce of the American hemisphere. The commercial correspondence of our merchants with the trading points on the east and west coasts crosses the Atlantic twice to make a postal connection in a circuit of trade which has its beginning and its end on our own continent. The statistics of our limited trade, under this extraordinary disadvantage, show that the growing preference for our products in these South American markets insists upon being gratified, even at the cost of a circuit of importation which carries our merchandise to Europe and incorporates it as a contribution to the volume and the profits of European South American trade. No stronger demonstration of the tendency of commerce to follow in the train of postal communication can be conceived than this vast and expensive circuit of importation resorted to in default of direct opportunities between the countries of demand and supply.

III. It would seem from these reports that the merchants and the communities, no less than the Government of these countries strongly desire an enlargement of direct trade with the United States. With all the advantages of foreign commerce supplied by the existing European arrangements for its prosecution, these markets perceive that this unnatural circuit, when the resources of the United States could supply a direct trade in its place, must be at the expense of the party subjected to the system and the profit of the party which administers and controls it. Everywhere there is shown a great desire to expand their

trade with the United States, and even the least prosperous exchequers of these Governments are ready to be opened to share in the expenses of steam postal communications, of whose value in promoting foreign commerce their own experience furnishes irrefragable proof.

IV. While many less immediate and less simple measures, about which judgments may not readily concur, may properly be canvassed by our people, now eager for a restoration and extension of foreign commerce, upon this one simple and first step of direct, regular, and frequent steam postal communication between the United States and the principal commercial ports of Central and South America there would seem to be no room for doubt.

If this be so, it is obviously the dictate of interest and duty, on the part of the Government, to promote by every just and appropriate means the attainment of this first and principal agency for the desired expansion of our foreign commerce. It is difficult to understand how this commencement and development of an ocean postal system, to be a forerunner of the expected trade, can be wholly trusted to the mere interests of mercantile combinations.

The governments of the foreign states with which this commerce is to be opened are ready to take their part in the public expense of this postal communication with us, and the participation or non-participation by the United States in this public expense seems to be the turning point in the acceptance or rejection of the reciprocal trade now proffered us.

WM. M. EVARTS.

DEPARTMENT OF STATE,
Washington, December 17, 1878.

Mr. EVARTS. Mr. President, the wise and patriotic ruler of Brazil, Dom Pedro, had a very earnest desire that his realm should be separated as much as possible in commercial and industrial intercourse from Europe, and that it should cling to this country for the exchanges of commodities. So strongly impressed was he with this idea that he undertook, out of the scanty coffers of his Empire, to keep on foot a subvention of $100,000 a year to support an American-built and American-manned line of vessels, under the flag of the United States, between the United States and Rio Janeiro.

This Government for a few years made a corresponding endowment. Then the Democratic party sent up the cry of "Subsidy!" against subsidies—subsidies that are helps to commerce, helps to trade, helps to navigation, helps that can not be given by individuals. The Democratic party denounced the policy. And yet this help had been taken away from the States by the Constitution and concentrated in the General Government, help which if not exerted here can be exerted nowhere. The trial was made by the Republican party, but under this incessant hammering and denunciation as "subsidy" of the opposition it came to an end. After keeping up his single donation for some years after, the Emperor's subvention failed and the ships passed away from this pathway on the seas.

Mr. President, it is seldom that sentiment and pathos find a place in the intercourse of great nations seeking each its own advantage, yet we must feel some pathetic interest in this distant nation, stretching out its arms to us in every purpose of this benign administration of that empire, seeking closer association with us in liberty, institutions, in everything that we could wish. Yet those beckoning hands, those outstretched hands, were stricken down by Democratic repugnance to our meeting half way these helps to our commerce. There is not much pathos among nations, I agree. But this picture, as it seems to me, if put on canvas, or in marble, in literature, or in law-making, is not one upon which we should delight to gaze.

Now, Mr. President, I see no reason to change my views on this topic. I expressed them in my letter at the request of Congress. There has been no departure that I know of in Republican quarters from pursuing that path. To be sure this inferior intimation was made: "Oh, you can not give subventions to ships unless you give them to some particular ships; that would involve some particular port, and that would raise a difficulty. New York is big enough; but there are Boston, Philadelphia, Baltimore, Charleston, and New Orleans. Why should not they have ships sailing all over the world, and not New York alone?" Of course they should. But it is well to have one start first, and as it must start somewhere and go somewhere, if you can not give a subvention to one ship how can you give it to twenty?

This is all idle talk that this is not one country. It is one country. There is not, I believe, from one end to the other of the State which I have the honor, with my colleague, to represent—there is not a motion or a breath in the press or in public life anywhere but that if it be a great State it is so because of the Union, and if the city of New York is great it is so because it is the great city of the United States.

But we have all sorts of what seem to me discreditable aspersions, which are not to be noted as of value but for the fact that in consequence ships lie idle, our paths on the ocean are unfrequented and our commerce unopened. And yet the cry is all the time from the Democratic side, "Break down your tariff, and then you will have trade." What shall we have trade in? And that brings me a little more closely to the notion of reciprocity. I had occasion to consider all these subjects during the four years that I had charge of foreign affairs, and I did not find it useful to encourage reciprocity, either in the shape of treaties or of responsive legislation.

I believe, Mr. President, that every country, every great country, should be the master of its revenues at all times from day to day. Commercial treaties that secure navigation, secure hospitality, secure ports of exchange, protection of life, liberty, and property, consuls, ministers, are of value to public action in the way of conventions and treaties. These secured, every country, and especially every great country that has to deal with lesser nations, should be the master, as I have said, from day to day of its own revenues.

There are many other considerations that are affected by the conduct of its revenues besides its intercourse with this or with that nation on a particular subject. I have, for these reasons, been averse to commercial treaties that affect our revenues, which should always be in the hands of the House of Representatives, under its constitutional authority, and only under such power of amendment as is open to us in the Senate.

I do not wish to see entanglements arise from an observation of only a single incident in our affairs and a neglect of a circumspect attention to connected domestic interests. Especially do I dislike this with a lesser nation that would ever be claiming that she should not be cut loose from our protection in a matter in entering into which she might have hazarded her relation with other great nations that frowned upon the transaction on her part.

These were my views then; these are my views now. I believe that we know how to make our tariff laws. I believe that we know how to conduct our navigation. I believe that we know how to obey the injunction of the great father and founder of our independence, Washington, against foreign entanglements in respect of trade, as well as in every other form.

The form of responsive legislation is less objectionable because this freedom of legislation is at the disposition, from time to time, under certain responsibilities of course, of either party. But if this responsive legislation takes the force really of the binding obligations that belong to a treaty, then it is open to the same objection as the treaty, and to another objection: that its relation, its import, and its value are not accurately measured as they would be in a treaty.

But, if it has not this stability and is open and free to our legislation, then it should be opposed by our policy, not towards a particular nation, but by our general policy towards the world. If we make new legislation in this or that particular it may be claimed to be contrary to this responsive legislation, and the corresponding party or nation will complain of ill faith, and that she has been invited upon the honor of the nation to trust in our promises, and her trust is put to naught.

I therefore do not favor these things, not on any question of policy of this or that political leader or of this or that political party, but because they are unsafe and apt to prove unprofitable and embarrassing. These are my views.

Mr. President, when we pass a law, on entering into this responsive legislation, and the corresponding nation passes its law, then the thing is done. It is done by the law-making power, at least on our side, and presumptively done by the law-making power of the other nation. The terms of this legislation are defined and precise, as belongs to law-making.

No doubt it is quite competent, under our Constitution, notwithstanding the separation of the departments of the Government, for us to perfect legislation and make it dependent under certain circumstances for its execution or non-execution upon conditions expressed in the act.

It is the duty of the Executive in all things to exercise his power under our will, absolutely defined, and thus upon an event to be ascertained and promulgated by him the operation of the law may be made to depend. Thereupon our substituted will shall take effect, with no intervention of anything but an Executive act, upon a fact to be ascertained as a fact.

Now, none of these propositions before us confine this transaction of ours, within the limits I have assigned, if it has any good foundation in prudence and value, to our interests in trade. The clause introduced by the Committee on Finance is perhaps the least objectionable of these tentative arrangements, but it has the distinct infirmity, as has been well pointed out by the Senator from Alabama [Mr. MORGAN], that the President is to pass upon a question of natural, industrial, and commercial interest; that he is to say whether the commensuration is well adjusted; that he is to deny to one nation what he is to accord to another: "You have done enough." "You have not done enough." And then we are brought, if there should be vigor in the President to execute this new duty, as he would undoubtedly do—we are brought into that awkward predicament when the one nation says, "I have done all I could, and that, you say, is not enough;" and the other says, "I have not done as much as I might, but I have done so much; and that, you say, is admitted to be enough."

But, Mr. President, although it is a familiar rule of international treaties that the favored-nation clause does not conflict with an interchange of special advantages, on which arrangements of commerce are based between particular nations, yet let me call your attention to another element in this proposition under view. The proposition is not opened to all the world. But this proposition contemplated is not open upon the ground of the mere interchange of special advantages, but is to be offered only to what are called non-competing nations. Now, here is introduced the new proposition of public law, that is to say, that notwithstanding the most-favored-nation clause you are permitted to make better accommodations with non-competing nations than competing nations.

Apply this suggestion to this very subject of sugar. The President goes around with this stock for barter, of interchanging tea, coffee, sugar, and hides. Very well. The point is that we do not produce

them; we will open these to you if you will admit free this, that, or the other equivalent.

It is all left open as to how much they are to admit or what. One says, "Yes, we will open our ports to all your commodities." So we make this agreement of reciprocal advantage. Well, Great Britain, who has already opened her ports to all our commerce without duty, says, "How is this? We are entitled to the most-favored-nation clause. You have given to one nation an advantage in commerce because that nation has given you free trade." Then this novelty in public law comes up: "Oh, we do this only with non-competing nations." Is that written in the bond of the most-favored-nation clause, that we may make this distinction between competing and non-competing nations? No publicist can stand upon that proposition.

We can, however, stand upon the proposition that it is not a violation of the most-favored-nation clause when one nation gives us something that other nations do not give or have not given us.

Now comes the question of prudence or value in these exchanges. Let us look at Brazil. Brazil is as good an instance, perhaps the best instance of all, a friendly nation, an American nation, a great nation. Now, they say, "With our bartering we will open to your exports coffee, sugar, and hides duty free, if you admit free what the President would say was a good list of our exports." Where will he find this list or how can he make it?

Under instructions from him the Secretary of State and the Secretary of the Treasury will furnish him a list, we may suppose. Then he says, "You must open to us all these articles." Well, Brazil says, as this Brazilian merchant says, "We can not do that; we can not admit them free, but we will do this: we will make the duties range a little lower than we make for England and for France." Well, should we not be jockeyed on that? What manufactures of any kind would go to Brazil under a proposition putting us on a little lower duty than that charged to England, France, or Germany? Why, Mr. President, the thought in all our debates here is that if we do not have this tariff of ours at high rates, then the British——

Mr. ALDRICH. Will it interrupt the Senator from New York if I make a suggestion?

Mr. EVARTS. Not in the least.

Mr. ALDRICH. Is not the Senator aware that with the same duties collected from the Americans as from the English, Germans, and French we send a large amount of manufactured cotton to Brazil now?

Mr. EVARTS. I have no doubt of it, and we send it by way of England largely.

Mr. ALDRICH. Unfortunately, yes.

Mr. EVARTS. Unfortunately, yes. That is true, no doubt. Our goods must stand transportation twice across the ocean to reach Brazil. We can not get in our general average under any such notion.

But suppose that Brazil should take off all its duties on our manufactures and take them off from England; could we then compete with England? I imagine not. Suppose that Brazil takes off one-half of the duty in our favor to enable us to undersell England and keeps the duty on England, what will England say to Brazil under the favored-nation clause? Why, she will say, "England has been open to your coffee, your sugar, and your hides free. How is it now that you make an under-bargain with another nation competing with ours, so that if she gives you free trade you will keep duties on against England and take them off against the United States?"

Mr. President, it is true, as I have said, that we may make the prospective action of the Executive depend upon what is properly an executive inspection of a fact of such quality and nature that it is susceptible of executive inspection; that is to say, when the month of the year comes around or when it is ascertained that there has been an act of Parliament passed and published in England. But that does not interfere with our duty as legislators at all.

It is not quite so easy to draw the line, under our distribution of powers between the great departments of the Government, between an executive power, which nobody thinks could be assumed by Congress, and a legislative power, which no one thinks can be assumed by or conferred upon the executive. But there has come about a little confusion because the executive is subject to the will of Congress. All the legislative power of this country is vested in the two Houses of Congress, together with the will of the Government; that is, the whole will of the people.

The executive is the servant of the law. The judiciary is the expounder of the law. Take the early debates, in the beginning of this century, during the time of President Jefferson, about the embargo troubles and all that. There the question was tested and it was said that the law was unconstitutional. The answer was, "No; this is not a regulation of commerce; it is an affair lodged in the Executive to execute our will expressed toward these foreign nations, not as to interchanges, but in resistance of their preying upon our commerce," and it was held constitutional.

We passed a meat bill the other day which contained provisions unquestionably for great executive authority upon commercial facts to be ascertained by the President. That law has reference to commodities that are found, under principles laid down by Congress, as taken out of commerce because they are not subject of interchange, because interdicted by health ordinances and health control. What happens, then, to these vicious subjects of import? Not the collection of duty upon them, but their destruction. That is an executive act under legislative will.

We have no right to complain of France. We never had any right to complain of France putting a duty on our pork that would exclude it from patronage and use within her borders any more then she could complain of us in regard to what we have done about her wine and silk. We said, "You are making but a pretense of health exclusion in order to give protection, and we understand it. But besides being excluded commercially you also stigmatize our product as unmerchantable. We can not submit to that. If under guises or under disguises you palter about that, we will look into your wines and your drugs and treat them as subjects to be excluded as being deleterious to human health." So much for that matter.

Mr. President, I have said more than I ought. My view on public law, my view of the expediency of these interchanges, is easily understood. Make your tariff as you think right. Let others make theirs as they think they have a right. And when you reach, as England has reached, the position where you can devour the substance of other nations better by free trade than you can protect your own substance by tariff legislation, then change your laws.

Pension Legislation—The Work of the First Session of the Fifty-first Congress, and the Record of Parties Compared.

REMARKS

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 5, 1890,

On the subject of pension legislation during the present session.

Mr. CUTCHEON said:

Mr. SPEAKER: I have attended here regularly each Friday evening during the present session to assist in the consideration of private pension legislation. During that time I have taken very little of the time of the House with remarks, preferring that the time should be devoted to the passage of these bills for the relief of deserving soldiers, their widows, and dependents; but this evening I would be glad to occupy a few moments in referring especially to the pension legislation of the present session and what has been accomplished by the majority of the House in the interest of the soldiers, and how it has been accomplished. I am not in the habit, Mr. Speaker, of indulging in remarks of a partisan character, believing that the record of a party will speak for itself, and that the country will have no difficulty in understanding and interpreting the actions of parties.

I congratulate the House and the country that in consequence of the general legislation which has been enacted at this session of Congress private pension legislation has become to a great extent unnecessary.

I believe that under the act of June 27, 1890, every honorably discharged soldier who is really entitled to a pension, and is really in need of it, can receive such pension to the full amount provided by that act. It is only in special cases, like the pending one (granting a pension to General Henry A. Barnum), that existing laws are inadequate and it is necessary to appeal to Congress to remedy that inadequacy.

When the disability bill was under consideration it was estimated that the number of claims that would be filed under it would be about 300,000. But little more than two months have elapsed since that law became operative, and already about 390,000 claims have been filed under it. That law is vindicating its wisdom and justice day by day; and more and more the soldiers of the country are coming to understand that their Representatives have given them the most liberal and generous pension law ever enacted. There may still be some unsatisfied and disaffected because they are unable to prove any disability under that law equivalent to $6 a month, either in the service or out of it.

I would call the attention of any who may be still dissatisfied with the provisions of the present law to the following statement of facts: First, that there are already pending under the old law claims of invalids for disability contracted in the service and of widows and dependents numbering upwards of five hundred thousand; second, that under the new law, where it is not necessary to prove the origin of disability in the service, there are pending nearly four hundred thousand claims; third, that there is no soldier who has a disability, whether contracted in the service or since the service, nor any widow of a soldier who is dependent upon her personal efforts for her support, but that is already entitled to a pension.

I suppose that no one would claim for a moment that those who have no disability should have priority over those who have disabilities.

I am safe in saying that no true soldier with no disability, for the sake of a service pension, would push aside the widows or orphans of a deceased comrade left without means of support. It is clear, therefore, that all claims for disabilities contracted in the service, and all claims for widows, orphans, and dependent parents, and all claims for actual disabilities duly proved should take precedence of claims for service only, not coupled with a disability.

Supposing the adjudication of the pending claims could proceed at the average rate of five hundred a day, or one hundred and fifty thousand a year, it would occupy six years in the adjudication of those now filed, to say nothing of the additional claims that will be hereafter filed. When these claims shall have been disposed of it will be time to consider the need of further service-pension legislation.

But it was my purpose, Mr. Speaker, at this time to speak more particularly of the pension legislation of this Congress and of the record of the two great parties with reference thereto. In the last Congress, on the 12th of July, 1888, I had the honor to submit some remarks on the history of pension legislation from its origin down to that date, and in order to make the record complete and continuous I desire now to embody a part of the remarks then made and to continue the record to the close of the present session, as I presume that there will be no further general pension legislation during this session of Congress. In the speech referred to I said:

"But, Mr. Speaker, we were told by the Democratic chairman of the Committee on Invalid Pensions in the last Congress (who is also the chairman of the same committee in this) on the 7th day of July, 1886, that 'all the legislation friendly to the soldier that has amounted to anything since the war has been given by a Democratic House of Representatives.' (CONGRESSIONAL RECORD, page 6636.)

"I join issue with the distinguished gentleman from Indiana. I deny the statement in whole and in part. It is not true in substance or in fact, in letter or in spirit, in statement or in intendment.

"Now, Mr. Speaker, I propose to examine the truthfulness and accuracy of that statement. I propose from the record to settle the question who has given 'all the legislation friendly to the soldier since the war.'

"The pension system as it now exists

"THE REPUBLICAN PARTY FOUNDED;

that party has enlarged and improved it from time to time; and up to March 4, 1885, has administered it.

"We have seen, reasoning *a priori*, from the constitution of the two parties what we might expect would be their attitude on this question, and I now propose to show from the record that it has been what might have been expected. The fundamental law upon which our present pension system was based was enacted July 14, 1862, while the war was still progressing and while the Republican party had undisputed control of every department of the Government. It provided the most ample and generous system of pensions that up to that time had been enacted into law. It provided for the disabled soldier, and for the widows, children, mothers, and sisters of those who should fall. It was a broad and comprehensive foundation, upon which has been erected the entire superstructure of our present system.

"From 1862 to 1875 the Congress remained in the hands of the Republicans, and the Executive was also Republican during that period, unless the Administration of Andrew Johnson be regarded as an exception.

"The principal acts that followed the fundamental act were—

1. Act of April 9, 1864.
2. Act of July 4, 1864.
3. Act of March 3, 1865.
4. Act of June 6, 1866.
5. Act of July 25, 1868.
6. Act of July 27, 1868.
7. Act of July 7, 1870.
8. Act of July 8, 1870.
9. Act of February 14, 1871.
10. Act of June 8, 1872.
11. Act of March 3, 1873.
12. Act of June 6, 1874.
13. Act of June 6, 1874.
14. Act of June 14, 1874.

"There were a number of minor acts which I have not mentioned.

"Each and all of these acts were passed by a Republican Congress and approved by a Republican President. None of them took a backward step.

"Each of them either established some new class of beneficiaries or else increased the rate or enlarged the remedies of those already existing.

"March 3, 1873, Congress revised and consolidated all the existing pension laws and created the pension code substantially as we have it to-day in the Revised Statutes.

"To show how reckless was the statement of the chairman of the Committee on Invalid Pensions, it may be said in brief that *every law, section, line, word, and syllable relating to pensions in the Revised Statutes of 1874 was enacted by Republican Congresses, by Republican votes, and approved by Republican Presidents.*

"I will not now pause, Mr. Speaker, to give in detail the substance of each of these acts, but refer those who desire to see how our pension system has grown up to the Statutes-at-Large of the several Congresses. I will now only name a few of the more important.

"The act of July 4, 1864, extended the limitation of arrears to three years and fixed the pension for loss of both feet at $20, and for the loss of both hands or both eyes at $25 per month, a Republican law.

"The act of June 6, 1866, increased the pension for loss of both feet, both hands, or hand and foot; also, for loss of one hand or foot.

"This was also the first law granting pensions to dependent fathers and mothers. This was a Republican law.

"The act of July 25, 1868, granted to widow pensioners $2 per month for each child by the soldier under sixteen years of age, and if there were orphan children but no widow surviving, it gave the orphans what the widow would have received.

"This was one of the most beneficial pension laws ever enacted. Under it about 18,000 widows received immediate increase, and the principle of the law remains in force until now. This was a Republican law.

"The act of July 8, 1870, inaugurated a new system of paying pensions and protected the pensioner from the fraud and avarice of pension cormorants.

"No one has ever thought of repealing or dispensing with it. Another Republican law.

"The act of February 14, 1871, provided pensions for the soldiers and sailors of the war of 1812, and for their widows. Another Republican law.

"All these acts, and many not enumerated, were enacted by Republican Congresses and by Republican votes.

"But at the election of 1874 the House of Representatives

"PASSED INTO THE HANDS OF THE DEMOCRATIC PARTY,

and with the exception of the Forty-seventh Congress (1882–'83) it has remained Democratic ever since.

"I propose now to analyze the pension legislation since that time, and show what has been done and by what votes it has been done.

"The act of February 28, 1877, allows separate pensions for the loss of both a hand and a foot.

"The act of March 3, 1877, allowed pensions to disabled soldiers in certain cases, although they had engaged in rebellion against the United States.

"The act of March 9, 1878, amended the Republican law of February 14, 1871, granting pensions to the soldiers and sailors of the war of 1812. It reduced the term of service from sixty to fourteen days. It provided that a widow's pension should cease if she should remarry. But the 'milk in the cocoanut' is found in the following:

"SEC. 5. That the Secretary of the Interior be, and he is hereby, authorized and directed to restore to the pension-rolls the names of all persons now surviving heretofore pensioned on account of service in the war of 1812 against Great Britain or for service in any of the Indian wars, and whose names were stricken from the rolls in pursuance of the act entitled 'An act authorizing the Secretary of the Interior to strike from the pension-rolls the names of such persons as have taken up arms against the Government or who have in any manner encouraged the rebels,' approved February 4, 1862, and that the joint resolution 'prohibiting payment by any officer of the Government to any person not known to have been opposed to the rebellion and in favor of its suppression,' approved March 2, 1867, and section 4716 of the Revised Statutes of the United States shall not apply to persons provided for by this act.

"Section 6 provides pensions for the widows of persons stricken from the rolls, as above, and who died while their names were so stricken from the rolls. This was a Democratic act.

"The act of June 18, 1878, makes the pension of a lieutenant-commander in the Navy the same as that of lieutenant commanding.

"The act of June 20, 1878, limits the fee of claim agents to $10.

"The act of June 17, 1878, increased the pensions of soldiers and sailors who had lost either both hands, both feet, or the sight of both eyes to $72 per month. These were all receiving $50 per month. It affected about 200 pensioners.

"The act of February 19, 1879, provides for paying three months' extra pay to the officers and soldiers engaged in the military service of the United States in the war with Mexico. A very large proportion of these were in the South.

"The act of June 9, 1880, was intended to prevent the reduction of the pensions of certain petty officers in the Navy.

"With one notable exception, this embraces in detail the entire list of pension measures up to the time when the Democratic party again lost control of the House.

"It will be noted that, with the exception of the act relating to pensioners of the war of 1812 stricken from the rolls for aiding the rebellion and the three months' pay to the officers and soldiers of the Mexican war, which benefited almost entirely those residing in the South, they amounted to very little indeed.

"They affect but comparatively few cases, and those who were already drawing high rates of pension.

"But the most important act of those six years from 1875 to 1881, which constitutes the exception referred to, remains to be considered. It was the act known as

"'THE ARREARS ACT.'

"This was the most important piece of pension legislation ever enacted in this country. This act has been persistently claimed by the Democrats as a Democratic act.

"In the Forty-ninth Congress one of the Democratic leaders, Mr. Bragg, of Wisconsin, said that the Republicans enacted the arrears limitation and the Democrats repealed it.

"The only foundation for this statement is in the fact that the re-

peal was passed when the Democrats had a majority in the House; but I will show from the record—

"1. That the bill was introduced by a Republican.

"2. That it was brought up and put upon its passage by a Republican.

"3. That it was passed by Republican votes.

"4. That of the 150 votes absolutely necessary to pass it the Democrats furnished about one-third.

"Many people seem to suppose that the payment of arrears of pensions, or, in other words, the commencement of the pension from the date of discharge, was a new and unheard-of thing until the passage of the act of January 25, 1879. On the contrary, it was

"AS OLD AS THE PENSION LAW.

"By the act of July 14, 1862, a limitation of one year was fixed within which the claim should be prosecuted in order that the pension should begin from the date of discharge. This limitation continued in force until the act of July 4, 1864, extended the limitation to three years from discharge. This limitation was re-enacted by the act of June 6, 1866. Before the expiration of this three years the act of July 27, 1868, extended the limitation to five years from the date when the right to the pension should have accrued.

"This five years' limitation became incorporated into the act of March 3, 1873, in which the pension laws were codified, and thence became section 4709 in the Revised Statutes of the United States of June 22, 1874. Under each of these acts 'arrears of pensions'—that is, pensions covering periods prior to the filing of the application therefor—were granted in thousands of cases. But as the period of five years from the date of discharge elapsed the right to pension prior to date of application was lost until the limit of five years from discharge had been exceeded in all cases.

"In this connection it will be interesting to examine the facts as to the passage of the act of July 27, 1868, which established the five years' limitation. In June, 1868, this House passed an act largely extending and liberalizing the pension laws. It was an act of many sections. The fifth section provided that all pensions under that act should 'commence from the death or discharge of the person on whose account the claim has been or is hereafter granted, or from the termination of the right of the person having prior title to such pension, provided application for such pension has been or shall be hereafter filed with the Commissioner of Pensions within five years after the right thereto has accrued; otherwise the pension shall commence from the date of filing the last evidence necessary to establish the same.'

"This proviso constituted the

"'ARREARS LIMITATION.'

"At the time of the passage of that act through this House, no objection was made to this proviso on any hand. Not an amendment was offered, not a vote was given against it, so far as appears from the record.

"The simple record is that 'the bill passed.'

"The bill was taken up in the Senate on July 20, 1868. The bill was amended, new sections added, and some sections changed, but the limitation proviso was not so much as alluded to in the debate. No objection was made, no amendment was offered, and no vote recorded against it. Again, it is recorded that 'the amendments were agreed to and the bill passed."

"That was in the Fortieth Congress. In the Forty-fifth Congress an attempt was made to repeal this limitation of the arrears proviso, but it never came to final action.

"In the Forty-sixth Congress, upon the 19th of June, 1878, Mr. Haskell, of Kansas (Republican), moved to suspend the rules and pass the act introduced by Mr. Cummings, of Kansas (also a Republican). This was House bill 4234, known as the 'arrears act.' Upon this motion the rules were suspended and the bill passed by a vote of 164 to 61, distributed as follows:

Democrats for the bill	48
Democrats against the bill	61
Republicans for the bill	116
Republicans against the bill	None.

"As this bill passed under suspension of the rules it required two-thirds, or 150 yeas, of which 150 the Republicans furnished 116 and the Democrats the remainder.

"This bill was taken up in the Senate on January 16, 1879, and after brief debate it was passed by a vote of 43 to 3.

"The yeas were 27 Republicans and 16 Democrats, and the 3 nays were all Democrats.

"The arrears act was not introduced by a Democrat, was not moved by a Democrat, was not passed by Democratic votes. A majority of 13 Democrats in the House voted against it. Every vote cast against it in either House was by a Democrat.

"That act received the approval of President Hayes January 25, 1879, and became a law.

"IT REPEALED THE ARREARS LIMITATION ABSOLUTELY

and for all time. It created no new limitation. It was a measure of full relief. It was a Republican law.

"But in the closing days of that Congress an appropriation bill was reported from the Democratic committee of the House by Hon. W. A. J. Sparks (Democrat) entitled 'An act making appropriations for the payment of the arrears of pensions granted by the act of Congress approved January 25, 1879, and for other purposes.' That act contained three sections.

"Section 1 made the necessary appropriation for the payment of the arrears; then followed this general legislation.

"Section 2 first substantially re-enacts the Haskell-Cummings bill granting pensions from the date of death or discharge, and then adds these words:

"If the disability occurred prior to discharge; and, if such disability occurred after the discharge, then from the date of actual disability or from the termination of the right of the party having prior title to such pension: *Provided*, The application for such pension has been or is hereafter filed with the Commissioner of Pensions prior to the 1st day of July, 1880; otherwise the pension shall commence from the date of filing the application.

"Section 3 repealed section 4709 of the Revised Statutes, which was the five years' limitation.

"This act was approved March 3, 1879. Under this law we have been operating to the present time.

"It will be seen that the Haskell-Cummings act of January 25, 1879, repealed the limitation on arrears absolutely and that the act of March 3, 1879, created a new limitation of less than one year and four months, namely, July 1, 1880. Such is the plain record in regard to the repeal and the re-enactment of the limitation of arrears of pensions.

"The statement of the gentleman from Wisconsin was as far from the truth as the statement of the distinguished gentleman from Indiana.

"Of the

"JUSTICE AND RIGHT OF THAT REPEAL

there can be no doubt.

"As I have before said, Mr. Speaker, a pension is simply an attempt on the part of the whole people to compensate in part losses suffered by individuals in behalf of the whole people.

"This compensation should be, so far as practicable, commensurate with the loss. The service of the claimant having been established and the loss in the service, why should not the compensation begin at the same time as the disability and loss?

"Why should 60,000,000 of people ask one poor man to bear alone a loss incurred in behalf of all? Is it because the pensioner has not claimed his right? Is it then to be counted against a man that from motives of patriotic pride he has forborne to claim his right when he might have claimed it, and that he has struggled manfully for years under increasing infirmities to avoid and postpone asking help and compensation for his loss from his countrymen? God forbid.

"When we have duly adjudicated in our own constituted tribunal that the claimant has suffered a loss in serving his country, a loss for which he was entitled to a pension if he had asked for it, why should not the pension reach back to the disability? Why should one rule be applied to those who came forward promptly to claim their dues, and another applied to those who have sought to avoid the necessity of claiming the right which the law had given them? Why should we not now repeal the existing limitation, and thereby do an act of justice?

"THE FORTY-EIGHTH CONGRESS.

"With the Forty-eighth Congress the Democratic party once more returned to the control of the House of Representatives, with a majority of more than seventy.

"Bills covering almost every possible phase of the pension question were introduced and referred to the proper committees.

"There were bills to repeal the arrears limit; bills to pension soldiers in the Mexican war; bills to increase the pensions of widows and orphans; bills to pension prisoners of war; bills to waive proof of prior soundness; bills to dispense with proof of actual dependence of fathers and mothers; bills to increase rates, especially in cases of loss of limb, of sight, and of hearing.

"There was a great abundance of material went to the committee, but very little of it ever came to action in the House. But a bill to pension

"SOLDIERS OF THE MEXICAN WAR

was promptly reported, and a substitute therefor, introduced by Mr. Townshend, of Illinois, was passed granting a service pension to every soldier who served for fourteen days in the Mexican war or was even carried on a muster-roll for that length of time, without any other requirement of age or service or disability or need.

"This act repealed so much of the Revised Statutes as prohibited pensions to persons who had borne arms against the United States in the war of the rebellion, and conferred a uniform life pension upon them of $8 per month, regardless of the fact that they might have been subsequently disabled while fighting against the United States.

"This bill went to the Senate (which was Republican) and was there amended so as to confer pensions upon honorably discharged soldiers of the Union who had become disabled for self-support and who were dependent upon their own labor. The Senate amendments also provided for the increase of widows' pensions, and those of dependent parents and children.

"It embraced the most meritorious features of the so-called dependent-pension bill afterward vetoed by the President. This bill, so amended, was returned to the House, and in the closing days of the first session of the Forty-eighth Congress, July, 1884, three days before the final adjournment, it came up for consideration.

"Mr. Hewitt, of Alabama, antagonized these Senate amendments with the original Mexican pension bill, which pensioned everybody in the Mexican war and the Black Hawk war and the Seminole war, but no Union soldier.

"Upon Hewitt's motion to substitute, the yeas were 84, all Democrats, nays 126, of which 87 were Republicans and 39 were Democrats.

"The House then proceeded to consider the Senate amendments, but when the sixth amendment was reached, the Democrats, under the lead of Mr. Hewitt, of Alabama, inaugurated a filibuster, which was maintained up to the hour of final adjournment (July 5, 1884), and so the bill was killed for that session.

"A few Democrats, under the lead of Mr. Townshend, stood steadfast for the bill.

"After the reassembling of Congress (January 5, 1885), Mr. Keifer, of Ohio, moved to suspend the rules, take up the bill as amended by the Senate, and

"CONCUR IN THE SENATE AMENDMENTS.

"To do that would pass the bill. On that motion the yeas were 129, the nays were 85.

Democrats for the bill	57
Democrats against the bill	84
Republicans for the bill	72
Republicans against the bill	1

"The one Republican against the bill was Bisbee, of Florida.

"So, for the want of the requisite two-thirds to suspend the rules, the bill was lost.

"This was the great pension contest of the Forty-eighth Congress, and this most just legislation was defeated by 84 Democrats.

"The only pension legislation which became law in the Forty-eighth Congress was a petty bill which gave to those who had lost a leg at the hip the same pension as those who had lost an arm at the shoulder, and a three-line proviso on an appropriation bill, inserted by a conference committee, giving the presumption of prior soundness (*prima facie*) to pension claimants.

"This Democratic House with its more than 70 majority was a very poor place for pension legislation. The Republican Senate did much. The Democratic House undid it all.

"THE FORTY-NINTH CONGRESS.

"The Forty-ninth Congress assembled with the Republicans in control of the Senate by a narrow majority, and the Democrats in a majority of about 40 in the House.

"Again bills were introduced covering the entire field of pension legislation, including Mexican war, widows' increase, prisoners of war, dependent and disabled, and repeal of the arrears limitation.

"The first contest arose on the 'widows' increase bill.' That bill came up in the House in regular order on January 21, 1886. Mr. BROWNE, of Indiana (Republican), offered an amendment to repeal the arrears limitation. A vote on the amendment was prevented. On February 2 Mr. Matson moved to suspend the rules and pass the widows' increase bill (with an amendment relating to date of marriage) and without the Browne amendment. This motion cut off all possibility of General BROWNE'S motion being voted on, just as it was intended and designed to do. The vote was then taken on the bill (to increase widows' pensions from $8 to $12 per month) and it was passed by a vote of 198 yeas to 66 nays, as follows:

Democrats for the bill	80
Democrats against the bill	66
Republicans for the bill	118
Republicans against the bill	None.

"All but two of the Democrats who voted against this bill were from the South. The two exceptions were Bragg, of Wisconsin, and Hewitt, of New York.

"SENATE BILL 1886.

"About the same time in the Senate was passed 'Senate bill 1886,' to pension disabled dependent soldiers.

"It passed by a vote of 34 yeas to 14 nays.

Democrats for the bill	7
Democrats against the bill	14
Republicans for the bill	27
Republicans against the bill	None.

"This bill went to the House, and the Democratic majority refused to consider or even report it, and it died in the hands of the Democratic committee.

"DEPENDENT PENSION BILL.

"As I have before said, the Senate had early in the first session passed a bill in the nature of a dependent pension bill, known as 'Senate bill 1886.' Petitions poured in from all over the country asking for its passage. The leaders on the Democratic side were in a dilemma. To take up and pass the Senate bill was to give all the prestige of the legislation to the Republican Senate, and that would never do. Thus matters stood until January 10, 1887, when Mr. Matson, chairman of the Committee on Invalid Pensions, introduced House bill 10457, which, after being considered and modified in committee, was reported back to the House and put upon its passage January 17, 1887. It was passed under suspension of the rules by a vote of 180 to 76.

Democrats for the bill	66
Democrats against the bill	76
Republicans for the bill	114
Republicans against	None.
Not voting	63
Republicans	26
Democrats	38

"It will be seen that almost two-thirds of the affirmative vote was Republican, while 76 Democrats voted against it, and only 66 in favor of it, and 13 abstained from voting without pairs.

"The act now went to the President.

"On February 11 the President returned the bill with his objection, or, as it is more commonly expressed,

"VETOED.

"The veto and the bill were referred to the Committee on Invalid Pensions, and after full and mature consideration that committee reported them back to the House with the unanimous recommendation that the bill pass notwithstanding the President's objections.

"Upon this the vote was had on February 24, 1887, with the following result—yeas 175, nays, 125:

Democrats for the bill	37
Democrats against the bill	125
Republicans for the bill	138
Republicans against the bill	None.
Not voting	18
Democrats	16
Republicans	2

"Every Republican member of the House except two (who were absent, paired) voted and are recorded for the bill. Of the 125 Democrats who voted against the bill, 96 were from the former slave States and only 29 from the former free States. Of the Democrats voting

"A MAJORITY OF 88 VOTED AGAINST THE BILL;

and so, for the want of the necessary two-thirds required by the Constitution the bill was defeated, primarily by the Democratic President, secondarily by the Democratic House.

"It is not my purpose now, Mr. Speaker, to criticise this record, but only to call attention to it.

"In order that these votes may be more readily referred to, I here append them in tabulated form.

"It will be noted, first, that only in one case (that of the widows' increase bill) were there more Democrats voting for than against any bill; second, that in all these votes there was but one Republican vote against one of them, and that was from the State of Florida. This table, taken from the official record, ought to settle now and forever the attitude of the Democratic party toward pension legislation:

Tabulated statement of votes on pension bills, Forty-sixth to Fiftieth Congress.

Name of bill.	Democrats for.	Democrats against.	Republicans for.	Republicans against.
Repeal of arrears limitation, Forty-sixth Congress	48	61	116	0
Mexican pension bill, with Senate amendments, Forty-eighth Congress, first session	39	84	87	0
Mexican pension bill, with Senate amendments, Forty-eighth Congress, second session	57	84	72	1
Widows' increase, Forty-ninth Congress	80	66	118	0
"Senate bill, 1886," Forty-ninth Congress (never reported back in the House)	7	14	27	0
Dependent pension bill, Forty-ninth Congress	66	76	114	0
Dependent pension bill, Forty-ninth Congress (to pass over President's veto)	37	125	138	0
On all the bills (aggregate)	334	510	572	1

"Mr. Speaker, I do not think that any poor words of mine can add anything to the force of these figures. They are the mute, dumb mouths that speak louder and more eloquently than any human voice of the utter falsehood of the assertion that 'all the legislation friendly to the soldier that has amounted to anything since the war has been given by a Democratic House of Representatives.' That statement is worthy of a member of the Ananias fraternity."

FIFTIETH CONGRESS.

During the Fiftieth Congress the dependent-pension bill slept in the House the sleep of death. The arrears-of-pension repeal was entombed with the dependent-pension bill on the Calendar, where it could only be reached by the action of the Committee on Rules, and that action was never taken.

The Committee on Invalid Pensions was buried under a load of public bills, but none of them ever saw the light of day or breathed the breath of life.

In the second session of the Fiftieth Congress one general pension bill was passed.

It was to increase the pension of those who had lost both hands or both feet from $72 to $100 per month. It was introduced by Mr. Long, of Massachusetts. On his motion it was taken up and passed by unanimous consent.

FIFTY-FIRST CONGRESS.

The first pension legislation brought forward in the Fifty-first Congress was to correct an error or oversight in the act of June 16, 1880, by increasing the pensions of those totally helpless, allowed since that date, from $50 per month to $72 per month, in accordance with the original intent.

The bill passed both Houses without division. As it became a law it was the result of a conference, and was approved March 4, 1890.

This was a Republican measure reported by a Republican committee.

The next pension legislation of the present Congress was the dependent-parents bill, and provides for dispensing with proof of the dependence of the parents on the soldier at the date of his death. It first came up in the Senate March 31, 1890, and passed by the following vote:

Republicans for the bill	32
Republicans against the bill	0
Democrats for the bill	10
Democrats against the bill	12

On the Democratic vote alone the bill would have been defeated.

This finally became law as part of the act of June 27, 1890.

April 7 Mr. MORRILL brought up in the House what was known as the Morrill bill. It pensioned four classes:

First. All soldiers sixty-two years of age who had served in the Army, Navy, or Marine Corps in the late war for ninety days and were honorably discharged.

Second. All who have a present disability equal to $8 per month, whether contracted in the service or not.

Third. All widows of soldiers sixty-two years of age.

Fourth. All widows under sixty-two years who have no dependence except their personal labor.

This bill was liberal, simple, and easy of administration. It was a purely service bill, coupled with an age disability. It was brought up on a motion to suspend the rules, when it required a two-thirds vote to pass it. The following was the vote:

Republicans for the bill	136
Republicans against the bill	1
Democrats for the bill	34
Democrats against the bill	86

So it was defeated for the want of a two-thirds vote. It will be seen that only a little more than a quarter of the Democrats voted for it, while only one Republican voted against it.

On April 30, under a special order of the Committee on Rules, Mr. MORRILL, chairman of the Committee on Invalid Pensions, called up the same bill and put it upon its passage. After a debate of four hours, a vote was taken on the motion of Mr. CHEADLE to reduce the age limit to sixty years. The vote resulted as follows:

Republicans for the amendment	143
Republicans against the amendment	0
Democrats for the amendment	40
Democrats against the amendment	71

The Republicans solidly for it and almost two-thirds of the Democrats against it.

The vote was then (April 30) taken on the amended Morrill bill (age limit at sixty years), with the following result:

Republicans for the bill	141
Republicans against the bill	0
Democrats for the bill	38
Democrats against the bill	71

Every Republican voting for and seven-tenths of the Democrats voting against.

The Senate and House having passed different bills, a conference was had, and a compromise was agreed upon, which has since (June 27) become a law, and under which 400,000 claims are already filed.

That act pensions all who have an existing disability equivalent to $6 per month and up to $12 per month, without proof that it was contracted in the service, provided they served ninety days and received an honorable discharge.

It also pensions the widows of all such, and all soldiers' widows dependent on their labor.

This conference report came to a vote in the House June 11, 1890, and was adopted by a vote of 145 to 56, as follows:

Republicans in favor of the report	117
Republicans against the report	0
Democrats in favor of the report	28
Democrats against the report	56

Every Republican in favor and just two-thirds of the Democrats against.

This was a Republican measure.

In the Senate it came to a vote June 23, 1890, with the following result:

Republicans for	31
Republicans against	0
Democrats for	3
Democrats against	18

Every Republican for, sixth-sevenths of the Democrats against.

So this most liberal and beneficent law was passed in the two Houses by a vote of 148 Republicans for and none against; 31 Democrats for and 74 Democrats against.

The next pension measure to be considered was the "prisoners of war bill."

This bill, in addition to pensions for prisoners of war, also provides that prisoners of war who were prisoners for thirty days or more should receive a per diem allowance of $2 a day for every day they were held as prisoners of war.

This measure was brought up on a motion to suspend the rules and pass the bill, and required a two-thirds vote.

The vote resulted as follows:

Republicans for the bill	119
Republicans against the bill	0
Democrats for the bill	24
Democrats against the bill	78

So the bill was defeated, more than three-quarters of the Democrats voting against it.

This is the last general legislation that has been acted upon at this session.

I now present in tabulated form the votes upon pension legislation in the first session of the Fifty-first Congress:

Name of bill.	Date of vote.	Republicans for.	Republicans against.	Democrats for.	Democrats against.
To increase totally helpless	Feb. 21, 1890	(*)	(*)	(*)	(*)
Dependent parents' (Senate)	Mar. 31, 1890	32	0	10	12
Morrill (62-year) bill (House)	Apr. 7, 1890	136	1	34	86
Morrill bill—Cheadle (60 years) amendment	Apr. 30, 1890	143	0	40	71
Morrill (60 years) bill	Apr. 30, 1890	141	0	38	71
Conference report (House) (now law)	June 11, 1890	117	0	28	56
Conference report (Senate)	June 23, 1890	31	0	3	18
Prisoners of war bill (House)	Apr. 21, 1890	119	0	24	78
Total votes on the several bills		719	1	177	392

* No division.

There is one other thing to which I have not adverted in the foregoing, and which perhaps ought to be taken into account in speaking of the record of the present session. I refer to the vote on the substitute offered by the gentleman from Ohio [Mr. YODER] for the House bill commonly known as the Morrill bill on the 30th of April last. That substitute was never favorably reported from any committee either of the House or Senate. It was offered contrary to the understanding had and agreed upon in the Committee on Invalid Pensions, that the committee should stand by the bill reported by it. That bill never could have been satisfactory to any except those who had long service and no disability. The vote on this bill was but 48 yeas to 161 nays, not voting 118.

The gentleman who offered this amendment, Mr. YODER, was a member of the Fiftieth Congress and also a member of the Committee on Invalid Pensions in that Congress while his political party was in full control of the House of Representatives, and yet during the two years of that Congress no general-service pension bill was ever offered to the House or presented as a substitute by the gentleman from Ohio or any of his political friends. That Congress was absolutely barren of any general pension legislation whatsoever, but like its predecessor, the Forty-ninth Congress, it was exceedingly prolific of pension vetoes, both general and special. The fact that but 47 Democrats out of about 155 voted for the substitute, in connection with the ominous silence of the gentleman and his party friends in the two preceding Congresses, gives rise to the suspicion that the substitute was offered only for political effect; but the country and the soldiers are neither so credulous nor so ignorant nor so forgetful as he seems to suppose, and they will not fail to contrast this sudden and new-born zeal for a service pension with the record of his party and of his President in the Forty-ninth and Fiftieth Congresses.

There is one thing that we have greatly missed in the present Congress, and that is our weekly list of Presidential vetoes of pension bills. The present Chief Executive evidently believes now, as he believed before his election, that it is no time to weigh the gratitude of the country for its soldiers with an apothecary's scales. In the nine months since this Congress convened no veto of a pension bill, great or small, public or private, has come from the hands of Benjamin Harrison. In addition to the many hundreds of private pension bills which have become a law during this session, we have placed upon the statute-book as a monument of the fidelity of the Republican party to its promises the act of June 27, under which not hundreds but hundreds of thousands of disabled soldiers and soldiers' widows will receive the grateful bounty of the nation.

Mr. Speaker, I invite a careful scrutiny of all my old comrades and of all patriotic men to the contrast exhibited in these records in the animus and in the actions of the Democratic and of the Republican parties; and upon the judgment of all reasonable and right-thinking men of that record the Republican party is willing to rest.

Rivers and Harbors.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 28, 1890.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 9486) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. WHEELER, of Alabama, said:

Mr. CHAIRMAN: It seems remarkable that during a period of material progress like the present there should be the slightest necessity for argument as to the constitutional right of the General Government to improve the rivers that flow through our domain, or the harbors which invite and shelter the commerce which is so essential to the prosperity with which this country is blessed. That the navigable rivers of the United States are as much its property as are its public buildings I think no one will deny, and this being conceded there is no other sovereignty which has any right whatever to improve the navigation of the rivers upon which commercial products are transported from State to State.

Even if the States which are traversed by our navigable rivers had a right and also the desire to improve their navigation, it will readily be seen that for the General Government to permit certain States to enter into such enterprises would be subject to the most grave objections. Each State has special interests which frequently are adverse to the interests of another State, whose best highway upon which to market her productions may be a river which a State with rival interests is willing to improve. Would it not only be possible, but very probable, that such permission would be exercised by a State in a manner quite objectionable to other States whose interests were rival and antagonistic? The possibility of such a result would be sufficient to prove that such a plan would be extremely injudicious, so injudicious, thought our forefathers, that they placed an inhibition upon any such possible impediment to trade. I refer to the sixth clause of section 9 of the Constitution, which reads:

No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another.

The courts have often decided that an indirect infringement of the Constitution is regarded with quite the same disfavor as a positive violation of its mandates, and it would be quite apparent that for the General Government to surrender to the States the question of improving the rivers would be placing in them unquestioned power to violate the clause of the Constitution I have just quoted. In clause 3 of section 8, Article I, the Constitution says:

The Congress shall have power to regulate commerce with foreign nations, and among the several States.

And, as stated in a succeeding clause, has power—

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof.

Thus it is seen that it is an unquestionable duty for Congress to improve and maintain the water ways of the United States.

While Rutledge, Randolph, Franklin, Jay, Ellsworth, and Madison may be called the fathers of the Constitution, there can be no question that Chief-Justice Marshall was its earliest defender, and certainly all will admit that he was by far its greatest expounder, and his decisions upon the meaning and construction of the instrument have long since become a part of the jurisprudence of our country. He presided over the Supreme Court of the United States for more than a third of a century, during which period he very thoroughly impressed his great mind upon our institutions.

In McCullough *vs.* Maryland, reported in 4 Wheaton, page 415, this distinguished jurist, referring to the scope and design of the Constitution, declared that superb structure was—

Intended to endure for ages to come, and consequently to be adapted to the various crises of human affairs.

And to the same effect and in the same spirit the Supreme Court said, in deciding the case of Hunter *vs.* Martin (1 Wheaton, 104):

The instrument [the Constitution] was not intended to provide merely for the exigencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence. It could not be foreseen what new changes and modifications of power might be indispensable to effectuate the general objects of the charter. * * * Hence its powers are expressed in general terms, leaving the Legislature, from time to time, to adopt its own means to effectuate legitimate objects, and to mold and model the exercise of its powers as its own wisdom and the public interests should require.

In The United States *vs.* The New Bedford Bridge (1 Woodbury & Minot's Reports, 421) Mr. Justice Woodbury used this expression:

For purposes of foreign commerce and of that from State to State the navigable rivers of the whole country seem to me to be within the jurisdiction of the General Government, with all the powers over them for such purposes (whenever they choose to exercise them) which existed previously in the States or now exist with Parliament in England.

In Corfield *vs.* Coryell (4 Washington Circuit Court Reports, 379) Mr. Justice Washington said:

The grant to Congress to regulate commerce on the navigable waters belonging to the several States renders those waters the public property of the United States for all purposes of navigation and commercial intercourse, subject only to Congressional regulation.

It was held in Gilman *vs.* Philadelphia (3 Wall., 724):

The power to regulate commerce comprehends the control for that purpose, and to the extent necessary, of all the navigable waters of the United States which are accessible from a State other than those in which they lie. For this purpose they are the public property of the nation and subject to all the requisite legislation of Congress. This necessarily includes the power to keep them open and free from any obstruction to their navigation, interposed by the States or otherwise; to remove such obstructions when they exist, and to provide by such sanctions as they may deem proper against the recurrence of the evil and for the punishment of offenders. For these purposes Congress possesses all the powers which existed in the States before the adoption of the national Constitution, and which have always existed in the Parliament of England. It is for Congress to determine when its full power shall be brought into activity and as to the regulations and sanctions which shall be provided.

It was distinctly asserted in 18 Howard, page 427, that—

The power of Congress to regulate commerce includes the regulation of intercourse and navigation.

Justice Story in writing upon this subject (volume 2, page 4) says that—

Commerce undoubtedly is traffic; but it is something more. It is intercourse. It describes the commercial intercourse between nations and parts of nations in all its branches, and is regulated by prescribing rules for carrying on that intercourse.

It has been said—

The river is only the instrument of commerce.

And in Gray *vs.* Clinton Bridge (reported in 16 American Law Register, 152) it is affirmed:

The power to regulate commerce is a power to regulate the instruments of commerce.

I also cite from Cooley *vs.* Board of Wardens (12 Howard, 316), which case, in referring to the power of the General Government on this subject, said it (the power)—

extends to the persons who conduct it, as well as to the instruments used.

And in 11 Wallace, pages 411 and 415, the Supreme Court says:

1. A river is a navigable water of the United States when it forms, by itself or by its connection with other waters, a continuous highway over which commerce is or may be carried on with other States or foreign countries in the customary modes in which such commerce is conducted by water.

If, however, a river is not of itself a highway for commerce with other States or foreign countries, or does not form such highway by its connection with other waters, and is only navigable between different places within the State, then it is not a navigable water of the United States, but only a navigable water of the State.

These authorities were cited by me in a speech which I made in this House nearly four years ago. It seems to me they are conclusive that the improvement of our rivers is the right, and therefore it is the duty, of the General Government to do all work which is necessary to make the rivers safe for navigation by the crafts suitable for our trade and commerce. European nations have apparently appreciated the importance of this subject. Early in this century the Seine in France was only navigable for small craft, the depth being but 2½ feet in many localities. When Napoleon Bonaparte became First Consul he directed improvements to be made. Each facility to navigation increased commerce, and that was followed by a demand for further improvements of the river, all of which have resulted in a total increase of the depth from 2½ to 10½ feet, so that to-day large ships sail up the Seine to Paris.

The improvements of the Rhone River alone cost $12,000,000, including a canal 2 miles long near its mouth and the deepening of the river below the city of Lyons. The report of the National Assembly, 1878, recommended expenditures of nearly $200,000,000 for rivers, canals, and harbors. It must be recollected that France is only three-fourths as large as Texas, and besides her facilities for inland navigation she profitably runs over 18,000 miles of railroad.

Russia has 19,000 miles of navigable water ways and 38,000 miles of raft-bearing rivers. The Volga, the Ural, and the Dnieper are together 4,506 miles long, draining 872,000 square miles of territory. Six less important rivers drain together 300,000 square miles. Notwithstanding the water ways are blocked with ice the greater part of the year, there is a vast system of artificial canals. The St. Petersburg canal cost $7,000,000, and 900 miles of other canals have been constructed.

Italy has only 1,100 miles of navigable rivers, and though formerly among the first in constructing water ways, has now only 435 miles of canal.

Austria-Hungary possesses in the Danube and its branches water courses which drain 316,000 square miles, notwithstanding which the Government has expended many millions to improve the river, $16,000,000 on one cut alone of 10 miles in length.

Germany, with an area little larger than that of France and 22,000 miles of railroad, has already spent more than $20,000,000 on a river not larger than the Clinch, upon which our Government has spent about $14,000.

Holland, with an area about as large as the State of Delaware, has expended upon three public water-works $32,000,000.

Belgium, about as large as New Hampshire, has expended $20,000,000 on dock and river improvements, besides running profitably 2,700 miles of railway.

Great Britain, with an area just half that of Texas and 19,000 miles of railway, had up to 1884 expended more than $100,000,000 to improve her inland navigation. The actual cost of transportation on all English water ways is about one-half cent per ton per mile.

The United States is more than three hundred times as large as Belgium or Holland, more than thirty times as large as Great Britain, and eighteen times as large as Germany or France, and yet our entire expenditures for rivers and harbors from the beginning of the Government until 1890, including the bill now before Congress, have amounted to only $211,270,451.69. I call attention to the following table, showing appropriations to the different States by this bill and the total amount each State has received up to this time.

Table showing the aggregate appropriations for the improvement of rivers and harbors during the century beginning 1789 *and ending* 1890, *including amount contained in this bill.*

States.	Total amount, 1890.	Total amount to date.
New York	$1,722,500	$20,621,236.28
Michigan	2,298,500	14,801,377.25
Wisconsin	428,895	6,842,436.74
Texas	893,150	6,583,850.00
Ohio	459,500	5,040,647.29
Illinois	961,000	5,001,205.00
Massachusetts	506,500	4,885,249.08
North Carolina	425,000	4,249,308.92
California	596,500	4,112,250.00
Delaware	128,100	4,086,264.69
Virginia	508,000	3,579,380.00
Maryland	403,500	3,499,592.50
Oregon	$402,100	$3,436,050.00
Georgia	532,500	3,156,705.41
South Carolina	598,000	3,061,500.00
West Virginia	561,500	3,028,175.00
Alabama	649,000	2,789,001.82
Connecticut	325,000	2,762,176.83
Maine	418,500	2,678,634.48
Florida	376,000	2,297,850.09
District of Columbia	280,000	2,146,500.00
Pennsylvania	145,000	1,973,792.23
New Jersey	178,600	1,946,638.00
Kentucky	210,500	1,818,500.00
Iowa	.....	1,770,000.00
Rhode Island	231,600	1,583,550.00
Tennessee	530,500	1,212,000.00
Indiana	57,500	1,167,453.92
Minnesota	172,350	1,023,600.00
Louisiana	256,000	920,400.00
Arkansas	43,500	878,900.00
Mississippi	111,500	831,025.00
Vermont	31,000	746,480.20

a Provided for in act of June 14, 1880.

It will be seen that the Mississippi River has during the last eleven years had appropriated to it $41,280,380.53; and if we include appropriations of which the Mississippi was a beneficiary in conjunction with other rivers, the total amount received would exceed $50,000,000.

I invite the attention of the House to the mammoth map which I have had opened in front of the Speaker's desk, illustrating the work which has been done on Muscle Shoals, the principal obstruction of the Tennessee River. Commencing about 12 miles below Decatur, Ala., it was necessary to excavate through solid flint rock, forming an impassable reef in the bed of the river, and to remove, by blasting, more than 1,000,000 cubic feet of the hardest rock. Four miles below the initial point of the work a rock wall 2½ miles long was built to confine the water between the wall and the southern shore; then a canal, 1¼ miles long, with two locks, was constructed, which carried the work to a point where navigation could be secured for a distance of 7½ miles.

Here the main canal, 14½ miles long, begins. The fall of the river in this distance is 84½ feet; in some places the fall is 18 feet to a mile; in others as much as 40 feet to the mile.

There are eleven locks, 60 feet wide and 300 feet long between the gates. They vary in lift from 5 to 12 feet and are of the most superior and substantial workmanship.

The river below Florence is obstructed by the Colbert and Bee Tree Shoals. In its natural condition the navigation of the river is good for about eight months of the year, but from two to four months the reefs and obstructions entirely close it to all transportation. Some little work of improvement was done many years ago, but it has not proved to be of any appreciable advantage.

In 1887 I went over the work in a small row-boat and made a close personal examination of the river for some 30 miles below Florence, and particularly the obstructions at Colbert and Bee Tree Shoals. I found in one place a rock reef extending over the channel and so shaped as to give in that tremendous river but 11 inches of water at the lowest stage, which, of course, caused a complete stoppage of navigation during periods of low water. I therefore filed a petition with the War Department for a thorough survey, which petition was supported and recommended by Col. J. W. Barlow, United States Corps of Engineers, the distinguished officer in charge of the work. I am happy to say that the Chief Engineer and the Secretary of War became so impressed with the importance of the work that they recommended an appropriation of $1,000,000.

General Duane, then Chief of Engineers, in his report dated October 22, 1887, page 231, in reference to the importance of improving the Tennessee River at Colbert Shoals, says:

> The funds now available and amount asked for can be profitably expended in completing the work of opening the canal and in improving the channel at Bridgeport and Guntersville Bars, and at other points, especially at Colbert Shoals, which is urgently recommended by the engineer officer in charge as worthy of immediate consideration and action, owing to the necessity of its improvement in connection with the early opening of Muscle Shoals Canal.

Last year his successor, General Thomas L. Casey, went over the improvements in person, and he fully concurred in the views of his predecessor. In his last report (page 243) he says:

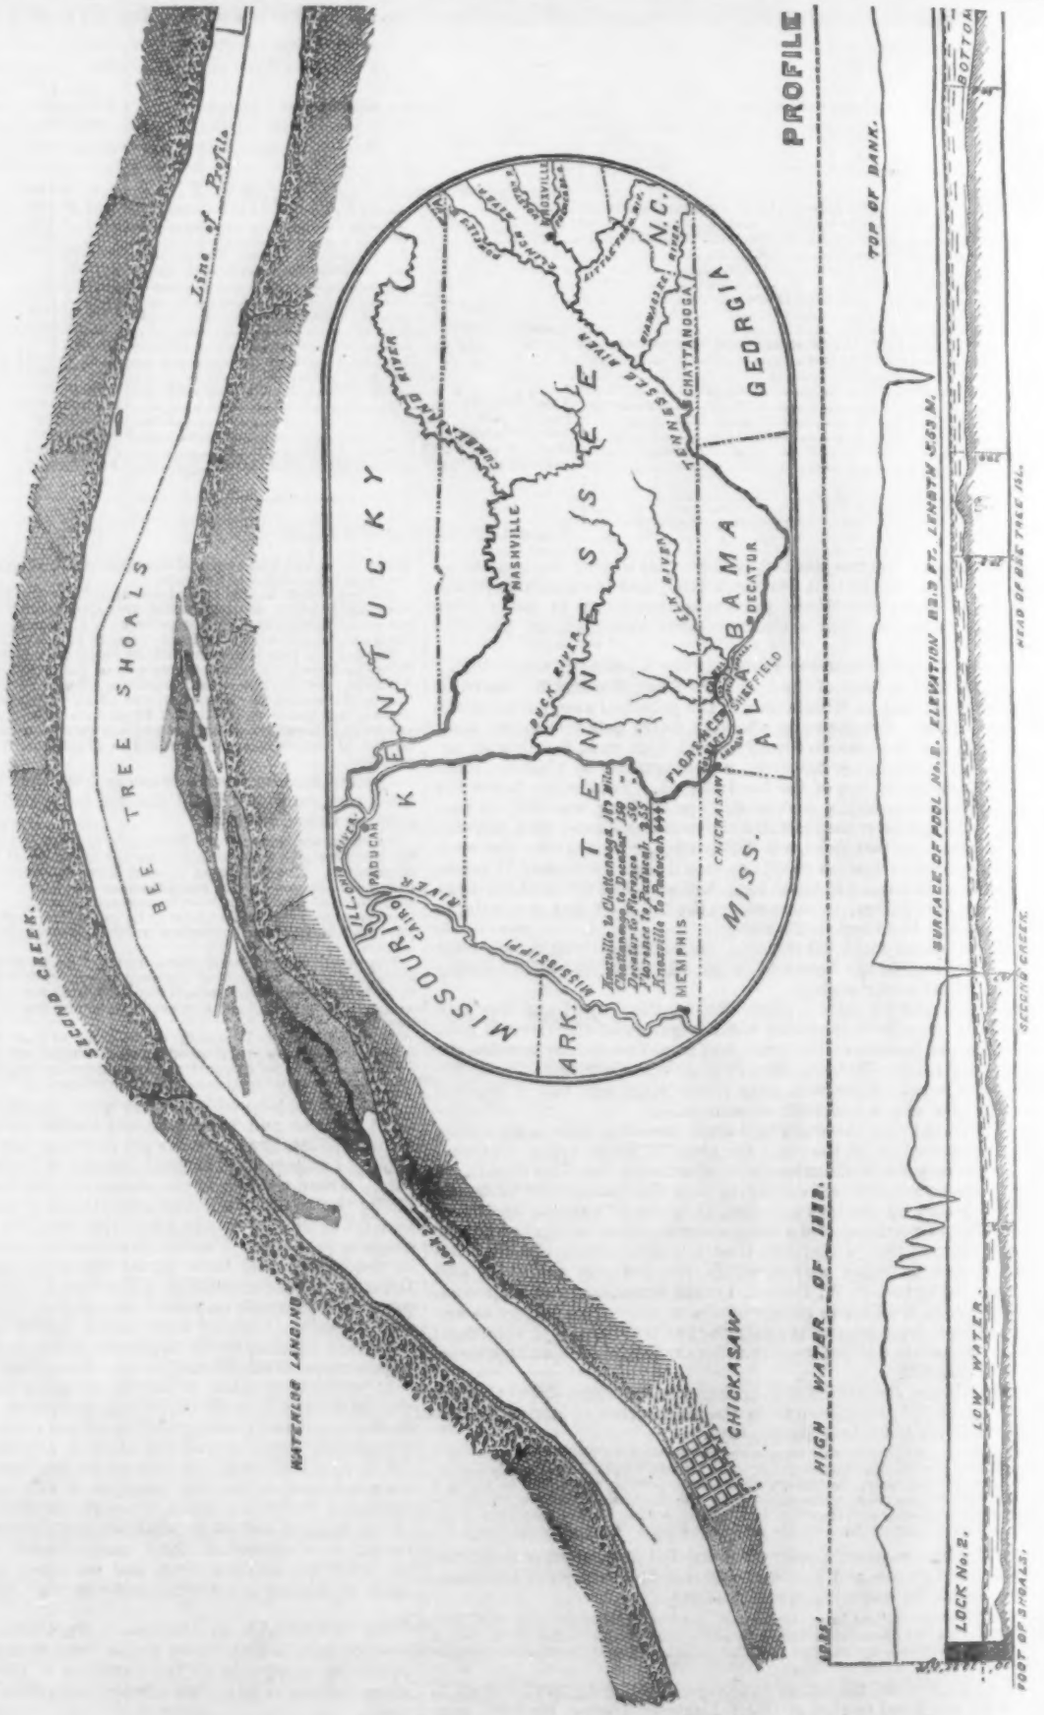
> The plans for the radical improvement of the Colbert Shoals and Bee Tree Shoals by locks and dams have been submitted, and the necessity of the work in connection with the opening of the Muscle Shoals Canal is urgently recommended.

Col. J. W. Barlow, the officer in charge, in referring to this work in his report, appended to that of Chief Engineer Duane, for 1887, page 1747, says:

> Without a corresponding improvement at Colbert and Bee Tree Shoals the costly canal and locks around the Muscle Shoals will be comparatively useless during a large share of the year.
>
> Above Colbert Shoals large iron manufacturing interests have been recently developed, which demand water transportation for their products, and this having been provided by nature in an almost perfect condition there is needed but a comparatively small improvement to make it entirely satisfactory.
>
> The force of this statement will be realized upon consideration of the fact that from the Muscle Shoals to the mouth of the river the distance is 255 miles, and with the exception of the obstructions offered by Colbert and Bee Tree Shoals the impediments to navigation are of an insignificant character; in fact, the river is navigable to the foot of these shoals throughout the entire year. The propriety, therefore, of an adequate improvement here, to connect the lower section of the river, some 235 miles in length, with the 400 miles above, seems manifest.

Colonel Barlow was quite as emphatic in his report for 1888, and in his report, on page 1829 of the last Report of the Chief of Engineers, General Casey, he says:

> An improved river from Knoxville to Paducah will make the commerce of the Tennessee to take rank among the foremost of the many tributaries of the Mississippi. The following extract from the report of last year applies in an increased degree to the conditions at this time, which predict a prospective commerce of vast magnitude, in coal and iron especially, to an extent by which this river may rightfully claim to be one of the main commercial arteries of our vast and intimately connected system of navigable Southern and Western waters.
>
> The prospective advantages to navigation as well as present benefits to the community by continuing the improvement to completion, not alone of the Muscle Shoals and the Colbert Shoals, but of the entire stream below Chattanooga, is held to be by the inhabitants of the Tennessee Valley well-nigh incalculable.
>
> The whole region is rapidly developing as one of the richest in coal and in iron and other mineral deposits, and all that seems necessary to the further development of these unquestioned resources is cheap transportation and an open river to the commercial centers of the Mississippi Valley.



The bill we are considering proposes to appropriate for the improvement of rivers and harbors in the United States a sum which would amount to less than 40 cents per capita of our population, a very small amount compared to the great benefits to be derived from the expenditure. Those residing in the vicinity of the water ways, made navigable by the labors of our admirable Corps of Engineers, will be able to save hundreds of dollars every year by their improved facilities for shipping products. The boards of trade or chambers of commerce, and in many cases both these organizations, of the cities of Chattanooga, Decatur, Florence, Sheffield, Knoxville, Evansville, and Paducah, have petitioned Congress on the subject, urging the most liberal appropriation possible. With all these facts I appeal to Congress to amend the paragraph relating to the Tennessee River, so as to give this important improvement $500,000 for the next fiscal year.

It would be economy to the Government and it would also save one year in time, which would be of incalculable benefit to the industries in that great and growing section of our country. Iron mines are being opened; furnaces are being erected; manufactories of various kinds are being established; the tonnage on the Tennessee River is becoming immense; and, to use the language of the report of the Government engineers, the whole region is rapidly developing as one of the richest in coal and iron and other minerals, and all that seems necessary to the further development of these unquestioned resources is cheap transportation and an open river, and we appeal to this body to give this work an appropriation commensurate with its great importance.

* * * * * * *

Mr. WHEELER, of Alabama. Mr. Chairman, I move to amend by striking out, in line 10, the words "and undergo an imprisonment not exceeding two years, at the discretion of the court;" and ask unanimous consent to have two minutes to explain the object of the amendment.

It is necessary to amend the bill as suggested, or else to amend by striking out the words "owner or owners;" so that it will read, "man-

ager or managers." Either amendment will make the section more effective than it is at present.

The CHAIRMAN. The Clerk will first report the first amendment suggested by the gentleman from Alabama.

The Clerk read as follows:

Strike out, in line 10 of section 5, the words "and undergo an imprisonment not exceeding two years, at the discretion of the court."

Mr. WHEELER, of Alabama. I also move, in line 14, to strike out the word "penalties" and insert the word "fine."

Now, I ask unanimous consent to have two minutes to explain the amendment.

The CHAIRMAN. Debate has been closed by order of the committee.

Mr. GROSVENOR. The former penalties prescribed in the acts did not do any good, and these are made here so that somebody will pay attention to them.

Mr. WHEELER, of Alabama. But I want to say to my friend that the very point he is trying to reach in the section can not possibly be reached by the language as it is, and that the amendment is necessary. My object is to so frame the section as to make it effective. I can assure my friend that if he will examine the bill he will admit that we must either strike out the words "owner or owners" or else modify the clause which provides for imprisonment. If the gentleman will reflect, he will find that there would be difficulty in imprisoning the owners of railroads.

The CHAIRMAN. Is there objection to allowing the gentleman from Alabama to proceed for two minutes?

There was no objection.

Mr. WHEELER, of Alabama. Mr. Chairman, I have had some familiarity with correspondence between the Secretary of War and the managers of railroads in connection with this subject, as I have been using efforts to get such an obstruction removed, and I am convinced that the section as it now reads would not assist in hastening railroads to comply with the requirements of the Government.

Mr. HENDERSON, of Illinois. I will say to my friend from Alabama that there is no trouble about securing compliance with this provision of the law.

Mr. WHEELER, of Alabama. But I have not yet got to the point I intended to make. Now, this section provides that the "owner or owners or manager or managers of any railroad" or "bridge" shall be liable to these penalties; that is to say, shall undergo imprisonment and be fined, as prescribed in this section. I contend that with this section as it now reads there will be difficulty in determining who shall be arrested or imprisoned, who are the "managers" or "owners;" it does not define who it shall be; it does not specify who shall be arrested, and the consequence is that the railroad which fails to comply with the requirements of the act could not be reached in years in the court to determine where the liability rests.

The owners of railroads are the stockholders, which includes women, children, and corporations of all kinds, some of the corporations being universities and churches; for instance, the Johns Hopkins University is a large stockholder in the Baltimore and Ohio, and I believe Trinity Church is a stockholder in a great many railroads.

Mr. GROSVENOR. It takes in all the managers.

Mr. WHEELER, of Alabama. It says the "owners." Now, they may be the stockholders, and in case of foreclosed railroads they might be bondholders, and might represent five thousand persons. Do you want to take all of them?

Mr. BLANCHARD. The intent of the act is manifestly to apply only to the managers of such corporations.

Mr. WHEELER, of Alabama. But the bill does not so specify. It says the owner or owners or managers. Now, I say that the $10,000 fine will be a much better safeguard to insure prompt compliance with the law.

[Here the hammer fell.]

I shall attach to my remarks maps which will aid very much in giving an intelligent understanding of this noble river, which is destined to become a great and important highway of commerce.

Farmers' Alliance.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 1, 1890.

The House having under consideration the order of business—

Mr. WHEELER, of Alabama, said:

Mr. SPEAKER: The gentleman from New York [Mr. SAWYER] has admitted that he understands that the obstruction to pension legislation at the late Friday night sessions is due to the unwarranted action on the part of the Republican majority in violating the rules of the House with reference to the consideration of the Private Calendar on Friday afternoons. They seem to have determined that no private bills shall be considered this session, and their especial animosity seems to be directed against the bill reported from the Committee on War Claims, which appropriates a small sum of money for the payment of judgments rendered against the Government by the Court of Claims.

INJUSTICE TO SOUTHERN CLAIMANTS.

In order to illustrate how unjust it is to take such action with reference to these claims let me briefly show how they compare with claims owned by gentlemen whose homes were in the North during the war. At that time the Government needed money. For $400 in gold it gave a bond which has been drawing interest ever since, and now the interest and principal, or rather the interest already paid, when added to the market value of the bond, amounts to about $3,100. At the same time that the Government officials wanted gold they wanted supplies, and they needed the supplies even worse than they needed the gold. Federal officers went to the good, honest farmers of my district and other localities in the South and got supplies for the Army. To make a case in point, say, they got from a farmer supplies worth $400.

They have given the bondholder $3,100, but this farmer of the South has been waiting for twenty-five years, and all that he asks is that he shall be paid this $400 without interest. Is it fair or just to deny him that petition? The Government wanted supplies there where their armies were quartered more than they wanted gold in New York: and this man, in obedience to the request or demand of the Federal officers, came with his wagon and brought them supplies, and now all he asks is the $400 without interest.

SOUTHERN MEN IN ONE ARMY OR THE OTHER.

Now, Mr. Speaker, it is a matter of history that there were more men from the Southern States in the Federal Army than there were in the Confederate army. There were 391,000 white men in organized regiments in the Southern States, 100,000 (estimated) white men from the South in the Northern regiments, and 210,000 black men from the Southern States, making in all over 700,000 men from the South in the Federal Army.

Mr. ALLEN, of Michigan. Will my friend allow me a question? Is it not also true that at least three Confederate States were driven out of the Union and into the Confederacy against a vote of a majority of their people?

Mr. WHEELER, of Alabama. If that were true, how do you and your party justify your constant efforts to annoy and punish the people of these States for going out of the Union if they were driven out.

I will inform the gentleman that my district furnished, I believe, as many and possibly more than 2,500 white men to the Federal Army, and I will also inform him that the people of my country were all in one army or the other. I repeat that substantially all the able-bodied men of that section volunteered and fought either in the Federal or Confederate army.

THE SOUTHERN FARMER DEFENDED.

They were good, honest farmers, and while speaking of farmers I will take the opportunity to reply to an unwarranted charge made on yesterday. I arose at the time, as is shown by the RECORD, and appealed to the Speaker to let me reply to and deny the aspersion. He refused me recognition, but nevertheless I interjected some words of denial. I now again deny the statement made by the very distinguished gentleman from Kansas, whom I highly respect, and I regretted to hear the charge he made against the farmers of our country, in which he stated that the Farmers' Alliance were demagogues both North and South. It may be true in the North, but I assert most positively that it is not true in the South. [Laughter.] Who are the farmers of the South?

Mr. ALLEN, of Michigan. A parliamentary inquiry. Unless my friend confines himself to the question I shall withdraw the request for unanimous consent.

Mr. WHEELER, of Alabama. Well, now, Mr. Speaker, is it possible my friend does not wish to hear farmers defended against unjust attacks upon their characters?

Mr. HILL. I think the gentleman is mistaken in his quotation of what the gentleman said. I suppose he alludes to the gentleman from Kansas [Mr. PETERS].

Mr. WHEELER, of Alabama. Yes, sir.

Mr. HILL. Well, then, he is mistaken as to what the gentleman did say.

Mr. WHEELER, of Alabama. It is in the RECORD. I have the RECORD here.

Mr. HILL. I have read it in the RECORD also. He says that there are demagogues in the Farmers' Alliance.

Mr. WHEELER, of Alabama. Here is what he says:

There are certain men connected with the Farmers' Alliance who are notorious demagogues, and who are trying North and South to lead it into the political arena.

Mr. PERKINS. That is quite different.

Mr. WHEELER, of Alabama. This and similar charges were made more than once by the gentleman in his speech and certainly carried

with them the inference that demagogism is a feature of members of the Farmers' Alliance, both North and South, and that inference I emphatically deny.

Who are the farmers of our country? They are the men from whom springs substantially all the wealth of which our country boasts. We all derive our living from their labors and efforts. Our most distinguished men followed that vocation. Washington, a farmer, led the armies of the Revolution. Putnam, Wayne, Sullivan, Mercer, Lincoln, Green, Marion, and Stark were farmers. The members of the Colonial and Continental Congresses were substantially all men engaged in agriculture. The same, to a great extent, is true regarding the eminent statesman who framed our Constitution; and the conventions of the States for the ratification of that instrument were composed almost entirely of farmers, and the statesmanship and wisdom displayed by them has been the marvel of the world.

Mr. STRUBLE. Have the Alliance in your district made a nomination? [Laughter.]

Mr. WHEELER, of Alabama. No, sir. But I will inform the gentleman that the Alliances in the district I have the honor to represent are not political organizations.

I think they understand my position and my views upon all subjects. The presidents of several of the Alliances have written to me, and I have frankly replied to all their inquiries, and I do not anticipate that they will oppose my nomination. [Laughter.]

The Alliances of North Alabama include many of the most distinguished and intelligent people of that section of the State.

The Alliance men know full well that the wrongs they suffer are due to legislation forced upon the country by the Republican party.

That legislation is needed to do justice to the farmer no one can deny, and already I am glad to say that this movement on the part of the farmers has caused our Republican Representatives to think about something besides pensions for soldiers and class legislation for bankers and manufacturers.

HIGH STANDING OF SOUTHERN FARMERS.

In former times, when our Government was not controlled by a heartless plutocracy, when laws were not tolerated the purpose of which was to enrich one class of the people at the expense of another, the occupation of agriculture was conducted with profit and was desirable in all respects. It drew to it the best class of our people, and there was something in the vocation itself so near to nature and so ennobling to manhood that American farmers became types of industry, integrity, virtue, honor, and courage. Their labor changed this continent from a wilderness to a vast garden. Their minds molded and created the form of government under which we live.

Their courage won the battles which gave us victory in all the wars which have given luster to American prowess.

With few exceptions all the great men of our land spent their boyhood upon farms and worked with their fathers in the cultivation of the soil. That men who have accomplished this for civilization should be victims of vicious legislation is an outrage which I am glad to see the manhood of the nation has determined shall cease.

Is it not true that the great prosperity which has blessed this country is due almost entirely to the farmers? Is it not true that they are the best citizens of our land, the most industrious, the most law-abiding, the best debt-paying? Are they not as a class the most intelligent, the most thrifty, the most virtuous, in the broadest and most extended sense of the word, of all the citizens of our land? And yet men of this character are called demagogues simply because they venture to come and ask Congress to do them justice, or rather because they ask Congress to cease enacting laws which do them the greatest injustice.

Such a suggestion is an outrage upon a class of most excellent citizens.

Every other trade and occupation has a lobbyist at the doors of Congress. The bankers, the whisky-distillers, the copyright men, the railroad men, the manufacturers, the steam-ship-subsidy men, the French-spoliation men, and the thousand or more others are at work here pressing the consideration of all characters of claims and urging the passage of laws to aid every conceivable occupation, except that of farming, and no one calls them demagogues; but when for the first time in their lives, yes, for the first time since the beginning of our Government, the farmers ask for legislation which they think would be to their interest, they are denounced as demagogues.

GREAT POWER OF FARMERS.

The farmers have great power in their hands and I thank God for it; and I say here, as I have said before, power can not be better placed or intrusted in safer keeping. If we want the Government to go on in its purity; if we want a government based upon honor, virtue, intelligence, and hard, solid judgment, I say leave the power with the farmers; leave it in the hands of those men whose occupation is the basis of all callings and employments, and, more than all others, has built up a class of men who are the very foundation of the Government under which we live.

There are some things which Congress should do for the people without delay. We should give them an adequate money circulation. To do this we should provide for free coinage of silver, and we should also coin the ten million of trade dollars which lie useless in the Treasury.

We should also get into circulation the thirty millions of deposits in the national banks, the one hundred millions reserve for United States notes, and twenty-three millions of fractional coin.

We should also improve our rivers, and regulate railroad monopolies so as to give our farmers cheap transportation for their products, and as far as practicable bring our farmers face to face with the purchasers of their products.

There is much else that should be done in this line, but the above will do for a beginning.

MANUFACTURING AND FARMING COMPARED.

On the 9th of July, 1888, I made a speech in this Hall in which I stated that the value of farms in the United States in 1880, as shown by the census, was $10,197,096,776. The number of persons employed on these farms was 7,670,493, and the total product, including what was consumed by the farmers themselves, was $2,264,278,718, about 22 per cent. of the capital invested, and a product of about $300 per capita.

This did not include the wear and tear of implements, the cost of seeds and fertilizers, nor the value and subsistence of the working stock. Had these been taken into account the product would have been reduced to about $200 per capita.

At the same date the census informed us that the capital invested in manufacturing industries amounted to $2,790,223,506; the number of hands employed was 2,738,930, and the value of the products $5,369,667,706, or about 200 per cent. on the capital invested. Thus the profits on manufacturing industries were about nine times greater than the profits realized in agriculture and about seven times as much as the product per capita realized in farming.

But if we deduct the value of the materials used in manufacturing, which was $3,394,340,029, we have a profit of about 70 per cent. on the capital invested, more than three times the per cent. made in agricultural pursuits and about three and one-fifth times the per capita of the products of farmers.

As these statistics are highly instructive as well as interesting, I have prepared a table which shows at a glance the marked contrast between the conditions of an industry which has borne all the burdens and received none of the benefits of legislation for twenty-five years, and industries which have been developed by partial laws into powerful monopolies.

Tables showing the comparative results of our agricultural and manufacturing industries.

FARMING INDUSTRIES.

Amount of capital invested, exclusive of implements, cost of seeds and fertilizers, work-stock or cost of their subsistence	$10,197,096,776
Number of persons employed	7,670,493
Value of gross product, including consumption by farmers	$2,264,278,718
Value of product for each person engaged in farming, about	$300
Per cent. of product on capital invested	22
Product of each person after deducting cost of seeds, fertilizers, feed of work-stock, etc	$200
Per cent. of product on capital invested	14⅔

MANUFACTURING INDUSTRIES.

Amount of capital invested	$2,790,223,506
Number of persons employed	2,738,930
Value of gross product	$5,369,667,706
Value of product for each person	$2,000
Per cent. of product on capital invested	200
Value of materials used	$3,394,340,029
Product, after deducting materials used	$1,975,327,677
Product of each person, after deducting value of materials used	$720
Per cent. of product on capital invested	70

CONDITION OF FARMERS IN 1890.

Since that time the gulf between the farmer and those engaged in occupations which are favored by laws enacted by the Republican party has constantly widened.

I have not been able to procure information from the Census Office or any other source as to the status of all of these figures, but the Statistician of the Agricultural Department estimates that the number of persons employed in farming has increased from 7,670,493 to 9,588,116, and the report of the Agricultural Department and the census statistics inform us that the aggregate value of crops of the farmer, which was $2,264,278,718 in 1880, has not increased and very probably has diminished during the last ten years.

Therefore, while the average value of the production of each person engaged in farming, which was $300 in 1880, is now, under the pernicious and wicked laws of the Republican party, fallen so that the average gross value of the product of each person engaged in farming is less than $224, after deducting cost of seeds, fertilizer, feed of work stock, etc., his net income would be less than $125 per year.

Consequently farm values have decreased, and distress in farming communities has been on the constant increase.

Hon. Norman J. Coleman, who was in Mr. Cleveland's Cabinet as Secretary of Agriculture, in a recent lecture said:

The real truth in a nutshell is that the dominant power in Federal legislation is no longer in the interest of agriculture, but in the interest of the manufacturer and capitalist. Here is the cause of all our strife. Since our unfortunate civil war began the capitalists and manufacturers of the East have had complete sway in shaping legislation to their great interest, profit, and advantage, and at the expense of the farmers, the wealth-producers of the country. No intelligent investigator can deny this. The laws that have been passed prove it. The results of the application of these laws testify to it. While the manufacturing interests, by the artificial aids they have received by legislation, have grown and increased to a magnitude to startle people: while their investments have proved highly profitable, and large dividends have been derived therefrom, the farmers' investments and profits therefrom have gone down as steadily as the others have gone up, because it was from the farmers, the real wealth-producers and the consumers of their goods, that these large profits have been derived. This country can not long stand this unjust, this unnatural drain.

Here are words from a man who, as editor of the leading agricultural paper of the North and as the head of the Agricultural Department of the Government during the four years of Mr. Cleveland's Administration, has had exceptional opportunities for accurate information. He tells you, what I have for years been stating in this Hall and to the farmers of the district I represent, that their distress is owing to the vicious and unequal laws enacted by the Republican party.

DEMOCRATIC PRINCIPLES BENEFIT FARMERS.

In order to show the relative increase in the value of property in the United States from 1850 to the present time, we must deduct the value of slaves for the census years 1850 and 1860.

The census of 1850 reports the actual value of all property in the United States at $7,135,780,228, but that includes 3,204,313 slaves, the average estimated value being $500—the total value was $1,602,156,500—which would show that the value of all other property was $5,533,623,728. The census of 1860 reports the actual value of all property in the United States at that date at $16,159,616,068, which included 3,953,760 slaves, and, estimating the average value at that time at about $800, the total value of slaves was $3,163,008,000, which would place the total value of all other property at $12,996,608,068; with these changes I have arranged the following table.

Percentage of value of farms to all other property in the United States for the years 1850, 1860, 1870, *and* 1880.

	Amount, 1850.	Amount, 1860.	Amount, 1870.	Amount, 1880.
Acreage in farms	293,560,614	407,212,538	407,735,041	536,081,835
Amount of capital invested in farms, exclusive of implements, cost of fertilizers, work stock, and cost of their subsistence	$3,271,575,426	$6,645,045,007	$9,262,803,861	$10,197,096,776
Per cent. of farms to all property	50	51	31	23
Estimated actual value of all property in the United States, value of slaves in 1850 and 1860 not included	$5,533,623,728	$12,996,608,068	$30,068,518,507	$43,642,000,000
Assessed value of all property in the United States, slaves not included	$4,743,041,709	$9,316,928,605	$14,178,986,732	$16,802,993,543

We therefore see that, under Democratic rule, prior to 1850 farm values were 59 per cent. of the total value of all property, and, still under Democratic rule, in 1860 farms comprised 51 per cent. of the value of all the property in the United States.

In 1870, after ten years of Republican rule, farm values were so reduced as to be only 31 per cent. of all values, and in 1880, after ten more years of Republican high-tariff laws, farm values were reduced until they were only 23 per cent. of all values, and to-day, after ten more years of high tariff, statisticians of the Census Bureau and the Agricultural Department admit that farm values and the money value of farm products have not increased and very probably have decreased, and as the total value of all property has increased some 50 per cent. the relative value of farms to the total value of all property is now only about 15 per cent.

That is to say that under Democratic laws the value of farms was more than half the property of the United States and under Republican laws farms have been relatively reduced in value until their value is now but about one-seventh the property of the United States.

We also see that from 1850 to 1860 the farms of the United States increased in value 103½ per cent., or more than doubled, while, under Republican rule, from 1860 to 1870 they rose but 30½ per cent., and under Republican and still higher protection during the ten years from 1870 to 1880 the increase was only 10 per cent., and, under the same or rather increased protective laws, from 1880 to 1890 it is estimated there has been no increase whatever.

This shows how criminally farmers have been legislated against by Republicans, and it also admonishes us of the imperative need of a prompt and entire revision of the laws which have operated so disastrously to this great and important interest.

THE SUBTREASURY BILL.

Mr. HILL. Will the gentleman permit me to ask him another question?

Mr. WHEELER, of Alabama. Yes, sir; most certainly.

Mr. HILL. I would like to ask the gentleman if he is in favor of the subtreasury.

Mr. WHEELER, of Alabama. In reply to the question of the gentleman from Illinois [Mr. HILL], I will say that I have read the bill very carefully and considered it with reference to the Constitution and the principles of the party of which I am proud to be a member. I have also taken all measures possible to learn what I could as to its probable and possible effect upon and its advantages and disadvantages to the farming interests of the section of country from which I come.

I listened with great attention to the arguments made by Mr. Macune and by Mr Livingston before the Committee of Ways and Means.

I accepted invitations to attend meetings held at the office of the National Farmers' Alliance, where the bill was fully and ably discussed. I have also had private conversations with the officers of the Alliance and with Col. Ben. Terrell, the national lecturer, and the more I investigate the more I find these gentlemen still undetermined as to what legislation would be most beneficial, whether considered with reference to the country at large or as only adapted to the interest and welfare of farmers. We have introduced resolutions asking you to bring that bill before the House for discussion; and I will say right here that I think that nothing could be better for us than to have that subtreasury bill brought before the House and a consensus of opinion obtained upon the subject. While I do not think that the discussion of the bill could result in its passage, I am quite sure that we would be able to wake Congress up to the necessity of speedily enacting some laws in the interest of the agriculturists of the United States.

COTTON FACTORIES MUST RUN CONTINUOUSLY.

One feature in the subtreasury plan should be and is being carefully considered by the farmers of the South.

It is important to us for our cotton to get into the manufacturers' hands with as little hinderance as possible. Unless this is done the mills can not work it up, because it takes almost constant running of the spindles and looms to consume the crop of the world, and it will therefore be readily seen that if there is any material interruption in the work a considerable portion of the crop may be on hand in its raw state at the end of the year.

If we put our cotton in the subtreasury no doubt the price would rise. This would reduce consumption and stimulate production, not in the United States, alone but all over the world. Last year the entire crop of the world was estimated at 12,574,000 bales, of which 9,314,000 reached ports of entry or were reported as shipped directly to the mills.

Now if the two causes I have mentioned should reduce consumption one-third, the world would from this cause alone have on hand at the end of the year about 4,191,000 bales in excess of the usual amount, and if the enhanced price caused an increase of production throughout the world so as to make the crop of 1891 one-fourth greater than the world's crop of this year, this would make an additional increase of the stock on hand September 1, 1891, of 3,143,000 bales; and from both of these causes the excess would reach the enormous amount of 7,334,000 bales.

Mr. STRUBLE. Is not cotton superior to grain as a security for this purpose?

Mr. WHEELER, of Alabama. In some respects cotton possibly would be superior to grain as a security, but when we consider the effect of the possible enormous increase in the visible supply of cotton and its probable ultimate effect upon the price, an element is introduced regarding which we have no precedent upon which to base calculations.

On the 1st of September of each year the actual visible supply of cotton is carefully calculated, and the new season starts with that amount to be added to the crop then being marketed. It is remarkable how sensitively the price of cotton is affected by the number of bales thus reported as the visible supply.

HOARDING COTTON DETRIMENTAL TO PLANTERS.

I can not better illustrate this than by a table which I have prepared, taking the figures from Ellison's Cotton Report and Shepperson's Cotton Facts for 1889.

Table showing the visible supply of cotton on September 1, 1886, 1887, 1888, *and* 1889, *and the price in New York, Liverpool, and New Orleans at said periods.*

	1886.	1887.	1888.	1889.
Visible supply of cotton in the world September 1 ..... bales	1,162,000	1,305,000	883,000	821,000
Price in New York September 7	$0.10 1/8	$0.09½	$0.10½	$0.10⅞
Price in Liverpool September 7	.05⅞	.05⅝	.05 7/16	.05 13/16
Price in New Orleans September 7	.09⅛	.08½	.09	.09⅛

It will, therefore, be observed that the slightest difference in the number of bales overcomes all other elements which affect prices, and the market responds with a sensitive promptitude which can only be compared to the delicate vibrations of the magnetic needle.

We see here that there was an increase in the visible supply in 1887 over 1886 of 43,000 bales, less than 4 per cent. or less than 4 bales to the hundred, and we see that cotton fell thirteen-sixteenths of a cent in New York, or more than 8 per cent.

Then, on September 1, 1888, the visible supply was less by 322,000 bales than in 1887, and cotton rose to 10⅛, or seven-eighths of a cent per pound. Then, on September 1, 1889, the visible supply fell 62,000 bales, and the price rose three-fourths of a cent in New York, seven-eighths of a cent in New Orleans, four-sixteenths of a penny, equal to about half a cent, in Liverpool.

Now, with this picture before us I ask what would be the price on September 1, 1891, if the world was confronted with a stock of cotton in any way approximating such an increase as I have indicated.

That is to say, suppose we are correct in the supposition that by reason of retention of the crop in the subtreasuries and the increased price of breadstuffs and other incident causes, cotton consumption should be reduced one-third, and from the enhanced price production should be increased one-fourth, then on September 1, 1891, the stock in the world would be as follows. Lowest amount on hand September 1: Previous years, 821,000; one-third not used, 4,191,000; one-fourth increase in production, 3,143,000; total on hand September, 1891, 8,155,000.

But the above are not all the elements which would enter into this plan of withholding staple products from the market and thus inflating their market value.

The experience of the last century shows that the mass of the people can not materially curtail their purchase of provisions, but that they can and do curtail their purchase of cotton clothing when money is scarce or prices are high.

Now, as the bill provides for the storage of breadstuffs for the purpose of increasing the price, it will readily be seen that if the bill should have the effect intended the incomes or earnings of the people would be substantially consumed in procuring food, and but little would be left to purchase cotton goods, and this would be another element tending to increase the surplus and unused stock of cotton goods.

If the law of supply and demand, which generally governs prices, should hold good in this case, I would have great fears that cotton would fall to a very low figure, probably to 3 and possibly to 2 cents a pound.

The speculators and mill men would have the cotton-planter by the throat.

The law provides:

SEC. 7. That the Secretary of the Treasury shall prescribe such rules and regulations as are necessary for governing the details of the management of the subtreasuries, * * * shall provide rules for the sale, at public auction, of all cotton, corn, oats, wheat, or tobacco that has been placed on deposit for a longer period than twelve months, after due notice published.

The moneyed men of the land would know where all this cotton to be sold was located, and they would also know the date of sale and by combines and manipulations would be enabled to purchase it at the lowest possible price.

At the time these sales would take place the new inflated crop would be coming in. This crop would have been grown at excessive cost because corn, wheat, oats, and tobacco, and clothing would have been high during the period in which it was raised, and of course if these articles were high, mules, which eat corn and oats, and hogs, which eat corn, would be high also.

What bankruptcy and distress might follow the sale of such an expensively raised crop at 2 or 3 or 4 or even 5 cents a pound.

It is therefore clear that to benefit the cotton-planter we must increase the price of cotton by legislation which stimulates all the arteries of trade and creates a general prosperity among the people. This gives them more money and they buy with freer hand. Therefore in order to obtain such results the Democratic party insist upon lower tariff and lower taxes, a greater abundance of money, and a larger and more accessible market for the products of American labor.

There are 2,728 counties in the United States. The bill contemplates the expenditure by the Government of $50,000,000 for buildings, the employment of at least ten thousand men to handle and care for the articles stored, and the loan by the Government of hundreds of millions of dollars upon the stored products, and all this to attain results of, to say the least, questionable utility to the supposed beneficiaries.

Now, all this labor and expense is to be undertaken to retard the marketing and hinder the consumption of articles which the labor of the land produces. Would not this tend to retard progress, and not to hasten and advance development? It seems to me this is a step in the wrong direction.

Again, when the cotton crop is being moved and marketed the necessity arises for an increased volume of currency, but under this plan the inflation takes place when the crop is in the warehouse, and the currency is contracted the moment the movement to market commences, the very time that inflation is needed.

COTTON FACTORIES.

Why do not the advocates of this idea propose exactly the opposite plan. If the Government is to help, why not ask it to help build a cotton factory in every county in the South. Then the men instead of locking up and caring for cotton would be helpers to make it into cloth.

To work up our cotton would require the labor of about 1,000,000 men, women, and children. In one year English mills paid $112,000,000 for raw cotton and sold the manufactured product for $561,000,000. At the same rate one of our cotton crops in a manufactured state would bring us $1,750,000,000.

The immensely increased population required for this work would cause a demand for all the breadstuffs, meats, and vegetables we could raise in the South. Our farmers would become the richest and most prosperous people on earth, and if the Government will not help in this laudable effort I say let us try to combine and start in this effort ourselves, and when we do start capital and capitalist will come and beg to be permitted to join in so profitable an enterprise.

Mr. HILL. I will also ask you whether or not the farmers in your district are in favor of the subtreasury scheme.

Mr. WHEELER, of Alabama. I do not feel sufficiently informed to definitely answer that question. I can only give such information as I have.

The farmers of my district are men of very superior intelligence, and they are prompt to investigate and quick to understand any proposition which is presented for their consideration.

I am confident the farmers of North Alabama are men of so much intelligence and individuality that they can not be induced to advocate any legislation until they have given it the most careful and deliberate investigation and become assured that its advantages are such as to make the legislation expedient, advisable, and beneficial. No doubt at first they were led to believe by Alliance leaders and lecturers who visited Alabama and by The National Economist and other Alliance papers sent to them from this city that the scheme would relieve them of their burdens, but when they saw and read the bill itself and studied it with the care which such intelligent men give to so important a question, I know that a great many became doubtful as to its efficiency in obtaining for them the benefits contended for by its enthusiastic advocates, and some of them have expressed themselves as positively opposed to the measure.

The farmers of my district are honest, generous, and fair, and by an examination of the census they see that of the sixty-six counties in Alabama only twenty-three would be entitled to a subtreasury warehouse, and the forty-three counties which are proscribed by the bill are the ones which under the theory of the bill are most in need of the aid which the bill proposes to provide.

The people of the Northwest, where this idea originated, and where they raise grain, were at one time, I believe, in favor of the subtreasury scheme. They thought they would be able to apply it in that section to better advantage than in the cotton countries, because they were told that if the grain was held back the people in the manufacturing sections of this country, and, in fact, the manufacturing countries of the world, would suffer if they were unable to get the grain, and therefore they would take it at any price.

Mr. COOPER, of Ohio. Is not cotton king?

Mr. WHEELER, of Alabama. I thank my friend from Ohio for the suggestion.

DETHRONED KINGS.

The term "Cotton is king" was used during the quarter of a century prior to 1861 among the farmers where cotton was the chief product as a method of expressing a great truth, that, under the honest, economical, just, and equal Democratic government which then blessed our country, "the farmer was king." At that time "Wheat was king." It sold as high as $2.80 a bushel, and the average highest price each of those twenty-five years was over $2 per bushel, and now it is about one-third that figure. "Corn was king." It sold as high as $1.15 per bushel, and the highest price each year averaged about $1 per bushel, and now it is less than half that price. "Tobacco was king." Kentucky leaf sold as high as 20 cents, and the average highest price each year was 16 cents, and now it is but 8 cents.

Cotton was surely king. It sold during that period as high as 15 cents, and the average highest price each year was 12½ cents, and now its average is about two-thirds that amount.

While you have reduced the price of the farmer's products and narrowed and curtailed his market for their sale, you have taxed the articles he buys and done all else in your power to increase the cost of raising the articles he produces, and at the same time you have increased the expense he is compelled to incur in the maintenance of his family. You have dethroned him. The farmer is no longer king. No, nor is cotton or tobacco or wheat or corn any longer endowed with kingly attributes.

Your party has placed usurpers on their thrones, and you have made the once proud, prosperous farmer the slave of the banker, the manufacturer, and the monopolist of every kind, and these people you have clothed in purple and fine linen and you feed them on the fat of the land, while the farmer suffering and weary in toil and sweat is trying to satisfy the sheriff and mortgagee who is driving his wife and children from a home covered with debt and liens, all of which are caused by the laws enacted by your party.

But to further reply to the question of the gentleman from Illinois [Mr. HILL] and in reply to those who contend that the subtreasury

plan would benefit the grain-growers of the Northwest, I must frankly say that the objection to the plan which is urged by cotton-growers of the South does not apply with equal force to the growers of grain.

Nevertheless, I find, after having made careful inquiry of members of Congress from the Northwest, that the farmers of that section do not regard the subtreasury plan as one which would increase their prosperity, and many think that the inauguration of such a system would be to their most serious detriment, and I can not find that any of the organs of the Alliance and Grange of the North or Northwest give it any encouragement; but on the contrary all my investigations show that it is openly opposed by them. I see that many Alliances in Missouri, Virginia, and Texas report against the subtreasury plan as unwise and impracticable.

ALLIANCE AGRICULTURAL JOURNALS.

I find that the most prominent Alliance and Grange journals of the North and Northwest regard the subtreasury scheme with but little favor.

The St. Louis Journal of Agriculture is certainly a respected organ of the farmers. In an editorial upon this subject it says that this scheme was never submitted for the general consideration of farmers in their Unions and Alliances with the arguments pro and con for indorsement or rejection, but was railroaded through the tag-end of the St. Louis convention, when most of the delegates had gone home. It also says:

We want to see some financial legislation enacted of a permanent and really beneficial nature, and if the farmers of the whole country will enact it and go on demanding it, and not be put off with any humbug and pretense, we are sure they will get it. So far as the warehouse project is concerned, we do not believe that it is favored by a single member of Congress who has any national reputation for wisdom and honesty and who is anxious to advance the real welfare of the people.

The Homestead Alliance and Grange, of Des Moines, Iowa, July 13, 1890, copies this editorial from the St. Louis Journal of Agriculture in an editorial which I will read:

MACUNE'S SUBTREASURY SCHEME.

The Journal of Agriculture, of St. Louis, has been taken to task for connecting the name of Mr. Macune, of the Southern Farmers' Alliance, with the subtreasury scheme, and replies as follows:

"Some one protested against our speaking of the subtreasury project as 'Macune's scheme.' We call it that because it is that, and nothing but that. After well nigh wrecking the Alliance of Texas with one of his schemes it would seem that modesty demanded of Mr. Macune that before he set up any other project affecting the interests of farmers he should submit it for their consideration. On the contrary, however, this scheme was not only never submitted for the general consideration of farmers in their unions and alliances, with the arguments pro and con, for indorsement or rejection, but was railroaded through the tag-end of the St. Louis convention, when most of the delegates had gone home. We think whenever a bill affecting the interests of farmers is to be proposed for enactment into law by Congress, by any one connected with a farmers' organization, the least that such a person can do is to submit the proposed bill for the approval of those whom it concerns. It matters not how wise and fertile at concocting schemes any individual may be, the combined wisdom of the great body of the farmers is greater than his.

"Since Mr. Macune and his crowd have taken the liberty to disregard any such consideration as this, and appear to hold in contempt the opinions of the people, and without any general instruction by or indorsement from the people, is trying to force it to enactment at the imminent risk of other proposed plans having real merit, we call it Macune's scheme.

"We want to see some financial legislation enacted of a permanent and really beneficial nature, and if the farmers of the whole country will enact it, and go on demanding it, and not be put off with any humbug and pretense, we are sure they will get it. So far as the warehouse project is concerned, we do not believe that it favored by a single member of Congress who has any national reputation for wisdom and honesty, and who is anxious to advance the real welfare of the people."

We do not know whether Mr. Macune is the author of this scheme or not, nor does it matter. Every scheme which proposes to revolutionize the financial system of a country should stand or fall on its merits, not its authorship. We do know that it was outlined by Mr. Macune and other leaders of the Southern Alliance at the St. Louis convention, and the proposition made to the Farmers' Alliance of the North to drop all other reform measures and concentrate the whole strength of the farmers' movement in an effort to secure its adoption by the present Congress. To this the Northern members would not accede for a moment.

The Progressive Farmer, another equally prominent farmers' organ of the Northwest, has this to say in an editorial upon this subject:

THE WAREHOUSE SCHEME.

Mr. Macune and his followers have wasted some valuable effort, and, no doubt, earnest work on their warehouse scheme, or, as they call it, the subtreasury bill. This is no less than a bill requiring the Government to erect at public expense warehouses in counties most productive of staple farm products, in which to store these products, and issue to the owners or producers a certain per cent. of their market value, holding the deposited products as security therefor. Upon its very face this plan seems to us visionary in the extreme.

It is impracticable, so far as the Government is concerned, and it would be of doubtful benefit to the producer, for his product would be pawned to the Government, and his ability to redeem at a profit to himself would depend not only upon his own good and careful management, but upon the market price of the article he had deposited. This price would be subject to speculation the same as now, and the speculators would have the advantage of knowing just how much of each article of production was in quod. In fact, the nation would become a great pawnshop, and the non-producers of the articles pawned would be taxed to sustain the system, a species of class legislation just as bad or worse than any of which we complain.

The editor then proceeds to urge the importance of legislation for farmers, and says:

Had Mr. Macune and the Southern Alliance put in the work they have done for some practical measure like the free-coinage bill or Stanford loan bill, the result might have been vastly different.

Now, it seems that Mr. Macune is spoken of by these papers as a leader in the Southern Alliance, and this should assure us that his efforts would be directed to the advocacy of measures which would be of benefit to the farmer of the South.

PURITY OF COTTON-SEED OIL.

With great labor the South has commenced building up the cotton-seed-oil industry, which has become a source of profit to every cotton-planter of the South.

The purity and healthfulness of this oil have been attested over and over again by the most eminent chemical and medical scientists of the United States.

For centuries olive-oil has been regarded as a most pure and delicious delicacy, not equaled for the purpose for which it is used by any oils of that character.

Cotton-seed oil is now pronounced in all respects as good as this delicate, delicious olive-oil.

As far back as 1873 the distinguished Dr. Edward Smith placed cotton-seed oil at the head of the list of vegetable oils, and from that time to this the official reports of the distinguished medical scientists in charge of the medical laboratories of the several States who have analyzed and reanalyzed this Southern product, have repeatedly reaffirmed this opinion of Dr. Smith and declared cotton-seed oil, whether used by itself or compounded with lard, is a perfectly wholesome and nutritious food, and they assert that its sale should not only be allowed, but even encouraged.

Professor Wiley, chemist of the United States Department of Agriculture, said:

As regards the manufacture and refining of cotton-seed oil, it may be remarked that the methods employed are not materially different from the processes made use of in the preparation of olive-oil. That cotton-seed oil has for many years been exported to Italy and France, in which countries it is largely employed for mixing with olive-oil, is a well known fact.

And he quotes and indorses the following from Allen's standard work on Commercial Organic Analysis, which says:

Refined cotton-seed oil is usually very free from acid, and when properly prepared is of pleasant taste and admirably adapted for edible and culinary purposes, for which it is now extensively employed, both with and without its nature being acknowledged.

Professor Conn, of the medical faculty of Dartmouth College, after explaining that lard was improved by admixture with cotton-seed oil, goes on to testify:

Cotton-seed oil within the past ten years has almost entirely taken the place of olive-oil in our markets. It is still sold as olive-oil, but chemical and microscopical examinations show it to be pure cotton-seed oil. The conditions, both chemical and miscroscopical, are so nearly alike that there is really no difference in its nutritive value. It is a well known fact that immense quantities of cotton-seed oil are sent to Italy, only to come back as olive-oil. In the South and West cotton-seed oil is taking the place of all forms of lard. These are well established facts, which no one who has investigated the problem will dispute. Cotton-seed oil and beef stearine would answer all of the purposes of lard and would be entirely unobjectionable from a sanitary standpoint.

Professor Irving A. Watson testified:

I believe that cotton-seed oil is a thoroughly healthful product; as much so as olive-oil.

I could go on quoting similar expressions from the affidavits of the chemical inspectors of the States of New York, Massachusetts, New Hampshire, and other States of the North, but my time will not permit me to do so. But in the same line I will read from page 197 of the report of the Secretary of Agriculture, which has just been published:

Of late years the demand for olive-oil, as an article of food and for other purposes, has greatly increased. The olive-growers of this country and of Europe say that no reliance can be placed upon the so-called olive-oils of commerce, unless the buyer procures them directly from the grower, and they affirm that many samples of so-called olive-oil consist mostly of cotton-seed oil, which in Italy is poured over the olives in the crusher to thoroughly mix the two oils. Very little pure oil, it is said, is obtainable even in Italy. This Department has lately been informed by one of the leading olive-cultivators of California that, although the olive-oil of the United States is sold to dealers in its original purity, they mix with it cotton-seed oil.

It is but natural to suppose that so excellent and healthful an article of food would become in great demand and displace inferior articles of like character, and we find that last year out of 600,000,000 pounds of all kinds of lard produced in the United States 320,000,000 pounds was the compound lard, 60 per cent., or nearly two-thirds, of which is composed of pure cotton-seed oil.

HIGH ALLIANCE LEADERS AGAINST COTTON-SEED OIL.

The Northeastern lard men, having failed to beat down this formidable competitor in a fair commercial fight, now come to Congress and demand that a law be enacted which they hope will tax this purer and better article so heavily that they can induce the public to use their inferior compound lard thus destroy a business which is bringing $12,000,000 a year to the Southern cotton-planter.

This nefarious bill taxes the manufacturer $100 a year, the wholesale dealer, $25; the retail dealer, $2; and then a tax per pound is levied upon the product. They then enact a series of onerous requirements and a host of penalties, punishable with imprisonments ranging up to two years and fines running from $50 to $5,000, and in some cases both fine and imprisonment are inflicted.

This wicked bill is simply a proposition for the Government to step in and place the weight and force of its courts and its army of Federal marshals on the side of an inferior product for the purpose of retarding

and, if possible, of preventing the manufacture and sale of the superior article, for which the people have shown a decided preference.

On which side would we expect Mr. Macune to throw his weight? We certainly would say as a fair man he would be on the side of right and against such a wicked, nefarious measure. As he professes to be friendly to Southern farmers, we say again surely he will be for them and against this bill, which was concocted to injure, if not destroy, one of their greatest industries. But what is our surprise to find published in the hired organ of our enemies in every issue since February 17 a letter from Mr. Macune, which I read from the latest edition:

[National Farmers' Alliance and Industrial Union. Office of C. W. Macune, chairman of executive board.]

511 NINTH STREET, N. W., *Washington, D. C., February* 11, 1890.

DEAR SIR: In response to your request to consider the Conger lard bill, No. 283, and if I approved to ask on behalf of the National Alliance legislative committee favorable action thereon, I have to say, after examining the bill and the accompanying reports of Mr. CONGER, I cheerfully recommend that the Committee on Agriculture report the same and trust the bill may become a law.

The American people are opposed to all frauds, especially those that affect the food supply. From a knowledge of the subject, I am confident that the legislation asked in this bill will not injuriously affect the cotton-seed-raiser and that he is more injured by the sale of compound lard under a false brand than he would be benefited should the present state of affairs continue to exist by the sale of his cotton seed to a trust, which gives him as little for his product as it possibly can to secure the seed.

Yours, respectfully,

C. W. MACUNE,
Chairman Executive Board.

ALEX. J. WEDDERBURN, Esq.,
Chairman Legislative Committee, Virginia State Grange, Patrons of Husbandry.

This letter was printed and scattered broadcast throughout the entire South, and sent to all Southern Alliances, accompanied with the very deceptive petition which I will read.

It will be seen that not satisfied with recommending that cotton-seed oil be taxed, he says:

The American people are opposed to all frauds.

This is plainly denouncing cotton-seed oil as a fraud and is saying that it is a fraud to make a healthful, delicious compound composed about two-thirds of the purest of vegetable oils and about one-third of pure lard. If that is a fraud then every mixture of pure articles is a fraud. Every good housewife who mixes ingredients to make a cake for her husband and children commits a fraud, and every time she breaks an egg to improve a pone of corn bread she commits a fraud.

But Mr. Macune intimates that cotton seed must be sold to a trust. It is true a trust buys largely, but there are many mills outside of the trust which are large purchasers. He also says the trust "gives him" (the farmer) "as little for his product as it possibly can to secure the seed." This is true with regard to all commercial transactions. The buyer gets products as cheap as possible and the seller gets the most that he possibly can, but I will ask Mr. Macune if it is not true that a law like this, which will tend to lessen the demand for cotton-seed oil, will also tend to reduce the price for which it is sold.

COTTON-PRODUCERS WICKEDLY DECEIVED.

The greatest and meanest fraud in this whole matter was the action of the men who are lobbying for the bill in sending blank petitions to alliances in the South with requests that they be signed and returned to the sender for presentation to Congress.

One of these blank printed petitions reads as follows:

PURE-LARD BILL.

To the Senate and House of Representatives in Congress assembled, Washington, D. C.:

The undersigned, citizens of —— P. O., —— County, State of ——, do most respectfully urge upon your honorable body the adoption of House bill No. 11027, for the prevention of manufacture and sale of adulterated and misbranded lard, and hereby urge the passage of the same.

Another printed form with which these men flooded the country was in these words:

PETITION IN FAVOR OF PURE LARD.

To the American Congress:

The undersigned citizens of ——, in —— County (—— Congressional district), in the State of ——, would respectfully urge the earliest possible adoption of the bill to prevent lard adulteration reported favorably from the Committee on Agriculture of the Fifty-first Congress, and known as the Conger bill.

There were three editions of the Conger lard bill. In the Fiftieth Congress it was numbered 11027, and in the present Congress Mr. CONGER introduced two such bills, No. 283 and No. 11568, all of them being very similar and all about equally objectionable.

Printed headings like the above, praying for the passage of these bills, were sent broadcast throughout all the entire farming country. They were sent to every Farmers' Alliance in Alabama, accompanied with the letter from Mr. Macune which I have read.

The farmers of the South are honest and could hardly believe that any one would ask them to sign a petition the purpose of which was to tax and reduce the price of one of their principal products. It will be observed that the purpose of the bill is carefully and sedulously concealed by the deceptive wording of the petition, and the good, honest, generous cotton-farmers signed these petitions very generally until I exposed the fraud through the papers of Alabama and then the nefarious deception ceased.

I wish to be very emphatic in the assertion that I do not intimate that Mr. Macune intended to make any recommendations injurious to Southern people, or that there is any question as to his devotion to their interest, or that he is not actuated by the very best intentions, but I wish to show that he was fearfully mistaken in his views regarding the lard bill, and I think that he is also mistaken in advocating the subtreasury bill instead of devoting the energies of the Alliance to the advocacy of measures and purposes which would be of more benefit to the farmer, would be practical in their operation, and would be easy to accomplish if Representatives having farming constituencies would combine in their support. For instance, had this been done with regard to the silver bill we would now have free coinage of silver.

Mr. COOPER, of Ohio. As one who is engaged in farming, will the gentleman allow me a question?

Mr. WHEELER, of Alabama. Certainly.

Mr. COOPER, of Ohio. Are you in favor of loaning money out of the Treasury to the farmers?

Mr. WHEELER, of Alabama. In reply to the gentleman from Ohio [Mr. COOPER], I will say that I am unalterably in favor of giving farmers every privilege which is enjoyed by people of other professions, and I am in favor of an immediate change in the financial and banking laws of our country so as to decentralize money and wealth and to enable the farmers of our country to establish banks adapted to their condition, their necessities, their convenience, and methods of business.

MONEY FOR FARMERS.

That a system can be easily devised which would be of great benefit to farmers without being in any way detrimental to other interests there can be no doubt. Even under the present illy adapted banking laws plans can be devised by which the farmers can borrow money as low as the rate mentioned in the subtreasury bill.

For instance: Take a county which has, say, 8,000 farmers. Let each subscribe $25 and establish a bank with a capital of $200,000.

We see the condition of the national banks of the United States are as follows:

Capital paid in	$642,073,676
Surplus fund and undivided profits	302,469,398
Individual deposits	1,521,745,665
Deposited by United States and disbursing officers	30,577,002
Total	2,496,865,741

The loans and discounts are $1,921,357,854. In other words, the loans and discounts are three times the capital and more than twice the capital and surplus combined.

Now, supposing our farmers' bank to have deposits equal to the average and an adequate but well secured circulation, it will readily be seen that the profits a farmer stockholder would receive upon a well conducted bank of this character would far exceed the interest paid by him for money he would find it necessary to borrow. All that would be necessary for the success of such a plan would be careful management of the bank.

The question is asked, how can this system help the people and why can they not each act independently with his own means? The answer is that farmers who raise stock, and grain, and meat, and hay, and clover, and tobacco, and cotton would want money at different periods of the year and they would keep all their idle money in these banks. For instance, Mr. Johnson sells his wheat in June for $1,000. He pays up his debt to the bank and has $600 left over. Instead of hoarding it at home he deposits it in the bank, and the bank lends it to Mr. Brown, who has a cotton crop. This is sold in November for $2,000, and after paying his debt to the bank he has $1,200 left over, which in turn he deposits and it is loaned to Johnson, who is planting his wheat crop, etc. In other words, all the money belonging to the farmers who own the bank is kept employed.

Now this illustrates that a plan can be devised to help the farmers, and the knowledge on the part of the farmer that some such plan as the above has aided all other vocations causes him to desire something similar for his benefit. That plans will be matured by which banking laws can be modified so as materially to benefit them, there can not, in my mind, be a particle of doubt.

Mr. COOPER, of Ohio. Are you in favor of the Government taking charge of the railroads?

Mr. WHEELER, of Alabama. I would prefer to discuss that when you gentlemen on the other side of the House bring in a bill for that purpose.

Mr. COOPER, of Ohio. I am asking you the question as a farmer. [Laughter.]

Mr. WHEELER, of Alabama. Well, then, I will answer as a farmer and say that I advocated and voted for the interstate-commerce law and am certainly in favor of the Government taking such supervision over railroads as is necessary to prevent combination, consolidation, and extortion by which the people could be oppressed and charged in excess of proper and reasonable rates, but I am not in favor of the Government acquiring ownership of the railroads by purchase and taking charge of them in that sense, and I am quite confident the people I represent do not advocate any such innovation.

GOVERNMENT OWNERSHIP OF RAILROADS.

The statements of the railroad managers of the United States reported the cost of the railroads a year ago at $10,205,493,050, and, though this may be an extravagant estimate, we all know that the railroads are stocked and bonded at about that figure, and if a law was passed directing their purchase the Republican party would be very apt to pay every cent that was demanded.

To raise such a sum of money you would issue bonds, and you know that one very important element in fixing the value of bonds is the amount issued. When our issue was less than $2,800,000,000 of 6 percents, United States bonds sold below par, and we could not expect to get more than 75 cents on a dollar by the sale of enough bonds to raise sufficient money to pay such a sum for the railroads.

This would make an annual drain upon the Government far beyond the resources of the people.

The income the Government would derive from these railroads would not be much.

Under the present management their entire income last year after paying expenses and interest on bonds was $101,388,736, and under Government management it would certainly be less and possibly be nothing at all. We would therefore find ourselves burdened with a fearful debt, the interest alone amounting to possibly $900,000,000 a year, and to meet this you would levy a direct tax which would be very hard upon the poor South, as the Constitution requires direct taxes to be levied according to population, and not according to wealth and value of property. The effect upon the people of my State would be terrible.

The population of Alabama is $\frac{1}{14}$ of all the population of the United States; therefore it is possible that $\frac{1}{14}$ of the $900,000,000 would be collected by direct taxation from the people of this State, which would require an annual tax upon the people of Alabama for this item alone of $22,000,000. Last year that State collected from the people $1,468,727. This was hard enough to pay, but an additional tax of fifteen times that amount to pay the Government would finally bankrupt nearly every man in the State.

Imagine a man whose State tax is $100 being required in addition to pay an annual direct tax to the Federal Government of $1,500.

A year ago there were 704,743 persons in the employ of railroads in the United States. For all these men to be transformed into Government employés, their tenure of office being subject to political caprice, would work a fearful change in our Government.

It would no doubt be satisfactory to the Republican party, as it would go far toward the consummation of their idea of centralized imperialism, but Democrats love purity, freedom, and liberty, and they oppose such measures as adverse to the American idea of government, and almost certain to result in financial and political disaster, besides being a long stride towards changing this Government from a republic to a centralized despotism.

Compound Lard.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, August 21, 1890.

The House having under consideration the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard—

Mr. WHEELER, of Alabama, said:

Mr. SPEAKER: I shall not attempt, in the short time allotted to me to speak upon this important measure, to even allude to the many evils which will certainly follow this character of legislation, nor shall I be able to discuss its flagrant assault upon the doctrine of democracy.

So violative is this bill of the ideas of free government which were handed down to us by our fathers that already it is stirring up bad blood in many gentlemen on the Republican side of the House who are unwilling to go so far in the violation of the principles of our Government as is attempted in this bill and as are some gentlemen who are willing to advocate legislation which they seem to think may be of temporary advantage to their constituents.

There was something said, Mr. Speaker, in regard to the fact that 90 per cent. of compound lard was manufactured by a few people.

For God's sake, if the monopolists have got 90 per cent. of the manufacture in their hands, why not leave 10 per cent. of it in the hands of the people? The trouble in this matter, Mr. Speaker, is that the South—God bless that country—is raising a vegetable product superior to all other vegetables in purity, outstripping and successfully competing with other ingredients which are used for food. This is not surprising. God has blessed that country. The sun shines brighter there, the soil is more fertile, the minerals are richer, and they do raise everything that is drawn from the soil cheaper in that country than in any other; and it is but natural that it should do what it has done and is doing, driving more than half of the American hog lard out of the market.

It is God's country and it obeys God's precepts. [Laughter.] And this Congress is attempting here to pass a law directly against the statutes of Almighty God. [Renewed laughter.] I read from Leviticus xi, 7, 8:

> And the swine * * * he is unclean to you.
> Of their flesh shall ye not eat, and their carcass shall ye not touch; they are unclean to you.

Mr. CONGER. Does the gentleman read from the new revision?

Mr. WHEELER, of Alabama. I read from God's Bible. [Laughter.] I revere all editions of the Bible, the old version and the new revision. They all contain the eternal truths of religion.

Mr. BUCHANAN, of New Jersey. May I ask the gentleman where he borrowed the book? [Laughter.]

Mr. WHEELER, of Alabama. I am surprised the gentleman asked that question, because this book has been in the House of Representatives ever since he has been a member and he has never found it out until now. [Laughter.]

Mr. BUCHANAN, of New Jersey. I used it four years ago in a silver speech. [Laughter.]

Mr. WHEELER, of Alabama. Worse and worse. The gentleman admits that his attention was called to the Bible four years ago, and yet he has been so indifferent regarding it that he has entirely forgotten there is a copy of the sacred volume in the Capitol building. Perhaps the existence of such a book has escaped his memory.

Now I shall read you what God tells us to eat. I read from Genesis ii, 9:

> And out of the ground made the Lord God to grow every tree that is pleasant to the sight and good for food.

Mr. CONGER. He does not say that you are to call it lard, though. [Laughter.]

Mr. WHEELER, of Alabama. No, the Lord does not say that we shall call it lard, and I admit it is doing so pure and healthful an article great injustice to give it the name of so impure a product as hog lard; and doubly aggravated do we find that wrong to be when we read the evidence before Congress showing the impurity of all hog-lard products, an article which the advocates of this bill are endeavoring to force upon the people.

In the Bible we frequently read of the ownership of flocks and herds of almost all kinds of animals except hogs or swine; but swine were considered and referred to more as unclean pests, as we now regard reptiles. So intense was the aversion to swine that they were associated with the idea of evil spirits or devils. And how often throughout the Holy Book do we see the fruits of the earth referred to as gifts of God for the subsistence of his creatures.

Mr. HOUK. Has the Constitution been lost, that my friend has to resort to the Bible? [Laughter.]

Mr. WHEELER, of Alabama. The Constitution has been trampled under foot by your party, and if it had not been for the Democratic party it would have been lost by this time. [Laughter.]

Democrats revere the Constitution because it is the foundation upon which this free and independent Government of the people has been erected.

Mr. HOUK. I asked the question because I never knew a Democrat to use the Bible before; it was always the Constitution.

Mr. WHEELER, of Alabama. But I have known the Republicans to trample the Constitution under foot. Even if Democrats did not use the Bible as much as you desire, they nevertheless revere it because it contains in its precious pages God's teaching of eternal wisdom, purity, and truth. I wish your party would take the teachings of the Bible as your guide and cease your constant encroachments and strains upon the Constitution of our country. The application of the "higher-law" doctrine to both the Bible and the Constitution is a Republican heresy as old as the party itself.

Now, Mr. Speaker, what is cotton-seed oil? I have not time in the brief space allotted me to read the numerous affidavits of some of the most distinguished scientific gentlemen of the United States upon that subject, but I will state that every one of those affidavits, whether made by Professor Wiley, of the Department of Agriculture, or by the distinguished professor of Dartmouth College, or by the equally distinguished professor of the New Hampshire board of health, testifies that there is no article of food existing that is as pure, healthful, and beneficial to life as cotton-seed oil. [Laughter.] And now, when God tells us to eat the fruits of the earth and when it is proved that this is the purest, best, and most healthful of all the fruits of the earth, Congress comes up and, as a fit ending to the career of the Republican party after twenty-five years of improper legislation, undertakes to say that this pure food shall be legislated out of existence or out of use. [Laughter.]

Cotton-seed oil has been subjected to most severe tests and criticism and every effort possible has been exerted to disparage it as an article of food, but the result has always been the reverse of what was intended, and every test has added proof to its excellence and healthfulness.

I will read a few extracts from the report of the New York board

of health which happens to be before me. Professor Tucker, the analyst of the board, says:

All over the world vegetable oils are obtained by the expression of the seeds or fruit or plants and used as food. From the cocoa-nut, Brazilian nut, walnut, almond, and a wide variety of other vegetable products, oils are extracted and employed in the preparation of food. In speaking of the vegetable oils Dr. Edward Smith, in his well known work on Foods, places cotton-seed oil at the head of the list, and says:

"There can be no doubt that we have, in this product of seeds of plants, which seem otherwise to be useless, a great storehouse of most valuable nutritive material, and if we know but little of them in this climate it is because we have the olive-oil at hand."

The report quotes from Professor Wiley, chemist of the Department of Agriculture, who says:

As regards the manufacture and refining of cotton-seed oil, it may be remarked that the methods employed are not materially different from the processes made use of in the preparation of olive-oil. That cotton-seed oil has for many years been exported to Italy and France, in which countries it is largely employed for mixing with olive-oil, is a well known fact.

I am clearly of the opinion that cotton-seed oil, whether used alone or commingled with other oils or fats, is a perfectly wholesome and nutritious food.

Professor Wiley also said:

"That it was very easily acted upon by the intestinal juices," and "very easily assimilated," and he added that "it seems to act on the digestive organs like olive-oil precisely." In response to the question "Are the nutritive qualities of cotton-seed oil equal to the nutritive qualities of pure lard?" he replied, "I should say there would be little difference as far as nutritive properties are concerned."

Further on in his testimony—

In reply to the question, "What would you say of cotton-seed oil when used alone as an article of food?" he answered, "I should say that it was perfectly wholesome," and he gave it as his belief that it was as wholesome as olive-oil or hog lard or beef fat.

Professor Tucker also quotes, as I will read:

Professor S. P. Sharpless, State assayer for Massachusetts and a chemist who has given much time to the study of food adulteration, stated during the course of the same investigation that he knew of no property injurious to health in cotton-seed oil or the refined lards which he had examined. Professor R. Ogden Doremus, of New York City, states that refined lard made from steam lard, beef stearine, and cotton-seed oil is "pure and wholesome," and that, in his opinion, "cotton-seed oil is a wholesome article of diet."

Professor Tucker then says:

These are the opinions which seem to be almost universally held by those who have investigated this subject from a scientific standpoint.

Throughout the cotton-growing States it has been for a long time very largely used, and the medical faculty of the Arkansas University state that it is preferred to other fats in many respects, "agreeing with the most delicate stomachs, whether used in baking or frying," and that "not one instance has ever been given of health being in any manner impaired by the use, however free, of cotton-seed oil in food. They state that "thousands of hands employed in the cotton-seed-oil mills are in the habit of making their dinners on the crude oil by dipping their bread in it, and some of them actually drink it, and yet from this free use of it nothing has ever resulted but the best of health."

Such testimony as that given above is not easily overthrown. Writers of eminence in our scientific, medical, and agricultural journals have borne similar testimony, and large numbers of people in our midst to-day use this oil from preference.

This distinguished chemist, in concluding this official report, states that such—

Cotton-seed-oil products as I have examined or of which I have knowledge are wholesome and nutritious articles of food.

I could go on indefinitely with citations of like character.

This and abundant other like evidence prove the superiority of cotton-seed oil as an article of food.

Gentlemen tell us that the demand for cotton-seed-oil butter has increased tenfold since it was subjected to a tax. This is true, but what caused it?

The tax did not do it. That has added to its cost and been a deadweight on the industry, but the discussion and agitation of this subject has brought cotton-seed oil prominently before the people, and its great purity and excellent qualities have become known, and that, I admit, has had an effect to increase the demand for it.

The American hog stuck his nose into Congress and has got it pretty badly bruised. He tried to root out cotton-seed oil, and besides failing to accomplish that he is getting rooted out of use himself.

I have in my hand a paper by J. H. Kellogg, M.D., descriptive of the hog of the present day, which certainly indicates that hog meat is hardly a proper article of food.

The doctor is an eminent physician of Massachusetts.

Gentlemen on the other side of the House in arguing this question have attempted, as far as possible, to secrete the purpose of this bill; yet that purpose would crop out and they could not conceal it. The gentleman from North Carolina [Mr. McCLAMMY] said that he would not follow the speech of the distinguished gentleman from Pennsylvania [Mr. BROSIUS] because he had lost his sleep last night, but I will endeavor to make some allusion to that speech. First, the gentleman from Pennsylvania says:

It is easily seen that the manufacturers and dealers, together aggregating a large per cent. of our population, have a deep stake in any legislation which protects them from competition.

All that this bill seeks is to protect the hog of the North from the competition of the purer and better and more healthful cotton-seed of the South. The gentleman from Pennsylvania commenced his speech by saying that—

Legislation which imposes unequal burdens can only be tolerated upon grounds of the clearest necessity, supported by a wise public policy, the demands of justice and right, and the advancement of the common weal.

That is good Democratic doctrine; but after announcing that sound Democratic principle the gentleman goes on to advocate this bill. To show what his purpose is he goes on to say—

That this steady decline in the swine market was due, in part at least, to the invasion of imitation compound can not be doubted by any intelligent observer and practical student of our markets.

Then, speaking of the extent of this injury, he says:

The extent of the injury must be left to conjecture.

Then he says, quoting from an authority (Wells in his Recent Economic Changes):

Cotton-seed oil is now equivalent to 70,000,000 pounds of lard, and it has contributed to notably reduce the price and place of that important product in the world's markets. The statements subjoined of intelligent men long engaged in the manufacture of pure lard remove all doubt upon the subject.

Mr. Speaker, this removes all doubt that the purpose of this bill is for a Congress, which happens to be sectional, to make its dying effort for sectional legislation to destroy an industry which a struggling people have sought to build up.

Mr. SAWYER. Will the gentleman permit a question?

Mr. WHEELER, of Alabama. Yes, sir.

Mr. SAWYER. I have read the bill, and I want to ask the gentleman whether there is anything in this bill which regulates, or places any tax upon, or requires any license for the sale of cotton-seed oil?

Mr. WHEELER, of Alabama. There is if it happens to be mixed with that impure article, lard. [Laughter.]

Mr. SAWYER. Then the tax is not upon the "pure" article, cotton-seed oil, but upon the mixture of the "impure" article, lard, with the "pure" cotton-seed oil.

Mr. WHEELER, of Alabama. It is true that cotton-seed oil in its raw state is not taxed by this bill, but the moment it is refined and prepared for table use and put in the form of lard a tax is imposed upon it. Its superiority is such that it is driving the hog lard out of the market, and now you propose to drive the pure article out by taxing it. If you will tax all lard we will not object. Tax the impure lard and we will submit to a tax on the pure cotton-seed oil.

Mr. CONGER. But pure cotton-seed oil, put up by itself, is not taxed.

Mr. WHEELER, of Alabama. The reason why you do not tax pure cotton-seed oil is that it does not come into competition with any Northern product. The serious objection to the bill is its un-American tendency, the enactment of laws to give one industry an advantage over another. Another anti-American tendency is that the numerous restrictions and penalties provided for in the bill will of necessity drive out all the small dealers and confine the business to large monopolies. As proof of this let me remind the House that in this very speech the gentleman admits that the law passed two years ago putting a tax on oleomargarine had the effect first to throw that manufacture entirely within the control of a monopoly and to reduce it from 200,000,000 pounds two years ago to 34,000,000 pounds to-day.

[Here the hammer fell.]

I will append Dr. Kellogg's paper, which should be read by every member of this House before voting on this bill:

In this country pork-raising is one of the great industries and one of the most prolific sources of wealth. And since the supply is wholly regulated by the demand it may be taken as a proper index of the prodigious quantities of swine's flesh which are daily required to satisfy the gustatory demands of the American people. No other kind of animal food is so largely used as is pork in its various forms of preparation. The Yankee makes his Sunday breakfast of pork and beans, besides making the same article a prominent constituent of at least two meals each day during the rest of the week. Pork and hominy is almost the sole aliment of the Texan farmer, while in the Western States pork and potatoes constitute the most substantial portion of the farmer's bill of fare. The accompanying dish may be hominy, beans, or potatoes, but the main reliance is pork in each case.

In the case of no other animal is so large a portion of the dead carcass utilized as food. Pork seems to be considered such a delicacy that not a particle should be wasted. The fat and lean portions are eaten fresh or carefully preserved by salting or smoking, or both. The tail is roasted, the snout, ears, and feet are pickled and eaten as souse; the intestines and lungs are eaten as tripe or made into sausages; black pudding is made of the blood; the liver, spleen, and kidneys are also prized; the pancreas and other glands are considered great delicacies, while even the skin is made into jelly. In fact, nothing is left of the beast but the bristles, which the shoemaker claims. Surely it must be quite an important matter, and one well deserving attention, if it can be shown that an animal which is thus literally devoured, and that in such immense quantities, is not only unfit for food, but one of the prime causes of many loathsome and painful maladies. Let us examine the hog a little, and see what can be determined respecting his real nature and his office in the economy of nature, if he has any.

A LIVE HOG EXAMINED.

Look at that object in a filthy mud-hole by the roadside. At first you distinguish nothing but a pile of black, slimy mud. The dirty mass moves. You think of a reptile, a turtle, some uncouth monster reveling in his Stygian filth. A grunt. The mystery is solved. The sound betrays a hog. You hasten by, avert your face, and sicken with disgust. Stop, friend; admire your savory ham, your souse, your tripe, your toothsome sausage, in its native element. A dainty beast, isn't he?

Gaze over into that sty, our pork-eating friend. Have you done so before; and would you prefer to be excused? Quite likely. But we will show you a dozen things you did not observe before. See that contented brute quietly reposing in the augmented filth of his own ordure. He seems to feel quite at home, doesn't he? Look a little sharper and scrutinize his skin. Is it smooth and healthy? Not exactly so. So obscured is it with tetter and scurf and mange that you almost expect to see the rotten mass drop off as the grunting creature rubs it against any projecting corner which may furnish him a convenient scratching place. As you glance around the pen you observe that all such conveniences have been utilized until they are worn so smooth as too be almost inefficient.

Stir up the beast and make him show his gait. See how he rolls along, a mountain of fat. If he were human he would be advised to chew tobacco for his obesity, and would be expected to drop off any day of heart disease. And so he will do, unless the butcher forestalls nature by a day or two. Indeed, not long ago a stout neighbor of his was quietly taking his breakfast from his trough, and grunting in infinite satisfaction, when, without a moment's warning or a single premonitory symptom, his swinish heart ceased to beat, and he instantly expired without finishing his meal, much to the disappointment of the butcher, who was anticipating the pleasure of quietly executing him a few hours later and serving him up to his pork-loving patrons. Suppose his death had been delayed a few hours, or rather suppose the butcher had got the start of nature a little, as he generally contrives to do.

But we have not half examined our hog yet. If you can possibly prevail upon yourself to sacrifice your taste in the cause of science, pork-loving friend, just clamber over into the reeking sty and take a nearer view of the animal that is destined to delight the palates of some of your friends, perhaps your own. Make him straighten out his fore-leg. Now observe closely. Do you see an open sore or issue, a few inches above his foot, on the inner side? And do you say it is a mere accidental abrasion? Find the same on the other leg; it is a wise and wonderful provision of nature. Grasp the leg high up and press downward. Now you see its utility, as a mass of corruption pours out. That opening is the outlet of a sewer; yes, a scofulous sewer; and hence the offensive ichorous matter which discharges from it. Should you fill a syringe with mercury, or some colored injecting-fluid, and drive the contents into this same opening, you would be able to trace all through the body of the animal little pipes communicating with it.

What must be the condition of the body of an animal so foul as to require a regular system of drainage to convey away its teeming filth? Sometimes the outlets get closed by the accumulation of external filth. Then the scrofulous, ichorous stream ceases to flow, and the animal quickly sickens and dies unless the owner speedily cleanses the parts and so opens anew the feculent fountain and allows the festering poison to escape.

What dainty morsels those same feet and legs make! What a delicate flavor they have, as every epicure asserts! Do you suppose the corruption with which they are saturated has any influence upon their taste or healthfulness?

Perhaps you are thoroughly disgusted now and would like to leave the scene. Pause a moment. Now let us look at the inside of this wonderfully delicious beast.

A DEAD HOG EXAMINED.

Do you imagine that the repulsiveness of this loathsome creature is only on the outside; that within everything is pure and wholesome? Vain delusion. Sickening, disgusting as is the exterior, it is, in comparison with what it covers, a fair cloak, hiding a mass of disease and rottenness which grows more superlatively filthy as we penetrate deeper and deeper beneath the skin.

WHAT IS LARD?

Just under the foul and putrid skin we find a mass of fat from 2 to 6 inches in thickness, covering a large portion of the body. Now, what is this? Lard, says one; animal oil; an excellent thing for consumptives; a very necessary kind of food in cold weather. Lard, animal oil, very truly; and we will add, as synonyms, disease, scrofula, torpid liver.

Where did all that fat come from or how happened it to be heaped up around that poor hog so prodigiously? Surely it is not natural, for fat is only deposited in large quantities for the purpose of keeping the body warm in winter. This fat is much more than is necessary for such a purpose and is much greater in amount than ever exists upon the animal in a state of nature. It is evidently the result of disease. So gross have been the habits of the animal, so great has been the foulness of its body, that its excretory organs—its liver, lungs, kidneys, skin, and intestines—have been entirely unable to carry away the impurities which the animal has been all its life accumulating. And even the extensive system of sewerage, with its constant stream, which we have already described, was insufficient to the task of purging so vile a body of the débris which abounded in every organ and saturated every tissue. Consequently this great flood of disease, which made the blood a black, turbid current, was crowded out of the veins and arteries into the tissues, and there accumulated as fat. Delectable morsel, a slice of fat pork, is it not? Concentrated, consolidated filth.

Then the fatter a hog, the more diseased he is? Certainly. A few years ago there were on exhibition at the great cattle show in England a couple of hogs which had been stuffed with oil-cake until they were the greatest monsters of obesity ever exhibited. Of course they took the first premium; and if a premium had been awarded for those animals capable of producing the most disease, it is quite probable they would have headed the list still.

Lard, then, obtained from the flesh of the hog by heating, is nothing more than extract of a diseased carcass. Who that knows its character will dare to defile himself with this "broth of abominable things?"

DISGUSTING DEVELOPMENTS.

Now let us take a little deeper glance, prepared to find disease and corruption more abundant the deeper we go. Observe the glands which lie about the neck. Instead of their being the ordinary size and composed of ordinary structure, we find them enlarged masses of scrofulous tissue. Perhaps tuberculous degeneration has already taken place. If so, the soft, cheesy, infectious mass is ready to sow broadcast the seeds of consumption and premature death; for, according to some excellent medical authorities, tuberculous disease is capable of communication by means of tubercles. If the animal is of sufficient age, the further process of ulceration will have occurred.

Now, take a deeper look still, and examine the lungs of this much prized animal. If he is more than a few months old, you will be likely to find large numbers of tubercles if you make a careful examination. If he is much more than a year of age, you will more than likely as not find a portion of the lung completely consolidated. Yet all of this filthy diseased mass is cooked as a delicious morsel and served up to satisfy fastidious tastes. If the animal had escaped the butcher's knife a few years he would have died of tuberculous consumption.

But what kind of a liver would you expect such an animal to have? Is not excessive fatness one of the surest evidences of a diseased and inactive liver? Infallibly. Then a fat hog must have a dreadfully diseased bile manufactory. Make a cut into its substance. In seventy-five cases out of a hundred you will find it filled with abscesses. In a larger percentage still will be found the same diseased products which seem to infest every organ, every tissue, and every structure of the animal. Yet these same rotten, diseased, scrofulous livers are eaten and relished by thousands of people who can not express their contempt for the Frenchman who eats a horse or the Chinaman who dines upon fricasseed puppy.

Now just glance at the remaining contents of the abdomen. In every part you notice evidences, unmistakable, of scrofula, fatty degeneration, and tuberculous accumulations.

WHERE SCROFULA COMES FROM.

The word "scrofula" is derived from the Latin *scrofa*, which means a sow. The ancient Romans evidently believed that scrofula originated with the hog, and hence they attached the name of the beast to the disease. Saying that a man has scrofula, then, is equivalent to saying that he has the hog disease. After we have seen that the hog is the very embodiment of scrofulous disease, can any one doubt the accuracy of the conclusion of the Romans who named the disease?

ORIGIN OF THE TAPE-WORM.

We shall not attempt to trace the history of this horrid animal, which frequently attains the length of 30 to 100 feet in the intestines of human beings, only so far as concerns its introduction into the human system.

With this end in view, let us glance again at that diseased liver. Upon closer inspection it will be no uncommon thing if we discover numberless little sacs or cysts about the size of a hemp-seed. These do not present a very formidable appearance, certainly; but as soon as they are taken into the stomach by eating the flesh containing them, the gastric juice dissolves off the membranous sac and liberates a minute animal which had been lurking there for months, perhaps awaiting this very opportunity. This creature, although quite minute, is furnished with a head and four suckers. With the latter it attaches itself firmly to the wall of the intestine and begins to grow. In a short time it produces an addition to the body, which is attached like a joint behind. Soon a duplicate of this is produced, and then another and another, until a body three or four rods in length is formed.

Under some circumstances, the eggs of the tape-worm may find entrance into the body, when the disease is developed in another form. The embryonic worms consist of a pair of hooklets so shaped that a twisting motion will cause them to penetrate the tissues after the fashion of a corkscrew. Countless numbers of these may be taken into the system, since a single tape-worm has been found to contain more than 2,000,000 eggs. By the boring motion referred to, which seems to be spontaneous in the young worm, the parasites penetrate into every part of the body. Penetrating the walls of the blood-vessels, they are swept along in the life-current, thus finding their way even to the most delicate structures of the human system. They have been found in all the organs of the body, even the brain and the delicate organs of vision not escaping the depredations of this destructive parasite.

When this lively migrating germ gets finally settled in the tissues, it soon becomes enveloped in a little cell, and remains quiet until taken into the stomach of some other animal, when it is liberated and speedily develops into a full-grown tape-worm, as already described. But although quiet, the imprisoned parasite is by no means harmless. The cysts which are formed often attain such a size as to endanger life. When developed in the eye, they of course occasion blindness. When occurring in the lungs or other organs, they interfere with their proper function. In the liver, which is the most frequent rendezvous of these destructive creatures, a most serious and commonly fatal disease known as hydatis is occasioned by the extraordinary development of the cysts, which are ordinarily not larger than a pea, but by excessive growth assume enormous proportions. The same disease may occur in any other part of the body in which the germs undergo development.

In Iceland this disease has become extremely common; and it is not very uncommon in this country. We have in our microscopical cabinet specimens of the embryonic worms taken from hydatid tumors of the liver of a patient who died of the disease in Bellevue Hospital, New York.

The poor victim who is forced to entertain this unwelcome guest suffers untold agonies, and finally dies if he can not succeed in dislodging the parasite.

The germs of these dreadful animals are found not only in the liver, but in the other organs as well. Pork containing them is said to be measly. Sometimes it is discovered; but that such is by no means always the case is evidenced by the fact that tape-worm is every year becoming more and more frequent in this country. It has long been common in Germany.

Some time since we received from a friend in the South a specimen of pork which was so densely peopled with the germs of this dreadful parasite that every cubic inch of flesh contained more than a score of them.

In Abyssinia the occurrence of the tape-worm has become so frequent, owing to the bad dietetic habits of the people, that it has been said that every Abyssinian has a tape-worm. In this country the parasite is most common in pork-butchers and cooks.

THE TERRIBLE TRICHINÆ.

Now, my friend, assist your eyesight by a good microscope, and you will be convinced that you have only just caught a glimpse of the enormous filthiness, the inherent badness, and the intrinisic ugliness of this loathsome animal. Take a thin slice of lean flesh, place it upon the stage of your microscope, adjust the eye-piece, and look. If you are fortunate, you will find displayed before your eyes hundreds of voracious little animals each coiled up in its little cell waiting for an opportunity to escape from its prison walls and begin its destined work of devastation. A gentleman of eminence in Louisville has made very extensive researches upon the subject, and asserts that in at least one hog out of every ten these creatures may be found. A committee appointed by the Chicago Academy of Medicine to investigate this subject reported that they found in their examination at the various packing-houses in the city at least one hog in fifty infested with trichinæ. Other investigations have shown a still greater frequency of the disease.

A few years ago we obtained a small portion of the flesh of an individual that had died from trichinæ poisoning. Upon subjecting it to a careful microscopical examination with a good instrument we discovered multitudes of the worms. The animal was seen inclosed in a little cyst, or sac, which is dissolved by the gastric juice when taken into the stomach of any animal. The parasite, being then set at liberty, immediately penetrates the thin, muscular walls of the stomach, and gradually works its way throughout the whole muscular system. It possesses the power of propagating its species with wonderful rapidity; and a person once infected is almost certain to die a lingering death of excruciating agony.

In Helstad, Prussia, one hundred and three persons were poisoned and twenty of them died within a month.

It is doubtless not known how many deaths are really due to this cause; for many persons die of strange, unknown diseases, which baffle the doctor's skill both as to cure and diagnosis. Trichinosis also very much resembles some other diseases in some of its stages, and may be attributed to other than its true cause. It is thought by many medical men of considerable eminence that hundreds of people die of the disease without its true nature being suspected.

PORK UNCLEAN.

Have we not seen that a hog is nothing better than an animated mass of physical defilement? Few that have seen the animal will dispute that his filthiness is a most patent fact. How wise and sanitary, then, was the command of God to the ancient Jew: "It is unclean unto you. Ye shall not eat of their flesh nor touch their dead carcass."

Although it may not be said that this law still exists and is binding upon all mankind as a moral obligation, it is quite plain that the physical basis upon which the law is founded is as good to-day as at any previous period. Could it be proved that the hog had kept pace with advancing civilization and had improved his habits, we might possibly find more tolerance for him; but he is evidently just as unclean as ever and just as unfit for food.

Adam Clarke, when once requested to give thanks at a repast of which pork constituted a conspicuous part, used the following words: "Lord, bless this bread, these vegetables, and this fruit, and if Thou canst bless under the gospel what Thou didst curse under the law, bless this swine's flesh."

The Mohammedans, as well as the Jews, abstain entirely from the use of pork. Such is also the case with some other tribes of Asia and Africa.

EVIL EFFECTS OF PORK-EATING.

At the head of the list we place scrofula. How almost universally it abounds. How few are untainted by this ugly disease. The chronic sore eyes, glandular

enlargements, obstinate ulcers, disfigured countenances, unsightly eruptions, including a long list of skin diseases, all proclaim the defilement of the blood with this vile humor. So, too, do the vast army of dwarfed, strumous, precocious children tell the same story. Erysipelas, too, a dreadful scourage, owes more to pork than to any other predisposing cause. That terrible disease leprosy, so common in Eastern countries and now beginning to show itself upon our shores, is thought by many to be largely attributable to pork-eating.

"Biliousness," a name which covers nearly every bad condition for which no other appropriate name can be found, is notoriously the result of pork-eating. This is the main reason why so many people complain of "biliousness" in the spring, after gorging themselves with fat pork all winter. The liver is overworked in attempting to remove from the system such a mass of impurity as is received in the eating of pork. It consequently becomes clogged, congested, torpid. Then follow all the ills consequent upon the irritating effects of biliary matters in the blood. The skin becomes tawny, jaundiced. The kidneys are overworked. Perhaps a fever results. A partial clearing out then occurs which enables the individual to pass along for a time again, until some epidemic or contagious disease claims him as a lawful victim.

Consumption is another disease which is not easily separated from pork-eating. In fact scrofula is its great predisposing cause. The narrow chests, projecting shoulders, thin features, and lank limbs of so many young boys and girls are evidences of the consumptive tendency, of which a scrofulous diathesis is the predisposing cause.

Dyspepsia, that malady of many forms, is a frequent result from the use of pork, especially when fat and salted or smoked pork is one of the most indigestible of foods, requiring between five and six hours for its digestion, when wholesome food will digest in half that time. This is the reason for the notion that salt pork is an excellent thing to "stick by the ribs."

Tape-worm we have already mentioned as the result of eating measly pork. It is a very difficult disease to cure, and often baffles the best medical skill for many years. Few ever detect the cysts in the flesh of the hog unless their attention has been directed to the matter.

Trichinæ produce in man an incurable disease. No remedy can stay the ravages of the parasite. All pork-eaters are in constant danger; for the worm is too small to be seen without the aid of the microscope. However, this disease is not nearly so formidable as the others named; for it is not so common, neither does it entail any weight of suffering upon posterity.

APOLOGIES FOR PORK-EATING EXAMINED.

On every hand we are met by all sorts of excuses for continuing to make swine's flesh an article of diet in spite of the striking evidences of its dangerous character. Let us examine a few of the most common of these apologies and test their value.

PORK IS NECESSARY AS A HEAT-FORMING FOOD IN WINTER.

Are there not plenty of more healthy animals than hogs to supply all the animal fat necessary? Certainly there are. And, better still, we have the various grains and farinaceous vegetables, which are abundantly sufficient to furnish all the heat required by man in any latitude.

OUR FATHERS AND GRANDFATHERS ATE PORK AND YET LIVED TO VERY OLD AGE.

Ah, yes, my good friend, and you are suffering the penalty of their transgressions. You may not be well aware of it as yet, but more than likely as not your old age will not be so free from ills as was theirs. And quite as probably you may even now see in your children the results of your own as well as your father's disregard of the dictates of sound sense in feasting upon the hog. Their frequent sore eyes, sore mouths, tetter, erysipelas, and other eruptions are all evidences of the scrofula which they have inherited.

Neither can you urge the plea "pork does not hurt me." No man ever became a drunkard who did not make the same excuse for liquor. You may not feel it now, but the future will expose your delusion.

THE HOG IS CLEANLY IF YOU GIVE HIM A CHANCE TO BE SO.

It is surprising to us that any person who knows anything of the real nature of a hog can make such an assertion. Who has not seen many a hog wallowing in the foulest mire right in the middle of a green, fragrant clover pasture? The dirty creature will turn away from the nicest bed of straw to revel in a stagnant, seething mud-hole. If one of his companions dies in the lot or pen he will wait until putrefaction occurs, and then greedily devour the stinking carcass. The filthy brute will even devour his own excrement, and that when not unusually pressed by hunger.

The hog is by nature a scavenger, and is especially adapted for that purpose. Let him pursue his natural calling.

SUFFICIENT HEAT WILL KILL TRICHINÆ AND INCIPIENT TAPE-WORMS.

Surely dead worms can not kill any one; but it must be delightful for the pork-eater to contemplate his ham or sausage with the reflection that he will find it a diet of worms. The Frenchman sometimes eats earth-worms, the African relishes lizards, and one philosopher so far overcame his natural prejudices as to eat spiders. "How disgusting," you say, and yet shut your eyes and swallow a million monsters at a meal because they are cooked, and so can not bite. The louse-eating Patagonian can not equal that. But it should be remembered that in order that the parasites shall be killed, every part of the meat must be subjected to a heat of at least 212°, which is quite difficult to do, and is seldom accomplished. A whole family were poisoned by eating pork-chops which were well cooked upon the outside.

WHAT SHALL WE DO WITH THE HOG?

Stop raising him. Turn him loose. He will soon find his place, like the five thousand which ran down into the sea in the days of Christ. If he must be raised, use him for illuminating-our halls and houses. Lubricate our car and wagon axles with his abundant fat. Do anything with him but eat him. It would be dangerous to adopt the principle that we must devour everything which is in the way or which can not be otherwise utilized. Adam Clarke thought of one appropriate use to make of him. He said that if he was going to make an offering to the devil he would employ a hog stuffed with tobacco.

Reader, what will you do? Can you continue to use as food such an abominable article as pork, and in so doing run so many risks as you must do? And if you decide that the animal is unfit to claim a place upon your own table, can you conscientiously raise and sell him, to your neighbor's injury?

CASES OF TRICHINA POISONING.

The reported cases of death from this terrible cause have become so frequent that we are no longer startled by them. Ten years ago the description of the death of a person literally infested with worms and tortured to death by their inroads upon the system would have excited feelings of the deepest horror; but now these accounts have become so common that little interest is shown in them, and death from this cause is one of the regular causes of additions to the mortuary list. Nevertheless, the disease is divested of none of its real horrors by its common occurrence. No one is safe; any one who uses swine's flesh as food in any form is liable to the disease. Salting, smoking, and the other ordinary means of curing pork do not destroy the parasite.

A few years ago Dr. Germer, health officer of Erie, Pa., was sent for in haste to see a patient who was supposed to be suffering from the cholera. He hastened to the bedside and found a whole family sick with symptoms much resembling those of cholera, though the season was then midwinter. Suspecting the possible cause, he secured a specimen from the pork barrel and hastened to his office. Upon making a careful microscopic examination he found myriads of the loathsome parasites in every part of the flesh examined. We prepared numerous microscopic specimens of the worm in various aspects from a portion of the infected meat kindly sent us by the doctor, and have shown them to hundreds of persons who were skeptical respecting the existence of such a pest, so terrible are the effects attributed to it.

In this case the hog had been fattened on the premises, having been purchased when quite young by the owner, a German, from a drove of hogs which passed through the city. It was known that previous to the purchase of the hog two of the drove had died on the road, and had been devoured by their scavenger companions. No doubt the deaths were the result of trichinosis, and by devouring the victims the whole herd became infected. It would be difficult to estimate what an amount of suffering and death was entailed by the consumption of this great herd of trichinous hogs. Several members of the German family died, together with several of the neighbors. Those who survived the acute stages of the disease only escaped to linger out a painful existence in the chronic and incurable state of the malady.

Some three years later we received a specimen of pork from a gentleman in Wisconsin who requested an examination of the same, stating that he procured it from the pork barrel of a neighbor whose family were suffering from a disease which the doctors called cholera infantum. Several of the children had died, and other members of the family were still dangerously ill. The pork had been suspected and examined, but no trichinæ were found by the observers, though several physicians had inspected it. Upon making a careful microscopical inspection of the specimen we found it alive with young trichinæ.

Many cases of poisoning from this source are never detected, when symptoms of the disease resemble those of several others so closely that most of the cases are treated for other diseases.

Federal Election Law.

Whenever Congress controls elections, farewell to the rights of the people even to elect their own representatives.—*Vice-President Elbridge Gerry.*

The Federal Election bill is infamy in its most insolent shape, an insult to the common sense and honor of every loyal and right-minded citizen.—*New York Herald.*

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

June 30, and July 1 and 2, 1890.

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. WHEELER, of Alabama, said:

Mr. SPEAKER: The bill known as the election bill, No. 10958, was introduced on June 14 1890.

On the 17th, printed copies, each containing 76 pages, were ready for distribution.

It passed through the process of reference to the Committee on Election of President, Vice-President, and Representatives in Congress, and on the 19th that committee reported to the House a bill numbered 11045, as a substitute. This was printed and made available to members of this House on the 21st, and on the 26th its consideration was commenced under orders from the Committee on Rules.

It will readily be seen that no committee of this House has been able to give this measure the study and consideration that so important a law merits, nor has any member of this body been able to investigate the intricate expressions which this lengthy election code contains.

The Committee on Rules has directed that the bill be voted upon at 3 o'clock on July 2.

To force a measure of this magnitude and character through Congress with such precipitate speed is a flagrant outrage and little less than a fearful, atrocious, I might say diabolic, crime.

This bill makes an entire and radical change in our system of government.

It takes the election of members of Congress as thoroughly out of the hands of State officers as if those officials ceased to exist. It is true it allows them to remain at the polls and report the results of the election to the State officials, but these reports are not received, considered, or accorded any significance by Congress even as *prima facie* evidence of the statements they contain.

Federal officers are appointed by Federal officials, who invade sovereign States, register the votes, pass upon their qualification and eligibility, receive and count the ballots, and certify the returns to a Federal election board, who then transmit the result to the Clerk of the House of Representatives.

PRINCIPLES OF LIBERTY OVERTHROWN.

The system of conducting elections which has been in successful and satisfactory operation for one hundred years is overthrown, governors of sovereign States are ignored and insulted, and the States themselves placed on a plane with reference to the Federal Government almost as degrading as the relation a conquered province bears to an imperial power to which its allegiance is due.

From the time that our forefathers planted their feet on the shore of this continent up to the present day elections by the people have been

regarded as a sacred right upon which the principles of a government of the people, by the people, and for the people, paramountly, solely, and I might almost say alone depended. [Applause.]

The people of each election precinct are generally known to each other, and this is especially true in the rural sections of our land.

Their views and opinions upon political and other public questions are understood, and the result of the vote is often predicted with surprising accuracy before the election takes place.

In every community there are certain men who during their long lives have earned the respect and confidence of the people as persons of capacity, judgment, and sterling integrity.

These men are selected as managers of the election, care being always taken that the opposing candidates have representatives on the board.

With rare exceptions the voters are known to at least one of the election officers and in probably a large majority of cases to the entire board.

The ballots are received, counted, and returned, and the integrity of the election is not questioned by any one.

Such an election complies with both the letter and spirit of the Constitution that election shall be "by the people."

Gentlemen on the other side of the House, instead of dicussing the constitutionality and advisability of the bill, have devoted their time to denouncing the section of country from which I am proud to come and which with its noble people I love with every impulse of my heart. They talk of unfair elections and charge that all elections in the South are conducted by violence and fraud; but when individual Republican members of Congress from that section are put upon their *voir dire* they all admit that Democrats conduct elections in their districts with perfect fairness. Mr. COLEMAN of Louisiana, Mr. EWART of North Carolina, Mr. TAYLOR, Mr. HOUK, and Mr. EVANS of Tennessee have all borne testimony to the perfect fairness with which elections were conducted by Democrats in the districts they represent.

I do not speak for the whole South, because I do not know and could not possibly know what occurs in all parts of that vast extent of country, comprising as it does nearly a million square miles of territory, nearly three times the extent of the thirteen original States and more than twelve times the size of all the New England States put together; but so far as I know, and my information is very general, I assert that there is not even an idea of fraud tolerated by the Democracy of the section from which I come; and in the absence of evidence to the contrary, it is but fair and just to presume that what is true of one part of the South is equally true of all others; and I assert that if the people of my district believed that I would accept an illegal vote or tolerate a fraud they would not elect me as their representative in Congress. The votes are quietly cast and correctly counted; and in the five elections by which I have been sent to this body, my opponents will not charge that there was a single unfair vote cast for me.

Mr. BUCKALEW. How large a majority have you?

Mr. WHEELER, of Alabama. My majority is over 4,300.

Mr. BUCKALEW. What was your majority in the other elections?

Mr. WHEELER, of Alabama. In my first election, in 1880, my majority was but 43; it was a very warmly contested election; my opponent was Mr. Lowe, the then sitting member, a very able man and skillful politician. The election was contested and a vast amount of evidence was taken, all of which thoroughly refutes the charge that Democrats are guilty of fraud and violence. In one election my majority was 1,350, and in the other two it was between three and four thousand.

Mr. BUCKALEW. You are a hero. [Laughter.]

Mr. WHEELER, of Alabama. No; the people of my district are heroes. It is a pleasure and a great honor to be the representative in Congress of people of their intelligence, integrity, chivalry, and honorable character, and the developments now taking place in that section are giving it an enviable prominence and will make it the most prosperous country on earth.

This bill overturns this accurate, honest, and excellent system, conducted by such people as I have described, and strangers, of whom the people have little or no knowledge and in whom they have less confidence, are sent to this quiet community, backed by paid deputy marshals, and, if desired by unscrupulous candidates, also backed by armed soldiers.

Some of the Federal officers of election will no doubt be men of education, standing, and character, but all persons who know the condition of the Southern States will admit that many of them will be persons unqualified for the office, without character to lose or to gain in the locality where they serve.

They will hardly have much fear of violating laws, offenses to which are tried in the Federal court, as this bill virtually provides that they may select the jurors who serve in that tribunal.

BILL IS AT VARIANCE WITH THE THEORY OF OUR GOVERNMENT.

But, supposing that none of these fears should be realized, the bill is objectionable because it is entirely at variance with American principles and theories of government.

The advocates of the bill are outspoken in their assertions that it is only intended to operate in those States and districts where there is a large negro population.

The advocates of the bill assume and assert that a large majority of the people in those localities are Republican, and that a minority of the people in those districts, by reason of superior education, intelligence, and manhood, so control the elections as to in many cases give Democratic majorities.

If the honorable, non-partisan people of the United States wish proof as to the falsity of the general charge made on this floor that elections in the South are fraudulently conducted it is abundantly supplied by the records of the facts which have been developed during the two years which have elapsed since the election in November, 1888.

The defeated Republican candidates in the South have been urged to furnish evidence that they were defeated by fraud. They have been tendered aid, urged to accept aid, and even had aid thrust upon them, and in addition to this have had committees of Congress sent South with unlimited power, money, and resources in the hope that something could be developed to sustain these allegations; and this, too, has been done by the agencies of a great and powerful Government.

They have also had Republican Federal officials in all these localities, and, if fraud or violence had existed as charged, indisputable proof would certainly have been placed before this body; and with all this, after seven months of investigation, they have only succeeded in unseating Mr. Turpin, of Alabama, and Mr. Cate, of Arkansas, their action in both cases being so unwarranted by evidence as to shock the conscience and excite the indignation of many of the fairer-minded Republicans.

I have not referred to the cases from Maryland and the Virginias, as it is not charged by any one that the pretended evils which it is claimed this bill will correct exist in those localities. But even if their assumptions and statements were true, which I do not admit, but emphatically deny, the plan they propose to adopt is an assumption on their part that our system, which is a government for the people, is a mistake and failure. For years the people of the South have deplored the want of education among the colored people. They have contributed a larger percentage of their own means to correct this evil than was ever before contributed by people of the Caucasian race for such a purpose under such circumstances since the world began.

In a recent speech in Congress Senator BLAIR said it would not do to assert that Southern Senators and Southern people had—

> A desire to keep the colored child in ignorance in face of the fact that 985,000 of them are attending the public schools in the South and that the burden of the expense is mainly defrayed by the white people of the South. This is marvelous progress.

I also beg to call attention to a speech by Ex-Governor Chamberlain, of South Carolina. He was a Northern man; was elected governor of South Carolina as a Republican. The speech was delivered at Boston February 8, 1890:

> I come from the South to-night. A business errand has again taken me to the State which was my home for twelve years. I have mingled again during the last four months with the people whom I then knew so well. What do I find? I find that since 1876 both races in South Carolina have prospered. I find the prosperity of the negro has advanced *pari passu*, more than *pari passu*, with the white man. I find the negro more self-respecting, better provided with schools, far better, acquiring property more rapidly, more industrious, more ambitious for education and property than he ever was before 1876; and I have come here to-night, at not a little inconvenience, to proclaim this in the ear of Boston's philanthropy and Boston's patriotism. [Cheers.] I proclaim it because it is true and because, if any man living owes it to himself and to the country to proclaim the truth in this matter, I am that man. [Great applause.]
>
> * * * * * * *
>
> What, then, is the duty of the North in respect to this problem; what is Boston's and Massachusetts' duty; what is the duty of all patriotic men? I answer with my whole mind and conscience, their duty is to let the negro alone. [Tremendous cheering.]

A few days ago General Longstreet, who has been a Republican for twenty-four years, during which time he has been a resident of the South, was interviewed by one of the editors of the St. Louis Globe-Democrat, a prominent Republican paper.

General Longstreet said:

> The negro is getting along quite well, and would do much better if it were not for the politicians. It does not follow that because a man is black he is a Republican.

This distinguished soldier continued:

> A negro is like almost any other man. He will vote for the advancement of his own interests. He will vote against a negro who has gone to the front simply as a politician, in favor of a respectable Southern white man any time. He will vote for a Southern white man that he knows against a politician of the North every time. Schools are working out the problem of the colored man in the South. The development of the country is giving him new avenues of employment. What he is gradually getting is better wages, and what he needs is less politics and less meddling from politicians.

You will all recollect the remarks of Vice-President MORTON on his recent return from the South. The whole tenor of his expressions was that the people, both black and white, were doing well, and that Congressional interference would be unfortunate for the entire country.

They have appealed to Congress to pass an educational bill to aid in this work, and the Democratic Representatives from the South have voted for and advocated such a bill almost unanimously, and now they see an Administration, with every branch Republican, refusing to pass a bill to contribute $7,000,000 a year for ten years for this great aid to the colored people, while at the same time they see this Congress hasten to enact this law which, it is estimated, will cost $12,000,000 a year for all time, although Southern Republicans tell them it will be a seri-

ous injury to all the people of the South and that the colored people will be the greatest sufferers.

If the Republican party was sincere in its statement that its purpose and desire is to secure to the negro the right to intelligently exercise the right of suffrage they would answer the universal prayer of that race and give them the education they so much desire and covet. This, and this alone, would attain the object which Republican orators assert with so much emphasis they desire. The enforcement or the attempted enforcement of the right of suffrage by marshals and bayonets will do more towards turning back the wheels of civilization than can be corrected by years of effort on the part of those who devote their best endeavors to secure a free and pure ballot and an advanced and progressive civilization.

BILL UNCONSTITUTIONAL.

That this bill is entirely outside the pale of the Constitution, I do not think there can be the slightest doubt, and that its operation would contravene the tenets and principles of our system of government, no fair-minded man of ordinary education and intelligence will deny.

In discussing the unconstitutionality of the bill I shall endeavor to show—

First. That expounders of constitutional law lay it down as a rule that in construing a constitution we must consider the situation of the country antecedent to and at the time the constitution was framed.

Second. That the history of those times and of the people of those times utterly negatives the assumption of the advocates of the bill that our constitutional fathers ever intended such a construction as is contended for by them.

Third. That the proceedings and debates in the constitutional convention forbid such an interpretation.

Fourth. That the proceedings and debates in the conventions held by the States to ratify the Constitution, with equal emphasis refute the construction for which they contend.

Fifth. That contemporaneous writers on the Constitution also deny the position which is assumed by the advocates of the bill.

Sixth. That the discussions in Congress during the hundred years which have elapsed since the Constitution was adopted most thoroughly prove that the view presented by Mr. LODGE has never been entertained and will never be tolerated by the American people.

Seventh. That even though not intended and not so expressed in the bill, it will be impossible to carry it into execution without doing acts the unconstitutionality of which no one will question.

I will not burden the House by reading the numerous authorities from Cooley and from Story and others, but will invite attention to only a portion of a single page.

I read from the chapter on "Constitutional interpretation," in Potter on Statutes and Constitutions, page 657:

It is regarded as appropriate for the courts and as a matter entitled to their most careful consideration in giving construction to the Constitution to look back at the situation of the country at the time and antecedent to the time of its adoption; to look at its then existing institutions, at the existence and operations of the then State governments, at the powers and workings of the old Confederation, and at all other circumstances which had a tendency to produce or obstruct its formation and ratification (Story, § 405); and it is also held that contemporary history and contemporary interpretation may be called in to aid in arriving at just conclusions.

These principles of constitutional construction are fully elaborated in the following decisions: Bigg *vs.* Commonwealth of Pennsylvania, 16 Peters. R., 610; Cohens *vs.* Virginia, 6 Wheat., 418, per Marshall, Ch. J.

I will also read from the same commentator, page 657:

The safest rule of interpretation will be found to be to look into the nature and object of the particular powers, duties, and rights, with all the lights and aids of contemporary history, and to give to the words of each just such operation and force consistent with their legitimate meaning as may fairly secure and attain the ends proposed.

PURPOSE OF OUR FOREFATHERS.

These authorities, as well as the numerous decisions I have before me, show that in order to understand the Constitution of the United States we must always keep in mind the purpose which our forefathers sought to attain and the evils they sought to avert by its adoption.

The preamble is in these words:

We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

There must have been some great necessity for this action by the people who were to be affected thereby.

During a period of nearly two centuries prior to the adoption of this constitution, Europeans had been coming to America.

They had established colonies until their aggregate population had reached three millions of people.

The colonies were protected from foreign enemies by the parent country.

Difficulties and conflicts between each other were prevented or adjusted by authority from the same source, and while each colony was independent of the other they all acknowledged a certain limited dependence upon the parental government.

The attempts on the part of the British Government as far back as 1754 to levy contributions and by various means to encroach upon the rights of the colonists brought about a meeting of deputies from many of the colonies, and the feeling then engendered culminated twenty-one years later in the armed conflicts between the colonists and British troops at Lexington, Concord, and Bunker Hill.

DECLARATION OF INDEPENDENCE.

The following year, July 4, 1776, thirteen colonies declared themselves independent States, all of which had joined for mutual protection against the war waged upon them by their mother country.

Finally Articles of Confederation were formed, in which it was especially provided that—

Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right, which is not by this Confederation expressly delegated to the United States, in Congress assembled.

The purpose of this Confederation was expressed in these words:

The said States hereby severally enter into a firm league of friendship with each other for their common defense, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretense whatever.

After the termination of the war of the Revolution the question of establishing a better system of government was agitated.

In May, 1785, a committee of Congress made a report recommending such action by a change in the Articles of Confederation.

On January 21, 1786, the Legislature of Virginia adopted Mr. Tyler's resolution providing for the appointment of commissioners from that State to meet commissioners from other States.

I read from Elliot's Debates, volume 5, page 113:

To take into consideration the trade of the United States; to examine the relative situations and trade of said States; to consider how far a uniform system in their commercial regulations may be necessary to their common interest and their permanent harmony; and to report to the several States such an act, relative to this great object, as, when unanimously ratified by them, will enable the United States in Congress effectually to provide for the same.

Pursuant thereto, on September 11, 1786, at Annapolis, Md., Edmund Randolph, St. George Tucker, and James Madison met commissioners from the States of New York and Pennsylvania, Delaware, and New Jersey.

The commissioners from New York and Pennsylvania came with almost precisely the power conferred upon its commissioners by the State of Virginia.

Delaware had similarly empowered her commissioners with this difference, that the act to be framed by virtue thereof is required to be reported (*ibid.*, 115)—

to the United States in Congress assembled, to be agreed to by them, and confirmed by the Legislature of every State.

ANNAPOLIS CONVENTION.

The States of Maryland, Connecticut, South Carolina, and Georgia did not appoint any commissioners, and those appointed by the States of New Hampshire, Massachusetts, Rhode Island, and North Carolina did not attend.

A resolution and address prepared by Alexander Hamilton was adopted, which recited their meeting and the reasons why they believed that a general convention of all the States should be held, and recommended (I read from page 116)—

The exercise of endeavors to procure the concurrence of the other States, in the appointment of commissioners to meet at Philadelphia on the second Monday in May next, to take into consideration the situation of the United States; to devise such further provisions as shall appear to them necessary to render the Constitution of the Federal Government adequate to the exigencies of the Union; and to report such an act for that purpose to the United States in Congress assembled, as, when agreed to by them, and afterwards confirmed by the Legislature of every State, will effectually provide for the same.

On February 21, 1787, Congress adopted a resolution in favor of the convention, and Virginia was the first State to comply.

The enactment of the Legislature of Virginia, after reciting several preambles, was in these words, page 117:

That seven commissioners be appointed to meet such deputies as may be appointed and authorized by other States, to assemble in convention at Philadelphia, as above recommended, and to join with them in devising and discussing all such alterations and further provisions as may be necessary to render the Federal Constitution adequate to the exigencies of the Union, and in reporting such an act for that purpose to the United States in Congress, as, when agreed to by them, and duly confirmed by the several States, will effectually provide for the same.

George Washington, Edmund Randolph, and James Madison were among the commissioners appointed. All the other States except Rhode Island followed the example of Virginia, and on May 25 the body which framed our Constitution met in the city of Philadelphia.

MEMBERS OF CONSTITUTIONAL CONVENTION ON ELECTIONS.

George Washington was unanimously elected president of the convention, the nomination being made by Robert Morris and seconded by John Rutledge. Benjamin Franklin was to have nominated George Washington, but he was too ill to be present.

On May 29 Mr. Randolph opened the business of the convention. I read from page 126:

He expressed his regret that it should fall to him, rather than those who were of longer standing in life and political experience, to open the great subject of their mission. But as the convention had originated from Virginia and his colleagues supposed that some proposition was expected from them, they had imposed this task on him.

He then proposed, as conforming to his views, a series of resolutions

which embodied his ideas of a plan of government, the one referring to the election of members of Congress being in these words (page 127):

Resolved, That the members of the first branch of the National Legislature ought to be elected by the people of the several States every —— for the term of ——, to be of the age of —— years at least.

Mr. Charles Pinckney proposed a draught which said (page 129):

The members of the House of Delegates shall be chosen every —— year by the people of the several States; and the qualification of the electors shall be the same as those of the electors in the several States for their Legislatures.

Each State shall prescribe the time and manner of holding elections by the people for the House of Delegates; and the House of Delegates shall be the judges of the elections, returns, and qualifications of their members.

But on June 6 he, according to previous notice and rule obtained, moved (page 160)—

That the first branch of the National Legislature be elected by the State Legislatures, and not by the people.

ROGER SHERMAN AND ALEXANDER HAMILTON.

Mr. Roger Sherman, of Connecticut, advocated this proposition of Mr. Pinckney. I read his remarks (page 161):

If the State governments are to be continued it is necessary, in order to preserve harmony between the national and State governments, that the elections to the former should be made by the latter. The right of participating in the National Government would be sufficiently secured to the people by their election of the State Legislatures. The objects of the union, he thought, were few: First, defense against foreign danger; secondly, against internal disputes and a resort to force; thirdly, treaties with foreign nations; fourthly, regulating foreign commerce and drawing revenue from it. These and perhaps a few lesser objects alone rendered a confederation of the States necessary. All other matters, civil and criminal, would be much better in the hands of the States.

Mr. Gorham also proposed a plan for the Constitution, its reference to the Lower House of Congress being in these words (page 189):

Resolved, That the members of the first branch of the National Legislature ought to be elected by the people of the several States for the term of three years.

On June 18, Alexander Hamilton made a beautiful speech and proposed a plan of constitution.

His recommendation regarding Congress was as I will read, page 205:

I. The supreme legislative power of the United States of America to be vested in two different bodies of men; the one to be called the Assembly, the other the Senate; who, together, shall form the Legislature of the United States, with power to pass all laws whatsoever, subject to the negative hereafter mentioned.

II. The Assembly to consist of persons elected by the people, to serve for three years.

III. The Senate to consist of persons elected to serve during good behavior; their election to be made by electors chosen for that purpose by the people. In order to this, the States to be divided into election districts.

Mr. Hamilton prepared another draught, but did not submit it to the convention. Its election clause reads (Elliot, page 585):

The Legislature shall provide for the future elections of Representatives, apportioning them in each State, from time to time, as nearly as may be to the number of persons described in the fourth section of the seventh article, so as that the whole number of Representatives shall never be less than one hundred nor more than —— hundred.

PLANS REFERRED TO COMMITTEE OF DETAIL.

On July 23 it was unanimously resolved (I read from Journal of the Convention as filed by the Secretary of State, page 199):

That the proceedings of the convention for the establishment of a national government, except what respects the supreme executive, be referred to a committee for the purpose of reporting a constitution, conformably to the proceedings aforesaid.

On the 24th (page 201) the convention chose this committee on detail by ballot. It consisted of Hons. John Rutledge, of South Carolina, afterward Chief Justice; Edmund Randolph, of Virginia, afterward Washington's Attorney-General and Secretary of State; Nathaniel Gorham, of Massachusetts; Oliver Ellsworth, of Connecticut, afterward Senator, Chief-Justice and envoy to France; and James Wilson, of Pennsylvania, afterward on the Supreme Bench. On the 26th, the proceedings and the resolution were referred. The clause affecting the election of members of Congress, as shown by the Journal, page 207, and by Elliot, vol. 5, page 375, was:

Resolved, That the members of the first branch of the Legislature ought to be elected by the people of the several States for the term of two years.

The plans proposed to the convention by Mr. C. Pinckney on May 29 and by Mr. Patterson on June 15 were also referred to the committee on detail, after which the convention adjourned until August 6. (Journal, page 214, and Elliot, page 376.) The articles in Mr. Pinckney's plan with regard to elections of members of Congress were (Elliot, page 129, and Journal, pages 72 and 73):

ARTICLE III. The members of the House of Delegates shall be chosen every —— year by the people of the several States, and the qualification of the electors shall be the same as those of the electors in the several States for their Legislatures.

* * * * * * *

ARTICLE V. Each State shall prescribe the time and manner of holding elections by the people for the House of Delegates, and the House of Delegates shall be the judges of the elections, returns, and qualifications of their members.

Mr. Patterson's plan is on page 191 of Elliot and 123 of the Journal. It has no provision for the election of Congressmen, but it authorizes Congress to elect a Federal Executive. None of the plans presented conferred any power upon Congress to either make or alter any regulations affecting the election of members of Congress, and no suggestions of that character had been made to the convention. On August 6 Mr. Rutledge delivered in the report of the committee of detail.

FIRST SUGGESTION OF CONGRESSIONAL INTERFERENCE.

The article we are discussing was in these words (Elliot, page 377):

ARTICLE VI.

SECTION 1. The times, and places, and manner of holding the elections of the members of each House shall be prescribed by the Legislature of each State; but their provisions concerning them may, at any time, be altered by the Legislature of the United States.

This was the first utterance of a member of the convention giving Congress any power to alter regulations of States regarding elections.

On August 9 this article was reached, and as it is an important subject I will endeavor to review the entire discussion which pertains thereto.

I read from page 401, Elliot, volume 5:

(Article VI, section 1, was then taken up.)

Mr. Madison and Mr. Gouverneur Morris moved to strike out "each House" and to insert "the House of Representatives," the right of the Legislatures to regulate the times and places, etc., in the election of Senators being involved in the right of appointing them; which was disagreed to.

A division of the question being called for, it was taken on the first part down to "but their provisions concerning," etc.

The first part was agreed to *nem. con.*

UNANIMITY AS TO PRIMARY RIGHTS OF STATES.

We therefore see that the convention were unanimous in adopting so much of the article as is contained in these words:

The times and places and manner of holding the elections of the members of each House shall be prescribed by the Legislature of each State.

Now, it has been contended that at that time many persons insisted that the General Government ought to have the full control of the election of the members of the National Legislature. This vote shows that no such contention existed.

It shows that every member was satisfied to leave this question originally and primarily with the States.

No one argued against it. No one voted against it. No one even lisped one word or syllable against the proposition, but when it was proposed to strike out the paragraph which gave permissive and contingent power to Congress to alter the provisions concerning the times, places, and manner of holding elections for members of Congress it was contended that the legislators of States ought not to have the exclusive right; but I will give the exact words as reported in the proceedings:

Mr. Pinckney and Mr. Rutledge moved to strike out the remaining part, namely: "But their provisions concerning them may at any time be altered by the Legislature of the United States." The States, they contended, could and must be relied on in such cases.

Mr. GORHAM. It would be as improper to take this power from the National Legislature as to restrain the British Parliament from regulating the circumstances of elections, leaving this business to the counties themselves.

Please observe that Mr. Gorham, of Massachusetts, spoke of this as "regulating the circumstances of elections." This ignores and refutes the idea of taking absolute control by the General Government.

I will now proceed to give the remarks of Mr. Madison, which are quoted by Mr. LODGE and other advocates of this bill as justifying a law which does not make or alter such regulations as States have made regarding the times, places, and manner of holding elections, but actually takes absolute control of said elections by appointing officers to manage and take control of the same and certify the results to Congress.

REAL POINT THEN AT ISSUE.

Before reading Mr. Madison's remarks I beg to call the attention of the House to the fact that Mr. LODGE in his report and speech has carefully abstained from informing this body as to the real point of Mr. Madison's remarks. Mr. LODGE, as well as all other advocates of the bill, hides the fact that five minutes before this much quoted speech of Mr. Madison was made the convention had by unanimous vote adopted that part of the proposed Constitution which is in these words:

The times and places and manner of holding the elections of the members of each House shall be prescribed by the Legislature of each State.

This left the question entirely with the States. If they failed or refused to prescribe the time, place, and manner there could be no Congress, and the committee on detail had therefore proposed the addition of the following words:

But their provisions concerning them may at any time be altered by the Legislature of the United States.

It was these words which Mr. Pinckney and Mr. Rutledge proposed to strike out.

This was the provision which Mr. Pinckney, Mr. Rutledge, and Mr. Roger Sherman argued should be stricken from the Constitution. Mr. Madison, Mr. King, Mr. Morris, and Mr. Gorham, each having just voted to place the power originally and permanently with the States, seemed to feel that in case the States did not exercise it a contingent and secondary power should be given to Congress, and in reading their remarks we must keep this important fact in our minds.

I will now read Mr. Madison's remarks, from page 401, Elliot, volume 5:

Mr. MADISON. The necessity of a General Government supposes that the State Legislatures will sometimes fail or refuse to consult the common interest at the expense of their local conveniences or prejudices. The policy of referring the appointment of the House of Representatives to the people, and not to the Legislatures of the States, supposes that the result will be somewhat influenced by the mode. This view of the question seems to decide that the Legislatures of the States ought not to have the uncontrolled right of regulating the times, places, and manner of holding elections. These were words of great latitude.

It was impossible to foresee all the abuses that might be made of the discretionary power. Whether the electors should vote by ballot or *viva voce*; should assemble at this place or that place; should be divided into districts or all meet at one place; should all vote for all the Representatives or all in a district vote for a number allotted to the district—these and many other points would depend on the Legislatures and might materially affect the appointments.

MADISON'S REAL MEANING.

We see here that Mr. Madison speaks of the time, place, and manner of holding elections. He says "whether the electors should vote by ballot or *viva voce*," that means manner; "should assemble in this place or that place;" "should be divided into districts or all meet at one place." Here Mr. Madison refers to the place of voting: "Should all vote for all the Representatives, or all in a district vote for a member allotted to the district." I suppose Mr. Madison meant by this expression to submit the question as to whether members of Congress would be elected by districts or upon a general ticket. All these suggestions referred to place and manner of holding elections, but it does not mean that the Constitution authorizes Congress to appoint the officers of election to register the votes, count the ballots, and certify the results. Anything said by Mr. Madison about exercising controlling power meant controlling the time, place, and manner, as indicated and explained by him.

Mr. Madison then says, pages 401 and 402:

Whenever the State Legislatures had a favorite measure to carry they would take care so to mold their regulations as to favor the candidates they wished to succeed. Besides, the inequality of the representation in the Legislatures of particular States would produce a like inequality in their representation in the National Legislature, as it was presumable that the counties having the power in the former case would secure it to themselves in the latter. What danger could there be in giving a controlling power to the National Legislature? Of whom was it to consist? First, of a Senate to be chosen by the State Legislatures. If the latter, therefore, could be trusted, their representatives could not be dangerous. Secondly, of Representatives elected by the same people who elect the State Legislatures. Surely, then, if confidence is due to the latter it must be due to the former. It seemed as improper in principle, though it might be less inconvenient in practice, to give to the State Legislatures this great authority over the election of the representatives of the people in the General Legislature as it would be to give to the latter a like power over the election of their representatives in the State Legislature.

I have been careful to give every word which the advocates of the force bill quote from Mr. Madison, and I insist, even taken as fixed by them, there is nothing in these remarks to justify their assumption, and when we complete Mr. Madison's remarks by adding the words which Mr. LODGE and the other advocates of the bill always omit, there is no ground whatever for the position taken by these gentlemen. The words which explain the previous remarks of Mr. Madison are these. I continue, on page 402:

This was meant to give the National Legislature a power not only to alter the provisions of the States, but to make regulations in case the States should fail or refuse altogether.

The only other expressions uttered in the convention which are relied on by Mr. LODGE are sentences from Mr. King and Mr. Morris. They are found on page 402 Elliot's Debates, volume 5, and in Madison's Papers, volume 3, pages 1280 and 1281. They are as I will read:

Mr. KING. If this power be not given to the National Legislature, their right of judging of the returns of their members may be frustrated. No probability has been suggested of its being abused by them. Although this scheme of erecting the General Government on the authority of the State Legislatures has been fatal to the Federal establishment, it would seem as if many gentlemen still foster the dangerous idea.

Mr. Gouverneur Morris observed that the States might make false returns and then make no provisions for new elections.

Mr. LODGE and his associates quote these remarks of Mr. King and Mr. Morris, but they do not tell this House that they were made ten minutes after they, together with Mr. Madison and the entire convention, had agreed upon the clause which gave the general, original, and primary power of prescribing the time, place, and manner of holding elections to the States.

SECONDARY POWER OF CONGRESS.

That question was therefore settled and the subject of discussion was as to the propriety of striking out the latter part of the clause, which, if done, would have deprived Congress of the secondary and contingent power even in case the States should fail or refuse altogether to make any regulations by which elections could be held.

The great apprehension was that the States would fail to send representatives to Congress, and for that reason Mr. Madison and Mr. King and Mr. Morris wished to preserve this contingent and secondary power to Congress. That was the question before them. It was not, shall Congress have all the power? but it was that, having given the power to the States, shall we, in the event they refuse or fail to exercise it, give the power to Congress? That was the question, and to understand what is meant by the words used by them one must keep in mind the point upon which their arguments were directed, and with this in view there is nothing to justify any such conclusion as is contended for by the framers of this bill. There is no room for argument that they even meant that Congress could take the power of making regulations from the States, much less that they could take entire control of the elections.

It will be observed that Sherman of Connecticut and Pinckney and Rutledge of South Carolina all spoke in favor of leaving this question irrevocably with the States, and not allowing Congress to in any way alter regulations made by States, and Madison of Virginia, Morris of Pennsylvania, and Gorham and King of Massachusetts were the only ones who spoke against them, a bare majority of one, and yet Mr. LODGE informs us that—

The motion was lost, apparently without a division, and, if we may judge from Mr. Madison's notes, had no serious support in the convention.

Mr. LODGE does not mention Roger Sherman's support of the motion made by Pinckney and Rutledge, and unfortunately Mr. Madison fails to give the speeches of any one of these gentlemen, although he gives his own very fully. He says, however (page 402):

Mr. SHERMAN did not know but it might be best to retain the clause, though he had himself sufficient confidence in the State Legislatures.

ELECTION CLAUSE FINALLY AGREED UPON.

Mr. Madison then continues to recite the proceedings of the convention. I read from page 402:

The motion of Mr. Pickney and Mr. Rutledge did not prevail.

The word "respectively" was inserted after the word "State."

On the motion of Mr. Read, the word "their" was struck out, and "regulations in such cases," inserted in place of "provisions concerning them," the clause then reading, "but regulations in each of the foregoing cases may at any time be made or altered by the Legislature of the United States." This was meant to give the National Legislature a power not only to alter the provisions of the States, but to make regulations in case the States should fail or refuse altogether.

Article VI, section 1, as thus amended was agreed to *nem. con.*

The clause, as adopted, was then in these words:

ARTICLE VI.

SECTION 1. The times and places and manner of holding the elections of the members of each House shall be prescribed by the Legislature of each State, respectively, but regulations in each of the foregoing cases may at any time be made or altered by the Legislature of the United States.

On pages 535 and 536 we see that, on September 10, the Constitution was referred to a "committee for revising the style and arrangement of the articles."

On September 12 Mr. Johnson, from the committee on style, made his report.

The clause referring to elections was changed so as to read:

SEC. 4. The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may, at any time, by law, make or alter such regulations.

On September 14 I find this entry. I read from page 542:

Article I, section 4, "except as to the places of choosing Senators" was added, *nem. con.*, to the end of the first clause, in order to exempt the seats of government in the States from the power of Congress.

This completed the article as it now stands in the Constitution. On September 16, Mr. Elbridge Gerry, of Massachusetts, announced, page 553, that he would withhold his name from the Constitution, giving as one of his reasons—

The power of Congress over the places of election.

For half a century Mr. Elbridge Gerry possessed in an eminent degree the confidence, esteem, and admiration of the American people. He was a graduate of Harvard, member of both the Colonial and Continental Congresses, member of the constitutional convention of 1787, and after this was twice elected to the United States Congress as a Federalist; was also elected governor of Massachusetts and Vice-President of the United States.

Mr. Gerry feared to give Congress even the power to fix the places of election.

What would that statesman have thought had he been told that a century from that time a member of Congress from Massachusetts would insist upon Congress taking the entire control from the States?

On September 13, Dr. Johnson reported the following, together with another resolution to be substituted for articles 22 and 23. I read from page 541:

Resolved, That the preceding Constitution be laid before the United States in Congress assembled; and that it is the opinion of this convention that it should afterwards be submitted to a convention of delegates chosen in each State by the people thereof, under the recommendation of its Legislature, for their assent and ratification; and that each convention assenting to and ratifying the same should give notice thereof to the United States in Congress assembled.

The Journal of Congress, September 28, 1787, volume 4, page 781, informs us that these resolutions were adopted by the convention on September 17, immediately after the signing of the Constitution, which instrument was reported to Congress. Conventions were held in the several States, and I have before me the proceedings of the conventions held in Massachusetts, Pennsylvania, New Hampshire, New York, North Carolina, South Carolina, Virginia, and Rhode Island, and I find in conventions of these eight States the great objection to the Constitution was this clause which allowed Congress in certain events to make or alter, etc., and the Constitution was only ratified upon assurance being given that this authority would not be exercised.

I will now call the attention of the House to the language used in the debates on this clause in the conventions of the States I have mentioned, and will also invite attention to the demands made by these States that this clause be stricken from the Constitution.

MASSACHUSETTS STATE CONVENTION.

First, we will examine Massachusetts. I would like to review the various speeches of the able men who composed that body, but I shall be compelled to content myself with calling attention to the report of the committee.

I read from page 176, Elliot's Debates, volume 1:

The convention having impartially discussed and fully considered the Constitution for the United States of America, * * *

Do, in the name and in behalf of the people of the Commonwealth of Massachusetts, assent to and ratify the said Constitution for the United States of America.

And, as it is the opinion of this convention that certain amendments and alterations in the said Constitution would remove the fears and quiet the apprehensions of many of the good people of this Commonwealth, and more effectually guard against an undue administration of the Federal Government, the convention do therefore recommend that the following alterations and provisions be introduced into the said Constitution:

That Congress do not exercise the powers vested in them by the fourth section of the first article but in cases when a State shall neglect or refuse to make the regulations therein mentioned or shall make regulations subversive of the rights of the people to a free and equal representation in Congress, agreeably to the Constitution.

And finally, as an admonition which it seems incredible that any one would neglect, the people in the convention enjoined upon their Representatives in Congress to at all times exert all their influence and use all reasonable and legal methods to obtain said alteration in the Constitution.

The language used by this great body of men was as follows (I read from page 178):

And the convention do, in the name and in behalf of the people of this Commonwealth, enjoin it upon their Representatives in Congress, at all times, until the alterations and provisions aforesaid have been considered agreeably to the fifth article of the said Constitution, to exert all their influence and use all reasonable and legal methods to obtain a ratification of the said alterations and provisions in such manner as is provided in the said article.

Notwithstanding this admonition and notwithstanding the fact that prominent among those who invoked this admonition were Hon. George Cabot, of Beverly, and Hon. Francis Cabot, of Essex, those distinguished patriots and lovers of the principles of liberty are now looking from another world and seeing their own blood not only disobeying their command, but foremost among those who seek to carry out measures referring thereto which violate the principles loved and fought for by these people, to a degree and extent far exceeding any apprehension they entertained.

To further show the fear the people of Massachusetts had with regard to even giving a little power to the Federal Government, upon the vote for ratification 168 voted against it and only 187 for ratification, and in the cultivated county of Worcester the vote was only 7 for and 43 against the Constitution.

NEW YORK STATE CONVENTION.

The New York State convention convened at Poughkeepsie on June 17, 1788, and George Clinton was elected president. Mr. John Jay, afterwards Chief-Justice of the United States, was a Federalist, and, like Alexander Hamilton, advocated a strong government.

In his speech in the New York convention, June 23, 1788, he said (I read from page 252):

The Hon. Mr. JAY. Sir, it seems to be on all sides agreed that a strong, energetic Federal Government is necessary for the United States. It has given me pleasure to hear such declarations come from all parts of the house.

If gentlemen are of this opinion, they give us to understand that such a government is the favorite object of their desire; and also that it can be instituted; that, indeed, it is both necessary and practicable.

Notwithstanding this, Mr. Jay expressed views quite contrary to those enumerated here by the advocates of this bill regarding the scope and design of the constitutional provision.

On June 25 Mr. Samuel Jones, a member of the committee on rules, said (I read from page 289):

He did not think it right that Congress should have the power of prescribing or altering the time, place, and manner of holding elections.

He apprehended that the clause might be so construed as to deprive the States of an essential right, which, in the true design of the Constitution, was to be reserved to them.

He therefore wished the clause might be explained, and proposed for the purpose the following amendment:

"*Resolved*, As the opinion of this committee that nothing in the Constitution now under consideration shall be construed to authorize the Congress to make or alter any regulations in any State respecting the times, places, or manner of holding elections for Senators or Representatives, unless the Legislature of such State shall neglect or refuse to make laws or regulations for the purpose, or from any circumstance be incapable of making the same, and then only until the Legislature of such State shall make provision in the premises."

CHIEF-JUSTICE JAY DEFINES POWERS OF CONGRESS.

Mr. Jay replied to these remarks. I read from pages 289 and 290:

The Hon. Mr. Jay said that, as far as he understood the ideas of the gentleman, he seemed to have doubts with respect to this paragraph and feared it might be misconstrued and abused. He said that every Government was imperfect unless it had a power of preserving itself. Suppose that by design or accident the States should neglect to appoint Representatives; certainly there should be some constitutional remedy for this evil. The obvious meaning of the paragraph was that if this neglect should take place Congress should have power, by law, to support the Government and prevent the dissolution of the Union. He believed this was the design of the Federal convention.

Hon. Richard Morris, Governor Clinton, and Mr. Jay continued the argument, but not one word was suggested indicating the possibility of such a constitutional interpretation as is insisted upon by the advocates of this bill.

Mr. Smith then proposed that the Constitution should provide that each State should be divided into districts.

Mr. Duane replied, expounding some good Democratic principles. I read from page 291:

If the proposed mode of election be the best, the Legislature of this State will undoubtedly adopt it. * * * Sir, how do we know the proposal will be agreeable to the other States? Is every State to be compelled to adopt our ideas or all subjects? If the gentleman will reflect, I believe he will be doubtful of the propriety of these things. Will it not seem extraordinary that any one State should presume to dictate to the Union? As the Constitution stands it will be in the power of each State to regulate this important point.

While the Legislatures do their duty, the exercise of their discretion is sufficiently secured. Sir, this measure would carry with it a presumption which I should be sorry to see in the acts of this State. It is laying down as a principle that whatever may suit our interest or fancy should be imposed upon our sister States. This does not seem to correspond with that moderation which I hope to see in all the proceedings of this convention.

On July 11, 1788 (I read from pages 355 and 356), Mr. Jay moved the following resolutions:

Resolved, as the opinion of the committee, That the Constitution under consideration ought to be ratified by this convention.

Resolved further, as the opinion of the committee, That such parts of the said Constitution as may be thought doubtful ought to be explained, and that whatever amendments may be deemed useful or expedient ought to be recommended.

Mr. Jay was supported by Mr. Chancellor Livingston and Mr. Chief-Justice Morris, and opposed by Mr. Melancthon Smith. The debates on this motion continued till Tuesday, the 15th of July, when Mr. Smith moved, as an amendment, to add to the first resolution proposed by Mr. Jay, so that the same, when amended, should read as follows:

"*Resolved, as the opinion of this committee*, That the Constitution under consideration ought to be ratified by this convention, upon condition, nevertheless, that until a convention shall be called and convened for proposing amendments to the said Constitution * * * the Congress will not make or alter any regulation in this State respecting the time, places, and manner of holding elections for Senators or Representatives, unless the Legislature of this State should neglect or refuse to make laws or regulations for the purpose, or from any circumstances be incapable of making the same; and that in those cases such power will only be exercised until the Legislature of this State shall make provision in the premises."

I now read from pages 357 and 358:

On July 23 Mr. Jones moved that the words "on condition" in the resolution should be obliterated and the words "in full confidence" substituted, which was carried.

The vote was 31 to 29, and on July 26 the Constitution was thus conditionally ratified by a vote of 30 to 27.

After ratifying the Constitution the convention adopted a resolution, which I will read from volume 11, part 2, page 321, Twenty-seventh Congress, April, 1842:

And the convention do, in the name and on behalf of the people of the State of New York, enjoin it upon their Representatives in Congress to exert all their influence and use all reasonable means to obtain a ratification of the following amendments to the said Constitution, in the manner prescribed therein.

And among the amendments the representatives from New York were enjoined to secure was the following:

That the Congress shall not make or alter any regulation in any State respecting the times, places, and manner of holding elections for Senators or Representatives unless the Legislature of such State shall neglect or refuse to make laws or regulations for the purpose or from any circumstance be incapable of making the same; and then only until the Legislature of such State shall make provision in the premises.

NORTH CAROLINA CONVENTION.

In North Carolina there was a stormy time, very largely due to the fear that improper use would be made of this permissive and conditional power given to Congress with reference to the time and manner of electing Senators and Representatives.

The convention met July 21, 1788, and elected Samuel Johnson its president after much discussion and debate. I read from Debates in Convention in North Carolina, page 210. It was finally—

Resolved, That a declaration of rights * * * ought to be laid before Congress, and the convention of the States that shall or may be called for the purpose of amending the said Constitution, for their consideration, previous to the ratification of the Constitution aforesaid on the part of the State of North Carolina.

They included proposed amendments to the Constitution, and prominent among these was the following, which I will read from page 214:

17. That Congress shall not alter, modify, or interfere in the times, places, or manner of holding elections for Senators and Representatives, or either of them, except when the Legislature of any State shall neglect, refuse, or be disabled, by invasion or rebellion, to prescribe the same.

On August 2 (I read from page 216)—

Mr. IREDELL moved that the report be amended to read:

"That this convention having fully deliberated on the Constitution * * * they do therefore, on behalf of the State of North Carolina and the good people thereof, and by virtue of the authority to them delegated, ratify the said Constitution on the part of this State; and they do at the same time recommend that as early as possible the following amendments to the said Constitution may be proposed for the consideration and adoption of the several States in the Union, in one of the modes prescribed by the fifth article thereof."

But the feeling against Federal encroachments was so strong that the vote really amounted to a rejection of the Constitution, 184 being against it and 84 for it.

It is true that after the people of North Carolina had read the proceedings of conventions of other States, and had by this and other means become convinced that the Federal Government would not attempt to regulate the manner of conducting elections in States, on November 21, 1789, they, in convention assembled, ratified the Constitution.

PENNSYLVANIA CONVENTION.

The Pennsylvania convention met November 21, 1787, and elected Frederick Augustus Muhlenberg president.

Mr. Wilson and Mr. McKean discussed the clause of the proposed constitution which referred to elections.

They were both earnest advocates of the establishment of a Federal Government. On page 296 Mr. Wilson says:

The times, places, and manner of holding elections for Representatives may be altered by Congress. This power, sir, has been shown to be necessary, not only on some particular occasions, but even to the very existence of the Federal Government. I have heard some very improbable suspicions indeed suggested with regard to the manner in which it will be exercised. * * * When the power of regulating the time, place, or manner of holding elections is exercised by the Congress it will be to correct the improper regulations of a particular State.

On pages 313 and 316 Mr. McKean enumerates objections which had been urged against the Constitution, and particularly dwells upon apprehensions which had been expressed—

That the Congress may by law deprive the electors of a fair choice of their representatives by fixing improper times, places, and modes of election.

Mr. McKean said (page 316):

Annual Congresses are expressly secured; they have only a power given to them to take care that the elections shall be at convenient and suitable times and places and conducted in a proper manner; and I can not discover why we may not intrust those particulars to the representatives of the United States with as much safety as to those of the individual States.

In some States the electors vote *viva voce*, in others by ballot; they ought to be uniform, and the elections held on the same day throughout the United States, to prevent corruption or undue influence.

The Pennsylvania convention ratified the Constitution, but coupled with that action a recommendation that the instrument be amended by adding these words:

That Congress shall not have power to make or alter regulations concerning the time, place, and manner of electing Senators and Representatives, except in case of neglect or refusal by the State to make regulations for the purpose; and then only for such time as such neglect or refusal shall continue.

NEW HAMPSHIRE CONVENTION.

New Hampshire ratified the Constitution on June 20, 1788, but recommended that the following alterations be introduced in said Constitution (I read from Elliott's Debates, volume 4, page 214):

That Congress do not exercise the powers vested in them by the fourth section of the first article but in cases where a State shall neglect or refuse to make the regulations therein mentioned or shall make regulations subversive of the rights of the people to a free and equal representation in Congress. Nor shall Congress in any case make regulations contrary to a free and equal representation.

SOUTH CAROLINA CONVENTION.

South Carolina was probably more emphatic than other States in expressing her views as to the importance of reserving entirely to the States the right of prescribing the time, place, and manner of holding elections of members of Congress.

In ratifying the Constitution on May 23, 1788, that State insisted upon submitting the following recommendation, which I read from Elliott's Debates, volume 4, page 213:

And whereas it is essential to the preservation of the rights reserved to the several States and the freedom of the people under the operations of a General Government that the right of prescribing the manner, time, and places of holding the elections to the Federal Legislature should be forever inseparably annexed to the sovereignty of the several States, this convention doth declare that the same ought to remain to all posterity a perpetual and fundamental right in the local, exclusive of the interference of the General, Government, except in cases where the Legislatures of the States shall refuse or neglect to perform and fulfill the same according to the tenor of the said Constitution.

The convention was so earnest with regard to this important subject that the last action before adjournment was the adoption of the resolution which I read from page 214:

Resolved, That it be a standing instruction to all such delegates as may hereafter be elected to represent this State in the General Government to exert their utmost abilities and influence to effect an alteration of the Constitution conformably to the aforegoing resolutions.

This resolution immediately precedes the signature of the distinguished president of the convention, Hon. Thomas Pinckney.

[Here the hammer fell.]

Tuesday, July 1, 1890.

Mr. WHEELER, of Alabama. Mr. Speaker, I desire to proceed.

The SPEAKER. The gentleman from Alabama is recognized.

Mr. WHEELER, of Alabama. Mr. Speaker, when my time expired on yesterday I was discussing the action of people in the conventions which ratified the Constitution. I will now continue.

THE VIRGINIA CONVENTION.

The Virginia convention met the 2d day of June, 1788, and Hon. Edmund Pendleton was elected president and Mr. Benjamin Harrison was appointed chairman of the committee on credentials.

I can not pretend to give more than a cursory glance at the proceedings, but it is quite clearly shown that the convention did not favor those features which gave any power to Congress to in any event make regulations as to the election of its members.

On June 14 (I read from page 276, Elliott's Debates, volume 2):

Mr. Monroe wished that the honorable gentleman, who had been in the Federal convention, would give information respecting the clause concerning elections. He wished to know why Congress had an ultimate control over the time, place, and manner of elections of Representatives, and the time and manner of that of Senators, and also why there was an exception as to the place of electing Senators.

Mr. MADISON. Mr. Chairman, the reason of the exception was that if Congress could fix the place of choosing the Senators it might compel the State Legislatures to elect them in a different place from that of their usual sessions, which would produce some inconvenience and was not necessary for the object of regulating the elections. But it was necessary to give the General Government a control over the time and manner of choosing the Senators to prevent its own dissolution.

With respect to the other point, it was thought that the regulation of time, place, and manner of electing the Representatives should be uniform throughout the continent; some States might regulate the elections on the principles of equality and others might regulate them otherwise.

This diversity would be obviously unjust. Elections are regulated now unequally in some States, particularly South Carolina, with respect to Charleston, which is represented by thirty members. * * * It was found impossible to fix the time, place, and manner of the election of Representatives in the Constitution. It was found necessary to leave the regulation of these, in the first place, to the State governments as being best acquainted with the situation of the people, subject to the control of the General Government, in order to enable it to produce uniformity and prevent its own dissolution. And considering the State governments and General Government as distinct bodies, acting in different and independent capacities for the people, it was thought the particular regulations should be submitted to the former and the general regulations to the latter. Were they exclusively under the control of the State governments, the General Government might easily be dissolved. But, if they be regulated properly by the State Legislatures, the Congressional control will very properly never be exercised.

I will dwell at some length upon the remarks of Mr. Nicholas, who strongly advocated the retention of the clause which gave Congress the secondary and contingent authority to make or alter regulations regarding the election of members of Congress.

It will be seen that his construction is diametrically opposed to that insisted upon by the gentleman from Massachusetts [Mr. LODGE]. I read from the proceedings of June 4, on pages 38 and 39:

MR. NICHOLAS DEFINES THE SCOPE OF THE CLAUSE.

There is another objection which has been echoed from one end of the continent to the other, that Congress may alter the time, place, and manner of holding elections; that they may direct the place of elections to be where it will be impossible for those who have a right to vote to attend; for instance, that they may order the freeholders of Albemarle to vote in the county of Princess Anne, or *vice versa*, or regulate elections otherwise in such a manner as totally to defeat their purpose and lay them entirely under the influence of Congress.

I flatter myself that from an attentive consideration of this power it will clearly appear that it was essentially necessary to give it to Congress, as without it there could have been no security for the General Government against the State Legislatures.

It will be observed that Mr. Nicholas urges the retention of the clause upon the same grounds as Mr. Madison, that it might be necessary in case the States should neglect to make the needed regulations, or, to use Mr. Madison's words, "fail or refuse altogether." Mr. Nicholas then proceeds:

What, Mr. Chairman, is the danger apprehended in this case? If I understand it right, it must be that Congress might cause the elections to be held in the most inconvenient places and at so inconvenient a time and in such a manner as to give them the most undue influence over the choice; nay, even to prevent the elections from being held at all in order to perpetuate themselves. But what would be the consequence of this measure?

It would be this, sir, that Congress would cease to exist; it would destroy the Congress itself; it would absolutely be an act of suicide; and, therefore, it can never be expected.

This alteration, so much apprehended, must be made by law; that is, with the concurrence of both branches of the Legislature.

Will the House of Representatives, the members of which are chosen only for two years and who depend on the people for their re-election, agree to such an alteration?

It is unreasonable to suppose it.

Here we see this Virginian a century ago arguing with his fellow-delegates in convention assembled and insisting that Congress would never even alter the time for holding elections for members of Congress. He then continues, page 39:

But let us admit for a moment that they will. What would be the consequence of passing such a law?

It would be, sir, that after the expiration of the two years, at the next election, they would either choose such men as would alter the law or they would resist the Government.

An enlightened people will never suffer what was established for their security to be perverted to an act of tyranny.

Mr. LODGE and other advocates of this measure tell us and the country that the language used and the intention of the Constitution as explained by those who ratified and framed it show that Congress has power to pass this bill which divests the States of all power regarding the election of members of this body, and yet here is one of the men who ratified it who says that the assumption of much less power by Congress than is contemplated by this bill would be an act of tyranny which would be resisted by an enlightened people. God forbid that an evil should be inflicted upon us of so fearful a character as to be denounced by our forefathers as justifying resistance. Our people are law-abiding and will never resist the decrees of Congress, but with the ballots of freemen they will drive from power these would-be destroyers of the principles of popular government.

Mr. Nicholas then says:

It may be said, perhaps, that resistance would then become vain; Congress are vested with the power of raising an army; to which I say, that if ever Congress shall have an army sufficient for their purpose, and disposed to execute their unlawful commands, before they would act under this disguise they would pull off the mask and declare themselves absolute.

I ask, Mr. Chairman, is it a novelty in our Government? Has not our State Legislature the power of fixing the time, places, and manner of holding elections? The possible abuse here complained of never can happen as long as the people of the United States are virtuous.

As long as they continue to have sentiments of freedom and independence, should the Congress be wicked enough to harbor so absurd an idea as this objection supposes, the people will defeat their attempt by choosing other Representatives who will alter the law.

HE CALLS THE ACTION NOW PROPOSED UNLAWFUL AND WICKED.

I call especial attention to the fact that this speaker—one of those who ratified the Constitution—refers to such action as is here proposed as unlawful, and he speaks of an attempt on the part of Congress to execute such a measure as an unlawful attempt, and he contends that

Congress would not be wicked enough to harbor so absurd an idea. Mr. Nicholas continues:

If the State Legislature, by accident, design, or any other cause, would not appoint a place for holding elections, then there might be no election till the time was past for which they were to have been chosen; and as this would eventually put an end to the Union, it ought to be guarded against, and it could only be guarded against by giving this discretionary power to the Congress, of altering the time, place, and manner of holding the elections.

This language clearly shows that those who framed and ratified the Constitution never contemplated the exercise of any power whatever on the part of Congress except in the event that the power was not exercised by the States, and this is, if possible, more fully illustrated by the further remarks of Mr. Nicholas which I will read:

It is absurd to suppose that Congress will exert this power or change the time, place, and manner established by the States, if the States will regulate them properly or so as not to defeat the purpose of the Union.

It is urged that the State Legislatures ought to be fully and exclusively possessed of this power.

Were this the case it might certainly defeat the Government. As the powers vested by this plan in Congress are taken from the State Legislatures, they would be prompted to throw every obstacle in the way of the General Government. It was, then, necessary that Congress should have this power.

Another strong argument for the necessity of this power is that, if it was left solely to the States, there might have been as many times of choosing as there are States.

It will be noticed that Mr. Nicholas says it is absurd to suppose that Congress will exert this power if the States will regulate elections so as not to defeat the purposes of the Union, and that it was necessary in that event that Congress should have the power of regulating the time, place, and manner, as the States might certainly defeat the Government, because the power vested in Congress was taken from the States, and this fact Mr. Nicholas contended would cause the States to become jealous of the Federal Government.

BENJAMIN HARRISON, IN 1788, FOR LIBERTY AND THE PEOPLE.

It may not be amiss at this time to allude to the emphatic manner with which Mr. Benjamin Harrison insisted that this and other amendments should be made to the Constitution as a condition-precedent to its ratification by Virginia. I read from the proceedings of June 25, 1788, volume 2, pages 457 and 458.

Mr. Benjamin Harrison said:

New Hampshire does not approve of the Constitution as it stands. They have refused it so. In Massachusetts we are told that there was a decided majority in their convention who opposed the Constitution as it stood, and were in favor of previous amendments, but were afterwards by the address and artifice of the Federalists prevailed upon to ratify it.

Rhode Island is not worthy the attention of this House. She is of no weight or importance to influence any general subject of consequence. New York, we have every reason to believe, will reject the Constitution, unless amendments be obtained. Hence it clearly appears that there are three States which wish for amendments.

In Maryland there is a considerable number who wish amendments to be had.

Virginia is divided; let this question be determined which way it will, one-half of the people at least wish amendments to be obtained.

North Carolina is decidedly against it.

South Carolina has proposed amendments.

Under this representation it appears that there are seven States who wish to get amendments.

It will be observed that afterevents showed that nine of the States demanded amendments.

Mr. Harrison continued in these words:

Can it be doubted, if these seven States insert amendments as the condition of their accession, that they would not be agreed to? * * *

I am not prejudiced against New England or any part. They are held up to us as a people from whom protection will come. Will any protection come from thence for many years?

When we were invaded, did any gentleman from the Northern States come to relieve us? No, sir; we were left to be buffeted. General Washington, in the greatness of his soul, came with the French auxiliaries and relieved us opportunely.

Were it not for this we should have been ruined. I call heaven to witness that I am a friend to the Union, but I conceive the measure of adoption to be unwarrantable, precipitate, and dangerously impolitic. Should we rush into sudden perdition I should resist with the fortitude of a man. As to the amendments proposed by gentlemen, I do not object to them. They are inherently good, but they are put in the wrong place, subsequent instead of previous.

This speech shows the intensity of the convictions entertained by this illustrious ancestor of President Harrison. He insisted that the provision of the Constitution we are discussing should be struck out previous to the ratification of that instrument, or, as he expressed it, this should be demanded previous to ratification, as a condition precedent and not subsequent. Can there be any doubt what that grand old man's views would be on the Lodge bill? I wish he were here to speak in this Hall. His denunciations would shake this building from its topmost turret to its undermost foundation.

VIRGINIA AGAINST CONGRESSIONAL INTERFERENCE.

The Constitution was finally ratified on Thursday, June 26, 1788, as shown by the Proceedings, page 483, but coupled with this ratification were certain recommendations, including the following, which I read from page 486:

That Congress shall not alter, modify, or interfere in the times, places, or manner of holding election for Senators and Representatives, or either of them, except when the Legislature of any State shall neglect, refuse, or be disabled, by invasion or rebellion, to prescribe the same.

And in the closing moments of the convention they enjoined their Representatives in Congress to secure the alterations they recommended. This invocation of the convention is in these words (I read from page 486):

And the convention do, in the name and behalf of the people of this Commonwealth, enjoin it upon their Representatives in Congress to exert all their influence and use all reasonable and legal methods to obtain a ratification of the foregoing alterations and provisions in the manner provided by the fifth article of the said Constitution and in all Congressional laws to be passed in the mean time, to conform to the spirit of these amendments as far as the said Constitution will admit.

RHODE ISLAND CONVENTION.

Rhode Island, after refusing to send delegates to the constitutional convention and after refusing by an almost unanimous vote to entertain the question of ratification, finally reconsidered, and on the 29th of May, 1790, that State affirmatively settled the question of ratification, to which they added the following (I read from page 225, volume 4, Elliot's Debates):

And the convention do, in the name and behalf of the people of the State of Rhode Island and Providence Plantations, enjoin it upon their Senators and Representative, or Representatives, which may be elected to represent this State in Congress, to exert all their influence and use all reasonable means to obtain a ratification of the following amendments:

That Congress shall not alter, modify, or interfere in the times, places, or manner of holding elections for Senators and Representatives, or either of them, except when the Legislature of any State shall neglect, refuse, or be disabled, by invasion or rebellion, to prescribe the same, or in case where the provision made by the State is so imperfect as that no consequent election is had, and then only until the Legislature of such State shall make provision in the premises.

THE MARYLAND CONVENTION.

It is asserted that the Maryland convention which ratified the Constitution also recommended that that part of the clause (Article I, section 4) be stricken out which gave secondary and contingent power to Congress to make regulations as to the time, place, and manner of holding elections for members of Congress.

I see that on August 21, 1789 (page 799, Annals of the First Congress), Mr. Smith stated that eight States had expressed that desire, and he enumerated New Hampshire, Massachusetts, New York, Pennsylvania, Maryland, Virginia, North Carolina, and South Carolina.

Mr. Smith stated that the convention of Maryland appointed a committee to recommend amendments, and among them was the one now under consideration, and he had certainly seen the resolutions.

At that time Rhode Island had not ratified the Constitution and was not represented in Congress; but I have already shown that when such action was taken by that State the following year, May 29, 1790, she emphatically demanded that this clause giving contingent power to regulate time, place, and manner of elections should be stricken from the Constitution.

We therefore see that nine States took that action, and it is worthy of note that, so far as we can learn, all of these nine State conventions were unanimous in this demand. The only States which took no action on this subject were Delaware, Connecticut, New Jersey, and Georgia.

CONSTRUCTION OF CLAUSE IN FIRST CONGRESS.

In the First Congress, first session, August 18, 1789 (page 790, Annals of Congress), Mr. Thomas Tudor Tucker, of South Carolina, proposed to amend the Constitution by striking out the words:

But the Congress may at any time, by law, make or alter such regulations, except as to the places of choosing Senators.

And on August 21, page 797, Mr. Burke, a distinguished judge, offered the following:

Congress shall not alter, modify, or interfere in the times, places, or manner of holding elections of Senators or Representatives, except when any State shall refuse or neglect, or be unable, by invasion or rebellion, to make such election.

Mr. Livermore, page 798, said:

This was an important amendment, and one that had caused more debate in the convention of New Hampshire than any other whatever.

The Hon. Elbridge Gerry, of Massachusetts, afterwards Vice-President of the United States, said:

If the United States are desirous of controlling the elections of the people, they will in the first place, by virtue of the powers given them by the fourth section of the first article, abolish the mode of balloting; then every person must publicly announce his vote, and it would then frequently happen that he would be obliged to vote for a man or "the friend of a man" to whom he was under obligations. If the Government grows desirous of being arbitrary, elections will be ordered at remote places where their friends alone will attend.

Gentlemen will tell me that these things are not to be apprehended; but if they say that the Government has the power of doing them they have no right to say the Government will never exercise such powers, because it is presumable that they will administer the Constitution at one time or another with all its powers; and whenever that time arrives farewell to the rights of the people, even to elect their own representatives.

If Vice-President Gerry felt and said—

farewell to the rights of the people, even to elect their own representatives—

if Congress ever became so arbitrary as to fix the place of election, and to so far regulate the manner as to say voting should or should not be done by ballot, I beg to ask with what horror Mr. Gerry would have contemplated this bill, written by John Davenport and fathered by HENRY CABOT LODGE, of Massachusetts.

I now read from page 799:

Mr. Stone called upon gentlemen to show what confederated government had the power of determining on the mode of their own election. He apprehended there were none; for the representatives of States were chosen by the States in the manner they pleased.

He was not afraid that the General Government would abuse this power and as little afraid that the States would; but he thought it was in the order of things that the power should vest in the States, respectively, because they can vary their regulations to accommodate the people in a more convenient manner than can be done in any general law whatever. He thought the amendment was generally expected, and, therefore, on the principles of the majority, ought to be adopted.

ELECTION CLAUSE IN FOURTEENTH CONGRESS.

I will now read from the Annals of Congress, December 17, 1816, page 301, Fourteenth Congress, second session:

The proposition made by Mr. Pickens to recommend to the States an amendment to the Constitution, to establish an uniformity of the mode of election (by districts) in all the States of Representatives to Congress and electors of President and Vice-President, was read.

In discussing the proposition Mr. Pickens said:

Another objection I have heard to one branch of this amendment is that Congress already possesses the power of regulating the elections of Representatives. It is a sufficient answer to say that Congress never has yet ventured to touch the subject, so extremely delicate is it viewed.

On page 694, same volume, I find that on January 21, 1817, Mr. Pickens laid before the House proceedings of the Legislature of North Carolina, which it was stated were the same as those presented by the Legislature of Massachusetts, the purpose being to secure an amendment to the Constitution requiring members of Congress to be elected by districts.

BENTON AND M'DUFFIE VS. CONGRESSIONAL INTERFERENCE.

On page 32, Annals of Congress, Eighteenth Congress, first session, I find that on December 11, 1823, Senator Thomas H. Benton introduced a resolution to amend the Constitution. The purpose of the amendment was:

First. To divide the United States into electoral districts.

Second. To discontinue the use of intermediate electors.

Third. To commit the election to a direct vote of the people. That is to say, the people in each Congressional or electoral district should vote directly by name for a candidate for President and Vice-President, and the candidate for each office receiving the greatest number of votes in any district should be entitled to the one vote of that district.

It will be seen that the material difference in this plan consists in the fact that the vote would be by district instead of by State, and the names of the candidates for President and Vice-President, instead of the name of an elector, would be on the ballot.

Senator Benton spoke in advocacy of the measure on February 3, 1824.

In this speech, in discussing the meaning of the word "manner" as used in the Constitution, Mr. Benton says (page 171):

The word "manner" can imply nothing but form, as the mode of conducting the election, certifying the returns, etc.

On December 22, 1823, Hon. George McDuffie, a member of Congress from South Carolina, made reports recommending an amendment to the Constitution regarding Presidential and Congressional elections.

The plan contemplated the division of the country into districts, from each of which an elector and member of Congress should be elected. One of the reports was very elaborate, occupying the record from pages 850 to 866, and his speech on the resolution occupies the record from pages 1067 to 1082.

I read from McDuffie's report, Annals of Eighteenth Congress, pages 852 and 853:

It has been said that the times, places, and manner of electing the members of this House are now liable to be prescribed by the Legislatures of the several States, subject to the controling and superseding power of Congress.

* * * * * * * *

If it should happen to this, as it has happened to all other free countries, that the Administration of the Republic should fall into the hands of a faction of men who, having acquired power by corrupt combinations, would be disposed to retain it in opposition to the will of the people, the power in question would become exceedingly dangerous. * * * The committee therefore feel the deepest conviction that the power now vested in Congress of controlling the election of its own members is utterly inconsistent with every just conception of constitutional liberty, and ought no longer to exist.

In some of the prints the report reads "it has been seen," but in others and the latest prints it reads "it has been said," and it is thus quoted by Mr. Clifford, page 349, Twenty-seventh Congress.

Mr. McDuffie was a very distinguished man. He served for fourteen years in this House, was governor of South Carolina and an honored Senator from that State.

In 1842, in the Twenty-seventh Congress, a clause was inserted in the apportionment bill in these words, which I read from volume 11, part 2, page 348:

That in every case where a State is entitled to more than one Representative the number to which each State shall be entitled under this apportionment shall be elected by districts composed of contiguous territory equal in number to the number of Representatives to which said State may be entitled, no one district electing more than one Representative.

JUSTICE NATHAN CLIFFORD IN 1842.

Quite an animated discussion was provoked, many able men of that time contending that it was a gross infraction of the Constitution.

It would be profitable to review the entire discussion, but I must content myself with some reference to the remarks of Hon. Nathan Clifford, of Maine, afterwards for a period of twenty-three years a distinguished justice of the Supreme Court of the United States.

Justice Clifford commenced his speech as I will read from page 347:

I consider the proposition involved in the amendment now under consideration one of the most alarming in principle that has been brought forward since I have had a seat in this House, not only on account of the Federal encroachment immediately proposed, and which it is designed to carry into effect, but more especially on account of the danger to be apprehended from its influence as a precedent, if it should be adopted, for future outrage upon the sovereignty of the States. Perhaps in this instance the precedent is more to be dreaded than the act.

Mr. Clifford said this might be a small matter, but he warned Congress of the effect of any, even slight, departure from the true spirit of the Constitution and said:

If the decision which is now made should not hereafter be regarded as the settled exposition of the Constitution, at all events it may be drawn into precedent to influence the deliberations of our successors touching the power of Congress to regulate the time, place, and manner of holding elections for the choice of Representatives on this floor, even to the most unimportant detail of the system.

Mr. Clifford then urged Congress to take care and not allow expediency to induce action on questions of doubtful constitutionality, and continued:

It is obvious, if the doctrine is once asserted that Congress has the discretionary power to supersede the regulations of the States as a question of expediency, merely because they are not calculated to promote the party views of a majority for the time being, that one encroachment will follow another, until the local governments will be stripped of every vestige of authority over all branches of the subject.

Mr. Clifford said his objection to the law was not that he opposed the method of election it proposed, but he said:

The real ground of opposition to the proposition is, not because it asserts either the expediency or propriety of separate districts, or in the preference given to that mode of election over a general ticket, but because the power is claimed, for the first time in the history of the Government, to enforce a system upon the States by Federal command.

The odious character of the amendment consists in the startling power which it assumes, to give directions to the members of the State Legislatures as to the manner in which they shall discharge their high functions as representatives of the people.

Mr. Clifford repeated that he favored the plan provided for by the bill, but he discountenanced interference by Congress and such encroachments upon the sovereign rights of States, and he said:

The power vested in Congress by the Constitution was conferred as an extreme right, indispensably necessary as a self-preserving principle in the Government, in case of the inability or refusal on the part of the States to obey the injunction imposed upon themselves by the compact, to prescribe the time, place, and manner of holding elections; and as such is as much a power of legislation whenever the contingency shall happen to call for its exercise as any grant to be found in the instrument.

Mr. Clifford argued that Congress had no right to enact laws on this subject unless States were invaded by a foreign foe so as to be unable to provide for elections or they should refuse or fail to make such provision, and he continued:

But the framers of the Constitution never designed this extreme power for any such occasion as the present. Far from it; it was conferred for a different purpose; and it would be a perversion of the grant—a high-handed outrage—to call it into exercise in a time of profound peace and general repose, to override the laws of the States, which have been in existence from the foundation of the Government, and have been practiced upon through a period of fifty years, without excitement or complaint.

Mr. Clifford then argued that the fact alone that no change had been made for fifty years and no inconvenience had resulted was sufficient reason of itself to make the proposed action unadvisable and said (page 348):

In the view which I take of the question it is wholly unnecessary to inquire whether the right of supervision in the premises, if it exists in any case, is derived from the words "manner" or "place" in the article so frequently cited from the Constitution, as it is my purpose to prove that nothing can justify Congressional interposition in any way but an uncontrollable necessity, growing out of the actual refusal or positive inability of the States to act for themselves. Of course, that inquiry becomes immaterial, though I think it would not be difficult to demonstrate that the "manner of holding elections" has reference exclusively to the regulations at the polls, as by ballot, etc.

Mr. Clifford then illustrates the inexpediency and impropriety of the proposed law and says:

After mature deliberation upon this point, I am prepared to lay down this general proposition: That all power over the subject of time, place, and manner of holding elections is expressly vested in the States in the first instance; and that they are under the solemn obligations of duty, arising out of their own compact, to make all needful and suitable regulations to secure a full representation on this floor; and that it is not competent for Congress to interfere so long as the States shall continue, as they have heretofore done, to perform that duty.

And it is equally clear to my mind that in the possible contingency—which is not very likely to occur—of neglect or refusal of the States to perform this high duty, which they owe to the Constitution and to the country, Congress does possess the power, as a self-preserving principle of the compact of union, to supply all such needful regulations in the premises as may become necessary in consequence of the omission of the States to exercise their own rightful jurisdiction upon the subject.

Mr. Clifford then discusses the matter at great length, and reviews the proceedings of the constitutional convention of 1787 and the speeches in the State conventions which ratified the Constitution, and says, page 349:

I have examined this question with some care, and the result of that examination has led me to the following conclusions, which, it seems to me, are fully sustained by the language of the Constitution and by the history of the debates when it was ratified:

1. That the power in the States to prescribe the time, place, and manner of holding elections is exclusive, so long as they continue to perform the duty imposed upon them by the Constitution.

2. That, if the States neglect or refuse to make regulations, Congress has full

power over the subject, as a self-preserving principle in the Government, and may rightfully exercise it, so far as it may be necessary to supply the omission of the States.

3. That the power to supply such omissions confers a right to legislate, and not of enforcing legislation, on the part of the State.

4. That any attempt at jurisdiction over the subject, till the States shall have omitted or become unable to act for themselves, is a positive violation of the true intent and meaning of the Federal compact and can not have any binding effect upon the people or the States.

The above remarks of Justice Clifford ought to profoundly impress every member of Congress and every citizen of the United States.

Mr. Clifford refers to the report made by Mr. McDuffie in the Eighteenth Congress and quotes a paragraph of this, a portion of which I have read from pages 852 and 853, Annals of Eighteenth Congress.

I will now call attention to an extract from Mr. Kennedy's speech of April 27, 1842, which I read from the Congressional Globe, page 317:

But it is contended that this enormous districting power is contained in and covered up by the word "manner." Now, I beg gentlemen to mark the connection and see to what this word "manner" refers. The "manner" of what? Of districting the States and prescribing what number of citizens shall vote in one district and what portion in another? No, sir. It is the "manner" of holding the elections. What is holding the elections? It is prescribing the mode in which the voter shall exercise the right of suffrage, whether he shall vote by ticket or *viva voce*, whether the ticket shall be put into a hat or into a box.

SIEBOLD CASE IN SUPREME COURT.

The Siebold case is invoked by Mr. LODGE to sustain him in this usurpation of power which is sought to be vested in Federal officers.

The decision was rendered by Justice Bradley and concurred in by a bare majority of the court and was dissented from by those able jurists, Justice Field and Justice Clifford, and yet there is nothing in the opinion of the court as rendered by Justice Bradley to justify the assertion that the court decides that the Constitution authorizes Congress to pass a law to take control of elections of members of Congress.

The Siebold case was a decision as to the constitutionality of the acts of Congress of May 31, 1870, and February 28, 1871, codified in certain sections of Title XXIV of the Revised Statutes, which provide (see sections 2011 and 2012) that upon appliance duly made the judge of the United States circuit court shall appoint two supervisors of election for every election district in cities of upwards of 20,000 inhabitants at any election at which a Representative or Delegate in Congress is to be voted for, in order that the registration and election may be guarded and scrutinized by them.

Sections 2016, 2017, 2021, and 2022 provide for the appointment of deputy marshals and authorize the supervisors to scrutinize the registration and the conduct of the election, but do not pretend to give any further force or effect to their reports than to regard them as memoranda of evidence in case of a contest before Congress.

The head-note numbered 8 contains the gist of the opinion on that subject. It says:

In making regulations for the election of Representatives it is not necessary that Congress should assume entire and exclusive control thereof. By virtue of that clause of the Constitution which declares that "the times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the place of choosing Senators," Congress has a supervisory power over the subject, and may either make entirely new regulations or add to, alter, or modify the regulations made by the State.

It will be observed that it only refers to regulations and does not refer to control.

It is true the opinion says (page 382):

The counsel for the petitioners, however, do not deny that Congress may, if it chooses, assume the entire regulation of the election of Representatives.

Even suppose this to be correct, which I do not admit, can not the court see a difference between enacting a law to regulate an election and enacting a law to take possession of and control it?

It is only necessary to refer to our ordinary dictionaries to learn how this word "manner" is defined.

Worcester gives this definition:

The mode in which anything is done; method; habit; custom; fashion; form; way.

Webster's definition is:

Mode of action; way of performing or effecting anything; method; style; form; fashion.

Certainly there is no definition here to justify the assumption that power to regulate the manner of doing a thing includes power to do the thing.

JUSTICES FIELD'S AND CLIFFORD'S OPINIONS.

The opinions of Justice Field and Justice Clifford most emphatically negative any such assumption as is contended for by Mr. LODGE. I read from page 418 the dissenting opinion being applied to the Clarke as well as to the Siebold case:

The power vested in Congress is to alter the regulations prescribed by the Legislatures of the States, or to make new ones, as to the times, places, and manner of holding the elections. Those which relate to the times and places will seldom require any affirmative action beyond their designation. And regulations as to the manner of holding them can not extend beyond the designation of the mode in which the will of the voters shall be expressed and ascertained.

Is it not going beyond such designation to, as proposed by this bill, appoint the officers of election and take control of the subject-matter, to register the votes, receive and count the ballots, make the returns, and certify the results?

The opinion proceeds in these words:

The power does not authorize Congress to determine who shall participate in the election or what shall be the qualification of voters. These are matters not pertaining to or involved in the manner of holding the election, and their regulation rests exclusively with the States. And whatever regulations Congress may prescribe as to the manner of holding the election for Representatives must be so framed as to leave the election of State officers free; otherwise they can not be maintained.

Yet this bill provides for registrations of the voters, including a canvass from house to house, an absolute control of the election by officers appointed by Federal courts, and a certification of the results by these officers.

Justice Field and Justice Clifford also say (page 416) that the clause we are considering—

was designed simply to give to the General Government the means of its own preservation against a possible dissolution from the hostility of the States to the election of Representatives or from their neglect to provide suitable means for holding such elections. This is evident from the language of its advocates, some of them members of the convention, when the Constitution was presented to the country for adoption.

Here are two eminent judges of the Supreme Court denying with emphasis that Congress has any right to enact a law which only supervises election of Congressmen. What would these eminent men say of a law which not only supervises, but actually takes complete control of such elections? But Justice Field and Justice Clifford do not stop there in their expressions, but on page 414 they say:

In my judgment, and I say it without intending any disrespect to my associates, no such advance has ever before been made toward the conversion of our Federal system into a consolidated and centralized Government.

I can not think that those who framed and advocated, and the States which adopted the amendments, contemplated any such fundamental change in our theory of government as those decisions indicate.

ABHORRENT EFFECT OF THE LAW.

If the laws of 1870 and 1871 and the opinion of Justice Bradley sustaining their constitutionality were so abhorrent to these jurists as to impel them to assert that—

No such advance has ever before been made towards the conversion of our Federal system into a consolidated and centralized Government—

let me ask what will be the effect in that regard if the Lodge-Davenport bill which is now being discussed should be enacted into a law?

This bill directs the United States judge, a resident of one State, to appoint officers to take absolute control of the election in another State.

Such an election would not be an election "by the people" of a State. It would be an election conducted by a judge of another State through and by officers appointed by him.

In answer to our arguments that these officers would control the election of State officers who are in most States elected at the same time as members of Congress, we are told that the States may change the times of electing their State officials, and in that connection I will read a paragraph from Judge Bradley, in the Seibold case, page 393:

In what we have said it must be remembered that we are dealing only with the subject of elections of Representatives to Congress. If for its own convenience a State sees fit to elect State and county officers at the same time and in conjunction with the election of Representatives, Congress will not be thereby deprived of the right to make regulations in reference to the latter. We do not mean to say, however, that for any acts of the officers of elections, having exclusive reference to the election of State or county officers, they will be amenable to Federal jurisdiction; nor do we understand that the enactments of Congress now under consideration have any application to any such acts.

And in their anxiety to disclaim any indorsement of the principles contained in the law, the court says, page 393:

It must also be remembered that we are dealing with the question of power, not of the expediency of any regulations which Congress has made.

Justices Field and Clifford are emphatic upon this point and show that if on no other ground such interference would make the law unconstitutional. They say, pages 412, 413:

So far as the election of State officers and the registration of voters for their election are concerned, the Federal Government has confessedly no authority to interfere. And yet the supervision of and interference with the State regulations, sanctioned by the act of Congress, when Representatives to Congress are voted for, amount practically to a supervision of and an interference with the election of State officers, and constitute a plain encroachment upon the rights of the State.

CONCLUSIVE GROUND OF UNCONSTITUTIONALITY.

Admitting that it is possible for States to change the time of electing their governors, judges, and many other State officials, there are other important officials which the Constitution requires them to elect and which the law of the United States requires them to elect on the same day that Congressmen are elected. The Constitution says, Article II, section 1:

Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

The Congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States.

Section 25 of the Revised Statutes provides that members of Congress shall be elected on the Tuesday next after the first Monday in November, and section 131 of the Revised Statutes provides that—

The electors of President and Vice-President shall be appointed in each State on the Tuesday next after the first Monday in November.

The law of Congress is, therefore, imperative that Presidential and Congressional elections be held upon the same day. Here are officers with whose election Congress has no right whatever to interfere, and yet the law we are discussing would just as effectually control the election of these officials as it would control the elections of members of Congress. The registration lists would be the same; the polls would be the same. The marshals would have the same influence over the one as over the other, and therefore this law would, in direct violation of the Constitution, supervise and control the election of electors for President and Vice-President of the United States.

INCREDIBLE ERRORS OF MR. LODGE.

Mr. LODGE, in his report and speech, by the use of precisely the same language, says:

The language employed in this section is so plain that it would seem almost superfluous to enter into argument or discussion as to its meaning. If words mean anything, those just quoted mean that the power of Congress over the conduct of elections of members of this body is absolute and complete. The Constitution says that Congress may make all regulations in regard to the election of Representatives, and the power to "make regulations" thus conferred is in terms exclusive and paramount. But out of abundance of caution the framers of the Constitution went further, and added to the word "make" the words "to alter;" that is, under the Constitution Congress has power to assume complete control of elections of its members and conduct them at such times and places and through such officers and under such rules as it may see fit. On the other hand Congress may, under this clause, leave the entire regulation of the election of Representatives to the States, or it may take a partial control of a part of the necessary procedure and leave what remains to the State, or it may alter and amend the State regulations and supervise and enforce their execution.

It seems to me absolutely incredible that an educated gentleman sent to represent a cultivated constituency could write out a sentence so incorrect, illogical, and unlawyer-like, but it is more surprising that after seeing this in his report in print he failed to see its errors, and speaks it out in the House of Representatives and allows it to appear in the record of our proceedings.

If Mr. LODGE had read the discussions in the convention of 1787 and the debates in the various State conventions which ratified the Constitution he would have learned that a majority of the great men of that time took a view just the reverse of the one he adopts and enunciates.

To say that a contingent and secondary power to make regulations for the election of members of Congress means—

that the power of Congress over the conduct of elections of this body is absolute and complete—

And that—

Congress has power to assume complete control of elections of its members and conduct them at such times and places and through such officers and under such rules as it may see fit—

Are assertions directly at variance with the opinions of our ablest men as expounded during an entire century, and including the length and breadth of our present system of government, during which time we have grown from the poorest and weakest to the most populous of all civilized countries, and the richest, most cultured, most enlightened and christian of all Governments on earth. Let me ask in the name of christian liberty if such strides in the world's civilization should be turned back to advance the selfish purposes of a few ambitious politicians.

Mr. LODGE then says:

But out of abundant caution the framers of the Constitution went further and added to the word "make" the words "to alter."

HISTORICAL MISTAKES OF MR. LODGE.

If Mr. LODGE was correct about this "abundant caution" which he tells us was displayed by our forefathers, what a remarkable set of men they must have been in the estimation of the gentleman from Massachusetts. The Constitution had already, as Mr. LODGE says, given authority to make all laws to regulate elections, but out of abundant caution they went further and added the words "to alter" all laws, etc.

Now, I have been taught that unquestioned authority to make laws was quite as far along as authority "to alter" them.

If a legislative body which has paramount authority upon a subject—and Mr. LODGE contends that the power of Congress is paramount—proceeds to exercise that paramount authority by making laws, does not that repeal and make inoperative and nugatory all laws which contravene its provisions?

Would not the making of such a law of necessity have the effect to alter the laws which, by implication, were repealed? But if Mr. LODGE had taken the trouble to read the proceedings of the convention he would have learned that the action of the framers of the Constitution was precisely the reverse of their course as stated by himself.

By referring to the Debates, volume 5, pages 377 and 401, he will find that the clause as it came from the committee on detail was in these words:

The times, and places, and manner of holding the elections of the members of each House shall be prescribed by the Legislature of each State; but their provisions concerning them may, at any time, be altered by the Legislature of the United States.

He will see that the clause as it first existed gave Congress the right to alter and not the right to make, and by looking at page 402 he will find that the latter part of the clause was amended so as to read—

But regulations, in each of the foregoing cases, may, at any time, be made or altered by the Legislature of the United States.

And he will see that Mr. Madison then said:

This was meant to give the National Legislature a power not only to alter the provisions of the States, but to make regulations in case the States should fail or refuse altogether.

Yet this illogical, unlawyer-like, incorrect paragraph is a fair sample of the entire argument. I will, however, recur to one more of his illogical, unlawyerlike, and incorrect paragraphs. It is this:

In view of the language of the Constitution, of its intention as explained by its framers, and of the full and elaborate decisions of the Supreme Court on every point which could be involved therein, there can be no need for your committee to offer further argument as to the constitutional powers of Congress to pass such a bill as that which they report herewith.

ERRORS AS TO LAW AND HISTORY.

Was there ever such astounding assurance?

There is no language in the Constitution which goes further than to say that Congress may make regulations as to the time, place, and manner, etc. Certainly that does not justify this bill.

I do not hesitate to state, and shall be able to prove, that this astounding assertion of Mr. LODGE is not sustained by a single expression from any of the framers of the Constitution.

Not one of them ever uttered one word in any way suggesting that Congress had a right to enact such a law as the one now under consideration. Not one of them ever conceived that any Congress would contend that the clause of the Constitution authorized Congress to enact a law to take control of elections in sovereign States and certify the results to this body. So far from their being full and elaborate decisions of the Supreme Court on every point which could be involved, I have clearly shown and I again assert without fear of successful contradiction that it is not sustained by a single decision from the Supreme Court of the United States or any other judicial tribunal of last resort which ever existed.

Nor has any writer upon the Constitution ever ventured to expound so fearful a heresy.

In the Siebold and Yarborough cases no such question was before the court, and any language which the advocate of this bill claims to justify such conclusion is at best mere *dicta*, it has no force as an opinion of the Supreme Court, and stands upon the same plane as the dissenting opinion of Justice Field and Justice Clifford, and in that light all that is said by Justice Bradley is overwhelmingly refuted by the able arguments and citations of Justices Field and Clifford.

As before stated, the question before the court in the Siebold and Yarborough cases was as to the constitutionality of laws which authorized the appointment of supervisors of elections who only acted as witnesses and who in no wise usurped the rights and prerogatives of State officers of election.

A question was also before the court as to the power of Congress to enact laws to compel State officers of election to observe the State laws regulating elections of Representatives and also to enact laws to authorize deputy marshals to keep peace at such elections.

There was no such law as this force bill in existence at that time, and the constitutionality of this bill was not submitted for the court's opinion.

ANOTHER HISTORICAL MISTAKE.

Again, by the use of precisely the same language Mr. LODGE says in both his report and speech:

In the convention of 1787, on the 9th of August, Mr. Pinckney and Mr. Rutledge moved to strike out the words which in the draught then before the convention conferred this power upon Congress. The motion was lost, apparently without a division, and, if we may judge from Mr. Madison's notes, had no serious support in the convention.

I have already adverted to the support given to this motion by Mr. Elbridge Gerry, of Massachusetts, Mr. Roger Sherman, from Connecticut, and Mr. Pinckney and Mr. Rutledge, from South Carolina; but we have only to glance at the debates in the State conventions which ratified the Constitution, and contemporaneous writers, to see that this clause was the one above all others which excited apprehension, and it is thus fully shown that a majority of the States only ratified the Constitution upon the assurance that this power could and would only be exercised by Congress in the event the States failed to exercise it themselves.

It was explained there, as we explain here, that the power to regulate Congressional elections was given originally, primarily, and absolutely to the States, and the permissive power was only given to Congress upon the contingency of failure, neglect, or refusal of the States to exercise it. It was assumed that the power given to Congress was at best a secondary and conditional power, which might become essential to the well-being and preservation of the Federal system, because if the Legislatures of States should not fix the time, place, and manner of holding elections there should be some power authorized to supply the omission.

In the debate Rhode Island was instanced as an example. That State refused to appoint electors for President and Vice-President or to elect members of Congress until long after the establishment of the Federal Government, and at the conventions of nine of the thirteen States amendments were proposed incorporating language which ex-

pressly limited the power of Congress to make or alter regulations as to the time, place, and manner of holding elections for Congressmen.

MR. LODGE GARBLES CURTIS ON THE CONSTITUTION.

Mr. Curtis, in his History of the Constitution (volume 2, page 257), says:

Among the powers conceded by the Constitution to the Legislature of each State is that of prescribing the time, place, and manner of holding the elections of its Senators and Representatives in Congress.

This provision originated with the committee of detail; but as it was reported by them there was no other authority reserved to Congress itself than that of altering the regulations of the States, and this authority extended as well to the place of choosing the Senators as to all the other circumstances of the election. In the convention, however, the authority of Congress was extended beyond the alteration of State regulations, so as to embrace a power to make rules as well as to alter those made by the States. But the place of choosing the Senators was excepted altogether from this restraining authority and left to the States. Mr. Madison, in his minutes, adds the explanation that the power of Congress to make regulations was supplied in order to enable them to regulate the elections if the States should fail or refuse to do so. But the text of the Constitution as finally settled gives authority to Congress "at any time" to "make or alter such regulations;" and this would seem to confer a power which, when exercised, must be paramount, whether a State regulation exists at the time or not."

This identical language is found in Mr. Curtis's late edition of 1889, volume 1, pages 478 and 480.

I call special attention to these words:

Among the powers conceded by the Constitution to the Legislature of each State is that of prescribing the time, place, and manner of holding the elections of its Senators and Representatives in Congress.

Mr. LODGE, in both his report, and also in his speech, essays to give the House Mr. Curtis's views, but takes especial care to omit the very important part of the paragraph.

Mr. LODGE says:

Mr. George Ticknor Curtis, in the latest edition of his Constitutional History of the United States, which is, as everybody is aware, a work of very high authority and great research, says in regard to this clause.

He then omits that part of the paragraph in which Mr. Curtis emphatically states that—

Among the powers conceded by the Constitution to the Legislature of each State is that of prescribing the time, place, and manner of holding the elections of its Senators and Representatives in Congress.

Mr. Curtis's manner of stating the proposition would tend to mislead a casual reader.

Mr. Curtis's language is:

Among the powers conceded by the Constitution to the Legislature of each State is that of prescribing the time, place, and manner of holding the elections of its Senators and Representatives in Congress. This provision originated with the committee of detail.

ERROR OF MR. GEORGE TICKNOR CURTIS.

A person who was not familiar with the proceedings of the constitutional convention and relied entirely upon Mr. Curtis's work for information on this subject would very naturally assume or at least would certainly be justified, from this statement of Mr. Curtis's, in concluding that the provision quoted by him originated with the committee of detail. This is not the fact.

The language of this provision is almost identical with that contained in the plan found in the journal of the convention (page 129), proposed by Mr. Pinckney on May 29, the day rules were adopted, and, to use the language of the journal, the day Mr. Randolph opened the main business (journal, page 126). It therefore appears that the provision quoted by Mr. Curtis was before the convention from the commencement of its sitting.

It is true that the last part of the section, which Mr. Curtis does not quote and which gives secondary and contingent power to Congress, did originate with the committee of detail, but not in the present language of the Constitution. As reported by the committee on August 6 (page 377) it was in these words:

The times, and places, and manner of holding the elections of the members of each House shall be prescribed by the Legislature of each State; but their provisions concerning them may, at any time, be altered by the Legislature of the United States.

ST. GEORGE TUCKER'S COMMENT IN 1803.

I now will call the attention of the House to a paragraph from Tucker's Blackstone, volume 1, page 191, in which, after reciting Article I, section 4, he says:

It can not be denied that this article vests a power in Congress the exercise of which if not really dangerous to the liberties of the States may at least interrupt their tranquillity, unless dictated by the utmost wisdom and discretion. In some of the States the vote is conducted by ballot, in others *viva voce*. In some the members are chosen by a general ticket or ballot of the whole State; in others the Representatives are chosen by districts. Without entering into the discussion of the preference due to either of these modes, we may venture to pronounce that the States respectively will be tenacious of that to which their own constitution or laws may have given the preference; any attempt to render the manner of election uniform must therefore inevitably produce discontents among the States. Hitherto the Congress has wisely left this article to the direction of the State governments.

St. George Tucker, together with Edmund Randolph and James Madison, were the three commissioners from Virginia who attended the convention at Annapolis on September 11, 1786.

He was thoroughly conversant with the debates in the convention which prepared the Constitution, as well as the debates in the various State conventions which ratified it.

It will be observed that there is no idea advanced which in any way intimates that the Constitution empowers Congress to take control of elections, but he only construed this clause as empowering Congress to enact laws regulating the manner of elections; that is, to say whether they should be conducted by ballot or *viva voce* and whether Congressmen should be elected by a general ticket or by districts, and even the exercise of such powers by Congress, unless dictated by the utmost wisdom and discretion, Mr. Tucker feared, would interrupt the tranquillity of the States and become really dangerous to their liberties.

ALEXANDER HAMILTON CONDEMNS SUCH LAWS.

Alexander Hamilton was without question the most earnest advocate of giving all power possible to the Federal Government. In fact he seemed to insist that the more power in the Federal Government and the less in the States the better would the liberties of the people be preserved, and yet this extreme champion of strong, even to the point of monarchical, government never suggested or conceived such desecration of the rights of States as is involved in the bill now under discussion.

Mr. Hamilton even went so far as to express his opinion that not only was no such interpretation conceived or intended by the framers of the Constitution, but that if such an effort had been made no man would have hesitated to condemn it.

I will read his words from the fifty-ninth number of The Federalist, issued February 22, 1788, page 450, Lippincott's edition:

Suppose an article had been introduced into the Constitution empowering the United States to regulate the elections for the particular States, would any man have hesitated to condemn it both as an unwarrantable transposition of power and as a premeditated engine for the destruction of the State governments?

The violation of principle in this case would have required no comment, and to an unbiased observer it will not be less apparent in the project of subjecting the existence of the National Government, in a similar respect, to the pleasure of the State governments.

An impartial view of the matter can not fail to result in a conviction that each, as far as possible, ought to depend on itself for its own preservation.

Justices Field and Clifford in the Siebold case quote part of this paragraph, and then say—I read from 100 United States Reports, page 419:

By the act of Congress sustained by the court, an interference with State elections is authorized almost as destructive of their control by the States as the direct regulation which he (Hamilton) thought no man would hesitate to condemn.

Mr. Hamilton went further, and insisted that this power to regulate elections should only be exercised in the last resort, and insisted that the Constitution intrusted the regulation of elections in the first instance to the States. I read from the fifty-ninth number of The Federalist, same edition, page 448:

The natural order of the subject leads us to consider in this place that provision of the Constitution which authorizes the National Legislature to regulate, in the last resort, the election of its own members.

It is in these words: "The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may, at any time, by law, make or alter such regulations, except as to places of choosing Senators." This provision has not only been declaimed against by those who condemn the Constitution in the gross, but it has been censured by those who have objected with less latitude and greater moderation; and, in one instance, it has been thought exceptionable by a gentleman who has declared himself the advocate of every other part of the system.

Here we see this distinguished man, this most distinguished maker of the Constitution, the only member from New York who signed the instrument, says with emphasis that Congress can only exercise this right to enact regulations in the last resort. What, may I ask, would have been his astonishment to see Congress enact a law to take absolute control of elections when there was no reason whatever for such action?

Mr. Hamilton also says (I read from page 449):

They have submitted the regulation of elections for the Federal Government, in the first instance, to the local administrations, which, in ordinary cases and when no improper views prevail, may be both more convenient and more satisfactory; but they have reserved to the national authority a right to interpose whenever extraordinary circumstances might render that interposition necessary to its safety.

JUSTICE STORY'S CONSTRUCTION.

Judge Story gives this clause of the Constitution careful analysis, in which he negatives any such construction of the power of Congress as is proposed by this law; and he further says (§ 826) that it is scarcely possible that any of the power conferred should be exerted—

unless upon very urgent occasions.

This distinguished jurist discusses the objections which were argued during the consideration of this section, contending that the only danger to the States is the possible improper and inconvenient designations of places for elections.

I read from Chapter XI, § 820:

The most that can be urged, with any show of argument, is that the power might, in a given case, be employed in such a manner as to promote the election of some favorite candidate or favorite class of men in exclusion of others by confining the places of election to particular districts and rendering it impracticable for the citizens at large to partake in the choice.

Judge Story also says, § 823:

If an elector were compellable to go 30 or 50 miles, it would discourage his vote as much as if it were 100 or 500 miles.

And he cites The Federalist, No. 61, and 1st Elliot's Debates, page 68, § 824. Judge Story says:

Suppose the Legislature should compel all the electors to come to one spot

in the district, as, for instance, to Albany, the evil would be great, but the measure would not be unconstitutional.

Citing the Federalist, 61, after showing that the power can never rightfully be exercised so as to be in any way detrimental to the States, Judge Story says, § 825:

The reasons in its favor are, on the other hand, of great force and importance. In the first place the power may be applied by Congress to correct any negligence in a State in regard to elections, as well as to prevent a dissolution of the Government by designing and refractory States, urged on by some temporary excitements. In the next place it will operate as a check in favor of the people against any designs of a Federal Senate and their constituents to deprive the people of the State of their right to choose Representatives.

In the next place, it provides a remedy for the evil—if any State, by reason of invasion or other cause, can not have it in its power to appoint a place where the citizens can safely meet to choose Representatives. In the last place (as the plan is but an experiment), it may hereafter become important, with a view to the regular operations of the General Government, that there should be a uniformity in the time and manner of electing Representatives and Senators, so as to prevent vacancies when there may be calls for extraordinary sessions of Congress.

Judge Story then proceeds, as I will read from section 826:

A period of forty years has since passed by without any attempt by Congress to make any regulations or interfere in the slightest degree with the elections of members of Congress. If, therefore, experience can demonstrate anything, it is the entire safety of the power in Congress, which it is scarcely possible (reasoning from the past) should be exerted unless upon very urgent occasions.

After citing the objections which had been urged to this clause and the reasoning by which these objections had been met, Judge Story says (section 826):

Still so strong has been the sense of Congress of the importance of leaving these matters to State regulation that no effort has been hitherto made to cure these evils, and public opinion has almost irresistibly settled down in favor of the existing system.

I will also call attention to an opinion delivered by Judge Story when on the Supreme Bench, which clearly shows that any law which gave Congress any power further than to prescribe the time and place and to indicate the manner or method which should be followed by State officers in conducting elections is clearly unconstitutional, because the friends of the bill admit that it is not clear as to what is meant by the word "manner," and therefore the construction given it must be adjudged in favor of the States and against the United States.

And again the friends of the bill admit that it is not clear that the power was only to be exercised by Congress in the contingency of the failure of the States to exercise it.

Now, as the States have exercised this power for one hundred years, the legal construction, as expounded by Judge Story, would be against vesting any such power in the United States. I read from Houston *vs.* Moore, 5 Wheat., 48; also cited in Dwarris on Constitution, page 669:

The sovereignty of a State in the exercise of its legislation is not to be impaired unless it be clear that it has transcended its legitimate authority, nor ought any power to be sought, much less to be adjudged, in favor of the United States, unless it be clearly within the reach of its constitutional charter.

The Constitution of the United States containing a grant of powers, in many instances similar to those already existing in the State governments, and some of these being of vital importance also to State authority and State legislation, it is not to be admitted that a mere grant of such powers in affirmative terms to Congress does, *per se*, transfer an exclusive sovereignty on such subjects to the latter.

On the contrary, a reasonable interpretation of that instrument necessarily leads to the conclusion that the powers so granted are never exclusive of similar powers existing in the State, unless where the Constitution has expressly, in terms, given an exclusive power to Congress, or the exercise of a like power is prohibited to the States, or there is a direct repugnancy or incompatibility in the exercise of it by the States. In all other cases not falling within the classes above mentioned it seems unquestionable that the States retain concurrent authority with Congress, not only upon the letter and spirit of the eleventh amendment of the Constitution, but upon the soundest principles of general reasoning.

CONSTRUCTION MUST HARMONIZE.

Another rule of construction is that where it is not clear, or when it is disputed as to what was meant by a word, as in this case the word manner, we must place that construction on the word which would harmonize with the designs of the makers of the Constitution and the general structure of our Government.

In that connection I will read a passage from Dwarris, page 679:

While, then, we may well resort to the meaning of single words to assist our inquiries, we should never forget that it is an instrument of government we are to construe; and, as has already been stated, that must be the truest exposition which best harmonizes with its design, its objects, and its general structure. (Vattel, book 2, chapter 17, sections 285–288.)

Now, no one can question that I have clearly shown from the debates in the constitutional convention and in the State conventions which ratified that instrument that the Constitution was adopted with the assurance that no interpretation would be given to the clause which would authorize Congress to exercise this power unless the States failed or refused altogether to exercise it.

In this connection I will read from Dwarris, page 659:

The words are not, indeed, to be stretched beyond their fair sense; but within that range the rule of interpretation must be taken which best follows out the apparent intention.—*Raule on Constitution*, chapter 7, page 31.

MUST INTERPRET ALL PARTS AS A WHOLE.

It would seem to me that it is entirely unnecessary to dwell further on this subject, but as I have the books before me I will read from the United States Digest, volume 12, page 741, a simple principle of law expounded and re-expounded and disputed by no one, that—

All statutes relating to the same subject-matter are to be interpreted together, and such a construction is to be given to them, consistent with the words, as will avoid the mischief and promote the object and policy contemplated by the statutes.

This principle has been laid down in many decisions, among which I will quote 1 Story, 251; 9 Miss., 590; 3 Blatchf., 325; 4 Fla., 445; 1 Ga., 32; 16 La. Ann., 350; 4 Gill & J., 1; 37 N. H., 295; 7 Fla., 13; 23 N. J. L., 143; 13 Ohio, 458; 1 Oreg., 31; 9 Ill., 221; 19 Vt., 230.

Dwarris says, page 194:

As the construction is to be made upon the entire instrument, and not upon disjointed parts of it, consequently all its parts are to be compared, considered, and construed with reference to each other.

But in construing the Constitution of the United States the courts are uniform in laying down the rule that greater strictness must be applied in restraining the power of Congress than should be applied to the Legislature of a State which is charged with infringing its constitution, because the Constitution of the United States contains only specific grants of powers to the General Government from the States, whilst the constitutions of the States make a general grant of all the political powers of the people, restrained only by specific reservations.

This principle is laid down in all the text-books. I will read, however, from the United States Digest, volume 12, page 738, section 741:

The acts passed by the General Assembly of the State are entitled to a more liberal construction than the acts of Congress; for the Constitution of the United States contains only specific grants of powers to the Government, while the constitution of the State makes a general grant of all the political powers of the people, restrained only by specific reservations.

Now I have clearly shown that section 4, Article I, gives original and primary power to the States and a secondary and contingent power to Congress. How and when is this power to be exercised? We do not have to look far in the Constitution to find an answer to this question.

In this same Article I, section 8, we read:

The Congress shall have power, * * *

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by the Constitution in the Government of the United States.

Now, construing these clauses of the Constitution together, as we are bound to do, let us ask when would a law by Congress be necessary to regulate the time, place, and manner of holding elections?

The answer is clear that the exigency would arise when the State neglected or refused to obey the command of the Constitution to perform that duty.

Bear in mind that the Constitution says members of Congress shall be—

chosen by the people.

How could Congress exercise the power we are discussing?

The answer is, to simply make regulations by which the people in the States should be governed in the management of their elections, and not, as provided by this bill, by taking exclusive control of the subject-matter of the elections; or, as demanded by Speaker REED, that the Federal Government should do their own counting and their own certifying.

Such an election would not be "by the people." It would be by the Federal Government. Such action would not be in conformity with section 8 of the Constitution, which we have quoted, because such action on the part of the Federal Government would not be necessary and proper.

This latter clause is discussed in 4 Wheaton, page 316; 10 Wheaton, 1 and 5, and 8 Wallace, page 603.

This opinion was rendered by Chief-Justice Chase. This eminent jurist in discussing the meaning of the words "necessary and proper" as used in section 8, Article I, of the Constitution says (I read from page 614):

The words "necessary and proper" were intended to have a "sense," to use the words of Mr. Justice Story, "at once admonitory and directory," and to require that the means used in the execution of an express power "should be bona fide appropriate to the end."

Judge Chase proceeds, on page 615, to show that it is finally settled that the power given to Congress "to make all laws necessary and proper" means laws which are appropriate, plainly adapted to constitutional ends, or, to use Judge Chase's language, to make laws—

consistent with the letter and spirit of the Constitution; laws really calculated to effect objects intrusted to the Government.

Judge Story, in his work on the Constitution, section 1253, says:

The language is that Congress shall have power "to make all laws which shall be necessary and proper." * * *

If the intention was to use the word "necessary" in its more liberal sense, then there is a peculiar fitness in the other word (proper). It has a sense at once admonitory and directory. It requires that the means should be bona fide appropriate to the end.

In the case being considered the States have performed their duty and have enacted laws prescribing the time, place, and manner of holding elections of members of Congress, and these laws have been in operation for one hundred years.

Under them we have quietly conducted twenty-six Presidential elections and have elected the members of fifty-one different Congresses.

We therefore say that the contingency has not happened which permits the proposed action by Congress.

It can not be contended that it is "necessary and proper" and "bona fide appropriate" for Congress to nullify and make nugatory and in-

operative the laws of States which were made pursuant to the positive command of the Constitution.

Is it necessary, and proper, and bona fide, and appropriate for Congress to attempt to take control of the internal affairs of States? Is the purpose of the Federal Government to take entire control of elections of members of this body "consistent with the letter and spirit of the Constitution?" I say with all the emphasis in my power that it is not. I say the framers of our Constitution never intended such a usurpation of power. The discussions in the constitutional convention and the debates in the various State conventions which ratified the Constitution utterly refute such an interpretation.

Is this "Lodge" force bill "calculated to effect the objects intrusted to the Government" by the States? The history of a hundred years tells us that it is not, and if this measure is not consistent with the letter and spirit of the Constitution, and not calculated to effect its objects, then, we are told by Judge Chase, that it is violative of that great safeguard of liberty, the Constitution of our country. I insist, Mr. Speaker, that Congress exhausted its constitutional powers when it enacted the laws now on the statute-book to regulate the time and manner of holding elections. I refer to the act of 1842, which provided for elections for Congressmen by districts, the acts of February 28, 1871, and May, 1870 and 1872, which provide for elections by ballot, and the act February 2, 1872, which provides for a uniform time for elections for members of this House. These laws are incorporated in chapter 2 of the Revised Statutes.

IN THIS CASE PERMISSIVE WORDS CAN NOT BE EXTENDED.

In a case like this, when the word "shall" is used to give power to and impose a duty upon the State and the word "may" is used in conferring power upon Congress, no one will deny that the one is positive and absolute and the other contingent and permissive.

The language is:

The time, places, and manner * * * shall be prescribed * * * by the Legislature, but Congress may make or alter it.

In such a case there is no room to invoke the principle of construction by which "may" can be assumed to mean "must" or "shall."

This subject was discussed in the cases of Miner *vs.* Mechanics' Bank, etc., 1 Pet., 64; New York and Erie Railroad Company *vs.* Coburn, 6 How. Pr. R., 224; Buffalo Plank Road Company *vs.* Commissioners of Highways, 10 How. Pr. R., 239.

The ordinary meaning of the word, which is permissive, ought to be adopted, and must be presumed to be intended, unless it would manifestly defeat the object of the provision.

DANGER TO JUDICIAL ERMINE.

In answer to all that has been said regarding the great danger to which our Constitution would be subjected by taking the management of elections from the people and subjecting them to the control of Federal officials, most of whom will of necessity be professional politicians and violent partisans, we are told that all danger of any unfair or partisan action is fully guarded against by placing the appointment of the supervisors in the hands of Federal judges.

I probably have as high a regard for our Federal judiciary and as good an opinion of their ability and integrity as any one on this floor, but I insist that to maintain for them the regard, esteem, and confidence of the people we must not drag them down into the turmoils of political strife.

We have seen one melancholy instance of such a procedure, which ought to warn us not to repeat such an error.

The connection of judges of the Supreme Court with the Electoral Commission had the effect of shaking the confidence of the people in that tribunal it will take years to repair.

If for no other reason I say in the name and for the good name of our judiciary, and for the purpose of preserving its good name and that the people may retain confidence in its integrity, I say eliminate any and all features which connect judges with elections.

To prove that I am right let me ask you to go back with me to the times when partisan political judges brought disgrace upon the judicial ermine of England.

It is in the dark records of those men that Britain finds its shame, all or at least much of which was due to mixing judges with politics.

But while lamenting over these glaringly displayed judicial crimes it is pleasing to see that, intermingled with these wicked political partisan judges, there appeared from time to time and from age to age men of power and might who have laid down principles of right and reason, which, like the eternal hills, will last forever and will be a bulwark and shield against wrong and oppression.

In Glanville, in Bracton, in Dyer, in Bradshaw, in Coke, in Mansfield, and in a host of other distinguished English judges, Great Britain finds ample consolation and abounding glory growing out of her judicial history.

To these great minds she is indebted for the fundamental principles of her constitutional freedom; and from these great men have sprung the prevailing tendencies of the human mind to keep up steadily its onward march toward the consummation in its best perfection of the grand idea of human liberty. Let us contrast the actions and careers of these men with those who painted the dark side of England's judicial history.

CORRUPT ENGLISH JUDGES.

Although the rulings of the courts so hedged and restricted the authority of the king as to make him in many respects a mere automaton, nevertheless when the king could draw his judges to his side of any question, whether of mercy or tyranny, he could always carry his point. For when the royal prerogative was propped and supported by the presence of the judicial sanction it was all-powerful; and many prominent examples appear in English history where the king needed and found a supppliant and unscrupulous judge to support him on some important occasion; and we see in many cases that, when a new appointment of a judge became necessary, the question of succession was, not who is most learned in the law and most upright in integrity, but who is the man upon whom the "powers that be" can most certainly rely to carry out their behests in some great pending or prospective question such as this: A certain nobleman must be tried for treason; now where shall we find a judge who in this anticipated prosecution will stand most stolidly by the king? Such was the question on which often hung the selection of a judge to fill a vacancy; nay, it has often happened that an upright judge of unflinching integrity has been removed upon some plausible pretext in order to make way for some truculent parasite.

When appointments were made to attain such ends we are not surprised that the bench of England was sometimes unworthy of confidence and respect.

The facts which I will state regarding most of these men I take from Campbell's Lives of the Chief-Justices.

When the Duke of Normandy won the crown of England he appointed one of his soldiers, Odo, his grand justiciar. He was called the fighting prelate. Campbell says that—

He oppressed and insulted the natives so far as to drive them into rebellion. The result was a general insurrection all over England; and William was obliged to return and to reconquer the kingdom.

Only one cause is reported as tried before him, which resulted in a verdict for the crown.

When intrusted with a military command he thought it unnecessary to discriminate between guilt and innocence; he executed without investigation all natives who fell into his hands, and he ravaged the whole country.

Instead of attending to the duties of his station he made riches and power the principal objects of his pursuit.

Such was the first justiciar of England. His ambition was unbounded and his sole purpose was to serve himself and his king.

To the natural qualities that made up in the rough the genuine old English baron of later day, he had as much culture as the educational facilities of the times afforded. He had considerable learning in civil, feudal, and canon law, with undaunted courage, and in gentler times and under proper influences and different auspices he might have made a good judge. He was succeeded by William De Warrenne and Richard De Benefacta, who were jointly appointed to the office of the chief justiciar. Campbell says:

These two grand justiciars, during their joint administration, invented a new punishment to be inflicted on disturbers of the public peace. Having encountered and defeated a powerful band of insurgents at a place called Fagadun, they cut off the right foot of all they took alive, including the ringleaders, the Earls of Norfolk and Hereford. It seems then to have been considered that in times of rebellion the judges were to exercise martial law or to disregard all law, according to their own arbitrary will.

Richard I was the first monarch to sell this high office to the highest bidder, and by this method it fell to Hugh Pusar, bishop of Durham. His morals were depraved even beyond the common licentious standard prevailing. He was guilty of extortion, rapine, and many other crimes of the period.

He was succeeded by De Weyland, who was esteemed as a man of talent and a great lawyer.

Lord Campbell says that his salary—

Being only 60 marks a year, he seems without scruple to have resorted to very irregular courses for the purpose of increasing his riches. He was punished for bribery. Having walked barefoot and bareheaded with a crucifix in his hand to the seaside at Dover, he was put on board a ship and departed to foreign parts. He is said to have died in exile, and he left a name often quoted as a reproach to the bench till he was eclipsed by Jeffreys and Scroggs.

Sir William Thorpe was chief-justice in the time of Edward III. He was convicted of receiving five bribes, all of which amounted to about $500.

He was sentenced to be hanged, and his lands and goods were forfeited.

POPHAM AND HOLT.

The next judge of this class to whom I shall refer is Popham, regarding whom Lord Campbell says:

The career of our next hero is capable of being made amusing as well as instructive. Although at one time in the habit of taking purses on the highway, instead of expiating his offenses at Tyburn, he lived to pass sentence of death upon highwaymen and to be a terror to evildoers.

While yet a child he was stolen by a band of gypsies, and remained some months in their society. We have no account of his schooling before he was sent to Baliol College, Oxford. Here he was very studious and well behaved, and he laid in a good stock of classical learning and of dogmatic divinity.

When Sir Thomas Bromley, who had been long solicitor-general, was promoted to be lord chancellor, Popham succeeded him as solicitor-general. He succeeded Sir Gilbert Gerrard as attorney-general.

Popham conducted the trials of all those charged as being implicated in Babington's conspiracy, which were meant to prepare the public mind for the trial of the unhappy Mary herself. I will give a little specimen of these proceedings from Tinley's case. The charge against him was that he had planned the murder of Queen Elizabeth in her coach. The chief evidence consisted of a confession of Abbington, an avowed accomplice, in which he said that "Tin-

ley was disposed to kill the queen," and that Babbington on his own trial said the day before, "Tinley would have had Her Majesty set upon in her coach."

"TINLEY. No! I said not so; only at the Three Tuns, in Newgate Market, I said 'it might be Her Majesty might be set upon in her coach,' and I said no more. But that proves not I did consent.

"POPHAM, A. G. You have said enough, if we had no other evidence against you.

"TINLEY. How so?

"POPHAM, A. G. Because you have confessed high treason; your words prove that you were devising on the manner of her death.

"TINLEY. I tell you there is no such matter intended in my words. If a servant which is faithful, knowing where his master's money is, do say, 'If I would be a thief I could rob my master, for in such a place as his money is,' this proves not that he would rob his master, albeit he used such words. And so, though I said 'she might be set upon in her coach,' it proveth not that I assented to the same; for I protest before God I never intended any treason in my life."

Popham's early life had been checkered with crime, but he was an able man and had served the king well as attorney-general. Being in the height of favor when the office of chief-justice became vacant, he, on the 8th day of June, 1592, was appointed to that high position.

Lord Campbell says:

He [Popham] held the office fifteen years. The reproach urged against him was extreme severity to prisoners. He was notorious as a "hanging judge." Not only was he keen to convict in cases prosecuted by the Government, but in ordinary larcenies, and above all in highway robberies, there was little chance of acquittal before him.

He presided over very important trials, and by this means his name became prominently connected with the history of England.

Sir Walter Raleigh was tried before him, and Guy Fawkes and his associates, who were implicated in the historical gunpowder plot, were also tried before this judge.

That sometimes he was cruel and unjust his most ardent admirers will not question. Lord Campbell gives an account of the trial of Garnet, the Jesuit. He says:

Popham's last appearance in a case of public interest was upon the trial of Garnet, the Superior of the Jesuits. Against him the evidence was very slender, and the chief-justice was obliged to eke it out by unwary answers to dexterously framed interrogatories. He succeeded so far as to make the prisoner confess that he was aware of the plot from communications made to him in the confessional; so that in point of law he was guilty of misprision of treason by not giving information of what he had so learned; but Garnet still firmly denied ever having taken any part in the devising of the plot or having in any manner encouraged it. At last he said very passionately:

"My lord, I would to God I had never known of the powder treason; but, as He is my judge, I would have stopped it if I could."

"POPHAM, C. J. Garnet, you are Superior of the Jesuits; and if you forbid, must not the rest obey? Was not Greenwell with you half an hour at Sir Everard Digby's house when you heard of the discovery of your treason? And did you not there confer and debate the matter together? Did you not stir him up to go to the rebels and encourage them? Yet you seek to color all this; but that is a mere shift in you. Catesby was never far from you, and, by many apparent proofs and evident presumptions, you were in every particular of this action, and directed and commanded the actors; nay, I think, verily, you were the chief that moved it.

"GARNET. No, my lord: I did not."

The report adds: "Then it was exceedingly well urged by my lord chief-justice, how he writ his letters for Winter, Fawkes, and Catesby, principal actors in this matchless treason, and how he kept the two bulls to prejudice the king and to do other mischief in the realm; and how he afterwards burnt them when he saw the king peaceably come in, there being no hope to do any good at that time."

His summing up to the jury is not reported, and we are only told that the verdict of guilty being found, "then the lord chief-justice, making a pithy preamble of all the apparent proofs and presumptions of his guiltiness, gave judgment that he should be drawn, hanged, and quartered."

Lord Holt became chief-justice, although in his youth, history says, he was a public highwayman, but as he became a judge he was unrelentingly severe in his punishment of thieves and robbers.

In referring to the historical truth of Holt's highway robberies, Lord Campbell says:

His biographers represent him as copying Henry V, when the associate of Falstaff, as not only indulging in all sorts of licentious gratifications, but actually being in the habit of taking purses on the highway. They even relate that many years after he recognized a man, convicted capitally before him, as one of his own accomplices in a robbery, and that, having visited him in jail and inquired after the rest of the gang, he received this answer: "Ah, my lord, they are all hanged but myself and your lordship."—*Campbell's Lives.*

JUDICIAL PERSECUTIONS OF RELIGION.

Foster was not regarded as a bad man, but when he became chief-justice he seemed to feel that the road to favor was the persecution of the Quakers.

John Crook and other loyal Quakers were brought before him for refusing to take the oath of allegiance. Lord Campbell gives the following account of the proceedings:

FOSTER, C. J. John Crook, when did you take the oath of allegiance?

CROOK. Answering this question in the negative is to accuse myself, which you ought not to put me upon, *nemo debet seipsum prodire.* I am an Englishman, and I ought not to be taken nor imprisoned, nor called in question, nor put to answer but according to the law of the land.

FOSTER, C. J. You are here required to take the oath of allegiance, and when you have done that you shall be heard.

CROOK. You that are judges on the bench ought to be my counsel, not my accusers.

FOSTER, C. J. We are here to do justice, and are upon our oaths, and we are to tell you what is law, not you us. Therefore, sirrah, you are too bold.

CROOK. Sirrah is not a word becoming a judge. If I speak loud it is my zeal of the truth and for the name of the Lord. Mine innocency makes me bold.

FOSTER, C. J. It is an evil zeal.

CROOK. No; I am bold in the name of the Lord God Almighty, the everlasting Jehovah, to assert the truth and stand as a witness for it. Let my accuser be brought forth.

FOSTER, C. J. Sirrah, you are to take the oath, and here we tender it to you.

CROOK. Let me be cleared of my imprisonment, and then I will answer to what is charged against me. I keep a conscience void of offense both toward God and toward man.

FOSTER, C. J. Sirrah, leave your canting.

CROOK. Is this canting, to speak the words of the Scripture?

FOSTER, C. J. It is canting in your mouth, though they are St. Paul's words. Your first denial to take the oath shall be recorded; and on a second denial you incur the penalties of a *præmunire*, which is the forfeiture of all your estates, if you have any, and imprisonment for life.

CROOK. I owe dutiful allegiance to the King of Kings. We dare not break Christ's commandments, Who hath said, "Swear not at all;" and the Apostle James says, "Above all things, my brethren, swear not."

When Robert Hyde was chief-justice he seemed to regard everybody as a criminal whose views on religion or any other subject differed from those of the king and himself. John Troyn, a printer, having printed a book entitled Phœnix, or the Solemn League and Covenant, it was claimed that the work contained passages which reflected upon the king, and Troyn was indicted for high treason.

On being asked how he would be tried, he said:

In the presence of that God, Who is the searcher of all hearts and the disposer of all things.

Lord Campbell gives us the following from his trial:

"HYDE, L. C. J. God Almighty is present here, but you must be tried by Him and your peers; that is, your country, or twelve honest men.

"PRISONER. I desire to be tried by God alone.

"HYDE, L. C. J. God Almighty looks down and beholds what we do here, and we shall answer severely if we do you any wrong. We are careful of our souls as you can be of yours. You must answer in the words of the law.

"PRISONER. By God and my country."

It was proved clearly enough that he had printed the book, and some passages of it might have been considered libelous; but there was no other evidence against him, and he averred that he had unconsciously printed the book in the way of his trade.

"HYDE, L. C. J. There is here as much villainy and slander as it is possible for devils or man to invent. To rob the king of the love of his subjects is to destroy him in his person. You are here in the presence of Almighty God, as you desired; and the best you can now do towards amends for your wickedness is by discovering the author of this villainous book. If not you must not expect, and, indeed, God forbid there should be any mercy shown you.

"PRISONER. I never knew the author of it.

"HYDE, L. C. J. Then we must not trouble ourselves. You of the jury, there can be no doubt that publishing such a book as this is as high treason as can be committed, and my brothers will declare the same if you doubt."

The jury having found a verdict of guilty, the usual sentence was pronounced by Lord Chief-Justice Hyde, and the printer was drawn, hanged, and quartered accordingly.

Chief-Justice Kelynge was without learning or common sense, but his subserviency to the king and zeal to carry out his commands and wishes enabled him to win and hold this high position.

When upon the circuit he threw aside all moderation and decency.

In Somersetshire he ordered the grand jury to find a true bill contrary to their consciences. He reproached the foreman, Sir Hugh Windham, and charged that Sir Hugh was the head of a faction.

He told the grand jury they were his servants, and that he would make the best men in England stoop to him.

Lord Campbell, in speaking of him, says:

Some persons were indicted before him for attending a conventicle, and although it was proved that they had assembled on the Lord's day with Bibles in their hands, without prayer-books, they were acquitted. He thereupon fined the jury one hundred marks apiece and imprisoned them until the fines were paid. Again, on the trial of a man for murder, who was suspected of being a Dissenter and whom he had a great desire to hang, he fined and imprisoned all the jury because, contrary to his direction, they brought a verdict of manslaughter.

Scroggs was made chief-justice because the king felt he could rely on his subserviency to counteract the apprehended machinations of Shaftesbury.

He presided at the trial of Andrew Bromwich, who was indicted for administering the Lord's Supper according to the rites of the Church of Rome.

Lord Campbell recites the following dialogue during the trial:

PRISONER. I desire your lordship will take notice of one thing, that I have taken the oath of allegiance and supremacy and have not refused anything which might testify my loyalty.

SCROGGS, C. J. That will not serve your turn; you priests have many tricks. What is that to giving a woman a sacrament several times?

PRISONER. My lord, it was not a sacrament unless I be a priest, of which there is no proof.

SCROGGS. What, you expect we should prove you a priest by witnesses who saw you ordained? We know too much of your religion; no one gives the sacrament in a wafer except he be a popish priest; you gave that woman the sacrament in a wafer; ergo, you are a popish priest.

Scroggs closed his charge to the jury in these words:

Gentlemen of the jury, I leave it upon your conscience whether you will let priests escape, who are the very pests of church and state; you had better be rid of one priest than three felons; so, gentlemen, I leave it to you.

THOMAS JEFFERSON UPON THE JUDICIARY.

Our forefathers were familiar with the cruel acts of injustice by English judges to which I have referred, and many of them had fled from England to escape such atrocities.

Thomas Jefferson fully realized the importance of keeping the judiciary entirely separated from political influences. It is interesting to read his apprehensions and views upon this important subject.

In a letter to Mr. Thomas Ritchie, dated December 25, 1820, Thomas Jefferson says:

The judiciary of the United States is the subtle corps of sappers and miners constantly working under ground to undermine the foundations of our confederated fabric. They are construing our Constitution from a co-ordination of a general and special government to a general and supreme one alone. This will lay all things at their feet, and they are too well versed in English law to forget the maxim *Boni judicis est ampliare jurisdictionem.*

A judiciary independent of a king or executive alone is a good thing; but independence of the will of the nation is a solecism, at least in a republican government.

Were Mr. Jefferson here to day he would tell this House that judges appointed to office on account of their political views and holding the office from and looking to preferment at the hands of the party in power will in many cases be influenced by political bias.

I will now read a letter written a month later. It is dated January 19, 1821, and addressed to Hon. Archibald Thweat:

I am sensible of the inroads daily making by the Federal into the jurisdiction of its co-ordinate associates, the State governments. The legislative and executive branches may sometimes err, but elections and dependence will bring them to rights.

The judiciary branch is the instrument which, working like gravity, without intermission, is to press us at last into one consolidated mass.

Against this I know no one who, equally with Judge Roane himself, possesses the power and courage to make resistance; and to him I look, and have long looked, as our strongest bulwark. If Congress fails to shield the States from dangers so palpable and so imminent the States must shield themselves and meet the invader foot to foot.

I call special attention to the warning here contained against consolidated government and his intimation of the evils arising from a life tenure of officials whose positions enable them to wield unrestrained power. I will now call attention to what is said by Mr. Jefferson in his letter dated August 18, 1821, to Mr. C. Hammond, in which he says:

It has long, however, been my opinion, and I have never shrunk from its expression (although I do not choose to put it into a newspaper, nor like a Priam in armor offer myself its champion), that the germ of dissolution of our Federal Government is in the constitution of the Federal judiciary; an irresponsible body (for impeachment is scarcely a scarecrow), working like gravity by night and by day, gaining a little to-day and a little to-morrow, and advancing its noiseless step like a thief over the field of jurisdiction, until all shall be usurped from the States and the government of all be consolidated into one. To this I am opposed, because when all government, domestic and foreign, in little as in great things, shall be drawn to Washington as the center of all power, it will render powerless the checks provided of one government on another, and will become as venal and oppressive as the government from which we separated. It will be as in Europe, where every man must be either pike or gudgeon, hammer or anvil.

If the States look with apathy on this silent descent of their Government into the gulf which is to swallow all, we have only to weep over the human character formed uncontrollable but by a rod of iron, and the blasphemers of man as incapable of self-government become his true historians.

This letter to Mr. Hammond reiterates the sentiments before expressed, and in addition thereto he uses utterances which it would be well for Congress and the people in general to consider.

I will now read what is said by Mr. Jefferson in his letter dated July 2, 1822, to Hon. William T. Barry:

We already see the power installed for life, responsible to no authority (for impeachment is not even a scarecrow), advancing with a noiseless and steady pace to the great object of consolidation. The foundations are already deeply laid by their decisions for the annihilation of constitutional State rights, and the removal of every check, every counterpoise to the engulfing power of which themselves are to make a sovereign part.

If ever this vast country is brought under a single government it will be one of the most extensive corruption, indifferent and incapable of a wholesome care over so wide a spread of surface. This will not be borne, and you will have to choose between reformation and revolution.

If I know the spirit of this country, the one or the other is inevitable. Before the canker is become inveterate, before its venom has reached so much of the body politic as to get beyond control, remedy should be applied.

Let the future appointments of judges be of four or six years and renewable by the President and Senate. This will bring their conduct at regular periods under revision and probation and may keep them in equipoise between the general and special governments. We have erred in this point by copying England, where certainly it is a good thing to have the judges independent of the king. But we have omitted to copy their caution also, which makes a judge removable on the address of both legislative houses. That there should be public functionaries independent of the nation, whatever may be their demerit, is a solecism in a republic of the first order of absurdity and inconsistency.

On March 4, 1823, Jefferson wrote to Judge Johnson, and in closing the letter he says:

I can not lay down my pen without recurring to one of the subjects of my former letter, for in truth there is no danger I apprehend so much as the consolidation of our Government by the noiseless, and therefore unalarming, instrumentality of the Supreme Court. This is the form in which Federalism now arrays itself, and consolidation is the present principle of distinction between Republicans and the pseudo-Republicans, but real Federalists.

The Siebold and Yarborough cases were, it seems, anticipated by this sagacious man. He was so impressed with these views that three months later, on June 12, 1823, he again wrote a letter to Judge Johnson, in which he says:

I have stated above that the original objects of the Federalists were, first, to warp our Government more to the form and principles of monarchy, and, second, to weaken the barriers of the State governments as co-ordinate powers. In the first they have been so completely foiled by the universal spirit of the nation that they have abandoned the enterprise, shrunk from the odium of their old appellation, taken to themselves a participation of ours, and under the pseudo-Republican mask are now aiming at their second object, and strengthened by unsuspecting or apostate recruits from our ranks are advancing fast toward an ascendency. I have been blamed for saying that a prevalence of the doctrines of consolidation would one day call for reformation or revolution. I answer by asking if a single State of the Union would have agreed to the Constitution had it given all powers to the General Government; if the whole opposition to it did not proceed from the jealousy and fear of every State of being subjected to the other States in matters merely its own; and if there is any reason to believe the States more disposed now than then to acquiesce in this general surrender of all their rights and powers to a consolidated government, one and undivided.

It seems almost an assumption for me to descant upon these words of wisdom so tersely and ably expressed. I will therefore, without comment, proceed to read what was said by Mr. Jefferson in his letter dated October 31, 1823, to Hon. M. Coray:

At the establishment of our Constitution the judiciary bodies were supposed to be the most helpless and harmless members of the Government.

Experience, however, soon showed in which way they were to become the most dangerous; that the insufficiency of the means provided for their removal gave them a freehold and irresponsibility in office; that their decisions, seeming to concern individual suitors only, pass silent and unheeded by the public at large; that these decisions, nevertheless, become law by precedent, sapping, by little and little, the foundations of the Constitution and working its change by construction before any one has perceived that that invisible and helpless worm has been busily employed in consuming its substance.

In truth, man is not made to be trusted for life, if secured against all liability to account.

Prior to writing the letters I have referred to, Mr. Jefferson had no doubt read the proceedings of the constitutional convention, and in the conventions of the States and in Congress regarding the powers of the judiciary, and no doubt had observed the efforts to amend the Constitution to which I have referred.

I will now read an extract from a letter written after the speeches of Senator Benton and the publication of the report of Mr. McDuffie.

The letter is addressed to Hon. Edward Livingston and is dated March 25, 1825.

One single object, if your provision attains it, will entitle you to the endless gratitude of society: that of restraining judges from usurping legislation. And with no body of men is this restraint more wanting than with the judges of what is commonly called our General Government, but what I call our foreign department. They are practicing on the Constitution by inference, analogies, and sophisms, as they would on an ordinary law.

* * * * * * *

They imagine they can lead us into a consolidated government, while their road leads directly to its dissolution. This member of the Government was at first considered as the most harmless and helpless of all its organs. But it has proved that the power of declaring what the law is, *ad libitum*, by sapping and mining slyly and without alarm the foundations of the Constitution, can do what open force would not dare to attempt. I have not observed whether, in your code, you have provided against caucusing judicial decisions, and for requiring judges to give their opinions *seriatim*, every man for himself, with his reasons and authorities at large, to be entered of record in his own words.

This letter may be said to be an utterance from the grave of this great man.

He was then eighty-two years of age, and died shortly after this letter was written.

Mr. Jefferson's great knowledge of human nature and his patriotic devotion to freedom are universally acknowledged.

He had a grasping intellect; his reading had been extensive, and his learning from travel as well as books had cultivated his mind to a degree seldom attained in that or any other period.

If Mr. Jefferson was right, I ask this House is it best to enact a law which virtually places elections in the hands of Federal judges?

JEFFERSON'S VIEWS JUSTIFIED.

To show that Jefferson was not entirely wrong in his view that judges could be biased I desire to call your attention to the action of Judge Woods with regard to the famous blocks-of-five letter, written by Mr. Dudley.

On October 24, 1888, Mr. Dudley gave instructions to Republican managers of election, which I will read:

Divide the floaters into blocks of five, and put a trusted man with necessary funds in charge of these five, and make him responsible that none get away and that all vote our ticket.

The New York World, in commenting upon this matter, said:

Judge Woods at one time, in one of his charges to the grand jury of Indianapolis, led the country to believe that he would do his duty in the matter; but, instructed from Washington, he positively directed the grand jury to let the blocks-of-five bribers go quit and free. Dudley about this time was threatening to use the "dynamite" he had in his possession unless the Harrison beneficiaries of his crime came to his rescue. Two more contradictory charges of a United States judge were probably never delivered in the case of any one accused of crime. Here they are, side by side:

ORIGINAL INSTRUCTION TO THE GRAND JURY.	REVISED INSTRUCTIONS.
The latter clause of the section makes any one guilty who counsels bribery. * * * This clause makes it an offense for any one to advise another to attempt to commit any of the offenses named in this section; so that, while it is not a crime to make the attempt, it is a crime to advise another to make the attempt. If A attempts to bribe B, that is no offense under this statute; but if A advises B to bribe C, then the one who commends or gives this advice is an offender under this law. And I will say that there is some wisdom in this provision.	It results, of course, that the mere sending by one to another of a letter or document containing advice to bribe a voter, or setting forth a scheme for such bribery, however bold and reprehensible, is not indictable. There must be shown in addition an attempt by the receiver of the letter, or of some other instigated by him to execute the scheme by bribing or attempting to bribe some voter in respect to the election of Congressmen, or in such way as to affect such election. Another point deserves consideration in this connection. If the view be adopted that advice not acted upon may constitute a crime, then the exact words used in giving the advice, whether oral or written, must be ascertained, and every possible intendment in favor of innocence must be allowed and all doubts resolved in favor of the accused. If the use of money be advised, but the particular purpose of its use be not clearly and indeed conclusively indicated, a possible innocent use will be presumed; and even if the purpose to bribe be unquestionable, and yet it appears that the design was to purchase votes for other officers than Representatives in Congress, it would be no crime under the statute which is designed to protect the election for that office.

I could give numerous other instances, but this is sufficient to show that judges are only human, and to keep the judicial ermine in its best purity we must keep our judges as free as possible from political strife.

It has been developed in this debate that this bill is animated in a

great degree by a desire to punish that part of our country which seceded from the United States thirty years ago.

Much has been said in speeches from the other side of the House upon this subject.

There was responsibility in this matter, but I ask if the young people of the South who will suffer from the effects of this bill had any part in this responsibility and I ask if the honorable, high-toned men of the North will not admit so much of the responsibility as the truth of history shows rested upon them.

It was a period in the history of our country which to be understood must be viewed from the pinnacle of that time.

If we look back from the standpoint of to-day we see nothing of the picture which was presented to the American people thirty years ago.

AN APPEAL FOR JUSTICE.

I ask the gentleman to look back to the history of those times, and ask him to admit that the people of the South were very largely urged to adopt the course they pursued by leading men and leading Republican papers in the North.

I do not like to recur to these things at this time, but I know I will be pardoned for calling attention to undisputed facts of history.

I do it in the hope that some of our Republican friends from the North will give these matters calm reflection, and I know if they will do this they can not but willingly shoulder at least a portion of the responsibility regarding the events which have been recurred to so often in this debate.

I say what I do in the kindest spirit possible, and beg every one to take my remarks in the manner and spirit that I intend them.

The older members of this House remember how often the leading papers of the North emblazoned in their columns the words:

Erring sisters, go in peace!

And they also remember articles which expressed and reiterated the sentiment that it was best to let the South go.

In Mr. Greeley's New York Tribune of November 9, 1860, he said:

GOING TO GO.

If the cotton States shall become satisfied that they can do better out of the Union than in it, we insist on letting them go in peace. The right to secede may be a revolutionary one, but it exists nevertheless.

And again, in the same issue of his widely circulated and influential paper, Mr. Greeley said:

We must ever resist the asserted right of any State to remain in the Union and nullify or defy the laws thereof. To withdraw from the Union is quite another matter; and whenever a considerable section of our Union shall deliberately resolve to go out we shall resist all coercive measures designed to keep it in. We hope never to live in a republic whereof one section is pinned to the residue by bayonets. Let them have both sides of the question fully presented; let them reflect, deliberate, then vote; and let the action of secession be the echo of an unmistakable popular fiat. A judgment thus rendered, a demand for separation so backed, would either be acquiesced in without the effusion of blood, or those who rushed upon carnage to defy and defeat it would place themselves clearly in the wrong.

The New York Tribune of November 16, 1860, again announced their views to the Southern people in an article headed "Secession in practice," in which the paper used the following words:

Still we say in all earnestness and good faith, whenever a whole section of this Republic, whether a half, a third, or only a fourth, shall truly desire and demand a separation from the residue, we shall earnestly favor such separation. If the fifteen slave States, or even the eight cotton States alone, shall quietly, decisively say to the rest, "We prefer to be henceforth separated from you," we shall insist that they be permitted to go in peace. War is a hideous necessity at best, and a civil conflict, a war of estranged and imbittered fellow-countrymen, is the most hideous of all wars. Whenever the people of the cotton States shall have definitively and decisively made up their minds to separate from the rest of us we shall urge that the proper steps be taken to give full effect to their decision.

Three days afterward, on the 19th, the same paper uses these words:

Now, we believe and maintain that the Union is to be preserved only so long as it is beneficial and satisfactory to all parties concerned.

We do not believe that any man, any neighborhood, town, county, or even State may break up the Union in any transient gust of passion; we fully comprehend that secession is an extreme, an ultimate resort—not a constitutional, but a revolutionary remedy. But we insist that this Union shall not be held together by force whenever it shall have ceased to cohere by the mutual attraction of its parts; and whenever the slave States or the cotton States only shall unitedly and coolly say to the rest, "We want to get out of the Union," we shall urge that their request be acceded to.

The New York Herald of Friday, November 23, 1860, said:

THE DISUNION QUESTION—A CONSERVATIVE REACTION IN THE SOUTH.

We publish this morning a significant letter from Governor Letcher, of Virginia, on the subject of the present disunion excitement in the South, southern constitutional rights, northern State acts of nullification, and the position of Virginia in this crisis. * * * To this end would it not be well for the conservative Union men of the city of New York to make a demonstration, a Northern movement of conciliation, concession, and harmony?

Coercion in any event is out of the question. A Union held together by the bayonet would be nothing better than a military despotism. Conciliation and harmony, through mutual concessions, in a reconstruction of the fundamental law, between the North and South, will restore and perpetuate the Union contemplated by the fathers. So now that the conservative men of the South are moving let the Union men of the North second their endeavors, and let New York, as in the matter of the compromises of 1850, lead the way.

And on the following day, November 24, the Tribune says:

FEDERAL COERCION.

Some of the Washington correspondents to egraph that Mr. Buchanan is attempting to map out a middle course in which to steer his bark during the tempest which now howls about him. He is to condemn the asserted right of secession, but to assert in the same breath that he is opposed to keeping a State in the Union by what he calls Federal coercion. Now, we have no desire to prevent secession by coercion, but we hold this position to be utterly unsupported by law or reason.

I will also quote an article from The New York Daily Tribune, Friday, November 30, 1860:

ARE WE GOING TO FIGHT?

But if the cotton States generally unite with her in seceding, we insist that they can not be prevented and that the attempt must not be made. Five millions of people, more than half of them of the dominant race, of whom at least half a million are able and willing to shoulder muskets, can never be subdued while fighting around and over their own hearthstones. If they could be they would no longer be equal members of the Union, but conquered dependencies. * * * We propose to wrest this potent engine from the disunionists by saying frankly to the slave States:

"If you choose to leave the Union, leave it, but let us have no quarrel about it. If you think it a curse to you and an unfair advantage to us, repudiate it and see if you are not mistaken. If you are better by yourselves, go and God speed you. For our part we have done very well with you and are quite willing to keep along with you, but if the association is irksome to you, we have too much self-respect to insist on its continuance. We have lived by our industry thus far and hope to do so still, even though you leave us."

We repeat that only the sheen of Northern bayonets can blind the South wholly to the evils of secession, but that may do it. Let us be patient, neither speaking daggers nor using them, standing to our principles, but not to our arms, and all will yet be well.

I will read an extract from an editorial in the New York Times of December 3, 1860:

By common consent, moreover, the most prominent and tangible point of offense seems to be the legislation growing out of the fugitive-slave law. Several of the Northern States have passed personal-liberty bills, with the alleged intent to prevent the return of fugitive slaves to their masters.

From Union men in every quarter of the South come up the most earnest appeals to the Northern States to repeal these laws. Such an act, we are assured, would have a powerful effect in disarming the disunion clamor in nearly all the Southern States and in promoting the prospects of a peaceful adjustment of all pending differences.

The next day, December 4, The New York Times publishes another article, in which it says:

Mr. Weed has stated his opinion of the crisis thus:

1. There is imminent danger of a dissolution of the Union.

2. The danger originated in the ambition and cupidity of men who desire a Southern despotism and in the fanatic zeal of the Northern Abolitionists, who seek the emancipation of slaves regardless of consequences.

3. The danger can only be averted by such moderation and forbearance as will draw out, strengthen, and combine the Union sentiment of the whole country.

Each of these statements will command general assent.

The only question likely to arise relates to the practical measures by which the "moderation and forbearance" can be displayed.

And while the South Carolina convention was in session and before any State had seceded and when it was doubted by many whether such action would be taken, Mr. Greeley said:

If it (the Declaration of Independence) justifies the secession from the British Empire of three millions of colonists in 1776, we do not see why it would not justify the secession of five millions of Southrons from the Federal Union in 1861. If we are mistaken on this point, why does not some one attempt to show wherein and why? For our own part, while we deny the right of slaveholders to hold slaves against the will of the latter, we can not see how twenty millions of people can rightfully hold ten, or even five, in a detested Union with them by military force.

In the same issue of Mr. Greeley's paper we read the following:

If seven or eight contiguous States shall present themselves authentically at Washington, saying: "We hate the Federal Union; we have withdrawn from it; we give you the choice between acquiescing in our secession and arranging amicably all incidental questions on the one hand and attempting to subdue us on the other," we could not stand up for coercion, for subjugation, for we do not think it would be just. We hold the right of self-government even when invoked in behalf of those who deny it to others. So much for the question of principle.

This conservative view of the question which Mr. Greeley gave to the world with such emphasis and in which he expressed his opinion of the principle involved was reiterated for days, weeks, and months with the characteristic persistence of that able leader.

Any attempt to compel them by force to remain would be contrary to the principles enunciated in the immortal Declaration of Independence, contrary to the fundamental ideas on which human liberty is based.

And months after the election of Mr. Lincoln, after most of the Southern States had seceded; after the people of the South had adopted a constitution and organized their new Confederate government; after they had raised and equipped an army, appointed embassadors to foreign courts, and convened a congress; after they had taken possession of three-fourths of the arsenals and forts within her territory, and enrolled her as one of the nations of the earth, Mr. Greeley's paper indorsed the action of the Southern people as fully as it was possible for language to enable him to do so. Mr. Greeley said:

We have repeatedly said, and we once more insist, that the great principle embodied by Jefferson in the Declaration of American Independence, that governments derive their just powers from consent of the governed, is sound and just; and that if the slave States, the cotton States, or the Gulf States only choose to form an independent nation they have a clear, moral right to do so. Whenever it shall be clear that the great body of Southern people have become conclusively alienated from the Union and anxious to escape from it, we will do our best to forward their views.

Mr. Greeley was earnestly and ably supported in his views by the most prominent men and able editors of Republican papers all over the North.

I cite the following from the Commercial, which was certainly the leading Republican paper of Ohio. After Mr. Lincoln was inaugurated the Commercial said:

We are not in favor of blockading the Southern coast. We are not in favor of retaking by force the property of the United States now in possession of the

seceders. We would recognize the existence of a government formed of all the slaveholding States and attempt to cultivate amicable relations with it.

After The New York Tribune and other Northern papers had announced to the world that secession was a legal and proper remedy Mr. Greeley now informs the people of the South that no concession would be made by the dominant party which was about to assume control of the Government, and he also admitted that the rights of the South in the Union, as they understood them, would not be regarded.

This was involved in his statement that he had the best authority for saying that Mr. Lincoln was opposed to concessions which looked like buying the privilege of taking possession of the Government.

This was announced in an article which was published in the Tribune on January 30, 1861, which was in these words:

We do not hesitate to say that these statements are false and calumnious. We have the best authority for saying that Mr. Lincoln is opposed to all concessions of the sort. We know that his views are fully expressed in his own language, as follows: "I will suffer death before I will consent or advise my friends to consent to any concession or compromise which looks like buying the privilege of taking possession of the Government to which we have a constitutional right."

It will be observed that Mr. Lincoln does not say nor does Mr. Greeley assume that the concessions asked for were not right.

Mr. Lincoln does not say that they were concessions which as a matter of right ought not to be granted. He speaks of the matters then pending before Congress, all of which were efforts to uphold the Constitution, as a concession or compromise. His language virtually admits that the demand for the concessions referred to was right, but he puts his refusal to grant them on entirely different grounds. In giving his reasons for not being willing to entertain the asked-for concessions, he uses these words:

Because, whatever I might think of the merit of the various propositions before Congress, I should regard any concession in the face of menace as the destruction of the Government itself and a consent on all hands that our system shall be brought down to a level with the existing disorganized state of affairs in Mexico.

On the 6th of February, 1861, Judge Chase made a speech before the Peace Congress, in which he, with great emphasis, said that the Northern States would not and ought not to comply with the obligation of the Constitution, which was demanded by the Southern people.

Mr. Chase said:

The result of the national canvass which recently terminated in the election of Mr. Lincoln has been spoken of by some as the effect of a sudden impulse or of some irregular excitement of the popular mind; and it has been somewhat confidently asserted that, upon reflection and consideration, the hastily formed opinions which brought about the election will be changed.

* * * * * * *

I can not take this view of the result of the Presidential election. I believe, and the belief amounts to absolute conviction, that the election must be regarded as a triumph of principles cherished in the hearts of the people of the free States.

* * * * * * *

We have elected him (Mr. Lincoln). After many years of earnest advocacy and of severe trial we have achieved the triumph of that principle. By a fair and unquestioned majority we have secured that triumph. Do you think we, who represent this majority, will throw it away? Do you think the people will sustain us if we undertake to throw it away? I must speak to you plainly, gentlemen of the South. It is not in my heart to deceive you. I therefore tell you explicitly that if we of the North and West would consent to throw away all that has been gained in the recent triumph of our principles the people would not sustain us, and so the consent would avail you nothing.

Mr. Chase in that speech, with great force, gave the South to understand that the Northern States would not and ought not to comply with the obligations of the Federal Constitution. While many people in the South were wavering as to whether to advocate secession or to trust to the Lincoln Administration for the preservation of their rights, and naturally looking to General Scott, who for twenty years had commanded the Army of the United States, the only expression that came from his lips was—

Wayward sisters, depart in peace.

The public press informed the people of the South that Mr. Chase said:

The South is not worth fighting for; let them alone.

And that Mr. Seward said, in his speech of December 22, 1860:

Secession was a mere political threat, unworthy of notice.

And that a great Republican leader in referring to the clause of the Constitution then under discussion declared it to be—

a league with hell and a covenant with the devil.

DANIEL WEBSTER'S SPEECHES.

The people of the South remembered the great speech of Daniel Webster delivered at Buffalo on May 22, 1851, in which he said:

Then there was the other matter, and that was the fugitive-slave law. Let me say a word about that. Under the provisions of the Constitution, during Washington's Administration, in the year 1793, there was passed by general consent a law for the restoration of fugitive slaves. Hardly any one opposed it at that period; it was thought to be necessary in order to carry the Constitution into effect; the great men of New England and New York all concurred in it. It passed and answered all the purposes expected from it till about the year 1841 or 1842, when the State interfered to make enactments in opposition to it. * * *

Now I undertake as a lawyer and on my professional character to say to you and to all that the law of 1850 is decidedly more favorable to the fugitive than General Washington's law of 1793. * * * Such is the present law, and, much opposed and maligned as it is, it is more favorable to the fugitive slave than the law enacted during Washington's Administration in 1793, which was sanctioned by the North as well as by the South. The present violent opposition has sprung up in modern times. From whom does this clamor come? * * * Look at the proceedings of the anti-slavery conventions in Ohio, Massachusetts, and at Syracuse in the State of New York. What do they say? That, so help them God, no colored man shall be sent from the State of New York back to his master in Virginia. Do not they say that? And to the fulfillment of that they pledge their lives, their fortunes, and their sacred honor. Their sacred honor! They pledge their sacred honor to violate the Constitution; they pledge their sacred honor to commit treason against the laws of their country.

They also remembered his great speech at Capon Springs, in which he said:

The leading sentiment in the toast from the chair is the Union of the States. The Union of the States. What mind can comprehend the consequences of that Union, past, present, and to come? The Union of these States is the all-absorbing topic of the day; on it all men write, speak, think, and dilate from the rising of the sun to the going down thereof. And yet, gentlemen, I fear its importance has been but insufficiently appreciated.

Again Mr. Webster says:

How absurd it is to suppose that when different parties enter into a compact for certain purposes either can disregard any one provision and expect, nevertheless, the other to observe the rest! I intend, for one, to regard and maintain and carry out to the fullest extent the Constitution of the United States, which I have sworn to support in all its parts and all its provisions. It is written in the Constitution—

"No person held to service or labor in one State under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due."

That is as much a part of the Constitution as any other and as equally binding and obligatory as any other on all men, public or private. And who denies this? None but the Abolitionists of the North. And pray what is it they will not deny? They have but the one idea; and it would seem that these fanatics at the North and the secessionists at the South are putting their heads together to devise means to defeat the good designs of honest, patriotic men. They act to the same end and the same object, and the Constitution has to take the fire from both sides.

Mr. Webster, in another part of the same speech, said:

I have not hesitated to say, and I repeat, that if the Northern States refuse willfully and deliberately to carry into effect that part of the Constitution which respects the restoration of fugitive slaves, and Congress provide no remedy, the South would no longer be bound to observe the compact. A bargain can not be broken on one side and still bind the other side. I say to you gentlemen in Virginia, as I said on the shores of Lake Erie and in the city of Boston, as I may say again in that city or elsewhere in the North, that you of the South have as much right to receive your fugitive slaves as the North has to any of its rights and privileges of navigation and commerce.

Mr. Webster also said:

I am as ready to fight and to fall for the constitutional rights of Virginia as I am for those of Massachusetts.

Mr. Webster was a constitutional lawyer, and he had read the proceedings of the convention which had adopted this Constitution. He knew that the provision of the Constitution which he was discussing was unanimously adopted by the New England States. And the fundamental law which was created in 1787, Mr. Webster felt they had no right to disregard in 1851. I will read the proceedings of August 29, page 306, of the constitutional convention of the United States:

It was moved and seconded to agree to the following proposition, to be inserted after the fifteenth article:

"If any person bound to service or labor in any of the United States shall escape into another State, he or she shall not be discharged from such service or labor in consequence of any regulations subsisting in the State to which they escape, but shall be delivered up to the person justly claiming their service or labor."

Which passed unanimously in the affirmative.

It would seem to me that the facts I have already recited would show that the responsibility of the great catastrophe was due in some degree to the action of the people in the Northern half of our land.

But as the gentleman from Massachusetts [Mr. LODGE] seems to think that his State is entirely free from responsibility on the question of secession, I will read a resolution passed by the Legislature of Massachusetts more than eighty-five years ago, which was in these words:

That the annexation of Louisiana to the Union transcends the constitutional power of the Government of the United States. It formed a new confederacy to which the States united by the former compact are not bound to adhere.

EX-PRESIDENT JOHN QUINCY ADAMS.

And to further show that other great men of Massachusetts concurred with the conservative views which Mr. Greeley so strongly announced, I quote from the great speech Ex-President John Quincy Adams delivered, I believe, April 30, 1839, half a century after Washington was inaugurated, the occasion being the celebration of the fiftieth anniversary of the commencement of our Government under the Constitution. Mr. Adams said:

But the indissoluble union between the several States of this confederated nation is, after all, not in the right, but in the heart. If the day should ever come (may Heaven avert it!) when the affections of the people of these States shall be alienated from each other; when the fraternal spirit shall give way to cold indifference, or collision of interest shall fester into hatred, the bands of political association will not long hold together parties no longer attracted by the magnetism of conciliated interests and kindly sympathies; and far better will it be for the people of the disunited States to part in friendship from each other than to be held together by constraint. Then will be the time for reverting to the precedents which occurred at the formation and adoption of the Constitution to form again a more perfect Union by dissolving that which could no longer bind and to leave the separated parts to be reunited by the law of political gravitation to the center.

To show that Mr. Adams felt that these views were consistent with a true interpretation of the original compact which bound the people together, I will call attention to the fact that three years later, January 24, 1842, he presented a petition to Congress from citizens of Haverhill, Mass. I read from Congressional Globe, volume 11, page 977:

Monday, January 24.—In the House, Mr. Adams presented the petition of sundry citizens of Haverhill, in the State of Massachusetts, praying that Congress will immediately adopt measures peaceably to dissolve the Union of these States:

First, because no union can be agreeable or permanent which does not present prospects of reciprocal benefits; second, because a vast proportion of the revenues of one section of the Union is annually drained to sustain the views and course of another section, without any adequate return; third, because, judging from the history of past nations, that Union, if persisted in in the present state of things, will certainly overwhelm the whole nation in destruction.

On the question of the reception of the foregoing petition, there were 40 votes in favor of it and 166 votes against it. (Volume 11, page 333.)

Immediately Mr. Gilmer introduced the following, page 983:

Resolved, That, in presenting to the consideration of this House a petition for the dissolution of the Union, the member from Massachusetts [Mr. Adams] has justly incurred the censure of this House.

Mr. Marshall, of Kentucky, introduced the following:

Resolved, therefore, That the Hon. John Q. Adams, a member from Massachusetts, in presenting for the consideration of the House of Representatives of the United States a petition praying the dissolution of the Union, has offered the deepest indignity to the House of which he is a member; an insult to the people of the United States, of which that House is the legislative organ; and will, if this outrage be permitted to pass unrebuked and unpunished, have disgraced his country, through their representatives, in the eyes of the whole world.

Mr. Adams, in defending his position, said, page 980:

I hold that it is no perjury, that it is no high treason, but the exercise of a sacred right to offer such a petition, and that it is as false in morals as it is inhuman to fasten that charge on men who, under the countenance of such declarations as I have here quoted, come and ask of this House a redress of grievances. And if they do mistake their remedy this Government should not turn them away and charge them with high treason and subornation of perjury; but ought to take it up, to weigh the considerations which can be urged in their favor; and if there be none but those which are so eloquently set forth in the pamphlet I have quoted, these should be considered. If they have mistaken their remedy the House should do as the gentleman from Kentucky [Mr. Marshall] told us he was ready to do—admit the facts.

The Congressional Globe says, page 236:

The trial of Mr. Adams, to the exclusion of all other business, commenced on the 25th of January, and terminated on the 7th of February, when the whole proceedings were laid on the table without deciding a single point. The expenses of the House during that time thus wasted exceeded $26,000.

This action of the House was construed by some people as an indication that circumstances might arise which would justify States in withdrawing from the Union.

MASSACHUSETTS RESOLUTIONS.

I will now read from page 319, "Acts and resolutions passed by the Legislature of Massachusetts in the year 1844:"

1. *Resolved*, That the power to unite an independent foreign state with the United States is not among the powers delegated to the General Government by the Constitution of the United States.

2. *Resolved*, * * * That the project of the annexation of Texas, unless arrested on the threshold, may drive these States into a dissolution of the Union.

3. *Resolved*, That his excellency the governor be requested to transmit a copy of the foregoing resolves to each of the Senators and Members of the House of Representatives of this Commonwealth in the Congress of the United States.

4. *Resolved*, That his excellency the governor be requested to transmit a copy of the same resolves to the Executive of the United States and of the several States.

Approved by the governor March 15, 1844.

Our people also recalled that the Legislature of Massachusetts, as if apparently to

EMPHASIZE THEIR VIEWS,

selected the one hundred and thirteenth anniversary of the birth of the Father of our Country to pass another secession resolution, which I read from pages 598 and 599 of the same volume. I call especial attention to the second resolution:

Resolved, That Massachusetts has never delegated the power to admit into the Union States or Territories without or beyond the original territory of the States and Territories belonging to the Union at the adoption of the Constitution of the United States.

Resolved, * * * and as the powers of legislation granted in the Constitution of the United States to Congress do not embrace the case of the admission of a foreign state or foreign territory by legislation into the Union, such an act of admission would have no binding force whatever on the people of Massachusetts.

Resolved, That his excellency the governor be requested to transmit copies of the preceding report and resolves to the President of the United States, the several Senators and Representatives in Congress from this Commonwealth, and the governors of the several States.

Approved by the governor February 22, 1845.

I would not have called attention to the facts which I have recited were it not that there are many men in this Hall who, in the turmoil of thirty years, have entirely forgotten the circumstances.

The question of secession was settled forever by a great war in which the people of the South were the principal sufferers, and I know that the high-minded people of the North are not willing to see measures adopted which will retard their progress.

I have not referred to the facts which I recited in any spirit of complaint or censure, but in the hope that it will cause some men to hesitate before they act upon the measure now before the House.

After years of disappointment and toil we are beginning to develop new sources of progress and wealth.

To show what is being done to-day, I will read a paragraph in the last number of the Baltimore Industrial Record.

THE PROGRESS OF THE SOUTH.

We give in this number of the Record nine columns of two to four line announcements of a week's progress in Southern development. These items represent millions of dollars' investment in Southern industries and thousands of good new citizens for the South, who are warmly welcomed and given the right hand of fellowship. Industrial cities are springing up amid coal, iron, marble, granite, and around water-powers that have been heretofore uninhabited. Southward the course of empire takes its way, and well it may, for here is the fairest land for all agricultural and rural pursuits, the most genial climate, the brightest skies, the widest virgin forests, the richest mines of coal and all metals, inexhaustible deposits of marble, granite, limestone, and sandstone, rarely beautiful rivers, immense water-powers, and the most hospitable people in the world.

I appeal to the members of this House to oppose this bill because it will retard the progress and injure the prosperity of the South and be of no benefit whatever to the North.

I appeal to them to oppose this bill because it destroys the principles of our government and changes our system of elections, which under the old time-honored methods have been satisfactorily conducted for a century.

I appeal to them to oppose this bill because its operation will drag the ermine of our Federal judges into the turmoils of political strife.

And, finally, I appeal to members of this House to oppose the bill because it is un-American, undemocratic, unrepublican, at variance with the Constitution, and directly opposed to the theories under which we have grown to be a great, happy, free, and prosperous people. [Applause.]

[Here the hammer fell.]

Wednesday, July 2, 1890.

Mr. WHEELER. Mr. Speaker, I desire to be recognized.

The SPEAKER. The gentleman from Alabama.

Mr. WHEELER, of Alabama. Mr. Speaker, in the few minutes I have to discuss this matter I want to say one word in reply to the remarks of the gentleman from Illinois [Mr. MASON] on yesterday. He stated that before he came to Congress he was convinced that the Southern people, all the Southern people, would steal ballots, and that any man who would steal ballots would steal a horse or any other property. He said he had now modified his opinion, and while he did not believe they would steal property, he believed every one of them would be guilty of the theft of a ballot.

The above was the substance of the gentleman's statement.

He has withheld his remarks from the RECORD and I can not give his exact words, but others have similarly expressed themselves.

Is it possible that such words can be uttered in the American Congress regarding a people nearly all of whom are descended from our fathers of the Revolution, men who have done more than any others to give character, force, and tone to American institutions, men many of whose grandsires fought under Greene, Marion, Gates, and Washington, and whose misfortunes, reverses, and calamities have been largely due to their love for the Constitution of their country and the principles of freedom for which their grandsires fought?

Is it possible, Mr. Speaker, that those who confess themselves so ignorant as to the condition of the people of such a vast section of the country should venture to cast their votes upon a matter of such great importance to the whole country, to the whole people of the South, and to the integrity of our free institutions? [Applause.]

Can those who confess that they are actuated by passion and prejudice and who show that they know nothing of the character and sentiments of the people of half of our country get their own consent to aid in the enactment of a law which they openly assert is only to apply to that part of the country regarding which they have no knowledge?

Mr. George Ticknor Curtis, in the preface to his edition of 1889 of his work on the Constitution, refers to Gibbon's History of the Decline and Fall of the Roman Empire, and says:

Perhaps some future Gibbon, centuries hence, will write the Decline and Fall of the American Republic.

God forbid that such a calamity should ever befall this country, which we all love, and in which we all take such commendable pride; but should it come, it will be the result of just such poison as is concealed in the measure now under consideration. [Applause.]

Mr. Speaker, I also wish to reply to the statements made by many gentlemen on that side of the House, and repeated by the gentleman from Ohio [Mr. JOSEPH D. TAYLOR] last night.

This speech also has been withheld and does not appear in the RECORD, and I state his remarks as I recall them. The purpose of his speech was, or seemed to be, an effort to convince this House that the people of the North could not go South and be received there with the courtesy due to gentlemen. I deny such statements *in toto*, and I call upon any gentleman upon that side of the House, Republicans as they all are, to state if he has ever in his intercourse with Southern people, at their homes or elsewhere, received anything but the courtesy, and every courtesy, which he could possibly receive at his own home. [Applause.]

I here upon this floor protest that there is no truth in any such allegations. And I assert this, that for the last twenty-five years no gentleman of the North ever visited the South without being treated with all the kindness and courtesy that he would have received at any locality in the North or that he would have received in his own home.

I freely admit that it is possible for a man who is devoid of the attributes of a gentleman and who seeks a quarrel to succeed in his purposes in the South as well as in any other section of the land, but I utterly deny the statement that a Republican can not go all over the South as a Republican and express the principles of a Republican. I wish now to quote from a speech by General Warner, and I call upon my friend from Tennessee [Mr. EVANS], whom I see in his seat and who heard this speech, to state if all he said is not true in every respect.

Mr. EVANS ought to be a good witness for you. He has lived in the South for twenty-five years and has been known all that time as an ex-Union soldier and an outspoken Republican. Mr. EVANS has never told me what he would answer, but I know he will state what is true, and the truth is all the vindication we desire. General Warner was a man from Ohio who had the most abundant opportunities for knowledge

upon this subject. This speech was made to Federal soldiers at a reunion of the Army of the Cumberland in the city of my friend, Mr. EVANS.

General Willard Warner had been a gallant soldier, had fought under General Sherman, and, as I have stated, was once a Senator of the United States. He addressed the Society of the Army of the Cumberland on September 14, 1880. I hold in my hand a book containing his speech, a paragraph from which I will read:

General Garfield said right when he said that if the soldiers had all these difficult questions to settle they would have been settled happily long ago. I have lived here in the South.

There are men here who know me as a radical Republican of the worst kind. I have lived here for sixteen years of the prime of my life, and I say it here, with pride and thankfulness, that I have yet to receive the first word or the first act of unkindness from a Confederate soldier, and I never expect to as long as I may live here.

These are words spoken by an ex-Federal general, and who as a Republican was elected to the Senate of the United States from Alabama.

He was a friend and associate of Lincoln and Garfield. He continued his speech, and emphasized his view regarding soldiers in these words:

The harsh words and language and insults come from those gentlemen, largely professional politicians, * * * who talk now, but who shirked in the fight when fighting men were in sharp demand. And now I say confusion to them. Confounded confusion to them—to the men who now, sixteen years after we fighting soldiers have laid down our arms, would wave their red flag in the face of this sorrowing nation. Their time has gone by, and the soldiers should everywhere be heard as they are being heard to-day.

There was nothing in this speech about lack of courtesy. The people all over the South appreciate and desire the society of gentlemen, and they give evidence of their appreciation by seeking the acquaintance and association of gentlemen whenever they are met, without a thought as to their political views or whence they came. [Applause.]

Mr. OUTHWAITE. I desire to say that there is so much disorder upon the floor that it is impossible to hear the gentleman.

The SPEAKER. The Chair turned over the House to the gentleman in a good condition of order.

Mr. OUTHWAITE. I am in the midst of the disorder and I differ with the Speaker as to its being a good condition of order.

The SPEAKER. If gentlemen in the vicinity of the member addressing the House will have the kindness to cease conversation and if gentlemen will take their seats, there will be no difficulty in hearing what the gentleman from Alabama [Mr. WHEELER] has to say.

Mr. WHEELER. I call upon you, gentlemen, to remember the appeals made to you by the Southern Republicans on that side of the House. I refer to the words of warning from the gentleman from North Carolina [Mr. EWART] and the admonitions uttered by the gentleman from Louisiana [Mr. COLEMAN]. Also to what was said by the gentleman from Tennessee [Mr. HOUK]. All of them told us that elections in the South were fair and honest. At least, all said they were fair and honest so far as their knowledge extended. The gentleman from Tennessee [Mr. HOUK] told you they were perfectly fair in his district.

Mr. HOUK. Will the gentleman allow me? I said that the elections were fair as far as my locality was concerned, but I did not say, and I would not say, that they were fair in all parts of the South, because I know the contrary to be the fact.

Mr. WHEELER, of Alabama. I call upon any gentleman from the South to say that elections are not fair in his district, at least as far as Democrats are connected with them. I call upon any Southern Republican to say if Democrats do not conduct elections with perfect fairness in his district; if every one, black or white, can not cast his vote with perfect freedom, and if Democratic inspectors do not count them precisely as they are cast.

I call upon the gentleman from Tennessee [Mr. EVANS] to speak out and tell his Republican associates if their accusations against the South are true. Tell them if Democrats conduct elections fairly in his district. Tell us who is right in his statements on that subject Mr. MASON or myself. Tell them who is right, General Warner or the gentleman from Ohio [Mr. TAYLOR] as to the deportment of Southern people towards strangers. I see the gentleman is standing and ready to reply.

The SPEAKER. There were two minutes, and the Chair did not take that out of the gentleman's time.

Mr. WHEELER. I want the gentleman from Tennessee [Mr. EVANS] to inform his party associates upon these two subjects.

The SPEAKER. The gentleman has had seven minutes.

Mr. EVANS. I would like to answer the gentleman's inquiry.

The SPEAKER. The gentleman's time has expired.

Mr. CULBERSON. I yield to the gentleman from Alabama.

Mr. WHEELER. I now refer to other hideous features of this bill.

It is the first time that a law was ever passed by a civilized people providing, as it does in section 8, for a system of espionage over judicial officers. I also wish to call attention to section 12, which provides that all the returns shall be sent by mail, so that during their transmittal they may be handled by any number of irresponsible persons without a single precaution to prevent their being tampered with or destroyed, should the majority be against the favorite candidate. But the worst and most carefully hidden provision is in section 33, which covertly incorporates section 1982 of the Revised Statutes in such a manner as authorizes the polls to be controlled by United States soldiers, a practice so reprehensible that at an election for Members of Parliament in 1760, troops having been halted in a church-yard near the polls, Parliament unanimously adopted the following resolution:

That the presence of a regular body of armed soldiers at an election of Members to serve in Parliament is a high infringement of the liberties of the subject, a manifest violation of the freedom of elections, and an open defiance of the laws and constitution of this kingdom.

Again, no one will deny that the power sought to be bestowed upon these Federal supervisors virtually gives them the authority to determine and regulate the qualifications of voters, which is in direct violation of Article I, section 2, of the Constitution, which states that electors for members of Congress—

Shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

If there were no other unconstitutional feature in the bill, this alone would emphatically condemn it.

No. 52 of the Federalist, February 8, 1788, quotes the above section and says (Lippincott's edition, page 403):

The definition of the right of suffrage is very justly regarded as a fundamental article of republican government.

To have left it open for the occasional regulation of Congress would have been improper for the reason just mentioned.

But here comes Mr. LODGE and Mr. Davenport with their bill, which takes this question from the States and places it in the hands of an irresponsible supervisor. The Federalist then says:

To have reduced the different qualifications in the different States to one uniform rule would probably have been as dissatisfactory to some of the States as it would have been difficult to the convention.

The provision made by the convention appears, therefore, to be the best that lay within their option.

Mr. Madison and his friends assert him to be the author of this number of the Federalist, and as Hamilton indorsed it we have both these distinguished statesmen as authority upon this subject.

TWENTY-SEVENTH, TWENTY-EIGHTH, FORTIETH, AND FORTY-FIRST CONGRESSES.

In reply to the gentleman who asked what of the law passed by the Whig Congress of 1842 requiring Congressmen to be elected by districts, which Mr. Clifford so bitterly denounced, I will say that it was regarded so utterly unwarranted by the Constitution and obnoxious to free institutions that several States failed to obey it, and with rare exceptions it terminated the political career of those who voted for it; and when members elected in disregard of its provision presented themselves to the Twenty-eighth Congress, they were seated by the overwhelming vote of substantially two for to one against, and among the affirmative vote we see the names of Stephen A. Douglas, Hannibal Hamlin, and Preston King.

Every member of the House should read all of the proceedings and speeches on this subject in the Twenty-seventh and Twenty-eighth Congresses. I will call special attention to the speeches in Volume XI, part 2, Congressional Globe, Twenty-seventh Congress, as follows: Mr. Kennedy, page 316; Mr. Butler, page 319; Mr. Floyd, page 320; Mr. Davis, page 338; Mr. Goggin, page 340; Mr. Houston, page 341; Mr. Reynolds, page 345; Mr. Clifford, page 347; Mr. Atherton, page 397; Mr. Summers, page 351; Mr. Payne, page 360; Mr. Pope, page 371; Mr. Barnard, page 379; Mr. Pendleton, page 407; Mr. Campbell, page 558. These speeches elaborate the views of both sides of this question.

I also beg to refer to the debate in the Forty-first Congress, volumes 83 and 84, by Mr. Eldridge, page 1271, and Mr. Woodward, Appendix, page 123, Mr. VOORHEES, page 124, and Mr. COX, page 127.

I also call attention to the debate in the Senate, volumes 83 and 84, pages 1633 to 1656, by Senators Bayard, Thurman, Vickers, Casserly, Johnson, Trumbull, and Hamilton. On page 1636 are given two columns of the names of convicts, thieves, robbers, murderers, etc., who were supervisors in New York City at the November election, 1870.

I also call attention to the debate on suffrage in the third session of the Fortieth Congress, volume 71, pages 560 to 745, and volume 72, pages 1224 to 1226, and pages 1425 to 1428; also to the discussions on the Force Bill in the Forty-third Congress, volume 11, pages 1750 to 1926.

TWO PATRICK HENRYS AND SERGEANT S. PRENTISS.

And now let us go back and glance at him whose trumpet voice and superb eloquence sounded the tocsin of war when the clash of arms at Lexington, Concord, and Bunker Hill told the people of Virginia and other Southern States that their brothers of Massachusetts needed the aid of strong arms and brave hearts.

Patrick Henry said (Elliott, volume 2, page 70):

The dissolution of the Union is most abhorrent to my mind; the first thing I have at heart is American liberty; the second thing is American union.

And on pages 149, 150:

The power over elections which is given to Congress is contrived by the Federal Government, that the people may be deprived of their proper influence in the Government by destroying the force and effect of their suffrages. Congress is to have a discretionary control over the time, place, and manner of elections. The Representatives are to be elected, consequently, when and where they please. As to the time and place, gentlemen have attempted to obviate the objection by saying that the time is to happen once in two years, and that the place is to be within a particular district, or in the respective counties. But how will they obviate the danger of referring the manner of election to Congress? * * * The power over the manner admits of the most dangerous latitude. They may modify it as they please; they may regulate the number of votes by the quantity of property without involving any repugnancy to the Constitution. I should not have thought of this trick, or contrivance, had I not seen how the public liberty of Rome was trifled with by the mode of voting by centuries.

A century was a division of the Roman people for the purpose of electing magistrates and enacting laws. This method of election was called "voting by centuries."

SPEAKER REED'S DISTRICT AND CONSTITUENTS.

In the county of York, which comprises about half the district of the Speaker of this House, there lived Samuel Nason, whose eloquence gave him the sobriquet of the Patrick Henry of the North.

I read from Mr. Nason's speech, Elliot, volume 1, pages 139 and 141:

Great Britain, sir, first attempted to enslave us by declaring her laws supreme and that she had a right to bind us in all cases whatever. What, sir, roused the Americans to shake off the yoke preparing for them? It was this measure, the power to do which we are now about giving to Congress. And here, sir, I beg the indulgence of this honorable body to permit me to make a short apostrophe to liberty. O, Liberty! Thou greatest good; thou fairest property! With thee I wish to live; with thee I wish to die! Pardon me if I drop a tear on the peril to which she is exposed. I can not, sir, see this brightest of jewels tarnished—a jewel worth ten thousand worlds! And shall we part with it so soon? Oh, no!

Gentlemen ask, can it be supposed that a Constitution so pregnant with danger could come from the hands of those who framed it?

We now come, sir, to the fourth section. Let us see—the time, place, and manner of holding elections shall be prescribed in each State by the Legislature thereof. No objection to this; but, sir, after the *flash of lightning* comes the *peal of thunder*: "But Congress may at any time alter them."

I wish, Mr. Speaker, you could have heard this eloquent patriot of your district. [Applause.] Mr. Nason continued:

But, sir, I say, by this power Congress may, if they please, order the election of Federal Representatives for Massachusetts to be at Great Barrington or Machias, and at such a time too, as shall put it in the power of a few artful and designing men to get themselves elected at their pleasure.

[Applause.]

These were the patriotic words of the representative of the grandsires of your constituency, the good, honest people of the County of York, of Maine. [Applause and laughter.]

This distinguished predecessor of the Speaker thought that the right to simply regulate the time of elections practically made Congress omnipotent, and the vote of that county in the convention was but six for the Constitution and eleven against it. The great Samuel Adams, page 137, also advocated leaving elections to the States. Sergeant S. Prentiss, the greatest Whig orator, and you, Mr. Speaker, were born and reared within a few steps of the same spot in Portland, Maine. In Prentiss's great speech in the Twenty-fifth Congress, in January and February, 1838, reported in his life, page 291, he viewed this question precisely as I have argued. He said that the best rule is to learn the intent and to construe so as to cover the intent, and that—

The framers of the Constitution very wisely concluded that the regulation of this most important of all political rights should be placed in the hands of the Legislatures of the States.

And after forcibly sustaining this view, he says, page 294:

The States were so jealous on this subject that most of them accompanied their ratifications of the Constitution with a solemn protest against the exercise by Congress of this power, except in cases of failure or neglect on the part of the State Legislatures.

On June 11, Globe, page 445, Mr. Prentiss laid before Congress a series of resolutions, ably expounding the same principles, all these facts showing with what disapproval, condemnation, and horror the sires and grandsires of the Speaker's constituents, including the people of both counties of his district, contemplated the evils he is now endeavoring to inflict upon our country.

For his benefit I will now read a paragraph from Lord Macaulay's History of England, specially applicable to the subject:

We have been taught by long experience that we can not without danger suffer any breach of the constitution to pass unnoticed. It is therefore now universally held that a government which unnecessarily exceeds its powers ought to be visited with severe parliamentary censure.

What censure, Mr. Speaker, will in times to come be visited upon those who, during this session of Congress, have trampled under foot the laws of our land, the rules of parliamentary procedure, and the Constitution of our fathers? [Applause.]

[Here the hammer fell.]

Cotton-Ties.

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890.

The House being in Committee of the Whole and having the iron schedule under consideration—

Mr. WHEELER, of Alabama, said:

Mr. CHAIRMAN: I ask unanimous consent for three minutes, not to be taken out of the time allowed for debate on this question. I ask of the House this courtesy in behalf of three millions of farmers. [Laughter.]

Mr. MCKINLEY. I hope the gentleman's request will be granted.

The CHAIRMAN. Unanimous consent is asked by the gentleman from Alabama [Mr. WHEELER] to occupy three minutes. Is there objection? The Chair hears none.

Mr. WHEELER, of Alabama. Mr. Chairman, I shall not take time to discuss the facts relative to this matter, but in these three minutes I desire to appeal to the heart of every member of this House in behalf of three millions of laboring farmers (two millions of them being colored men) of the part of the country I have the honor to represent.

If this change in the law should take place it would be at the cost of these poor people, people who to-day are living by the hardest kind of labor, a number of whom last year were unfortunate enough to make the worst crop produced in many years—people borne down under the extremes of poverty, who were not able last year to buy the usual blankets and clothing to keep their children warm or to supply them with food to shield them from hunger; in the name of these people I appeal to you to let the tax at least stand where it has been for the last thirty years, and not treble it and thus impose this additional and unnecessary burden upon them as is proposed by this bill.

Mr. Chairman, in 1883 we passed upon this very question, and the Republicans on that side of the House joined with the Democratic party in voting against that proposition in the bill which sought to raise the tariff on cotton-ties to the same amount that it is proposed to be raised in this bill. It was adjudicated then; let it so remain. It was then said in behalf of the existing tax that 35 per cent. in a few years would enable the manufacturers to supply iron ties for the entire product of the South, so that they would ask no extension of the tariff or no increase of the duty. And yet after the lapse of seven years they come and ask us, not to give them the same that was given then under a protest, but to give three times the amount, and then tell us that in three or four years perhaps, if the people are forced to pay them this exorbitant tax, they may be able to get along without any tax whatever.

Mr. Chairman, in the name of the farmers of the great Northwest, in the name of the hard-working, laborious toilers in the cotton fields of the South, in the name of the farmers throughout this broad land, whose farms we are told are covered over with mortgages (though some gentlemen argue that that is an evidence of prosperity, yet we have the evidence that many of these people are not able to pay off their mortgages which are every day being foreclosed upon them), in the name of all of these people I appeal to you not to impose this burden upon the defenseless laboring people of the South and the overtaxed and doubly mortgaged farmers of the North.

[Here the hammer fell].

Rules.

No man is good enough to govern another without his consent.—*Abraham Lincoln.*

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1890.

The House having under consideration the report (No. 23) of the Committee on Rules—

Mr. WHEELER, of Alabama, said:

Mr. SPEAKER: The senior member in length of service upon the Committee on Rules commenced his elaborate speech in defense of the new rules in these words:

The Committee on Rules in framing this code has, to the best of its ability, prepared and reported a code of rules under which the will of the majority of the House shall be ascertained and expressed with accuracy and with the utmost expedition consistent with fair and due debate and consideration.

This gentleman [Mr. CANNON] also said:

The committee believe that there should be radical changes touching the manner and the conduct of the business of the House, and the changes recommended in this report are so radical and so proper in our opinion that some gentlemen upon the other side have denounced them as "revolutionary."

This is an admission on the part of this leader on the side of the majority which ought to cause some hesitation in adopting a code which this gentleman asserts contains radical changes and which he admits are so radical as to be called revolutionary in their character.

An interview with the Speaker of this House was published on February 3, in which he used this expression:

The rule of the majority is at the very base of our Government. If it be not the true rule, our faith is vain and we are yet in our sins.

While it is true that the majority should rule, all that the Democrats desire is that they shall rule under the Constitution. Judge Cooley, in his Principles of Constitutional Law, says:

So far, then, from the Government being based on unlimited confidence in majorities, a profound distrust of the discretion, equity, and justice of their rule is made evident in many precautions and checks; and the majority is, in fact,

trusted with power only so far as it is absolutely essential to the working of republican institutions.

Since the first dawn of civil liberty the wisest statesmen of all nations have agreed that an unbridled and unrestrained majority is the most dangerous foe of liberty, and therefore in perfecting systems of government the greatest care was taken to devise means by which a majority could be checked by certain powers given to the minority, and the history of civilization has proven the wisdom of maintaining such checks and balance.

THE RULE GIVES THE SPEAKER ABSOLUTE POWER.

Another serious objection to the proposed rule is that it gives almost imperial power to the one man who happens to be the Speaker of this House. I presume there are still some Republicans who continue to revere Abraham Lincoln; to them I would recall his famous declaration that—

No man is good enough to govern another without his consent.

If these rules are adopted, Congress, and practically the country, very much against their wish, and certainly without their consent, will be governed by THOMAS B. REED.

If a man perfect in all respects and of unquestioned and infallible wisdom could be found, a people would be fortunate in giving such a person absolute power, because undoubtedly his rule would be wise and perfect in all respects, and that is all that was ever asked for or is desired by any people, but the history of the last eighteen hundred years shows that during that period no such man has existed, and therefore it has been demonstrated that the only way to preserve liberty is for the people to govern themselves.

If ages of experience have demonstrated that one-man power is destructive to liberty, how much more dangerous is an unrestrained rule of a majority. It contains all the evils which follow from the concentration of all power in one man without a single element of the advantages of such a system of government. It is the existence and presence of absolute power and the total absence of any tangible responsibility. It is possible for such a government to exist for some time without becoming tyrannical and despotic, but it is impossible for such a government to exist without finally overthrowing all the safeguards of liberty.

The rules which the Republican party is endeavoring to force upon this body are framed so that an ambitious and unscrupulous leader could succeed in any wicked designs upon the people. Is it strange that the gentleman from Illinois [Mr. CANNON], one of the distinguished Republican leaders of the Committee on Rules, should pronounce them "revolutionary?"

METHODS OF THE LAST ONE HUNDRED YEARS.

For one hundred years it has been the rule in this body that all votes shall first be taken *viva voce* and the Speaker determines and announce how the vote appears to be. If any one doubts the judgment of the Speaker a division is demanded, and by a rising vote the Speaker first counts the affirmative and then the negative vote. If any member still doubts, tellers are demanded and a method less liable to mistakes is adopted. A friend and an opponent of the measure proposed are appointed to act as tellers; one side passes between them, the gentlemen being counted as they pass; the other side then passes and is counted in like manner, and the tellers report the vote thus taken to the Speaker, whose sole duty it is to announce to the House the report made by the tellers.

This, it would seem, ought to be satisfactory to most people who desire perfect accuracy; but the framers of the Constitution determined to give a system even more perfect and free from the possibility of error. They said this count by tellers may be accurate, but there is a possibility of mistake; therefore the Constitution says even after the accuracy of the vote has been tested by all these methods—

That the yeas and nays of the members of either House on any question shall, at the desire of one-fifth of those present, be entered in the Journal.

This is the last resort, and of necessity from the method of procedure imports absolute verity, and for a hundred years has been accepted without question as an undoubtedly accurate expression of the will of Congress.

It is now proposed to adopt a rule by which the yea-and-nay vote of all members participating in the business of the House shall not be the last resort. A higher authority is proposed to be created. It is proposed that one man's *ipse dixit* shall have more weight, authority, and force than the joint recorded judgment of all the members of the House.

It proposes that this higher authority shall be a single individual. If but half a dozen members participate in voting upon a measure, this rule provides that one man, whose duty it is to "speak the will of the House," and who is therefore called "Speaker," shall have the authority to declare that one hundred and sixty-six members were present and that the action of the six members is as effective as the joint recorded action of every elected member.

PRACTICAL OPERATION OF SUCH A RULE.

If this rule is adopted its practical operation will be that when the recorded vote on a measure develops the presence of less than a quorum the Speaker will proceed to count. Members in the lobbies will enter, pages will scour the corridors and committee-rooms, members will pour in through the doors and before the count is completed enough will have entered to make a quorum. Many of them and possibly every one of these members was absent when the bill was read, discussed, and voted upon, but now they are used by the Speaker as instruments by which the bill is enacted into law, and yet they have no knowledge of its provisions and the measure has not had the benefit of their judgment even in the most remote degree. In fact the chairs and desks in the House exercise as much mental and physical effort in the matter as has been exercised by these members who reach this Chamber only after the question of quorum has been raised.

Does it require any argument to show how utterly such a proceeding would fail to fulfill the constitutional requirements of a quorum to do business? To say that these members thus counted by the Speaker were present and participated in the proceedings of the House is contravening the truth and makes our Journal record as facts what we all know to be flagrant falsehoods.

This is not altogether a new question. It has been considered and debated by able statesmen, and the judgment of Congress and the decisions of its presiding officers have always been against the constitutionality of this innovation.

MR. BLAINE DECLARES SUCH A RULE UNCONSTITUTIONAL.

During the second session of the Forty-third Congress, when Mr. Blaine was Speaker, the question was raised by Republicans who sought to adopt this plan to enable them to pass the force bill through the House. Mr. Dorman, a Republican, rose and was recognized to make a parliamentary inquiry, and the following colloquy took place:

Mr. DORMAN. My parliamentary inquiry is this: Is the disclosed vote the only means by which a quorum can be declared, when it is in the cognizance of every man here, the Speaker included, that there is within the Hall a sufficient number of members who have not voted to make a quorum?

The SPEAKER. The Speaker would be glad to hear from the gentleman from Iowa [Mr. Dorman] any practicable mode in which his point can be enforced.

Mr. DORMAN. Is it not within the power of the Speaker, he having cognizance of the fact, to declare that a quorum is present?

The SPEAKER. But the Speaker's declaration will not make members answer "ay" or "no."

Mr. RANDALL. I move a call of the House.

The SPEAKER. If any gentleman raises the question that business is proceeding without the presence of a quorum, it is within the competence of the Chair to decide that a quorum is present, and he will not allow the business of the House to be interrupted by any dilatory proceeding. He assumes the responsibility for that purpose of declaring that a quorum is present, because no business can proceed without a quorum. Even a gentleman speaking is entitled to have a quorum present. If the point be raised, a gentleman addressing the Chair may be taken off the floor by any member raising the point that no quorum is present. The question being so raised, the Chair, according to his judgment and on his responsibility, can rule that a quorum is present. But when the roll-call is resorted to, that is the last mode of certification, from which there is no appeal. Now, that the rules absolutely require gentlemen to vote is undeniable; but how the gentleman from Missouri, on whom the point has been made, can be compelled to stand up and pronounce his "ay" or "no," the Chair does not know.

It will be observed that Mr. Blaine admits that the Speaker may upon his judgment and responsibility rule that a quorum is present in certain cases, provided a call of the roll has not disclosed the contrary, but when the roll is resorted to and the recorded names number less than a quorum Mr. Blaine states that this is the last mode, from which there is no appeal. Mr. Coburn then said:

I rise to a point of order. It is simply as to the manner of making a record of members present. One way of making a record is to have the roll called and the names of members marked as present upon the roll-call, whether upon the yeas and nays or upon a call of the House. That makes the record; but there is another way in which the House can make its record as positively, as absolutely, as undeniably as that, and that is by a member rising in his place and saying there is present another member who has not answered to his name, mentioning his name to the House, and asking that it be recorded. The record can be made, and that man is present and voting.

The SPEAKER. The Chair never heard of that being done. He begs to remind the House, whereas that might and doubtless would be true that there is a quorum in the Hall, the very principle enunciated by the gentleman from Indiana has been the foundation probably for the greatest legislative frauds ever committed. Where a quorum, in the judgment of the Chair, has been declared to be present in the House against the result of a roll-call, these proceedings in the different legislatures have brought scandal on their name.

Here Mr. Blaine informs the body over which he presided that the methods then proposed, and which are similar to the principles now sought to be ingrafted in our rules, have been the foundation of the greatest legislative frauds ever committed:

Mr. HAWLEY, of Illinois. But suppose the roll-call had disclosed the presence of two hundred members; I have the right, and every member has the right, to demand that every other member present shall vote.

The SPEAKER. No. The Chair denies that utterly. If that were the case, the House could do no business. The House would be a mere mob if that should be entertained.

Mr. NEGLEY. I would inquire if on the last vote a quorum was not present.

Mr. Speaker BLAINE. On the roll-call there were 142 members answered to their names. The Chair begs to state that no gentleman has, under the rules, brought to him any suggestions whatever as to the mode of forcing a minority to respond to their names. There can be no record like the call of the yeas and nays, and from that there is no appeal. The moment you clothe your Speaker with power to go behind your roll-call and assume that there is a quorum in the Hall, why, gentlemen, you stand on the very brink of a volcano.

I beg the House will observe that Mr. Blaine states that the moment a Speaker is clothed with the power which is not only sought and asked for, but demanded by Speaker REED, we—

stand on the very brink of a volcano.

In the Forty-sixth Congress the same question was raised.

MR. GARFIELD DENOUNCES SUCH PROCEDURE.

Mr. Garfield, afterwards President Garfield, opposed the innovation and expressed regret that the question was brought before the House. He called upon members—

to see into what a strange and vague condition this House would be led if this were adopted. Whenever the question arises whether there is a quorum or not present, it is to be determined according to what he calls "ocular demonstration."

The Chairman of the Committee of the Whole or the Speaker of the House is to see with his own eyes that there is a quorum present.

Who is to control his seeing? How do we know but that he may see forty members more for his own purpose than there are in the House? And what protection have gentlemen if the Speaker says he sees a quorum if he can not convert that seeing into a list of names on the call of the roll by the Clerk?

In reply to the inquiry if the Speaker does not count upon a rising vote, Mr. Garfield said:

Yes; but we always have the opportunity to correct that count by means of a new count by tellers appointed from both sides.

Before anything can pass we can have the yeas and nays taken and the names of those voting recorded. Aside from the insuperable objections that I have raised to this proposition as a thing that ought not to be tried because of its vagueness, its uncertainty, and the dangers that members of the House may be imposed upon by an unscrupulous Speaker that may come hereafter—I say that, aside from all that and beyond that, I ask members to consider one fact.

This has been a House of Representatives since 1789. This has been the theater of all sorts of political storms and tempests. We have lived through the times of great wars, of a great civil war, when there were excitements hardly paralleled in the history of parliamentary annals; yet during all these years no man before, so far as I know, no party before, has ever thought it necessary to introduce a rule that gives the power of declaring the presence of members by the single voice of one person, a power that will enable him to bring from his sick-bed a dying man and put him down in the Hall so that the Speaker shall count him and make his presence, against his will and perhaps in his delirium, count in order to make a quorum, so that some partisan measure may be carried out over the body of that dying man. Sir, the moment you get over the line, the moment you cross the boundary of names, the moment you leap over the iron fence of the roll, that moment you are out in the vague, and all sorts disorders of may come in.

MR. CONGER TERMS IT VIOLENT AND PARTISAN.

Mr. CONGER argued very forcibly against the legality of determining the presence of a quorum by the count of the Speaker. He said:

Sir, I, in common with every member of this House, demand that there shall be a public exhibition of presence, a public record of votes; that there shall be tellers; that there shall be yeas and nays; that the yeas and nays shall determine how you and I and every other member of this House may have voted and would vote.

The point made by my friend from Ohio [Mr. Garfield] is a good one: that we are committing to the Speaker of this House or the Chairman of the Committee of the Whole the right first to determine who are present and to determine when there is a quorum. It is useless to say that there may not be times when in such an emergency as would require the exercise of this power the presiding officer would not be partisan. Shakespeare foretold this when in one of his plays he said:

"Get thee glass eyes,
And, like a scurvy politician, seem
To see the things thou dost not."

Such politicians will come here on either or any side. The force of circumstances, the impetuous passions of members which would produce such an occasion, will influence men to see that which they see not, with or without "glass eyes."

I have no fear that this amendment will be adopted in the House, because it would be wrong in itself; it would be unconstitutional; it would be violently partisan. I have no fear that the fair-minded men of this House on either side will adopt so violent and partisan a measure.

MR. HAWLEY OPPOSES IT.

Mr. HAWLEY, of Connecticut, who is now a Senator from that State, argued in the same line with Mr. Garfield and Mr. CONGER. I read as follows from his speech:

Now, the evil, if there be one, in the existing system, that of which gentlemen complain, is simply this, that we of the minority claim a right, by sitting silent, to prevent less than a majority of the members elected from passing a bill. The worst that can be done by a factious minority, if that be the term applied to it, is to fight until the actual majority of the members elected shall pass the bill. When they are present that friendly majority constitute a quorum of themselves; they do not require the assistance of the minority; they run the House themselves and pass their bills. In case of what you call factious resistance we drive them only to that.

The modern State constitutions are all tending in that direction. I have not looked at them with this in view, but I know from a casual inquiry of gentlemen near me that the new constitutions of California, Minnesota, and Pennsylvania require that a bill shall not be regarded as passed unless an actual majority of the members elected shall vote for it.

MR. REED SPEAKS AGAINST IT.

The next gentleman who obtained the floor to speak in opposition to the method now sought to be enforced was Mr. REED, of Maine.

Mr. Chairman, if it were my purpose to reply to the gentleman who has just taken his seat [Mr. Phister], it seems to me that it would be a suitable and proper reply to say to him that the constitutional idea of a quorum is not the presence of a majority of the members of the House, but a majority of the members present and participating in the business of the House. It is not the visible presence of members, but their judgments and their votes that the Constitution calls for.

The gentleman then proceeded in his argument and said:

It is a valuable privilege for the country that the minority shall have the right by this extraordinary mode of proceeding to call the attention of the country to measures which a party in a moment of madness and of party feeling is endeavoring to enforce upon the citizens of this land. And it works equally well with regard to all parties, for all parties have their times when they need to be checked, so that they may receive the opinions of the people who are their constituents and who are interested in the results of their legislation.

It will be observed that the extraordinary mode of proceeding to which Mr. REED refers was a combined effort on the part of the Republicans to defeat a measure by refusing to vote and thus breaking a quorum.

And yet we now have presented to us the spectacle of this same Mr. REED demanding that the Constitution be trampled under foot in order to intrust him with a power which Mr. Blaine said would lay the foundation "of the greatest legislative frauds ever committed;" and, if entertained, "the House would be a mere mob;" and that with such a system the Government would "stand on the very brink of a volcano;" all of whose correct, conservative, and judicial views were indorsed during the Forty-sixth Congress by Mr. Garfield, since President, and by Messrs. Conger and HAWLEY, who were soon afterwards elected to the Senate; and also, last but not least, most emphatically indorsed and advocated by Mr. THOMAS B. REED, who has since won the high position of Speaker of the House of Representatives.

WOULD ENCOURAGE FRAUD.

Again, to show the error of this proposed method.

All parliamentary proceedings prohibit a member from voting upon any question in which he is interested. It means that he shall not in any manner aid in causing such a measure to become the law. But under this rule he refrains from voting, and the Speaker, unaware of his ineligibility, counts him to make a quorum, and thus a man who may be the special and only beneficiary to a bill aids and possibly by his presence makes the quorum which passes the bill, while if he were not counted less than a quorum would appear to be in the Hall and the bill would fail. We see here a man doing indirectly what the Constitution and law and decency say he shall not do and which to do would cover him with shame and disgrace.

Again, suppose a bill should cause a large subsidy to be granted to a corporation and the stock should be divided among all the members but one. In such a case the one member who does not own stock would vote for the bill and the silent one hundred and sixty-five members, all of whom own stock and all of whom are beneficiaries of the bill, secure its passage by their presence and reap the benefit of the legislation. I insist, Mr. Speaker, that any rule which makes such a proceeding possible is a gross violation of parliamentary law and contravenes both the letter and the spirit of the Constitution.

The further we investigate the history of barbaric ages the more absolutely we find men governed by the unrestrained power of one man. The more ignorant men are the more willingly do they submit to the control of one ruler. The tendency of civilization has been to limit the power of rulers, and as far as possible to place the affairs of government in the hands of the people. The boast of the American citizen is that this is a Government in which all the people have an equal voice, as expressed by Webster in 1830:

The people's Government, made for the people, made by the people, and answerable to the people.

And again by Theodore Parker in 1850:

A Government of all the people, by all the people, for all the people.

And in strikingly similar words by Lincoln:

And that government of the people, by the people, for the people, shall not perish from the earth.

The rules which have been reported, and by which this House is sought to be governed, are in direct contravention to the principles of government which Americans hold most dear, which our forefathers centuries ago fought to establish and maintain, and under which we have become the most prosperous and most enlightened people on the earth.

[Here the hammer fell.]

Tariff.

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 9, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes—

Mr. WHEELER, of Alabama, said:

Mr. CHAIRMAN: Before proceeding with my speech, I desire to indorse every word said by the gentleman who has just taken his seat [Mr. PAYNE] with regard to the great possibilities and boundless resources of our country. I come, Mr. Chairman, from that part of the country most blessed with the elements of wealth, the locality which excels all others of this broad land in material resources and the possibilities of physical development.

ALABAMA'S WONDERFUL PROGRESS.

I come, Mr. Chairman, from a State which makes more iron than any foreign nation on earth, except Great Britain, Germany, and France, a State which in the production of iron excels Belgium, Austria-Hungary, Russia, Sweden, Spain, and Italy, a State which makes more iron than any other State of our Union, except Pennsylvania and Ohio, which will, I trust, in another year excel Ohio and stand second only to the great iron State of Pennsylvania. And, if we omit the rest of the United States and the countries I have named, Alabama to-day is making eight times as much iron as the rest of the world combined. [Applause.]

And, Mr. Chairman, adjoining my State and in close proximity to the district which I have the honor to represent, are Chattanooga, Rome, and South Pittsburgh, making the country I come from the center of the coming iron industry of the world. General Samuel Thomas, formerly from Ohio, a gentleman known to you all, who now has great interests in the South, has repeatedly said to me and to others that the Tennessee Valley is destined to become the center of iron-manufacturing, not of the South alone, not of this country alone, but the center of the iron-manufacturing industries of the world. We are making in that country—as I read in the report of Mr. Swank, printed two days ago and sent me to-day—we are making Bessemer steel in the iron district of Alabama. Less than two weeks ago Mr. Carnegie, one of the best authorities on steel-making in the world, told me that after a close analysis and a thorough investigation of the iron ores of Alabama, he was satisfied that, with even the means we now have, we could with two processes make most excellent Bessemer steel.

ALABAMA SHIPS IRON TO PITTSBURGH.

I read from The Philadelphia Times of two days ago, which I hold in my hand, that within the last six weeks 5,000 tons of pig iron were purchased at Sheffield, a city of my district which has grown up during the last five years, and on that 5,000 tons of iron shipped from that place to Pittsburgh a net profit of $30,000 was realized.

I regret, Mr. Chairman, that more time was not allowed to debate this important subject. For the last half century all our Presidents in their messages to Congress and all our Secretaries of the Treasury in their reports have endeavored to impress Congress with the necessity of giving this subject the closest study, and of exercising the greatest wisdom possible in the enactment of laws of this character.

These messages from our Presidents and reports from our Secretaries of the Treasury have been very similar to the admonitions and advice we find in the famous message which Mr. Cleveland sent to the House of Representatives on December 2, 1887.

I recall these words:

> The difficulty attending a wise and fair revision of our tariff laws is not underestimated. It will require on the part of the Congress great labor and care, and especially a broad and national contemplation of the subject, and a patriotic disregard of such local and selfish claims as are unreasonable and reckless of the welfare of the entire country.

Republicans in their desperation charge that tariff-reformers are not friendly to the manufacturing interest. It would be almost impossible to note a charge more utterly devoid of truth. We have demanded revision because we know it is essential to the permanent success of manufacturers almost as much as it is to the farmer and commerce and all other industries.

THE TARIFF A PROBLEM OF POLITICAL ECONOMY.

I hold in my hand a book published in New York in 1885, entitled Economic Fact Book. I find entire chapters devoted to views of people on the tariff. Among them I find an expression from myself, which I will read. It expressed my views then; I adhere to the same views to-day, and I do not expect to change them as long as I live. I read from page 141:

> I think all will concede that successful manufactories are very important, if not essential, elements to the prosperity of agricultural interests. Certainly, all will concede that in a country like ours, where we have such abundant raw material—coal, iron, copper, timber, cotton, and wool—we ought to excel all other nations in the variety and extent of our manufactories. No one will deny the fact that the tariff law of March 3, 1883, and the law which was repealed at that date, utterly failed to even approximate such a result.
>
> Under these laws we have not succeeded in selling the products of our factories to any extent in foreign markets, but, quite the contrary, we have seen England supply the world with fabrics, and get prices for them much higher than we would be glad to sell the same articles, while at the same time we have seen our home markets glutted by overproduction; and we have not seen factory operatives enjoying steady and well paid work, and to-day we see Bismarck recommend that the Reichstag treble the duty on American wheat and allow it to stand untouched upon Russian cereals. It seems to me that the tariff question should be regarded as a problem of political economy, the solution of which would be to find what laws will do most toward stimulating and building up the industries of our country. To attain this I think the tariff must be revised so as to be fair to all interests, so as to encourage a trade with foreign nations, so as to bear heaviest upon articles of luxury and lightest upon articles of necessity.

In the same line of thought more than two years ago, early in the session of 1888, I introduced a bill to establish a bureau upon which the duty of exhaustive investigation of this subject would devolve and by contest not unlike trials in courts the true merits of every proposed change would be examined into, thoroughly investigated, and determined.

The bill was in these words:

Be it enacted, etc., That a bureau, in the Treasury Department, is hereby created and established, which shall be known as the Tariff Statistical Bureau, which shall consist of one chief tariff statistician and four associate tariff statisticians, who shall be selected with special reference to their familiarity with the general subject of tariff taxation, and their ability to collate, classify, and tabulate the results of their statistical investigations, all of whom shall be appointed by the President.

SEC. 2. That it shall be the duty of this bureau to secure, and keep constantly on file, the tariff laws of all countries; also, as far as practicable, to investigate, collate, and compile information showing the effect of said laws upon the general prosperity of the countries by which they are enacted, their effect upon the labor and industries of those countries, and especially their effect upon the general prosperity, the labor, and manufacturing, and other industries of the United States.

SEC. 3. That any citizen or corporation of the United States shall be privileged, either in writing or personally or by counsel, to submit to and urge upon the attention of said bureau propositions or suggestions as to any amendments to, or modifications of, existing tariff laws, and it shall be the duty of said bureau to receive and properly file all such written or printed propositions or suggestions, and, when submitted in writing or by oral argument, all such propositions or suggestions shall be duly considered by said bureau, and their conclusions as to the probable effect of such amendments to, or modifications of, the tariff laws upon any special enterprise or industry, as well as the probable effect upon the labor and general industries of the United States, shall be reported to the Secretary of the Treasury.

SEC. 4. That the business of the bureau and its modes of procedure shall be subject to such rules and regulations as the Secretary of the Treasury may think best calculated to secure the prompt and efficient dispatch of business, and, upon his request, the bureau shall aid the Secretary in preparing such rules and regulations, and when adopted they shall be printed and a copy thereof furnished to every person having business with the bureau.

SEC. 5. The chief of said bureau shall receive a salary of $5,000 per annum, and the four associates shall each receive a salary of $4,000 per annum; and the bureau shall be authorized to appoint a secretary, who shall receive a salary of $2,500 per annum, and to employ, subject to the approval of the Secretary of the Treasury, such clerks as may be required to insure the prompt and efficient dispatch of the business of the bureau.

SEC. 6. That it shall be the duty of the Secretary of the Treasury to cause suitable and convenient rooms, in the city of Washington, properly lighted, furnished, and heated, to be assigned to said bureau, and to cause the necessary stationery and other articles to be supplied and the necessary printing to be done for the said bureau.

My bill received a unanimous favorable report and was entered upon the Calendar, but was not enacted into law. Some six months after my bill was introduced, and many months after it was reported, Senator PLUMB introduced a bill quite similar. Last December I reintroduced the same bill. It is House bill 38, but it has not been considered. I believe the investigations of such a bureau would finally result in the establishment of a tariff which would go very far towards a general stimulation of all industries and largely increase the prosperity of all our people. I believe it would also result in establishing reciprocity with all nations on this continent except the British colonies and possessions, and eventually, no doubt, extend such a business treaty with many other nations; and with our greatly increasing power of production reciprocity with many nations will become an absolute necessity; and we can not long delay the advent and practical inauguration of this system.

THE BILL WILL ADD TO ENGLAND'S SUPREMACY.

The advocates of the bill now before the House tell us that it will stop the importation of all manufactured articles which can be made with American labor, and they are so ignorant of the great laws of trade and commerce as to exultingly boast of the injurious effect the McKinley bill will have upon English industries.

I want to say here and now, and I want it to be remembered, that I assert this bill is framed so as to especially favor the general policy of the English commercial system, and I further assert that it will not be regarded with disfavor by the statesmen who control and direct that system.

Any action upon our part which cuts off or limits the commercial relations of the United States with the rest of the world will be to the advantage of English manufacturers and English commerce and will go far towards adding to the supremacy of England upon the oceans of the world. It is true that some manufacturers of England who are engaged in the production of articles particularly adapted to our market will be subjected to losses, but the great bulk of English trade and commerce will ultimately be the beneficiaries of the suicidal policy upon which the McKinley bill is based.

M'KINLEY BILL INCONSISTENT AND INCONGRUOUS.

Again, the more we examine the bill the more inconsistencies, incongruities, and contradictions are developed. The bill is not even consistent with the report which accompanies it. The bill has been changed so many times in some particulars that the country at large is by no means certain as to what tariff is proposed on several articles. The gentleman who preceded me [Mr. PAYNE] endeavored to explain the vacillation of the committee upon hides. In one of the bills we find a duty of 15 per cent on hides, and in another the duty——

Mr. McKINLEY. There has been but one tariff bill reported.

Mr. WHEELER, of Alabama. I believe the first print of the bill was not reported. I should have said in one of the prints of the bill, hides are taxed 15 per cent. and in another they are placed on the free-list. The press and general rumor inform us that the 15 per cent. was put on hides as a concession to farmers; but the moment that the shoemaking constituents of the gentleman from Massachusetts [Mr. LODGE] commenced an uproar and Mr. LODGE announced that 15 per cent. on

hides would endanger his election the committee were called together, the farmers' wishes and interests were ignored, and the demand of Mr. LODGE and his constituents was acceeded to. I desire, however, to call attention to the fact that while they have made the bill to please the manufacturer they have made the report to please the farmer.

I read from the bottom of page 17 of the report submitted to the House by the gentleman from Ohio [Mr. MCKINLEY] a deliberate and unequivocal statement that the bill increased the duty on hides. The language of the report is:

We advance the rates upon products of the soil which either do supply or can be brought to supply the home consumption. Horses, cattle, * * * hides, wool, tobacco, and many other products are advanced with a view to raise the entire market for the American farmer.

I wish also to refer to an error of the chairman of the committee in speaking of the great prosperity of our country and comparing our debt per capita with that of other nations. In referring to our country he entirely ignored our State, county, and municipal debts. Now, in other countries the whole debt is combined in one sum, and if we added together the liabilities of our counties, municipalties, and States the aggregate would make the debt of the United States double what it appears from the figures presented, and the argument of the gentleman based upon the comparison would lose its force or would have an effect directly the reverse of what he intended. There was a time when such a comparison would have been a matter of pride to every American, but that was in the happy days of our Republic before the reign of extravagance and corruption inaugurated by the party which now governs our country.

DEMOCRATS TEACH REPUBLICANS ABOUT FOREIGN MARKETS.

There is one thing, Mr. Chairman, upon which the Republican party should be congratulated. At last they have been instructed and convinced by Democratic speakers and Democratic newspapers as to the existence of a "foreign market." In the great debate of two years ago they informed us that there was no such thing as a foreign market; that it was a myth and had no existence except as a matter of fancy or imagination.

The report, signed by all the Republican members of the Committee on Ways and Means, including the present Speaker of this House, endeavored to convey to the minds of Americans that the hundreds of millions of foreign buyers of the articles similar to American products did not exist; that the foreign market was a delusion, a mere shadow. They say in the report:

The foreign market to which the American producer is invited by the majority (the Democratic) report is delusory.

And they charged the Democratic members of the committee and the Democracy in general with acting—

under the delusion of a foreign market.

But feeling the necessity of getting some one to indorse their statements they quote from a New England manufacturer:

The world's market is a great free-trade shadow-dance.

But to-day, in the speeches of the members of the committee and in the report presented to this House, they speak with great respect of the foreign market to which the Democratic party have long insisted that we should direct our inquiries and our efforts.

HOW REPUBLICANS IMPOVERISH FARMERS.

I wish also to say a word in reply to the speech made by the distinguished gentleman from Michigan [Mr. BURROWS]. After laboring so long to show how the increased tariff proposed by them would benefit the farmer, he says that this great question is a question of "a theory and not a condition." I want to call attention to the fact that, while our corn crop increased 25 per cent. in the last ten years, our exports of corn have fallen off from $54,000,000 worth in 1880 to $13,000,000 worth last year. The exact figures were $54,279,608 in 1880 and $13,355,950 in the last report, which I have before me.

That is one of the effects of the tariff laws imposed upon the country by the Republican party. A reduction from fifty-four millions to thirteen millions ought certainly be a warning to us not to invite further retaliatory tariffs in Europe to prevent an increase and to cause a decrease of our exports. Where is the home market for the corn-farmer of which the gentleman so eloquently speaks? We made over 2,000,000,000 bushels of corn last year in this country. A careful estimate made by competent authority shows that the entire home market for corn, including corn which is made into whisky, is not more than 1,000,000,000 bushels. Where is the home market which is given to the people by the Republican party for the other 1,000,000,000 bushels?

It is in the furnaces and the fire-places of the great West. Hundreds of millions of bushels burned up as fuel, burned possibly in some cases to prevent its rotting and causing a pestilence, destroyed because the Republican party has insisted that the American farmer does not want a foreign market for his corn. It may be a theory to the monopolists; but it is a matter of serious concern to the farmer whose farm is mortgaged and who is unable to feed, clothe, and educate his children.

Under the laws passed by the Republican party the exports of bacon, ham, and pork have fallen off 50 per cent., and the exports of our wheat have fallen off in ten years from $190,000,000 to $42,000,000. One hundred and ninety million dollars' worth of wheat was exported in 1880; $12,000,000 worth last year. And while our exports have been constantly decreasing, the exports from India have been on a constant increase, having risen from nothing twenty years ago until to-day they exceed the exports of the United States.

The American farmer, with a leaky roof, a mortgaged farm, and no money, is too seriously affected to jest with the gentleman from Michigan [Mr. BURROWS] about theories and conditions. He knows his condition is as bad as possible, and he knows also that it was brought about by the legislation of the party to which the gentleman from Michigan belongs.

THIS BILL ADDS TO BURDENS OF FARMERS.

In face of all this let me ask, what has the Republican party done for the farmer in this bill? It has increased the tariff upon everything that he uses. It has increased the tariff upon his wire fences, upon his trace-chains; it has increased the tariff paid by the Southern people upon their iron ties. Yet, not satisfied with that, not satisfied with this depletion of the products of the Southern farmer, it has laid a direct tax upon his cotton-seed oil; it has laid a direct tax on compound lard, and upon oleomargarine. And now it takes off every particle of protection which for fifty years has been given to the farmer who raises cane sugar in the South and beet sugar in the North.

Mr. Chairman, I lay it down as a principle which no one will deny that to have prosperity we must have commerce with foreign nations. Admit, if you please, that it would be possible to induce foreign nations to trade with us, to purchase our supplies, while we purchase nothing from them—even if that were possible the result would be that our produce would have to go out in ships which would come back empty; and consequently we would have to pay double freight charges for everything that left America from the barns of American producers; and this would certainly place us at great disadvantage as compared with other nations which avoid taxing their commerce.

Now, the gentleman from Ohio, the chairman of the committee [Mr. MCKINLEY], had a great deal to say in the course of his speech about the enjoyment to be derived by the American farmer from the benefits of protection. There may be two or three different views of what enjoyment is. There is down in my part of the country an old negro preacher who frequently while at work in the woods or fields will stop and repeat certain phrases. Just before leaving home I approached him one day when he was practicing some phrase which no doubt he intended to use in his sermon that night. I walked up behind him, and he was repeating, "Oh, Lord! how long shall we enjoy eternal damnation?" [Laughter.] And I ask, how long shall the farmers of the West and the South be compelled to submit to, or, as you would say, "enjoy" the oppressions which come upon them from the laws enacted by the Republican side of this House? The enjoyment that they will get from this bill will be very much the same kind of enjoyment that the wicked will get in the eternal damnation which awaits them.

HOW PROHIBITORY TARIFF LOWERS WAGES.

Now, Mr. Chairman, there is another principle which nobody will deny, that the only way to increase the price of anything is to create a demand for it; and the only way to increase the price of labor is to create a demand for labor. I want to illustrate that by a reference to the condition of the cotton trade of the world. I have in my hand the reports of three consecutive Secretaries of State—all Republicans—Mr. Evarts, Mr. Frelinghuysen, and Mr. Blaine. Over their own signatures these gentlemen give the exact wages paid in the cotton factories of Europe and the United States in each different vocation.

These distinguished Republicans tell us over their own signatures that the wages paid in the English factories to persons employed in making cotton goods are greater than those paid at any place in the United States. England exports an average of three hundred and eighty millions of cotton goods a year; we export ten millions. There is a demand in England for labor to make thirty-eight times as much cotton goods as there is in the United States. There is a demand, and a pressing demand, for labor there to make three hundred and eighty millions of cotton goods for exportation.

There is a demand here to make but ten millions; and the consequence is that that demand for labor makes, and for the last ten years has made, the wages in cotton-mills higher there than here. The places in the United States to which these gentlemen refer are Fall River, Lowell, Rhode Island, and Pennsylvania, and in every one of these places, running the figures to thousands of decimals, they show that the wages paid are less than those paid in the English factories.

MCKINLEY AND DANIEL WEBSTER.

Now, Mr. Chairman, I wish to say one word in correction of the remarks of the distinguished chairman of the Committee on Ways and Means in regard to the speech of Daniel Webster. He said Mr. Webster stated that at the time referred to he knew more about the Constitution and the theory of our Government then he did twenty years before. But the gentleman did not go far enough. What did Mr. Webster say in that memorable speech in referring to the tariff act of 1824? Remember that the tariff law of 1824 enormously increased duties.

Mr. Webster said—I give his exact words:

Every member in this Congress from the State of Massachusetts, with the exception of one, I think, voted against the act of 1824.

Mr. KERR, of Iowa. The speech that the gentleman from Ohio quoted was made in 1845.

Mr. WHEELER, of Alabama. No; the gentleman is mistaken. The speech was delivered on July 25 and 27, 1846.

Mr. KERR, of Iowa. The speech of 1845 was the one in which Mr. Webster said he knew more than he had known in 1824.

Mr. WHEELER, of Alabama. No; my friend is quite mistaken. The speech occupied parts of two days and was of considerable length. In that memorable speech Mr. Webster spoke of Mr. Clay's great effort which he referred to as having ushered in the tariff of 1824, the speech which Mr. Clay's friends alluded to as a speech for the "American system." It was this system which every member of Congress but one voted against.

Mr. Webster said he had investigated this important matter and had studied the Constitution, and—

the sentiments of the great men who framed it; I hope I have studied with more care the condition of the country when the convention assembled to form it, and yet I do not know that I have much, sir, to retract or to change on these points.

This does not indicate any such decided change of views. I recall another expression to the same import:

The reason why I advocate a tariff now is that my people have commenced to be manufacturers; and though I have studied more, yet I doubt if I would change one word of what I said upon the great theory and principles of our Government.

In other words, what he expressed in his first speech in favor of freedom of trade he believed to be the true principle which should govern our country.

Now, Mr. Chairman, I wish to say one word more with regard to the changes in the bill. First, I will allude to the changes made in the free-list. The chairman of the committee tells us that they have added to the free-list books printed in all languages except English. In other words, there is a direct discrimination against Americans and American reading people, and in favor of foreigners who can not read the English language. That is the first paragraph. The last paragraph puts art productions upon the free-list. So that the millionaires of our country may decorate their halls and parlors at the expense of the poor and hard-working people of the country.

Mr. KERR, of Iowa. Will the gentleman allow me to call his attention to the fact that the same provision was embodied in the Mills bill?

Mr. WHEELER, of Alabama. But it was stricken out by the Democrats; it did not come before the House in that way. We struck it out in caucus and every Democrat voted for it. The Democratic party determined that taxation should be imposed as far as possible upon luxuries.

But the most remarkable feature is the reason they, "the artists," give for it themselves. I will read it:

We, as American artists, proud of our country, confident of its future, and jealous of its honor and credit, are opposed to all special advantages.

And I ask gentlemen to pay attention to this:

We ask no protection, deeming it worse than useless.

I commend these words to our friends on the Republican side of the House. I say that all people who are asking for special privileges in order that their riches may be enhanced should have their attention called to this language of the noble artists, who say that proud of their country and confident of its future, as well as jealous of its honor and credit, they are opposed to all special privileges and discriminations.

If the Republican party will reach that high standard and lay that down as a principle of action the great and good people of this country would rise up and call them blessed. But what have the Republicans of the Committee on Ways and Means done for the working people and the poor of the country? The window-glass that shelters from cold while it gives us the light of heaven is increased in value 138 per cent. I could go on, Mr. Chairman, and mention a large number of these changes, but as my time is short I will have to be content with inserting them in my remarks.

UNITED STATES PRODUCES ONE-THIRD THE GREAT STAPLES.

But I want to call the attention of the committee to this: To-day a changed condition is spread before us. We now produce, substantially, one-third of the coal, one-third of the iron, one-third of the steel, and one-third of the finished iron, as well as of the pig-iron made on the face of the earth, and yet we have but one-twenty-fifth of the population. We make one-third of all these products of the world with one-twenty-fifth of the population. How, then, can we continue prosperous unless we have facilities and open markets for exporting our commodities to the people of the nations of the earth?

PRINCIPLES OF DEMOCRACY.

I want to state what are the principles of the party of which I have the honor to be an humble member. It is a party which has devoted its efforts to extending the power of the people, enlarging their rights and privileges, and, so to speak, incorporating them more intimately in the functions of the Government. This has been the purpose to which this great party has been devoted all these years. It was its purpose when it was first called into existence. It is its purpose to-day, and its mission will never be fulfilled until this noble, God-like work has been accomplished. [Applause.] It is this unfaltering, unswerving devotion to the interests of the great masses of the people that has given it a vitality never before enjoyed by any other political organization.

It has seen the Federal party born, exist, and die, and the great Democratic party live. It has seen the Whig party with all its virtues born, exist, and die, and the great Democratic party live. It has seen the American party, it has seen the Greenback party, it has seen the Knownothing party, all of them, born, exist, and die, and the great Democratic party still live. [Applause on Democratic side.] It has seen the Republican party, with its magnificence, its audacity, its millionaires, its power, and its prowess rise, exist, and it will see it die, and the great Democratic party will continue to live. [Applause on Democratic side.]

It is this, Mr. Chairman, this principle which has given this party vitality never before enjoyed by a political organization, which has enabled it to survive during a quarter of a century of disaster and defeat, and, like Antæus of old, though almost constantly overpowered by the political Hercules with whom it wrestled for supremacy, it rallies after each storm and battle, and, like that famous giant, always gaining renewed vigor and renewed strength from every defeat which hurled it back upon the mother from which it sprung, the great body of the American people. [Loud and prolonged applause on the Democratic side.]

Oklahoma.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 19, 1890.

The House being in Committee of the Whole and having under consideration the bill (S. 895) to provide a Territorial government for Oklahoma—

Mr. STOCKDALE said:

Mr. CHAIRMAN: In the brief time allotted to me I shall touch hurriedly upon the salient points of the measure now presented for our consideration.

There are two propositions pending before the House in this bill: one is to take action in reference to this Territory, the other is that no action shall be taken and leave it alone as it is. The bill proposes, as I understand it, and I have tried to understand it, to extend the laws of the Government and the operations of the Constitution over that Territory. The second section is:

That the Constitution and all of the laws of the United States which are not locally inapplicable shall have the same force and effect in said Territory of Oklahoma as elsewhere in the United States; but nothing in this act shall be construed to interfere with the local governments of any of the Indian tribes which may now be provided for by the laws and treaties of the United States, or which may exist in conformity thereto.

A good deal has been said in the discussion of this question, Mr. Chairman, in reference to the absolute title of these Indians. Is it proposed by this bill that the Government of the United States shall forcibly rob them of their property? Whenever a gentleman who opposes this bill can show that, I will most heartily and earnestly vote with that side. If that title is in the Indians in absolute fee-simple, and the state of affairs occurs here that is claimed, that the laws of the United States, the Constitution of the United States can not go there, then I say that these Indian tribes can sell that Territory to whomsoever they please, either the citizens of this country or of a foreign power, or a foreign power itself.

Now, then, it has been said, and attention has been called to the consideration, that the Indians paid for that Territory. I ask what did they pay? It was the exchange of their possessions in the east, or on the eastern side of the Mississippi River, for their possessions on the west side. What title had they to their possessions on the east side? What title did they convey to the United States Government in making the exchange? In the case of Johnson *vs.* McIntosh, reported in 8th Wheaton and decided by Chief-Justice Marshall, the question raised was as to the title of the Indians to property on the east side of the river.

By this treaty—

Says the Chief-Justice, speaking of the treaty between England and the American Government—

the powers of government and the right to soil which had previously been in Great Britain passed definitively to these States. We had before taken possession of them by declaring independence; but neither the Declaration of Independence nor the treaty confirming it could give us more than that which was before possessed, or to which Great Britain was before entitled. It never has been doubted—

Says Chief-Justice Marshall—

that either the United States or the several States had a clear title to all the lands within the boundary lines described in the treaty, subject only to the Indian right of occupancy, and that the exclusive power to extinguish that right was vested in that government which might constitutionally exercise it. In pursuance of the same idea—

Continues the Chief-Justice—

Virginia proceeded at the same session to open her land office for the sale of that country which now constitutes Kentucky, a country every acre of which was then claimed and possessed by Indians, who maintained their title with as much persevering courage as was ever manifested by any people.

There is not an acre of land west of the Mississippi River and very little east of it that was not in the absolute possession of the Indians, and according to the argument of gentlemen on the other side under the absolute ownership of the Indians. Then how came we by it? How came this Government by it? It was by the right of discovery, claiming under the darrein title from the European Government from which we obtained it. The lands occupied by this country and acquired from France were lands gotten originally from the Indians and they were never consulted. The treaty that was made with these Indians was in pursuance of law. It provided for the exchange of these lands, and the President of the United States had no power to give a greater title than the law authorized him to give. The treaty provided that they should have a patent if they wanted it. It is no part of the title.

Now, then, can this Government to-day or any other day consent that there is a territory within its civilization that is beyond the power of the Government of the United States to control? It has been tried three times in these United States to accomplish that purpose. I was one of the gentlemen who tried that experiment once—that there was a Territory in these United States that the Government of the United States could not control, and the decision was against us.

I say the Government of the United States can not part with the title in the lands in the sense that is claimed here. It does not rest in the power of the legislative department of the Government to do that; if it did, it could destroy the Government by ceding the lands. The ownership of land being in the Government, it sells it to citizens or Indians, reserving the right of eminent domain. The sale to the Indians was not like a sale to a foreign Government, where all right of jurisdiction is abandoned.

The Government of the United States never loses its power to see that a republican form of government is anywhere and everywhere. Why, the Government of the United States can to-day take hold of a State government, that was a sovereign power at the beginning, and revise its government to see if it is a republican form of government. And here we are told, in the House of Representatives of this Union, that there is a strip, a patch of land within the very heart of the American civilization (it is nearer to the Atlantic than to the Pacific) over which the United States can not establish a government and cordon it with bayonets and prevent the ingress of American civilization.

We do not take the land. All this talk about robbery is outside of the question. If it were in it I would state who were the robbers. It is those men who come here to represent a constituency and then take out of the pockets of the people $7,000,000 annually to support these lazy, lounging Indians who use the provisions we give them and the horses we provide them to ride out and kill women and children. If they are civilized, as gentlemen say, then they need a civilized government. If they are not civilized and still desire to live in tribal relations as savages, it is time the policy that has failed for a hundred years be changed.

Public Park in the District of Columbia.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 24, 1890.

The House being in Committee of the Whole, and having under consideration the bill (S. 4) authorizing the establishment of a public park in the District of Columbia—

Mr. STOCKDALE said:

Mr. CHAIRMAN: I wish to occupy the attention of the House but a short time. I am opposed to this bill, because of the principle it involves. I believe that it is the first instance where the United States Government has done as it is now about to do, and what this bill asks the legislative department to do. I believe I am correct in saying that the United States Government owns but one park. It is proposed by this bill to own two at least. The Yellowstone Park was reserved, not purchased. It was reserved for its great curiosities and natural phenomena. I believe that this bill proposes to do what the United States Government never has proposed to do before, and which it has not the power legally to do, as I believe.

The gentleman from Pennsylvania [Mr. ATKINSON] argued the question upon a health basis. That is aside issue. That is not in the bill. The bill makes no such proposition as that. If it did, it would be a travesty to assume that it was sought to establish this park to advance the sanitary condition of Washington or its people, a city full of parks, and its streets, equal to parks, made at Government expense; but to set it apart for a public park or a pleasure ground for the enjoyment of the people of the United States borders on the ridiculous. The people of the United States do not come here to see trees and grass; they have them at home.

I have no doubt that the real object is to benefit the citizens of Washington City. That is the true intent and meaning of this bill, to furnish drives for the wealthy citizens of Washington; poor people can walk in it and get run over; but it probably would be subject to the objection that the people of the United States are spending this large sum in addition to the many millions already spent for the pleasure of the people of this city. It is said that there are no public parks in the northwest of this city. Why, my dear sir, for the last five years the city has so progressed in the northwest that every man who resides there has a park around him. Every man residing in the northwest as it is now extended has a park to himself. Each house is surrounded with extensive grounds. But this bill is evidently intended for the particular benefit and pleasure of those privileged gentlemen by furnishing shaded drives at Government expense. It is said it is for poor people to walk in. This proposed park is six or seven miles from the portion of the city where the poorer classes live, and they can go that distance to walk through this new park and read the signs, "Keep off the grass."

The chairman of the committee announces that the first thing he is going to do when money is appropriated to develop this park is to make drives in it. Drives for whom? For these people that die with diphtheria and other diseases? Why, the people who die with those diseases are the people in the city, the people working at their trades and their several vocations, and the gentleman proposes to relieve these men on Pennsylvania avenue, and on the other various streets, where the business of the city is carried on, by making a public park 6 miles away on Rock Creek! That is his argument. It reminds me of the Thompsonian doctor who was called to see a sick child. He said he did not know what was the matter with the child, "but I will tell you what I can do," said he, "I can give it some medicine to throw it into fits, and I am death on fits."

Mr. PAYSON. Did he say "death?" [Laughter.]

Mr. STOCKDALE. I say if the object of this bill is to provide a sanitary measure for the people of this city then the bill is not written properly, and the committee did not know what they were talking about; and if it be a measure to provide a park "for the people of the United States," the expenditure of this money is an imposition upon the citizens of Washington City, because they are required to pay half the cost of it without their knowledge or consent. The money is to be legislated out of their pockets and put into this park "for the people of the United States," and not for the people of Washington, according to the bill.

I am not opposed to the expenditure of public money where there is something valuable returned to the people of the United States for the expenditure, but I am opposed to expending those millions of money for pleasure-grounds for anybody. The bill does not mean what it says. When it says that it is for the benefit or the pleasure of the people of the United States, it means that is for the benefit of a few people of the United States who come here and become fascinated with the city, which is already so great and so beautiful. It is said that the surplus is in the Treasury and may as well go out. I admit that it is better out than in, but when you expend that surplus in this foolish way you will tax the people to put it back next year, and when you come to restore that money, which now constitutes the surplus, it is well known who will have to supply the money. It is not the millionaires who live in Northwest Washington, or anywhere else. It is the great productive industries of the country, the people who work with their hands, who will have to put back that money into the Treasury for other millionaires to spend other millions upon pleasure parks "for the people of the United States."

Another objection I have to this bill is that this is the first time on record, so far as I know, that the Government of the United States, or any other government, has assumed to take away the fee-simple right of any man who owns the soil without his consent, for the pleasure of people who want to drive in a park. Cities may do that if they want to, and if the city of Washington wants a park, let her make it, but I do say that when this Government of the United States, now for the first time in its history, undertakes to say to a citizen who owns the soil, who owns his home, "You must get out of here, because some gentlemen want to drive through these grounds as a park," it is an outrage.

The citizen is not asked what he will take for his property. If this is to be for public highways—and that is an interpolation in the bill—it should be provided for in the same way that lands are condemned

for public highways. But these lands are not condemned for highways. They are condemned "for the pleasure of the people of the United States." I say the Government has no legal power to dispossess a man of his property for anything except a necessary public use, and it certainly has no power to do it for public pleasure.

Pleasure of whom? The people of the United States, say these gentlemen. Then you will make people give up their homes in this District so that gentlemen in California or Texas may have pleasure-drives when they come here. What a free Government this is!

This is showing more contempt on the part of the Government for its citizens than any civilized government has ever shown, because there is not a potentate in Europe who would undertake to say to the citizens, "I want your property for a pleasure park that I may drive in it, and I will put my own price on it." As to the cost of this land, I do not believe it will cost as much as it ought to cost. Why? Because the people who own the lands that will fall within the proposed park have nothing to say as to what shall be paid for their property. Perhaps they do not want to sell it at all. Perhaps a man has an ancestral home there which has come down to him with many historic and many family traditions and associations around it; but all that goes for naught when some gentlemen parade themselves before the country and say, "We want to turn this land into a park to drive in;" the old idea that it takes two to make a bargain is exploded.

Mr. Chairman, we did something like this not long ago, and what has been the result? We have made a luxurious home for a few aristocratic monkeys and a few dromedaries and a buffalo or two which look now as if they wanted to die. We have turned people out of their homes for that, and now it is proposed that we go a little further, and because some gentlemen want to drive through these lands as a park we are to say to the citizen, "All your history and all the memories and all the glories that hang around your ancestral home must count for nothing because, forsooth, your lands are wanted for the pleasure of the people of the United States."

The very language of the gentlemen of the committee indicates how much contempt is felt for the citizen. Why, sir, for a man to stand up here and make a plea for the rights of the citizen is to subject himself to ridicule. It is a subject for laughter. They are only laboring people. Gentlemen say, "It is no matter about the surplus; we will gather it in." I know how you will gather it in, gentlemen. The people who till the soil are the people to whom you will send out your messengers to bring back additional taxes, to be in turn expended in extravagance and folly. Now, Mr. Chairman, I do not wish to consume the time of the committee further.

Building a Modern and Efficient Navy.

REMARKS
OF
HON. WILLIAM McADOO,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 10, 1890.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 8909) making appropriations for the naval service for the fiscal year ending June 30, 1891, and for other purposes—

Mr. McADOO said:

Mr. CHAIRMAN: I wish, in addition to my remarks a few days ago, to say a word before this debate closes. I am satisfied from the remarks made on this bill by those in opposition to it that while gentlemen are ordinarily well informed on subjects they address themselves to, there are among the opponents of this appropriation those who would not be able to tell the difference between a line-of-battle ship and an Alexandria coal schooner. [Laughter.]

A line-of-battle ship has been defined to be a great iron structure. If that is a true definition, then wherein does it differ from an iron shed? [Laughter.]

A MEMBER. Or a distillery warehouse?

Mr. McADOO. Yes, as my friend from Kentucky suggests, "or a distillery warehouse," which is also an immense iron structure and equally dangerous.

The gentleman from Kansas [Mr. PETERS] states the naval question—that is, what the Navy shall consist of—by saying it is a contest between the cruiser and the battle-ship. I tell the gentlemen who assume that to be the fact that the naval question here presented is not a contest between the cruiser and the battle-ship, but it is a contest between what is called the high free-board and the low free-board, or vessels of the monitor type and battle-ships proper.

Mr. PETERS. I did not say it was a contest between the battle-ship and the cruiser.

Mr. McADOO. If I misunderstood you then I will correct it. I myself was in favor of the low free-board as against the high free-board, because the low free-board of the monitor type is adapted simply to coast defense, and because I believed our proper naval policy was to first protect our coast if necessary, making the defense rest largely on naval hands by vessels purely of the coast-defense type, of the monitor class with revolving turrets, and depending chiefly, if not wholly, on floating rather than stationary batteries or fortifications. In addition we would build protected and unprotected cruisers of such weight and strength as would properly and efficiently protect our commerce upon the high seas. [Applause.]

But the gentleman from Kansas, and those on this floor who follow his lead, have narrowed the question until there is no room for those who differ only, as I do, about the type of ship, but believe in continuing to build a navy. They state the question to be whether we shall have any ships at all, and they move to strike out the paragraph without any type of vessels to take the places of these proposed ships. I do not stand willing, the country does not stand willing, to this; it is not a sectional question, it does not belong to us in the East, it does not belong to the State I represent on this floor, and will be of no more benefit to the people of that State, viewed in a broad and proper light, than to the constituents of the gentleman from Kansas himself.

The gentleman from Kansas has mooted a question in regard to these vessels which was brought up in the committee when it was proposed to build larger vessels.

I agree with the gentleman from Kansas that it is beyond dispute we can not float in our harbors such battle-ships of the larger type as are built by the Italian, the French, and the English Governments, with possibly the exception of the waters of Puget Sound. I admit, with the gentleman from Kansas, who stated here a fact that is indisputable, that it would be impossible to do so, or to build to-day in our navy-yards or shipping-yards and successfully float in the channels to our harbors vessels of the type built by the Italian Government, such monster ships as the Lepanto and the Italia, and also the three additional vessels of the same type of 10,045 tons displacement each, namely, the Ruggiero di Lauria, Francesco Morosini, and Andrea Doria. Nothing of this kind has been built or should be built here, because they would draw far more water than would enable them to enter the most of our harbors, protected as they are by bars or shallows and shifting channels.

But the vessels, Mr. Chairman, proposed by this bill will draw only 23 feet of water, and Admiral Simpson, in a very interesting article of recent date as to the rehabilitation of the Navy, says that 23 feet is not too much draught for our principal harbors.

But, sir, I support the proposition contained in this bill because I think these can be considered as practical coast-defense vessels, and certainly prefer them to a bare negation and failure to continue building a navy. I would not give a cent for the purchase of a vessel which could with difficulty go out of our bays, and in case of defeat or pursuit would be unable to re-enter. It would be utterly useless to us. We could not utilize her. I would not take as a gift for our country the monster war vessels of Great Britain, because they would not be in keeping with our necessities, and would be unduly expensive and valueless in our purposes in maintaining a navy. But the swift cruisers and the coast-defense vessels, a numerous fleet of torpedo-boats, and this type of battle-ship for an outer line of defense, and with the splendid *personnel* of our present Navy, and ample and increasing facilities for building vessels and guns speedily and of the best quality, we would be fairly able to defend ourselves.

Now, these three proposed ships, owing to their limited coal endurance, owing to the fact that they can not steam across the ocean and back and carry sufficient coal to assume the aggressive, will necessarily make them enlarged types of coast-defense vessels, and in some respects they are superior to any other vessels of their size or to vessels of the purely monitor type. For myself, I preferred a purely coast-defense vessel, because I believe that the inner line, which means the very life of our exposed cities, should be first protected. An army that consisted wholly of a skirmish line would offer little opposition to an enemy. Before I close I wish to refer to a remark of the gentleman from Alabama in opposition to the passage of this bill providing for the construction of these vessels. He suggested that if New York was subjected to an act of foreign vandalism, to which she might be subjected, as has frequently been suggested by gentlemen sometimes, may be with a little of exaggeration intended to properly dispel our indifference and national complacency, that in that event the nation that did it would become a province of the United States. Whereupon the gentleman from Maryland asked the very pertinent question: "When Great Britain laid this Capitol in ashes, when she burned the bridge across to Anacostia, a bridge that you only replaced the other day with a proper structure, did we lay Great Britain in ashes or take possession of her colonies?" "Ah," says the gentleman from Alabama, "were we in the condition we are in to-day?"

Mr. Chairman, I hold in my hand the Naval War of 1812, by Mr. Roosevelt.

[Here the hammer fell.]

Mr. McCREARY was recognized, and yielded his time to Mr. McADOO.

Mr. McADOO. Now, I wish to say to the gentleman from Alabama

that we were a greater naval power at that time in comparison with Great Britain than we are to-day. This is a statement that is verified by history. And in that connection I desire to quote from the book to which I have just referred.

Mr. Roosevelt says:

The British vessels encountered were similar, but generally inferior, to our own. The only 24-pounder frigate we encountered was the Endymion, of about a fifth less force than the President. Their 38-gun frigates were almost exactly like ours, but with fewer men in crew as a rule. They were three times matched against our 44-gun frigates, to which they were about as 3 is to 4. Their 36-gun frigates were larger than the Essex, with a more numerous crew, but the same number of guns, carrying on the lower deck, however, long eighteens instead of 32-pound carronades—a much more effective armament.

The 3-gun frigates were smaller, with long twelves on the main deck. The largest sloops were also frigate built, carrying twenty-two 32 carronades on the main deck and twelve lighter guns on the quarter deck and forecastle, with a crew of one hundred. The large flush-decked ship-sloops carried twenty-one or twenty-three guns, with a crew of one hundred and forty men. But our vessels most often came in contact with the British 14-gun brig-sloops. This was a tubby craft, heavier than any of our brigs, being about the size of the Hornet. The crew consisted of from one hundred and ten to one hundred and thirty-five men.

As naval architecture advanced from sails and wood to steam and steel, from primitive engines and paddle-wheels to quadruple expansion ones and twin screws, and heavy steel armor pressed with Titanic machinery, we, recovering from our great war, fell behind. Alas! we can to-day make no such proud comparison as above with any of the great nations; but we are speedily pushing, under the last and present Secretaries of the Navy, into a place befitting this great country, if you will only hold up the hands of those in authority so long as they are efficient, honorable, and honest men.

The point I make is this, and I do not propose to go into the technical question of naval details: I want to observe that we were then more able to have made a province of Great Britain, so far as our Navy is concerned, for this act of vandalism than we are to-day. Even the Chilians, I understand, would affect to laugh at us on the sea. Of course, if this unconquerable and undefeated people of ours undertook the province-creating business in dead earnest, we would never submit to failure. As I have so often said, repeating the observations of military men like the late General Sheridan, we are absolutely secure from foreign invasion on the land. The foot of an alien invader with arms in his hand will probably never desecrate this land of ours. Even if China, with its teeming millions, should in the distant future, as great soldiers assert, become a colossal military power, unfriendly to us, she could not, even with a European alliance, gain a foothold on our territory against American freemen defending their homes.

Our coast, however, is exposed to modern navies, and we are not able as a naval power to protect our citizens or defend our rights abroad.

Mr. OATES. The gentleman from New Jersey has mistaken the comparison I made. It was not as to the naval strength, but as to the greatness in every respect in resources and in business, in the carrying trade that Great Britain is doing, to and from the United States now.

Mr. MCADOO. I have not time to yield further. All that the gentleman says is true as to our material resources. Everybody knows that our aggregated wealth has increased beyond the wildest dream. Everybody knows that the commerce between this country and Great Britain has advanced. But this does not interfere with the naval comparison. At that time it took five months to build a wooden line-of-battle ship. It takes five years now to build a battle-ship to compete with those of Great Britain. So that, even allowing the advance of naval science and architecture and the tremendous growth of our country, we were then, I assert it again, more able as a naval force to meet with Great Britain, engaged, too, at that time in a continental warfare, to avenge ourselves than we are now. Of course, outside of the navy we should find ways to strike her, if compelled to, and strike her with great effect.

Why, the gentleman from Indiana [Mr. HOLMAN] stated here the other day, as if it were a matter of discovery to the House, "Why," said he, "you are building magnificent war-ships." The gentleman was astounded at these monsters of the deep we are creating. "Why, gentlemen," he says, "they are not built of wood, but are built of steel and iron." Why, the gentleman seeks to convey to the House the impression that these vessels are formidable war-ships that no projectile could pierce. These ships are built of steel much less than an inch thick. They are built of steel and not of wood, not because such a thickness of steel is superior to the wooden vessels in resisting the aggression of projectiles, but they are built of steel because in the course of modern naval experience it has been determined that steel can better resist the tremendous shock of the machinery which is necessary to propel a vessel 22 knots an hour and over. That is why the vessels are built of steel.

A cruiser is not a vessel intended as a war-ship in the sense of a battle-ship, and is not a vessel that has more resistance against the projectile than if it were built of wood. It is a feeling impressed on the country and on the House that because we have followed the course of modern naval architecture in building these vessels of steel instead of wood that we have created mighty monsters that will embroil us in foreign war and endanger the liberties, the peace, and even the property of the people of the United States. My good friend is unnecessarily perturbed. The corn will tassle in peaceful times for many summers on the rich fields of Indiana. An efficient navy means peace and not war. A blockade of New York or New Orleans means that the surplus farm products shall rot or burn. The gentleman from Kansas [Mr. PETERS] says that there is a vast growing feeling among our people that the armed force of the United States should be decreased rather than increased. I agree with the gentleman from Kansas so far as a large standing army is concerned. The Constitution, as I said the other day, provides for the armed force on land that can protect the liberties and property of our people in the militia.

The same Constitution has also provided that we shall maintain a navy. Negative as to an army, but positive command to create a navy. "A wise man this Lysander, Joseph," but wise were these fathers, my Lord Richelieu. We ask not a great army, nay, our people shall not groan under colossal military establishments. When the Republic rests on bayonets it is dead. We bear the enormous burden now of the pensioned veterans who saved the Union; we shall not add to this a vast army of active soldiers, for even if they did not menace popular government, giant that we are, we could scarcely bear this additional weight. But if the gentleman from Kansas applies these objections to the necessary and needed force for the defense of the seacoast, I say to him that there is no considerable body of our citizens in any section of this Union who are opposed to defending our exposed coast, to protecting our citizens, and properly maintaining our rights and dignity abroad, nor who believe that we should be so exposed as to tempt the cupidity of other nations to levy tribute on our coast, or incite the ambition of those governments which our institutions menace every hour that they exist to ignore our interests or fail to respect our citizens or our flag in their dominions.

If the gentleman thinks that any considerable body of our people believe in this policy, then I say to the gentleman from Kansas and to the gentleman from Indiana that they totally misunderstand the wishes and desires of the whole people and of this great land, whether in States whose coasts are lapped by the sea, or the millions of the interior and farmost West and North. The people of the United States, whether they labor in the workshops and manufactories, or engage in trade or practice their skill in special callings, or whether they till the soil on the prairies of Indiana, which the gentleman so well represents, are willing to contribute through the taxation which they pay to this Government to protect the great Republic at its borders and without on every sea. [Applause.]

International Copyright.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 2, 1890.

The House having under consideration the bill (H. R. 6941) to amend Title LX, chapter 3, of the Revised Statutes of the United States, relating to copyrights—

Mr. STOCKDALE said:

Mr. SPEAKER: In the time allowed me, this question can not be discussed with any degree of intelligence or force. But I have investigated the question to some extent; and when I started in the investigation I was impressed with the idea that I would support this bill; but during the investigation I have succeeded in convincing myself, at least, that the bill ought not to pass. I admit that it will be an advantage to a certain class of the American people, and a very worthy class, too. It will be an advantage to the type-setters, the printers, and the publishers of the United States. It will be an advantage to the authors of the United States.

Mr. BLAND. Do you not think that the reprinting of the vast quantity of cheap literature which is now printed is a greater advantage to the printers than it would be to turn the whole thing into the hands of monopolies?

Mr. STOCKDALE. I am inclined to think that the amount of printing in the United States would be increased by this measure.

But in our Government and our legislation the object which we profess, at least, to seek is the benefit of the vast body of the people, and if legislation is proposed which would benefit a few while injuring the vast multitude of the people, the few should forego the benefit or profit and let the people have their way.

This measure is to some extent a protection to some of our people; but it is a protection to a far greater extent to the people of foreign countries. Against the people of foreign countries I have nothing to say; but I do say that when we undertake to pass a law that is to circumscribe the field of knowledge of our own people in the interest of foreign authors or any other people of foreign countries we are extending the doctrine of protection further, I believe, than our friends on the Republican side have ever undertaken to go. This is protection not to

the American people, not to the American producer either of material or of ideas, but it is a protection to foreign authors against the interests of our own people. This, as I have heard it aptly expressed, is "protection run mad."

The grandest conceptions of scholars and statesmen, of foreign authors published in foreign countries, must remain a sealed book to Americans until some printers set the type up again and print the same book over again. Why this delay and additional expense?

It is the great business of the human mind to extend its investigation into the field of science, of literature and of law; the whole field of human knowledge invites the world to investigation. Men of this and other countries in their investigation in the field of science, in the realms of poetry, or in the walks of literature, produce thoughts which are the food upon which the human mind can act and expand and enlarge itself, and why shall we put an embargo upon these sources of delight? You may starve the body with high tariffs, but let us not cut off the supplies from the immortal mind. Foreign authors working in these directions are protected in their own countries, as the authors of this country are protected here.

If a book be published according to the laws of a foreign country and a man purchases that book there, it is his property; he has the right to do with it as he pleases, according to the present law. He brings it here and he undertakes to diffuse it among our people. The ideas may have originated abroad; they may constitute poetry or literature of the very highest order. These ideas come to us freely and, as was aptly said by the gentleman from Illinois, they can be disseminated through this country at such a price that our people in all parts of the country can read them.

As has been said, this is important, especially in the Southern States, where our institutions are endangered by reason of the existence of a large class of uninformed people. I say that we should not undertake in this way, for the benefit of others than our own people, to circumscribe the dissemination of the thoughts of men. Why, sir, we have benevolent societies whose object it is to disseminate printed books, to educate the people, to enlarge and purify their thoughts. Their efforts should be encouraged instead of burdened. Thoughts of great and good men should be free to circulate as the air and sunshine are free.

Are American authors imperial, that they must keep other books out, or are they to be censors of what we shall read? These benevolent institutions, I say, are furnished with means and money——

The SPEAKER *pro tempore* (Mr. LODGE). The time of the gentleman has expired.

Mr. STOCKDALE. I only wanted to add, Mr. Speaker, in conclusion, that this bill will circumscribe the operations of these people to the detriment of the American readers.

Federal Elections.

SPEECH

OF

HON. SAMUEL S. YODER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890.

The House having under consideration the bill (H. R. 11145) to amend and supplement the election laws of the United States, etc.—

Mr. YODER said:

Mr. SPEAKER: When a political party has gained power by a very meager majority, and that majority is obtained by, to say the least, questionable means, by the fat fried out of favored millionaire manufacturers; by debauching the ballot-box and intimidation of employés, and the use of money contributed to campaign committees who divide votes into blocks of five because aware that it is necessary to resort to desperate and diabolical means to retain that power—then, and then only, will the leaders resort to the means contemplated in the so-called Federal election law, more properly designated as the Davenport-Lodge force bill.

The pretended authority for the perpetration of this most destructive measure of all popular elections by the people in their sovereign capacity they find in section 4 of Article I of the Constitution, while it is well known to every student of the history of the acceptation of that clause of the Constitution that it would have defeated the adoption of the entire Constitution had it not been defined to mean that Congress should never under any circumstances exercise this power except in cases where the States refused to provide for the election of members to Congress.

The explanation of the meaning of this clause in the Constitution is so plain that it would seem needless to enter into an argument or discussion as to its meaning. Mr. Madison is quoted by the advocates of this bill as favoring such a measure, but they carefully refrain from stating all that Madison said—that it was immediately after the adoption of the clause of the Constitution which vests in the State Legislatures the primary power to regulate the "time, place, and manner of holding elections for Senators and Representatives." Then follows the speech quoted by Mr. LODGE in his report, and also the explanation which is not quoted, as follows:

This was meant to give the National Legislature a power not only to alter the provisions of the States, but to make regulations in case the State should fail or refuse altogether. (See Elliott, pages 401, 402, volume 5.)

Conventions were held in the several States to ratify the Constitution after it had been signed, September 17, 1787. I have the proceedings of the conventions of Massachusetts, Pennsylvania, New Hampshire, New York, North Carolina, South Carolina, Virginia, and Rhode Island, which I find in Elliott's Debates, volume 1, page 176. The only other expressions uttered in the convention which are referred to by Mr. LODGE are those of Messrs. King and Morris; but Mr. LODGE did not tell that they were made ten minutes after the adoption of the first clause, which vested the power in the State Legislature, together with those of Mr. Madison.

SECONDARY POWERS OF CONGRESS.

The question and the subject of discussion was as to the propriety of striking out the latter part of the clause, which, if done, would have deprived Congress of the secondary and contingent power, even in case the State should fail or refuse altogether, to make any regulations by which elections could be held for members of Congress. The great apprehension was that the State would fail to send Representatives to Congress, and for that reason Mr. Madison and Mr. King and Mr. Morris sought to preserve this contingent and secondary power to Congress.

That was the question before them. It was not should Congress have the power, but it was, if having given it to the States, should they refuse to exercise it should that give power to Congress? There is no room for argument that Congress could take the power to make regulations from the States, much less that it could take control of the elections.

MASSACHUSETTS STATE CONVENTION.

On page 176 of Elliott's Debates, volume 1, I find the following:

That Congress do not exercise the powers vested in them by the fourth section of the first article, but in cases where a State shall neglect or refuse to make the regulations therein mentioned.

And finally, as an admonition that it seems incredible that any one would neglect such representation, the convention admonished their Representatives in Congress to use all reasonable and legal methods to obtain a ratification of said alterations and amendments in the Constitution.

The New York State convention adopted the following:

Resolved, That it is the opinion of this convention that nothing in the Constitution now under consideration should be construed to authorize Congress to make or alter the regulations in any State respecting the times, places, and manners of holding elections of Senators and Representatives, unless the Legislature of such State should neglect or refuse to make laws or regulations for the purpose or from any circumstance be incapable of making the same; and in that case such power shall only be exercised until the Legislature of the State shall make provisions in the premises.

And so on in every State convention these provisions in the Constitution had to be explained and so understood to mean that only in case the State neglected or refused altogether, then, and in that event only, should Congress have authority to exercise this power, and every student of the debates in the constitutional convention is aware that had this interpretation not been placed upon this clause the States would have refused to ratify the Constitution with this provision in it. The "time, place, and manner," etc., should be prescribed by the Legislatures of each State, but Congress may by law at any time make or alter such regulations, etc. The first is original and primary, the second is permissive and contingent. The Legislatures and Congress can not both have original and primary power to act on the same subject at the same time. Such a conflict would never have been sanctioned. Nor can we believe that the men who draughted this section intended to distinguish it from every other section in the Constitution in granting to two separate and distinct authorities coequal power over the same subject at the same time. Nor can I conceive a greater absurdity than the granting of plenary powers to the Legislature of the State in the first clause of the section, only to be abrogated and annulled by the second section without cause.

No one believes that the intelligence which framed that great instrument, careful in avoidjng any conflict between the State and Federal authorities, deliberately placed this power into two distinct hands to be exercised at the same time possibly, and in different ways. We conclude, therefore, that the obvious and plain meaning of the section under discussion is that the Legislature of each State should have the primary authority to determine on the time, place, and manner of holding elections, and that Congress should have such power ultimately, in case the State neglected or refused to act.

This bill proposes to exercise that power, so utterly obnoxious to the framers of the Constitution, unwise in its general scope, iniquitous and subversive of the rights of the people. During a century of the existence of this Constitution no party ever thought of construing this provision so as to authorize the Federal Government to control elections in States.

In 1842 we find that Congress attempted to take charge of this matter by passing a law directing the States to elect their Representatives by districts rather than by the general ticket system, as some were then doing. The bill was approved June 25, 1842, by President Tyler. The States of Missouri, Georgia, and New Hampshire declined to obey the law, and elected their Representatives by the general ticket system as theretofore. Upon the assembling of the Twenty-eighth Congress the question of their title to their seats was at once raised and reports were filed by Mr. Douglas for the majority and it was promptly decided by yeas 128, nays 68, in favor of seating the members and against the authority of Congress to take charge of these elections.

We find voting among those in the affirmative such men as Hale, Hamlin, and other leading Republicans. So that it was decided that the power claimed by Congress to command the States to elect Congressmen within the borders prescribed by it did not exist, and it has never been attempted since.

PROVISIONS OF THE BILL.

It is proposed in this bill that the power which is inherent in the States be taken from them and given over for its determination into the hands of Federal officers appointed under clauses 7 and 11 of section 8 of the Davenport-Lodge bill. It is provided that the supervisors supervise the registration and actually pass upon the right of a man to vote. It is proposed that the power which is inherent in the State should be taken from it and given for its determination into the hands of Federal officers appointed by Federal judges.

These Federal officers under this bill will have the power to pass upon the qualifications of the voter and to say whether or not he can vote. This is not only applicable to voters for members of Congress, but as elections are held in many States for State, county, and municipal officers and Presidential electors at the same time as for members of Congress, this bill seeks to do by indirect means what it is acknowledged it can not do by direct means, namely, to put the elections, Federal, State, county, and municipal, under the control of Federal supervisors and deputy United States marshals, and by the section of law which it re-enacts employ United States soldiers at the polls.

The power to challenge the vote, the power to count the votes, puts the election of all voted for in the hands of Federal officials. The power of supervisors carries with it the power to compel the doing of something which is the subject for the supervisor and the power over the right of suffrage. Thus supervisors are compelled to go to the city officers, who are the registrars, and to interfere with the registration. Again, they are required to enter the court-rooms, where the judge naturalizes persons, and supervise the naturalization of citizens, and virtually take charge of the State courts. More than that, the power is given him to direct the officer of the State to do certain things upon his own responsibility when he has to discharge the duties of registrar for his State or city, and for that alone. This is a bill to foist upon the people a horde of Federal officials, responsible to no one but their party; no one to compel them to do their duties properly. It is the laws enacted by the States that the Republican party fears.

It is not contemplated in this bill to repeal the State laws, but to supersede them by Federal officials, the tools and subservient appointees of the Republican Federal Administration under the immediate control of a chief supervisor, who commands unlimited authority and is responsible only to the Republican Federal court. The purpose of the official is to act for the Republican party. There is manifested a willingness to degrade the Federal judiciary by dragging it into the field of partisan politics and making it an instrument of oppression to the people.

Never in the history of this country has any party in its blind partisan zeal attempted to rush through Congress a measure so threatening to the judicial system of our country, and this portion of the bill its advocates never discuss.

PROSTITUTING THE JUDICIARY.

Let us for a moment contemplate the deep and damning conspiracy here unfolded. Four months ago the judicial bill was passed through the House of Representatives by the leader of the Republican party.

The conspiracy was concocted in a secret caucus, and with the assistance of the Committee on Rules was rushed through with such rapidity that they themselves were dazed. The bill revolutionized the judicial system of the United States and was put through this House in four hours. No time was given for the House to think. No one suspected the infamous outrage contemplated. Only thirteen members felt like voting against a bill of such importance without knowing its effects. One hundred and eighty-three did not vote at all. A certain few Republicans who were in this all along had a knowledge of the effect and scope of the bill, though Democrats as a rule were suspicious of it.

John Adams's midnight judges were created with as little general knowledge and purpose as this law was put through. No one except the men who are pressing this judicial bill understood it well. That bill provided for an increase of United States circuit judges by the appointment, by the President of the United States, of seventeen judges. It prepared the way for the carrying out of the Republican scheme under this bill.

The power of appointing the Federal supervisors and chief supervisor and the Congressional returning board is lodged in the United States circuit judges. This was also necessary to the carrying out of the conspiracy. It was necessary that they should have the control of these courts. Some of the judges were Democrats. Some of the Republicans were advanced in years and their places might soon be filled by Democrats, or they might not be willing tools. Mr. Chief-Justice Fuller, Justice Field, and Justice Lamar, who are Democrats, might be called on to appoint some of these supervisors and returning boards. That would not suit the Republican programme.

The Cannon bill removes all difficulties by relieving Messrs. Fuller, Field, and Lamar and their colleagues from service on the circuit and makes seventeen new circuit judges. Five judges at least out of the nineteen who now hold circuit court are Democrats. The new men to be appointed by President Harrison will be Republicans; they will will be new men, fresh and hot Republicans, who can be relied upon for pressing work when required.

PREPARED TO MEET ANY EMERGENCY.

They owe their appointments to the Republican party. They are appointed for life, not responsible to any constituency, and only to the Republican party to whom they owe their official life. And now they are expected to create a Republican House of Representatives in the future.

By the Lodge bill these judges are given a power, and it is made their duty, to appoint Federal officers whose duties are to take charge of and conduct elections and make out certificates of election, which shall entitle them to seats, of members of Congress, and they are responsible to these judges and no one else. If they are charged with a violation of the law, the perpetration of an outrage at the polls, intimidation, bribery, falsification of the returns, or any other crime, they are only answerable before these courts. The circuit judge who appointed him is the judge who must pass upon his guilt or innocence; and for fear that some one might be fearful of consequences, it is provided in the Lodge bill that all supervisors shall be considered in the service of the United States for sixty days after the election, so as to give them plenty of time to go to Canada in case they are wanted by any State authority.

It is also provided that the grand jurymen shall all be good, reliable Republicans, or be selected by a Republican clerk of the United States court, which is the same thing, to try the offenders, or to convict Democratic State officials of the election. Mr. ROWELL explained the purpose of this provision of the bill—that it was necessary that the jurymen should all be of the same politics, or you could not get them to agree. Being all Republicans, all could agree to acquit Republican criminals and convict Democrats whether guilty or not. Mr. MILLS came forward with a proposition to make these courts non-partisan. The motion was promply voted down by the Republicans of the House. Under this new bill there will be twenty-seven circuit judges, twenty-five of whom will be Republicans and only two Democrats.

The new judges are to be appointed by President Harrison, and will serve for life (by and with the advice and consent of the chairman of the Republican national committee). No doubt he will find the right kind of men to fill the positions of United States circuit judges. The election of members of Congress from every State in this Union is to be subjected to the partisan judiciary and the Republican supervisors and the Republican returning boards, and all have been appointed for life. You must not forget that supervisors are appointed for life as well as judges of the United States courts under the provisions of this bill. This commission of villainy against popular rights to be accomplished by the Cannon bill and the Lodge bill is simply inscrutable unless you study their origin, their provisions, and their infamy taken together.

Beginning at section 42 and going on through this bill you will find thirty-nine provisions for punishing State officers of elections, and there is one little section providing for the punishment of the supervisors. There is not only a life tenure for the chief supervisor who conducts these elections, but there is no penal statute in regard to him. The judges of the circuit court of the United States appoint the supervisors; if one was to be tried for misconduct the judge who appointed him is to judge his guilt or innocence by a court of the same political faith, a jury of exclusive Republicans.

The conduct of the supervisor is not alone on trial, but the judgment of the judge who appointed him is also on trial and before the judge who selected him.

The most baneful and demoralizing effect of all the outrageous features of this bill is the dragging down into the filth and mire of political corruption the ermine of the judiciary. Thomas Jefferson said regarding the judiciary:

> It is proven that the power of declaring what the law is *ad libitum*, by sapping and mining slyly, and without alarming, the foundation of the Constitution, by a corrupt judiciary, is the beginning of the end of all free government.

The chief supervisor has his powers well set out in this bill. Everything that is to be done, everybody who is to be employed everybody who is to employ, everybody who is to be interested in the employment, is to be carefully scrutinized by him, and his duty is to provide for the affairs of the people, and on any failure or refusal of the legal State authorities to conform to and discharge the duties conferred upon them by the law they can be arrested and incarcerated merely upon the affida-

vit of this supervisor, and then taken away to some place, many miles away perhaps, where the expense of a trial would be greatly increased, and to appear before a partisan judge on the complaint of a partisan supervisor and partisan deputy marshals employed and virtually owned by this chief autocrat of elections.

This bill provides that the General Government may go into a State and direct the local officers in the performance of their duties. We have no remedy but to obey the Federal authorities, and in this way destroy every authority of the State.

If Congress can compel local officers to certify the returns of Federal supervisors under the provisions of State law, it can increase the duties of these local officers as to these returns. It can impose upon them such duties as party necessity may suggest, and compel their performance by mandamus or proceedings in contempt or otherwise, and thus utterly destroy the machinery of State government.

According to this bill there is power vested in the General Government to destroy the State, and this is done under a hypocritical pretense of a desire for a free ballot and a fair count.

DEPUTY MARSHALS INVADING THE HOMES OF CITIZENS.

This bill provides for a house-to-house canvass, sending the supervisors and deputy marshals to force an entrance, if need be, into the houses of people to "verify by proper inquiry and examination at the respective places of residence" of voters the correctness of the registration books, and to make a "thorough and effective house-to-house canvass" of elections in their respective districts to ascertain the qualifications of the male voters residing there. The females in Wyoming are happily excepted from this outrage.

The time-honored maxim that "a man's house is his castle" is to be eliminated from our system of law and in its place is to be substituted the provision that whenever it is suspected that the Republican party can purchase, intimidate, or otherwise influence a voter to its advantage, then a supervisor and a deputy marshal may go with all the powers of the General Government at their backs search the man who can be purchased or intimidated, and report to the Republican national officeholders (or chief supervisor for life), who will report the same to the Republican national committee, who will then divide these into blocks of five, with a trusted man with the necessary funds in charge, who will see that they vote the Republican ticket and that none get away.

COST OF THE LODGE BILL.

There are about sixty thousand voting precincts in the United States. Under this bill the cost of the canvassing board, and cost of the chief supervisors, and cost of the supervisors themselves in each district, the cost of the deputy marshals, allowing three to every precinct and three supervisors for each, and allowing a fair average of the amount that they are to be paid, is from $5 to $20 per day. Under this law I find at a low estimate that this bill will cost in round numbers $12,000,000 for every election held under the provisions of this bill, provided it was enforced in every State, and would be that much saved to the national Republican campaign fund toward again purchasing the next Presidency.

This bill also re-enacts the section of the Revised Statutes authorizing the employment of United States troops at the polls; it provides for the employment of deputy United States marshals, not less than a certain number, but puts no limit at all on the number which may be employed. There can be as many as the supervisor may see fit to appoint.

The men selected by the chief supervisor to serve as supervisors or deputy marshals to a certain precinct, under the provisions of this bill, need not necessarily be residents of that particular precinct, or even residents of the county, and the chief supervisor is the sole and only judge as to the character, fitness, and qualifications of these subordinates.

The deputy marshals are appointed by the United States marshal, and every one will be a Republican before this bill goes into effect.

The chief supervisor has absolute power over the elections and unlimited power over his subordinates. They certify who is and who is not elected to Congress, and their certificate seats the man as a full-fledged Congressman, and if the Clerk of the House of Representatives refuses to place such man on the rolls he is fined $5,000 and then sent to the penitentiary. He can discharge them at will, suspend them from office, and other powers. And this is a "free ballot and a fair count."

How nice the arrangement to pay these minions of a party. His warrant, in the shape of a certificate of the expense, is forwarded to the Attorney-General. This is made by the thirty-third section of this bill a compulsory order to the Attorney-General to, without delay, cause to be deposited in the subtreasury or a Government depository in the judicial district (this makes it better yet; they can get at it handier) from which the estimate shall have been sent, to the credit of the marshal of the United States of said district, the sum of money he so estimates; and to pay these estimates the law makes it a permanent appropriation, so that if the next House or any House should be—as it surely will be—Democratic, the Treasury of the United States is absolutely without protection by that House. He is also made an officer for life, so that no changes which may occur but his death would relieve the district over which he is chief supervisor from his domination.

Under his orders his subordinates are compelled to make a canvass from house to house of every city, and obtain a perfect list of the voters residing therein, so that at the expense of the tax-payers he may have for the benefit of his party and national campaign committee absolutely accurate knowledge of the views and circumstances of every voter, and thereby be enabled to bring to bear on every one of them whatever corrupt means may be thought best suited to get him to vote the Republican ticket. In these visits the officer and the voter are alone; this secret conference affords the opportunity for bribery or intimidation, and the tax-payer contributes to pay for this chance to debauch the suffrage and demoralize the voters.

This puts into the hands of the Republican organization a complete list of all doubtful voters in all doubtful districts in the United States, and furnishes this list at the public expense, and furnishes the willing tools, paid out of the public Treasury, to see to it that the means adopted shall be properly applied to the voters selected, and yet it is claimed by the advocates of this bill that it is done for the purpose of securing a free ballot. How much would the firm of Dudley & Quay pay today for such a list in all close districts?

UNITED STATES DEPUTY MARSHALS AT THE POLLS.

As to the character and fitness of deputy United States marshals and supervisors heretofore appointed under section 2021 of the Revised Statutes of the United States in cities of 20,000 inhabitants or over, in Congressional districts when Congressmen were to be chosen, I can only refer to the debates in the Senate of the United States, volumes 83 and 84. On page 1636 I find two columns of names of convicts, thieves, robbers, murderers, etc., who were supervisors in New York City. These disreputable characters were appointed by the real author of the present bill now under discussion, the man who attended to the drawing up of every detail, every section, and every line of the Lodge election bill, who was constantly closeted with the committee who had this bill in charge, and who was either on the floor of the House, in the Speaker's private room, in the gallery, or in the House lobby when the bill was put upon its passage, so that he might be consulted with regard to the effect of any amendments that might be offered before the final passage of the bill. I refer to John I. Davenport, of New York.

The people of my own State, Ohio, have had a foretaste of what may be expected in the event this bill becomes a law. At the election for members of Congress held in the city of Cincinnati on the 14th of October, 1884, Lot Wright, United States marshal for the southern district of Ohio, acting under the advice of the national Republican committee and by authority of section 2021 of the Revised Statutes of the United States, appointed large numbers of deputy United States marshals to serve at the several voting precincts of Cincinnati.

I hold in my hand House Report No. 2681 of the second session of the Forty-eighth Congress, extracts from which I will insert in the RECORD:

Mr. SPRINGER, from the Committee on Expenditures in the Department of Justice, submitted the following report:

The Committee on Expenditures in the Department of Justice, having been instructed to investigate certain charges against Lot Wright, United States marshal for the southern district of Ohio, and having had the matter under consideration, have instructed me to submit the following report:

The House of Representatives on the 2d day of December, 1884, adopted the following preamble and resolutions, submitted by the Hon. John F. Follett, a Representative from the State of Ohio, namely:

"PREAMBLE AND RESOLUTIONS.

"I do impeach Lot Wright, United States marshal of the southern district of Ohio, of high crimes and misdemeanors. I charge him with usurpation of power and violation of law:

"In that he appointed a large number of general and special deputy marshals to serve at the several voting precincts in the city of Cincinnati, in the State of Ohio, at an election for members of Congress, held in said city, on the 14th day of October, A. D. 1884, and armed said deputy marshals with pistols and other deadly weapons said to have been furnished by the War Department of the United States Government;

"In that a large number of the deputy marshals so appointed and armed were notorious criminals and men of known vicious and brutal habits and reputation, and many of them non-residents of said city of Cincinnati and of said State of Ohio;

"In that the said deputy marshal, acting under his orders and directions, aided, abetted, and encouraged fraudulent voting, intimidation of voters, and gross outrages upon the elective franchise and the rights of the honest voters of said city, in furtherance of the interests of a political party and its candidates: Therefore,

"*Resolved*, That the Committee on Expenditures in the Department of Justice be required and directed, as soon as the same can reasonably be done, to investigate such charges and report to this House—

"First. How many deputy marshals, general and special, were appointed and authorized by said United States marshal for the southern district of Ohio to serve at the several voting precincts of said city at said election, with the name and residence of each, and the voting precinct to which each was assigned.

"Second. What citizens, if any, of said several precincts asked for the appointment of such deputy marshals, with the names of such citizens and the reasons, if any were assigned, for such request.

"Third. Whether any, and, if so, how many, of such deputy marshals have, prior to such appointment, been accused or convicted of crime, or were men of known vicious and brutal habits and reputations.

"Fourth. Whether said deputy marshals were under the direction and control of partisans and used the powers vested in them in the interest of any political party, and aided, countenanced, and encouraged fraudulent and illegitimate voting in the interest of such political party and its candidates.

"Fifth. What number and what kind of pistols or other deadly weapons were put into the hands of said deputy marshals, who furnished the said weapons, from whence were they received, why furnished, and how many of such weapons

have been returned, together with the names of such deputy marshals as have failed to return the weapons furnished them.

"Sixth. What amount of money has been paid to such deputy marshals, and by whose order was the same paid, and at what rate per day.

"Seventh. Any other matter or thing connected with or germane to the general subject of such investigation."

In accordance with the foregoing resolution the following members of the Committee on Expenditures in the Department of Justice were appointed to make the investigation: WILLIAM M. SPRINGER, of Illinois, chairman; Thomas J. Van Alstyne, of New York; JOHN W. STEWART, of Vermont.

INVESTIGATIONS BY THE COMMITTEE.

The subcommittee before proceeding to examine witnesses called upon the Attorney-General for copies of all correspondence between the Department of Justice and Lot Wright in reference to the Congressional election in the southern district of Ohio, on October 14, 1884. This correspondence was promptly furnished by the Department, and is printed in the volume of the testimony herewith submitted.

The committee also called upon the Secretary of the Treasury for copies of all vouchers and accounts filed in the Treasury Department by Lot Wright for expenses incurred by him on account of said election. These were also promptly furnished and are printed with the testimony. The Commissioner of Pensions was also called upon for information as to special examiners or other employés of the Pension Office who reported from or were employed in the State of Ohio during any part of the months of October and November, 1884. The Commissioner furnished the committee all the information desired, which will be found printed on pages 75 to 103 of the testimony.

After examining eleven witnesses in the city of Washington, the subcommittee proceeded to the city of Cincinnati, Ohio, where a thorough examination of witnesses was had, and a careful investigation of all the facts material to the case was made. The sessions of the subcommittee in Cincinnati began on the 5th day of January and closed on the 17th day thereafter. Mr. Wright was represented by Judge Forsker, Hon. H. L. MOREY, and others, as counsel. Mr. Follet, upon whose motion the resolutions authorizing the investigation were adopted, and Hon. A. A. Kramer, the unsuccessful candidate for Congress in one of the Congressional districts of Hamilton County, of which the city of Cincinnati forms a part, appeared in person, and were also represented by Mr. Charles Baker, as counsel.

Before proceeding to the consideration of the facts which were developed by the testimony, a brief statement of the law which the marshal of the southern district of Ohio was called upon to execute and which governed his conduct should be made.

Section 2028 is as follows:

"No person shall be appointed a supervisor of election or a deputy marshal, under the preceding provisions, who is not, at the time of his appointment, a qualified voter of the city, town, county, parish, election district, or voting precinct in which his duties are to be performed."

There can be but one construction given to this section. It clearly provides that the deputy marshals of election shall be qualified voters in the precinct in which their duties are to be performed. The law was so drawn as to apply to such counties, towns, or cities as might have but one place for voting. In such case the deputy marshal might reside at any place in such county, city, or town; but where there were voting precincts or election districts prescribed in counties, cities, or towns it is clear that the law requires the deputy marshal to reside in such election district or voting precinct.

Marshal Wright's accounts show (testimony, pages 58 to 75, and page 299) that of one thousand three hundred and seventy-one special deputies appointed and paid by him, every one of them, with perhaps two or three exceptions, was allowed and paid for services performed, "actually on duty," on Wednesday, October 15. The whole amount paid for services of special deputy marshals by him was $14,800, as appears by the two accounts mentioned.

The appointments were made without any reference to section 2028 of the Revised Statutes, requiring the persons appointed to be voters in the election district or voting precinct in which their duties were to be performed. In fact, the section was wholly disregarded in making the appointments, but in many cases deputies doubtless performed duties in their own precincts.

But in some cases persons who were known to Marshal Wright to reside in Hamilton County, outside of the city of Cincinnati, were appointed to serve in the city. Appointments were made of general deputies to serve in many of the suburban villages on election day, and to perform no other duties than those pertaining to the election. All such appointments were without authority of law, and were expressly prohibited by section 2030 of the Revised Statutes.

In addition to these general deputies appointed in the suburban villages of Hamilton County, Marshal Wright appointed many others, who were non-residents of the State of Ohio, to act as general deputy marshals. He furnished the committee a list, which is printed on page 300 of the testimony, but could not give their places of residence. This list embraces only about 130 names; but Mr. Wright did not know how many others were appointed of whom he had no record. He claimed that the general deputies appointed by him would not exceed 150; but he admitted that his clerks signed his name to commissions, and that he did not keep a record of those appointed. He did purchase, however, 1,300 metallic badges and 2,000 ribbon badges, purchased in separate lots of 1,000 each, to be worn by his deputies on election day.

The testimony developed the names of quite a number of persons who were appointed whose names do not appear in any of the published lists. The whole number of special and general deputy marshals appointed whose names are given is 1,501. But Marshal Wright, in his letter to the Attorney-General, of October 29, already referred to, says that he had employed special deputy marshals as follows: 68 men for more than two days and 1,600 two days each. He also says:

"In addition to the above I had many others who did excellent service (not under pay)."

NON-RESIDENT MARSHALS.

The published list of general deputies does not disclose their residences, but the testimony showed that Charles Adams, after whose name "Sixth ward" is written, was then a citizen of Colorado, and holds a position in the Post-Office Department. W. F. Crawford is a post-office inspector at Austin, Tex. W. H. H. Llewellyn, after whose name "Sixth ward" is written, is agent of the Mescallero Apaches, in New Mexico.

Several Department clerks from Washington, numerous internal-revenue officials and postmasters of Kentucky, a member of the Missouri Legislature, Government officials stationed at St. Louis, several persons from Chicago, Indianapolis, Louisville, Covington, Ky., a hotel keeper from New Rochelle, N. Y., and many others from different parts of the country were appointed general deputy marshals to serve at that election. General deputies were not paid out of the Federal Treasury, but out of campaign funds disbursed through the Lincoln Club, a Republican partisan organization in that city.

OFFICIAL OATHS.

Notwithstanding the statute requires that the oaths of office should be administered to the deputies by the judge of the district court, yet it does not appear that any of them were so administered. United States commissioners performed this duty, as will appear by the oaths on file in the Treasury Department. All persons so appointed and sworn were illegally qualified, and had no legal status whatever. They had no authority to make arrests, no authority to perform any of the duties of a general deputy marshal or of a special deputy, and all sums paid to them should be disallowed and repaid into the Treasury of the United States.

PARTISAN AND INCOMPETENT MARSHALS.

The deputy marshals appointed were all members of one political party, or of persons who would vote a portion of the Republican ticket. They were in many cases colored "roustabouts" and "roughs," men of no character or bad character, and one hundred and forty-four, as appears by the vouchers filed in the Treasury Department, were unable to write their names, and each signed his receipt with "his X mark." Some were ex-convicts, and one, who served as a special deputy, was at the time a fugitive from justice from the State of Indiana. His name is William J. Farrell, and he has since been returned to Switzerland County, in that State, and convicted of obtaining money under false pretenses, and sent to the penitentiary at Jeffersonville for two years, where he is now serving out his sentence.

Some of them were drunk on election day and disorderly, and showed by their appearance and conduct that they were utterly incapable of properly comprehending or discharging the responsible duties imposed upon them by law. Your committee were unable to ascertain the number of deputy marshals who, prior to their appointment, had been accused or convicted of crime, or the number of those who were men of known vicious and brutal habits. Accuracy in this respect would have prolonged the investigation indefinitely; but enough was proven to establish the fact conclusively that there were persons who were appointed and acted as deputy marshals at that election who were of the very worst elements of society.

NO NECESSITY FOR MARSHALS.

There was no necessity for the appointment of so large a force of deputies on the day of election. It was the opinion of Mr. Theodore Cook, a prominent citizen called by Marshal Wright, and of many witnesses called by the other side, that there was no necessity for appointing either deputy marshals or deputy sheriffs. Mr. John W. Herron, an attorney at law and prominent Republican, called by Marshal Wright, testified that a fair election would have been secured if the appointments had been made of good men from both parties.

EFFORTS OF A CITIZENS' COMMITTEE.

Mr. M. E. Ingalls, president of the Cincinnati, Indianapolis, St. Louis and Chicago Railroad Company, testified that he was chairman of a citizens' committee who called on Marshal Wright to ascertain his views in reference to the appointment of marshals. The statement was made to Mr. Wright that the community was very much excited; that there was great danger of trouble; that it could be allayed by having the appointments made from each party. One of his replies was that the mayor was a Democrat, and the police was Democratic, and therefore the marshals should be Republican; to which an answer was made that one-third of the police was Republican, and Democrats would be very well contented if the same number of appointments of marshals were Democratic. The direct demand was made on him to appoint a minority of his marshals in each precinct of Democrats, to which he replied finally that if the committee would put their request in writing he would take it into consideration and give them an answer.

The request was reduced to writing and placed in the marshal's hands. There was a good deal of discussion at the interview as to the extent of Marshal Wright's authority. It appeared to the witness that Mr. Wright seemed to have an idea that he had supreme management and control of everything. It was then represented to him that the mayor of the city was very anxious to join him in any movement that would give a fair and peaceable election. Mr. Wright replied, if the mayor wanted to see him he could come and call. Mr. Ingalls further testified as follows:

"Q. When did you see him next?

"A. The next day some member of the Democratic committee came down to my office with a project of swearing in deputy sheriffs, and stated he was going ahead to do it. I asked him to wait till I got an answer, and I wrote a note to Mr. Wright asking him if he could give me an answer to this demand. He sent back word by my colored boy that he wanted to see me at once at his office, but just then I could not come. As soon as I could, I went up, but he was out. I went on 'Change and came back and met Mr. Wright in front of his building and I asked him for an answer. He seemed very much excited. He said that he had got this town in charge and he was going to have a fair election, and the man who crossed his path should feel his steel. I told him I did not care about any talk of that kind; that we only wanted the fair thing. He said if I would come to his office at 4 o'clock that evening he would give me an answer. I said I would come with our committee, which consisted of myself, Mr. Parker, and Mr. Bell. He said I might bring Mr. Theodore Cook. I said Mr. Cook was not on the committee, and I said Mr. Parker and Mr. Bell were as respectable citizens as we had. I did ask Mr. Cook, and he said he could not go; he was busy. Mr. Parker had left town and Mr. Bell and I went.

"Q. You and Mr. Bell went?

"A. Yes, sir.

"Q. What occurred at that interview?

"A. Mr. Wright declined to give us the name of any appointment. I don't think he said he would appoint any Democrat, but he said he should manage his business in his own way and appoint whoever he pleased, and he did not want any names to be submitted. I finally said to him—I probably got a little angry, perhaps—that I would not take the responsibility of doing the dirty work he was and inaugurate what would come for all of Cincinnati. He said that was very insulting. I told him, 'Very likely,' and left him.

"Q. Was the list of his deputies published in the Sunday papers prior to election?

"A. Not to my knowledge.

"Q. Mr. Parker is an ex-president of the Chamber of Commerce of Cincinnati?

"A. Yes, sir.

"Q. John E. Bell is one of the leading business men of Cincinnati?

"A. Yes, sir.

"By Mr. VAN ALSTYNE:

"Q. Was it your belief when you went to see the marshal in the first instance that if he would divide his marshals between the parties the Democratic committee would not have appointed deputy sheriffs?

"A. I have no doubt if the marshal had said, 'Fix your appointments; I will go and see the mayor, and we will divide our appointments,' there would not have been a drop of blood shed on election day; I believe that as much as I am sitting here."

THE RESPONSIBILITY.

Your committee are of the opinion that if there had been a fair division of the deputy marshals between the two political parties, and the appointment of a reasonable number of competent men of good character, the election would have been fair and peaceable, and not a drop of blood would have been shed or any riot occurred. If this be true the responsibility for all outrages that occurred on that fatal election day, the riots, assaults, shootings, clubbings, woundings, and loss of life, must be laid upon Marshal Wright and upon those who aided, advised, and abetted him in his partisan course.

At the Presidential election in the same city in November, only three weeks later, there were no deputy marshals or deputy sheriffs, and there was a peaceable and quiet election. The illegal appointments of non-resident deputies, the unnecessarily large number of special deputies, and the known incom-

petency, bad character, rough appearance, ignorance, and brutality of many of them, the manner in which they were armed and instructed as to their duties, and the partisan course of the marshal in refusing any Democratic representation in the appointments to be made, were all acts and conduct calculated to, and which did, provoke riot and bloodshed at the polls and prevent a fair and peaceable election.

ARMING THE DEPUTIES.

About six hundred of the deputy marshals were armed by Marshal Wright with "British bulldog" revolvers, of .44 caliber. Those revolvers were sent to Marshal Wright from New York by members of the Republican national committee. They were not paid for with Government funds, but were a contribution from that committee. They were placed generally in the hands of the colored deputies, who were instructed by Marshal Wright and others who assisted him at his office to use them. About half of the revolvers issued were returned, under the instructions given, but others were retained by the parties to whom issued. The names of some of those who retained them are given in the testimony.

They were also furnished with clubs or billies. Powell Clayton, of Arkansas, was present in Marshal Wright's office when deputy marshals were being sworn in and supplied with revolvers. He said to the deputies, "Now, you have your arms, use them." Marshal Wright's language was, "Now you have arms, don't be afraid to use them." This was said to colored marshals who were being sent into Irish wards. (Testimony of Mr. Hyman, page 220.) Somewhere from thirty to fifty arrests were made during the day (mostly by colored marshals) of persons who were brought before United States commissioners, who were at the United States court-room, for preliminary examination.

In most of the cases the parties were discharged, the charges being frivolous. One colored marshal brought in a colored man who had declined to tell where he lived. The deputy marshal thought the prisoner had insulted the United States Government.

The persons described by Mr. Johnson were specimens of the colored deputies appointed by Marshal Wright "to keep the peace at the polls and to secure a fair election." Is it to be wondered at that the polling-places were, in many of the wards, surrounded by riotous crowds, and that outrages of the most disgraceful character were perpetrated? Several persons were shot down in the streets and killed and many were wounded. The exact number of killed and wounded during the day was not ascertained.

TESTIMONY OF POLICEMEN.

James F. Ferrill, a policeman, and resident of the city for thirty years, testified that at precinct A, Sixth ward, there were about 100 colored deputy marshals, armed with bulldog revolvers. He said they were mostly strangers to him; that there were 200 or 300 more colored men about the polls at that precinct than he had ever seen at any previous election; that they interfered with the police in the discharge of their duties; that in the morning when the polls were opened the gangway leading to the polls was crowded with colored men, many of them marshals, for an hour or two; that they were voting, and that many of them he had never seen in the ward before; that the employment of deputy marshals in that precinct was entirely unnecessary, and that they contributed in no way toward keeping the peace at the polls.

Anthony Donnelly, a policeman of twelve years' experience and a resident of the city for over thirty years, testified that he was well acquainted with the residents of the Twentieth ward; that he was on duty at Precinct B of that ward; that in the morning about 6 o'clock when he arrived there was a great crowd about the polls, principally of colored men; that when the polls opened the colored marshals stood on both sides of the gangway and took complete possession of and blocked up the approaches to the polling-place; that fully twenty-five of those who acted as marshals were strangers to him, persons whom he had never seen; that there were fully fifty colored and ten to twelve white marshals about the polls all day; that quite a number of strange colored people came there during the day in squads of three to six and voted; that when challenged they swore their votes in; that the colored marshals would protect and encourage them, telling them to swear in their votes; that the conduct of the marshals was overbearing; that they were armed with clubs and revolvers; that it was dangerous to be about the polls during the day; that when any disturbance arose the marshals displayed their clubs and pistols; that after the polls closed, about 9 o'clock at night, riots occurred near the corner of Sixth and Freeman streets, in which colored marshals and citizens participated, and that two policemen and one colored marshal were killed and several citizens wounded; that a great many shots were fired, and general alarm produced.

It would be tedious and unprofitable to recite the many acts of violence and disorder that occurred during the day. Many innocent persons were the victims of assault and stray shots. On two occasions mobs of citizens, infuriated by the conduct of colored deputy marshals at the polls, assaulted the marshals and other colored persons, and two unoffending colored men were set upon, chased through the streets, and cruelly beaten. Another colored man, who was mistaken for a colored marshal who had fired into the crowd near the polls, was chased through the streets by a mob of boys and men, and narrowly escaped.

CONCLUSION.

From the testimony taken by your committee it will appear:

That the deputy marshals appointed by Marshal Wright were largely in excess of the necessities of the situation;

That they were appointed as Republican partisans and political workers, and in most cases prostituted their official positions to partisan ends;

That they were armed with revolvers and other deadly weapons furnished by the national committee of the Republican party;

That many of such deputy marshals so appointed and armed were notorious criminals and men of known vicious and brutal habits, and many of them were non-residents of the State of Ohio;

That many of such deputy marshals, acting under the orders of Marshal Wright, aided, abetted, and encouraged fraudulent voting, intimidation of voters, and committed gross outrages upon the elective franchise and the rights of honest voters;

That the employment and payment of special deputy marshals on the day after the election was without legal warrant, and all moneys paid to such persons for services on that day were illegal, and the sums so paid should be returned to the United States Treasury;

That the appointment of deputy marshals who were non-residents of the State of Ohio was without warrant, and constituted a gross usurpation of authority; and

That the appointment of deputy marshals was in many other respects irregular, illegal, and an unwarranted abuse of his official trust.

Wherefore your committee are of the opinion that Lot Wright, United States marshal for the southern district of Ohio, has been shown by the testimony herewith submitted to have committed high crimes and misdemeanors; that he has been guilty of usurpation of authority and violation of law in the manner set forth in the preamble to the resolutions adopted by the House of Representatives on the 2d day of December last.

In view of the impracticable nature of impeachment proceedings, and especially at this late day of this Congress, your committee will not recommend the adoption of articles of impeachment in his case.

The committee ask leave to be discharged from the further consideration of the subject.

All of which is respectfully submitted.

I call the attention of the House and the country to this official report, and mark my prediction. The above recital of bloodshed, riot, and outrages is a mere foretaste of what we may expect if this bill ever becomes a law. If this is a sample of what was done when United States marshals only had authority of law to witness an election, what may we not expect under this bill, which gives supervisors appointed for life, deputy United States marshals without limit as to numbers, who need not be residents or voters where they serve, backed by bayonets in the hands of United States soldiers, entire and absolute control of the registration, scrutinizing naturalizations, and the casting as well as counting of the votes, and, finally, absolute and final power to issue certificates of election? Let us hope and pray that the people will put the seal of their condemnation on the party proposing such infamy by an overwhelming defeat at the polls at the coming election, before our liberties are destroyed.

The Tariff.

REMARKS

OF

HON. HARRY WELLES RUSK,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 20, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. RUSK said:

Mr. CHAIRMAN: I regret that sufficient time has not been allowed to properly consider and debate the objectionable features of this bill, which will impose such heavy burdens upon the many for the benefit of the few, and I must content myself with addressing some remarks to the amendment I have proposed to the metal schedule in relation to tin-plate. My amendment, sir, looks to the retention of the present rate of duty, and in support of it I ask your earnest consideration of the following facts:

In the year 1888 some $6,500,000 were paid into the Treasury from tin-plate tariff, and it is now gravely proposed to increase this tax to $15,000,000—either to go into an overflowing Treasury or else into the pockets of the favored Pittsburgh manufacturers.

This tax falls not only on the tinware-manufacturing industries, employing twenty-five thousand workmen, and the consumers of the articles of domestic use, entering into every household—and the poorer the home the greater the proportion of tinware to other wares—upon the building industry, in the increased cost of roofing material almost doubling the cost, upon the great tobacco factories, in the packing of their products, upon other industries using the tin package and box, but it falls with peculiar severity upon that great and peculiarly American industry, the canned-goods trade.

While in the case of the other industries it does not fall so heavily, because of the permanent use of the articles produced from the tin-plate; in the canned-goods trade, the tin can is but the wrapper or package containing the food product, and once used is worthless. It was then with surprise, that I read the statement of Mr. Cronemeyer before the Ways and Means Committee, where he states, when advocating increased duty on tin-plate, "The canners are with us." I was struck with the spirit of self-sacrifice displayed by the canners in the willingness to more than double their own taxes to benefit and enrich the Cronemeyer syndicate, but I found it a singularly inaccurate statement. Hardly had his statement been uttered before it was contradicted by protests from canned-goods exchanges all over the country.

Not content with this, a national convention of canned-food producers, held within the present month in the city of Baltimore, came as a body to this Capital and protested against this ruinous increase of taxation. They have for years poured millions of dollars into the Treasury for the support of this Government, and now that they are told there is a great surplus of money in the Treasury they claim that if any change is to be made in the existing law it should be in the direction of lifting their burden and not increasing it.

Mr. Chairman, the canned-goods industry has grown to great proportions without asking governmental interference in its behalf. It has indeed given a home market to the Eastern farmer, who can no longer raise the cereals with profit to himself. Not only this, but throughout the counties of my own and other States the farmer, not choosing to sell his fruits and vegetables to the canned-goods producers, erects his own canning-house, preserves his own products, and puts them on the market as canned goods.

The canned-goods industry paid last year $2,000,000 taxes on its share of the tin-plate manufactured into 600,000,000 cans, and it must be remembered that in the manufacture of cans nearly one-tenth of the tin-plate is lost, so that a tax of $200,000 was paid on the waste material. There are now about two thousand canned-goods factories in the

country, representing many millions of capital and employing 250,000 working people, producing goods valued at $40,000,000.

In my own State, in the year 1888, we produced 80,000,000 cans of oysters, vegetables, and food; in addition thereto we manufactured 40,000,000 cans for use of producers in other States; we gave employment to about 75,000 people. Our share of the duty on tin-plate paid into the Treasury in 1888 was $400,000, or about 4 per cent. on the capital of $10,000,000 invested in this business, and it is now proposed that the people of my State shall pay about $900,000 tribute to Pittsburgh, or 9 per cent. on our capital employed, for the privilege of carrying on the canned-goods industry.

Mr. Chairman, this increase must fall somewhere, either upon the farmer in a diminished price for his product, upon the working people in reduced wages, or upon the consumer, if prices can be advanced; or else many of these canned-goods factories must close their doors and discharge their working men and women, for in the fierce competition existing in this industry prices have been brought so low that there are no margins of profits which can stand a diminution by reason of this increased tax and the cost of the increased capital required for the business.

The only interests that seemed to be looked after in this portion of the tariff are those of the foreign consumer, who gets his canned goods cheaper by reason of the drawback of duty allowed on exported goods, and the Standard Oil Company, which, using the cans for exports, gets back under the drawback 90 per cent. of the duty paid on the tin-plate used in making its cans.

The tin-plate is one of the packer's raw materials; he pays at present a heavy duty, amounting to 34 per cent. ad valorem, while the gentlemen who wish to manufacture tin-plate can import their raw material, pig-tin, free. But, increase this duty on tin-plate, and how long will it be before the owners of the Dakota tin mines, if they really contain any tin, will be obtaining what they are now asking, a duty on tin ore? and then your tin-plate syndicate will claim another increase to compensate them for the duty on their raw material, and the canned-goods industry must bear the additional burden.

Mr. Chairman, if the majority of this House in the face of these facts propose to carry out the wishes of the Pittsburgh syndicate, we, conscious of having performed our duty, can have but one appeal—that to the people.

Forfeiture of Railroad Land Grants.

SPEECH,

OF

HON. JOHN A. CALDWELL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 25, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (S. 2781) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purpoees.

Mr. CALDWELL said:

Mr. SPEAKER: I will vote for this bill because it forfeits land heretofore granted to railroads and restores to the people at least one hundred thousand good farms, consisting of some seven or eight million acres of land, the conditions of which grants said railroads have violated and broken. We are thus keeping faith with the people. We also promised to restore silver to its money uses, and the Republican party has kept that promise, and as the value of silver approaches its money value the products of the farm have appreciated in a like ratio. Let us carefully examine the facts from the Treasury and learn the wonderful effects of the restoration of silver and of an economical financial administration.

Forty-four millions have been saved to the Government by wise Republican methods. There are some eloquent figures and significant contrasts.

In methods of administration not less than in national policies the Republican government of President Harrison has differed radically from the Democratic government of Mr. Cleveland. These differences are of immense importance to the people. They are the differences between competency and incompetency, between economy and extravagance, between official fidelity and official carelessness, between honesty and dishonesty, between the courageous assertion of national rights and the insipid surrender of them; and in results they are the differences between good times and hard times, between commercial activity and commercial stagnation, between large and rapid exchanges and small and slow exchanges, between national prestige and national discredit.

REPUBLICAN HONESTY—IN ONE BRANCH OF TREASURY ADMINISTRATION A GAIN OF $7,000,000 CREDITED TO REPUBLICAN FIDELITY.

Just compare, for instance, the financial administrations of the two governments during their first eighteen months.

The average cost of collecting the internal revenues under Cleveland was 3.36 per cent.

Under Harrison it has been 2.9 per cent.

The average annual increase in internal-revenue collections under Cleveland was $4,618,328.28.

Under Harrison the increase for the first full year was $11,700,262.37, and it cost $85,000 less to collect it. There was no change meanwhile in the revenue laws.

This proves the greater honesty and efficiency of Republican officials.

These figures are from the records in the Treasury Department. The Democrats can not deny them. They can only deny out of them.

HOW ABOUT THAT SURPLUS?—MILLIONS WASTED BY DEMOCRATIC DEVICES TO CREATE A SURPLUS FOR POLITICAL PURPOSES—MILLIONS SAVED BY REPUBLICAN MANAGEMENT OF BUSINESS AFFAIRS ON BUSINESS PRINCIPLES.

When Mr. Cleveland took office he found an available cash balance in the Treasury of $21,631,381.67. Under President Arthur the surplus moneys had been spent in the reduction of the public debt. Mr. Cleveland pretended that there was no authority in the law for this use of the revenues, so he permitted the surplus to accumulate. He had a political object to serve by this policy. He wished to choke the Treasury with idle money, so that he and his party could raise the cry of "high taxes," and thereby create a sentiment in favor of a free-trade bill.

The 3 per cent. loan of 1882 was at this time outstanding, redeemable at the pleasure of the Government. Had he followed Republican policy he would have expended the surplus in the purchase of these bonds. That would have restored the surplus to the people and would have reduced the interest-bearing debt and saved the country a vast fortune in its interest account.

But he held on to the surplus until it had grown so large that a great financial disaster was imminent, and then, swallowing his alleged scruples, he began to buy bonds. This he did so clumsily, however, that, although his purchases amounted to but $62,138,400, he ran up the price of 4 percents from 125 to 129 and of 4½ percents from 107 to 109. Even then the surplus had grown from $21,631,381.67 to $76,527,561.24.

When President Harrison took office the surplus was down to $48,096,158.50. Mr. Cleveland had become frightened at the evil results of his hoarding policy, and during the last months of his Administration, ignoring consistency, he had been grabbing after all the bonds in sight, and had actually got them all.

NOW REMEMBER:

When Cleveland took office there were out at call $194,190,500 of interest-bearing bonds. Four percents were selling at 125 and 4½ percents at 107.

When he retired from office he had bought every bond then redeemable and had enhanced the price of 4 percents to 129 and the four-and-a-halfs to 109.

President Harrison confronted therefore an unfavorable situation, and yet his Secretary of the Treasury by wise methods has been able to buy $151,145,050 of these two classes, and has lowered the price of fours to 124, and of four-and-a-halfs to 104½, thereby saving the Government an expense of just $44,025,540.72. In these eighteen months of Republican administration the interest-bearing debt has been reduced in the sum of $171,000,000.

This is a financial record to be proud of. It was possible because under this Administration the Treasury Department has been conducted by a business man on business principles. Its affairs have not been manipulated for political effect. It has not been managed so as to bring about a "condition" with which the President might find himself conveniently "confronted" when he wanted to thrust a free-trade policy on the country. It has not been "worked" so as to hoard up a fictitious surplus with which to scare free-traders into an ecstatic terror. Its affairs have been conducted in the people's interests, and these are the results:

SILVER RESTORED—THE REPUBLICAN PARTY IN CONGRESS HAS REVIVED SILVER'S MONEY USES—IN EIGHTEEN MONTHS ITS VALUE HAS RISEN AS MUCH AS IT HAD DECLINED DURING TWELVE YEARS UNDER THE BLAND ACT.

The Democratic party has never been a creative party. No investigation can unearth one single affirmation policy, except an affirmative lust for office, that has come from the Democracy. Its genius is for opposition, a fact which the American people have plainly appreciated. It has generally been kept in the field where its talents are best employed.

No incident in the history of the Democratic party illustrates this more forcibly than its course with regard to silver. It has never had any clearly defined policy for the employment of the nation's immense silver product. The Bland act was its nearest approach to a policy, and this was a compromise and a policy of disaster. Its policy under Cleveland was ferociously against silver. That "statesman" who, until he became President, had never been west of the Alleghanies in his life, who knew absolutely nothing of Western interests, even before

he took his seat in the White House made haste to say that silver coinage must be stopped at once and completely. He and his Treasury officials held to this reckless and ignorant scheme during the full term of his Administration, and although Republican resolution checked every attempt to carry it out, they did succeed in forcing down the price of our silver product and the value of our silver dollars to a point which completed the ruinous results of the Bland act.

With the fall of silver the value of all agricultural products fell too, and the farmers of the country are suffering fearfully in consequence—a condition of things which the Democrats falsely attributed to the protective tariff, alleging in willful violence of the truth that protection has raised the price of farmers' supplies. This, as every farmer knows, is a silly misrepresentation, for the cost of a farmer's necessaries never was as low as it is to-day. Indeed, it is much lower in America than in free-trade England. The trouble is, and has been, not that the farmer has had to pay heavily for what he buys, but that he has been unable to get a decent price for what he sells, and this has resulted as much from the low price of silver as from any other one thing.

The Republican party in the present Congress, acting on the promises made in the platform upon which President Harrison was elected, has passed a silver bill for the correction of these Democratic follies, and its excellent results have come so quickly and in such a bewildering profusion as to surprise even the authors of the bill. In three weeks after it received the President's approval the price of silver rose to the point where the fatal Bland act found it, and in these eighteen months of Republican Administration silver has advanced as much as it declined during the entire twelve years in which the Bland act operated.

This table, compiled from official sources, shows what the facts are:

Changes in the value of silver.

Dates.	Significance of dates.	Price of silver in London.	Equivalent value of a fine ounce.	Price of a fine ounce in New York.	Commercial value of the silver in the silver dollar.
		Pence.			
Feb. 28, 1878	Date of the passage of the Bland act.	55	$1.205	$1.193	$0.9225
Mar. 1, 1878	Day after passage of the Bland act.	54⅝	1.204	1.20	.9315
Mar. 22, 1878	Three weeks after passage of the Bland act.	54⅛	1.189	1.20	.9198
Mar. 1, 1879	One year after passage of the Bland act.	49⅛	1.085	1.085	.8393
May 19, 1888	Lowest price reached.....	41⅛	.9124	.915	.7057
Mar. 4, 1889	Inauguration of President Harrison.	42⅜	.9331	.933	.7218
Dec. 2, 1889	Republican Congress met.	44⅛	.9727	.9625	.7523
July 14, 1890	Passage of the new silver law.	49½	1.0796	1.08	.835
July 15, 1890	Day after passage of new silver law.	50	1.096	1.10	.8477
Aug. 13, 1890	New silver law went into effect.	51½	1.1015	1.13	.8519
Aug. 30, 1890	About three weeks after the silver law went into effect.	54⅛	1.1947	1.195	.924

FARM VALUES INCREASING—AS SILVER HAS RISEN, THE VALUE OF ALL AGRICULTURAL PRODUCTS HAS GREATLY INCREASED.

Just as under the Bland act the value of all agricultural productf fell as the price of silver fell, so now they have risen as the price os silver has risen. Since the opening ot this Republican Congress wheat has advanced 23 cents per bushel, which makes the wheat crop of 1889 worth more than it had been by $154,526,400. Corn and oats and all other products of agriculture and industry have similarly increased in value and an addition to the cash value of the national resources has been made which is largely in excess of a thousand millions of dollars. This is what Republican wisdom has accomplished. It has been against Democratic protest and obstruction. Every Democratic vote in Congress was cast against the silver bill.

DEMOCRATIC HYPOCRISY.

The Democrats based this action on the hypocritical pretense that they wanted a better bill, that they wanted unlimited coinage, and would be content with nothing else! They had the audacity to advance this shabby plea despite the notorious fact that they had held power in the House of Representatives and in the White House for four long years without ever allowing a silver bill of any kind to become a law. Their platform of 1884 had straddled the question. Their platform of 1888 had utterly ignored it. Not a sentence, not a syllable on the subject of silver did it contain. Their own President had publicly denounced their own Bland act as "ruinous legislation." Their Secretaries of the Treasury in a dozen documents had urged the immediate and complete cessation of silver coinage. This is the party that now bobs up in this Congress and votes against the Republican silver bill on the ground that, though very good indeed, it is not good enough! Was ever impudence more brazen, or demagogy more undisguised?

Consider the figures in this table. They show the effect of Republican legislation on the values of farm products:

Prices of American cereals in Chicago per bushel.

Dates.	Significance of dates.	Price No. 2 spring wheat.	Price No. 2 yellow corn.	Price No. 2 white choice oats.	Price No. 2 rye.
Dec. 2, 1889	Date of meeting of Republican Congress.	$0.79	$0.31½	$0.23	$0.45
July 14, 1890	Date of passage of the new silver law.	.88	.33	.34	.48½
Aug. 13, 1890	Date new silver law went into effect.	.99	*.50½	*.41	†.63
Aug. 30, 1890	Date of present statistics...	1.01½	.48½	.37½	.63

* The exceptional advance during the month was partially due to the material lowering in the condition of the crops.

† Rye is a cereal not extensively cultivated in the United States, the figures given under that heading are, consequently, only important as showing the general rapid advance in prices of farm products from December 2, 1889, to the present date.

Samuel J. Randall.

REMARKS
OF
HON. JAMES W. COVERT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 14, 1890.

The House having under consideration resolutions of respect to the memory of Hon. Samuel J. Randall, late a member of the House of Representatives from the State of Pennsylvania—

Mr. COVERT said:

Mr. SPEAKER: Next, perhaps, to the Commonwealth of Pennsylvania, my own State of New York loved Samuel J. Randall best while living and now mourns him with deepest sorrow dead. The sublime courage of the great statesman, his deep earnestness, his ever-present faithfulness, and his unswerving honesty were qualities which commended him long ago to the whole people of my State. To-day New York joins with Pennsylvania in an expression of sincere sorrow at the loss of one who was something more than an able and respected Representative in Congress.

A statesman has left us whose home was not alone in the locality which sent him here, but in the hearts of the people of the whole land. He represented more than a local constituency and stood for more than local interests. While his home district was near and dear to him always, his allegiance was not confined to its narrow limits and his labors were not alone for its people. He had for his constituency patriotic and liberty-loving men everywhere, and he had for his district the whole confederation of States.

I shall not attempt, sir, at this late hour, to add anything in the direction of personal history to what has been so fully and feelingly said by my esteemed friend from Pennsylvania [Mr. O'NEILL], who was so long and so intimately associated with Mr. Randall in his Congressional labors. The lifework of our late fellow-member has been outlined by his colleagues who have already spoken. They have borne full and truthful evidence of the warm affection in which their distinguished associate was held in the State of his nativity, and which for so long a time honored itself by honoring him.

I seek, in the few remarks I am making, only to voice if I can the sentiment of deep regret shared by my colleagues and by the great State we represent at the loss New York feels she has sustained in the death of him who was rightly called "The Great Commoner," and these remarks are intended to be as sincere and as direct as was the character of him of whom I speak. His was in very truth a character cast in heroic mold. However modest he was by nature, the direct and positive qualities of the man could not but assert themselves. Thus it was that this man grew.

By natural methods, without seeking advancement, promotion came to him; leadership was conferred upon him and the Speakership of this House was accorded to him as if it was his by natural right. I had the honor to serve as one of the junior members of this body during four years of Mr. Randall's service as Speaker. No judge upon the bench ever excelled him in the absolute fairness and impartiality of his rulings.

To be right was his first aim, and that he succeeded in this desire was attested by the respect always accorded to his decisions.

As a leader, whether of the majority or minority in this House, he was able, courageous, faithful, and honest. He never sought to attract admiration for the skill and ability by which he accomplished results. Like a master artist, he was content that his work when completed should speak for itself and for the methods which produced it.

It has been stated more than once to-day that Mr. Randall was a man of deeds rather than of words. While it is true that he did not indulge in figures of speech and did not practice even if he possessed the graces of oratory, yet I never heard him speak without thinking him eloquent. He was direct and manly and forceful in marshaling the material of which his speeches were constructed. His phrases had absolutely no veneering about them. The grain of the polished oak could be observed in them always, and this was more attractive than any artificial coloring.

He was absolutely sincere in his political beliefs. Democracy with him was something more than a mere name, something other than an empty title. With him it involved that abstract idea of manhood equality which, when applied within the walls of this Chamber, meant the equality of all members as Representatives in Congress. While he was Speaker of this House every young member of it, no matter on which side of the Chamber he was seated, realized that his rights were sacred in the keeping of the occupant of the chair and was his warm and devoted personal friend.

Mr. Speaker, the life of Samuel J. Randall has yet to be written. His colleagues, however desirous they have been to give to this House and to the country an appreciative review of his public services, have yet, from lack of time, presented only an outline of his work, extending over a period of nearly thirty years. For over a quarter of a century these services have formed a part, and a very important part, of his country's history. An extended biography of this courageous and earnest worker should be placed in circulation, not only as a measure of justice to him and to the work he accomplished, but for the benefit and encouragement of those who are to follow in governmental affairs.

Some cynic early said that "republics are ungrateful." The universal sorrow over the death of Samuel J. Randall proves the untruth of this statement. The whole people appreciate to-day that the grand figure whose presence we miss from this Hall gave all he could—his best years and his best ability—to his country. They know and appreciate that no soldier ever on any battle-field gave better or truer service. They mourn with deepest sincerity this gallant soldier who fought and won so many civic battles for them, and they want his memory to be handed down to all time, the common heritage of the Republic.

Reference has been made to the fact that this able, active worker, after a life's devotion to the public interests, died poor. This may be true in a material sense, but from every other standpoint the man who lived and labored and died as he did never knew poverty and left behind him more than a princely fortune. Samuel J. Randall died rich—rich in the warm regard of all who knew him and in the respect and admiration of the people whose interests he protected. He has left behind him not a colossal fortune obtained by unscrupulous means, but he has bequeathed to the family he loved and by whom he was idolized, to the people of this land whom he unselfishly served and who gratefully appreciate his labors, the record of a life as bright and as flawless as the June sunshine which to-day gilds the Dome of the nation's Capitol.

Original-Package Bill.

REMARKS
OF
HON. CHARLES BARWIG,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890.

On the bill (S. 398) to limit the effect of the regulation of commerce between the several States and with foreign countries in certain cases.

Mr. BARWIG. Mr. Speaker, I avail myself of the privilege of printing in the RECORD a few remarks on the original-package bill. I did not participate in the discussion of the measure when it was under consideration by the House, as I thought the ground was fully covered by my colleagues on this side. But I have just received a letter from an intelligent German citizen addressed to myself and to my Republican colleague [Mr. VAN SCHAICK], which so clearly expresses or should express the sentiments of every German-American that I can not do less than give it to the country by printing it in the records of this body. It is as follows:

WASHINGTON, D. C., *September* 30, 1890.

DEAR SIR: Having failed to find you in when I called, I take the liberty of addressing you this letter before I leave the city.

Like yourself, I am a German and also a resident of the West, and, as we have this much in common, I trust the freedom with which I write will be pardoned.

I have spent several months in Washington, as an interested observer of legislation, and particularly of that class of legislation which would naturally concern and impress a German citizen, who, leaving his fatherland, has sought political and personal liberty under the glorious flag of this Republic. You are a Republican. I have also been one up to this time. I espoused that political faith at the outbreak of the late war, and have stood by the party on all issues growing out of that conflict. In so doing I have acted in common with the great majority of Germans throughout this country, and it is to this fact that the Republican party has owed its supremacy in almost every Western State.

But, however loyal I may have been to the party in the past, I must be frank enough to say to you that I have reached a point of political divergence, for the record the present Republican Congress has made upon questions affecting the personal liberty of the citizen forbids my longer following the fortunes of that party. What that record has been may be briefly expressed in the single phrase, intolerant and undisguised Puritanism.

If you wish to analyze this record look at the vote upon the proposition to foist and fasten upon the Territory of Oklahoma the dogma of prohibition, or, a little later, the no less fanatical canteen act. Both these measures, while opposed by the Democrats, received the vote of practically every Republican Senator and every Republican member of the House. Can you gainsay this assertion?

But it remained for the party to even more boldly and unblushingly trample under its feet the sacred principle of personal liberty when, at the dictate of the hypocrites and fanatics of Maine, Iowa, and Kansas, it gave to the authorities of these and other intolerant communities the power of search and seizure, the invasion of the home and the confiscation of personal property under the so-called "original-package" bill. And when it was moved to except the innocent article of lager beer from the operation of this infamous law, even this was rejected, not a single Republican voting in favor of the motion. But it was left to the House, the so-called popular branch of Congress, to complete the work thus begun in the Senate, and let us look at the record in that body whose members are again before the country for indorsement and in many districts are asking the suffrage of the German voter.

Out of 173 Republicans in the House, just 9 voted with the Democrats against the bill. And who were these, and what their districts? LEHLBACH of Newark, N. J., and VAN SCHAICK of Milwaukee, both German-Americans, and neither of them renominated for election to the next Congress; BECKWITH of New Jersey, STOCKBRIDGE of Baltimore, BAYNE of Pittsburgh, BURTON of Cleveland, CALDWELL of Cincinnati, ADAMS of Chicago, and KINSEY and FRANK of St. Louis, all from metropolitan districts. In short, not one Republican member living and breathing the political atmosphere beyond the shadow of a brewery voted or had the manhood to vote against the outrageous scheme. And, mark you, no one was more assiduous or earnest in his efforts to push this thing through than your Speaker REED, who is allowed to pose as the representative and leader of your party in all its startling new departure.

In view of these things and the further fact that the Democrats as a party opposed all this iniquitous legislation as subversive of the very principles underlying a republic of freedom and freemen, can you longer remain a Republican? I certainly can not, nor do I believe any German can, who, having seen the old party strike the chains from the blacks of the South, now beholds the melancholy spectacle of its attempting to forge new shackles for the white man of the North.

Yours, very respectfully,

AUGUST FROLICH.

Hon. I. W. VAN SCHAICK,
House of Representatives.

P. S.—I take the liberty of inclosing a copy of this letter to Hon. CHARLES BARWIG, a colleague of yours in the present House.

Contested Election—Clayton vs. Breckinridge.

SPEECH
OF
HON. JOHN HENRY McCARTHY,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 4, 1890.

The House having under consideration the contested-election case of Clayton *vs.* Breckinridge, from the Second Congressional district of Arkansas—

Mr. McCARTHY said:

Mr. SPEAKER: I rise to say a few words in regard to the issues involved in this contest and investigation. It does seem to me that in order to reach a proper conclusion as to the results of such investigation we must first approach the case setting aside all partisan feeling. There ought to be no question of North or South. To arrive at a proper decision, one that should receive the admiration and approbation of the people of this great Republic, we must approach it in the same manner and under the same reservations that we will or should approach any other question, and solve the same.

Now, what are the issues presented? It is that in the Second Congressional district of Arkansas an election took place, in the fall of 1888, for member of Congress. In that contest there were two persons presented to the people of that district asking for their votes, one representing the principles of one party, the Democratic, and the other representing the principles of the Republican party. These two men were known in their particular locality, one the sitting member, Clifton R. Breckinridge, and the other John M. Clayton, now deceased. The election was nothing more than an ordinary Congressional election such as has taken place often in the past. The election proceeded, and so far as the contestant is concerned no questions were ever raised or presented in this contest but the facts of illegal voting in Woodruff County and the stealing of the ballot-box at Plummerville.

The case as presented to the people by the contestant himself, and the one issue that he desired to be tried, was whether or not the box containing the votes of the people in Plummerville had been stolen, and that, if it had been stolen, then the vote in that district and of that particular locality should be counted as it was cast, if it could be ascertained, and have its full weight in the determination of the result of the election; that whichever party received the majority of the votes should have the benefit of it.

Now, then, that being the case, what was the first thing to be determined by this committee? The question first to be determined was the vote of the particular locality in which the ballot-box was stolen. There is no difficulty in reaching a satisfactory result upon that issue. It was conceded by both parties to the issue and by all the parties concerned that the Plummerville ballot-box was stolen. How, then, was the vote cast and deposited in that ballot-box to be a benefit to the parties? It must either be by polling all the votes again or by concessions on the part of those interested in the result of this contest and investigation.

This question is met and settled, for all parties have conceded the state of facts which are in dispute in regard to this district, both parties positively affirming that they were not and are not responsible for such a condition of affairs. It is admitted that at this place, Plummerville, there were cast 683 votes, of which the gentleman now deceased received 558, and 125 were cast for the sitting member, thus leaving the gentleman now deceased, and who had contested the seat, a majority in this district of 433, which must be deducted from the original majority claimed by the sitting member of 846. Let us, then, deduct this number from the vote and it still leaves the sitting member with a majority of 413; but that is not enough for the gentlemen on the other side and who constitute a majority of this committee.

It will not do. They must, by some calculation or other means, make it appear that John M. Clayton was elected and received the largest vote. In conducting this investigation they must go to Arkansas filled with partisanship and full of prejudice, I shall not say hate, but so near it as to give the appearance of such, with the determination to unseat, at all hazards, the sitting member and to make some campaign matter for their party in the near future. It must be clear to every fair-minded man that they started wrong in the beginning. Their duties under the resolution by which they were appointed were as broad as the resolution itself. Quoting the words of the minority of this committee in their report to this House, they say:

> In regard to all this the House said it is of the highest importance that these matters be thoroughly investigated. * * * The committee was instructed to make a full and a thorough investigation. * * * It was instructed to take and report all the evidence. * * * It was instructed to make this investigation and to take all the evidence not only in regard to the case, but also in regard to the method of said election; also in regard to the contest and in regard to all events relating thereto or arising therefrom after said election. It will be seen that all the points enumerated are clearly and forcibly embraced in the positive instructions of the House. It is known also that Colonel Clayton had only just begun to take his testimony, and that in only two places, when he was killed and the contest was su-pended. Therefore the whole case and all the subsequent events and proceedings, so complicated and important, and all covered by the instructions of the House, fell to the consideration of the committee.
>
> It is something of a guide in forming a judgment of the fairness with which the committee has discharged its duty in regard to these matters of so much more than ordinary extent and complexity to consider what time is deemed necessary and usually consumed in taking testimony in ordinary cases. The time fixed by law for taking testimony in an ordinary election case is ninety days. (Revised Statutes U. S., 107.) If exceptional circumstances arise this is sometimes extended; all other proceedings connected with the election case come out of other time. Ninety days, then, is the least time provided by the laws of the United States and the custom of the House for taking testimony alone in an ordinary contested-election case.

They were not there representing either the contestant or contestee. Their duties were to investigate the whole subject. Did they do it? Did they investigate this subject as the resolution required and commanded them to do? No. Examine these resolutions. A subject such as this, requiring an investigation, first, as to who was entitled to the seat at issue; next, an investigation of the surrounding circumstances before, during, and after election, which involved in its scope the thorough and most searching examination, an examination of the murder of John M. Clayton and the discovery, if possible, of the perpetrators of this terrible crime, and the possible bringing of them to justice, could not in the ordinary nature of things be disposed of in twelve days, and yet we have the astounding spectacle of this committee, controlled and managed by the majority of this House, beginning, conducting, and concluding such examination and investigation within fifteen or sixteen days. This was a most important and serious case. The whole people of a section of the State of Arkansas, the whole people of Plummerville, the good as well as the bad, were under a cloud; their fair name, integrity, and honor questioned. Quoting the words of the minority of the committee in their report, they say:

> Of rumors and charges regarding the local contest of this people we know nothing reliable beyond their official report, and over their local affairs we have no jurisdiction, although in all their previous national elections no complaint has ever been brought before Congress, and not even a rumor of wrongdoing has ever been spoken or published so far as we know; yet in this election it was stated and acknowledged upon every hand that one of their ballot-boxes had been stolen. This was followed by a deplorable and shocking tragedy resulting in the death of the contestant. Whether the theft of the ballot-box did not upon any possible hypothesis change the result of the election or alter the right of the Democratic candidate to the certificate, for the maximum voting strength of the precinct was known and not disputed, and the returns show that the Democrats had carried the district by a majority of 149 votes even if the Republicans had obtained every vote in the township, which they did not claim and did not do, yet this event gave a striking feature upon which to base a contest, and the two events gave abundant proof for speculation, crimination, and charges. Whatever might be a hasty or passionate view of these matters, we have had time for reflection.
>
> Whatever might be a vulgar, sordid, and unpatriotic view, we know that these questions and this case involve the memory of a gentleman whose death was deplored by good men throughout the Union, and nowhere so deeply as by the people with whom he lived; that they involve the right of a member of this House, a gentleman of long service and honorable life, the representative rights, the honor, and the good name of an American constituency and the rights, dignity, and honor of the American House of Representatives itself. These considerations, at once tragic, pathetic, personal, patriotic, and rising to the highest dignity of judicial duty, would move men, if any power on earth could do so, to measure well their course. The case is exceptional. The eyes of the whole country have been directed to it. No people have ever been called upon to pass through a more trying ordeal than this people, no men through one more trying than these men. No committee and no Congress has ever been put to a severer test, and to neglect the duty of fair and impartial work, to stoop to speculate upon a people's honor, to prostitute the power, functions, and the dignity of the House, to work palpable injustice and to make merchandise of human blood, is to degrade the House in the estimation of all good men. This the House seemed fully to appreciate, judging by the full and accurate instructions it gave to the committee.

The people, irrespective of party, and not the scheming politician and the office-seeker, will judge whether this was a fair and honest investigation. In the ordinary investigation of contested seats, as I am informed, it takes much more than fifteen days to ascertain the result, yet here were most serious crimes charged, fraud, bribery, and murder, with the most serious investigation of a contested seat pending, the first of its kind in the history of our country, and the whole matter is closed, the whole matter is solved, the whole determination is arrived at in less than sixteen days. It is apparent to all fair-minded men that this committee have not obeyed the resolutions of this House. It is clear to all fair-minded men that they did not accept or enter upon the duties imposed on them without partisanship and prejudice, and with that fairness and absence of bias that men coming to such an important and serious investigation should have. If they were prejudiced, if their minds were altogether made up as to the result, then as fair men they should have declined to act upon the committee.

But, Mr. Chairman, we have had such extraordinary spectacles in this House in my short connection with it, of men holding positions on committees whose minds were biased, whose minds, judging from their conduct, appeared to be altogether made up in regard to the results to be arrived at, that we are not at all surprised to find in this investigation, the most important, in my judgment, that has come before the House, men participating whose judgments it would appear are already formed and who knew in advance what the purport of the report would be. They concluded that with the admission of the stealing of the ballot-box and the acceptance and allowance of such, as claimed by their most ardent advocates, they could not succeed in unseating Mr. Breckinridge. Like careful and shrewd lawyers, as they are, experienced in country as well as city practice, they resolved that they must attack the fair and honest count in favor of Mr. Breckinridge in other localities, in order to show some apparent justice and reason for the result to be arrived at. How was this to be done? They must then charge that in certain townships colored men voted for Mr. Clayton whose votes were credited to Mr. Breckinridge.

After a period of nearly eighteen months had elapsed, with an inducement of $2 per day and their expenses paid for coming to the place of examination, enough colored men were found, most of whom could neither read nor write, to go to Little Rock, and under such inducements besides other pressure to take the stand and swear that they had voted for Mr. Clayton, although they could not tell just which was his ticket. [Applause.] This evidence, although standing singly and alone and without any corroboration whatever, should have at least created a doubt in the minds of the committee, but it was permitted to stand, and was accepted as gospel truth against the positive affirmation and oath of all the election officers. Again, let me quote the words of the minority committee:

> Consider now the character of the testimony in opposition to all this and the means employed to procure it. They offered the inducement of $2 a day and mileage to a few negro voters to deny after the election how they voted. What is the central idea of the secret ballot now so warmly urged all over the country? It is not all men who need it; not even all negroes who vote the Democratic ticket. But surely if men will not vote freely when exposed to influences in the act of voting, then these same men will deny that they did or that they intended to so vote when offered money or confronted with influences by the exposure of their ballot after they have voted. Are they weaker before than after? If the vote is to be cast in secret and the act of the voter is to remain a secret, then what are we to rely upon as good and sufficient evidence of the result? Obviously upon the returns as certified by the election officials. Were there ever returns more reliably certified than these from Woodruff County? Were they ever more reliably borne out by the results of past elections not only admitted to be fair, but especially that, for supreme judges boasted of them as fair. * * *
>
> To show how the majority really estimate their negro testimony, which here they take above that of the best officials, courts, juries, and all evidence by past elections of the fairness of the result, we recall the instance where two negroes, as respectable looking as any who appeared, testified that they saw Dr. White and William Palmer, two reputable citizens, in the latter's blacksmith shop burning up the Plummerville ballots and ballot-box. Judge McClure (Republican), without even being sworn, contradicted them. The subcommittee accepted this off-hand and single statement as fully satisfactory and dismissed the matter at once. This ignorant and characterless testimony is brushed aside when contradicted in a certain matter by a Republican, although the former are under oath and the latter is not; but the same kind of testimony, even more ignorant and evidently more destitute of character, is in every instance accepted at once when it relates to a vote as against the sworn testimony of election officers of both political parties. One such negro comes and now says he did not intend to vote the way he is recorded. All the election officials contradict him and they are brushed aside and he is accepted. It is solely upon such testimony that the majority has changed votes and upon the same testimony they cast out Democratic votes.

But many of the colored men voted the Democratic ticket, and particularly for Mr. Breckinridge—this, too, even at a time when the colored people of that locality had been threatened with social as well as political

death if they dared to vote the Democratic ticket or for a Democrat. Let me read to you part of the testimony of George McNealy (colored), who was called, sworn, examined, and testified:

Direct examination:

Q. Where do you live?
A. In Augusta.
Q. Were you at the election there in November, 1888?
A. Yes, sir.
Q. Who did you vote for for Congress?
A. Breckinridge.
Q. Are—have you usually voted the Democratic ticket?
A. Yes, sir.
Q. I want to ask you whether the colored Republicans gave you any trouble on account of your being a Democrat?
A. Gave me any trouble?
Q. Yes, sir.
A. They did not give me any trouble of that kind; they kind of made a little threat around there.
Q. Have not you had occasion to complain for some time?
A. Yes, sir.
Q. Well, what have they done to worry you, and what have they done to you?
A. Well, they attempted that if I ever came out in the country what they would do; they would light a torch behind me.
Q. Have they made some threats against you in that way?
A. They threatened me one night going home.
Q. Tell me about it.
A. Well, sir, the day I voted up at the court-house I was going on down and I got over and went over the stile; and there was a crowd of fellows standing out there, and there was one, I do not know which one, said: "That d——d little Democrat, that yellow nigger, if I ever catch him out in the country I will light a torch behind him." I said that was all right, that I would be at the torch lighting.
Q. Have any of them made any attempt to cut you off from society on account of that—on account of voting that ticket?
A. You mean society?
Q. Was there any objection ever made to your associating with them and going about?
A. With the girls?
Q. Yes.
A. Yes.
Q. Well, what was that?
A. Well, I was working for Mr. Blocklinger when I voted, and the old man, Mose, he come up there one day and was standing there at the door talking, and he said: "If I ever catch you with one of my girls, or one of them on the street with you, or speaking to you, I will just take an ax and lay them out."

Let me read to you also a part of the testimony of Mannel C. Carter (colored), who was called, sworn, examined, and testified:

Direct examination:

Q. Did you vote the Democratic ticket in the election in 1888?
A. Yes, sir.
Q. Did you vote for Breckinridge for Congress?
A. Yes, sir.
Q. Did you—I wish you would state whether the colored Republicans gave the colored Democrats any trouble about voting.
A. Why, the colored Republicans around there, they said if a fellow voted the Democratic ticket he couldn't go with them and couldn't go with any of their daughters, and I told him I wasn't particular about going with their daughters. I told them I would vote as I pleased. I said there were just as many white folks around there voted the Republican ticket as voted the Democratic ticket; and I asked what they was going to do, and they said they would lick me the first time they got me out in the country. I told them they had a chance at that. They said they would lick me out there—of course they had men to keep up with men that voted the Democratic ticket and watch them. John Martin was to keep up with them, and he made some remarks around there.
Q. What was he doing?
A. He was canvassing.
Q. Did they have anybody to notice who was voting the Democratic or Republican tickets?
A. They could tell very easily.
Q. How could they tell?
A. They had a red ticket, and on the back of the ticket they had a butterfly, and they said to my partner, Ike Hamlet——
Mr. COOPER. Are you telling what you heard yourself?
A. I am telling what I know. They said, don't you do it or you will die: and I said, I will; I said I was going to vote for Breckinridge. I said I will vote just as I please. He said he was going to vote for Clayton, and you may vote as you please.
Q. You did as you pleased?
A. Yes, sir; we were old partners, us two; and were going with the same girls, sisters.
Q. What did they do; how did they act?
A. They hurrahed about it, and say they would bulldoze you or kill you, make it hot, or something like that.
Mr. MCCAIN. Do you think there was any colored men about there who would be willing to have it known they had voted the Democratic ticket if they had voted it?
A. I don't suppose nothing; I suppose there was three colored people was going to vote the Democratic and they was scared and they says they didn't vote it.
Q. What did you say about how the girls treat you?
A. Oh, the girls say, if I say I am a Democrat, then they say, "You can't go with me." * * *
Mr. HARDD. You are satisfied a great many colored people voted the Democratic ticket and afterwards denied it; you know they have?
A. Yes; certainly they have.
Mr. MCCLURE. Do you mean to say a great many colored people up there will go on the stand and perjure themselves?
A. Of course, they will perjure themselves in a minute. Didn't Andrew Johnson down there vote the Democratic ticket and come up here and swear he did not?

There can be no doubt that such a condition as described by them existed at the time. If any more evidence was needed, the editorials in the Arkansas Register of Sunday, August 31, 1890, the organ of Powell Clayton, just before the recent State election, must be convincing and conclusive, if one will be convinced.

[From the Arkansas Register.]

When you see a colored man peddling Democratic tickets, look out for him—he has sold out to the enemy.

No colored man can give any valid reason for voting the Democratic ticket. When you find one beeing about "the way Rector was treated," spot him—he has Democratic money in his pocket. Mr. Rector has no fault to find, and is an enthusiastic supporter of the entire ticket. He is not a "kicker," and those who "kick" for him are doing that which Mr. Rector does not approve of. Colored men who fight the ticket would oppose any ticket that could be nominated for a few dollars of Democratic money. These men are deceiving no one but themselves, and Republicans will remember the traitors in future conventions. It would be manifestly better for the Republican party if all that class of so-called Republicans who sell out would go over into the Democratic party bodily. An open enemy is preferable to a treacherous friend.

This has reference to the colored voters.

But to return to what appear to be the purposes of the majority of this committee in furthering their effort in the conduct of this case. As I said before, something must be done. It required but a minute's reflection on their part and it was solved. They must charge that fraudulent returns had been made in White River Township, Cotton Plant Township, Augusta, and Riverside precinct, all of Woodruff County; this because it would appear more plausible in this county than in any other, there being so many colored people residents of the same. They then proceeded by the kind of testimony already stated to claim that Clayton received at White River 62 more votes than given credit for, and which were claimed to have been counted for Breckinridge. This, with the 44 originally returned, would make 106, but they do not deduct this 106 from the 264, the total vote, which would give even by their own count 144 for Breckinridge, but they throw out his entire vote of either 148, according to their best count, or 210, as originally returned for him.

The same at Cotton Plant, where they add to the 132 votes originally returned for Clayton the 73 votes claimed under this investigation as having been cast for him but counted for Breckinridge, and thus make Clayton's total 205. Instead of deducting these 205 from the total vote, 318, which would leave Breckinridge 113 by their own count, they again throw out his entire vote. The same in Augusta, where they add to the 32, originally returned, 18 claimed as being counted in the same way under this investigation, making 52, and instead of deducting the 52 from the whole vote, 132, which would again leave Breckinridge by their own count 80 votes, they throw out his entire vote. So, too, with Riverside, they add to the 59 originally returned 31, claimed as being counted in some way, making 90 votes, and instead of deducting these 90 votes from the whole vote, 256, which would leave Breckinridge by their own count 166, they throw out the entire vote.

Thus, in a word, they add to Mr. Clayton's vote, which was 269, in these townships and precincts 184 more votes and throw out the entire vote as returned for Breckinridge, which was 691. If you propose to allow Clayton these 184 additional votes, would not the better way be to also allow Breckinridge his vote, even decreased by the number claimed by you? With this deduction Mr. Breckinridge would be clearly elected. Had they allowed the vote which Breckinridge was entitled to after the deductions made, Breckinridge would, by their own showing, have had in these townships 507 votes (all of which have been thrown out), a sufficient number to elect him beyond a question. These votes, as I say, have been thrown out, and these voters have been disfranchised. Was there ever so unfair, unjust, and unequitable a conclusion? [Applause.]

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. FLOWER. I hope my colleague will be allowed additional time. I appeal to the gentleman from Georgia [Mr. CRISP] to give him additional time.

Mr. CRISP. I have not got it to yield to the gentleman. The time is all parceled out. I now yield fifteen minutes to the gentleman from New York, Mr. TRACEY.

Irrigation of Arid Lands.

SPEECH
OF
HON. PRESTON B. PLUMB,
OF KANSAS,
IN THE SENATE OF THE UNITED STATES,
Wednesday, July 16, 1890,

On the amendment of the Committee on Appropriations relative to the irrigation of arid lands to the bill (H. R. 10884) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1891, and for other purposes.

Mr. PLUMB said:

Mr. PRESIDENT: That part of the statute of October 2, 1888, which has been the subject of comment and which has led to the legislation proposed in this bill, after providing for the topographic survey of lands in the arid region, says:

And all land which may hereafter be designated or selected by the said United States surveys for sites for reservoirs, ditches, or canals for irrigation purposes, and all lands made susceptible of irrigation by such reservoirs, ditches, or canals, are from this time henceforth reserved from sale as the property of the

United States and shall not be subject, after the passage of this act, to entry, settlement, or occupation until further provided by law.

Under the construction which has been put upon that statute by the Interior Department, whatever exhibit the Director of the Geological Survey may attach to his report becomes a part of the law, and the Director has attached an exhibit which includes as arid all the land marked between the two red lines on the map back of me, the eastern one of which represents practically the one hundredth meridian and the western one a line drawn varying from 200 to 300 miles east of the Pacific Ocean, the area lying between these two lines comprising, as the Senator from Wisconsin [Mr. SPOONER] has said, about two-fifths of that of the United States.

Now, it may be that that is not too large a reservation, having reference to possible need for irrigation, but it is intolerable that every settler should be dependent as to his right to enter the land upon which he has settled on the question as to whether that tract of land might or might not be the subject of possible irrigation. It does not follow from the law as construed by the Attorney-General and as enforced by the Interior Department that only those lands which lie immediately under a proposed reservoir or ditch site shall be reserved, but every tract of land which by any process applicable to the transfer of water from one place to another could be made irrigable by that water, no matter how remote from the original source of supply, is withdrawn. Therefore, a tract of land 500 or 1,000 miles away to which water might be conveyed from the source in the mountain becomes by the operation of this law "susceptible of irrigation" and is withdrawn from settlement, an area probably five times greater than the artificial water supply can ever cover.

Under that withdrawal over twenty-five entire counties and parts of five or six more in Western Kansas have been withdrawn from settlement, and every entry in all that area suspended. The lands are more or less arid, no doubt, but a large proportion has already been settled upon. Possibly the settlement was unwisely made in many cases, but the Government opened the lands to settlement and invited the people to enter upon them for homesteads and pre-emption entry. They have done so and have taken the risk, and it is unconscionable that the Government should now step in and say, "You have made a mistake; these lands are arid, and we will not permit you to perfect your entries," thus not only depriving them of the right which it had invited them to exercise, but also destroying the investment which their settlement necessitated. Of course the Director of the Geological Survey may change the boundaries of this arid district by excluding Kansas, and so he may enlarge them. The scope of the law depends upon his judgment and his caprice.

Mr. President, it is said that if we repeal the law of 1888 we open the great area to speculation, and a great many changes have been rung upon the term "speculation" as applied to the acquisition of Western public lands during the last few years. I have no doubt that at every step in the administration of the public-land laws since 1841, and probably ever since the Government has had lands, there has been speculation in them, after a fashion; there have been technical violations of the law; and yet so beneficent has been the operation of those laws, so genuine the entries under them, that the entire area west of the Alleghany Mountains has been settled thereunder. Is it worth while now to be shedding tears over the fact that possibly some quarter-section in Ohio, now and for the last fifty or one hundred years an improved farm, that some farm in the State of Illinois or in Wisconsin, was originally acquired from the Government by some trifling subterfuge on the part of the entryman?

Mr. President, there is such a thing as being too nice and too wise. The land laws of the United States have been useful in the development of the national resources. I do not know a class of men, not even excepting those who have borne arms in its defense, to whom the Government is more indebted than to those men who have constantly and always, under the operation of these laws, pushed out to the frontier. There is not a quarter-section of land in all that area, speaking in a large way, but correctly, in which the expenditure of labor, in which the effort, the patience, the determination of the man who entered it has not been equal to more than equal to the entire cash value of the land after the entry was completed.

He may have made a mistake; he may have been governed by a motive to get his land by the short cut; he may not have had in mind the making of a permanent home upon it, and he may have had in mind the fact that he could obtain it after a short residence upon it, or perhaps by avoiding residence altogether after a certain amount of cultivation, and then selling it out to some other man who might come along and desire to buy it of him rather than to go farther west; yet I say that the expenditure of time, of enterprise, and of labor upon this land has been the equivalent of its value, and, take it all together, a dozen times more has been spent there than the land is worth.

The record of the frontier is a record of courage, of constancy, of wrecked fortunes, and yet, Mr. President, a record of the most magnificent progress the world has ever seen, and to-day is as much and as vital a part of the national history and the national resources and wealth as the history of any other portion of the Republic. The men who have gone out there, desiring to get away from the old location, thinking they will find something which they do not find, disappointed often, perhaps in a majority of cases, have been the picket line of the great army behind them which has marched on resistlessly until it has brought almost the entire area of the Republic under cultivation.

Mr. President, there has been no speculation there that is worth complaining of. What there has been, if any, is simply a wen, a wart upon an otherwise healthy body. The Senator from Florida [Mr. CALL] speaks of the redwood fraud; that 16,000 acres of land were obtained by fraud from the Government in the redwood district, which has no more relation to this arid region than the region of eternal snow. It is 500 miles from the nearest border of the arid region. But 16,000 acres of land were obtained fraudulently in the redwood district nearly ten years ago, and annually during the last ten years 25,000,000 acres of land have passed from the Government to the title and possession of individual settlers. If the exception proves the rule, then the citing of this redwood case shows most extraordinary faithfulness in the management of the trust concerning the public lands in this area.

I have no doubt the people who committed this fraud have added also the other crime laid to their doors, that they live abroad. Frauds of that kind, of course, ought to be ferreted out; but such frauds can not be committed under the desert-land law. The desert-land law is not in terms a settlement law, and yet settlement as inevitably follows it as daylight follows dark. Take the Territory of Utah, take Idaho, where entries under the desert-land laws are permitted and where perhaps a majority of the acreage entered has been under that law, and what do we find? The average size of farms in the Territory of Utah to-day does not exceed 30 acres. There is not such a record of acquisition and subdivision of land anywhere under the shining sun as in the Territory of Utah.

The inevitable and constant tendency of irrigation and the uses of land by means of irrigation is subdivision. There is scarcely a large tract of land in the world cultivable only by irrigation owned by one man. It is not possible that there can be any continuously large holdings under irrigation. It is just with that part of our country as it is with India and all other sections of country where irrigation prevails, the irrigable lands are eventually minutely subdivided. As the lands will produce more than those naturally watered so less will suffice for the needs of a single family, and this finally determines in a majority of cases the size of the farm. But irrigation is not economical or profitable where carried on by hired labor. The processes of application and use are so delicate, the water itself is so elusive, the whole process is so subtle, that it has got to be applied by the hand of the proprietor himself in order to be of the greatest value. Hired labor will not do it. There is no possibility of large estates where they have got to be reclaimed by the artificial application of water, and the section of country in which large estates are possible is not, therefore, in the arid regions.

Mr. President, the desert-land law of the United States gives to every citizen of the United States who is willing to reclaim it the privilege to purchase a section of land, and no more, at a dollar and a quarter an acre. An advance payment of 25 cents per acre is required, and it is also required that the purchaser shall, within a certain period of time, reclaim the land by putting water upon it by artificial means sufficient to make it productive. When this is done within a certain specified period and proof thereof made the purchaser can by paying the additional dollar an acre obtain title. In order to get the land he must not only pay for it, but he can not in one case out of a hundred reclaim it, within the meaning of the law as construed by the Department, unless he spends an average of three or four dollars an acre in the shape of works designed to carry and actually carrying water upon it.

It is not possible, therefore, to enter such land under the homestead law. To leave the law which it is now proposed to repeal on the statute-books means that there shall never be one single acre of land within the limits of the arid regions as they may be defined by the Director of the Geological Survey entered, because it can never be entered under the homestead law. The homestead law is a settlement law. In order that a person may acquire title under the homestead law he must go upon the land precedent to the filing of his declaration and he must make his home there and live there, substantially, without break. He can not do either until he has put water upon the land by artificial means, and if he puts water upon it in advance of going on the land to live, as he must, he takes the chance that some other man will go there about the time the water is ready to flow on it, thereby effecting reclamation, and take his entry away from him by making first settlement.

Therefore, the intention of the law of 1888, which we propose to repeal, is, if literally carried out, that not one single acre of all the land within these two red lines here [indicating], embracing two-fifths of the Republic, shall ever be settled by any one, and that is what was undoubtedly designed.

Mr. President, the careful, the shrewd, the forceful man who drew that provision, and got it enacted into law by means of a conference committee appointed to adjust differences between the two Houses in 1888, not a provision ever adopted by vote of either House, had in mind exactly this consequence: He said to himself, "Here is a great area to which I will apply a scheme that I have got for human gov-

ernment. I will apply here a scheme of communal proprietorship in land which I have got in mind, and to which I will commit the Government of the United States by this seemingly innocent provision in the statute."

What is that? It is found in a bill here reported or as proposed as an amendment by the Senator from Texas to another bill pending in the Senate, whereby it is provided that all this area shall be divided into irrigation districts, containing such lands as may be subject to reclamation, containing other lands to be known as forest lands not subject to reclamation, and other lands as pasture lands not subject to reclamation; that the little community which shall settle in the valleys which may be subject to irrigation—one, two, three, four, five, six, a dozen or fifty men, as the case may be—are to become practically the owners not only of the land on which they live, but of all the forest lands and all the pasture lands within the limits of that district; and there is to be a common of pasturage, a common of forestry, and masters of forestry, and masters of pasturage, and men who shall parcel out, under the direction of this community, the uses of the forests and the pastures in these several districts.

Mr. President, saying nothing about this plan in the abstract, and having nothing but admiration for the genius of the man who conceived it and who believed that he could find in Congress pliancy enough to put him in possession of that country under the operation of this system, I will say that there is nothing, in my judgment, that is further from the genius of the American people than that. The average American citizen wants what he owns segregated and separated from the holdings of every other person in the world. He will be content with nothing less. Yet it is this system which was in mind when this statute was drawn and when the conference committee was induced to adopt it, and which has found expression in the amendment of which I have spoken.

Mr. President, it is not only an interesting question, but one of overwhelming importance to the country, what shall become of this great arid region? Who is to settle it, and under what terms and conditions? The American people will settle it themselves if you give them a fair chance to do so. The problem can not be worked out by rule. It will be worked out by the individual enterprise of men with their faculties sharpened by self-interest, pressing here and avoiding there, adapting themselves to every phase of a problem which is not only great, but possessing infinite variety.

They have done it already in the valleys of Arizona and New Mexico, and in the States of Colorado and Montana, and all over that area, and they have built up, not a system of corporate monopolies, but a system under which the agricultural resources of those sections have been developed to the equivalent of supplying the mines to which they are adjacent, and under the operation of this there are small and not large farms operated by their owners. It is not to the interest of Montana or Colorado or any other of the mining States or Territories to have an agriculture that produces grain for export. It is to their interest to have that agriculture to-day and for all time which supplies the home demand. They do not want to send grain across the great intervening arid spaces and across Kansas and Nebraska and the Dakotas to a distant market.

The men who are engaged in agriculture there to-day want to supply the home demand and no more. If you let them alone, as the mines are developed agriculture alongside of them will develop also; the two will go together hand in hand, supporting each other, strengthening each other, and the two together building up great and prosperous and powerful communities, and in that process there will be no wreck of individual fortunes that can be laid at the door of the Government. They will take care of themselves. The State of Colorado, which has got, according to common consent, the wisest system of law applicable to the distribution of water, is not interested in promoting large land holdings, and the Senator from Colorado [Mr. TELLER], himself a citizen ever since white settlement in that country, knows that no such thing has resulted from it.

The State of Colorado by its constitution set the pattern for all the States in that area. It dedicated every inch of water within the limits of the State to the public use, and prescribed the order in which that use should have preference: first, for domestic purposes; second, for agriculture; third, for manufacturing; and fourth, for mining. Whoever, therefore, takes a drop of water out of one of the streams in Colorado does it under authority of the law of the State, and under a rule by which he can not take more than he uses, and under which every one who comes after him who wants can also have what is left upon terms already known and provided. The man who has got a section of land is not entitled to water under the law of Colorado or the law of any of the interior States for that section unless he has subjected that section to the plow, unless he is ready to use it.

If he is using water on 10 acres of that land the next man who comes behind him can take all the water that the first man does not need for that 10 acres, and so on. So it is in Utah, and so it is in all parts of that great country. There is no monopoly of water, there is no monopoly of land. On the contrary, as I said, the constant, the inevitable tendency is to a subdivision of holdings. Witness, as I have before said, Utah, where every inch of water that can be usefully taken under present conditions is being applied to production. Away up on the mountain-side there will be a little patch of land under plow and 5 or 10 acres glowing in the summer sun with the yellow of gold because there are 10 acres of ripened wheat. Some neighboring spring has furnished the water it needed, and everywhere and always, as population has trenched on this source of supply, there has been an inevitable subdivision of the land, until to-day Utah ought to be the paradise of land reformers, the average size of the farms being less than 30 acres.

Is it for this new-tangled, rather, perhaps, I ought to say mediæval system, that you propose to destroy that under which such beneficent results have been realized?

Is the arid region, the region in which lie the great body of the remaining public lands, to be given over to experiments which promise un-American results, and meanwhile the American homesteader be shut out?

Mr. President, I can not forbear saying that it is one of the peculiar features of this controversy that the two States which have given the most lavishly of their domain to speculation are here complaining of the speculative tendency of the laws of the United States in their operations in the arid region. The State of Texas, rich in population, in natural resources, and in development, when it wanted a statehouse which would have caused the levy of a cent on a hundred dollars of the taxable property of that empire, chose instead to give 3,000,000 acres of land, which it might and ought to have held for settlers, to a syndicate—3,000,000 acres of land which otherwise would have gone to settlers, and now possessed by a foreign corporation and embraced in one single inclosure in the western quarter of that State.

If Texas has saved anything from its domain that it could get a railroad to take, I have not heard of it. It has given more land to railroads in proportion to the mileage of the railroads built within its limits than the United States ever gave. And Florida, 37,000,000 acres in extent, confesses that more than half its area has gone the same way, not by the action of the United States, I ask you to observe; every single grant was made by the Legislature of the State of Florida, one-half of that State donated to railroads.

Mr. President, from these two sources we get all this talk about corporate and foreign land-holding in the arid regions. No, Mr. President, there is no corporate holding in the West of consequence. We hear about it now and then, and I am tempted to relate how the story about it got a start. A Scotchman, whom I happened to casually meet, and who being interested in an option on or a commission on the sale of a cattle ranch in Wyoming, seeing in the public prints that Congress was about to enact a law forbidding alien land-holding, wrote a letter to the then Commissioner of the General Land Office inquiring about it, saying that the corporation with which he had the incidental connection of which I have spoken owned about 30 miles square, we will say, in the Territory of Wyoming, and the proposed action of Congress would prevent a sale of the same in Scotland. The letter got into the newspapers and there were added to it speculative estimates of the amount of land owned by aliens in other parts of the United States, and when the whole of these speculative items were put together they made up a large acreage and the comment was of course widespread, and it and the speculative estimates are still going.

It turned out that the company of which the Scotchman spoke only owned a section of land on a little stream in one of the valleys of Wyoming, and because the adjoining land was not occupied the possessors of the section of patented land used it for pasturage purposes, grazing their cattle upon it, and by some arrangement with somebody else, who had a similar amount of land right upon an adjacent stream, they divided the intervening range between them for use and they spoke of each one as entitled to so much land. There was a great rush at one time of cattle companies into that western area, induced by high prices for cattle. The craze ran its course; very soon the ranges were overpastured, most of the companies failed, the tide receded, the losses were very great. Some fortunately sold out, often to foreigners, upon whom the losses of course fell, but the quantity of land which passed from the Government on account of these cattle was very small. But, small or large, it was too great. I believe there ought to be no principle more sacred than this: that all the soil over which the American flag floats shall be in the ownership either of the Government of the United States or of the men who yield obedience to it as citizens, and the bill which I had the honor to introduce in the Senate and which became a law forbids the acquisition of lands by aliens in all the territory over which the United States has jurisdiction.

But, as compared with the great body of the land which has gone into private possession under the beneficent operation of the land laws in the arid regions, the holdings of foreigners are as a flea bite upon an elephant. The outcry about it had little foundation at the time, and it has less now.

What the land laws have heretofore done through all the area over which the population of the United States has spread they ought to continue to do under proper limitations for the land we have yet got. There is one policy, as the Senator from Wisconsin [Mr. SPOONER] expresses it, which would say to the Government, "Part with no more land, in order that those who already own land may get better prices for that which they own, and also better prices for the products of it."

But there is another policy, and a wiser one, which says that wherever the Government has got land which any citizen wishes for the purpose of making a home thereon, for the purpose of developing it and making it fruitful, we will let him have it. It gives opportunity for enterprise, a field for the energies and aptitudes of our people. It gives them something to do on American soil, enables them to change their occupation, and operates to relieve the congestion which comes in our great cities; it is a perpetual safety-valve. It has brought about the great internal development, to be followed some day very soon by an external one equally great and which could not have come without it, which makes the United States to-day the leader in everything except aggressiveness among the nations of the civilized world.

We have had little foreign commerce since the war because we have had better within. We have had an internal commerce of greater proportions than any other nation ever had. We have not plowed the ocean as we might have done, and as compared with the early part of our career, because we have plowed the lands of the interior. We have not built ships to navigate the ocean because the wise ship-builders of New England and other portions of the East, after the close of the war, found that they could make more money building railroads in the West, and they have extended them into nearly all the habitable area, producing a wonderful development which enables us to know the resources of even the most remote portions of the country.

We have got the one thing which more than anything else is the foundation of national independence, and that is a surplus of food products, and along with that we have got a railroad system which will enable us to bring these products to any given point for foreign shipment or domestic use cheaper and quicker than the resources of any other nation can thus be focused. The pioneer has had his share in this great work, and no history of the growth of this country during the past fifty years would be worth opening the pages of if it did not take into solemn and thoughtful account what he has done. He has blazed the way for the teeming millions who occupy the West; he has sown what others have reaped. The country and not himself has had the fruit of his labors. The doubts and dangers he confronted were manifold, largely unforeseen, and yet always courageously met. He gained for himself sometimes; oh, yes, but where one man gained ten lost. There was but one inevitable gainer—the country. Every sacrifice of the pioneer brought wealth to the nation.

As I said in the beginning, there is no such record of fortitude, of courage, of patient determination, of that patriotic building which takes little account of one's own self, but always the prosperity of all, as that exhibited by the settler upon the Western frontier. Human he has been; oh, yes. He has taken advantage of the Government in a mean way occasionally, no doubt. Who does not? Who is there that presents a claim before Congress that expects that claim to be tried in the same way that it would be if it were tried against an individual? Who does not take account of the fact that he owns a part of all the national resources in getting what he can get from Congress, and that in getting money from the Government he gets at least a part of that which belongs to him independent of his special claim.

When invited to go upon the public land the pioneer says, "It is true they will establish some rules and regulations as to the manner in which I may acquire title to a piece of land," but, with that American directness which always adopts the easiest and cheapest road to the end, he says, "I do not care so much about these regulations, and which are matters of detail, but I want to make a home and make it here." He has found coadjutors in his neighbors. He has not always found enemies in the land office, and against his individual sin, venal and rarely involving moral turpitude, I put the greatest accomplishment the human race has ever shown in the development of any country. Whoever else may reproach him, I will not. Whoever else may seek to find blemishes in that great achievement, I will not. To us the splendor of it obscures them all.

Now, Mr. President, there is just one thing else I want to state, which may be fairly taken into account in this connection. I think it was Prince Metternich who said that the statesman *per se* was the man who knew and understood the resources of his country. It has been a part of a wise governmental purpose from the beginning to find out what the resources of this country were. We have had geological surveys, and surveys within surveys oftentimes, but they have been in this line of finding out what we have. It was to some extent the curiosity of the Yankee who, having lost a cent, said he did not care about that miserable copper coin, but he would like to learn where in thunder the thing had gone; but it was also more a feeling that to know was to be able to devise new means for national independence.

But the pioneer is not always or alone he who develops the agricultural regions. The country has no end of indebtedness to the pioneers who have developed the mining resources of the mountain regions at great hazards. I have had abundant opportunity to observe the quality and the labor of the men who have so wonderfully developed the resources of Colorado. And in connection with what has been said about the value of topographical and geological surveys with reference to the development of mining regions I will venture to relate an incident which came under my own observation.

As we all know, gold was discovered in 1859 in what was then called the Pike's Peak country, though 100 miles distant from that protuberance. But still it was all known as the Pike's Peak country. The first discoveries were at the place where Denver is now located, and there was a great rush of people to the locality and equally, of course, all portions of the country round about were prospected. There were no railroads nearer than Jefferson City, Mo., and the nearest line of what could be called transportation was the Missouri River, 800 miles distant, and most of this distance was over a trackless and unsettled prairie, the present arid and subarid regions of Western Kansas and Nebraska and Eastern Colorado. Tens of thousands of persons in search of gold traversed this area, braving Indian hostility and other frontier perils.

The chief mining in those days in Colorado, as well as elsewhere in this country, was placer mining. This was carried on to a large extent in the vicinity of what is now Leadville. The work of the pioneer placer is still visible in the abandoned flumes and ditches in that vicinity. Some of the mines are still worked—notably a placer property about 20 miles below Leadville, known as the Gaff placer, until recently owned by Cincinnati parties. But about six years ago the property was sold to some Englishmen. They sent out from England, to take charge, one of the best known of English mining engineers, one who had experience in nearly all the mining regions of the world. He found a ditch bringing water upon the placer ground of his company, which had been constructed in 1859 by the pioneers, without engineering appliances, the instrument with which it had been located being a "go-devil"—in effect, a pair of dividers with legs of unequal length. The ditch was several miles in length, constructed along a steep mountain-side, where ditch construction is always difficult and hazardous, even with the best of appliances. Yet these miners had built a ditch which at the expiration of nearly thirty years was in first-class condition.

These same English people, after they bought the property, employed the most scientific engineer they could get in this country, who built a ditch to carry the water from the other side of the mountain across to their placer ground, at a cost of $75,000, and Captain Harvey, the engineer sent there by Mr. Barry, the greatest miner and said to be the richest commoner in England, told me that that specimen of ditch work done by those men in 1859, with no instrument of engineering except this tripod, was the finest piece of work he had ever known to be done, infinitely superior to the one just completed by his company at a cost of $75,000 by the accomplished engineer whom they had employed.

I do not attach any great importance to the proposed topographic and geological surveys. They are chiefly useful for drainage purposes. If it is of use to find how high the mountains are, the relative height of the various protuberances and depressions, all right. It keeps a good many very nice people employed, and it results in fine maps. It gives something undoubtedly to the common stock of knowledge, and I would not oppose it, but as to any other advantage to come from it, in my judgment we shall never realize it.

But there is one thing that may be done in the direction of ascertaining what the resources of this region are. There may be wise expenditures made, not for the purpose of doing the work which men themselves can and will do, but for the purpose of giving them an object-lesson, things which the individual settler could not well find out, and, if so, only at a cost beyond his means. This relates chiefly to the question of water supply for the whole region of country under consideration, the sources of the same, and the means whereby they can best be utilized.

That country is not a back-yard, Mr. President; it is an empire. True, it is almost wholly undeveloped, but a beginning has been made.

Many years ago tens of thousands of men went into that area for the purposes of agriculture, an agriculture depending upon natural precipitation of moisture. They took single quarter-sections of land and made their little homes upon them, spending thereon all the accumulations of a lifetime. The time came last year and the year before and this year when many, nay, most of them, had to confess that their anticipations were not to be realized, that the precipitation of moisture under present conditions was not sufficient for agriculture. They had not anticipated this. They looked for climatic changes which did not come, and they failed to appreciate natural and inevitable conditions. They did not appreciate that nature would yield slowly, if at all, and they, too, must give way and meet nature half-way.

They went too far away from their base, and they went in multitudes. Thousands have left under the stress of unfortunate circumstances resulting in failure. They have sacrificed their all in an effort to make homes in the arid region. What they have done and suffered has brought value to the nation, but only loss to them. Some will stay to be rallying points for a new advance of the line of emigration, and some of these days in the not distant future the land will truly blossom as the rose. Those who make up the later throng will have the benefit of the services and sacrifices of those who have gone before. I have no doubt that there can and will be a system of agriculture devised applicable to the arid region without artificial moisture. The experiments made at Garden City in Kansas, at the Government grass station, and in Colorado encourage this belief. It will be found possible by reclamation and otherwise to produce varieties of food-plants which will thrive in localities where the annual precipitation of moist-

ure is not greater than 15 or 18 inches. This result will be reached slowly, but it will come; and there will be a production ample for the support of a reasonably dense population. There will also be conservation of storm waters with good effect and over considerable areas irrigation. The arid region is a valuable portion of the public domain, and will become in time the home of more people than have ever yet been congregated within its borders.

The Good Book says the world was made for man. So believing, I believe that man will finally subdue and occupy every portion of it. He will have to give way, he will have to yield propossession, he will have to accommodate himself to circumstances, but that finally he will overthrow nature is no more doubtful to me as to the future than it is as to the past.

Meanwhile there are things in the line of investigation, bringing together known facts and helping in their application, which the Government can do and should do.

True, the pioneer has taken the chances voluntarily, but he ought not be left to perish. He is poor. He is already doing all and more than his part. The Government should help as has been proposed.

There is a great store of precious metals in the mountains of the West, and alongside or near by are fertile lands, needing only the application of moisture to make them yield abundantly. The two resources are helpful and necessary to each other. The gold and silver could not be mined profitably if the wheat, the corn, the barley, and the alfalfa had to be carried from distant markets. On the other hand, but for the mines there would be no market for the products of the field.

The subject is too important to be treated in a narrow way. Opportunity should still be furnished to obtain title to the public lands by settlement and reclamation. All the home-seekers should not be characterized because of the irregularities of a few. The best possible opportunity should be afforded all who are willing to go upon the lands in good faith. Meanwhile the work of exploration should go on to the end that the settler may have all the advantage which comes from as perfect knowledge as possible of all the elements of the problem with which he is confronted.

The Tariff.

SPEECH
OF
HON. WILLIAM McKINLEY, JR.,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 15, 1890.

The House having under consideration the amendments of the Senate to the bill (H. R. 9416) to reduce the revenue and equalise duties on imports, and for other purposes—

Mr. McKINLEY said:

Mr. SPEAKER: If any one thing has been demonstrated by this debate, it has been that the Committee on Rules erred, if it erred at all, in assigning altogether too much time for the consideration of the Senate amendments to the House tariff bill. The Committee on Rules gave two hours for that discussion, and I invite the attention of the House and of the country to the fact that not fifteen minutes of those two hours have been devoted to the discussion of the amendments coming from the Senate or to the discussion of the tariff bill at all.

Very much of the time has been devoted to merely personal controversy, to settling the question of the consistency of certain gentlemen on this floor, the question as to how they stood upon the silver bill three months ago and how they stand upon it now. I submit that, with the single exception of the speech of the gentleman from Louisiana [Mr. PRICE], we have had no discussion of the amendments that are now pending in this House, sent from the Senate of the United States, and what the gentleman from Louisiana said has only confirmed me in the belief that we are doing exactly right in non-concurring in the amendments of the Senate. He has given what he deems a sufficient reason why the date that the bill shall go into effect should be changed. It seems to me a good and substantial reason, which should receive the most thoughtful consideration by the committee of conference. But, aside from what he has said, this discussion has had no relation whatever to the subject that is in hand, and has shown that it is not real debate the opponents want, but an opportunity for general party and personal controversy.

Why, the gentleman from Georgia himself [Mr. TURNER] at the very outset said he did not propose to discuss the measure, but he proposed to discuss the method of its passage. The methods of the majority, methods to transact the public business—why, they are known to the country and approved by the country. The trouble with the other side of this House has been that they have not discussed measures at all, but have been calling names for the last nine months, and while they have been calling names the majority on this side of the House have gone on and done more public business than has been done by any House of Representatives in a single session since the formation of the Government. [Applause on the Republican side.] And, Mr. Speaker, they have done the business that the country demanded. Every interest has been consulted and considered in our proceedings. Opposed by the other side——

Mr. BLOUNT. Will the gentleman permit a question?

Mr. McKINLEY. Yes, sir.

Mr. BLOUNT. Did the gentleman seriously expect the minority side of the House to undertake to discuss the tariff bill, with its 464 amendments, in an hour?

Mr. McKINLEY. I did not expect that you would discuss the 110 verbal amendments. They required no discussion. But I did suppose that there were a few important matters in the bill which you gentlemen would give us some light upon, but you have utterly failed to do it. Although we gave you a full hour for the purpose, you yielded the time to gentlemen to talk about farm mortgages and the depression of agriculture and other subjects foreign to the issue before us, which were so fully and unprofitably discussed during the debate here months ago.

Mr. BLOUNT. It would have been absurd to undertake to discuss the bill in the time that was allowed.

Mr. McMILLIN. Will the gentleman from Ohio permit a question?

Mr. McKINLEY. Yes, sir; I will permit a question.

Mr. McMILLIN. Did not the gentleman himself open the discussion by saying that he did not understand the Senate amendments and could not tell what their effect would be?

Mr. McKINLEY. I said nothing of the kind and I said nothing that could be even distorted into such a statement.

Mr. McMILLIN. The gentleman either forgets what he did say——

Mr. McKINLEY. I rose in my place, Mr. Speaker, and stated the number of amendments and what those amendments were.

Mr. McMILLIN. And you also stated that you did not know what their effect would be and could not tell the House.

Mr. McKINLEY. I said nothing of the kind; I say it with all kindness to the gentleman from Tennessee; the RECORD will show that the gentleman is wrong and I am right.

Now, Mr. Speaker, the gentleman from Alabama [Mr. HERBERT] says this is a "sectional bill"——

Mr. McMILLIN. I am informed that the gentleman has his remarks for revision; will he kindly turn them over to me?

Mr. McKINLEY (handing manuscript to Mr. McMILLIN). The gentleman may look at them; here they are; I have not even looked at them, much less revised them.

The gentleman from Alabama says this is a "sectional" bill, and that the country is suffering because we are "tinkering with the tariff." "Tinkering with the tariff!" That is the mission of the Democratic party. And this a "sectional" bill! I say there is not a single paragraph in this bill that is "sectional" in its character—not one. It is national from beginning to end. Look at the Mills bill——

Mr. HERBERT rose.

Mr. McKINLEY. Wait till I finish this sentence. Look at the Mills bill which you passed in the last House; and it is sectional from top to bottom. You put what on the free-list? Cotton-ties for the use of the people of the South. You put cotton-bagging on the free-list. You protected your sugar and your rice; and then you turned to the farmers of the North and put their wool, their flax, their hemp, and other agricultural products on the free-list. [Applause on the Republican side.] If there ever was a sectional bill emanating from any party in this House or any other, it was the Mills bill of the Fiftieth Congress.

Mr. McMILLIN. Now, will my friend from Ohio yield?

Mr. McKINLEY. Oh, yes; I will yield.

Several MEMBERS (to Mr. McKINLEY). Go on.

Mr. McKINLEY. I have not the slightest objection to yielding to the gentleman from Tennessee.

Mr. McMILLIN. I read the report of the gentleman's language:

Your committee can not with accuracy—and I do not now undertake to do it, Mr. Speaker—state the effect upon the revenues by the amendments of the Senate.

[Laughter and applause on the Republican side.]

Mr. McKINLEY. If the gentleman from Tennessee had put to me the inquiry whether I said what he now reads, I should have answered in the affirmative; for I did say that I could not tell with exactness the effect on the revenues; but I went on to state that the effect would be about $62,000,000 of reduction estimated upon the imports of last year.

Mr. McMILLIN. But this is a tariff bill; and revenue is the question involved.

Mr. McKINLEY. We can not play upon words. Take this bill that you call a "sectional" bill——

Mr. HERBERT. Let me ask the gentleman a question.

Mr. McKINLEY. When I get through with your "sectional" allegation I will hear you. This is called a "sectional" bill; now what has this bill done? It has taken care of every product of the South unless you except sugar.

Several MEMBERS on the Republican side. It has taken care of that.

Mr. McKINLEY. And it has given to the producers of sugar a bounty equal to the duty they heretofore have been enjoying a direct and assured protection.

Mr. COLEMAN. Which the Republican party has pledged itself to maintain.

Mr. HERBERT. Now, will the gentleman from Ohio yield for a question?

Mr. McKINLEY. I have a number of items here that I want to call the gentleman's attention to. Yellow pine, I believe, is a product of the South—produced nowhere else.

Mr. HERBERT. And white pine is a product of the North.

Mr. McKINLEY. Exactly; and under this bill yellow pine of the South is made dutiable at $2 and white pine of the North at $1. [Applause on the Republican side.] Take rice. Take mica. This product of North Carolina and of Tennessee we found upon the free-list; we in the House took it from the free-list and put it upon the dutiable list, and in open Senate our provision was approved by a majority vote.

Mr. GROSVENOR. Take coal and iron ore.

Mr. McKINLEY. Yes, take coal; take iron ores; take sponges; take oranges; take rice; take anything you produce in the South, and look through our bill and you will find in every particular it has the same meed of protection that we have given to the industries of the North. And we propose, Mr. Speaker, to go right on protecting the South as we have done for twenty-five years; in spite of themselves, in spite of their Representatives, we propose to go on giving them such protection as will still further increase their industrial prosperity and development. [Applause on the Republican side.] We have done it for twenty years or more, and we will not stop so long as we have a majority in Congress, notwithstanding their Representatives here oppose the very principle upon which the prosperity of the South depends and to which it must look for its future development.

Mr. HERBERT. Now will the gentleman yield?

Mr. McKINLEY. Talk about "methods." You have been in the control of the House for twelve years, since 1876. Point to the public measure you have put upon the statute-books in the interest of the country or of your fellow-citizens in all that period of time. You said you would revise the tariff, and in all those years you were never able to do it.

Mr. HERBERT. Because a Republican Senate defeated our bill.

Mr. McKINLEY. Ah, but you had the Senate in that time; it was Democratic for two years, and during the same period you had the House. You said you would reduce the revenue; yet in all those years you reduced the revenue less than $7,000,000. And during the eleven years, in which the Republicans have controlled, from 1866, we wiped from the statute-books three hundred and sixty-two millions of annual taxation and we propose by this bill to roll away sixty millions more. [Applause on the Republican side.] There is the record of a party that has methods. But you have had no methods except those of obstruction and of maddened resistance to public measures. [Laughter and applause on the Republican side.]

Now, Mr. Speaker, I demand a vote.

Mr. HERBERT. Will the gentleman yield to my question now? [Cries of "Vote!" "Vote!"] I ask the gentleman now if he is willing to yield to the question? [Renewed cries of "Vote!"]

Mr. McKINLEY. Yes, I will yield to the gentleman's question.

Mr. HERBERT. I want to ask the gentleman, if it was "sectional" in the Mills bill to put cotton-ties on the free-list, what do you call it in the McKinley bill to raise the tariff on cotton-ties and put, at the same time, binding twine upon the free-list?

Mr. McKINLEY. I call the act—what you term the McKinley bill—an act in the interest of American manufacturers and the American people; and I believe your proposition to put cotton-ties on the free-list is an act in favor of the British rather than the American manufacturer and against the interests of American consumers. [Applause on the Republican side.]

Mr. HERBERT. The gentleman does not answer my question. I asked him to state to me——

Mr. McKINLEY. Cotton-ties are to-day on the dutiable list——

Mr. HERBERT (interrupting). And you are raising the duty on them still higher.

Mr. McKINLEY (continuing). And we can not manufacture them in the United States successfully because of the low duty. Therefore this is a revenue tariff, and the consumers pay the 1 cent a pound. Now, we propose to make it 2 cents a pound, so as to start up our own factories and enable your people who use these ties to get cheaper cotton-ties than they can get from the other side to-day. We propose that they shall get cotton-ties at a lower rate, made in the South, in the gentleman's own State, made in our own establishments, manufactured by our own workmen, and produced from our own raw material. [Prolonged applause on the Republican side.]

Mr. HERBERT. Why not adopt the same policy in regard to binding-twine? Why not increase the duty on that in the interest of the farmers of the Northwest so as to enable them to get their binding-twine cheaper? If the rule holds good in regard to cotton-ties, it must hold good in regard to binding-twine.

Mr. McKINLEY. The gentleman from Alabama must know when he talks about the House bill that we did not put binding-twine on the free-list. We made it dutiable at 1½ cents.

Mr. HERBERT. I am not talking of the House bill, but of the Senate bill, which you do not give us a chance to amend or discuss.

Mr. McKINLEY. And when we do give you a chance you discuss everything else but the subject in hand. [Laughter and applause on Republican side.]

Mr. HERBERT. I am discussing what is before us. I am discussing what is in the amendments of the Senate; and I think the gentleman will find it difficult to explain to the people of this country why a different principle shall prevail in regard to cotton-ties and binding-twine.

[Here the hammer fell.]

Samuel J. Randall.

REMARKS

OF

HON. FRANK HISCOCK,

OF NEW YORK,

IN THE SENATE OF THE UNITED STATES,

Saturday, September 13, 1890,

On the resolutions relative to the death of Samuel J. Randall.

Mr. HISCOCK said:

Mr. PRESIDENT: Before entering the Chamber I was not aware the Senate was considering resolutions in memory of Mr. Randall; but I will not go to other duties, pressing as they are, without placing in the RECORD a few words expressive of my estimation of his abilities and public virtues.

I served with Mr. Randall ten years in the House of Representatives, and early in the period an acquaintance began which soon ripened into friendship and great personal regard, at least on my part towards him, and I am quite sure that he frequently extended to me more than the ordinary official and parliamentary consideration.

He possessed abilities of a very high order, and to say that he was an honest, unselfish statesman is as unnecessary, if not offensive, as to defend the loyalty and patriotism of Lincoln, Grant, Sheridan, or Sherman.

Mr. Randall had attained a position above that atmosphere in which private hates and personal jealousies and poisonous slanders may render personal defense and explanations necessary. Monumental in respect to his abilities and virtues, whoever criticises the design is compelled to admit his great excellence in the class to which he belonged.

Mr. Randall was both an honest and earnest partisan. He recognized that our Government is administered by parties and, without regard to his personal fortunes, was convinced the Democratic party would in power more largely promote the general prosperity of the country and more certainly than the Republican party perpetuate those democratic and republican principles upon which our form of government rests. He was never doubtful or hesitating in his judgments or opinions; and, believing as he did, he rejoiced over the victories of the Democracy and mourned over her defeats, for to him her triumphs were his country's. Strong as were his convictions in this respect, however, he never sought to degrade the party he so earnestly opposed. What I mean is that he never contributed to her mistakes, if she made any. Petty politicians, small statesmen in the opposition—if they should be dignified by the appellation—upon the theory that the party in power is responsible, will contribute to her mistakes; if there are bad men in the majority, they will unite with them to promote venal and improper legislation. Mr. Randall never descended to that method; his country was involved, and his patriotism was of too high an order to permit him to yield to any temptation to sacrifice her interests and honor for even the time being.

In the legislative body of which he was so long the leading member, when in the minority, his influence to the fullest extent was exerted to obtain in legislation the best possible results, however strengthening and distinguishing they might prove to his party opponents.

I have more than once seen a party leader rescued by him from defeat or from a vicious amendment to his bill, promoted by those of his own side or a combination extending to both sides.

Mr. Randall was not a popular or magnetic speaker and did not possess the wonderful power, by eloquent appeals and denunciations and logic clothed in the laces and diamonds of rhetoric, to sway or influence those who heard him or read his speeches; but he was a leader of men and a captain of leaders. Those who knew him intimately may not agree upon the qualities that enabled him to exercise so long his commanding influence, but they will agree he possessed and held the scepter apparently without effort, whether in or out of the Speaker's chair. His intellectual equals gravitated to him and followed; thought-

less inferiors surrendered themselves to his guardianship, and it was not on account of an argument or appeal made at an imminent crisis.

When out of sympathy with the majority of his party associates in the House of Representatives upon one great question, and when, to to the looker-on upon the other side, personal hatred of him had been engendered, upon other than the great disturbing issue Mr. Randall still dominated and, I believe, was regarded as the party leader by both sides of the House. I would say his great influence over those with whom he was associated was not attributable to one of his capacities or characteristics, but was the natural result of their combined force. The roots reaching deep into the earth, the gigantic trunk, and the wide-spreading branches with their crown of foliage, all make the oak possessed of strength that resists the shock of tornadoes and the fierce blasts of the storms of a century.

Mr. Randall was possessed of an intellectual force and power that enabled him to perfectly master all the questions presented to him in his long legislative service. He was always equal to the subject and prepared for the occasion; never uncertain in respect to his course or unmeaning or doubtful in his advice to others. He was not timorous nor was he inconsiderate, and never seemed to be afflicted with those troubled experiences of uncertainty that many leaders pass through before advising or acting. At the proper moment, with quiet manner, without oratory that inflamed or any of the arts or methods that excite sympathy or passion, with few words he resolved all doubts for his associates.

Mr. Randall was a just judge of men. It was unnecessary for him to learn by conversation with or personal inquiry of the members of the House how they would vote upon the important questions affecting public or private interests, but still non-partisan in their character. I believe, sir, he could, as a rule, from his knowledge of the members' character and mental organization, check a division of the House. In his administration as Speaker and his leadership upon the floor, Mr. Randall never descended to tricks, combinations, or promises for support, but contested the questions fairly and upon their merits. I do not believe he ever sought to secure aid or support through the tremendous influence and power he possessed as Speaker or as chairman of the Committee on Appropriations. In the one position he did not bargain away favors; in the other, he did not for support promise appropriations in which gentlemen or their constitutents were interested; he did not regard legislation as the proper subject for barter and trade.

Mr. President, I will speak a moment of his organization of the committees of the House when he occupied the Speaker's chair. They seemed to grow. Openly they were formed, the members taking their places as if controlled by the natural law of selection on account of their peculiar fitness to the interests they severally represented and their public repute or representative character.

Mr. President, I have not spoken of Mr. Randall as dead. He became a great personality that can not by that great natural change be extinguished or destroyed. He will be a historic figure. He was so identified with legislation at the time of such vital consequence to the country and with an influence reaching so far into the future that the future statesmen and historians will closely study his character. It can hardly be said that the death of any one is an irreparable loss to the country; it may be said of his that it created a vacancy not yet filled. Irrespective of party relations, he was himself a national political issue; and could his vigorous mind have been sustained by the requisite physical strength it may be fairly said of him that, like the radiation of light from its source, his patriotic and statesmanlike influence would have been broadened and extended.

James B. Beck.

REMARKS

OF

HON. MARCUS A. SMITH,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES.

Saturday, September 13, 1890,

On resolutions of respect to the memory of James B. Beck, late a Senator from the State of Kentucky.

Mr. SMITH, of Arizona, said:

Mr. SPEAKER: At Friars' Carse, in one of the most romantic and historic shires in Scotland, many years ago, the immortal Ayrshire Plowman, on the glazed windows of a rustic house, with a borrowed diamond, inscribed these words:

> Life is but a day at most,
> Sprung from night, in darkness lost.

While this may be true of many lives, it is not true of Burns, nor is it true of him whom the nation mourns to-day. A life so full of manly deeds, so rich in honest labor, can not be lost in darkness. Life is mortal, yet the great achievements of a great life are dedicated to immortality. If it were otherwise, how vain becomes the loftiest ambition of man, how useless are the noblest lives, and how tragic is every birth.

It can not be that the example left by the life of James B. Beck will ever cease to shine as a beacon-light across the dark waters, attracting to its course many a storm-tossed boy. If his life be viewed only as an example in death, he bequeathed to the struggling, toiling boys of the world a richer inheritance than ever fell from princely hands.

It is not my purpose here to attempt a review of his distinguished public service, for that has already been done by those more intimately acquainted with his life in the two Chambers of this Capitol, but I can not forbear a word or two in this connection. Coming in early life from Scotland, he finally cast his lot in the matchless valley of the Elkhorn, in the heart of the far-famed blue-grass region of Kentucky. Among a people second to none on earth in all the virtues which adorn American civilization and give stability to our form of government, a people educated, well-to-do, brave, honest, proud, and manly, he very soon, by the rectitude of his life and the possession and practice of those virtues which had made the place of his adoption famous, attracted willing recognition which culminated in a love so strong that they dealt to him with unsparing hand the greatest honors in their gift. Recognizing the justice and generosity with which he had been received, he more than repaid in tireless labor and reflected renown the great debt which he felt was due them.

Flung into public life at a time when the country was in more danger from the passion and prejudice of legislation than it later was at the hands of open force and coming from a border State of divided sympathies, he by manfully withstanding the beating storm attracted the attention of the whole people and sprang at once to the very forefront of that almost helpless minority to whose persistent patriotism is largely due the final peaceful settlement of those great problems which the war left as its bitter heritage.

Manfully and bravely did he do the work which duty assigned him. It is needless here to specify the great questions in which he took conspicuous position, for he was conspicuous in all he undertook. Taking an active part pro or con in all the controlling policies of the times, he died leaving no statesman behind him with more intimate knowledge of Federal legislation and few, if any, as well equipped for its duties.

Mr. Speaker, it is not as a public servant nor as a statesman that I most love to think of him.

I met him first at Lexington, Ky., in 1869, during my first year at college. I was then impressed with his great force and with his bluntness of speech, both of which somewhat awed me and forbade in me any effort to approach him.

My studies consuming most of my time gave me little opportunity to meet him, except perhaps on the street, where he always had warm friends about him.

After I had begun in that city the practice of law I met him frequently, and the nature that at first impressed me with its austerity became as tender, as approachable, and as kindly as ever graced the life of a gentleman. This was true not only in my case, but true as well with every man who knew him well. Many a favor could I now recall which he has cheerfully done me; yet his life was so full of favors and kindnesses to all whom he knew and liked that I forbear specific mention.

On my entrance to the Fiftieth Congress I met no one who gave me a more cordial greeting, nor any who ever took like time and pains to explain away the difficulties in which my ignorance of parliamentary law often involved me. He would have done as much for any young man seeking his aid. Within a strong, rugged exterior he carried as big and as true a heart as ever beat.

The just tribute and correct estimate of the man as he was, so ably presented to us by his distinguished friend, Mr. BRECKINRIDGE, make what others may say seem tame and commonplace. What most impressed me in the man was his unyielding, aggressive force, his tireless energy, and the direct, honest, straightforward methods of his mind. In the friend I was equally impressed with his tender consideration, his kindliness, his gentleness of soul, and the intensity of his love for his own people.

A better husband, a more affectionate father, and a truer friend has never lived or died among us. In every relation of life he rose to the fullest measure of exalted manhood.

Yet with all this the simplicity of his daily life was refreshing to behold, and made his friendship seem, as it was, sincerely genuine. He loved the horse, the dog, and the gun as few men love them, and few men were better judges of them than he. With what zest he enjoyed the open air; with what ease he carried his gun over rough fields in search of game throughout the day; and when evening came he seemed as fresh and buoyant as morning found him and charmed his tired companions with many quaint stories and delightful experiences which that or other such days had given him.

To me he was at times the most delightful talker I ever heard. His simplest stories, unconsciously to him, bore always a lesson to his younger listeners. I have gone from his companionship at times feeling that

there was little worth reading that he had not thoughtfully perused. To the young men whom he blessed with a share in his confidence his mind seemed a perfect storehouse of valuable facts.

Mr. Speaker, Mr. Beck has been often likened to some of the sturdy forces of nature. The simile is not inapt. Viewed from a distance he appeared a rugged, rock-ribbed mountain, which, on approach to its bosom, revealed sweet violets blooming there, giving freely their gentle fragrance to all about them. I have never known a man in whom the gentle and the strong were so intimately blended. We shall never look upon his like again.

Though he has been succeeded in the Senate by one of the ablest men in public life, yet he will be missed and mourned, not only by his friends and associates, but by the toiling millions as well, in whose interest he had wrought so long and so faithfully. While the nation mourns its loss and friends weep at his bier one ray of light pierces the gloom, revealing to us the consolation that though he sleeps his life's great work still goes on toward final consummation. He "has ceased from his labors and his works do follow him," evidencing the rich reward to which he is entitled and which we know he now enjoys.

So much has already been so well said of the public service and private life of him who honored me with a degree of his friendship that I have been forced thus to speak somewhat personally of him as he appeared to me. I make no apology further than you may find it in my profound admiration for him as a statesman and my great love for him as a man.

James B. Beck.

REMARKS
OF
HON. CHARLES E. HOOKER,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, September 13, 1890.

The House having under consideration resolutions of respect to the memory of James B. Beck, late a Senator from the State of Kentucky—

Mr. HOOKER said:

Mr. SPEAKER: I am not amongst those whose names appear on the list upon the Speaker's desk. This arises possibly from the fact that I was absent during the time in which this list was made up. Listening to the eloquent tribute of his intimate friends, I have felt that I could not in justice to the dead and my memory of him permit this occasion to pass without some slight tribute, though unstudied, by one who in his earlier service in this House had been the recipient of so much kindness and courtesy from the distinguished Senator in whose honor we meet to-day to pay the last tribute.

Mr. Beck was about to leave this Hall to take his seat in the Senate of the United States when I was first elected to Congress. He was among the distinguished men to whom I was presented by my friends who had preceded me here; and of them all there was none to whom I feel I owe more gratitude for the kindnesses shown me, as a younger member of the Congress of the United States, and for the advice which flowed from his kindly heart on many an occasion when I had the honor to meet him. I have seen him in circumstances of elation when he has received the plaudits of his fellow-citizens and the honors of the State that delighted to honor him, and I have seen him in the hours of affliction, when the hand of misfortune had been laid heavily upon him in the death of the most cherished member of his own household.

I chanced to be in this city, though Congress was not then in session, when he lost the partner of his bosom, who had been so long a source of consolation and comfort to him. Out of respect to him, though not associated intimately with his family, I was at the funeral of his wife on this occasion. The great affliction which he felt was manifested in that strongly marked face, subdued, as it was on that day, by signs of sorrow to which ordinarily he was unaccustomed.

In every relation of life he has stood a marked type of a great man. It has been said by his distinguished friend and magnificent eulogist [Mr. BRECKINRIDGE], who stood so near and close to him, that his great power was the power derived from the fact that he was of and from the people. In that respect something has been said about his coming from the aristocratic region of Kentucky. He may well have laid claim to that term, Mr. Speaker; if you trace it back to its original Greek meaning, in which the word *aristos* signifies "best," he was indeed and in truth an aristocrat. Claiming it from no lineage of blood, from no descent of ancestry, but claiming it as those may who like himself spring from the great heart of the people, claiming it because of his own ripe thought and his own noble action, in that sense he was indeed an aristocrat.

It has been said by my distinguished friend from Illinois, General HENDERSON, who served with him here so many years, that he was not an orator. Sir, if I could make an improvement on the definition of oratory given by the great Roman orator himself, that it consisted of "action, action, action;" if I might presume to improvise on that definition, sir, and say that in my judgment oratory consisted of earnestness, earnestness, earnestness, then I should pronounce James B. Beck the most magnificent natural orator I ever listened to; for he never spoke upon any subject that he did not render every one of his auditors conscious of the fact that they were listening to a man who was all over in earnest with regard to the subject about which he spoke. And I never heard him speak on any question that I was not reminded of a scene that occurred in my early life, when I heard that great old orator and Frenchman, Major Dévizac, who was the aid of General Jackson at the battle of New Orleans, make a speech in the good old State of New Jersey on one occasion. It was out in the open air, to an immense auditory. A short distance away was a sluggish canal, and, speaking in apology for the earnestness and enthusiasm with which his French nature spoke, he said: "I am not like yon sluggish canal, but I am like my own raging Mohawk. I receive my enthusiasm from the people and I give it back to them."

So it was with this great orator from Kentucky; he received his enthusiasm from an education in the midst of the people. He knew them, and in the loftiest forms of eloquence, in that Senate of high debate to which he was transferred from this Hall, arriving there, he leaped into that arena of high debate armed *cap-a-pie* for the conflict and took his position side by side with the foremost Senators in debate that then sat in that august body. And when the chances of political fortune removed from that body its most magnificent exponent of the great truths of which he was the advocate, when that grand old Roman, Senator Allen G. Thurman, was no longer there, it fell to the lot of the great Senator from Kentucky to take the mantle that fell from his shoulders and to rank as the great debater of the Senate.

In all the elements, therefore, which constitute true oratory he may be said to have been an orator of the character that I have described.

But it was by those social qualities to which his friends, more intimately connected with him than I am, have alluded that most of us who knew him here felt endeared. There was no occasion of a social nature, when he was one of the guests, that crowds did not surround him to hear those genial stories and to bask in that genial smile and those earnest and eloquent appeals which distinguished him alike in conversation and in debate.

I have felt, Mr. Speaker, that the proprieties of this occasion would not allow me to say less, and they would probably not justify me in saying more; but I could not permit the occasion to pass by, unprepared as I am, without laying my humble tribute on the grave of the great Representative, the great Senator, and the great citizen in whose honor we meet to-day to pay the last sad tribute of earthly respect.

The McClellan Pension Bill.

REMARKS
OF
HON. AMOS J. CUMMINGS,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, September 24, 1890,

On the bill (S. 3711) granting a pension of $2,000 a year to Ellen M. McClellan, widow of Maj. Gen. George B. McClellan—

Mr. CUMMINGS said:

Mr. SPEAKER: The soldier of the Army of the Potomac who did not esteem it a privilege and regard it a bounden duty to speak on behalf of the widow of Maj. Gen. George B. McClellan would lack both patriotism and manhood. General McClellan was a brave soldier, a skillful tactician, and a true patriot. No general ever more completely won the confidence of his troops, none ever had a more devoted army. It was to him that the army of the Potomac owed its effective organization, its drill, its *élan*, and its first triumphs. His masterly movements in West Virginia at the outset of the war brought us the brilliant and almost bloodless victory of Rich Mountain.

There are men upon this floor who saw Winthrop fall at Big Bethel and who slept in the wet trenches at the second siege of Yorktown. There are men within 40 feet of me who heard Hancock's famous order at Williamsburgh. There are Representatives in this House who threaded the swamps of the Chickahominy with George B. McClellan and who saw Guilford D. Bailey yield his life at Seven Pines. There are men here who heard the rattle of musketry at Mechanicsville, who faced shot and shell at Gaines's Mill, and who served the guns at Malvern Hill. There are those here who swept over Crampton Pass with "Little Mac," who had a part in the glories of South Mountain, and who upheld the Union and its flag upon the bloody field of Antietam. The stone bridge and the bloody cornfield are as vivid in their eyes to-day

as they were twenty-seven years ago this month, when that Borodino of American battles was fought. There are men here who a few weeks later flocked to the front of the line and saw their great commander doff his cap in final adieu to the magnificent army he had organized, equipped, drilled, and led to victory. The mournful words, "Come back, oh, come back to us, McClellan!" still ring in their ears. Other brilliant generals afterward led them in battles that cast renewed luster upon their arms, but the warmest spot in their hearts was reserved for their old commander.

It is not to these men, Mr. Speaker, that I appeal on behalf of the widow of George B. McClellan. They need no such appeal. Enhazed in memories of gallant Phil Kearny, of the chivalric Hancock, of intrepid Isaac I. Stevens, of the brilliant Reno, of the accomplished Reynolds, of steady-going Sumner, of fighting Joe Hooker, of honest John Sedgwick, and a score or more of McClellan's corps, division, and brigade commanders who have joined the bivouac of the dead, they need no reminder of the duty of the country toward his widow. Indeed, they themselves are the strongest reminder of his services and of the debt the country owes her. She at least should be shielded from penury.

No man has questioned the patriotism of her husband; no man will question his bravery, skill, and generosity to the vanquished; no man can question the value of his magnificent public services. Abraham Lincoln said that it was the victory at Antietam that gave him the opportunity to issue his emancipation proclamation.

Mr. Speaker, the Committee on Pensions has unanimously reported this bill for the relief of the widow of George B. McClellan. It ought to pass without opposition. No party prejudice, no sectional feeling should be shown in its consideration. It impeaches the gratitude of the nation to make distinctions in granting pensions to the widows of eminent American generals. I hope that the three bills before the House this afternoon will receive favorable consideration. McClellan, Frémont, Crook, all three rendered the country needed and essential service. To care for their widows is a comely way for the nation to express its appreciation.

Deficiency Bill.

SPEECH

OF

HON. LEWIS E. PAYSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 24, 1890.

The House being in Committee of the Whole and having under consideration the amendments of the Senate to the bill (H. R. 11459) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1890, and for prior years, and for other purposes—

Mr. PAYSON said:

Mr. CHAIRMAN: These claims are supported here by good men, who are doubtless sincere in their claims for constituents and friends; they doubtless believe these claims are just and proper, and I do not criticise them; but after a very careful examination of the subject, made several years ago, I feel that the claims are not just, and that there is no liability on the part of the Government for them, and that they should not be paid; and I hope the House will non-concur in the Senate amendment.

It is urged that they are old and that justice has been long delayed.

Singularly enough, Mr. Chairman, their age is accompanied by a vigor of growth that is remarkable.

In 1835, when the first bill passed either House, and under the charge of Daniel Webster, who had had large professional experience with them, he asserted that they would not exceed ten millions of dollars and that five millions would be a fair allowance to the claimants in full settlement.

Now, by the growth attendant upon their age, I suppose, following the usual course of nature when carefully matured and fostered, these claims have grown until excellent authority places the probable amount of these claims at above thirty millions of dollars.

I quote from the report from the Committee on Appropriations in the last Congress:

The first fact that attracts attention in coming to the consideration of these claims is their great magnitude. The law officers of the Government inform us that upon computation of them as filed in the Court of Claims they exceed the sum of $40,000,000, and the number of vessels seized or detained, as set forth in petitions filed, is 2,300. Mr. Webster, speaking for the claimants in the Senate in 1836, declared that "the papers showed that American citizens had claims against the French Government for 615 vessels unlawfully seized and confiscated," and the estimates heretofore made of the total amount of the claims have ranged from one-fourth to one-eighth only of the amount now demanded. From the best means of information at hand the committee are of opinion that after all deductions and rejections by the Court of Claims the aggregate amount will exceed $30,000,000. The amount already reported by the court and included in the present bill is therefore but a small part of the whole, but a decision by Congress to pay the reported items or any one of them will in principle commit the Government fully upon the whole question of payment.

Before the passage of the reference act of 1885 the position of the claimants was quite different from that assigned to them by the present bill. For half a century or more bills for their relief, presented from time to time, provided for an appropriation of $5,000,000, to be distributed among them pro rata in extinguishment of their demands, being about one-sixth of the probable amount of expenditure to which the Government will be committed by approving the items of appropriation contained in the present bill. Inasmuch, however, as the act of 1885 did not commit the Government to any principle of action upon the claims, the whole question of their allowance, and, if allowed, the manner of paying them, and the amount to be paid, remain open for the deliberate and intelligent judgment of Congress.

I am opposed to the allowance of these claims as presented here, because of the feeble character of the proofs in many of them, on which the right of the claimant is based.

Mere talk in families, in the second and third generation, allowed as evidence of the validity of a claim half a century before!

And the production, by a claimant of what purports to be an ancient letter, because peculiarly folded and sealed with wax, assumed to be an ancient letter, to fix the right of a claimant to perhaps hundreds of thousands of dollars, against the Government!

Such evidence would not be permitted in any court in the land in litigation over the most trivial matter. I read a statement of one of the Government attorneys in these cases as to the character of evidence taken and allowed, on which we are asked to vote millions of money:

Mr. COTTON. Well, if you will allow me to suggest here, I have taken quite a number of these depositions in New England. If I find a woman who is, say, a daughter or a granddaughter of one of the parties claiming to have lost these goods and she says that she had heard her mother or her father's brothers or sisters talk over these matters, that it has always been understood that her father was a ship-owner, that his ship and cargo were taken by the French during a certain period; while it is not strictly evidence in the ordinary sense of the term, I think the idea is precisely what Congress meant, that this should be admitted. That is the only evidence that was obtainable, and as an illustration, as I stated to you the other night, a gentleman presented to me a letter folded in a way which I knew letters used to be folded, sealed with a wafer seal and purporting to be written at a certain date by one who states himself to be a captain on a vessel, in which he described that yesterday his vessel was taken, and such proceeding was had. It is perfectly convincing to me of the fact, although it is not sworn testimony.

The CHAIRMAN (looking over the law). I see nothing in this jurisdictionary act of 1885 that would change the ordinary rules of evidence. "Provided in the course of their proceeding they shall receive all suitable testimony on oath or affirmations or all other proper evidence, historic or documentary." It must be suitable, it must be proper, it must be taken under oath or affirmation.

Mr. RUSSELL. I agree with you, sir, that it does not change the rules of evidence.

Therefore, Mr. Chairman, I am opposed to voting this money on one of the general appropriation bills.

My colleague [Mr. CANNON] has demonstrated the impropriety of that method, and I can add but little to what he has urged.

But I submit a few observations on the merits of the claims.

The time at my disposal is too short to even epitomize the arguments which can be made, and which should be made, against concurrence in this Senate amendment. I have always assumed, Mr. Chairman, that the object of all discussion was to elucidate and give information, that statements might be made by gentlemen who have been engaged in the subject-matter of the proposed legislation for years, and those who assume to speak by authority for claimants in matters like this should at least have a percentage of accuracy in their statements. Very little of that (and I say it without any discourtesy to gentlemen who have preceded me in this discussion in behalf of the claimants) has thus far been found.

The gentleman from Maryland [Mr. MCCOMAS] premises what he has to say by appealing to the sense of national justice which should pervade the discussion of all such affairs; and he indulges in a flight of oratory and some pretty rhetoric in that regard, and then reaches a climax in the assertion that every Federal Executive and every Federal authority who has been called upon to examine and pass upon these questions have been heard and found to be in behalf of these claimants. The gentleman from Maryland doubtless believes that to be true; but I say to the gentleman and the House in that regard that there has never been found a Federal Executive who has, as the Executive, approved these claims after examination by Congress. On the contrary, these claims have passed Congress on two occasions and having been presented to two Federal Executives were vetoed by both of them, once by President Polk in 1846 and again by President Pierce in 1855.

Mr. COGSWELL. In neither case——

Mr. PAYSON. I have only ten minutes. I have not time to yield to the gentleman. I say that without discourtesy.

Mr. WALKER, of Massachusetts. He never yields, but while pretending to yield always wants to finish that sentence which is never finished.

Mr. PAYSON. I will yield when the gentleman makes that remark.

Mr. COGSWELL. I did not say it.

Mr. PAYSON. The gentleman from Massachusetts ought not to say that. I always yield when requested and when I have time, and I do not refuse now in any discourtesy, as the gentleman knows. But ten minutes is too brief a time in which to discuss, even without interruption, a question involving $30,000,000.

Mr. O'NEILL, of Pennsylvania. Not $6,000,000.

Mr. PAYSON. To resume what I was saying, Mr. Chairman, instead of every Federal authority—referring now to Congress—approving these claims when presented, I assert, and I have the record before me to prove, that, when these claims were presented to Congress during the lifetime of the first generation, the generation the individuals of which were actors in the events which gave rise to these claims, they were not favorably considered, and there never was a fully favorable report recognizing the validity of all of them in Congress during that period. When gentlemen say these claims are old and venerable I agree; but in their youth, Mr. Chairman, when the recollections of the men who dealt with the subject-matter of these claims were fresh and vivid, when the witnesses were alive, when the men who had been actors in these matters were still active in public affairs, although these claims were presented to Congress time after time, there never was until 1826 a favorable report with reference to them.

Mr. COGSWELL. I beg the gentleman's pardon. That is not so.

Mr. PAYSON. I will publish the record in my speech.

More than that, there never was a bill in favor of one of these claims that ever passed either House of Congress until the distinguished Senator from Massachusetts, Daniel Webster, having charge of a bill in 1835, succeeded in passing it through Congress, and the action of Congress then was based upon the great speech which he made upon that occasion. Mr. Chairman, Daniel Webster had been the attorney for those claimants for years. Receipt after receipt for money which he had collected as attorney for claimants for depredations committed prior to the war between France and the United States may be seen to-day in the Treasury Department. I only submit, in connection with this fact, that, with all the transcendent genius which that great lawyer possessed, it is barely possible that his relation to these claimants as counsel for years may have influenced his judgment somewhat, not in an improper sense, but in their favor when he came to act upon this question at the other end of the Capitol. But the point I am now making is this: I want this committee to understand that the statement made by the gentleman from Maryland [Mr. McCOMAS] that these claims have always received formal approval by the Federal authorities is incorrect, the fact being that during the first generation of their existence—and I emphasize this——

Mr. COGSWELL. And I deny it. Here is a report made in 1807.

Mr. PAYSON. I know the report the gentleman refers to, and it was not a favorable report upon all these claims. I have the report under my hand made in 1807 by General Marion, in which the committee say they decline to give an opinion as to the time when the claims ought to begin or "the period for captures after which the memorialists would not have been entitled to compensation from France and *of course could not be entitled to indemnity from the United States.*"

The italics are my own.

I have here a brief résumé of the early treatment of these claims, which I will insert:

EARLY TREATMENT BY THE GOVERNMENT.

[Furnished by Mr. C. W. Russell, of the Department of Justice, in pursuance of a request by the subcommittee of the Committee on Appropriations.]

It must ever be a stumbling-block in the way of these claimants that the men who were contemporary with the events out of which grew the claims did not pay them. Of the acts of the Government alleged to have made it liable, contemporaries must be acknowledged to have had a vivid and comprehensive view which antiquarian researches can not give. How, then, did the Government treat these claims?

In 1802 a special committee of the House reported on them, through Mr. Giles. Although special committees are, generally, selected with a majority in favor of the proposed measure, this committee simply reported the facts, reviewing all the hostile laws of the United States and France, the treaties, negotiations, etc., and concluded without recommendation, as follows:

"Upon the whole view of the case, the committee submit it to the House to determine whether the Government of the United States be, in any respect, bound to indemnify the memorialists and whether there be any ground for discrimination between the cases of losses sustained before the acts of the 28th of May, 1798, the 7th of July, 1798, and the 9th of July, 1798, and the cases of losses sustained after those periods."

No action was taken during the session, and in 1803 (January 28), a motion to appoint a special committee to consider the subject was rejected by a vote of 31 against 39.

A few days later a resolution declaring that indemnity ought to be paid was lost by a vote of 39 to 45 (January 31).

Considerable debate took place, and on February 26 a motion to go into Committee of the Whole on the subject was lost by a vote of 21 to 48 nays, which ended the matter for several years.

Here was a proposition to appoint a committee simply to look into the subject deliberately voted down, and after debate a similar proposition to consider it in Committee of the Whole voted down by more than two-thirds majority, a vote accepted by the advocates of the measure during several years as rendering it useless to pursue the subject.

With many of the same men in Congress nothing was attempted until 1807, when a special committee of the House (and, of course, a friendly committee) made a report two-thirds of a page long (February 18, 1807) simply affirming the opinion of the committee in favor of the validity of the claims, and concluding:

"Your committee beg leave to decline giving an opinion on the precise time when those claims ought to commence or on the period for captures after which the memorialists would not have been entitled to a compensation from France, and, of course, can not be entitled to idemnity from the United States."

The committee thus intimated that there was such a time. This could only have referred to the same hostile acts of Congress mentioned in the Giles report. As to this report of 1807, the annals of Congress fail to mention it being made or anything in connection with it, and the matter again disappeared from Congressional discussions for years.

Nothing occurred until 1818, when a voice from the Senate is heard, the importance of which can not be overestimated. It was from a standing committee, seventeen years after the action of the Senate in striking out the second article. That report (of March 3) was emphatically against the claims. It gave the view of a committee of the body which was party to the alleged bartering away of the claims. They say:

"It was the duty of this Government to use its efforts for the reclamation of the property of its citizens thus alleged to have been unjustly taken from them by the cruisers of other nations. This duty appears to have been fulfilled. The article of the convention above referred to deferred the negotiation to an indefinite period on the points it embraced, during which time the former treaties, and conventions were to have no operation. This was, in effect, a renunciation of these claims, so far as negotiation was concerned.

The subsequent modification suggested by France produced no essential change in the instrument as ratified by the Senate, and even as it was at first negotiated."

Allusion was made to the fact that "this claim is made in part by underwriters, and even by insurance companies," whose claims are said to be "certainly weaker than the bona fide claimant of the vessels and merchandise." The report concludes with the following resolution:

"*Resolved*, That the relief asked by the memorialists and petitioners ought not to be granted."

On the 20th of March, 1818, this resolution was voted on and adopted.

Next follows in order of time a report in the House by the important Committee on Foreign Affairs (January 31, 1822), concluding with a similar resolution. Among other things the committee say:

"Your committee are of opinion that the assent of the American Government to such an article was the result of a thorough conviction only that the claims which it embraced on the Government of France were, owing to the character and conduct of that Government, entirely hopeless; and that an empty promise to negotiate further on them, when it might suit the convenience of that Government, was, in effect, an indefinite postponement even of negotiation, and, according to the construction universally given in such cases by the usage of nations, equivalent to a virtual renunciation of the claims."

Reference is made to the chance of recovery from France as the measure of just compensation, and this chance is regarded as infinitesimal.

This report appears never to have been acted upon.

Next comes a report in the House by the Committee on Foreign Relations in 1824 (March 25), concluding with this resolution:

"*Resolved*, That the petitions by the several persons who ask indemnity for spoliations committed by French cruisers on their property between the years 1793 and 1800 be rejected."

This report refers to Giles's or that of a select committee, and takes its statements of facts as a basis. "Governed by that report," it says, "the committee are not satisfied that the French Government ever admitted the justice of the claims of the petitioners or ever intended to pay them; that the Government of the United States used every effort, even to war itself, to rescue the property of American merchants from the lawless violence of France; that its efforts to procure payment for the spoliations committed by the French cruisers were not discontinued until it was obvious that there was no hope of success; and that their Government never received from France any equivalent from the claims of Americans upon France. The war of aggression was commenced by France, and every act of the United States was a just retaliation for previous injury. The treaties were annulled by an act of Congress in 1798, in consequence of the utter disregard of the stipulations of them by that power."

This report was never taken up, so far as can be found by the annals of Congress.

Nothing further was done, except to procure some documents from the State Department, until 1827. It is to be presumed that what took place after 1826 was no longer the action of contemporaries with the events of 1793–1801.

But it is suggested that in 1826 new light was thrown on the subject, and much emphasis is laid on this new light by the Committee on Foreign Affairs in 1828 (Mr. Everett reporting): "The Committee on Foreign Affairs are inclined to think that the strength of the claim against the United States was impaired by a want of information as to the extent and positiveness of this alleged renunciation. The journal and correspondence of our ministers who negotiated the convention, from which alone the nature and extent of the renunciations could be collected, were never made known until the close of the first session of the Nineteenth Congress, when, in obedience to a call of the Senate of the United States they were communicated *in extenso* to that body."

The Committee on Foreign Affairs was mistaken, however, for the Senate had this very journal and this correspondence, and more, read aloud *in extenso* previous to striking out the second article in 1801.

So much for the new light, so far as the Senate is concerned; and, so far as the House is concerned, it is not pretended that the new light did more than emphasize the facts always relied on as rendering the Government liable. The liability has been rested on the same argument and same facts from the very beginning. The claims against France, the second article, embracing the abrogated treaties and the indemnities, Napoleon's note, the action of the Senate, not one of these things, which are regarded as establishing the claims, was discovered in 1826. They were all as notorious in 1802 as they are in 1890.

Such then was the action of the Government during the life of the generation which was contemporary with the events out of which the claims arose. In the Senate, one single report, emphatically adverse, and one single vote, declaring that the claimants ought not to be paid. In the House, a long report in 1802 showing the action of France and this Government, without recommendation, and suggesting a war period during which no valid claims arose; followed in 1803 by a refusal to appoint a committee on the subject, and a refusal, by a vote of 48 to 21, to go into Committee of the Whole to consider the question. This was followed by nineteen years of inaction, if we except a report two-thirds of a page long in 1807, favorable, because by a special committee, but meeting with absolute silence and dying from utter neglect. Next come an adverse report in 1822 and another adverse report in 1824, which, being adverse, were sufficiently acted upon by being left on the table. Not a single break in the adverse action of either House if we disregard, as we ought, a few sentences by a special committee in 1807.

We come now to the period after 1826 and after the dying out of contemporaries from Congress.

In 1827, a favorable report, known as Holmes's, by a special committee of the Senate and laid on the table; in 1828, a favorable report (one of Everett's) about a page long by the House Committee on Foreign Affairs; same year, a favorable report (one of Chambers's) by a select committee of the Senate; in 1829 a similar report (another of Chambers's); same year, another of Everett's; in 1830, a report (Livingston's) by a select committee of the Senate; in December, 1830, a report of the same thing by Livingston. This was all, down to 1834; and, being analyzed, it amounts to two or three reports, by special committees, and one or two favorable reports by Mr. Everett representing the House Committee on Foreign Affairs. It is to be observed that Holmes's report, of 1827, simply reported a resolution directing the procurement of evidence concerning the claims and that Mr. Chambers's first reports discuss the amount of just compensation, saying:

"The committee are not prepared to adopt the rule which obtains in the pecuniary transactions of individuals, by which the voluntary agent or trustee who compromises the claim of another and receives less than the full amount is made responsible for the whole. The principle which lies at the foundation of this rule fails in its application to governments. There can be no apprehension of impure motive or of fraud or connivance in the conduct of a government over the claim of its citizens against foreign governments. * * * A majority of the committee, after much deliberation on this most difficult branch of the

subject, have concurred in adopting as the basis by which to arrive at a given sum the propositions suggested in the instructions to our envoys dated July 15, 1797, and which authorized them to stipulate for specific succors to an amount not exceeding $200,000 per annum, in place of a general guaranty. A difficulty, it is certain, yet remains: to ascertain the gross sum which will be an exact equivalent for an annual subsidy of that amount." Chambers's second report is accompanied by a bill fixing the compensation at $2,000,000. Everett's committee did not discuss the question. Livingston's recommended $5,000,000, to be distributed pro rata.

No action of any kind was taken on these reports.

Omitting the action of select committees, which are appointed from the friends of a proposed measure, and Giles's non-committal report, we have in all these proceedings Everett's three reports in 1828-'29 in favor of the claims and seven instances of adverse action, embracing a refusal by the House even to appoint a committee to consider the subject, a refusal by the House to go into Committee of the Whole to consider it, a rejection by the House of a resolution that indemnity should be paid, and an affirmative vote by the Senate that the claims ought not to be paid. Both Houses voted against the proposition that the claims were valid; and, before the generation of contemporaries and the vivid recollection of the events had passed away, the Government was thus on record as denying its liability to pay these claims. The judgment of contemporary statesmen was pronounced against them unequivocally.

In 1835 Webster introduced, advocated, and passed in the Senate, by a vote of 25 to 20, a bill to appropriate $5,000,000 to pay the claims. In the House, this bill was reported back by the Committee on Foreign Affairs with the recommendation, which the House adopted, that it be laid on the table, as the committee had not time to perform the enormous labor of investigating the voluminous records bearing on the subject. The committee reported two statements, neither of which it adopted as its own, one by Mr. Cambreleng against the bill and one by Mr. Everett in favor of it. Mr. Cambreleng's statement was long and very able, and not until the Administration of President Polk, about eleven years later, did the House pass a bill of this kind.

This report of the Foreign Affairs Committee is very remarkable and significant. It marks a turning point in the history of these claims. Contemporaries had passed away, the subject had become buried in voluminous records. The simplest events were no longer known, but must be unearthed by antiquarian researches. A whole national and international history (plain enough to those who were part of it) had to be exhumed. A jury of historians was necessary to decide intelligently upon the facts of the case.

Thus, in 1835, the Committee on Foreign Affairs confessed, as Congress did in 1885, that the subject was unmanageable.

In such a state of affairs things turned out as might have been foreseen. Certain prominent members of Congress continued their able advocacy and procured the appointment of special committees to make favorable reports; the "Cansten Agency" was established in Washington to work for the claimants; and the claimants themselves, in all the seaboard States, urged and petitioned; and the continual *ex parte* presentation of the case, in season and out, created a public opinion favorable to the claimants.

It is submitted that the action of Congress and committees during this later period should furnish but little of an argument for or against the claims. Congress did not understand them. If a committee could not find time to digest the voluminous records, still less could every member who was required to vote do so. The debates show that they certainly did not master those records, even such as ventured to argue the question.

It is insisted, therefore, that the positive judgment rendered against the claims by contemporaries should lose none of its authority by reason of what took place afterwards, and it is submitted that that judgment ought to have sufficed to all aftercomers and ought to end the matter now.

Mr. COGSWELL. Here it is.

Mr. PAYSON. The gentleman need not interfere. There is no necessity for this. I hold in my hand the official document and will print it in the RECORD in connection with my remarks. I think I was saying, Mr. Chairman, when interrupted, that in 1835——

Mr. COGSWELL. Eighteen hundred and seven.

Mr. PAYSON. I hope the gentleman will not interrupt me as to dates. I think I know what I am saying.

Mr. COGSWELL. Well, you give me no time and you decline to yield——

Mr. PAYSON. If the gentleman will contain himself and permit me to finish my statement, he will not find it necessary to interrupt me nor will he dispute what I am about to say. I say, Mr. Chairman, that the first bill that ever passed either House of Congress in favor of any of these claims was in 1835, and I pause now for a contradiction of that statement.

Mr. COGSWELL. That is not the statement you made. You said there had been no favorable report upon them before the time of Webster. Here is a report in 1807, twenty years before Webster came to Congress, and it is one of the most favorable reports ever made to Congress upon the subject.

Mr. PAYSON. Mr. Chairman, does this come out of my time when I am protesting against it?

Mr. COGSWELL. You asked me for it.

Mr. PAYSON. I did not.

Mr. COGSWELL. You said you paused for a reply.

Mr. PAYSON. I did; to my reference to the first passage of a bill.

Mr. Chairman, I was proceeding to say that in 1835 the first bill passed that ever passed Congress with reference to these claims, and the gentleman from Massachusetts [Mr. COGSWELL] interrupted me and said "1807." I was saying that that was the first official public recognition of these claims by the passage of a bill in either House of Congress. All through these discussions, during all these years that have passed down to this very time, the argument of the advocates of these spoliation claims is based upon the fundamental proposition that this country and France were in a state of peace, that there were depredations committed by French vessels upon American vessels for which American citizens would have the right to claim indemnity and the protection of the arm of this Government to enforce their just demands as against France. That has been the argument all the way through.

Mr. Chairman, briefly stated, these cases arose out of the seizure of certain vessels belonging to American citizens and their condemnation under French decrees in the closing years of the last century.

It is claimed by these claimants that in making the treaty with France in 1800 a contract or bargain was made by our Government with France by which our Government traded off valid claims of our citizens (these claims) to get rid of our obligations to France under a treaty with France made in 1778, and thereby this Government is liable to these claimants as descendants and assignees for the amount of these claims.

All this I deny.

I assert that when the treaty of 1800 was negotiated we had no valid claims against France for these spoliations.

We were under no obligations to France under the treaty of 1778, and both nations so regarded it.

The war of 1798 and 1799 put a final quietus on all relations between the two nations under prior treaties—if there was a war, and this I shall demonstrate.

There was a war; there was an express recognition by both countries of the abrogation of the treaty of 1778. Congress expressly declared it so.

I quote on this point the report, to which I have referred, of the last Congress:

THE OLD TREATIES WERE BROKEN BY FRANCE AND ABROGATED BY THE UNITED STATES.

1. By the French decree in 1793 and the seizures under it and by the Bordeaux embargo, American property was taken by force and appropriated to public use, in most cases upon promises of payment, unfulfilled until 1803-'04. In some cases no payment has ever been made. These seizures were in the nature of forced loans, produced great hardships, and were in plain violation of the treaties of 1778.

2. By the French decree of 1796, by which the commercial treaty of 1778 was openly defied and the main advantages to America therefrom destroyed; under which decree pillage and confiscation of our merchant ships and their cargoes were authorized and carried out upon a large scale upon the European coasts, on the ocean, and in the West Indies.

3. By other French decrees, which, openly abandoning amity and commercial right as defined and guarantied by the treaties of 1778, made war upon our commerce, letting loose thereon the public war ships and innumerable privateers of France, whose seizures were followed by prize condemnations in French tribunals upon land, and appropriations of property to glut the rapacity of the captors and of the French Government.

Now, independent of the question of public war in 1798 and 1799 and its effect upon the old treaties, we have in this record abundant evidence that those treaties were over and over again broken by France in their material provisions, with most disastrous consequences to the commerce and interests of the United States. Practically and in fact France set the treaties aside, refusing to be bound thereby, and substituted for them her own lawless will. By the plainest rules of justice they could not thereafter be held to operate in her favor or to have any continued existence, except by the acquiescence and consent of the United States. And public law in this case follows the rule of justice and gives to it an effectual sanction. As contracts, the treaties, being broken in their material provisions by France, no longer bound the United States in 1798; it was not at all necessary for the United States to resort to war to rid herself of their obligations; she was already freed and discharged therefrom by the action of France.

It was under these circumstances that our Congress passed the declaratory act of July 7, 1798, which was as follows:

"An act to declare the treaties heretofore concluded with France no longer obligatory on the United States.

"Whereas the treaties concluded between the United States and France have been repeatedly violated on the part the French Government, and the just claims of the United States for reparation of the injuries so committed have been refused, and their attempts to negotiate an amicable adjustment of all complaints between the two nations have been repelled with indignity; and

Whereas, under authority of the French Government, there is yet pursued against the United States a system of predatory violence, infracting the said treaties and hostile to the rights of a free and independent nation:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the United States are of right freed and exonerated from the stipulations of the treaties and of the consular convention heretofore concluded between the United States and France, and that the same shall not hereafter be regarded as legally obligatory upon the Government or citizens of the United States."

That act was good law when it was passed, and it still remains among our statutes to define and fix conclusively and forever the position of our Government toward those ancient treaties with France. In brief, those treaties had been shamefully broken and set aside by France, and they were formally abrogated by us on the 7th July, 1798. Thenceforth they had no obligation, validity, standing, or force as treaty contracts between France and the United States.

It is thus established that by the separate but concurring action of both Governments, as well as by actual war waged between them, the old treaties had no legal existence in the year 1800. They were defunct, and could be revived only by a new agreement between the parties. But the negotiation of any new agreement which should revive them was expressly forbidden to our envoys by their instructions from the Department of State (October 22, 1799), and the prohibition was classed among the ultimata of the negotiation. The prohibition was in the following language:

"That the treaties and consular convention, declared to be no longer obligatory by act of Congress, be not in whole or in part revived by the new treaty; but that all the engagements to which the United States are to become parties be specified in the new treaty."

The old treaties, the revival of which was thus forbidden, had been already spoken of by the Secretary of State in a prior part of the same letter of instructions, where, after referring to certain articles of the commercial treaty of 1778, he added:

"The dissolution of that and our other treaties with France leaves us at liberty with respect to future arrangements."

So we were not under any obligation to France because of the treaty of 1778, as that was abrogated.

If, then, we were at war, these claims had no legal foundation, because the law is clear: that when nations are at war the losses sus-

tained by citizens of either country because of it are without any redress whatever, unless they are expressly provided for in the treaty of peace; no legal right whatever for such losses survives the war.

It is agreed that the treaty of peace of 1800 did not provide for these claims, and so if there was a war that ends the legal claim.

I read from the documents I have in my hand and to which I have referred:

Tuesday, September 9, 1890.

[Statement of Mr. Charles W. Russell, of the Department of Justice.]

The CHAIRMAN. I will ask you to give the subcommittee in charge of the general deficiency bill such information and suggestions as occur to you in regard to the French spoliation claims, making clear to us the position of those advocating the validity and propriety of these claims and the propriety of allowing them, and also what views are urged against them.

Mr. RUSSELL. The contention on the other side is in the main that which was made for them by Daniel Webster in 1835, in a speech in the Senate, and an analysis of the opinions of the courts would show a very close adherence by the courts to the line of argument proceeded upon by him. They say that the citizens of the United States have valid claims against France for the seizures of vessels and cargoes prior to the year 1800; that in the making of the treaty of 1800, or ratifying the same, to be more particular, a bargain was made by which this Government traded off these valid claims of its citizens and got rid of obligations to France under the treaty of 1778 between the two countries, and thereby this Government became liable to the claimants as having taken private property for a public use. That was the gist of the argument.

Now, on behalf of the Government it was denied that the claims were valid against France by reason that the acts out of which they are said to have arisen were hostile; that, in the second place, they were so recognized by our Government under certain acts of Congress in the year 1798, and issue was joined of hostilities between the two countries in 1798. Our vessels, navy as well as private, were sent out with instructions to seize any armed French vessels anywhere on the high seas and bring them in and have them condemned as prizes of war.

The CHAIRMAN. At that point, did our merchant vessels have written authority to that effect?

Mr. RUSSELL. They had written formal authority signed by the President of the United States, or rather commissions.

Mr. COTTON, Assistant Attorney-General. Do you mean that all merchant vessels had that commission or certain commissions were issued to certain vessels?

Mr. RUSSELL. I meant that certain commissions were issued to certain vessels.

Mr. COTTON. So it did not apply that all of our merchant marine that went out had these letters of marque?

The CHAIRMAN. Letters of marque or letters of reprisal, do you term them?

Mr. RUSSELL. Well, they were called commissions; they were letters of marque.

The CHAIRMAN. I understand you to say nearly all of these took these commissions.

Mr. RUSSELL. Nearly all of them took these commissions. The acts of Congress expressly state that they were to have the same powers exactly as the naval vessels. During the resulting conflicts some conspicuous fights took place, as that between the Vengeance and the Constellation, the latter commanded by Truxtun, and between the Beauseau, a French vessel, and another one of ours, and three or four conspicuous naval battles took place which created a good deal of excitement at the time and made the reputation of naval officers of the United States. The number of French armed vessels captured was somewhere over a hundred. They were captured by naval vessels, but it is stated in the report by Mr. Giles on this subject in 1802, very soon after the time of this, that both our private and other vessels had captured French vessels, but the facts became dim by the lapse of time.

The CHAIRMAN. Who was Mr. Giles?

Mr. RUSSELL. He was a member of Congress from Virginia.

The CHAIRMAN. That was the Congressional report?

Mr. RUSSELL. Yes, sir.

Mr. COTTON. Now, to get back of that, let me see if I can not assist the committee by getting at the real meat of the matter. At the close of our Revolution or during the Revolutionary period, our Government entered into a treaty offensive and defensive with France?

Mr. RUSSELL. Yes, sir.

Mr. COTTON. Do you know about the date of that treaty?

Mr. RUSSELL. The date of it is the 6th of February, 1778.

Mr. COTTON. What special privileges, if any, where granted to France by the United States at that time?

Mr. RUSSELL. The obligations assumed by the United States, which remained some time after, were the exclusive right of harbor in American ports in time of war for the French privateers; and, secondly, we guarantied to France forever her American colonies, her possessions in America, many of which were the West India Islands.

Mr. COTTON. How long did that treaty exist before there was a claim by France of any infraction of the treaty?

Mr. RUSSELL. It existed down to 1796, when France claimed both through our minister in Paris and through the Secretary of State to the minister in Washington that the Jay treaty with England infracted that treaty by turning over exclusive port privileges in almost the same language to Great Britain and by recognizing certain acts of Great Britain, which referred to the capture of cargoes as legal.

Mr. COTTON. So that the first irritating cause really was the making of this treaty with Great Britain, the Jay treaty?

Mr. RUSSELL. There was some irritation prior to that, but practically, aside from Americans who complained of certain decrees of France which were in the nature of pre-emption decrees under which cargoes of all neutrals were seized and the amount due for them was appropriated by French ports, and as to our American cargoes, paid for either by Agent Skipwith in 1796 or afterwards by the treaty of 1803, being recognized as a species of debt.

Mr. COTTON. What was the state of feeling historically in the United States growing out of the Jay treaty, as it is called, in connection with this general subject?

Mr. RUSSELL. The feeling in the United States was divided between the political parties. What were at that time called the French party considered this a grievous outrage upon France and insisted that France was perfectly justifiable in what she did in retaliation for it. The other party insisted, and very ably argued, that we had done nothing whatever to France by making this Jay treaty with England, and in the main this party was right. For in the first place there was an article in the Jay treaty which provided that the rights of France, either by name or general, should not be interfered with by this new stipulation.

Mr. COTTON. By that you mean the Jay treaty?

Mr. RUSSELL. Yes, sir.

The CHAIRMAN. Now, I would like for you to go on without any interruption and then we will put questions to you later.

Mr. RUSSELL. There was at the time and afterwards, and you find it traced in the opinions of the court, the idea that we had failed to guaranty these French possessions in America as required in the treaty of 1778, but the truth of history is that France never made a demand for that guaranty to be fulfilled. Her reason for so doing was that, as we represented to her, it was better for her to have us in a neutral position in order that our vessels might carry provisions to her ports, of which she was in sore need, than to have neutral vessels which could not be captured by England, as they would be had we taken part in the conflict.

So that in no serious manner did we ever violate the treaty of 1778, or rather we did not violate it at all, because the matters complained of, namely, our allowing Great Britain to condemn our cargoes in certain instances, were in accordance with British rights before. Under the law of nations a belligerent has the right to condemn the cargo of another belligerent, and that is all we allowed Great Britain to do under the Jay treaty. Under our French treaty we had provided that free ships should make free goods, but this gave no right to Great Britain.

Now you ask me about the reasons we have for saying that the claims were invalid because there was a state of war between the two countries.

Mr. COTTON. Between what two countries?

Mr. RUSSELL. Between the two countries, France and the United States. The principle that this would invalidate the claims is admitted, but the fact that there was a war is denied.

Mr. COTTON. By whom?

Mr. RUSSELL. By the claimants, the French spoliation claimants.

Mr. CANNON. Would you allow me right there at that point; there is no question but what France committed acts of war?

Mr. RUSSELL. No, sir.

Mr. CANNON. Did any vessel bearing letters from the United States or commissions from the United States seize any French ships during the war?

Mr. RUSSELL. Yes, sir; our naval vessels seized something over one hundred French vessels, and they were brought in and condemned as prizes, which in itself is a state of war.

Mr. CANNON. Have you in your lot of briefs a statement of these vessels and the adjudications, etc., the number of them?

The CHAIRMAN. Do any of your briefs show these facts?

Mr. RUSSELL. Yes, sir; nearly all the briefs show that fact, and the opinion of the court practically admits that many of these vessels were——

Mr. CANNON. How do they get over this, jump it?

Mr. RUSSELL. That is something I would not undertake to say. They say that this is not a war at all. In one opinion it is stated that it is a state of peace looking very much like a war, but not amounting to a war.

Mr. CANNON. Why, because war was not formally declared and prosecuted?

Mr. RUSSELL. Yes, sir; because war was not formally prosecuted.

Mr. CLEMENTS. And there was no engagement of naval and military forces?

The CHAIRMAN. Yes, there were four great naval fights.

Mr. RUSSELL. There were naval battles, but there were no land battles, for the reason that France had no way or capacity to send them over here then.

One reason the court thought it did not amount to a war was that the right of capture looked to the capture of French armed vessels, but the fact was that Great Britain had driven from the seas all French vessels that were not armed, so that even that made no difference that the combat was between belligerents on both sides instead of between a belligerent and a non-combatant; but there were no French unarmed vessels on the high seas. They were the only ones preying upon our commerce. They were French combatants and our vessels were armed to go out and meet them, and did do so.

Now we say there was a war, but that, whether there was a war or not, there was on the side of France for the avowed reason we had infracted the treaties and had done such wrong in retaliation. This hostile course of France is put upon the express grounds that the American Government had done her a wrong, and she proposed by force to redress herself, and that necessitated, if the matter had gone no further, such retaliation as is lawful for a sovereign power as war, and that those acts of retaliation would not have been unlawful. We say that instead of acquiescing under this retaliation and complying more completely with the wishes of France, we joined issue in this. We abridged our treaties with France, deprived her of her rights under them, and we made this law of which I have already spoken.

So that, whether it was war absolutely and technically or simply a joining of issue by force, the matter from that time was fairly *res adjudicata*. They decided each party should right itself by force, and not by diplomacy, which had been adopted and had failed. But we are not without authority on this question of war. Some of the vessels of which I have spoken as being captured from the French, and I believe they happen to be vessels not of France in one case, but vessels captured by her from other nations in the hands of prize crews. Some of these cases were taken to the Supreme Court of the United States, and in the year 1800, in the case of Bass against Tinsey, 4 Dallas Reports, page 37, each of the four judges of the court, the Chief-Justice being sent as one of the envoys to France——

The CHAIRMAN. Was that Marshall?

Mr RUSSELL. That was Ellsworth. Each of the four judges delivered a separate opinion upon it, in which he stated his view of the question, what was the status of France and America in regard to each other at the time the vessels were captured, and they stated these various contests between the two countries, and the argument and acts of Congress authorizing these hostile acts, and the acts of France, and they stated that this amounted to war; that France was our enemy and that the acts of Congress referring to vessels taken from the "enemy" used that word as meaning France; that it was a limited war, a maritime war, but that it was a public war because it was waged by the orders of two sovereign powers, and was a contention of force between the two nations.

Then, in the year 1801, another of these cases came up where a Hamburg vessel, belonging to a neutral country, had been captured by an American vessel, which captured her outside of the orders of American vessels, these orders being directed against French armed vessels, this vessel being a vessel of Hamburg in possession of a French prize crew, and not at all intending to attack American vessels. This case was taken to the Supreme Court and Chief-Justice Marshall delivered the opinion.

The CHAIRMAN. What is that?

Mr. RUSSELL. First Cranch, page 1. He likewise reviewed the conduct of France and the United States and decided that this was war, and that, although this particular act was not authorized by the laws of Congress explicitly, yet the status of the two nations was such that it authorized the act to be done. He stated that they were in a state of war with regard to each other, and this act was such as a belligerent would very well do with regard to another vessel.

Going a little further, he says incidentally that within the range of the war it was like any other war and had the same kind of effect upon the rights of property as any other war. Of course he was deciding the particular case before him. In the third opinion of the Court of Claims reported to Congress on December 7, 1857, the report was in effect that after all there was a war.

The CHAIRMAN. What page is that found on?

Mr. RUSSELL. Page 48 of the report. And they say this in connection with the argument that this was at least retaliation by France, and that we had joined issue on it as a question of force, and that the matter was *res adjudicata*. The courts say that acts of retaliation are admitted to be justifiable under certain circumstances, and they go on to say that France did not make that point, however, in the negotiations, and that what the thing was after all was a partial, limited war, as the Supreme Court had said. They say elsewhere, in this same third opinion again, that it was war such as the Supreme Court had said it was, a partial, public, limited war.

The CHAIRMAN. Why do you speak of this as the third opinion?

Mr. RUSSELL. Well, there was a reargument where there was a reiteration of what had been said, and this opinion came in on the contention that this was at least retaliation, and that meant retaliation by force. That put an end to the matter as a matter of law. We seem to find in the court opinion, as matter rather of inference than of statement, that if this was not a general war it would have no such effect as a war.

Mr. COTTON. Does not the court use this language in designating this class of war, "a perfect state of war?"

Mr. RUSSELL. Yes, sir; they do.

Mr. COTTON. The court hold that whatever this may have been, it was not what was known among nations "as a perfect state of war" between two countries.

Mr. RUSSELL. That is true; yes, sir.

Mr. COTTON. Is not that the exact turning-point of the court's opinion?

Mr. RUSSELL. Well, sir, I do not think it would be fair to the court to say they have had no better argument than that.

Mr. COTTON. Will you give me John Davis's second opinion?

Mr. RUSSELL. The court does say, however, in the last opinion which is referred to [handing document; that is, Cushing's], that whatever was in the scope of this war, such as it was, was subject to the fate of war or some such thing, but they practically draw from the scope of it the very hostilities by France, which on our side constituted it, namely, these captures, and also these very armed vessels, bearing commissions from the American Government, that went out on the high seas authorized to capture French vessels; in other words, the very things which were the war they leave out of the scope of it; but if there is any authority for saying that a public war between two countries has a less effect in extinguishing rights than a general war or a perfect war, or that a limited war is any less lawful, any less an act of sovereign redressing itself, any less presumed to be just under the law of nations than a general or solemn war, where the only difference is that the whole nation is theoretically, not practically, called into the service of the Government instead of part of it being sent out by land or sea, I am not aware of any such authority. Nothing of the kind is intimated in the opinions of the Supreme Court of the United States referred to, but rather the reverse. They held it was in all respects a war in the usual sense, with the usual incidents of war. While on that line I may express the opinion that the Chief-Justice, who was absent, but absent in a place which enabled him to know more perhaps of the matter than the judges who remained, he being at the head of the envoys then in France——

The CHAIRMAN. Which Chief-Justice?

Mr. RUSSELL. Ellsworth. He and the other envoys reported to the Government, at the conclusion of the negotiations, among other things, that in their opinion the state of affairs between the two countries was a war limited in its extent, but not in its nature. I may add that the Attorney-General in August, in 1798, stated that a state of war existed; that the supreme court of France, so far as prize-matters were concerned, stated afterwards that this was as stated; at all events that the treaty was a treaty of peace which had terminated in hostilities; and that the French negotiators insisted it was war, and said that any impartial tribunal would pronounce it a state of war, at least on the part of America; so that the argument that there was not a war in the face of all these acts of Congress and decisions of the court and these notorious combats on the ocean seems to weaken that position and to admit an argument can be made where none could be.

I quote further from the excellent speech of the gentleman from Pennsylvania [Mr. BUCKALEW] in the last Congress:

That is one proposition. My other proposition is that France made war upon our commerce—limited war—and we responded by a war which was mainly defensive, but still aggressive for the purpose of defense, and that claims for losses on either side were not recoverable, were not legal demands. We claimed that France had been unjust, and therefore we tried to recover those war claims on our side by negotiation, but failed therein, and the claims fell because not provided for in the treaty of peace.

In one of the treaties of 1778 (the treaty of alliance) there was a mutual guaranty by France and the United States of their respective possessions in America. There was another provision, mutual also in its terms, in the commercial treaty of 1778, which provided that when either nation should be engaged in war they should have hospitality for their vessels and privateers in the ports of the other, enabling them to take in prizes of war and take them out again free from port charges. These were two provisions of the treaties which gentlemen have been talking about, and which are claimed to have been valuable to France.

The commercial treaty of 1778, in the twenty-third and twenty-fourth articles provided, as it turned out, for the interests of the United States. By those articles free ships made free goods. We could carry British goods in our vessels and they would be safe from French capture. When France and England went to war the advantage was on the side of England as far as this particular treaty was concerned, and France complained. Dr. Franklin had secured the adoption of a great principle, a beneficent one in its application to maritime war. Another feature of the treaty was to limit articles contraband of war to those that were properly so; in other words, to military stores and implements; and the treaty also provided that provisions and all articles of a similar character, of which our country produced abundantly, should not be regarded as contraband.

These were the provisions of the treaty of a continuing character, which were immensely valuable to us, so that when the war between France and England broke out early in 1793, we, as a neutral power, had the ports of both England and France freely open to our commerce. War prices sprang up all over Europe, and we reaped a rich harvest; great armies were raised; agricultural sections were stripped of laborers, and we, as a neutral nation, could take advantage of the situation and make great profits. In fact, notwithstanding these depredations, our commerce was quite profitable from 1793 to 1800.

These provisions of the treaty, which, as I have said, were of vital importance to us, France openly set aside by the decree of the 9th of May, 1793. Why, she acknowledged it; she said so, that she had set them aside. She declared that she could not keep her vows to the neutral powers, for England was pressing her too closely; and by that decree of her National Assembly it was provided that her vessels of war and cruisers should seize as prize of war enemy's property upon neutral vessels. So that in defiance of the treaty of 1778 we could not carry British goods or the goods of any other nation engaged in war with France.

What further? She provided that our vessels on the ocean, loaded with American provisions, might be seized by force, gutted of their cargoes, the provisions brought into French ports and applied to French use upon a promise that they should be paid for. When? Not when the act was committed. They were not paid for up to 1800, except in a few cases, nor until 1803, eight or ten years after they were seized. Was not that breaking the treaties? Could the treaties be broken more clearly, more absolutely, more outrageously? The merchant of Boston who sent his ship-load of goods to Liverpool to be sold there, the proceeds to be invested in British goods for the return voyage, could make double profit by his venture, and the vessel could earn double freight. But such voyages were broken up by this decree of the French Assembly. Our profitable commerce was heavily injured. What did the decree do? Why, the French ships seized our vessels on the ocean, in the British Channel, anywhere, taking them to French harbors, then despoiled them, turned them loose upon the broad Atlantic to creep their way back home. No money to buy a return cargo, stripped of everything of value; and yet gentlemen tell us that France maintained her treaties with us and had continuing rights under them! Nothing can be more unfounded or extravagant than to say that the treaties bound us after this open, defiant annulment of them by France. They were dead as far as she was concerned, and she could claim nothing under them. We had a right to treat them as rescinded from the date of that decree.

We bore and forebore until 1796, when she passed another insolent decree, that our vessels should be treated as we permitted Great Britain to treat them. Until 1795 we had no commercial treaty with Great Britain, and our relations with her were under the law of nations, and she could seize as contraband of war things that France could not under the treaties of 1778. Of course the treaties of 1778 were disadvantageous to France in her great struggle with England, while they were of very great advantage to us. She was better off under the law of nations than she was under her bond to us, and she said so, and set the treaties aside, for it was her interest to do so. But in July, 1796, she declared that she would treat our ships as England was permitted to treat them. Why, the poor skipper upon the ocean, if England took his vessel for breaking an imaginary blockade of continental ports, could not resist the outrage.

That was the insolent decree of France, which again broke her treaties with us. Of course they were broken before, but this was an additional breach.

Then, 2d March, 1797, she made another decree, of which I have a memorandum here. It was a decree of the French Directory, which provided in the first place that enemies' property should be seized on neutral ships without limit. Second, it extended contraband of war to extraordinary limits. And, lastly, it required ship-rolls under an old, ancient French regulation, the absence of which on our ships was made cause for seizure and condemnation. That was the decree of 1797.

No wonder that General Dix, in his argument of 1846, declared that that decree abrogated the commercial treaty of 1778; in other words, swept it out of existence.

Next we come to the important French decree of 18th January, 1798, which the President of the United States, in his annual message to Congress of December in the same year, described as an unequivocal act of war upon American commerce by the Republic of France. What was that decree? It has been quoted already, but I must refer to it because it is of great importance.

Here is the decree:

"ARTICLE 1. The character of vessels relative to their quality of neuter or enemy shall be determined by their cargo. In consequence every vessel found at sea loaded in whole or in part with merchandise the production of England or of her possessions shall be declared good prize whoever the owner of the goods or merchandise may be.

"ART. 2. Every foreign vessel which in the course of her voyage shall have entered into an English port shall not be admitted into a port of the French Republic, except in case of necessity, in which case she shall be bound to depart from the said port as soon as the causes of her entry shall have ceased."

So that if an American vessel had any commodity on board a production of Great Britain or of any of her colonies in North America, in the West Indies, or in Asia, the ship and everything it contained was forfeited to France, to be condemned in her prize courts. It left no commerce of ours upon the ocean secure from her grasp. Taken in connection with her prior decrees, it absolutely outlawed American trade. Now, I assert with confidence that these decrees which I have cited entirely set aside, so far as France was concerned, the treaties of 1778. She broke them because it was her interest to break them, but thereby she forfeited all rights under them and released us completely from all their obligations.

Now, what was done by us in regard to the treaties? Why, on the 7th of July, 1798, the Congress of the United States, the law-making power representing our sovereignty, passed a statute which binds us and all the people of this country in honor and conscience. They passed a law declaring that those treaties with France were null and void; that they did not bind the Government or the people of the United States and should not bind them in future. Congress did not formally abrogate the treaties; they treated them as already abrogated by France, and Chief-Justice Ellsworth declared that the act did not change the situation between France and us, because it simply declared what that situation was at the time. The treaties were all dead; dead by reason of outrageous violation of them by France, and we declared in our sovereign capacity as a nation that they were dead and should remain so.

Now, what becomes of this argument, heard for over seventy-five years, that we gave up to France these claims of our citizens for the consideration that she would kindly release us from the old treaties of 1778? What becomes of that miserable pretense of an argument which has been heard so long in Congress and outside of Congress in support of these claims? It is plain that in 1800 France had no treaties with us that were valuable to her or onerous upon us. The whole question of treaties as subsisting or abrogated had been closed two years before. We were, in our relations with her, under the general law of nations.

In the next place, it is equally clear that France, by the several decrees I have referred to, made war upon our commerce, and in particular by the decree of 1798 placed herself in the attitude of an avowed and open enemy.

And she followed up her decrees by practical action. She sent her war ships upon the ocean to seize our vessels. She gave commissions to privateers, and they also spoiled our commerce on all parts of the sea; and this condition of things continued until, as Judge Marshall says, hostilities were terminated by the treaty of 1800. Some persons have doubted whether that convention treaty of 1800 was a treaty of peace. But Judge Marshall decided (in Talbot *vs.* Seaman, 1 Cranch, 1) that we were at war with France, and that the state of war continued until the treaty of 1800 was made. That treaty was, therefore, a treaty of peace. He decided not merely that there was a state of war between the two countries, but held that we had the right to recapture a vessel taken by France from Holland and restore her to Holland, and that the captors had the right to claim salvage; and he held this although the acts of Congress against France did not provide for such a case at all. And why could we do that? Because, said the great judge, France was our enemy and we were hers; because the relation of public war between us justified us in going even beyond the acts of Congress in smiting her.

I might go on to multiply proofs. The Attorney-General of the United States, in an opinion which was read yesterday, said that public war existed on the part of France against us and on our part against France. You have the declaration of the President of the United States in his official message of December, 1798, that France opened war upon us by her decree of 18th January in the same year. You have in the treaty correspondence of 1800 the plea of the French negotiators that the actual condition was one of war; that they had previously made an undue concession in admitting that there was only a misunderstanding between the two countries. They plead war. Then, sir, you have the decision of our Supreme Court in 1800, in Bas *vs.* Tingy (4 Dallas, 37). While our negotiators were in France that case was heard at the August term of the court, and it was held that there had been war between France and the United States from the spring of 1798 onward. Four judges concurred in that opinion, the Chief-Justice being in Europe as one of our envoys.

When the treaty of 1800 came before the Senate in February, 1801, unfortunately that body sat in secret session, so that we can not tell by any record what their views were. It seems that they struck out the second article of the treaty, with but one negative vote, and that all the Senators along the Atlantic

seaboard voted to strike it out. Why did the Senate so vote? The argument of the claimants has been that the Senate did that in order to get rid of the old French treaties; but that is quite impossible. No such motive could have actuated them. Why, then, did the Senate strike out that second article? For two or three good and sufficient reasons, which we may infer from the facts known to us, in the absence of any record of the Senate debate. In the first place they struck out the article because the Supreme Court had just decided, virtually, that these claims were war claims against France, as the French negotiators had contended they were. Therefore, to have any future negotiation about them was idle, because France, standing upon the decision of our own great court, could readily defeat us in any future contention we might make.

This, sir, I submit, is conclusive that there was a state of war between the two countries, and, the losses of our citizens being casualties to be borne by them under the law, because not provided for in the treaty of peace in 1800, there is no legal claim here; and I trust the Senate amendment will be voted down.

The Work of the Republican Party in the Fifty-first Congress.

SPEECH

OF

HON. ELIJAH A. MORSE,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 27, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. MORSE said:

Mr. SPEAKER: The makers of the Constitution of the United States, perhaps as august, honorable, and patriotic a body of men as ever convened, the same men who gave birth for the first time to that great principle with which the nations of the earth for centuries had been pregnant, that all men were endowed with certain inalienable rights, among them being life, liberty, and the pursuit of happiness, and in defense of which they pledged their lives, their liberty, and their sacred honor, and to maintain which they fought the war of the Revolution—I say these men ordained in the Constitution of the United States that the lower House of Congress, the members of the House of Representatives, should be elected every two years. In their wisdom they had ordained that this was wisest and best that the people might be in close touch with their Representative, that if his acts were unsatisfactory they might remove him and elect a more faithful servant. It is meet and proper that the people should demand of their Representative that he should give an account of his stewardship.

Having such a purpose in view, I propose here and now to consider some of the matters which have been acted upon by the Fifty-first Congress during the ten months it has been in session, and I hope to be able to demonstrate that a majority of the Congress, animated by a patriotic desire to serve the people of the country, though hindered and embarrassed at every point by Democratic obstruction even to the point of the Democrats leaving the House in a body, yet in spite of this factious opposition I think it is not extravagant to say that this Republican Congress has enacted into law more wise, beneficent, and salutary legislation than has been enacted by any Congress in the same time since the foundation of the Government.

The first contest came upon the question of amending the rules, and in this contest the Republicans won a victory the magnitude and importance of which to the perpetuation of a republican form of government can not be overestimated.

THE TARIFF.

Another and perhaps the most important piece of legislation enacted by this Fifty-first Congress was the tariff bill, and, of course, any bill that we could hope to pass must, in the nature of the case, be to some extent a compromise.

I state freely and frankly that New England, in order to get protection to her manufacturing industries, was obliged to make some concessions to the South and West; but the manufacturing interests and the workmen of Massachusetts received substantially that protection which was promised them in the platform at the Chicago convention, from the competition of the pauper labor of Europe, excepting the duty on binder-twine, which the Republican House fixed satisfactorily, but was reduced by the Democrats of the Senate aided by Republican Senators from the Northwest. And this is a violation of the Chicago platform which promised protection to American industries, and it was a yielding to a senseless cry against a "trust" that never existed, and is the one blot on the McKinley tariff bill and which I confidently expect to see corrected at the next session.

The placing of hides on the free-list was a concession of the farmers of the West to New England and of great consequence to the boot and shoe industry of Massachusetts, and especially to the Second district, which contains the largest market of its kind in this country. The West demanded protection for its hides; but, it being satisfactorily shown, as in the case of sugar, that our production of hides was only a fraction of our consumption and that we produced no sole-leather hide whatever, this important concession was made to the manufacturers of the East.

The reduction in the duty on sugar is a great and lasting blessing to the people of New England. The present duty amounts to a per capita tax of $1.25 for every man, woman, and child in New England.

Another item of importance to the city of Quincy, in the Second district, was the doubling of the duty on finished granite. It was shown to the satisfaction of the House and Senate that the American workmen and manufacturers in this great industry were brought into immediate competition with the underpaid and poorly paid stone-workers of Europe, from the fact that finished granite for building purposes and monuments was brought to this country at nominal freight and laid down at the seaport cities of the country at a lower price than our manufacturers paying larger wages could do.

This increased duty, I am told, has already led to an advance in the wages of the stone-workers in the Second district of 10 per cent.

The duty on coal and iron was continued substantially as at present, and this seems to fill our Democratic brethren with anger, and they cry out against the duty on "raw material."

Now let us examine this croak about "free raw material" to see what it means. The first important inquiry is, what constitues raw material? I submit that what is considered raw material in one section of the country is not so considered in other sections.

In New England wool is considered raw material. In Ohio and other States where the sheep are raised and the wool is sheared it represents the finished product of the farmer and the laborer. In New England our Democratic brethren are wont to style coal and iron as raw material.

In Pennsylvania and other States, where men take their lives in their hands and delve in the bowels of the earth for these metals, load them on cars and ship them to different sections of the country, they represent the manufactured goods of the miner and manufacturer. So then we come to this principle:

The moment a blow is struck on the metal in Mother Earth by American labor it ceases to be raw material, and the question of competition of foreign labor is involved.

Now, the Democrats tell us that if we had free coal and free iron the larger iron industries of New England (car-axles, car-wheels, merchant and bar iron, and heavy forgings) could be successfully carried on as formerly; but how can I, as your representative, demand of the wool-grower of Ohio and the miner of Pennsylvania protection for the finished manufactures if we refuse protection to their product?

In short, the protection principle of the whole country must stand or fall together. You can not ride two horses, one called free trade and the other protection, going in opposite directions at the same time.

Tacks and rivets are some smaller iron products in which the principal item is labor, which is at present largely and profitably carried on in this district. The McKinley tariff bill increases the duty on jewelry from 25 to 40 per cent. and cannot fail to be a great benefit to the jewelry manufacturers and workmen, but how can I demand protection for the manufacturers of Attleborough and North Attleborough, the industry of those two towns, from foreign competition, or for the stone-workers of Quincy, or for the great boot and shoe industry of Brockton and other large boot and shoe industries in the Second district? How can I demand protection for the great cordage works of Plymouth, if I demand free trade in the products and goods of other sections?

But suppose we have free coal and free iron in New England. While under protection the smaller iron products of Taunton, Plymouth, and other towns may be and are successfully carried on, I repeat that the fiat of the Almighty bars New England from engaging in the heavier industries, on account of an increased freight, over States like Pennsylvania and Alabama, where God Almighty put natural gas, coal, iron, and lime in close proximity, and free Canadian coal would not help us.

As well might the people of Pennsylvania and Ohio complain that Taunton herring or codfish did not swim in the Susquehanna or Ohio.

The preponderance of the testimony is that Canadian coal and iron are both of such poor quality that they could not compete in New England successfully with Pennsylvania coal and iron.

Certain it is that in the province of Quebec, at Montreal, and west of that, they buy coal in Pennsylvania, notwithstanding they have water communication with the coal and iron mines of Canada.

The colleges of the country, especially Harvard College, teach their pupils the doctrine of free trade. President Eliot goes on the stump and tells us that free trade is a panacea for all our ills.

Now, I allow that free trade is a beautiful theory. It is a beautiful theory that all the world is a band of brothers, but the Book says, "He that refuseth to provide for his own household is worse than an infidel, and hath denied the faith." Your first duty is to your own family, your second to the community in which you live, to the State in which you reside, to the country of which you are a citizen.

They have a cordage factory in Hong-Kong, China. It is equipped with American machinery and the operatives are paid 15 cents a day.

There are 65,000,000 people in this country, and there are 450,000,000 people in the Chinese Empire. Now, I do not desire to shake up my countrymen with the 450,000,000 Chinese or with other millions of European laborers and strike an average of their wages.

If you destroy our protective system you have but one alternative—either to abandon our manufactories or reduce the laborer to a level of the pauper laborer of Europe or the Mongolian of Hong-Kong.

Pardon a seeming digression here, which will lead up to an argument.

As I was leaving church one Sunday morning in the city of Washington a few weeks ago, a gentleman stepped up to me and said, "Your name is MORSE?" "Yes." "And your father's name was Abner Morse?" "Yes, sir." "Well," said he, "forty-eight years ago, when your father left South Bend, Ind., and you were an infant, your father left that place never to return. It was before the days of railroads. He left, as he came there seven years earlier, in his own private carriage. He could not carry all he wished, and some things had to be left behind. Among them," said the stranger, "was a package of letters which he left with my father, an old man now eighty-six years of age, living in this city. They are marked 'Abner Morse. To be called for.' As your father has been dead twenty-five years, if you will come to the house I will give them to you."

They proved to be the letters of my mother, who died in 1842. There were letters from my father to my mother before they were married. There were letters from my mother's sister, from her home of refinement and ease and culture in the East to her sister, in what was then the Western wilderness, in the valley of the St. Joseph's River, and where the primeval forest of creation stood.

They told stories of love, of courtship, of marriage, of death, of neighborhood news in the village of her childhood, in that far off time. They told of the altar, the cradle, and the tomb.

With most of the actors in the scenes described in these letters, "Life's fitful fever is over," most of the actors have played their part and joined the silent majority.

But what I introduced this subject and these letters for was to say that during the period covered by these letters we had free trade. They describe the condition of things in Onondaga Valley, New York, and the valley of the Genessee, then as now a great wheat-growing and agricultural section, indeed then one of the richest, as now, and most prosperous sections of the whole country, and what do they say about the effect of free trade in this country at that time?

They say the country was in dire distress; they say that horses, oxen, and cattle, and swine, and wheat had no market and could not be sold at any price. They say that men were glad to work twelve or fifteen hours a day for 50 cents, and could not get work at that.

Why? Because we had a tariff for revenue; because we bought all our goods in England, and had no business but agriculture. And the same experience was had later during the hard times and financial panic of 1847; and in the light of this experience our Democratic brethren ask us to repeat this folly and to return to a policy of "free trade."

God forbid we should do it.

DEMOCRATIC CLAIM THAT THE COUNTRY IS BEING RUINED BY PROTECTION ANSWERED.

If you could believe those croakers who tell us the country is going to destruction in consequence of the protective tariff, surely our condition would be sad indeed.

But what are these facts?

Two and one-half millions are added to the wealth of this great country every time the sun rises and sets.

But they say the rich are growing richer and the poor poorer.

The first part is true, no doubt, but the second is a lie. In this country the poor share the prosperity of the rich, and there is not a country on the face of the earth where laboring people are so well clothed, warmed, and fed, and have so many of the things that go to adorn and embellish civilized life as in our country under the wise protective policy of the Republican party.

Listen to the following:

From the Atlanta (Ga.) Southern Industrial Record, in its issue of February 20, 1890, is gathered the following: "Three hundred and twenty-five new manufacturing enterprises were inaugurated in the ten cotton States during the past two weeks, employing over $6,000,000 capital. This does not include the many new railroad enterprises, employing many millions of capital, developing vast extent of the country, rich in minerals, coal, timber, and agricultural lands. Industrial development is spontaneously springing up all over the South which will eventually make it populous and rich."

What is our answer to Hon. Peleg McFarlin, a respected citizen of Carver, and Mr. Tobey and others who talk of the "decadence of New England industries?" Let me give the following from a recent issue of a Boston journal:

The hives of industry are so full that the swarming process may naturally lead to new swarms and new hives at distant points. These work no injury to New England. We can spare them. Not 1 per cent. of the substantial manufacturing concerns of New England have migrated south or west in a decade. Any general exodus is a fancy of the prejudiced operator. New England in 1889 invested $50,000,000 in new manufacturing plants at home. Deposits in her savings-banks increased over $60,000,000 in 1889. The situation is most hopeful in 1890. Let our people look at the bright facts instead of the doleful misstatements of interested parties.

And here is an extract from the Lowell (Mass.) Mail, referring to the erection of a cotton-mill plant in its vicinity which will involve the expenditure of $3,000,000:

When it is done it will furnish work for 2,000 operatives, whose wages will support directly at least 6,000 people. These people will eat bread, and meat, and vegetables, and dairy products, and fruit from American farms. They will wear clothing made in American shops, from cloth manufactured in American mills. They will use American boots and shoes, furniture, crockery, and iron and wooden ware. They will burn American coal and oil. They will employ American physicians, lawyers, teachers, and preachers, and read American books and papers. They will patronize American railroads, theaters, and base-ball nines. They will buy American watches and jewelry, and in almost every conceivable way they will help to make a demand for the products of American skill, industry, and enterprise.

REPUBLICAN PARTY NOT SECTIONAL.

But they charge that our tariff legislation was sectional. That charge I deny. We paid a bounty of 2 cents per pound to the sugar-planters of Louisiana. We placed a protective duty on the hemp raised in Kentucky. We placed a protective duty on the rice raised in Kentucky and South Carolina, and upon the marble quarries of Tennessee, upon the oranges and lemons of Florida, and the yellow pine of the Southern States.

In the river and harbor bill we made large appropriations for the rivers and harbors of the South. One item was $6,200,000 for the improvement of the Galveston (Tex.) Harbor. Away with this cry of sectional legislation. It is false. I throw it back to the men who make it.

The Republican party in the Fifty-first Congress legislated for the whole country—the North, the South, the East, and the West.

The Republican party in the Fifty-first Congress defended the rights of the black man, and seated several such men, who were honestly elected, in spite of the revolutionary tactics of the Democrats in leaving the House in a body.

We unseated Breckinridge, of Arkansas, the man who stood in the bloody shoes of Clayton, who was murdered in cold blood, shot through a window while he was away from home taking testimony with which to contest the seat to which he was elected; shot through a window while he was seated at a table in a hotel engaged in writing a letter to his little motherless children in his distant home.

The right of Breckinridge to a seat, his right to a seat stained with the blood of a murdered Republican, was so doubtful, one Democrat (and that one of his colleagues from Arkansas, FEATHERSTON) voted to unseat him. But hush, hark, shut the windows of heaven. The son of John A. Andrew, Representative ANDREW, of Massachusetts, voted against justice and against Clayton, whose blood cries to heaven.

The Democrats denounced us for what they style the "force bill." It should be called an "anti-force bill." It is a bill to prevent force at the polls. It is a bill by which Congress proposes to exercise its constitutional right to control the election of its own members, and see that every man in the country has his right to vote for members of Congress and have that vote counted as cast. That is all; nothing more nor less.

But they go around the country howling about "bayonets at the polls."

We have over 30,000 polling places in the United States for members of Congress and 25,000 soldiers, so that we should have only a piece of a soldier at each polling place if they were equally distributed, and the bill applies to North and South. Our Republican Congressional committee describe the law as follows:

The Federal election law does not interfere with local systems at all, but merely provides a way by which frauds can be detected and punished. It makes false registration a crime. It makes unlawful interference with registration, by violence upon, or intimidation, or bribery by any person lawfully entitled to vote, a crime.

It makes willfully keeping any false poll-list or knowingly entering false names or false statements thereon a crime.

It makes giving or accepting a bribe to induce a person to vote or refrain from voting a crime.

It requires the ballot-box to be placed in plain sight of the voters, and in such a position as to enable the election officers, national and State, and the voter when voting, to see that the ballot is in fact placed in the box.

It makes the willful rejection of legal votes, knowing them to be legal, a crime.

It makes the willful acceptance of illegal votes, knowing them to be illegal, a crime.

It makes the fraudulent substitution of one ballot for another for the purpose of having the vote rejected, or for the purpose of having it counted for a person other than the voter intended, a crime.

It makes willfully placing ballots not lawfully cast in any ballot-box among ballots lawfully cast, for the purpose of changing the result, a crime.

It makes unlawfully removing ballots from a ballot-box lawfully cast, for the purpose of changing the result of the election, a crime.

It makes a willfully false canvass of votes, or the false certification and return of such vote, a crime.

It makes it a crime for every officer charged with a duty under the law to willfully neglect to perform such duty or to be guilty of any corrupt or fraudulent conduct or practice in its execution.

It makes false swearing, in matters pertaining to such Congressional election, perjury.

It makes stealing the ballot-box or the ballots a felony; and it provides just punishment, by fine or imprisonment or both, for each of these crimes against a government by the people through manhood suffrage.

That is this bill. There is not a section, line, or syllable in it besides this, more than is necessary to enforce with certainty these provisions.

I believe with Hon. JOHN DALZELL, of Pennsylvania, who said in discussing the contested-election case of Clayton *vs.* Breckinridge:

We can say that theft, murder, and fraud, however successful elsewhere, are doomed to inevitable defeat at the portals of the House. We may not be able

to purify election methods, where they are impure; we can at least make them barren of results so far as we are concerned.

Besides these measures I mentioned, we have passed a conservative silver bill, to create a currency to take the place of the expiring national-bank currency, which stops the coinage of silver next July and decrees that every silver certificate shall have behind it a gold dollar's worth of silver bullion, and that the money of this country, the poor man's money, shall be the money of the world and equal gold in value. (See page 16, Congressional Hand-Book.)

Besides the tariff bill, the election bill, and the silver bill, the House of Representatives passed the national bankrupt bill, which, when it shall pass the Senate, can not fail to have a most beneficent and salutary effect upon the great business interests of the country.

The Republican party vindicated its right to be called the great moral reform party of the country by passing the anti-lottery bill, forbidding the transmission through the mails of any lottery tickets, advertisements, or even newspapers containing advertisements of lotteries, and thus struck a death blow to that great swindling scheme, which had debauched the State Legislature of Louisiana and was robbing the poor people of this country of millions of their hard-earned money, known as the Louisiana Lottery Company.

The Republican party redeemed its promise to the soldiers of the country by passing the disability pension bill which gives to every disabled soldier, no matter how he became disabled, or whether he can connect his disability with his army service or not, a pension of from six to twelve dollars per month, according to disability, and to every soldier's widow a pension of $8 per month, and to all minor children under sixteen years of age a pension of $2 a month until sixteen is reached.

While this bill does not go so far as some of our comrades desire, yet that it is a great measure of relief is shown by the fact that over 380,000 applications have already been made by soldiers and their dependent relatives for relief under this bill. A similar bill was vetoed by Grover Cleveland when President of the United States, but this bill was passed by a Republican House, by a Republican Senate, and signed by a Republican President, and is now a law.

We admitted two States into the Union, Idaho and Wyoming, and added two stars to the flag. We established a Territorial government for Oklahoma and prohibition until the people voted otherwise.

We passed a bill to return 8,000,000 acres of railroad land to the public domain and open the same to settlers.

We passed the agricultural-college bill, a wise and beneficent measure.

We passed the anti-trust law, aimed at great trusts like the Standard Oil Company and the sugar trust.

We passed, in the interest of pure and unadulterated food, the "meat-inspection bill" and the Conger lard bill.

LABOR MEASURES.

In the interest of labor we passed the alien-contract bill, convict-labor bill, convict-material bill; all these measures in the interests of protecting American labor. (See page 19, Congressional Hand-Book.)

Then, once more the Republican party defended its right to be called the moral party of the country by passing the Wilson bill, to correct the "original-package decision" of the Supreme Court of the United States. This bill subjects to the existing laws of prohibitory States intoxicating liquors shipped into them or passing through them.

Let me here give a word of admonition to my third-party friends on the folly and inexpediency of their course. The third-party vote in the State of New York gave the vote of that State to Grover Cleveland. That vote made him President. He appointed several members of the Supreme Court, among them Lamar, an unreconstructed rebel. He appointed Chief-Justice Fuller, who rendered the infamous "original-package" decision.

Had they succeeded in re-electing Grover Cleveland, instead of electing Benjamin Harrison, he would undoubtedly have vetoed this bill, and as the result we should have had the appalling situation all over the country now of having every restriction of the liquor traffic of every name and kind wiped out, and free rum in "original packages" of one drink and upwards sold in every community, in every State, in every section of the country, and the people powerless to regulate or prevent.

That is what the third-party success in defeating the Republican party in 1888 would have meant, and their success in the approaching campaign might be fraught with an equal disaster to the cause of temperance and prohibition.

However sincere some of their members may be, I insist that the practical effect of their course is to give direct aid and comfort to the brothel and the saloon, and to the Democratic party.

Confident am I that the cause of temperance and prohibition in the State and nation has been put back by the third-party movement. In the last fifteen years they never have elected a member of Congress, and never will until the crack of doom. They have not placed one law on the statute-book of any State in the Union. They have scarcely elected a single member of the Legislature in any State in the Union. Out West they call the third party the "Democratic aid society;" however well intended, that is the only effect of their course.

The vote for the original-package bill was practically a Republican vote, and the vote against it was substantially a Democratic vote.

The Republican party also passed at this session the canteen bill, forbidding the sale of wine and beer at army posts in prohibitory States.

Our Republican Congressional committee sums up our work in the Fifty-first Congress in the following sentences:

Briefly, and all too briefly, this is the record of the Republican party in the House of Representatives during the nine months of the two years in which it must perform its work. The history of this country, splendid as it is in the passage of safe, wise, and helpful legislation, contains no example in times of peace of a session of Congress so remarkable for good. Its work has been done quickly, quietly, resolutely, and in the face of an opposition which has been bitter and unscrupulous in an equal degree.

A hundred issues might be presented as a result of the differences between the two parties developed during the present session of Congress. These are the paramount ones:

Shall Congress be a deliberative assembly, wherein public measures may be properly considered, duly debated, and then, without waste of time, actually voted upon, and wherein the American principle of "majority rule" shall be respected, or shall it be a mob, incompetent to act, powerless to carry out the public will, with a majority so overcome by its own rules that it is dependent upon the minority for its authority and power?

Shall we allow the Capitol to be filled up with men who obtain seats in Congress, not as the result of a free ballot and a fair count, but by the forcible suppression of franchise rights, by wholesale frauds, by murder, arson, brutality, and other crimes?

Shall we abandon the policy of protection, after all it has done for us, to enter upon a policy which we have tested many times, to our immediate, unfailing, and tremendous loss?

Shall we again rob ourselves of the rewards which have so richly come from the restoration of silver, and once more pay into the hands of foreigners who have for years been buying our silver at low prices and using it against us in the grain markets of the world?

Shall we pay our money, $150,000,000 a year, to build up the merchant marine of England, to increase her strength upon the sea and her hold upon the foreign markets of the world, when we might, as well as not, be paying it for our own advantage in all of these respects?

Shall we keep our plighted faith to the loyal men who offered their lives in defense of freedom and union, and to the protection of whose families from want and misery we gave our word as a nation?

These are the chief and most sharply defined issues upon which the country is asked to cast a deciding ballot this fall. Every effort is being made to sidetrack them, to envelop them in clouds, and to carry the people away from here and there on false pretenses. The Democrats start off in the next Congress as usual with thirty-one stolen seats. They have that number of seats to their credit without a campaign. By infamous gerrymanders, especially in Ohio Maryland, Kentucky, and Indiana, they expect to steal twenty-one other seats. This gives them an immense advantage.

To the Republicans it is an awful handicap. But if the intelligent, thoughtful, and patriotic people of the land will do their duty as citizens, if they will stand sturdily by their guns, if they will vote as they wish and think, the result will be a glorious Republican victory, and a prompt and happy completion of the work which President Harrison and this Congress have carried forward so wisely and so well.

On the coast of England, many years ago, there were men engaged in the "wrecking business." They put up false lights along the shore, and they thus allured vessels ashore and then, amidst the groans of the drowning and the dying, they robbed their victims.

Gentlemen and fellow Republicans, the Democrats of this country are putting up false lights along the shore to allure the manufacturing business and business interests of the country to destruction.

Can the country afford to falter in her allegiance to the Republican party? She can not, she must not, she will not.

Gentlemen and fellow Republicans, grave and unfinished problems confront us as a nation still—questions vital to the welfare and perpetuity of our institutions.

The mission of the Republican party is not ended, not while it continues to stand for protection to our industries and to American labor, for temperance, for free speech and an honest ballot, for honor in public affairs, for free unsectarian schools.

So long will the Republican party prove to our enemies to be "clear as the sun, fair as the moon, and terrible as an army with banners."

French Spoliations.

SPEECH

OF

HON. CHARLES H. MANSUR,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 23, 1890,

On the bill (H. R. 11459) making appropriations to supply deficiencies in the appropriations of the fiscal year ending June 30, 1890, and for prior years, and for other purposes.

Mr. MANSUR said:

Mr. SPEAKER: Prior to my advent in the Fiftieth Congress I knew nothing of the merit or demerit of French spoliation claims, so called, having no knowledge of them otherwise than from references in the public press. Being assigned to duty upon the Committee on Claims, and the said committee having decided in the Fiftieth Congress to report the findings of the Court of Claims on these spoliation matters favorably, my colleagues on that committee devolved the duty upon me

of preparing a report. That report has been submitted to Congress, and with addenda was again adopted and submitted by the Committee on Claims at this session of Congress, and to it I refer for a full elaboration of my views upon the justice of these claims.

For ninety years these claims have been before the country, and although since the late civil war somewhat in the background, yet they have never lost their interest to the student of history or the lover of justice. My investigations upon this subject lead me to the confident belief that no person unprejudiced can come to a calm and deliberate study of the questions involved in these claims and deny the liability of the Federal Government to pay them. To the lover of American liberty and independence they possess, upon investigation, a peculiar charm. It is not too much to say, nor is it untrue, when I declare that when paid they will constitute the last installment of the price of our American liberty and American independence.

I can not hope by any argument that I can present to add to the force and strength of what has already been said during the past ninety years by men of the most eminent position, character, and talent that our country has produced.

Dr. Wharton, in his work on International Law, page 727, says:

This view of the distinguished jurist and diplomatist [Chief-Justice Marshall] is sustained by forty-five reports favorable to these claims made in the Congress, against which stand but three adverse reports, all of which were made prior to the publication of the correspondence by Mr. Clay in 1826. Besides Marshall, Madison, Pickering, and Clay, the validity of the claims has been recognized by Clinton, Edward Livingston, Everett, Webster, Cushing, Choate, Sumner, and many other of the most distinguished statesmen known to American history; and while opponents have not been wanting—among the most eminent of whom were Forsyth, Calhoun, Polk, Pierce, Silas Wright, and Benton—still the vast weight of authority in the political division of the Government has been strenuous in favor of the contention made here by the claimants.

But I shall rather content myself with bringing before Congress many citations and excerpts from the sayings of the distinguished gentlemen just named and others who have spoken and written upon this subject. To understand the full force and value of these claims it is necessary to recall the condition of the Colonies at the time they threw off the British yoke. Conscious of their inability to successfully maintain their independence without foreign aid, the Colonies early in 1776 dispatched Silas Deane to France as a private agent to ascertain the views of that country, and in the same year, on favorable representations made by him, Benjamin Franklin and Arthur Lee were joined with Mr. Deane and appointed commissioners to negotiate an alliance with France. As to their duties and instructions, I quote from the celebrated report of Mr. Cushing, made during the first session of the Twenty-sixth Congress, from the Committee on Foreign Affairs, to wit:

They were instructed and empowered to "assure His Most Christian Majesty that such of the British West India Islands as in the course of the war shall be reduced by the united force of France and the United States shall be yielded in absolute property to His Most Christian Majesty, and the United States engage, on timely notice, to furnish, at their expense, and deliver at some convenient port or ports in the said United States provisions for carrying on expeditions against the said islands to the amount of $2,000,000 and six frigates, mounting not less than twenty-four guns each, manned and fitted for sea; and to render any other assistance which may be in their power as becomes good allies."

These instructions are material to be remembered, because they show that we, on our side, as the consideration of the aid we solicited from France, proffered to her an alliance offensive and defensive, designed as the treaties actually concluded prove, to embrace within the scope of its operation all the French and British possessions of America, which it appears to have been in contemplation to conquer, and divide between the allied powers.

In the event of the negotiations two treaties were concluded on the same day, the 6th of February, 1778; one entitled a "Treaty of offensive and defensive alliance" and the other a "Treaty of amity and commerce."

The treaty of alliance, after providing for the active prosecution of the existing war between the United States and Great Britain, to the end of maintaining the independence of this country, for the making of common cause with France in case of eventual hostilities between her and Great Britain, and for the conquest and partition of the remaining British colonies in America, proceeds, in in the eleventh and twelfth articles, to stipulate as follows:

"ARTICLE XI.

"The two parties guaranty mutually from the present time and forever against all other powers, to wit, the United States to His Most Christian Majesty, the present possessions of the Crown of France in America, as well as those which it may acquire by the future treaty of peace. And His Most Christian Majesty guaranties on his part to the United States their liberty, sovereignty, and independence, absolute and unlimited, as well in matters of government as commerce, and also their possessions, and the additions or conquests that their confederation may obtain during the war, from any of the dominions now or heretofore possessed by Great Britain in North America, conformable to the fifth and sixth articles above written, the whole as their possessions shall be fixed and assured to the said States at the moment of the cessation of their present war with England.

"ARTICLE XII.

"In order to fix more precisely the sense and application of the preceding article, the contracting parties declare that, in case of a rupture between France and England, the reciprocal guaranty declared in the said article shall have its full force and effect the moment such war shall break out; and if such rupture shall not take place, the mutual obligations of the said guaranty shall not commence until the moment of the cessation of the present war between the United States and England shall have ascertained their possessions."

In execution of this treaty France entered heartily, and with ample forces of sea and land, into the war of the Revolution; and with her aid and the blessing of God on the united efforts of the allied nations we achieved our sovereignty as a nation. Whether France was actuated more or less by considerations of generosity or of policy, certain it is that she promptly, faithfully, and effectively fulfilled her part of the treaty; the "essential and direct end" of which, as declared in the instrument itself, was "to maintain effectually the liberty, sovereignty, and independence, absolute and unlimited, of the United States."

And equally certain it is that for the sacrifice of men and of treasure she thus incurred she received from us at the time no direct equivalent or benefit whatsoever, except that of the humiliation and loss of territory inflicted on her rival, Great Britain. And it is not less certain that when the United States issued from that terrible conflict a great and free Republic, full of a deeply grateful sense of the inestimable advantage she had received from the alliance of France, and having thus far rendered to her benefactress no correspondent advantage, there remained of all the stipulations of the treaty but one which in any future possibility could be profitable to France, and that was the perpetual guaranty of the possessions of the latter in America.

Let us see what the financial value of this "perpetual guaranty by the United States of the French possessions in America" had actually cost France on her part and in her efforts to secure and establish our independence. Senator Sumner, in his report to the Senate in Thirty-eighth Congress, first session, says:

According to the report of Calonne, the French minister of finance, the war which ensued in support of this guaranty cost France 1,449,000,000 francs, or about $280,000,000. But French blood, more costly than money, was shed on land and sea in the same cause, until at last the army of Cornwallis surrendered at Yorktown to the allied forces of Rochambeau and Washington and the war closed by the recognition of the Independence of the United States. If liberty be priceless, if life be priceless, then was the aid lavished by France infinite beyond calculation.

Let us now turn and consider the value of the treaty of 1778 with France to the United States. Senator Clayton, in his speech in the Senate on April 23 and 24, 1846, says:

To know the real value of this guaranty we must look back to the period when these treaties were entered into, which was the darkest hour of our whole Revolutionary struggle.

On the 11th of September, 1777, our Revolutionary army met with a disastrous defeat at the battle of Brandywine. On the 4th of October after that the army was again defeated at the battle of Germantown, and shortly after Washington led his distressed troops to Valley Forge, where he went into winter quarters. The condition of the American army may be judged by his letters written at the time from the camp at Valley Forge.

In his letter to Congress of 23d December, 1777, he says that "unless some great and capital change takes place his army must be inevitably reduced to one or the other of three things—starve, dissolve, or disperse; that three or four days of bad weather would prove their destruction; that out of his whole force of 11,000 men 2,898 are in the camp unfit for duty because they are barefoot and otherwise naked, besides a number confined in the hospitals for want of shoes, and others in farm-houses on the same account; and for want of blankets many were obliged to sit up all night by fires." In a letter from General Varnum, written from the camp in February in 1778, he says: "The situation of the camp is such that in all human probability the army must shortly dissolve."

Washington, in a letter written at the same time, anticipates a general mutiny and desertion. In March, 1778, Washington writes to Congress that between two and three hundred officers had resigned their commissions, and that the supplies of men promised to him had entirely failed. In a letter dated the 10th of April, 1778, he sums up a most appalling picture of the intolerable distress of his army by telling Congress that "no order, regularity, or care of the men or of the public property prevails." Sir, I shall not attempt to add to his description of the horrors of the winter at Valley Forge. There was not an American patriot whose heart did not sink within him at that gloomy period. The hopes of the country, resting entirely on the army, were prostrated with it.

Sir, it was in the midst of this universal despondency that the glorious intelligence was announced to the camp at Valley Forge that the powerful nation of France had bound itself by the most solemn treaties with the United States "to remain and guaranty against all other powers their liberty, sovereignty, and independence, absolute and unlimited, forever." And the scene was immediately changed from one of universal mourning to one of universal joy. Shouts of applause burst from the lips of our distressed soldiers, and rang through all the ranks of the American army, while it is said that even the Father of his Country waved his hat in triumph, and joined in the strongest demonstrations of national gratification.

Sir, it is certain that these treaties revived the sinking spirits of our countrymen and secured the independence of America. Their value to us is not to be counted at this day in dollars and cents. We know that France faithfully and honorably complied with her part of these contracts.

How did we discharge our treaty obligations? What sums of money did we expend for France? What lives did we lavish in her defense? I prefer to let another tell the story. Mr. Buel, from the Committee on Foreign Affairs, in his report made to the Thirty-first Congress, first session, of the House of Representatives, uses the following language:

France pointed us to the ships, men, and money which she furnished in our Revolution. She pointed us to our independence which she had aided so much in achieving. She pointed us to her war with England, and then to the treaties of the Revolution, by one of which we became her allies and were bound to bear our own part in that war. While she referred us to her guaranty in that treaty of our liberty, sovereignty, and independence, she insisted upon the observance of our guaranty to defend her possessions in America. She also pointed us to her treaty of amity and commerce by which we gave to her what we denied to England—the free use of our ports for purposes of war; and then referred us to the treaty of 1794 (the Jay treaty) with England, by which we repudiated our solemn obligations and preferred our oldest enemy to our oldest friend.

She pointed us to our deliberate neutrality in the face of such treaties, while she was losing most of her West India possessions. In fact, she reproached us with the worst of national offenses—a violation of national honor, a breach of plighted faith, a disregard of treaties, a deliberate ingratitude for the part she had borne in the war of our independence.

And the French minister, Mr. Adet, on the 15th of November, 1796, announces the order of his Government to suspend his functions in the United States, and made a formal claim of the guaranty, in the following terms:

The undersigned, minister plenipotentiary of the French Republic, now fulfills to the Secretary of State of the United States a painful but sacred duty. He claims, in the name of American honor, in the name of the faith of treaties, the execution of that contract which assured to the United States their existence and which France regarded as the pledge of the most sacred union between two people the freest on earth.

In this connection it is well to here show what the possessions of France in America at that time were, and what she lost.

Dr. Wharton, in his work on international law, second edition, on page 721, states:

At the opening of the war France possessed the fertile islands of St. Domingo,

Martinique, Guadeloupe, St. Lucia, St. Vincent, Tobago, Desecada, Marie-Galante, St. Pierre, Miquelon, and Granada, with a colony on the mainland at Cayenne, and "in little more than a month the French were entirely dispossessed of their West India possessions, with hardly any loss to the victorious nations." (Alison's History, vol 3, p. 396.)

I now invite the attention of the House to the condition of affairs in France, as well as in Europe, that led up to and were the causes of the spoliations upon our commerce by France. A wonderful coalition in 1792–'93 was made against republican France in the heat of the war between France and England. In about six months England had contracted twenty-three separate treaties with allies, the character of which may be determined by the one made with Prussia in July, 1793, in which the high contracting parties took the resolution to shut all their ports against French ships and not to permit the exportation to France of grain, salt, meat, or other provisions, and to employ all means in their power to injure the commerce of France and to bring her by such means to conditions of peace. The crops in France had failed that year, a frightful civil war was raging, and all Europe was in arms against her as punishment for beheading her king, Louis XVI.

To starve the people of France was their avowed, diabolical purpose, and behind this was another no less strong: kings against people, crowned heads against republics. Open war had been declared by England and France against each other, and the capture of our American vessels had begun by each of them. On the part of France it may truthfully be said that owing to her short crops and starving condition her early captures in 1793 were made under the pressure of absolute necessity.

On the 22d of April, 1793, President Washington, of his own impulse, issued a proclamation of neutrality, which states:

Whereas it appears that a state of war exists between Austria, Prussia, Sardinia, Great Britain, and the United Netherlands of the one part, and France on the other; and the duty and interest of the United States require that they should, with sincerity and good faith, adopt and pursue a conduct friendly and impartial towards the belligerent powers, etc.

This measure was discussed in his Cabinet with reference to the bearings of the eleventh article of the treaty of alliance. Did the *casus fœderis* thereby stipulated for exist? There was no decision upon this point by the President, but Chief-Justice Marshall informs us that the proclamation "was intended to prevent the French minister from demanding the performance of the guaranty contained in the treaty of alliance," and the proclamation was complained of in this relation by the Government or diplomatic agents of France at once, and not merely as it has been asserted, long afterward, although it did not as yet become the subject of a formal demand of execution.

This proclamation of neutrality was, under a fair consideration and construction of our treaty with France, an absurdity. In the mean time spoliations upon our commerce increased, only to be intensified and wonderfully increased by the activity of French vessels, spurred up by a growing hostile feeling in France, the necessary and inevitable result of the treaty negotiated by the United States with England in 1794, now known as the Jay treaty. The essential features of this treaty of Jay, by which important rights inimical to the interests of France and in direct conflict with the terms of the treaty of 1778 made with her by America were granted, are as follows:

ARTICLE XXIV.

It shall not be lawful for any foreign privateers (not being subjects or citizens of the said parties) to have commissions from any other prince or state in enmity with either nation to arm their ships in the ports of either of the said parties, nor to sell what they have taken, nor in any other manner to exchange the same; nor shall they be allowed to purchase more provisions than shall be necessary for their going to the nearest port of that prince or state from whom they obtained their commissions.

ARTICLE XXV.

It shall be lawful for the ships of war and privateers belonging to the said parties, respectively, to carry whithersoever they please the ships and goods taken from their enemies, without being obliged to pay any fee to the officers of the admiralty, or to any judge whatever; nor shall the said prizes when they arrive at and enter the ports of the said parties be detained or seized, neither shall the searchers or other officers of those places visit such prizes (except for the purpose of preventing the carrying of any part of the cargo thereof on shore in any manner contrary to the established laws of revenue, navigation, or commerce), nor shall such officer take cognizance of the validity of such prizes; but they shall be at liberty to hoist sail and depart as speedily as may be, and carry their said prizes to the place mentioned in their commissions or patents, which the commanders of the said ships of war, or privateers, shall be obliged to show. No shelter or refuge shall be given in their ports to such as have made a prize upon the subjects or citizens of either of the said parties; but if forced by stress of weather or the dangers of the sea to enter therein particular care shall be taken to hasten their departure and to cause them to retire as soon as possible. Nothing in this treaty contained shall, however, be construed or operate contrary to former and existing public treaties with other sovereigns or states. But the two parties agree that while they continue in amity neither of them will in future make any treaty that shall be inconsistent with this or the preceding article.

Neither of the said parties shall permit the ships or goods belonging to the subjects or citizens of the other to be taken within cannon-shot of the coasts, nor in any of the bays, ports, or rivers of their territories, by ships of war or others having commission from any prince, republic, or state whatever. But in case it should so happen, the party whose territorial rights shall thus have been violated shall use his utmost endeavors to obtain from the offending party full and ample satisfaction for the vessel or vessels so taken, whether the same be vessels of war or merchant vessels.

I call the attention of the House to the fact that the port privileges granted to Great Britain are substantially, if not literally, in the same language by which the same rights are guarantied to France in the treaty of 1778, with the further addition that in article 25 of the Jay treaty America stipulates that, while she continues in amity with Great Britain, she will not in future make any treaty that shall be inconsistent with the provisions of articles 24 and 25, which gave the same port privileges to Great Britain as had been guarantied in 1778 to France.

The Jay treaty was brought about from three considerations—our want of manufactures, a desire to renew commerce with the then greatest manufacturing and commercial people on the globe, aided by the natural ties of blood and birth and a common ancestry. The fact is now well known and established that England did not demand or dictate to us that she must have the exclusive use of our ports, notwithstanding our previous pledge of them to France, but that Mr. Jay was instructed by our Secretary of State, Mr. Randolph, to tender this to England, and it proved disastrous and brought dangerous results indeed upon our people. The promulgation of the Jay treaty in 1796 opened instantly the vials of wrath and the vengeance of France against the United States, holding us to be perfidious and accusing us of having joined in the great coalition to starve her people, and so France commissioned large numbers of privateers for the purpose of sweeping the ocean of American vessels, and even loaned her public vessels to privateers for a share of the booty they could thus acquire.

Prior to this the spoliations upon our commerce had been so great that our merchants were practically abandoning commerce upon the high seas; so much so that the income of the Government in the course of one year fell off a round million of dollars, or from 15 to 18 per cent. of our annual income. The Government could not afford this falling off of the revenues, and with a view of neutralizing the fears of our merchants the following circular notice was issued on August 27, 1793, by our Secretary of State, Mr. Jefferson, to the merchants of the United States:

I have it in charge from the President to assure the merchants of the United States concerned in foreign commerce or navigation that due attention will be paid to any injuries they may suffer on the high seas or in foreign countries contrary to the law of nations or to existing treaties, and that on the forwarding hither of well-authenticated evidence of the same, proper proceedings will be adopted for their relief. (Mr. Jefferson, Secretary of State, to Messrs. Duke & Co., August 31, 1793, 4 Jeff. Works, 31.)

This assuring statement was followed up by another one equally so from the President himself.

Washington's message to Congress, December 5, 1793, after speaking of the unfriendliness of the French minister, says:

In the mean time I have respected and pursued the stipulations of our treaties according to what I judged their true sense, etc.

The vexations and spoliations understood to have been committed on our vessels and commerce by the cruisers and officers of some of the belligerent powers appeared to require attention. The proofs of these, however, not having been brought forward, the description of citizens supposed to have suffered were notified that on furnishing them to the Executive due measures would be taken to obtain redress of the past and more effectual provisions against the future. (Volume 4, Annals of Congress, page 15.)

To show the importance of this circular letter and the extract from Washington's message, I call attention to the following comments of Senator Clayton, once Secretary of State, in his address delivered in the Senate of the United States, April 23 and 24, 1846. He said:

It appears this circular was carefully distributed among the merchants in all the seaports of the United States. It presents the extraordinary case, the only one I am aware of in the history of this Government, of a direct communication from the Executive to all concerned in foreign commerce and navigation. Its object, on its own face, is not merely to assure them of indemnity for the past—it does not assure them that due attention will be paid to any injuries they may have suffered, but it does, in the most solemn manner, pledge the faith of this Government to them "that due attention will be paid to any injuries they may suffer on the high seas, or in foreign countries, contrary to the law of nations or to existing treaties." And it does solemnly further pledge the faith of the Government to all those who may thus hereafter suffer, that "on their forwarding (to the Department of State) well authenticated evidence of the same, the proper proceedings will be adopted for their relief."

If before the promulgation of the Jay treaty our revenues fell off so severely, we may consider that nothing but the assurances of our Government in the circular letter of Mr. Jefferson kept American commerce upon the high seas; but the depredations still being great, our Government resolved upon negotiations, and on July 15, 1797, appointed Charles C. Pinckney, John Marshall, and Elbridge Gerry as envoys extraordinary to the French Republic. Their instructions were voluminous and contained the following:

Finally, the great object of the Government being to do justice to France and her citizens if in anything we have injured them, to obtain justice for the multiplied injuries they have committed against us, and to preserve peace, your style and manner of proceeding will be such as shall most directly tend to secure these results.

This imposing overture of agency by the Government (which has never been repealed or modified) was anxiously accepted by the claimants against both England and France, who were then at war, and both equally depredators on our commerce, and they accordingly hastened the evidence of their losses to the Department of State for prosecution against both.

The claims against England were successfully prosecuted under the treaty with her of November 19, 1794, through a board at London, to the amount of $11,650,000, as recorded by Col. John Trumbull, the fifth umpire member of said board, as stated in his volume entitled Reminiscences of My Own Times, page 238.

But the evidence of claims against France fared very differently. It was sent to our minister at Paris, Mr. Monroe, and after his recall to

the envoys, Messrs. Marshall, Pinckney, and Gerry, to whom the French Government made the following proposition on the 8th of November, 1797:

2. There shall be named a commission of five members, agreeably to a form to be established, for the purpose of deciding upon the reclamations of the Americans relative to the prizes made on them by the French privateers.

3. The American envoys will engage that their Government shall pay the indemnifications or the amount of sums already decreed to the American creditors of the French Republic, and those which shall be adjudged to the claimants by the commissioners. This payment shall be made under the name of an advance to the French Republic, who will repay it in a time and manner to be agreed on. (Document 102, page 467.)

This proposition was at first coupled with a conditional loan to France, but the condition was afterwards withdrawn. The envoys, however, discarded the proposition on the ground that England would regard it as a covert aid to France, which might provoke England to make war against the United States. This refusal was offensive to France. But in all the subsequent negotiations, and to the very end, she uniformly acknowledged her liability for the spoliation claims and constantly proposed to provide for them in conjunction with a like provision in her favor by the Government of the United States for her national claims which she insisted on.

France not being in a temper for reconciliation, the mission failed, France stating that her finances were practically exhausted by her wars; and, while admitting her liability for these spoliations freely and promptly at all times, declared she could not pay in money for them. She offered to our envoys the following proposition on November 8, 1797:

There shall be named a commission of five members, agreeably to a form to be established, for the purpose of deciding upon the reclamations of the Americans relative to the prizes made on them by the French privateers.

The American envoys will engage that their Government shall pay the indemnifications, or the amount of the sums already decreed to American creditors of the French Republic, and those which shall be adjudged to the claimants by the commissioners.

This payment shall be made under the name of an advance to the French Republic, who will repay it in a time and manner to be agreed upon.

The American envoys, however, refused to sanction it as being outside their instructions, particularly stating that England would regard it as surreptitious aid given to France.

On the 22d of October, 1799, a second mission to France was appointed, consisting of Oliver Ellsworth, William R. Davie, and William Vans Murray, with instructions that contained the following ultimata:

The following points are to be considered as ultimata: First, that an article be inserted for establishing a board with suitable powers to hear and determine the claims of our citizens for the causes hereinbefore expressed, and binding on France to pay or secure payment of the sums which shall be awarded.

First, at the opening of the negotiations, you will inform the French ministers that the United States expect from France as an indispensable condition of the treaty a stipulation to make to the citizens of the United States full compensation for all losses and damages which they shall have sustained by reason of irregular or illegal captures or condemnations of their vessels or other property under color of authority or commissions from the French Government or its agents.

These discussions were elaborately considered at Paris until the 30th of September, 1800, and it is not too much to say, in the light of the voluminous proof contained in Document 102, submitted to the Twenty-fourth Congress, that the right of our citizens to pay for these spoliations committed upon their property was conceded at all times by both France and the United States; yea, uniformly conceded and never denied during the entire negotiations.

The instructions to our ministers in 1797 were as follows:

Although the reparation for losses sustained by the citizens of the United States, in consequence of irregular or illegal captures or condemnations or forcible seizure or detentions, is of very high importance and it is to be pressed with the greatest earnestness, yet it is not to be insisted on as an indispensable condition of the proposed treaty. You are not, however, to renounce these claims of our citizens, nor to stipulate that they be assumed by the United States as a loan to the French Government. (Document 102, page 455.)

In 1799 the instructions were somewhat varied:

At the opening of the negotiation you will inform the French ministers that the United States expect from France, as an indispensable condition of the treaty, a stipulation to make the citizens of the United States full compensation for all losses and damages which they shall have sustained by reason of irregular or illegal captures or condemnation of their vessels and other property under color of authority or commissions from the French Republic or its agents. (Document 102, page 562.)

On the 11th of August, 1800, the French ministers, Joseph Bonaparte, Fleurieu, and Roderer, submitted this proposition to our envoys:

If the reflections presented on this subject in the note of the French ministers of the 5th of the present month suffice to lead the ministers of the United States to the acknowledgment of the treaties, the first consequence which will result from them, and which the ministers of France will be eager to recognize anew, is, that the parties on both sides ought to be compensated for the damages which have been caused by their mutual misunderstanding. Thus, the first proposition of the ministers of France is to stipulate a full and entire recognition of the treaties, and the reciprocal engagement of compensation for damages resulting on both sides from their infraction.

At the foot of the communication they submitted a second modified or alternative proposition, as follows:

Either the ancient treaties, with the privileges resulting from priority, and the stipulation of reciprocal indemnities, or a new treaty assuring equality, without indemnity.

Our envoys were expressly forbidden in any manner to give recognition to the old treaties of 1778, nor could they negotiate to give "equality in our ports to France," since by the Jay treaty of 1794 we had given the exclusive right to the use of our ports to Great Britain and could not recall it without an immediate war with England. The French ministers were rigid and unbending in their determination to stand by the propositions just stated so far as related to our guaranty of the French islands and the use of our ports.

The French ministers did consent to take 10,000,000 livres and release America from any future guaranty of assistance to France, but France insisted that no consideration whatever would or could compensate her for the loss of the use of our ports. The result was a deadlock in the negotiation. It is useless for me to attempt to detail all efforts made to break it. Suffice it to say that finally this proposition by our envoys was submitted: That a new treaty should be prepared with an article in it that should recognize all claims on both sides, and defer their decision to some future convenient time. This proposition was accepted by France, and constitutes the second article of the new treaty so prepared, afterwards concluded as a "convention," of which the second article was as follows:

The ministers plenipotentiary of the two parties not being able to agree at present respecting the treaty of alliance of 6th February, 1778, the treaty of amity and commerce of the same date, and the (consular) convention of November 14, 1788, nor upon the indemnities mutually due or claimed, the parties will negotiate further on these subjects at a convenient time; and until they may have agreed upon those points the said treaties and convention shall have no operation, and the relations of the two countries shall be as follows.

This second article was promptly and quickly ratified by Bonaparte, the First Consul. Its moral and legal effect was the same as if France had given her bond pledged to pay in the future the spoliation claims; and if it does not declare the amount, yet I can confidently state that it was an acknowledged debt, adjudged in every respect except the amount, for France through her ministers had always acknowledged her liability for these claims. The bond, in the shape of an "article" in the "convention" agreed upon by the ministers on both sides, was taken charge of by the United States in the character of a trustee for all her citizens who had claims of spoliation, with powers to enforce collection.

The Senate of the United States, without any assent or knowledge on the part of the claimants, in executive and secret session, struck out article 2, and when this was ratified by France the United States had practically paid their obligations and debt to France with the said bond, which represented the value of all the claims of the United States citizens. No reasons have ever been made public why the Senate struck out the said article. Whatever their motives were at the time, there is nothing extant, so far as is known, to show what their motives were for striking it out; but all the facts surrounding, connected with, and leading up to the final consummation of the treaty as eventually ratified by both of the great powers make it self-evident that there could be but one reason, and that a desire upon the part of the Senate to release the United States from our treaty obligations with France incurred during the war of the Revolution.

It seems that when the action of our Senate was first conveyed to the First Consul he expressed surprise and dissatisfaction, because it was well known that this article was inserted at the instance of our own envoys; but that astute minister of state, Talleyrand, informed the First Consul that a simple nullification of article 2 would not only lose the old treaties to France, but would have the additional effect to make her liable for the spoliation claims under international law. On this advice of Talleyrand, the First Consul immediately wrote and added the following proviso, and then ratified the modified convention:

Bonaparte, First Consul, in the name of the French people * * * approves the above convention in all and each of the articles. * * * The Government of the United States having added to its ratification that the convention shall be in force for the space of eight years, and having omitted the second article, the Government of the French Republic consents to accept, ratify, and confirm the above convention, with the addition, importing that the convention shall be in force for the space of eight years, and with the retrenchment of the second article: *Provided*, That by this retrenchment the two states renounce the respective pretensions which are the object of said article.

This conditional ratification being again sent across the waters and submitted to the Senate, was by it confirmed as fully ratified, and so returned to the President, who, by his proclamation of December 27, 1801, declared it to be the supreme law of the land. The original convention was confirmed and signed by John Adams, President, and John Marshall, Secretary of State. The final ratification was signed by Thomas Jefferson, President, and James Madison, Secretary of State. If, then, according to the original view taken by France, that article 2 if stricken out from the treaty would leave France liable under international law, and after due notice, by the First Consul, "that by the retrenchment of article 2 the two states renounced the respective pretensions which are the object of said article 2," it must be absolutely clear and apparent to every person that the Senate of the United States, acting as duly authorized agents of the United States in ratifying the treaty, destroyed and annihilated all rights of American claimants to recover from France, and since these claims were recognized in article 2 and duly provided for in the future as recognized and valid claims to be liquidated and settled at a more opportune time in the future, there can be but one opinion—that the United States appropriated private property to the payment of a national obligation, and have thereby brought the nation strictly within the provisions of the Federal Con-

stitution, which declares "that private property shall not be taken for public purposes without just compensation."

No rational man believes or can believe that the United States surrendered these claims without consideration. Manifestly not. The United States relinquished and the United States received the property of our citizens as the equivalent for the exoneration of the United States from heavy national obligations to France as well as from the claims of her individual citizens.

This is the simple common-sense view of the transaction, and it was the view entertained at the time by the Government of the United States.

ARE THESE CLAIMS WAR CLAIMS?

The only objection I have ever heard urged to these claims, while admitting that they were originally just claims against France, are that, originating in a state of war between the two countries, the treaty of September, 1800, was a treaty of peace, and there being no provisions in it for the payment of these claims, the United States did not become liable for them. If it can be shown that there was no war existing at any time between the United States and France between the years 1793 and 1801, then of course this objection falls to the ground. The Constitution of the United States expressly declares that "Congress shall have power to declare war." This being a special prerogative granted by the Constitution to Congress, it must be and is exclusively within the power of that department of the Government to determine and declare when a state of war exists.

I presume it will be conceded, for the fact was actually so, that there was never any declaration of war on the part of either country; and it seems almost impossible to conceive of a general public war without such declaration. If this position be impregnable, as I claim it is, it settles the question. But my reading shows me that there is no necessity to stop with this. Fortunately there are many proofs that the two parties most interested either did not know that a general war existed between them, or if they did they both uniformly and on all occasions denied it and asserted that while contention and a certain amount of bad feeling existed, yet the condition was one of peace and not war; and both of the great contracting powers by their highest officials have said officially and plumply that no war prevailed, that no war existed, time and again.

In a letter from M. Talleyrand, minister of exterior relations, to M. Pechon, French minister at The Hague, dated August 28, 1798, he says:

France, in fine, has a double motive, as a nation and as a republic, not to expose to any hazard the present existence of the United States; therefore, it never thought of making war against them, nor of exciting civil commotions among them, and every contrary supposition is an insult to common sense. (Document 102, page 649.)

During the negotiations at Paris, on the 20th of August, 1800, the French ministers wrote to our envoys as follows:

In the first place (the French ministers) would insist upon the principle already laid down in their former note, namely, that the treaties which united France and the United States are not broken; that even war could not have broken them, but that the state of misunderstanding which has existed for some time between France and the United States, by the acts of some agents rather than the will of the respective Governments, has not been a state of war, at least on the side of France. (Document 102, page 616.)

And the Emperor Napoleon at St. Helena, in dictating for his history the events of his reign, said:

The suppression of this article (the second article of the convention of 1800) at once put an end to the privileges which France had possessed by the treaty of 1778, and annulled the just claims which America might have made for injuries done in time of peace. (See Gourgaud's Memoirs of the History of France, volume 2, page 129.)

And in the French tribunal or congress, on the final ratification of the convention of 1800, the report advising it contains the following, namely:

"I was getting past recovery. War would have broken out between America and France if the Directory, changing its system and following the counsels of prudence, had not opposed moderation to the unmeasured conduct of the President of the United States. * * *

Commissions granted by the President to attack the armed vessels of France are not to be regarded as a declaration of war; the will of the President does not suffice to put America in a state of war; it requires a positive declaration of Congress to this effect. None has ever existed. The Republic was therefore justified in claiming the enjoyment of the stipulations comprehended in the old treaties, and indemnity for the non-execution of those stipulations. (Code diplomatique, par Portiez (de l'Oise), tribun à Paris, messidor, an X. Translation, page 6.)

The instructions of our Government to the envoys to France, Messrs. Ellsworth, Davie, and Murray, of October 22, 1799, contain the following, namely:

This conduct of the French Government would well have justified an immediate declaration of war on the part of the United States, but desirous of maintaining peace, and still willing to leave open the door of reconciliation with France, the United States contented themselves with preparations for defense and measures calculated to protect their commerce. (Document 102, page 561.)

On the 20th of September, 1800, Mr. Marshall, Secretary of State (late Chief-Justice), wrote to our minister at London as follows:

The aggression, sometimes of one and sometimes of another belligerent power, have forced us to contemplate and prepare for war as a probable event. (Document 102, page 452.)

It so happened that at the date of Mr. Marshall's letter the American envoys at Paris had concluded an arrangement by a convention (of September 30, 1800) which declares on its face "to terminate the differences which have arisen between the two states," etc., and the President's proclamation of the convention is in these words: "Whereas a convention for terminating certain differences which had arisen between the United States and the French Republic," etc. (Laws United States, volume 1, page 114.)

A number of legislative acts were passed by Congress evincive of the indignant feeling which the course of conduct pursued by the French Government had produced and showing a determination to resist them by force. These are the most important:

Act of 28th of May, 1798, authorizing the capture by public vessels of the United States of "all armed vessels of the Republic of France which have committed, or shall be found hovering on the coast of the United States for the purpose of committing, depredations on the vessels belonging to the citizens thereof."

Act of 18th June, 1789, "suspending intercourse with France, under penalty of the forfeiture of vessels carrying on such intercourse."

Act of 25th June, same year, authorizing American merchant vessels to oppose searches, etc., made by French vessels to capture the aggressors and to recapture American vessels taken by the French, but with a proviso that—

Whenever the Government of France, and all persons acting under or by their authority, shall disavow and shall cause the commanders and crews of all French armed vessels to refrain from the lawless depredations and outrages hitherto encouraged and authorized by that Government against the merchant vessels of the United States, and shall cause the laws of nations to be observed by the said French armed vessels, the President of the United States is hereby authorized to instruct the commanders and crews of the merchant vessels of the United States to submit to any regular search by the commanders or crews of French vessels, and to refrain from any force or capture to be exercised by virtue thereof.

The act of June 28, 1798, "declaring the condemnation and sale of French vessels taken in pursuance of the act of May 28."

The act of July 7, 1798, declaring, for the reasons recited in the preamble—

That the United States are of right freed and exonerated from the stipulations of the treaties and of the convention heretofore concluded between the United States and France, and that the same shall not henceforth be regarded as legally obligatory on the Government or the citizens of the United States.

The act of July 9, of the same year, "authorizing the public vessels of the United States to capture all armed vessels of the Republic of France on the high seas, and giving authority to the President to issue commissions for the like purpose to private armed vessels."

It will be observed that in none of these acts is war declared nor the statement made that war existed.

[Extract from the Code diplomatique, relative to the convention of September 30, 1800, between the United States and France.]

Grounds of the projected law relative to the convention concluded between the French Republic and the United States, laid before the Corps Législatif by Citizen Roderer (who, with Messrs. Joseph Bonaparte and C. P. Claret-Fleurieu, on the part of France, and Messrs. Ellsworth, Davie, and Murphy, on the part of the United States, negotiated the convention on September 30, 1800), counselor of state, charged by the consuls with the presentation thereof:

Session of 5 frimaire, an X (26th November, 1801).

Citizen Legislators: The treaty which I have the honor to present to the Corps Législatif has terminated the misunderstanding between France and America, from which neither their distance nor the recollections dear to the two nations have been able to preserve them during the revolution.

The French ministers then gives a digest of the treaty obligations of the two nations, and of the causes that led to negotiations for a settlement of respective contentions, as finally concluded in the convention of September, 1800. They then proceed:

Such was the state of things when three American negotiators arrived at Paris, led thither by the desire and the hope of preventing a signal rupture.

American commerce was alleged to have suffered considerable losses. The negotiators demanded indemnity for them.

The French Government had also to allege claims for her commerce, which had suffered for a long time; it recognized that it was just to liquidate, compensate, and close, if it were possible, the indemnities which might be respectively due; but it put forth as a condition to any stipulation on this subject that the former treaties between France and the United States should be previously recognized, considering that indemnities could only be an acknowledgment of uninterrupted friendship between the two states, a disavowal of all the violences which might have grown out of a simple misunderstanding, a sort of protest against everything which might have announced a hostile intention, a new assurance of fidelity to the old conventions—in a word, considering that indemnities could be only the execution of the old treaties and not a preliminary of a new one, since avowing their annihilation would have been avowing war and imposing on that one of the two nations which would have to pay the other a balance of the indemnity the shameful obligation of purchasing peace.

The American negotiators considered themselves bound by the act of Congress which had declared the treaties null and decided that it was impossible that they could recognize them. It consequently became necessary to adjourn the respective pretensions, and to regulate by new stipulations the relations of amity and commerce which the negotiation was to re-establish. Such has been the object of the convention concluded at Paris on the 8th vendémiaire, an X (30th September, 1800), which is now presented to the Corps Législatif.

The bases of this treaty are, the most perfect equality between the two nations and exact reciprocity in all cases susceptible there, a great liberality of principles, and a reciprocal assurance of treating each other in all species of relation upon the footing of the most favored nation. Such ought to be the characters of a treaty concluded between two nations who are proud of their liberty.

The following report was made to the *tribunat* by A. P. Adet (minister of the French Republic to the United States, in 1795), one of its members, in the name of a special commission, upon the convention concluded between the French Republic and the United States of America, at the session of the 13 frimaire, year X (December 4, 1801):

Tribunes: Gratitude attached the Americans to the French, under the mo-

narchical government. At the commencement of the Revolution a more lively sentiment existed between them; everything was concurring to strengthen the ties which united the two nations, when the passions of men who were governing them came to interpose between and separate them. The American Government, forgetting the duties of neutrality, had concluded, under the influence of the enemies of France, a treaty which wounded our interests.

Congress on the 7th of July, 1798, enacted the following bill:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the United States are of right freed and exonerated from the stipulations of the treaties and of the consular convention heretofore concluded between the United States and France, and that the same shall not henceforth be regarded as legally obligatory on the Government or citizens of the United States."

In consequence of this bill, the American Government suspended the commercial relations of the United States with France and gave to privateers permission to attack the armed vessels of the Republic. The national frigates were ordered to seek them and to fight them. A French frigate and sloop of war, successively and unexpectedly attacked by the Americans, were obliged to yield to force, and the French flag (strange versatility of human affairs!) was dragged, humiliated, before the same people who a little while ago, with eager shouts, had applauded its triumph.

"I was getting part recovery. War would have broken out between America and France if the Directory, changing its system and following the counsel of prudence, had not opposed moderation to the unmeasured conduct of the President of the United States. In this way it rendered null the projects of the American ministry, which would have declared war against us if it had only its wishes to consult.

[Letter from Ex-President John Adams.]

QUINCY, *May* 9, 1823.

SIR: I have received your letter of the 26th of April. You are entirely mistaken in supposing that the second article of the convention of (1800 with) France was stricken out by my desire or information. On the contrary, I was desirous of retaining them (it); so much so that I sent a message to the Senate and explicitly told them it would have been more agreeable to my inclination to have ratified the convention as it stood.

As to my address, and answers, and escorts, and parades, and all the pomposities of that time, I wish to forget them forever; they were extremely disagreeable to me at that time.

To explain all the mysteries of that period never was and never will be in my power; it would require volumes to give a simple history of it. All that I can say of it is, there was war between St. Denis and St. George; each had an army in America constantly skirmishing with each other, and both of them constantly stabbing me with lances, pikes, and spears. My sole object was to preserve the peace and neutrality of the country; and that, I thank God, I obtained, at the loss of my power and fame with both sides.

I am, sir, respectfully, your most obedient, humble servant,

JOHN ADAMS.

JAMES H. CAUSTEN, Esq., *Baltimore.*

M. de Onis, the minister of Spain, in negotiating the Florida treaty with Mr. J. Q. Adams, and in reference to our claim for spoliation against Spain, says:

The United States were not at war with France; consequently their recourse, as the aggrieved party, was always open to the Government and tribunals of the aggressor. (Vide Wait's State Papers, volume 12, page 46.)

Hence the conceded liberality of Spain.

In President Jefferson's message to Congress of 8th December, 1801, the following appears:

It is a circumstance of sincere gratification to me that on meeting the great council of the nation I am able to announce to them, on the grounds of reasonable certainty, that the wars and troubles which have for so many years afflicted our sister nations have at length come to an end; and that the communications of peace and commerce are once more opening among them. While we devoutly return thanks to the beneficent Being who has been pleased to breathe into them the spirit of conciliation and forgiveness, we are bound, with peculiar gratitude, to be thankful to Him that our own peace has been preserved through so perilous a season and ourselves permitted quietly to cultivate the earth and to practice and improve those arts which tend to increase our comforts.

I shall not attempt any further argument to show that the hostile feelings between the two nations, the capture and recapture of armed vessels, privateers, and merchantmen, was not general war, whatever it was, for if Adams and Jefferson, our Presidents during the whole time of the spoliations, and the great Bonaparte, master of the art of war, as well as the great ministers of state on both sides of the water, did not know what constituted peace and what war I am sure I do not, and I am very fearful but few, if any, of my colleagues upon the floor of this House are any wiser or better informed upon the distinctions of the two conditions than I am. Inasmuch as these great rulers say it was not war I agree with them.

CONTEMPORANEOUS AND SUBSEQUENT OPINIONS.

Incidentally much has already been cited showing what the opinion of many of the great men of the period, contemporaneous with these claims, was of their justice and what government was liable for them. Such quotations have heretofore been used by me for other purposes than expressions of opinion of the legal liability of the United States for their value.

I now quote from the recorded statements of a few our great statesmen upon this point.

Here is the testimony of our Secretary of State, who controlled the negotiations for us:

[Extract of a letter from Hon. Timothy Pickering, Ex-Secretary of State, to James H. Causten, dated Salem, November 19, 1824.]

When, in 1797, Pinckney, Marshall, and Gerry were appointed ministers plenipotentiary to negotiate with the French Government, then administered by the Directory, on all the differences between the United States and France, those ministers were instructed to agree on an equitable mode of examining and deciding on the claims of our citizens in respect to the depredations of our commerce. But, although they were to press those claims with the greatest earnestness, they were not to insist on them as an indispensable condition of the treaty. They were enjoined, however, "not to renounce them." But a regard to justice was of all things the most remote from the views of the Directory. You must be acquainted with the result of that mission. The Directory would not even receive our ministers.

By the second article of the treaty negotiated by Ellsworth, Davie, and Murray (in 1800), it appears that our Government felt itself bound in duty to its injured citizens to demand of the French Government compensation for the depredations; but as a set-off the latter demanded a renewal of the treaty of alliance, etc., of 1778, and of the consular convention of 1788, all of which Congress, in 1798, had justly declared void, in consequence of their notorious violations by the French Government. The Senate of the United States, unwilling to renew those treaties, advised the ratification of the new treaty, expunging the second article, thus leaving the reciprocal claims of the two Governments undecided and subjects of future negotiation, and adding a limitation of the treaty to eight years. President Adams ratified it accordingly.

The French Government gave its assent, and with the proviso that by the retrenchment of the second article the two states renounced the respective pretensions which were the object of that article, and in this form Bonaparte, then First Consul, ratified it. The treaty in this situation being laid before the Senate by President Jefferson, was returned as fully ratified, without any further act of the Senate. This implied a reciprocal abandonment of the old treaties and of the claims for depredations up to that time, September 30, 1800.

Thus the Government bartered the just claim of our merchants on France to obtain a relinquishment of the French claim for a restoration of the old treaties, especially the burdensome treaty of alliance by which we were bound to guaranty the French territories in America.

On this view of the case it would seem that the merchants have an equitable claim for indemnities from the United States. If the treaty of September 30, 1800, containing the relinquishment, is obligatory on the United States, and as such to be insisted on by the present French Government, it amounts to an admission that the Government *de facto* had a right to bind the French nation as effectually as if the treaty had been negotiated with the present legitimate Government; and such, doubtless, is the principle of public law. It follows, then, that if the relinquishment had not been made the French Government would be responsible. Consequently, the relinquishment by our own Government having been made in consideration that the French Government relinquished its demand for a renewal of the old treaties, then it seems clear that, as our Government applied the merchants' property to buy off those old treaties, the sum so applied should be reimbursed.

[Letter of Hon. Ex-Senator William C. Preston, with the opinion of Chief-Justice Marshall.]

COLUMBIA, *January* 29, 1844.

SIR: I have this moment received your letter of the 24th instant, inquiring of me concerning Judge Marshall's opinion of the claims for French spoliations anterior to 1800.

When that subject was under discussion in the Senate some years since, as a member of the committee to which it had been given in charge, I bestowed no little pains in the investigation of it, and, as I believe will happen to every one that does so, I became thoroughly satisfied of the justness of the claims.

While they were under discussion in the Senate they happened to be the subject of conversation between Mr. Leigh, Mr. Calhoun, and myself one evening in our mess-parlor, when Judge Marshall stepped in, and having overheard or been informed of the subject of conversation, asked to share in it, saying that having been connected with the events of that period, and conversant with the circumstances under which the claims arose, he was, from his own knowledge, satisfied that there was the strongest obligation on the Government to compensate the sufferers by the French spoliations. He gave a succinct statement of the leading facts and the principles of law applicable to them, in so precise and lucid a way that it seemed to me a termination of the argument by a judicial decision. It was apparent from his manner that he felt an interest in the inculcation of his opinion, arising from deep conviction of its truth.

I most heartily desire that the long-delayed and very inadequate justice now proposed to those unfortunate claimants will be made this session.

I am, dear sir, your obedient servant,

WILLIAM C. PRESTON.

JAMES H. CAUSTEN, Esq., *Washington.*

In the Fiftieth Congress I heard it asserted that it was doubtful whether Chief-Justice Marshall had ever expressed any opinion upon the liability of our Government for the French spoliation claims. His great name and fame, as well as the additional fact that he was one of the commissioners who negotiated the treaty of September, 1800, would make a statement coming from his lips the equivalent of a judicial decision from any other person our country has yet produced. To strengthen the letter just read of Mr. Preston's, I call attention to the following extract in a speech of Senator Clayton, delivered in the Senate of the United States April 23 and 24, 1846:

It was my fortune, on one occasion during the year 1835, to hear Judge Marshall express his opinion in favor of the bill then before the Senate for the payment of these claims. A gentleman who has long been the agent of these claimants has kindly placed in my hands, at my request, the following letter from Mr. Preston stating the opinion of Judge Marshall (*clarum et venerabile nomen!*) on the same subject, and, as I suppose, expressed about the same period to which I referred.

[Here the Secretary read the letter of Mr. Preston's above cited.

After the reading of this letter, Mr. Calhoun rose, but spoke in a voice scarcely audible to the reporter. He was understood to say that there could not be a shadow of a doubt of the perfect correctness of Mr. Preston's statement, but that owing to the multiplicity of public business that pressed upon his mind during the session of 1835, and other causes, he had not retained a distinct recollection of the conversation referred to. He had no doubt that the recollection of Mr. Preston was correct.]

To still further strengthen this statement of Judge Marshall, attention is now called to the following letter from Ex-Senator Benjamin Watkins Leigh:

RICHMOND, *August* 17, 1846.

MY DEAR SIR: I received in due time your letter of the 11th, and I should have answered it immediately, but you intimated that you had sent me at the time a copy of your speech containing Mr. Preston's letter, and I was desirous of seeing it in order that I might see how far his recollection agreed with mine. However, the copy of your speech has not yet come on, and now I think it better to write at once than to wait longer for the information.

I have, then, to state that the late Chief-Justice Marshall did, in conversation with me and some two or three others, while a bill was before the Senate for the payment of the claims for French spoliations prior to 1800, express an opinion, distinctly and positively, that the United States ought to make provisions for the payment of those claims; and the opinion made the more impression

on my mind since it was contrary to an idea which I had taken upon the subject, and it determined me to examine it with greater care and deliberation than I had before given it.

You may make whatever use of this letter you please.

I remain, with old and constant respect and esteem, yours truly,

B. W. LEIGH.

Hon. JOHN M. CLAYTON.

The query may arise with many, why Chief-Justice Marshall was so reticent. The answer is, that between the convention of September, 1800, and its final ratification by the high contracting powers he was appointed and confirmed Chief-Justice, and assumed his seat on the bench in August, 1801. Such was, and justly, his sense of the dignity of his position that it sealed his lips to all public utterances on this subject.

Here is the opinion of Mr. Madison:

[Extract from the instructions of Mr. Madison, Secretary of State (Mr. Jefferson, President), to Mr. Charles Pinckney, our minister in Spain, dated February 6, 1804, Spain having contended that injuries committed on our citizens in Spanish ports by Frenchmen were included in the release of France by the United States in the convention of 1800.]

The plea on which it seems that the Spanish Government now principally relies is the erasure of the second article of our convention with France (of 1800), by which France was released from the indemnities due for spoliations committed under the immediate responsibility to the United States. This plea did not appear in the early objections of Spain to our claims. It was an afterthought, resulting from the insufficiency of every other plea, and certainly as little valid as any other. The injuries for which indemnities are claimed from Spain, though committed by Frenchmen, took place under Spanish authority; Spain, therefore, is answerable for them. To her we have looked, and continue to look, for redress. If the injuries done to us by her resulted in any manner from injuries done to her by France, she may, if she pleases, resort to France as we resort to her. But whether her resort to France would be just or unjust, is a question between her and France, not between either her and us or us and France. We claim against her, not against France. In releasing France, therefore, we have not released her. The claims, again, from which France was released were admitted by France, and the release was for a valuable consideration, in a corresponding release of the United States from certain claims on them. The claims we make on Spain were never admitted by France, nor made on France by the United States; they made, therefore, no part of the bargain with her, and could not be included in the release.

OPINION OF MR. MURRAY, OUR ENVOY.

Mr. Murray, commissioned to exchange the ratifications of the convention of 1800 with France, to Mr. Madison, Secretary of State of the United States, dated—

PARIS, *July* 1, 1801.

SIR: By the Nos. 14 and 15, which I have the honor to inclose, you will see that the French ministers have refused to agree to the unconditional suppression of the second article.

To you, sir, I can say that I wish I had been authorized to subscribe to a joint abandonment of treaties and indemnities. As claims they always will be set off against each other; and I consider the cessation of their claim to treaties as valuable.

I believe that they will offer a conditional ratification, similar to ours, with the suppression of the second article and the admission of the new one, provided the two Governments exchange declarations by which all claims to treaties and indemnities be mutually abandoned.

I write in haste, by post, to reach the frigate, which I hear this moment has not sailed.

I am, with great respect, sir, your most obedient servant,

W. V. MURRAY.

Mr. Giles, in his report dated April 22, 1802, to the House, within two months of the final ratification of the treaty, it being the first report made on these claims, says:

From these circumstances, and a recurrence to the fifth article of said convention, in the following words, "the debts contracted by one of the two nations with individuals of the other shall be paid, or the payment may be prosecuted in the same manner as if there had been no misunderstanding between the two states; but this clause shall not extend to indemnities claimed on account of captures or confiscations," it appears that the exclusion of the second article of the convention was considered as a renunciation of the indemnities claimed by the citizens of the United States for spoliations and depredations upon their commerce, so far as the Government might otherwise have been instrumental in obtaining such indemnities.

Mr. Marion, on July 18, 1807, reported to the House as follows, it being the second report made on these claims:

From a mature consideration of the subject, and from the best judgment your committee have been able to form on the case, they are of opinion that this Government, by expunging the second article of our conven ion with France of the 30th of September, 1800, became bound to indemnify the memorialists for their just claims, which they otherwise would rightfully have had on the Government of France, for the spoliations committed on their commerce by the illegal captures made by the cruisers and other armed vessels of that power, in violation of the law of nations, and in breach of treaties then existing between the two nations; which claims they were, by the rejection of the said article of the convention, forever barred from preferring to the Government of France for compensation.

Mr. Holmes, in his report to the Senate, July 8, 1827, says:

From the best consideration that your committee have been able to bestow upon the subject, they are of opinion that the claims of our citizens against France for indemnity, which were released by the convention of the 30th September, 1800, when examined and liquidated, would not exceed $8,000,000.

Much of the evidence in support of these claims is wanting, and is supposed to be deposited with our minister or the agent for claims at Paris. Your committee are of opinion that measures should be adopted to procure the evidence which is there, or elsewhere, that the claims should be examined and liquidated and thereupon provision ought to be made for the payment of a reasonable sum for their final discharge.

Robert R. Livingston, minister to France, April 27, 1803, says:

The payment for illegal captures, with damages and indemnities, was demanded on one side and the renewal of the treaty of 1778 on the other; they were considered as of equal value, and they only favored the subject of the second article. (Document 102, page 717.)

John Marshall (one of the ministers) says:

I would positively oppose any admission of the claims of any French citizen, if not accompanied with the admission of the claims of American citizens for property captured and condemned for want of a *rôle d'équipage*. My reason for conceiving that this ought to be stipulated expressly was a conviction that if it was referred to commissioners it would be committing absolutely to chance as complete a right as any individual ever possessed. (Journal of Envoys, No. 316, page 471.)

[Extract from a report of Mr. Clay, Secretary of State, to President John Q. Adams, dated May 20, 1826, and by message of the President was laid before the Senate on the same day.]

After describing the original convention of 1800, the striking out the second article thereof, the condition of mutual relinquishment of claims prescribed by the French ratification, and the acceptance of said condition by the Senate:

"The two contracting parties thus agreed, by the retrenchment of the second article, mutually to renounce the respective pretensions which were the object of that article. The pretensions of the United States, to which allusion is thus made, arose out of the spoliations under color of French authority, in contravention to law and existing treaties. Those of France sprang from the treaty of alliance of the 6th of February, 1778, the treaty of amity and commerce of the same date, and the convention of the 14th of November, 1788. Whatever obligations or indemnities from those sources either party had a right to demand were respectively waived and abandoned, and the consideration which induced one party to renounce his pretensions was that of the renunciation by the other party of his pretensions.

"What was the value of the obligations and indemnities so reciprocally renounced can only be matter of speculation. The amount of the indemnities due to citizens of the United States was very large, and on the other hand the obligation was great (to specify no French pretensions) under which the United States were placed in the eleventh article of the treaty of alliance of 6th of February, 1778, by which they were bound forever to guaranty, from that time, the then possessions of the Crown of France in America as well as those which it might acquire by the future treaty of peace with Great Britain, all these possessions having been, it is believed, conquered at, or not long after, the exchange of the ratifications of the convention of September, 1800, by the arms of Great Britain from France.

"The fifth article of the amendments to the Constitution provides, 'nor shall private property be taken for public use without just compensation.' If the indemnities to which citizens of the United States were entitled for French spoliations, prior to the 30th of September, 1800, have been appropriated to absolve the United States from the fulfillment of an obligation which they had contracted, or from the payment of indemnities which they were bound to make to France, the Senate is most competent to determine how far such an appropriation is a public use of private property, within the spirit of the Constitution, and whether equitable considerations do not require some compensation to be made to the claimants."

Daniel Webster, in the Senate of the United States, January 12, 1835, said:

Mr. President, I have performed the duty of explaining this case to the Senate, as I understand it. I believe the claims to be as just as were ever presented to any Government; I think they constitute an honest and well founded debt, due by the United States to these claimants; a debt which, I am persuaded, the justice of the Government and the justice of the country will, one day, both acknowledge and honorably discharge.

I commend this language of Senator Prentiss in the Senate of the United States, January 13, 1835, to members of the House:

Sir, to falsify one's own words and acts, we can readily see, would disgrace an individual, and I am altogether unable to understand how the same thing can fail to dishonor the Government. The simple question presented for my consideration and decision and for the consideration and decision of every honorable Senator is, is this money justly due from the Government? And in deciding this short question, I, for one, can not allow myself to yield to arguments, however ingenious or plausible, which are founded upon assumptions totally repugnant to the whole tenor of the negotiations with France and flatly contradicted by the uniform declarations and acts of the American Government.

Mr. Cushing, in his report above cited, says:

Looking only to the negotiations, and to the treaty in which they resulted, it would seem plain that this indebtedness was determined by that treaty, and in the way of set-off. Throughout the whole talk of the commissioners the whole talk is of counter-demands. The United States demanded indemnification in behalf of our citizens for the losses they had sustained. France, admitting that our citizens were entitled to indemnity, insisted that she had claims against the United States, as a nation, under the treaty of alliance for the guaranty of her possessions in the West Indies and under the treaty of amity for important exclusive privileges in our ports; and also claims on behalf of individuals.

The United States felt the pretensions of France in those respects to be so well founded and so embarrassing that she offered to purchase a discharge of them with money. These counter-demands were advanced together. They were discussed together. Being found to be difficult of adjustment, they were reserved together in the second article and adjourned for future negotiation. It was then solemnly declared by one party and solemnly acknowledged by the other that they were mutually released; and the release on the one side was the equivalent or consideration for the release on the other. Did France renounce and abandon without consideration her claims on the United States under the treaties of alliance and of commerce, for a discharge from which claims the United States had actually offered to pay 8,000,000 francs? Did the United States renounce and abandon the claims of its citizens without consideration? Manifestly not.

Hon. Edward Everett, in the House of Representatives, February 21, 1835, said:

So long as the present class of claims remains unadjusted a large number of the citizens of the United States will remain under the painful impression—an impression fortified by a solemn act of the Senate of the United States—that their property has been taken from them without their consent, and without compensation, by the Government of their own country.

It deserves particular remark, in this connection, that this class of claims is the only class for which satisfaction has not been obtained by our Government. In the collisions with foreign countries to which we have been exposed while carrying on a neutral commerce with numerous belligerent nations we have had to complain of illegal seizures and acts of violence on the part of almost every nation. The claims against England, arising from these illegal and violent acts, at a period coeval with the spoliations of France for which indemnity is now sought, were satisfied by Great Britain more than thirty years ago.

After a lapse of twenty years the claims against Spain, in nature identical with the present class, were satisfied under the Florida treaty. The claims for supplies, for embargoes, and for captures, for which restitution was ordered by the council of prizes, were satisfied by the Louisiana convention in 1803 to the amount of 20,000,000 francs. Claims to a smaller amount on the Governments of

Russia, Sweden, Denmark, and Naples have been at different times satisfactorily discharged by those powers.

Mr. Sumner, in his report to the Senate, April 4, 1864, says:

It was the peculiarity of this case that on one side the claims were national and on the other side individual. But a set-off of individual claims against national claims must, of course, leave that Government responsible which has appropriated the individual claims to this purpose. The set-off and mutual release is between nation and nation; but if the claims on one side are only individual and not national, the nation which, by virtue of this consideration, has been released from national obligations must be substituted for the other nation as debtor, so that every individual whose claims have been thus appropriated can confidently turn to it for satisfaction. On this point there can be no doubt, whether we regard it in the light of common sense, reason, duty, Constitution, or authority.

The value of these opinions can not be too highly estimated. If great ability combined with large experience in affairs of state can enable men to speak with authority, then it is true that in all the past no such galaxy of names in America and France can be produced to counterbalance the authority that should be given to and go with the opinions I have gathered together and cited.

Prior to the late war fourteen States had by resolutions of their Legislatures indorsed the validity of these claims and demanded their payment. Of these States New York has twice, Massachusetts five times, Maine eight times, Connecticut twice, and Rhode Island four times, in this solemn and persuasive way, testified their belief in the justice of these claims and made demand for their payment.

Here is a list of the States, and the day and date of such indorsements, taken from Congressional documents:

No. 1. New York Legislature, May 8, 1848.
No. 2. New York Legislature, April 7, 1856.
No. 3. Ohio Legislature, February 23, 1847.
No. 4. Louisiana Legislature, February 2, 1848.
No. 5. Massachusetts Legislature, February 24, 1841.
No. 6. Massachusetts Legislature, January 23, 1844.
No. 7. Massachusetts Legislature, March 5, 1844.
No. 8. Massachusetts Legislature, March 4, 1852.
No. 9. Massachusetts Legislature, March 7, 1856.
No. 10. Maine Legislature, April 9, 1840.
No. 11. Maine Legislature, June 18, 1841.
No. 12. Maine Legislature, February 21, 1844.
No. 13. Maine Legislature, February 21, 1845.
No. 14. Maine Legislature, May 6, 1854.
No. 15. Maine Legislature, January 3, 1856.
No. 16. Maine Legislature, December 18, 1857.
No. 17. Maine Legislature, January 20, 1858.
No. 18. Connecticut Legislature, June 4, 1838.
No. 19. Connecticut Legislature, December 22, 1843.
No. 20. Connecticut Legislature, December 10, 1844.
No. 21. Delaware Legislature, January 10, 1842.
No. 22. Rhode Island Legislature, January, 1832.
No. 23. Rhode Island Legislature, February 23, 1844.
No. 24. Rhode Island Legislature, May 20, 1846.
No. 25. Rhode Island Legislature, April, 1856.
No. 26. Maryland Legislature, April 11, 1836.
No. 27. Alabama Legislature, January 9, 1841.
No. 28. Pennsylvania Legislature, March 12, 1838.
No. 29. New Hampshire Legislature, March 2, 1839.
No. 30. New Hampshire Legislature (against), February 14, 1842.
No. 31. Virginia House of Delegates, February 18, 1850.
No. 32. Arkansas Legislature, December 12, 1844; against, January 18, 1847; in favor, January 29, 1851.

WHAT WAS SUBMITTED TO THE COURT OF CLAIMS?

There is one other point in relation to these claims that I desire to urge upon the consideration of this House. It is, that under the act of January 20, 1885, whereby we referred these claims to the Court of Claims, we provided "that the court shall examine and determine the validity and amount of all the claims included within the description" of the act.

The question of their "validity" has therefore been expressly submitted to the court by the jurisdictional act. The decisions reported to Congress show that the question has been fully and carefully considered, and the court decides that those reported favorably to Congress constitute "valid obligations" of the United States.

It is true that these are not final judgments and power to render final judgments was not conferred upon the court, but we did refer it to the court to ascertain "the validity and amount," and as bearing on those questions Congress has incurred the expense of sending abroad for evidence to be used on either side and has devolved heavy expenses on the claimants in the prosecution of these claims before the court. Now, after five years of investigation by the court of our own selection, petitions asking nearly $20,000,000 have been finally disposed of and only $1,666,748.15 have been allowed as constituting "valid obligations." There is no place for any bugbear in these claims, and the duty of Congress in the face of that decision of our own court to which we sent the claims is too manifest for discussion.

WHAT AMOUNT IS PROBABLY REQUISITE TO FINALLY LIQUIDATE THESE CLAIMS?

Senator Sumner, in his elaborate report of April 4, 1864, enters exhaustively into a detail of the number of vessels captured and their value, and from an average of 1,547 vessels paid for to the United States under conventions for the payment of similar claims by Great Britain, Spain, France, Denmark, Naples, Mexico, and Colombia, 1,547 in all, he deduces a general average of $14,336 for the cargo of each vessel, and puts the full number of vessels unsettled for by France at 898, amounting to $12,572,000. In my report made to this Congress, page 53, I state the Attorney-General states in his report for 1889 that petitions aggregating about $30,000,000 have been filed in the Court of Claims. I call the attention of the House to that part of my report on the value, and will only add, that of that $30,000,000 in round numbers, out of which there have only been allowed to the claimants the sum of $1,666,748.15, I do not believe that in the $10,000,000 of claims still remaining for adjudication there will be any such disproportionate dismissals as prevailed among the $20,000,000 so far adjudicated.

When I consider that so far the claimants have presented select cases, those that are most easy to be proven, and when I remember that by the provisions of the law of January 20, 1885, referring these claims to the Court of Claims for adjudication, that the court is required to determine the amount and validity of all claims, together with present ownership, under the forms and rules of law, and upon competent evidence, I feel confident that not more than one-half of the remaining $10,000,000 can possibly be put into judgments by that court; in which event, under all the safeguards thrown around these cases by the United States in the requirements of proof, I can not believe that more than $7,000,000 of money will be required to liquidate and settle all claims, including those in the pending bill and those hereafter to be allowed.

The Tariff.

REMARKS
OF
HON. JOHN DALZELL,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 27, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes.

Mr. DALZELL said:

Mr. SPEAKER: We have now reached a place where it is safe to assume that the people of this country are to enjoy the benefits of a wise protective-tariff law enacted upon the line of protective principles and in redemption of the pledges of the Republican party. Secure, as we believe, for the future in the promise of material prosperity to result from this wise, economic measure, we are led to hope that the day is not far distant when legislation equally wise in another direction shall secure to every citizen of the Republic his constitutional right, without fear of fraud or intimidation, to cast his ballot and have it counted as cast. The necessity for a Federal election law and the benefits to result therefrom are so clearly and emphatically expressed in the paper that I hold in my hand that I satisfy myself without further intrusion upon the House with submitting it as part of my remarks:

FAIR ELECTIONS OR FOUL, CHOOSE—SHALL THE DEMOCRATIC PARTY CONTINUE TO OCCUPY FIFTY-ONE STOLEN SEATS IN CONGRESS?—WHAT THE NEW LAW SAYS—IT IS NATIONAL, FAIR, SIMPLE, DIRECT, AND EFFECTIVE—CENTRALIZATION IN THE SOUTH—HOW THE ELECTORAL MACHINERY IN THE SOUTHERN STATES IS HELD IN A FEW STRONG HANDS—SOUTHERN TESTIMONY AS TO SOUTHERN METHODS—BY SUPPRESSING REPUBLICAN BALLOTS TEN MEN GET INTO CONGRESS FROM THE SOUTH ON FEWER VOTES THAN ARE REQUIRED TO ELECT ONE CONGRESSMAN IN THE NORTH—THE SUPREME COURT'S WARNING NOTE.

No issue in the present campaign is more important to the individual citizen than that which arises upon the Federal elections bill. The House of Representatives is a national body. Its members represent not a sovereign State, nor the sovereignty of a Congressional district, but the indivisible sovereignty of the American people. The man who takes a seat in the House of Representatives through a certificate which fraud or violence has given him commits a gross outrage, not merely upon the people of the district he is falsely alleged to represent, but upon the people of every other Congressional district in the Union.

It has been said that the elections bill passed by the present House is sectional in its character. Nothing but a guilty conscience can explain such a charge. The bill says that ballot-box stealing shall be a crime; that false registration and unlawful interference with registration, and the making of false poll-lists, and bribery, and the willful rejection of legal votes, and the willful acceptance of illegal votes and the fraudulent substitution of one ballot for another, and the placing of ballots not lawfully cast in a ballot-box, and the unlawful removing of lawful ballots from a ballot-box, shall all be crimes. It says that these acts shall be crimes everywhere, in every district of the Union—wherever they occur. There is nothing in this that imputes dishonor to one part of the country. The bill is "sectional" only in its application to any section and every section where such crimes are committed.

The Republican party does not pretend that in practice the bill will not apply more largely to the South than to the North; but this is the fault only of the Southern people. No condition of fact is taken for granted which Southern leaders and Southern newspapers have again and again declared to exist. It is not to Republican authorities, North or South, that the intelligent voter needs

to go for evidence of the unrighteous crimes that are perpetrated in every election throughout the Southern country.

In a dispatch to the New York Sun, a Democratic organ, dated September 11, 1890, at Jackson, Miss., where a convention is now in session to revise the constitution of that State, a long account is given of a speech delivered by Judge Calhoun, the president of the convention. These extracts are taken from that dispatch:

BOUND TO TELL THE TRUTH IF THINGS GO TO PIECES.

The judge reviewed all the franchise plans submitted to the convention, and insisted that none but the Campbell plan and that which he had presented himself would insure white control in the State. It was a law of divine ordination, he said, that the white race can not tolerate divided sovereignty, and any Legislature would have the stamp of idiocy upon it that would assemble such a body as this, with the enormous attendant expense, with an object short of this. Let the truth be told, if it bursts the bottom out of the universe.

FRAUD AND FORCE AND MURDER UPON INDIVIDUALS TO BE CHANGED TO FRAUD, FORCE, AND MURDER UPON THE STATE.

He did not propose to mince matters and hide behind a subterfuge, but if asked by anybody if it was the purpose of the convention to restrict negro suffrage he would frankly answer:

"Yes; that is what we are here for."

The fiat had gone forth that fraud, force, and intimidation must cease, and if the convention failed to insure white supremacy by peaceful methods he would, in case a negro was hereafter killed in a political riot, regard himself and every member of the convention an accessory to the murder.

The speaker then made an elaborate constitutional argument to prove that the plan he favored was republican in form. This plan divides the State into thirteen gerrymandered election districts, eight of which will have white majorities, and electors of these districts shall elect all State and county officers, and the senate and the Legislature shall alone be elected by the people.

CENTRALIZED SOUTHERN GOVERNMENTS—NO SUCH THING EXISTS IN THE SOUTH AS THE TOWN MEETING OR GENUINE LOCAL SELF-RULE.

There is a brutal frankness about Judge Calhoun's speech which is of great value in enabling the people of the United States to come to a correct judgment as to the attitude of the Southern Democracy toward the colored race. This is not the sort of language usually heard from Southern men in Congress or when they visit at the North. They come into the Capitol or at the New York and Boston dinners of the New England Society, and talk for hours of the "harmony between the races" and the "growing sentiment of good-will." They invoke the shades of their "old mammies" to witness their affectionate regard for the negro. But there are Southern men who, like Judge Calhoun, prefer to be honest and brutal than uncandid and suave, and certainly the honest way is the better way. It leads to a fair understanding all around.

Judge Calhoun says, then, that the Mississippi convention is assembled for the purpose of "restricting negro suffrage." He says the people are tired of "force, fraud, and intimidation," a statement which comes hard upon the multiplied declarations of Southern Congressmen that such things do not exist. But the people are not tired of the object which these crimes were committed to secure. That object must still be accomplished, and he proposes the way. He will put the government in the hands of a select body of white men, chosen from the white counties. This star chamber, with the selection of which only a minority of citizens shall have anything to do, is to be supreme in all affairs. It is to elect State officers, county officers, township officers. It is to levy the taxes and to spend them. It is to be sovereign and irresponsible!

NOT A NEW SCHEME.

And this is what Southern Democrats call "local self-government." This is the "liberty" they have been denouncing the Republicans for venturing to assail! Every Democratic speech against the Lodge bill has been an appeal for the vindication of "local self-government" against the "revolutionary measures" of the Republicans. And this is a sample of the priceless boon they are striving to protect.

Judge Calhoun's scheme is not a new one. In motive and in effect, if not in form, it is already in operation in every Southern State. Delaware has accomplished it by means of a poll-tax which is so administered that no negro can get his name on the poll-list, and therefore no negro can vote. Maryland's last Legislature, which gerrymandered the State to prevent the re-election of its present Republican Congressmen, also adopted a star-chamber scheme by which all government is invested in a few officials. Congressman HAUGEN, in a recent speech, stated the situation in these impressive words:

"In none of the southern tier of States is the choice of election officers lodged in the community in which they are to serve. In Virginia the system is a perfect wheel with the Legislature at the crank. There never was a more perfect invention for self-perpetuation in office. In Maryland, from the very beginning of colonial government down to the session of the last Legislature, the power of appointing local election boards was vested in the sheriff of the county. But some of the counties elected Republican sheriffs, and the late Democratic Legislature placed the power of appointing local election officers in the hands of the governor.

"In Mississippi an electoral commission, consisting of the governor, lieutenant-governor, and secretary of state, forms the fountain-head from which flows all authority to supervise and control elections. In Alabama this power is vested in certain county officers; in South Carolina it is in the State, and likewise in Florida and North Carolina. In short, you may look all through the Southern States in vain for a discoverable trace of the home, town, or city government inherited from New England. The tendency is all the time in the opposite direction—to rob the local community of the privilege of controlling its own affairs."

It will not be uninteresting nor impertinent to reproduce in this relation a sentence from a speech delivered by Congressman MCCOMAS. It throws a glaring light on the results of the centralized system. It is a complete answer to the Democratic allegation that the so-called "negro governments" ruined the South and rendered white supremacy necessary for the honest administration of government. "Within a short period," said Mr. MCCOMAS, "the treasuries of half the States in the South have been plundered by defaulting State treasurers: by Vincent, of Alabama; by Polk, of Tennessee; by Tate, of Kentucky; by Burke, of Louisiana; by Nolan, of Missouri; by Hemmingway, of Mississippi, just convicted, and by Archer, of Maryland. Minority rule is inevitably corrupt rule."

A SAMPLE SOUTHERN JUDGE.

He explains that fraud and murder are "undemocratic," and says they should be avoided, "if possible."

In Judge Calhoun's speech, quoted above from the New York Sun, he refers to the "Campbell plan." This is a plan, not unlike his own, which is suggested by Hon. J. A. P. Campbell, now a member of the supreme court of Mississippi. In an address issued to the people of that State in anticipation of the constitutional convention now sitting, Judge Campbell used these words: "I know full well we can continue to govern this country. I have no fears as to that. But if we should have to resort to shotguns and Winchesters, or to fraud, that would be too undemocratic for me, and it would be destructive of that liberty, equality, and fraternity so dear to us, and should be avoided if possible."

"If possible!" Just think of that! Think of the diseased condition of public sentiment which would admit the possibility of such language as this from a judge of the highest court of a free American Commonwealth! Just think of such an official, feeling himself called upon to explain that "shotguns, Winchesters, and fraud" are "undemocratic" and "destructive of liberty and equality!" Think of the grim satire contained in the phrase "so dear to us!" And think of a supreme court judge urging his fellow-citizens, to whom this "liberty" is "so dear," to avoid murder and fraud, "if possible!"

The Charleston News and Courier, the leading Democratic newspaper of South Carolina, recently remarked that it was "appalled at thinking that the rising generation of white men in the South is being taught that elections are to be carried, not by the honest vote of a fair majority, but by rank intimidations, subterfuge, and evasion."

It may well give this cry of alarm. It may well summon its people to stop and to think. It may well ask them to consider the results upon domestic as well as public morals when these methods are openly practiced by Anglo-Saxons and professed christians. "We have carried this sort of thing," said the Columbia Register recently, "as far as it can possibly go, and the result is that we are fast getting to be a set of rascals within our party limits, if we have not got there already." It is a pity that these warnings and confessions are not oftener heard in the South. They usually come not as open confessions, but as insolent boasts, as bravado, or as cynical mockery. In the debate upon the Lodge bill Congressman HEMPHILL, of South Carolina, was bold enough to say, "We know that we must either rule the South or leave it, and, for myself, I swear we will not leave it!"

The New Orleans States, commenting on a speech of General Chalmers in his late contest, declared with cold bluntness, "It is true that the people of Mississippi do suppress the negro vote, and they make no effort to conceal that fact." The Birmingham (Ala.) Age, seemingly dull to the grim humor of its statement, defended its people recently by asserting that "There are no places where the negro is not allowed the unrestricted right of ballot, unless it be in those regions where he constitutes a majority!" And Henry Watterson, the bravest and certainly the ablest of the Democratic editors of the South, has honestly proclaimed the dishonesty of his neighbors in these plain, straightforward words: "I should be entitled to no respect or credit if I pretended that there is either a fair poll or count of the vast overflow of black votes in States where there is a negro majority, or that in the nature of things present there can be."

WHAT THESE METHODS LEAD TO.

These glimpses into Southern acts and motives enable us to understand and appreciate the tone of sad regret which rendered a recent remark of General SPINOLA, the Tammany Congressman, so moving. The general was bewailing the difficulties under which Northern Democrats labored in their efforts to get into Congress. "With us," he said, "it is a struggle to put a man into this House. A tremendous battle has to be fought in every Congressional district of the North. But how easy a matter it becomes below Mason and Dixon's line! One gentleman is declared to be the candidate, his neighbors rally around him, he is put to no expense, he is called upon to perform no labor in the canvass, the ballots are printed, and they are deposited, and he is elected."

How very fine, to be sure! How very nice and slick and comfortable! But the Tammany cynic could scarcely have had before his eyes the dreadful dramas that these methods are enacting. Men, even if their skins are dark, do not easily resign a liberty once gained and exercised. They do not willingly relinquish their right to speak their thoughts and act their will. Over against the agreeable situation that this Northern Democrat so much covets and admires, let the picture of its results be placed as they were sketched by Judge Cunningham, the Democratic magistrate who urged his grand jury to discover the rascals through whose atrocious crime Clifton R. Breckinridge was covered with the stolen mantle of the dead:

"There is no man who does not know that murder and assassination are the results and will continue to be the results of the political methods that have been employed in this country to carry the last election, and the meanest man in the country is the professed politician who advocates or indorses such methods. You must stop this ballot-box stealing, force, and fraud, or the title to your property will not be worth the paper it is written on. Democracy means that the people shall rule, and we are told that it is undemocratic to denounce bulldozery, ballot-box stealing, and assassination. If this be true, then I am no Democrat. If apology for bulldozery, ballot stealing, and assassination constitute Democracy, then may the angels and ministers of grace protect me from such Democracy!"

CURIOUS SOUTHERN FIGURES—THEY SHOW HOW THE COLORED VOTE IS SUPPRESSED AND HOW THE POLITICAL CHARACTER OF CONGRESS IS THEREBY REVERSED.

It is not pretended by the Republican party that it can legislate virtue into communities that are insufficiently provided, or that it can send the Northern people down South to see that the Southern people behave themselves on election day. It is not pretended that the Federal authorities have any power or duty with regard to State elections. It is simply claimed that by the Constitution Congress is a national body, and that the rights of all the people everywhere are involved in every Congressional election.

It is an outrage on New York and New England if the votes of their Congressmen are nullified by the votes of an equal number of persons who are sitting in Congress on a certificate secured through fraud and murder. The Constitution was not unmindful of the possibility of such a situation, and it gives Congress an authority over Congressional elections which the Supreme Court has pronounced to be supreme and paramount.

If that authority is ever to be invoked, surely now is the time and here is the occasion. The Southern people are represented in Congress according to their population. The colored people are counted to give the South its representation, but they are not permitted to have a voice in deciding of whom that representation shall consist. Their existence serves to double the South's numerical strength in Congress, and then they are disfranchised, and thus the vote of a Southern white man counts for twice as much as the vote of a Northern man. A glance at the returns of the last election in Mississippi shows how the suppression of the colored vote is managed.

According to the last census, Mississippi contained 108,245 white males of voting age and 130,278 colored. There are fourteen counties in the State where the whites have a clear majority, and fourteen other counties where the colored voters are numerically in the majority. Now, in the white counties the negroes were not materially interfered with, and 62 per cent. of them actually voted. But in the counties where their strength naturally gave them a fair chance of success they were not permitted to vote, and less than 12 per cent. actually got their votes cast and counted.

In Claiborne County, for instance, where there are 986 white voters and 2,566 colored, Cleveland received 590 votes and Harrison only 12. In Lowndes County, where there are 1,490 white voters and 5,006 colored, Cleveland received 1,122 votes and Harrison only 17. In Yazoo County, where there are 2,238 white voters and 5,363 colored, Cleveland received 1,196 votes and Harrison only 7; and in Noxubee County, where there are 1,360 white voters and 4,819 colored, the returns, as they were counted, gave Cleveland 845 votes, and Har-

rison not one! This is the State where Judge Calhoun and Judge Campbell are now laboring, as they openly declare, to restrict the colored vote. If they succeed in restricting it any more than it is already restricted, what on earth will they do with it?

TWENTY-SIX STOLEN SEATS.

South Carolina and Kansas are each of them entitled to seven Congressmen. Each contains about the same number of voters. This table shows the total votes cast in each of the Congressional districts of those two States in 1886:

South Carolina.			Kansas.		
District.	Name.	Votes.	District.	Name.	Votes.
First	Mr. Dibble	3,317	First	Mr. Morrill	31,287
Second	Mr. Tillman	5,235	Second	Mr. Funston	34,792
Third	Mr. Cothran	4,499	Third	Mr. Perkins	36,716
Fourth	Mr. Perry	4,479	Fourth	Mr. Ryan	38,084
Fifth	Mr. Hemphill	4,701	Fifth	Mr. Anderson	35,996
Sixth	Mr. Dargan	4,469	Sixth	Mr. Turner	33,025
Seventh	Mr. Elliott	12,476	Seventh	Mr. Peters	61,465

Total for seven Congressmen in South Carolina 39,077
Total for seven Congressmen in Kansas 271,365

In other words, one voter in South Carolina exercised as much influence in Congress as seven voters in Kansas.

There are twenty-six Congressional districts in the five Southern States of Alabama, Georgia, Louisiana, Mississippi, and South Carolina, where the colored people are in a clear majority according to the census of 1880. Every one of these districts is, and for years has been, represented by a Democrat. This table tells the story:

State and district.	Representative.	Term.	Total vote as returned.	Majority for Representative as certified.	Colored majority in district as returned by census 1880.
ALABAMA.					
First	R. H. Clarke, Democrat	First	18,699	4,489	2,858
Second	H. A. Herbert, Democrat	Seventh	21,244	6,838	249
Third	W. C. Oates, Democrat	Fifth	16,216	10,478	3,149
Fourth	L. W. Turpin, Democrat	First	24,403	13,153	26,612
GEORGIA.					
Second	H. G. Turner, Democrat	Fifth	11,000	11,000	3,763
Third	C. F. Crisp, Democrat	Fourth	12,750	6,124	2,431
Fourth	T. W. Grimes, Democrat	Second	13,923	5,673	2,947
Sixth	J. H. Blount, Democrat	Ninth	8,934	8,934	8,229
Eighth	H. H. Carlton, Democrat	Second	9,634	5,182	4,180
Tenth	G. T. Barnes, Democrat	Third	7,374	5,780	6,145
LOUISIANA.					
Fourth	N. C. Blanchard, Democrat	Fifth	17,265	15,339	5,752
Fifth	C. J. Boatner, Democrat	First	22,670	20,124	22,154
Sixth	S. M. Robertson, Democrat	Second	16,812	7,964	4,545
MISSISSIPPI.					
Second	J. B. Morgan, Democrat	Third	19,902	8,161	2,468
Third	T. C. Catchings, Democrat	Third	16,238	7,010	14,720
Fourth	Clarke Lewis, Democrat	First	15,251	10,459	5,973
Fifth	C. L. Anderson, Democrat	Second	20,269	12,271	1,570
Sixth	T. R. Stockdale, Democrat	Second	14,084	9,116	1,327
Seventh	C. E. Hooker, Democrat	Sixth	15,864	8,691	6,440
SOUTH CAROLINA.					
First	Samuel Dibble, Democrat	Fourth	9,855	7,244	2,236
Second	G. D. Tillman, Democrat	Fourth	12,337	9,299	6,643
Third	J. S. Cothran, Democrat	Second	8,774	8,759	1,210
Fourth	W. H. Perry, Democrat	Third	11,416	11,410	1,599
Fifth	J. J. Hemphill, Democrat	Fourth	9,586	9,559	2,610
Sixth	G. W. Dargan, Democrat	Fourth	8,972	9,259	3,296
Seventh	William Elliott, Democrat	Second	15,435	1,355	24,899

Total vote in all these districts 378,897
Number of Congressmen elected 26

This total vote is but little greater than the total vote of the single State of Wisconsin in that same election. In Wisconsin, 353,691 votes were cast, and they elected nine Congressmen. In these five Southern States the total vote was 378,897, and it elected twenty-six Congressmen. Is that fair and honest? It would be bad enough were it the result of popular indifference to the duties of citizenship, but when twenty-six seats in Congress can be continuously stolen, year after year, and are so stolen, by intimidation, ballot-box stuffing and stealing, force and fraud, thus completely reversing the political character of the popular branch of Congress, a situation is produced which makes legislation necessary for the very safety of the Republic. In deciding the famous Yarborough case the Supreme Court uses these portentous words:

"If the Government of the United States has within its constitutional domain no authority to provide against these evils (force and fraud), if the very sources of power may be poisoned by corruption, or controlled by violence and outrage, without legal restraint, then, indeed, is the country in danger, and its best powers, its higest purposes, the hopes which it inspires, and the love which enshrines it, are at the mercy of the combinations of those who respect no right but brute force on the one hand, and unprincipled corruptionists on the other."

Is free government worth preserving? Is the nation's plighted faith to be preserved? Are citizens to be cheated and outraged merely for insisting on their plain rights as citizens? The issue is clear. Come, now, what do you say?

I conclude in the language of Senator Frye:

Cowardice never yet won a battle—never yet preserved a friend.

The Tariff.

SPEECH
OF
HON. MARK H. DUNNELL.
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, September 27, 1890.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes.

Mr. DUNNELL said:

Mr. SPEAKER: The hour has come for a vote in this House upon a subject-matter of legislation which has occupied the time of committees, the House and the Senate, from the very beginning of this session, nearly ten months ago. The imposition of duties upon foreign imports has been followed from the very first months of our national existence under the Constitution. The right to lay duties for purposes of revenue for the support of the Government has never been questioned by any party or any class of men. It is not my purpose to enter upon a general discussion of the tariff question at this time.

While I shall give my vote for an adoption of the pending report it will be given me to say that while I fully indorse and indeed congratulate all classes of the country upon many provisions of the bill, there are some which I would have different. This report will have my vote because the good provisions of the reported bill, as I call them, far outnumber those which have seemed objectionable. No thoughtful person can fail to discover the difficulties attending the arrangement of duties. Sections of the country are differently affected by any tariff.

The diversified capabilities of the nation render it well-nigh impossible to make a tariff which shall bear upon each State and each industry of all the States with exactly equal weight. It has been the duty of Congress to seek the least possible inequality. Taxation, either direct or indirect, is necessary. No government can exist which does not impose some burdens upon its subjects.

Indirect taxation has been the method of the United States in raising revenues for the support of the Government. There has been no Administration of the Government, from Washington to this time, which has not, in the adjustment of duties for the purposes of revenue, had in view at the same time the encouragement and protection of home industries. The amount of this protection did not really divide or characterize parties till the Administration of Jackson. While he was a protectionist, his party became more distinctly the party advocating a tariff for revenue with incidental protection. It was not my purpose to go into a history of protection. It may, however, be proper to refer to the national election of 1888.

The Republican party was for protection to American industries and to American labor. The Democratic party came to the very borders of free trade. The protective features of the pending tariff bill are the demand of the people as proclaimed in the election of Benjamin Harrison. The measure of protection, or rather the amount, has more or less divided the friends of the bill. It seemed to me that the increase of duties on woolen goods was more than the increase of the duty on wool; but when I am informed that, under the present low duty on wool, 160,000,000 pounds of wool came into this country the last year in manufactured cloth and that not less than $100,000,000 were paid out for foreign-grown wool, every pound of which we could have raised at home, I am better content with the wool schedule. It can also be stated that the increased duty is upon the high-priced woolens, while there has been a reduction in the duty on the cheaper woolens.

When the tariff bill was first before the House I offered an amendment to the tin-plate clause for a reduction of the proposed duty of 2.2 cents per pound to 1 cent per pound, the present duty. This motion was ruled out of order and no vote was taken on it. I then voted for the clause now found in the bill, for it was a very favorable modification of the original clause in the bill affecting the duty on tin-plate. I continue in the belief that the tin-plate provisions of the bill are wrong; that the bill gives a large protection to an industry very largely imaginary. I hope for a favorable result and am willing to insert in my remarks the following sentences from the speech of the honorable gentleman from Wisconsin [Mr. LA FOLLETTE]:

What will a protective duty on tin-plate accomplish? It will enable us to make from twenty to twenty-five million dollars' worth of tin-plate in this country annually. What does that mean? It means that to produce the 1,000,000 tons of additional iron ore, the 2,000,000 tons of additional coke and coal, the 450,000 tons additional pig-iron, the quarrying of 700,000 tons of additional limestone, the 15,000 tons of Dakota block tin, the 3,000 tons of additional lead, the 6,500 tons of additional tallow and oil, the 20,000 tons of additional sulphuric acid, the 30,000,000 feet of additional box lumber, to turn the pig-iron into sheet-iron, to make the machinery and keep it in repair, and to freight the materials will give constant and remunerative employment to 40,000 men, with their families, making a population of 200,000 directly dependent on this great industry, which will build up quickly in this country under this bill. To these added wage-workers will be paid annually $21,000,000 in wages, to be in large part expended among the farmers and merchants of this country.

That is what this increased duty will do. It will do more; it will give us very soon tin-plate at a cheaper rate than we pay to-day, give us a steady and reliable market which will re-p nd to the gradual cheapening cost of production and the controlling laws of domestic competition.

The honorable gentleman from Michigan [Mr. BURROWS] further defends the tin-plate provision of the bill as follows:

No valid reason can be furnished for continuing our dependence upon a foreign country for the supply of this article of prime necessity in every household. No reason can be assigned why we should continue to pay tribute to England, as we did last year, at the rate of $22,000,000 annually, to be continued in ever-increasing exactions.

This proposition to increase the duty on tin-plate will undoubtedly provoke the severest criticism of the Democratic party. This is to be anticipated. It is in conflict with its theories of "free trade." It would never occur to modern revenue reformers to build up a new industry in the United States by the imposition of a protective duty on the competing foreign article. They much prefer a tariff for "revenue only," and when under such a duty the domestic industry languishes, instead of throwing over it the shield of governmental protection they would expose and abandon it to the assaults of a merciless foreign competition, to which it must inevitably succumb.

We are determined that this disgraceful surrender shall not be consummated. We can make our own tin-plate. We have the material, the capital, the labor, the skill, the genius, and under this bill, when enacted into law, a new industry will spring into life, bringing to the American people a renewed source of wealth and to labor increased employment.

Here is an ordinary pail [exhibiting sample] such as is used by workingmen, containing a coffee receptacle and a tin cup. This whole outfit costs at wholesale 25 cents and at retail in Philadelphia just 35 cents. Removing the wire handle, the weight of the remainder is just 18½ ounces; allowing one-half ounce for wire and solder used in its manufacture and we have 18 ounces, or 1⅛ pounds of tin-plate in this dinner-pail. Now, assuming that the present duty of 1 cent a pound on tin-plate is included in the price (35 cents), the 18 ounces of tin-plate used in the manufacture of this pail would represent exactly 1⅛ cents.

If the duty were now to be doubled and the cost of tin-plate should be increased correspondingly, and this increased duty should be added to the price of the dinner-pail, it would cost the workman 36⅛ cents instead of 35 cents he now pays. One and one-eighth cents is therefore the full measure of the additional burden he would be called upon to bear, as a compensation for the establishment of a great industry in the United States, which would give employment to 35,000 of his fellow-workmen, whose annual wage earnings would be $23,000,000.

It is a matter of congratulation that there has been a large increase in the protective duty upon all the products of the farms of the country, while the Mills bill of 1888 had a large reduction of the duty, and many of them were placed upon the free-list. There were imported into the country the last year of farm products $200,000,000 worth. The bill also makes a large reduction in the duty on steel rails and in the metal schedule many reductions are found. The following statement is taken from the speech of Mr. LA FOLLETTE:

This bill reduces the duty upon iron, round, square, and flat, such as used by the blacksmith; upon beams, girders, and all structural iron; upon forgings of iron or steel; upon hoop or band iron when not cut to length, flared, or otherwise manufactured; upon steel rails; upon blacksmiths' tools; upon wedges, crowbars; upon bolts and nuts; upon cast-iron pipe; upon all castings of iron; upon chains of all kinds; upon files; upon cut-nails and spikes; upon certain sizes of wire nails; upon cut tacks and brads; upon needles, and places sewing-needles upon the free-list, reduces copper one-half and puts nickel on the free-list, and upon all items of the metal schedule where reduction can be safely made without risk to producers or consumers in this country.

The country will applaud the provisions of the bill that places all sugars under No. 16 in color upon the free-list, saving annually to the consumers of this article of universal use not less than $56,000,000. To the farmers of the West this bill furnishes a great relief by a reduction of the duty on binding-twine from 2½ cents per pound to 7 mills per pound. The Mills bill fixed it at 15 per cent. ad valorem, equivalent to 1½ cents per pound. These real and substantial provisions far outweigh any apparently high duties on other articles. It will, therefore, have my vote and my defense before my constituents.

That a proper protection tends to a reduction in the price of articles manufactured at home can not be controverted. I insert some letters found in the speech of Mr. LA FOLLETTE. The writers are personally known to me and their statements are entitled to the utmost confidence:

FULLER & JOHNSON MANUFACTURING COMPANY,
Madison, Wis., April 29, 1890.

DEAR SIR: Your favor of 26th received, and I hasten to name the prices of some of the leading articles of agricultural machinery in the years named: 1870 to 1875, self-raking reapor, $160 to $190 currency; 1880, self-raking reaper, $145 to $150 gold; 1885 to 1889, self-raking reaper, $60 to $70; 1876 to 1882, self-binders, $300 to $325; 1888 to 18-9, self-binders, $115 to $130; 1870 to 1875, mowing-machines, $100 to $120 currency; 1880, mowing-machines, $80 to $90; 1883 to 1890, mowing-machines, $50 to $60; 1870 to 1875, horse-rakes, $40 to $45; 1880 to 1890, horse-rakes, $20 to $27.

Other farm machinery would run in about the same proportion. There has been a proportionately greater fall in the price of self-binders than other machinery, because they were not manufactured prior to 1875. It should also be remembered that the self-binder now bought for $115 is a much better machine than the one they paid $300 for. The same rule holds in other machinery, but not to so great an extent. Yet all farm machinery has improved very much in the last twenty years.

Yours truly,

J. A. JOHNSON.

Hon. ROBERT M. LA FOLLETTE,
Washington, D. C.

THE S. L. SHELDON COMPANY,
Madison, Wis., May 1, 1890.

DEAR SIR: It is with pleasure that I comply with your request and furnish you the retail prices of different prominent machines during the years mentioned.

Retail prices to farmers were as follows in 1870: Grain drills, from $100 to $115 each; broad-cast seeders, from $75 to $80 each; self-raking reapers, from $165 to $175 each; hand-raking reapers, from $130 to $140 each; mowers (for cutting grass), from $80 to $85 each; lumber-wagons, from $85 to $95 each; bob-sleds, from $40 to $50 each.

Between 1870 and 1880, and since, some prominent machines were invented, among which is the grain-binder and disk-harrow, which largely took the place of reapers and ordinary cultivators and harrows, and where machines were not superseded by others the machines in use were very much improved in capacity; and in spite of the material decline in prices they are very much better made and finished than formerly.

The prices were as follows in 1880: Grain-drills, $75 to $80 each; broad-cast seeders, $55 to $60 each; self-raking reapers, $120 to $130 each; mowers, $65 to $70 each; lumber-wagons, $65 to $70 each; bob-sleighs, $25 to $30 each; corn-planters, $45 to $50 each; sulky cultivators (for corn), $35 to $40 each; grain-binders, $200 to $250 each; binders, both wire and twine, were sold at $300 apiece for some years after they were invented, but had begun to decline in price in 1880.

Prices in 1885: Grain-drills, from $65 to $70 each; broad-cast seeders, from $45 to $50; self-raking reapers, from $90 to $85; mowers, from $55 to $60; lumber-wagons, from $55 to $65; bob-sleighs, from $23 to $25; corn-planters, from $35 to $40; sulky cultivators, from $28 to $35; grain-binders, from $140 to $160.

Prices for 1890: Grain-drills, from $55 to $65; broad-cast seeders, $35 to $40; self-raking reapers, from $60 to $65; mowers, from $45 to $55; lumber-wagons, from $50 to $60; bob-sleighs, from $18 to $23; corn-planters, $30 to $35; sulky cultivators, from $24 to $28; grain-binders, from $115 to $135.

Hoping this statement will reach you in time, I remain

Yours truly,

S. L. SHELDON.

Hon. ROBERT M. LA FOLLETTE,
Washington, D. C.

There has been a large reduction in the price of articles which enter into daily use and consumption on every farm, and also in the price of articles purchased for use in every family as well. Some of these articles and their prices in 1880 and in 1890 I will insert below.

These prices emphatically refute the oft-repeated charge of the free-trader that the tariff is a tax paid by the consumer. There are many instances, as in the case of cut and wire nails, where we purchase the domestic article for less than the duty, and how can it be said in such cases that their cost is enhanced by the amount of such duty?

Articles.	Price in 1880.	Price in 1890.
Barbed wire, per pound	$0.10	$0.04
Fence staples, per pound	.10	.05
Iron nails, per keg	6.00	
Steel nails, per keg		2.80
Plain wire, per pound	.06½	.03½
Wash-boiler	2.25	1.75
Stove-pipe joint	.25	.20
Horseshoes, per keg	8.00	4.50
Tool steel, per pound	.20	.12½
Plow steel, per pound	.13½	.08½
Cook stove	$33.00	$24.00
Mattock and handle	.40	.85
Wrench	.75	.40
Blossburgh coal, per cwt.	.80	.45
Bull ring	.40	.25
Putty, per pound	.10	.05
Shot, per pound	.12½	.08
Iron, per pound	.05	.03
Four-tined fork	.75	.50
Seat spring, pair	1.75	1.00
Lantern	1.50	.75
Common clevis	.20	.10
Milk pans, per dozen	2.25	1.00
Buggy springs, per pound	.20	.10
Swedes iron, per pound	.12½	.06
Cartridges, per box	.35	.15
Wire cloth, per foot	.06	.03
Post-auger	2.25	1.25
Sugar, granulated, per pound	.12½	.07
Sugar, standard A	.11	.06⅞
Sugar, C	.10	.06½
Kerosene oil, 150 test, per gallon	.25	.13
Kerosene oil, 175 test, per gallon	.35	.15
Salt, per barrel	2.25	1.25
Unbleached muslin, per yard	.08	.06
Calico, per yard	.07	.05
Gingham, per yard	.12½	.10
Worsted dress goods, per yard	.15	.12½
Do	.35	.25
Do	.65	.50
Do	1.00	.75

I have failed to enter my hearty approval of the reciprocity provisions placed in the bill by the Senate, and further failed to state that the duty has been reduced on pine lumber 100 per cent.

With the passage of the tariff bill the work of the first session of the Fifty-first Congress will end.

No single session in the history of the Government, in a time of peace, has achieved so much for all the people of the country as this. The Cleveland Administration held possession of the Government for four years, but it was completely barren of results in the interest of the people. I will name some of the acts passed by this Congress:

1. The anti-trust act, prepared with great care that it may not be held unconstitutional, and intended to prevent trusts and combinations in domestic trade and commerce.

2. The disability pension act, by whose humane and just provisions every disabled defender of the Union, his widow and orphan, will be cared for. President Harrison gave the act a ready approval, while President Cleveland vetoed a similar bill.

3. The silver act, by which an additional sum of two and one-half millions of coin certificates each month are to be issued; a measure

which the agricultural and other business interests of the country are already and most favorably feeling. It is worthy of mention that the very month that Harrison was nominated for President the bullion in our silver dollar was worth but 70.57 cents, and on the 1st of this month it was worth 92.4 cents. This is Republican legislation, and the people will not be slow to note the effect. With this object-lesson before us it is safe to predict that the legislation of the Republican party will speedily bring the two metals together, so that our mints can be safely opened to the free coinage of both without doing violence to the convictions of our most conservative people or the teachings of sound economic principles.

4. The original-package act, a measure of great importance and made necessary by a decision of the Supreme Court.

5. The meat-inspection act, in the interests of the meat producers and exporters.

6. The land-grant forfeiture act, by which 8,000,000 acres of land are restored to the public domain and open to entry under the land laws of the country.

7. The anti-lottery mail bill, demanded by all good citizens.

8. The contract-labor bill, called for by all the labor organizations of the land.

[illegible] sent to the Senate the compound-lard bill, giving protection to the pork producers of the country; the bankrupt bill, demanded by creditors and debtors in every section of the land; the election bill, designed to secure honest elections in every Congressional district of the Union, a result that every patriotic citizen should devoutly desire; also a bill making it unlawful to employ convict labor upon public works; a bill forbidding the purchase by the Government of the products of convict labor, and a bill of national importance, an enlargement of the circuit-court system of the country in the interest of speedy justice. There are also pending in the House the pure-food bill, the Butterworth anti-option bill, and two very important shipping bills. If these bills are not reached this session they will become acts early in the next.

Land-Loan Bill.

SPEECH

OF

HON. LEWIS P. FEATHERSTON,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 27, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. FEATHERSTON said:

Mr. SPEAKER: I do not desire to discuss this tariff bill—volumes have been given to that subject—but simply to avail myself of this opportunity to get into the RECORD some reasons in support of the land-loan bill, introduced some time since by myself and referred to the Committee on Agriculture, but from which committee I have as yet been unable to obtain a report.

The purpose of the bill is to establish a land loan bureau, to be under the control of the Treasurer of the United States, by which loans are authorized to be made on cultivated farms, to the actual owners who are residents thereon, at 2 per cent. interest.

The increase in the currency to be accomplished by the recent silver legislation is a step in the right direction, and will do much to relieve present stringency and bring prosperity. But the difficulty which confronts us is to get into the hands of the people this increase of circulation, and whatever more is needed. The hope in introducing this measure is to open new channels by which the currency of the country may get to those of our citizens who are in distress for the want of it, and who can furnish ample security for its return.

For twenty-seven years our Government has furnished to the bondholders, whenever organized as national bankers, the currency of the nation at a cost of not exceeding 1 per cent. We will not here comment upon the wisdom of a policy which placed the control of the volume of the currency under the management of a number of corporations, under one general organization. I only desire to call your attention to the fact that within the next few years these bonds will be due, and can be and ought to be paid; also, that for the past several years the payment of these bonds has operated to contract the currency, while the production and business of the country has been rapidly expanding, $354,408,008 of such notes being in circulation in 1875 and less than half that sum of the same notes being in circulation at the present time. This, too, in the face of the fact that during the same time our population and production have about doubled themselves. Nothing has been done to counteract this contraction which to any extent keeps step with our development.

The facts and figures furnished officially by the Bureau of Statistics under the direction of the Secretary of the Treasury show that although the acreage and products of agriculture have more than doubled in the last twenty years the same amount of money purchases the increased product, and in fact less money is required to buy the corn crop of 1889 than it took to buy the crop of 1869, the acreage of 1869 being 37,103,245, with a production of 874,520,000 bushels, valued at $658,532,700, and that of 1889 being 78,319,651, with a production of 2,112,892,000 bushels, valued at $597,918,829; although more than twice the acreage and yield, the crop did not bring to the producers as much money as the crop of 1869 brought them. Other cereals show the same conditions. Official statistics will verify this statement. The same is shown as to the cotton crop. The crop of 1869 amounted to 2,260,557 bales, realizing $225,000,000; 1889, 6,935,082 bales, three times as much, worth only $292,139,209.

Here we have a threefold production bringing to the producer only a small amount more in money than he received for the crop of 1869.

This conclusively shows that the volume of the currency controls the price of products; that the money of to-day will purchase three times the quantity of production that the money of twenty years ago would have done.

I introduce these statistics not as an argument in favor of inflation, but to establish the fact beyond dispute that the volume of currency is the measure of values, and to show that those who control the volume of currency can exert an influence which should at no time be placed in the hands of a few soulless corporations or individuals. Such power can not be safely placed anywhere but with the nation.

A careful consideration of facts brings the inevitable conclusion that while the producer in general has been the sufferer under this system of contraction and uncertainty, the farmer has been the chief loser; he has planted under one price and gathered under another, and the profits which urged him forward under sunshine and through storms for a weary year have almost invariably slipped from his grasp with reduced prices. It is pertinent to this discussion to ask who are the beneficiaries of this system of contraction.

The bondholder has gathered in annual interest and principal together a sum equal to his original bond and 50 per cent. more, and his bonds now are worth as much corn or as much cotton or as much wheat as they were twenty-five years ago.

The bondholder and the national banker have controlled the volume of currency, and these are the results. Patiently, and partially from ignorance, the producers have submitted to this system. Three millions of them, now organized in open revolt, indicate that the weary toiler will not consent longer to so unfair a condition.

The law creating the national banks prohibits the loaning of money upon real estate as security. It conveys exclusive control of the volume of the currency to these corporations, and restricts their operations to ninety-day transactions upon personal security.

I am not ready to conclude that it was the intention of the Congress which formulated and passed this law to create a preferred class.

I shall not contend that it intended to place the farmers, whose productions were annual, at the mercy of the national banker and the merchant; and yet no man of intelligence and observation can deny that this has been the result.

The Government furnishes the banker the national-bank notes at a cost of 1 per cent. or less. The national bank supplies the merchant at ninety days at the rate of from 6 to 12 per cent.

This, then, goes to the producer, through the medium of the merchant, either in cash or supplies, at rates varying from 10 to 50 per cent. Under the law the farmer can get the necessary money to conduct his business upon no other basis.

His lands are not valid security. His crops require a year to be planted, gathered, and marketed. A loan for ninety days can be of no service to the farmer. So he must secure his accommodations from his merchant. This accounts for the unprecedented prosperity of our cities and towns, and the poverty and incessant labor of the farmers and producers generally.

This is a grievous fault in our financial system.

There is no one, I presume, to defend this condition upon the grounds of fairness or justice. The plea urged is that we know of no other way to conduct the finances of this nation.

We fear the results of any innovation upon the present system.

We desire to suggest that this financial plan was never completed. The genius which conceived it was too soon removed from the financial arena.

The branch which was to have supplied, at a low rate of interest, currency to the producer and manufacturer upon real estate as collateral was not added to the system, as evidently must have been the original intention.

Under the present plan, by which the Government prefers the banker and merchant of the country, they have accumulated thousands, if not millions.

The farmer has labored zealously, supported his family with difficulty, and finds himself in debt.

This bill asks that the balance of the financial plan be carried out, and that the Government do for those who feed the nation exactly the same thing which it has been doing for years for the national banker.

We do not object to paying tribute to our Government, but we oppose the creation of corporations by the nation which are to be empowered to distress the people of the nation. Let us have the currency direct and without the various arbitrary profits and circuitous methods of soulless corporations.

I ask you to come to the relief of the great mass of this people, whose labors have given us the crowning glory of civilization.

In this bill we ask that the Government broaden its financial policy. We ask that it secure to itself the interest it now allows and authorizes national banks to gather from its people.

We propose to furnish the unquestioned title to our homes, and only ask that there be loaned us one-half their appraised value. You loaned the bondholder 90 per cent.

You charged the banker 1 per cent.; we offer you 2 per cent. We could well afford to pay you 4, for we now pay your national banker 10. Why should he come between us and our Government? Why should you prefer him to us and force us to pay tribute to any one save "our country?" The interest-gatherer alone will complain of this departure.

The exact provisions of this bill are not material to us. We do not desire to dictate as to details. You may, if you fear inflation, limit the amount to be loaned and distribute it proportioned to the agricultural population of the different States, giving preference to the half million American farmers soon to be evicted from their homes because they can not longer support their families and pay 10 to 50 per cent. on their mortgages. For my part, I can see no danger from inflation when every dollar of your currency is backed by $2 of actual value.

Were one-half the amount of interest now paid to mortgage-holders on the homes of American farmers going into the Treasury of the nation there would be no need of the complicated and expensive system of revenue collection to which the nation must now resort to meet necessary expenses; thus another source of relief. Shall a republic search the archives of monarchies for precedents?

For one hundred years this Republic has been blazing a path through the trackless provinces of an unknown and unrealized destiny. Her audacity has been coupled with a success which has startled the world, and where a half-century ago she moved with uncertainty has now become the beaten road of all civilization.

By reference to the financial system of Russia you will observe that even this absolute monarchy came to the relief of a distressed agricultural population by similar loans within the past century.

During that period most of the countries of Europe have found it necessary to devise means by which money could be furnished to agriculture at a low rate of interest.

ENGLAND

in the year 1846 authorized the loaning to land-owners and did loan several millions to them at a less rate of interest than 2 per cent.

A parliamentary committee has recently made a report recommending the loan of $25,000,000, at a similar rate of interest, for the purpose of encouraging agriculture.

DENMARK.

In 1786 the government founded a Credit-Kasse, for the purpose of making advances for the improvement of agriculture, at 2 per cent. It has since then founded several savings-banks for the same purpose.

In 1850 a law was passed to form the establishment of banks to loan upon lands.

NASSAU.

In this little state a state bank was founded in 1840 to furnish advances to the communes and landed proprietors to redeem their ancient debts, tithes, and other burdens, to assist agriculture and commerce generally.

BELGIUM.

There are two in operation, one, Caisse des Propriétaires, a limited liability company, founded in Brussels in 1835 and incorporated for ninety-nine years.

It lends to the amount of 66 per cent. of the value of the land. The interest is fixed from time to time. The borrower pays besides something to extinguish the capital and not more than 1 per cent. on the loan for commission.

He may regulate the annuity so as to extinguish the debt in terms of from five to sixty years.

POLAND.

The Société de Crédit Foncier de Pologne was founded in 1825, and reformed in 1838.

It issues bonds bearing 4 per cent. interest, transferable by indorsement or delivery. The borrowers pay 4 per cent. interest, 2 per cent. to form a sinking fund, and a fee of 1 florin for notes of 200 or 500 florins, and 2 florins for those of 1,000 florins.

By this means the debt is redeemed in twenty-eight years. The sum advanced does not exceed one-half the estimated value of the land.

Is there a necessity for some such action upon the part of Congress? I quote from Judge Pepper, of Kansas:

The time has come for study; civilization is opening new fields for exploration. New phases of old things appear. There is a growing demand for larger liberty and greater equality of privileges. Half the wealth of the country is owned by a few thousand persons. Seventy men are rated at an average of $37,500,000 each, making an aggregate of $2,700,000,000; thirty other persons are put down at an average of $15,000,000 each, making a grand total of $3,000,000,000 as the ascertained wealth of one hundred citizens of the United States. And these are only conspicuous examples. It is estimated by a careful student, Thomas J. Shearman, that "the United States are practically owned by less than 250,000 persons." The distribution is expressed in these figures:

Class.	Families.	Wealth in millions of dollars.	Average per family.
Rich	182,090	43,367	$238,135
Middle	1,200,000	7,500	6,250
Working	11,620,000	11,215	968
Total	13,002,090	62,082	4,775

Poverty is increasing absolutely and relatively; farm values in all parts of the country are decreasing; renters and debts are increasing; agriculture is profitless, and wages are barely supporting. Money alone is returning large gains. Government bonds command 25 per cent. premium, and money dealers are reaping rich harvests, while farmers, with large crops, can pay little if any more than their taxes and the interest due on their debts. A change is inevitable.

Is the proposed plan practical? I quote from the same authority, discussing a similar plan, and I think applicable to the one submitted for your consideration:

The Government lending money to the people is not a new thing. It is at least twenty-seven years old. The national-bank act was passed for the very purpose of lending money to the people. Government bonds are deposited as security to bill-holders, the Secretary of the Treasury issues notes to the banks, and they lend them to the people. Upward of $358,000,000 of that kind of money was out among the people at one time, and there is now $181,000,000 of it.

The banks were made the agencies through which the money was distributed, and care was taken to apportion the number of banks to be established, so that the different parts of the country should be fairly supplied. And at this hour $47,000,000 of public money is held by 270 of these banks, placed there by the Secretary of the Treasury, without charge to the banks, simply to have it where the people can get it if they want it at bank rates of interest. * * * The Treasurer of the United States, in his report for the last year, calls attention to the money-lending feature of the Government's work.

"In becoming practically the sole issuer of currency," he says, "the Government has assumed the duty of supplying the needs of the public for a circulating medium." He devotes all of page 12 to this subject, suggesting points of interest, all having reference to the present method of getting money to the people through banks. Why not dispense with this costly method, and instead of giving money to the people charged with 6 to 10 or 12 per cent. interest—the profit of the banks—give it to them directly through Government agents, charging for the service only what the work is really worth?

If the money is for the people, why not give it to them directly without the intervention of persons who make a profit on the transaction? Do away with banks for this purpose altogether, and furnish money to the people at cost of distribution, just as other things which the Government furnishes are supplied. If the banks will act as Government agents, well; if not, employ private persons to do the work. Get the money to the people at cost; that is the great work to be done.

* * * The Comptroller's report of 1888 says: "The monetary transactions of the Government have been conducted through the offices of the Treasurer of the United States, nine assistant treasurers, and 297 national-bank depositaries." The Treasurer's report for 1889 shows that of the 3,262 national banks doing business, the Government had designated 270 of them as depositaries through which the Treasury acts in distributing money direct from the Treasury, and they hold public moneys amounting to $47,259,714.

A year ago the amount was $68,712,511. The plan proposed would not require any more agencies than the Treasury now has, and it would not require the local deposit of any more money than is now deposited there. Nor would it require the services of more people than are now employed in these depositary banks. The business of the whole country could be done through about three hundred agencies with a force of three to four thousand persons.

The Comptroller of the Currency, with a force of ninety-two assistants and a corps of bank examiners, superintends the business of over 3,200 national banks. These banks employ an average force of ten persons at least, making a total of 32,000 persons engaged in national banking, all looked after by one man in Washington on a salary of $5,000 a year. And this is practicable; it has been going on a long time.

Has Congress the power?

I deem it useless to refer gentlemen of the committee to the well-known decisions of the Supreme Court, and ask to be allowed to quote from Judge Henry C. Caldwell, long recognized as one of the soundest patriots of the nation, and whose ability as a lawyer has never been questioned during a service of twenty years as United States district judge, and who is now serving as circuit judge of the United States:

WHAT MONEY IS, WHO CREATED IT, AND WHAT FUNCTIONS IT WAS CREATED TO PERFORM.

Money as a measure of value and a legal tender in the payment of debts is a creation of the law. It may be of gold, silver, copper, paper, or any other substance; but, of whatever substance made, its value as a circulating medium and a legal tender in payment of debts is derived from the laws of men, and not from the laws of nature.

The Constitution of the United States declares that "the Congress shall have power * * * to coin money" and "regulate the value thereof."

The Supreme Court of the United States has decided that Congress has power to make money out of paper and make that paper a legal tender in payment of debts.

Observe, the grant of power to Congress not only includes the power to "coin money," but also to "regulate the value thereof."

The present standard silver dollar is a legal tender in payment of debts for 100 cents on the dollar, and yet until the recent rise in silver bullion it contained less than 90 cents' worth of silver. The material of which a one-thou-

sand-dollar legal-tender note is composed is not as valuable as an ounce of cotton or an ear of corn. It derives its value from the law, which makes it a legal tender in payment of debts for the amount expressed on its face.

Gold and silver in bullion, or in spoons, plates, or ornaments, is not money. In all these shapes gold and silver are mere commodities to be bought and sold in the market like cotton or any other commodity. It must be coined by the Government, and its value fixed and stamped upon it by law, before it becomes money.

Money was created to be a circulating medium, a measure of value and a legal tender in payment of debts, and it only performs its true function when actively employed in settling balances, facilitating exchanges, and in industrial pursuits. It is a barren thing, it gives birth to nothing. Horses and cattle multiply and increase the wealth of the country; farms and factories yield their productions, but money is as incapable of producing anything as a yard-stick or a half-bushel.

It may be endowed by law with the power to accumulate; that is, to draw interest. But this power is a gift of the law and may be withheld altogether or granted to the extent only that it is found to be beneficial to the people.

The rapidity with which we are passing towards the condition which has preceded the decline of other republics should be a matter of vital concern to those intrusted with the welfare of the people and guidance of the affairs of the nation. When all history points us with unerring precision to the rock upon which sister republics have been wrecked, I sincerely hope we have both the intelligence and nerve to avoid that spot.

This bill and these remarks are submitted for your careful consideration, sincerely believing that a sense of fairness and patriotism will awaken investigation which will result in the adoption of some method or system which will accomplish the much needed relief, which will place agriculture upon the pedestal of independence and weave for her the garland of glory which it is her due to wear.

Taxation and Public Expenditures.

To persuade my countrymen, so far as I may, that it is not in a splendid government, supported by powerful monopolies and aristocratic establishments that they will find happiness or their liberties protection.—*Andrew Jackson.*

SPEECH

OF

WILLIAM S. HOLMAN.

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 27, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes.

Mr. HOLMAN said:

Mr. SPEAKER: All reasonable men admit that the main portion of the revenues for the support of our Government should be raised by a tariff on goods imported from foreign countries. It has been the policy of our Government from the beginning and will probably be our policy for generations to come. The point of difference between the political parties of our country has been as to the principle on which the duties on imported goods should be imposed.

The theory on which the Democratic party has proceeded ever since the days of President Jefferson has been that the duties should be levied impartially, without favoring one class of our people or oppressing another, without building up the wealth of one class by the impoverishment of another class of our people. Prior to the time when the Republican party came into power, in 1861, the Democratic party had mainly framed our tariff legislation from the inauguration of Jefferson as President, and especially from 1846 to 1860.

The statistics of 1850 and 1860 demonstrate conclusively, and I think all fair-minded men admit the fact, that under the impartial and moderate tariff of 1846, which remained in force substantially until 1861, this country enjoyed an unexampled prosperity. I do not mean that wealth was rapidly increased, but I mean that during that period there was a steady growth of wealth and that wealth remained in the hands that produced it. There was no law during that period "to take from the mouth of labor the bread it had earned;" there were no great estates and no cry of our people for bread; there were during that period reasonable taxation and frugal expenditure.

It was the golden period of our history; and, above all, that greatest of all American industries, agriculture, enjoyed unbroken prosperity. No man who has examined the statistics of agriculture in the censuses of 1850 and 1860 can or will deny this. It was not such a development of agricultural industries as we have witnessed in the last twenty years, where land-grant railroad corporations with hundreds of millions of acres of land, a free gift of Congress to corporate monopoly, have imported from Europe hundreds of thousands of farmers to develop and increase the value of the imperial gift made to those corporations by Congress, but a progressive and steady improvement, the farms and their products growing in value every successive year, the log cabin steadily giving place to the more comfortable and cheerful family mansion, with school-houses and churches adorning every neighborhood, while prosperity, plenty, and contentment, with the assurance of hope for the future, gladdened the homes of our country.

It was not a period of feverish speculation, when under the encouragement of class legislation overgrown estates are made in a year and multitudes are impoverished, but when all men had an equal chance for life.

The truthful historian of the future will point to that period of moderate and reasonable taxation and frugal expenditure in all departments of our Government, State and Federal, as the golden period in our history.

The art of the politician is to overshadow this question of tariff taxation with obscurity. It is not a complicated subject. The complicated tables and endless comparisons of results of tariff taxation at different periods seldom aid honest inquiry and generally confound the judgment and obscure the real matter at issue.

The spirit of the pending bill, the McKinley bill, so called, is as completely expressed and exposed by comparing half a dozen of its provisions taxing articles of luxury, a tax that falls on the wealthy, and the tax on articles of actual necessity in every-day life, a tax that falls on the masses of our laboring people.

Make this comparison, gentlemen, and, as by volumes of statistics, unless wholly blinded by party prejudice, the fact will appear as clear as the light of day. No tariff bill was ever considered by Congress when the fact was so clearly manifest that the measure was intended to enrich the few at the expense of the many.

I intend to be brief, and yet the few facts I will mention will expose the character of the bill, I think, as completely as would a volume of comparisons, and yet I will only mention comparatively minor subjects of taxation, for they more clearly express the spirit of the bill.

By the seven hundred and thirty-third paragraph of the bill, "woods, namely, cedar, lignum-vitæ, lancewood, ebony, box, grenadillo, mahogany, rosewood, satin-wood, and all forms of cabinet woods in the log, rough hewn," are on the free-list, while all other lumber (except cross-ties for railroads and timber for building wharves) pays a duty of from $1.50 to $2 per 1,000 feet, and yet railroad cross-ties are on the free-list.

Here the woods used in articles of taste and luxury and by railroad corporations come in free of tax, while lumber indispensable on every farm and in the construction of the building of every home pays a high tax.

Again, such works of art as "oil paintings" and "statuary," being purely articles of taste and luxury, have in all former tariff laws borne at least moderate taxation, 30 per cent. ad valorem; yet by the House bill they are placed on the free-list and by the Senate bill only taxed 15 per cent. ad valorem, while common blankets pay a tax increased from 66.97 to 93 per cent. ad valorem, and the tax on tin-plates, an article used in every household, is increased from 34.66 per cent. to 76.24 per cent. ad valorem. (See paragraph 137.) Yet diamonds pay a tax of only 10 per cent. ad valorem.

It is not my purpose, as I have stated, to enter into the details of this bill. It has been done by a number of gentlemen on both sides of the House and the figures are absolutely bewildering. This tariff bill is fearfully and wonderfully made. Its provisions are so obscure that even an expert can not tell for the present exactly its effects. It is not politic to clearly state the methods by which the mass of our people are impoverished year by year and a few amass overgrown estates.

But there is one matter of detail to which I must refer by way of comparison. I have stated that "oil paintings and statuary" are for the first time in our history placed on the free-list by the House bill and taxed only 15 per cent. ad valorem even by the Senate bill. All men know that "oil paintings and statuary" are only imported into this country by people of wealth, yet lithographs are taxed at 35 per cent. ad valorem and common engravings are taxed 25 per cent. ad valorem.

Think of this, gentlemen. A man of wealth returning from Europe may import a costly oil painting for his private gallery or a costly article of statuary to decorate his halls or elegant grounds around his mansion free of tax, or at most at 15 per cent. ad valorem, but the cheap lithographs and engravings that decorate the homes of our people must pay a tax of 25 per cent. on the one and on the other 35 per cent. ad valorem. Is there any Americanism in this? It is straight-out British snobbery, an insulting favoritism of wealth. "Oil painting and statuary" free, tin-plates 76.24 per cent., and blankets 93 per cent.! And this is equal taxation under the McKinley tariff bill! While every article of universal use—salt, coal, pine lumber, and all the rest are heavily taxed, the farmer is protected by an import tax of 25 cents a bushel on wheat; but all the wheat imported is manufactured into flour for export, and the manufacturer has a drawback of 99 per cent., leaving the protection 2½ mills on the bushel.

But I will not enter into further details. The items I have given are an index to the entire bill; the same principle of favoritism to the rich and excessive taxation of the mass of our people pervades the whole

instrument. But still I must call to mind another item. At least fifty thousand of our wealthy people spend their summers in the gay capitals of Europe. What do you think of the provision of the bill that authorizes each of them to bring $500 worth of clothing, equal in value to $965.00, into this country? What do you think of that? Even in the matter of clothing your millionaires are to escape taxation, while your laboring people must pay 93 per cent. ad valorem, even on blankets to protect their children from the cruel blast of winter! And such is the McKinley bill!

BUT TARIFF DUTIES ARE NOT A TAX ON THE CONSUMER, WE ARE TOLD!

Yes, we are gravely informed that the revenue which annually comes into the Treasury is not a tax on our people, but is paid by foreigners for the privilege of trading with us. If that is true, why do you relieve those foreigners from paying a tax on "oil paintings and statuary" imported into this country by wealthy citizens? A tax on an "oil painting or article of statuary" which runs up to a million dollars a year, why do you release them from paying that?

Why not generously release them from the payment of the 93 per cent. ad valorem duty on blankets? If the tariff is not a tax on the consumer, why do you release the foreigners from paying the duty on clothing up to the value of $500, which you propose to permit the wealthy people, who annually go to the European capitals to make a vulgar display of their wealth, to bring into this country free of taxation? This is a miserable pretense. As a general rule the consumer pays the duty, and he pays the same measure of duty whether the goods are imported or not. The goods the millionaire is permitted to bring from abroad cost him $500; if purchased from the protected manufacturers in this country they would cost him $965. That is all there is in it.

BOUNTIES.

Here we have a new departure, one thoroughly un-American, sugar on the free-list and the whole people taxed to pay the wealthy planter of Louisiana 2 cents on every pound of sugar he produces. Sugar, of course, ought to be on the free-list. I have always advocated that ever since the condition of our affairs justified the abolition of the tax on tea and coffee. A bounty on producing sugar! And fastened on the Government for fifteen years, no matter how peremptorily the people denounce and condemn it! A bounty of $1 a pound on raw silk for ten years, even if every voter in the United States pronounces it unjust and un-American. Just think of it, a "bounty" of $1 a pound on raw silk, and even the common calico dress of the working women of our country taxed at 50.79 per cent. ad valorem.

Wealthy planters of Louisiana with their great plantations are to be paid in "bounties" $8,000,000 a year by the laboring men and women of this country, and the syndicate of wealthy gentlemen who manufacture raw silk are to be paid large bounties, and that too by laboring people who pay taxes unknown in any other country of the world, and all this to enrich favored classes at the expense of the whole people.

I trust in God that this infamous and wholly un-American system, hitherto well known to monarchies, but never to a republic, will receive from our people a signal rebuke, an emphatic condemnation. This bounty system has in all the ages belonged to that political theory common to monarchies, "Let the government take care of the rich, and the rich will take care of the poor." God have mercy on the poor if this infamous system of bounties is to prevail in America. We will pay, to begin with, $8,000,000 a year. No one can guess how much within the fifteen years.

GENERAL PROSPERITY IN MANUFACTURING STATES.

We are told here that the manufacturing districts of the East are prosperous. Why not, even under the present tariff? The pending tariff bill, if it becomes a law, will of course greatly enlarge the prosperity of the few beneficiaries of an excessive tariff. Mr. Carnegie will, of course, be able to purchase other castles and make other munificent gifts in Europe at the expense of his impoverished employés in America.

These excessive tariff gentlemen inform us that the country in general is prosperous under the present tariff. Wall street says that on the whole the country is prosperous, and it is proposed to enlarge the general prosperity of the country by an increased taxation, and insist that the McKinley bill, while increasing the present average of 47 per cent. of taxation enormously beyond that, will open up a new era to labor and infuse new life and energy into all the industries of our country. So, sir, increased taxation and increased burdens are to give encouragement and hope to labor! Can any intelligent man in America believe that so preposterous and infamous a proposition is true?

It is true that the manufacturing industries of the East are prosperous so far as the manufacturers are concerned; great fortunes are being made and increased steadily by the men who control the great manufacturing industries of the Eastern States, but the poverty and wretchedness of the laborers in the mines and manufactories of that section of the Union have no parallel in our country; and yet, under even the present tariff, overgrown estates, wrung from the sinews and life-blood of multitudes of laboring men, are secured by the manufacturers year after year.

Every year furnishes its crop of millionaires and every year witnesses the increased number of poverty-stricken and wretched families.

I am compelled to admit that under the present tariff wealth steadily increases, but the result of it all is the unbridled arrogance and stately mansions and luxurious life of the few and the hovels and hopeless poverty of the multitudes of men whose unrequited labor has created their wealth.

But admitting that there is prosperity in the manufacturing districts, a fact that must be admitted as to the manufacturers, how is it as to other industries?

AGRICULTURE.

It will readily be admitted that the greatest industry of our country is agriculture. It will remain the greatest industry in our country as long as our free institutions exist. I have often called attention to the fact that the only guaranty the American people possess for the permanency of their system of government is to be found in the natural conservatism of the men engaged in agriculture, the farmer a freeholder and the plow in the hand of its owner.

In a country like ours, differing from all other countries in the fact of our possessing a greater, in fact an imperial, expanse of fertile lands, extending from the one great ocean to the other, it would naturally have occurred that the interests of agriculture would be the great interest of the nation. All men have known that to make our agriculture profitable the product of our lands must find a market for its surplus in countries less favored than our own, countries where manufactures, not agriculture, are the leading industry.

This idea controlled our legislation for nearly three-quarters of a century. During that period no statesman suggested a measure or policy that should make agriculture subordinate to any other industry of the country. Manufacturing industries were of course encouraged, but no one even suggested that agriculture should be made subordinate to any other industry. But all fair-minded men now understand that for the last twenty years our legislation has been in the interest of manufactures, and in fact against agriculture.

During the war we only sought for revenue without regard to the effects of legislation on any given industry. But that war legislation suggested the idea of the rapid creation of fortunes by class and high-tariff legislation in behalf of manufacturing industries, without regard to its effects on our naturally greatest industry, agriculture.

WHAT HAS BEEN THE RESULT?

The cause and the result are apparent to all intelligent men, unless prejudiced against the interests of agriculture and in favor of manufacturing industries, excessive tariff taxation, which, while its weight fell on our people, it diminished the demand in other countries for our products, and resulted in Germany, France, and other European powers partially excluding the products of our farms from their markets. All men understand this; and while we still export over five hundred millions' worth of the productions of our lands to Europe, mostly to England, it is not half that we would have exported under natural conditions to the countries needing the products of our lands.

Your policy of promoting the one industry at the expense of the greater industry has resulted in Germany and France and other European powers in extraordinary efforts during the last twenty years to develop agricultural industries of their own and in their colonies in competition with our agricultural industries. Hence the markets of Europe, with rare exceptions, are largely closed against us. Under a natural policy that gave equal chance to agriculture and manufacture both would have prospered, the latter with an always increasing local demand for its products, the former with an always increasing demand for its products in the markets of the world.

There are two other causes for the extraordinary decline in the value of farms, and of course of farm products, in the United States, and only two.

First. The unexampled and un-American policy of the Republican party in granting to railroad corporations a body of land equal in area to nine such States as the State of Ohio has naturally resulted in an unexampled effort of colonization of foreign farmers on the lands claimed by these corporations. Hundreds of thousands of these farmers have been imported within the last eighteen years by these corporations to occupy their enormous landed possessions—an artificial system of colonization hitherto unknown to this country. Of course, there is overproduction when your policy imports farmers from Europe by great corporations and an excessive tariff almost closes the ports of Germany, France, Austria, and Denmark against us!

Secondly. The excessive taxation to which the farming industries of this country have been subjected. I have called attention to this time and again in this House. The farmers, while enjoying no "benefits" from the enormous taxation you impose on them by an enhanced cost of every article in every form employed or required by them, are left subject to the full weight of that taxation. You promised a home market, yet the farmers of Pennsylvania and Connecticut suffer almost as much by the artificial policy of the tariff-taxing schemes of concentrating wealth as the country west of the Alleghanies, for the benefit of manufacturers.

High and excessive taxation has now continued in a time of peace for twenty-five years. What are the results? An enormous and unprecedented increase of the capital of the manufacturing districts on the one hand, and the greatest interest and the conservative force under-

lying this Republic, its bulwark and defense, agriculture, on the other hand, depressed, disheartened, discouraged, lands mortgaged, and homes desolate. A decline in all values of at least 40 per cent. in farms and products of farms in fifteen years, while the earnings of the States east of the Alleghanies, in every field of manufacture, riot in overgrown estates.

"By their fruits ye shall know them" are the divine words. The fruits of the policy of the leaders of the Republican party during the last twenty-five years has been great estates for the few, the great farming interests of our country depressed and discouraged, farms reduced in value, or at least in price, to an extent never known before in any country except as the result of desolating war, and an ever increasing portion of our people wretched and homeless.

What a contrast this is to the condition of our country through its first seventy-five years. Whether prosperous or not, the equality of our people in material wealth was maintained. No great estates of the few to exult over the poverty of the many! With land ever increasing in value the farmer and his wife and children were contented and prosperous and always cheered by the assurances of hope.

By their fruits ye shall know them.

And what bitter fruits have this system of class legislation, this favoritism of capital, this oppression of labor by unnatural and un-American laws produced? You boast of the enormous increase of wealth your policy has produced. Yet the condition of our country proclaims the fact to all the world that, while your policy has created overgrown estates, it has oppressed labor and struck a deadly blow at the very heart of the great industry which in all the centuries has been the champion of liberty, the bulwark and shelter of Republican government!

REDUCED COST OF MANUFACTURED ARTICLES.

We are told by the champions of great estates that the tariff has reduced the cost of manufactured articles. What an absurd suggestion. Has not the cost of those articles been reduced much greater in every other country, whether "free trade" or "high tariff" governments? The inventions by which one man with machinery in most fields of manufacture can do the work formerly requiring the labor of ten or twenty men is the cause of that.

HOME MARKET.

We hear everlastingly the siren song of a home market for the products of our farms. Let us go to the farms of New England, right under the shelter of the great protected industries of our country. Here is an example:

VACANT FARMS IN NEW HAMPSHIRE.

Quite recently during this year the commissioner of agriculture and immigration of New Hampshire issued a book in which it was stated that there had been reported to his office 1,442 vacant farms with tenantable buildings in various parts of the State. He says:

"Many of these farms can be purchased for less than it would cost to replace the buildings and for one-fifth of the cost of the permanent improvements upon them.

"I notice that the purely agricultural county of Coos has only two hundred abandoned farms, while the county of Hillsborough, of which the manufacturing city of Manchester is the county-seat, has two hundred and twenty-eight of them.

"Judge Nott, of the Court of Claims, has issued a pamphlet on 'The reason for the decline of farm values in New England,' in which appears this pathetic description of a deserted New England village. The poetry of a Goldsmith could add nothing to the effect of the plain statement:

"'Midway between Williamstown and Brattleborough'—

"Says Judge Nott—

"'I saw on the summit of a hill against the evening sky what seemed a large cathedral. Driving thither I found a huge old-time two-story church, a large academy (which had blended in the distance with the church), a village with a broad street, perhaps 150 feet in width. I drove on and found that the church was abandoned, the academy dismantled, the village deserted. The farmer who owned the farm on the north of the village lived at one side of the broad street, and he who owned the farm on the south lived on the other, and they were the only inhabitants. All of the others had gone to the manufacturing villages, to the great cities, to the West. Here had been industry, education, religion, comfort, and contentment, but there remained only a drear solitude of forsaken homes.'

"Writing of this pamphlet to its author the venerable poet Whittier says:

"'DANVERS, MASS., *December* 1, 1889.

"'MY DEAR FRIEND: I thank thee for thy noble 'testimony' in regard to the sad decline of New England agriculture. Every year when I go to the New Hampshire hill country I find more and more abandoned farms, and the sight takes away much of the pleasure of a sojourn in view of the mountains.

"'I hope thy article, with which I fully agree, will be widely read. It should be published in pamphlet form and scattered broadcast.

"'I am, very faithfully, thy friend,

"'JOHN G. WHITTIER.'"

There is something really pathetic in this letter of the great poet John G. Whittier, who loves the once fruitful fields of New Hampshire and of all New England with the sincere affection of a poet. And so the fair fields of New England are made desolate by a policy that aims only at the creation of great estates. Thousands impoverished that a few may become millionaires! Every man who loves his country and his race ought to resolve that he will labor to place the brand of eternal infamy on such a policy, a policy the fruits of which are bitter and deadly.

PROFLIGATE EXPENDITURE.

Mr. Speaker, one of the most fatal results of excessive tariff taxation and excessive revenues is the extravagant and corrupt expenditure of the money drawn from the labor of our people. High tariff and profligate expenditure go hand in hand.

Let us compare for a moment the expenditures of our Government under reasonable safeguards and under the unrestricted sway of excessive tariff taxation with its natural result of extravagance. In the Forty-fourth Congress the Democrats controlled the House; the Republicans, the Senate and Executive. I was the chairman of the House Committee on Appropriations which made the appropriations for the year ending June 30, 1878. The entire annual appropriations made for that year were $144,592,149.23.

The annual appropriations for the present fiscal year, up to this day, are $361,451,688.03. This $361,451,688.03 does not include one dollar of appropriations on account of the dependent pension law passed this session, which will perhaps require an annual appropriation of $36,000,000. That appropriation will be made next session. The country will not complain of this increase of the pension-list. The appropriations for the present fiscal year include $69,924,461 more for pensions than was appropriated for pensions for the year 1878. So the comparison of the appropriations of the years 1878 and 1891, made this session, equalized as to pensions, stands thus:

Appropriations for 1891	$361, 451, 688. 03
Deduct increase of pensions since 1878	69, 924, 461. 00
	291, 527, 227. 03
Deduct entire appropriations for 1878	144, 592, 149. 23
	146, 935, 077. 80

So that the "ordinary current annual" appropriations, the pension-list equal, have more than doubled in twelve years, a result without any parallel in our history except in time of war.

There is no approach to this profligate extravagance in our history. The increase should not have exceeded $15,000,000 in those twelve years (except as to pensions, which I have equalized in the foregoing statement), and yet the increase in the "ordinary" appropriations in twelve years reaches the enormous sum of $146,935,077.80—more than twice the entire annual expenses of the Government before the war. In 1860 the appropriations were $60,000,000 in round numbers, and this was seventy-three years after the Constitution of the United States was adopted. The Secretary of the Treasury estimates the entire revenues of the Government for the year 1891 at the sum of $450,414,000. The annual appropriations for this fiscal year, 1891, are $361,451,688.03, and the "permanent" appropriations for this year are $101,628,453, making the entire expenditures for the year $463,080,141.03. So the account for 1891 stands thus:

Annual and permanent appropriations for 1891	$463, 080, 141. 03
Receipts from all sources in 1891	450, 414, 000. 00
Deficit	12, 666, 141. 03

Agriculture bears the largest portion of the burden of taxation, Federal and local. Can you hope that that great industry can prosper with this ever-increasing enormous annual drain on its earnings? If you wish agriculture to flourish you must remove the excessive burdens you have imposed on it. Remove them and the old-time prosperity will be measurably restored.

And so the "ordinary" current appropriations have increased in twelve years $146,935,077.80 without regard to the pension-list!

And yet, under the comparatively frugal appropriations of 1878 the Departments of Government were more efficiently administered than in former years, although the appropriations for 1878 were $34,574,060.67 less than the appropriations made for the corresponding session of the preceding Congress. The Departments were more efficient because there was less money for prodigal and corrupt employment. In fact, in 1878 $144,592,149.23 was at the least $40,000,000 more than was required for the honest, efficient administration of the Government; but the Republican Senate fought for every dollar of the profligate estimates, and a reduction of $34,574,060.67 was all that could be secured. Yet in twelve years the annual appropriations have reached the enormous sum of $361,451,688.03.

I trust the laboring men of this country will notice the remorseless increase in the expenditures of Government under this Administration. I trust they will consider how steadily high taxation and extravagant expenditures go together. They bear the burden and surely ought to demand that it should not wantonly be increased.

I hope the farmers of this country and all men who work for a living, now fully aroused, will see to it that taxation shall not exceed the honest necessities of the Government, Federal and State, and that this carnival of excessive taxation shall cease. You will find, gentlemen, that when Federal taxation and expenditures are excessive and prodigal the States uniformly follow the example.

Considering the present condition of affairs in our country, may we not hope that all men who love their country more than party will unite in demanding that the old-time frugality shall be restored, that the old-time equality in the opportunities of all men under the laws of this land shall be recognized by Congress, re-establishing the great principle of a free government, "Equal protection to all men, favors to none?"

Maple-Sugar Bounty.

REMARKS
OF
WILLIAM W. GROUT,
OF VERMONT,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 27, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. GROUT said:

Mr. SPEAKER: The proposition to pay a bounty for the purpose of fostering our industries is new in the legislation of the United States though much practiced by European countries, where it has proved a great success. I am free to say that I would not favor this proposition for a bounty on sugar as a part of a general system wherewith to encourage production, for in most cases it can be better done by a duty on imports. But the fact is, the sugar question, which is really the great one in this bill, is exceptional and should be treated upon the grounds peculiar to itself. We have paid for the last ten or twelve years on an average about $95,000,000 annually for foreign sugars, thus sending that sum in gold and silver out of the country each year. There is nothing plainer than that if we were to produce our own sugar, and thus keep this immense sum at home, we should as a people be $95,000,000 richer every year. In other words, we should keep $95,000,000 in our circulating medium which now goes out from it. That surely "were a consummation devoutly to be wished."

It would meet in a perfectly legitimate way the demand of those who advocate an increased volume of currency as the cure of all public and private ills. On every account it is greatly to be desired. To accomplish it the present and preceding tariffs were so framed as to give large encouragement to the production of sugar, and to this end between $50,000,000 and $60,000,000 duty has been annually paid for the last fifteen years as a duty on foreign sugar. This duty for the last fiscal year was $54,896,437.38, and from the fact that this duty has thus far failed to increase production, thereby reducing the price, it has all the time been a tax upon the consumers of sugar, who have really paid every dollar of these vast sums.

THE PROBLEM

for solution is, how, without crippling our revenues, to relieve the people of this immense burden which is a tax of almost $1 per capita annually upon our entire population upon this single, essential article of food.

The whole problem is, how to do this and at the same time so stimulate production as to ultimately make our own sugar and thus save the $95,000,000 now paid annually for foreign sugar, as well as the fifty or sixty millions duty upon that sugar. With a surplus in the Treasury and this bill a law, as it will be in a few days, no one will contend but that we can spare the revenue derived from the duty on sugar and also easily pay the proposed bounty, which upon present production would be about $6,000,000. The present duty on sugar is something less than 2 cents a pound, and the proposed bounty will give the American producer better protection than he enjoys under the existing tariff. This is as it should be; for the amount of our sugar product is not increasing, as will be seen from the following figures furnished by the statistician of the Agricultural Department, the ton being reckoned at 2,240 pounds:

Cane crop.

States.	1887.	1888.
	Tons.	*Tons.*
Louisiana	154,971	144,287
Other Southern States	9,843	9,031

Maple, beet, sorghum, etc.

	1888.	1889.
	Tons.	*Tons.*
Maple	20,000	22,000
Beet, sorghum, etc	2,000	3,099

From this examination of the subject it will be seen that the people will be saved from taxation the difference between the present duty, about $55,000,000 a year, and the proposed bounty, about $6,000,000, making a net saving of $49,000,000 annually in round numbers, and at the same time have greater encouragement than now for the production of domestic sugar. And who will say it is not wise to put sugar on the free-list and pay the proposed bounty? Who will say that it is not good economy, good housekeeping? But our Democratic friends say there is no warrant for it in the Constitution. Let us see.

THE CONSTITUTION

gives express authority to Congress to raise money from the people and expend it for the "general welfare." And if it is not for the "general welfare" of the American people to save for them at once forty-nine millions annually, and prospectively between ninety and a hundred millions annually in addition thereto, then it is not constitutional to pay this bounty; otherwise it is. It seems to me that the above statement of the case carries with it a complete answer to the constitutional point, and upon that I leave it.

From the above statement of the statistician of the Agricultural Department it will be seen that

MAPLE SUGAR

forms no inconsiderable part of the whole American product. It is about one-seventh, and amounted in 1889 to a trifle less than 50,000,000 pounds, which at 6 cents a pound, for which the bulk was probably sold, was worth just about $3,000,000. Here is another statement from the same officer, showing the maple-sugar production by States according to the census of 1859, 1869, and 1879:

States.	1859.	1869.	1879.
	Pounds.	*Pounds.*	*Pounds.*
Alabama	228		
Arkansas	3,077	1,185	
Connecticut	44,259	14,266	44,092
Georgia	991		
Illinois	134,155	136,873	80,193
Indiana	1,541,761	1,332,332	225,117
Iowa	315,476	146,490	50,710
Kansas	3,742	908	
Kentucky	380,941		66,535
Louisiana		269,416	
Maine	393,742	160,805	153,334
Maryland	63,283	70,464	176,076
Massachusetts	1,006,078	399,800	878,793
Michigan	4,051,822	1,781,855	3,423,149
Minnesota	870,669	210,467	76,972
Mississippi	99	125	
Missouri	142,028	116,980	58,964
Nebraska	122	10	402
New Hampshire	2,255,012	1,800,704	2,731,945
New Jersey	3,455	419	2,496
New York	10,816,419	6,692,040	10,693,619
North Carolina	30,845	21,257	4,103
Ohio	3,345,508	3,469,128	2,895,782
Oregon		11	
Pennsylvania	2,767,335	1,545,917	2,866,019
South Carolina	205	2	
Tennessee	115,620	134,968	31,206
Vermont	9,897,781	8,894,302	11,261,077
Virginia	938,106	245,093	85,693
West Virginia		490,606	310,866
Wisconsin	1,384,451	907,192	448,837
The United States	40,120,205	28,44—— 3,645	36,576,061

The above table shows that the maple-sugar industry extends to thirty-one States of the Union, and though not large in a strict commercial sense, yet when the number and character of those engaged in it are taken into account its importance is more apparent. It is withal an industry in no sense sectional, but in every sense national. It is found in the South as well as in the North, in the West as well as in the East. There must be nearly, if not quite, two hundred thousand producers of maple sugar in this country. And who are they? The hardy tillers of the soil, the men who eat their bread in the actual sweat of the face, men of intelligence and character, who "know their rights, and, knowing, dare maintain" them. They are the men spoken of by Goldsmith as—

> A bold peasantry, their country's pride,
> When once destroyed, can never be supplied.

Now, what reason can be given these hard-working, hard-handed farmers, who, all agree, are just now having a hard time, for not allowing them the same bounty a pound on the few hundred pounds of sugar they produce that you give to the men of large means who produce a large quantity? In other words, why should not the small farmer have precisely the same encouragement in the production of sugar that is given to the Louisiana planter, or to Claus Spreckels, the millionaire beet-sugar maker? Let those who doubt the propriety of extending this bounty to maple sugar answer this question. It is said by some that as there can be no reasonable expectation of producing our supply of sugar from the maple tree, there is no object in encouraging production.

Well, I admit that the sugar consumed in this country could in no probability be produced from the maple, but at the same time I assert that there is no better ground for expecting it from the cane, and yet there is no objection to the bounty on cane sugar. The cane is really an exotic, even in the climate of Louisiana. Every few years a killing frost so affects the crop that it makes the business uncertain. This is shown by the figures already given in a lessened product of 11,496 tons in a single year, whereas the same figures show an increase in the maple

product of 2,000 tons in the year 1889. It also appears that the maple tree is indigenous in every part of the country, and being so, it argues the possibility of a

LARGELY INCREASED PRODUCTION,

and I predict that under this bounty it will be more than doubled within five years. In this connection let me read from a letter written in April last by a farmer in my district, upon whose presentation of this point there can be no improvement:

I am so glad the duties are to be taken from sugar. I have advocated this for years, and I stood alone for a long time in this town in the matter. I always advocated a bounty, too, but I am very sorry that the wise ones think it unnecessary to encourage the production of maple sugar. Perhaps they think a bounty would not stimulate the production of this article, but they are mistaken. In this town alone there are several sugar orchards, numbering twelve thousand trees at least, that are lying idle on account of the high wages demanded and the low price of the sugar. I have two such places myself that are not used. One is fitted with buckets, too, and this is the case in nearly every town in this vicinity. Now, those twelve thousand trees might have made 36,000 pounds (18 tons) of sugar this year. If all the two hundred and forty towns in the State would do as well, we have 4,320 tons extra production in one year.

Other farmers write upon this same point as follows. One says:

I think a bounty on maple sugar would greatly aid in retaining if not increasing the maple forests on our hills, which is so desirable. I am very much interested, as I am tapping three thousand trees now, and with proper care can soon double that number.

Another:

Only about one-half of the maple trees in Vermont are in use because it does not pay the farmer, especially if he has to hire help. If the duty is taken off sugar and no bounty given, it will be still worse.

Another:

A few years ago many farmers in this vicinity cut down their maples because there was no profit in making maple sugar. The past year or two the demand is somewhat better. Of course with a small bounty we should be encouraged to save our maples, large and small, and build up this important industry. Why should we not encourage sugar-making in Vermont as well as in Louisiana?

I might multiply witnesses, but this must suffice, and I repeat that as much by way of increased production may be expected from the maple as from the cane. But what of the beet and sorghum industry? A great production is expected from them, and I think reasonably too, but as yet this industry is in an experimental stage. The total product in 1889 from both beet and sorghum was less than one-seventh what it was from the maple. Now, what is

THE LESSON

to be drawn from the foregoing facts? Simply this, if the American people ever produce their own sugar it will be by encouraging every source of supply and neglecting none; and if we are able to supply our wants from the cane and maple and from sorghum and beets all combined we shall do exceedingly well, for we are the greatest sugar-eating people on the face of the earth.

It is also said by some who doubt the propriety of extending the bounty to maple sugar that it already sells at a price sufficient to insure continued production, even though sugar goes upon the free-list. This is

A GREAT ERROR

and needs correction. It is true that a small part of the whole product, that made from the "first run" and with utensils in every respect first class, which means not only of the most improved kind, but of absolute cleanliness in every respect—I say that it is true that a small share of the whole product thus made and sold to consumers who do not care what they pay for the sirup or the butter they eat on their griddle-cakes for breakfast brings something more than the regular market price; but the proportion of maple sirup of this exceptionally fine grade is not as large as the proportion of fancy butter which brings 50 or 75 cents a pound. And who ever thought of refusing protection to butter because the gilt-edged part of the product sells for a price above the rest? Instead of this, this bill wisely gives increased protection to butter.

The real fact is the great bulk of maple sugar goes upon the market at the price of other sugars, namely, from 5 to 7 cents a pound. Now, upon this point I do not ask you to take my word. Last winter, when the matter of a bounty on maple sugar came up, I found the impression prevalent that it was all sold as a luxury and at a high price, and I at once wrote several large dealers in our State, and the following is the substance of their replies. One said:

I can not say exactly how much I bought, but from 400 to 700 tons, more or less. The price ranged from 6 to 7 cents a pound.

Another says:

A large majority of the maple sugar sold in this section the last few years has been sold for from 6 to 7 cents a pound, not including inferior, which has sold for less, nor superior, which has sold for fancy prices.

Another, who devotes himself exclusively to handling sugar, says:

The ruling price in the Chicago and New York markets for the past year has been 7 cents, delivered, net. This would net the producer in Vermont less than 6 cents, taking out transportation and storage.

Another firm, extensive dealers, after speaking of a class of sugar that brings 8 or 9 cents a pound, say:

But there is not market enough for this kind of sugar; but we could sell almost any amount for from 6½ to 7 cents a pound.

Another, probably the largest dealer in our State, writes:

I have bought for the last six years from one to one and three-fourths million pounds of maple sugar yearly; price paid, from 5 to 7 cents.

This ought to satisfy all of the erroneous impression that maple sugar sells for a high price. But, as illustrating this and other phases of the question better than I can do, let me give the following extract from the letter of a gentleman of wide acquaintance and excellent standing with the people of Vermont, especially the farmers:

Hence it is that the bulk of the sugar made in this State goes upon the market at a low price and must come in competition with the sugars of commerce to a greater or less extent. While, as I said above, the price received for the bulk of the sugar is barely above the cost of production, yet it is a money crop and to many farmers about the only source of obtaining money for interest and taxes, or a means of paying the inevitable "store bill." If sugar is placed on the free-list it can not fail to affect the price of the maple which is sold in the general markets. If it should cause a decline in maple of 2 cents a pound, and I fear it would, it would practically prohibit the manufacture of sugar in this State, except that portion which is strictly fancy and used as a table luxury.

This proposed discrimination would not only be unjust, but it would be a great wrong for Congress to check the material prosperity of the farmers of our State in this way. It would virtually rob the farming population of one of the smallest States in the Union of nearly half a million dollars annually, and possibly more. The farmers of Vermont have always done their duty to the Government; why should they be punished in this way? We do not object to free sugar, but we do object to this unjust and unwarranted discrimination. The sturdy farmers of cold, rocky, hilly Vermont should have an equal chance with the cane and sorghum growers who till the fertile soil of the Mississippi Valley.

Mr. Speaker, this is the story of a Vermont farmer—and who better than those engaged in the business can tell us about it? I will let them still further speak for themselves. One says:

To remove the tariff on sugar without a bounty on maple would be destructive of the industry.

Another says:

If we should not get the same encouragement as other producers it means the death of the maple-sugar business in this State.

Another:

No bounty for us means the destruction of the sugar industry of Vermont and the transfer of the maple orchards to the lumber-yards.

Another:

It would be impossible that other sugars could be cheapened without affecting maple. If Congress should fail to include maple for a bounty it would be a decided sectional discrimination.

Another:

We can hardly make maple sugar pay at present prices. Free sugar and no bounty will kill the business, and Congress will hear an indignant cry from the maple-sugar-makers all over the country.

Another says:

As maple-sugar-makers we know that with the tariff off Canadian sugar will come into competition with ours and we could not live.

And another, a dealer, speaking of the past, says:

Canadian sugar has hurt the price of ours.

Now, if this has been the case with a duty of 1.8 cents a pound, what will be the result with the duty taken off and no bounty? The

CANADIAN PRODUCT,

by the Canadian census of 1881, was 20,546,049 pounds, almost two-thirds that of the United States. The maple tree is nowhere plentier nor thriftier than in Canada and she could easily tenfold her product of maple sugar, and with our markets open to that product, and no bounty for the protection of our own, she would soon control the business. Production would increase on her side of the line and fall off on ours. Her maple forests would be enhanced in value and ours correspondingly decreased. The tendency would be to make her farmers more contented and happy and ours less so. An industry aggregating $3,000,000 annually would be seriously crippled, if not practically destroyed, and discontent, the precursor of social and political upheavals, would surely follow with the already restless farmer throughout the whole belt of Northern and Middle States.

If this picture does not please it can be

COMPLETELY REVERSED

by giving to every man who adds to the country's sugar supply the same bounty; in other words, by treating all alike. Then the farmer, whose humble station perhaps increases his sensitiveness, will not feel that he has been ignored; but knowing that according to his works will be his reward, he will make the most of his opportunities for the production of sugar. Every maple tree would then be utilized; the maple groves and forests would be worth preserving and, as the result, would be preserved. Not only would the farmers be benefited, but the maple-sugar-outfitters as well. The manufacturers of buckets, both from tin and wood, of spouts and evaporators, boiling-pans and heaters, and the foundrymen also, who make the arches, would all realize that the maple-sugar industry had received an impetus instead of a set-back—would, in short, all share in the benefits, thus exemplifying the practical fruits of protection.

It has been said that this maple-sugar bounty

IS SMALL BUSINESS,

and some laugh at it, while others sneer. Mr. Speaker, it can not be that this Republican House, this protection House, will turn this great

army of sugar-producers away empty because the industry is a humble one. We have seen that it is worth three millions of dollars annually to the American people. This may look small to gentlemen who habitually dwell among the figures which express the immense revenues and expenditures of this great Government, but I can assure you that it does not look small to that great number of our people who win their bread by daily labor; it does not look small to the people of my State who make almost one-third of our whole maple product. And if excuse be wanting for the warmth with which I have pressed this matter upon those having it in charge, sometimes perhaps to the verge of annoyance, it may be found in the active interest which the people of my State have taken in the subject since it was understood sugar was to go on the free-list.

A small affair! It is not always easy to determine definitely just what things are small, influences are so subtle and quantities so often not what they seem. Besides, many small things lead to great results; hence it has been said in great wisdom, "Who hath despised the day of small things?" We are also told on the same authority that ships are "turned about with a very small helm."

Here is an illustration of the effect of a small matter. The London Nautical Magazine says the new rules as to life saving appliances, which go into effect November 1 in the British life-saving service, provide for the apparently insignificant thing that every boat of a sea-going vessel and every life-boat shall carry a gallon of oil and a vessel of approved pattern for distributing it upon the water in rough weather. Then follows, in the same number of the magazine, the abstract of a lecture delivered before the Royal Institute by the physicist, Lord Rayleigh, explaining why it is that oil is effective in calming the waves of an angry sea.

Mr. Speaker, this bounty to the two hundred thousand maple-sugar-makers of the country would amount to about $1,000,000 annually, and would be more than a gallon of oil upon the great sea of unrest among our agricultural classes. It would be more because it would be just, and this question is not one in physics, but extends to the domain of morals, where justice, with conscience quick and judgment strong, never fails to approve the right. Let "even-handed justice" prevail as to all the sugar-makers of the country, and when this bill goes upon trial before the American people, and Congresses and Presidents are elected upon the issue, from hill-top and plain, from forest and field, shall be heard these two hundred thousand voices in approval. Indeed, this provision of the bill, being just, will defend itself.

Contested-Election Cases in Fifty-first Congress.

SPEECH
OF
HON. JOHN F. LACEY,
OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 27, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes.

Mr. LACEY said:

Mr. SPEAKER: Gentlemen have seen fit in the discussion of this economic measure to again thrash over the old straw, and again and again refer to the contested-election cases in the Fifty-first Congress.

They have denounced the election law as a "force bill" and have sought to prevent its passage by the continued calling of hard names.

It is a "force bill" only in this: it forces the bulldozer, the ballot-box-stuffer, and the maker of false certificates out of business. It drives force away from the polls and eliminates physical force as the controlling influence at the ballot-box.

It is a sad commentary upon the morality of a political party that it should so earnestly assail a law that would protect and purify Federal elections. Let us briefly review the election cases in the present Congress and see if their complaint of the proposed law and of the results in these trials is not equally ill founded. Contests were instituted in twenty-one cases, but in one district in Illinois, one in California, and one in Mississippi the contests were abandoned, leaving eighteen for consideration.

Of these cases seventeen have been decided by the Elections Committee and one is undecided, the case still unsettled being the Tennessee case of

EATON VS. PHELAN.

This case was delayed by the illness of Mr. Phelan, who, though too ill to appear at the hearing of his case, seems to have been able to challenge an opponent in Tennessee to fight a duel according to the approved rules of the code of honor.

Four other cases were reported by the committee and are still pending in the House. The committee has reported in favor of unseating eleven of the sitting members and has reported in favor of six of the contestees. And strange to say not any one Democrat, either in committee or on the floor of the House, has voted against a Democratic contestee in a single one of these cases.

IN BOWEN VS. BUCHANAN,

from Virginia, the committee found that there was much to be condemned in the manner of the election, but they unanimously voted to retain Mr. Buchanan, the Democrat, in his seat.

IN CHALMERS VS. MORGAN,

the noted General Chalmers was the contestant. He showed fraud on the Mississippi plan amounting to several thousands of votes, but the changes proved were held by the committee to be insufficient in amount to overturn the large majority returned for contestee. To this finding the Democrats gave their ready assent on the committee and in the House.

IN KERNAGHAN VS. HOOKER,

in Mississippi, much fraud was shown, but insufficient on account of the great majority certified for the sitting member.

IN HILL VS. CATCHINGS,

from the same State, a like result was reached as in the Chalmers case, and the Democracy concurred.

IN THREET VS. CLARKE,

from Alabama, the majority for the Democratic contestee was successfully reduced upon the hearing, but the general result was unchanged.

IN POSEY VS. PARRETT,

from Indiana, the case turned upon the right of twenty students to vote at a college town. Under the peculiar facts of the case it was held that these students' place of voting was at their school, and again the Democracy were content.

But in all the other cases

NO DEMOCRATIC CONSCIENCE

seems to have been touched. It was assumed by every member of the minority that a certificate to a seat on the Democratic side was unimpeachable; and even the six Democrats whose title was reported favorably by the committee not only voted against the committee in all the other cases, but gracefully retired to the corridors and restaurant to prevent a quorum from deciding the cases of Langston and Miller.

Three cases came up from West Virginia. The superserviceable Democratic governor of that State

TOOK THE CONTRACT

of furnishing enough certificates to give his party the organization of the House.

IN SMITH VS. JACKSON

the result was very close. At one precinct eight hundred and two votes were returned for Jackson. This was not enough. But the word "two" was so written as to look like "twe," and the governor put on his Democratic goggles and pronounced it "twe," and judicially determined that "twe" was an abbreviation of "twenty" or "twelve," and as twelve was enough to change the result he determined that "twe" meant "twelve" instead of "twenty." This sounds like a joke from Pinafore or the Pirates of Penzance, but it was gravely sustained by the Democrats in the House, and the Republicans were denounced as revolutionists, and the Speaker received his famous title of "Czar" in the heat of the contest over this case.

IN M'GINNIS VS. ALDERSON

the same governor gave the defeated candidate the certificate, and he took his seat and is still drawing his pay, and all the Democrats in the committee sustain his title. In Kanawha County a contest arose in this case in regard to a recount. The ballots from one precinct were put in a bag and thrown up over a storm-door in the clerk's office; the ballots from another precinct were put in a wooden box and the box nailed up. All these ballots had been evidently opened and the chisel-marks on the box showed how it was done. Litigation arose about the propriety of a recount. While this litigation was going on the governor omitted this county from his computation, although there was a Republican majority of over 1,300 in it, and gave the Democratic candidate the seat. Even this did not turn the Democratic stomach, and no one of the minority concurred in giving back to McGinnis the stolen seat.

IN ATKINSON VS. PENDLETON,

in the same State, another close district was changed by a recount. It was not known exactly how many changes were needed, and the judge of one of the county courts was called home by the pretended illness of his wife, a bogus telegram announcing her sickness having been received by him and paraded in the court-room. When he returned a few days afterwards from his home, where he found his wife happily attending a merry-making, the ballots were found changed just enough to change the result. A conservation of villainous force was exercised; only just enough to change the result and no more. The delay enabled the opponents of a Federal election bill to make just changes enough to put in the man who had been rejected at the polls.

In the bloody case of

FEATHERSTON VS. CATE,

from Arkansas, the Union Labor candidate was cheated out of his seat by force, intimidation, and fraud, and murder played a prominent part. Double-slotted ballot-boxes were used by which the judges could turn the ticket into the box or out of it, as they saw fit, and to the voter it looked fair. Even the bold and bare-faced frauds shown up in this case were not enough to shame the opposition, and the double-slotted ballot-box received the unanimous indorsement of the entire Democratic side of the House.

IN THE BRECKINRIDGE CASE,

even the murder of the contestant seems to have made no impression upon the opposition, and not one single Democratic vote was cast either in the committee or the House to turn him out of the bloody seat of John M. Clayton. The larceny of the ballot-box and the wholesale withdrawal of Republican tickets and substitution of Democratic ballots in their place did not shock the conscience of the minority. And, in connection with the murder of Colonel Clayton, even the most recent murder of Mr. Cook, of Mississippi, who had contested Mr. Anderson's seat, but had abandoned the contest, seemed to make no impression upon our opponents. "A Democrat once in must stay in," seems to have been their motto.

In Alabama a black district with 26,000 Republican majority had been set apart by the gerrymanderers of that State. McDuffie ran against Turpin, and was elected by a large majority, but the natural majority of 26,000 for the Republicans was changed to 13,000 for the Democratic candidate, and one Republican was murdered by a deputy sheriff at the polls because he was taking a list of the voters so as to be able to testify to the names of voters. The Republicans were expecting to be counted out and this man was preparing the evidence. He lost his life, but the Democratic deputy sheriff remained in office and was never punished, and has now been indorsed by the unanimous vote of his party in Congress.

IN WADDILL VS. WISE,

in Virginia, a more peaceable method, but none the less illegal, was adopted. Skillful challengers were placed in Republican wards to make frivolous challenges, and by collusion with the Democratic judges the voters were so delayed that over 500 voters were still in line when the polls were closed in their faces at sundown. These tactics gave the Democratic candidate his seat, and the Democratic majority of the House for the first, last, and only time during the present session decided that the contestee was not entitled to his seat. But they would not agree that Waddill should be seated, and whilst they voted to eject Wise, they insisted on giving him a new trial at the polls.

IN LANGSTON VS. VENABLE,

the Democratic minority claim that General Mahone was opposed to giving Langston the seat, and the unanimity with which the Democracy have in this instance rallied to the supposed assistance of Mahone would indicate an entire "readjustment" of their political feelings. Frauds were clearly shown sufficient to change the result, but the Democratic party fled to the corridors, and for many days delayed this House from tendering justice to Langston. But justice came at last, and the scholarly Langston took his seat.

IN MILLER VS. ELLIOTT

the boldest and most bare-faced fraud was perpetrated. Ballot-boxes were concealed behind a board screen and shuffled to cause the tickets to be put into the wrong boxes so that they might be taken out and destroyed under a provision of the statute of the State to that effect.

At one poll an enterprising negro climbed a tree, from which he could see the boxes, and when they were changed he would shout, "Change dem tickets, de boxes is shifted."

This action upon his part was denounced in unmeasured terms by contestee's attorney before the committee as a fraud. Ballot-boxes were stuffed and the district made Democratic. It was a marvelously shapen or rather a marvelously misshapen district. Voting precincts were cut in two, and the Republican voters all put into that district as far as possible. Its appearance on the map was a marvel. The McKinley district in Ohio is a thing of beauty compared to this ingenious work of art. Colonel Cooper, of Ohio, said of it in the Fiftieth Congress that it "was not wrong to worship it, for there was nothing like it in the heavens above or the earth beneath or in the waters under the earth."

Even this skillfully formed district, in which it was attempted to mass the Republican vote of South Carolina and in which there is a clear Republican majority of 20,000, was shamelessly stolen. The governor refused to appoint any Republican representative on the election boards, and in a grave and serious public document announced that he did so "to keep up the high standard of purity of elections for which South Carolina was so noted." And even this case did not pall upon the Democratic palate in committee, but happily the mass of the party had retired to break a quorum and did not record their votes in favor of perpetuating the fraud.

IN GOODRICH VS. BULLOCK,

from Florida, we have the old, old story of fraud in its most disgusting form. Bullock still retains his seat, but the Democratic members of the committee have stood by him with the rest.

In Maryland the case of

MUDD VS. COMPTON

involved the intimidation of negro voters at a single precinct and mistakes in the count at other precincts. The returns were by mistake locked up with the ballots in the ballot-box from one precinct, and legal proceedings were instituted to open the box and procure the return for the governor. The law was understood to forbid the opening of the box. Whilst this proceeding was going on the governor gave Mr. Compton the certificate, although the full returns showed that Mr. Mudd was elected. The case was a simple one and free from all difficulty, and the full and counted returns gave the majority to the Republican contestant. Again the minority united in unbroken opposition.

This, Mr. Speaker, is a brief outline of the cases which have been heard or are reported to this House. I will not comment upon the Eaton-Phelan case which is still unreported.

These cases only show by sworn testimony, what no one denies outside, that fraud, murder, intimidation, and force are potent factors in twenty or thirty of the Congressional districts of the United States. We can not shut our eyes to these facts, nor can we shirk the responsibility that rests upon us. The passage of a law to prevent such evils, and its rigid and faithful enforcement, is the imperative duty of the hour.

The Tariff.

SPEECH
OF
HON. LEVI MAISH,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 1, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes.

Mr. MAISH said:

Mr. SPEAKER: Our country can never reach its highest prosperity without foreign commerce. We must trade with other countries to dispose of our redundant productions. We can undoubtedly stimulate our manufacturing industries by the imposition of duties upon the importation of manufactured articles. To the extent that this is done foreign commerce is abridged. What class of our people does this most affect? Unmistakably the class that depends most upon foreign commerce.

The natural and normal condition of our people is that of agriculture. In this field we have no competitors, and every effort that is made to promote the manufacturing industries of this country is made at the expense of the agricultural industries of our people. How far they should be made to suffer in the interests of other industries is a question that the farmer should be permitted to answer.

Mr. A. B. Farquhar, of York, Pa., has discussed this question with so much ability and learning that I will incorporate his article entire as a part of my remarks. He is an extensive manufacturer of agricultural implements and a few years ago was an ardent Republican. His experience and studies upon the tariff question have constrained him to advocate the policy of the Democratic party.

Mr. Farquhar's article is as follows:

PROTECTION AND AGRICULTURE—THE M'KINLEY BILL AS IT AFFECTS THE FARMER—A BOLD BID FOR HIS VOTE—CONVINCING ARGUMENTS TO SHOW THAT TAXES UPON IMPORTS ARE A HINDERANCE TO AGRICULTURAL PROSPERITY.

Will you allow me, farmers of a great Republic, the privilege of addressing you some earnest words? You are not suffering for lack of advisers on this question of protection, I am well aware. Indeed, you have never yet been more surfeited with pretended sympathy. In the elaborate tariff bill reported by Hon. WILLIAM MCKINLEY from the Ways and Means Committee of the present House of Representatives your interests (or rather what he expected to pass off as your interests) have been very deeply considered. The majority report accompanying the bill is especially eloquent over your condition and your claims. A long letter has been written by the head of the Agricultural Department, which pledges to the support of this new measure the whole weight of Secretary Rusk's official position, past services, and popularity.

These are but specimens of what is done and said every day. An exhaustless torrent of speeches, editorials, magazine articles, and pamphlets has been increasingly poured forth upon you with the design of overwhelming your reason, persuading you that the policy of imposing high duties on imports is particularly beneficial to you, and thus engaging your votes for men who are trying to raise them higher.

In the face of this mass of argument, I shall undertake to show that those same high duties are really working you a grievous injury; that they are largely the cause of the lamentable depression in farming interests, now acknowledged on every hand; that you have at this hour no more urgent demand upon your legislators than for their abatement, and that there is nothing but evil for you in the increases proposed by the bill. I shall not merely set assertions of my own in opposition to the assertions of the distinguished gentlemen I have cited. I hope to succeed in proving my points by facts and reasoning so clear that they need only to be understood to carry conviction, and only be examined to be understood. I unhesitatingly take up the gage of bat-

file they have thrown before me; you shall be judges of the contest, according me nothing more than fair treatment. On a question which so closely concerns yourselves you may be worse losers than I if you dismiss me without a patient hearing.

FARMER AND FARM-IMPLEMENT-MAKER UNITED IN INTEREST.

The burdensome duty of declaring the truth as I see it is one from which I would gladly be excused if I could. But a special responsibility is thrown upon me by two circumstances: I happen to have attained some degree of business success, and may therefore expect people to listen to me who would not listen otherwise; and my interests as a manufacturer are known to be in every way identical with those of the agriculturist. I can make no pretensions to the chair of the instructor. I never studied political economy under the professors, nor has the book-and-closet side of the subject ever had so much attraction for me as the practical side, in which I am vitally concerned, and whatever importance may attach to my views is due to their origin in business experience—in the many years of arduous toil, close application, vicissitudes of prosperity and disaster that have impressed them upon me.

Since there is no escape, in a tariff discussion, from the suspicion that judgment is warped by private interests, it is well to bear in mind that, on this point, I have not an interest in the world that is not yours also. The better your condition, the more of my tools and machinery you can buy and when prosperity fails you it can not abide long with me. If I want cheaper raw materials for my manufacture (and except for these I have never had any interest in the importing business) it is not because I hope to keep the benefit all to myself; my customers must share it with me, whether I will or no. My feelings are with you, no less than my business interests. I have always loved country life and can never forget that I was born a farmer's boy.

My opinion of protection, it is worth while to state, is not regulated by political predilections. I was an earnest Republican from the foundation of the party until long after the war issues were settled and its mission was finished. My place has always been on the side of freedom. In the earlier and better days of the party that side was with the Republicans. I never turned my back on the party till the party turned its back on freedom—and your welfare in the same act. Do you believe that it is any wiser to travel with a party merely because it was going in the right direction a few years ago than to travel on a stage-coach for the same reason?

CAN WE ACCUMULATE MONEY BY TAXING IMPORTS?

Questions of national economy are not, in reality, so intricate as many suppose. They are determined by the same principles of clear common sense which you apply to questions of private economy, and no mind able to meet all demands for foresight and contrivance, that have to be met by the successful farmer, need fear in the least to trust itself with the larger questions when the necessary facts are all before it. You must not, then, give ready credence to the man who is able only to bewilder you; and you can not be too careful to have all the facts that bear upon a question before yielding your decision.

Mr. MCKINLEY, in one of his speeches during the Presidential campaign, advocating measures for hindering the importation of goods, claimed for them the same merit that we allow to the head of a household when he prudently resolves not to buy too much from others, but save up his capital, arguing that to the nation, as to the family, more saving brought more strength. This passage looks at first sight like the very appeal to plain, practical common sense that I have been commending; and the reason it is not is because of the importance of one or two facts it conceals. If Mr. MCKINLEY had called attention to one vital difference between the private citizen's storing up money in his own strong-box by skill in selling and economy in buying, and the nation's trying to do the same thing—the fact, namely, that additions to money saved have no tendency in the one case to lessen the relative value of previous savings, while they have in the other—he could not have drawn the same conclusion.

Perhaps I would better explain my meaning more clearly. If one of your neighbors were to save up some money or have it left to him, no effect would be produced on the purchasing power of what you and other people held; you could do as much with it and prices would not change. That is because he is only one in a multitude. Suppose every man in your community—your whole township—should make a sudden gain in wealth, say, by the discovery of a mine; you would notice little difference in the value of money even then, for you would continue to trade with outsiders. If your trade should by any cause be confined to your own neighborhood you could not fail to feel it. Let us suppose again that the supply of additional money were to be distributed over a whole State and that trade with other States were somehow cut off. Can there be any doubt whatever that the value of a dollar would become very much smaller?

You may say that prices would become higher, if you choose; the two expressions mean exactly the same thing. If you have any doubt have a talk with some one who was in California within the first few years after the rich gold discoveries there in 1848, when it was practically an isolated State. The precious metal was to be had in abundance by almost any one with strength to get it out; but a clay pipe cost 25 cents, a drink of vile whisky a dollar, and other things in proportion; so that for every practical purpose $1 in our Eastern States had the same value as twenty or more in the region where so many of them were to be had. Do you see how, if Mr. MCKINLEY's policy really succeeded in bringing a good deal of money to this country, the same results could fail to follow? The last dollar brought here in return for the produce of our hard labor, while it cost us quite as much as the first one, would be certain to be worth less to us. Having to spend it within the country we should find ourselves confronted with advanced prices.

If this result—cheap money and high prices—does not in fact follow the enactment of laws of the kind Mr. MCKINLEY advocates (laws that hinder importation by collecting duties on imported goods with a view of encouraging sales of our products for money), you can not be at a loss to tell the reason. It is because those laws do in fact little or nothing to bring money to the country. That state of things ought not to surprise you in any way. Suppose, in consequence of this legislative discouragement of importation, the foreign country to which we sent our goods should send us a large sum of gold in payment. Before we did any trading with that country again we should find that two changes had occurred: First, in consequence of the increased supply of money with us, the value of a dollar had fallen off—that is to say, prices had risen; and as the cost of producing our goods rose we could worse afford to sell at the same price. For the second change, money having become scarcer in the country with which we traded, its people could worse afford to buy our goods at the same price. Is it not perfectly plain that this state of things could not go on very long without putting a stop to trade of this kind altogether?

As a matter of actual experience it does not go on long. However high our tariffs are put very little of our trading is done for money. To yourselves, of course, when you deliver wheat to a merchant who is going to ship it to Liverpool and are paid for it, or when you buy a garment of imported wool, foreign commerce appears as a cash transaction; but the money given you has not crossed the ocean, nor will that paid by yourselves make the voyage. Could you see how the great importing and exporting houses manage the actual business of exchange—the great bulk of it by paper representing credit, only enough specie being sent across to pay the small balance, or difference between one side and the other, usually less than one-fifteenth of the whole amount—the transaction would wear a different appearance. Even the fact that the West Indies and South American Republics send us from three to seven times as much merchandise as we send them does not make large shipments of money necessary, for we pay the difference by drafts on London, where we have a large credit from exportations of cotton, beef, and breadstuffs, while the English square matters by sending their wares to the countries of which we buy. As a matter of actual experience, Mr. MCKINLEY's favorite legislative devices have no such effect as he claimed for them in his speech, and a very little study of the subject has shown us why they could not have. The facts concealed by him—I can hardly suppose him ignorant of them—are fatal to his claim.

Two circumstances may sometimes cause a difference between the total value of merchandise exported and that imported by a country; while they operate, it will not do to set down as a firm and fixed law that the two values must necessarily be equal. Both are illustrated in the recent history of our own country. The effect of the California gold discoveries made itself felt after 1849; and the tables of our total imports and exports show that while there was very little difference between the sums up to that date—first one being greater, then the other, without any long continuance of either condition—the value of imported goods began then to be in excess, and continued so for a quarter of a century, through the civil war and all its changes, with scarcely an interruption.

That is just what we ought to have expected; silver and gold are subject, like other commodities, to the law of demand and supply, by which, when we began to produce a relative excess of them, they flowed to countries producing less, and were replaced by goods which we found it easier to get in that way than to make by our own efforts. After 1874 the balance turned, and down to 1888 our exports of merchandise exceeded the imports in value; the movement of specie, which had in the preceding twenty-five years been prevailing outward, then sinking (except during the year or two when we were making large importations for a fund to sustain resumption) to an even balance. The change, like all financial changes, had its reason; it appears to be owing to increased investments of British capital here and the interest we have to pay on them. The entire interest is now estimated as high as $100,000,000 a year, and Great Britain prefers to take it (together with as much more which we have to pay her for transporting our goods) in merchandise. That country steadily imports a great deal more than it exports, and its prosperity is an abiding refutation of the "balance of trade" superstition. Not for a good many years after the war was our national credit far enough restored to tempt the foreigner to make such investments, so that their effect could not earlier be felt.

Will you please notice, before quitting these figures, that there is no shadow of justification for connecting the changes in them with the changes in our tariff policy? Imports began to be considerably in excess in 1850, four years after the last preceding change of the kind; this ceased, and exports ran ahead in 1875, with no change in duties; the excess of exports seems just now to have ceased or greatly diminished, with no change. When we remember that the years when the tariff was changed were 1842, 1861–1864, 1868–1870, when its rates were increased; 1846, 1857, when they were reduced, and 1883, when the changes were ambiguous, we see how totally unfounded are the claims that high tariffs strengthen us by bringing money into the country. And yet those claims are plausible at the first view. Tariffs look as though constructed for that purpose, since they stop goods and let money come in free. The case is evidently one of those in which a contrivance does not work as it was professedly intended to work. And, that being the case, telling people that it is working in exactly that way does not make it work so.

You have been detained a good while on this point, because it is a very important one. A great many glib and persuasive speakers found huge piles of argument on the pretense that high import duties in some way keep money flowing into the country, when it would not come under low duties. They support by this pretense the fanciful connection which they have conjured up between reduction of duties and the great financial distresses in 1837 and 1857. As there are not many people living who can clearly remember how those startling disasters really came about, and as there are a great many people who have not learned about the causes of them from reading, these quacks think they can safely and easily pass off any explanation of their own inventing.

Since the best refutation of their inventions is found in a simple study of the history of the times when the panics broke upon us and since the more thorough the study the more ridiculous such inventions are found, I need only say that those panics, like all others—including the ones that attended the collapse of the great "South Sea" and "Mississippi" schemes nearly two centuries ago, before there was a tariff question, and the terrible one beginning in 1873, while we were under a very high tariff—were alike the result of extravagant speculation; and there is good reason for the belief that the speculative spirit which received such a fearful rebuke in the disastrous crisis of 1837 had been to some extent stimulated by the twist given to our industrial enterprise by the high import duties enacted nine years before. Of course, the only reason anybody could have for supposing that high duties could prevent commercial crises must be their assumed tendency to bring in money, and it is therefore very proper for you to know that they do not bring in money to any perceptible extent.

You may often hear it claimed that the tariff does great things in the way of giving employment to workingmen and increasing our industrial establishments—claims which you can dispose of in the same way. You can point to the results of actual trial, too; you could not find any time when our country enjoyed free trade, to be sure, but you could go back to a time when import duties were upon a revenue basis and very much lower with us than they now are. Just before the war, when duties were lowest, there was not only no lack of industrial enterprise, but manufactories were fast increasing; faster, proportionally, than they are now. The laboring man was not forgotten; the superiority in his condition (in the free States) over what Europe could show was more marked than it has since been.

Although this country has progressed, along with all the rest of the world, in the improvements of the last thirty years; although we offer, even now, a better home for the workingman than any European country, it can not be denied that the change for the better has been more visible within the past thirty years in England than here. We have made progress, I dare say, and yet I can not help pointing out that it is within that time that we have become accustomed to the unwelcome visitation of tramps, not known among us before; and that England can point, as one of the accompaniments of her forty years of a free-trade policy, to a proportion of her inhabitants obtaining relief as paupers, of 1 to 23 at the beginning, 1 to 41 at the end. Our States can show no such change for the better in forty years. The change in many of them is the other way.

EXPORTATIONS DIMINISH ALONG WITH IMPORTATIONS.

The principle to which I have tried to call your attention, that there is very little movement of gold and silver when different countries trade with each other except in obedience to a special demand for gold or silver (from a country that produces more of them, for instance, to one that produces less), and that the great bulk of goods sent out are paid for by the goods sent in, is invariably disregarded by the protectionists, despite its importance. The practical proof of this principle you have seen in the small proportion which specie bears to merchandise in total import and export valuation, as shown by the tables of the statistical bureau of our national Treasury. Please attend, now, to a new point. If this principle is true another one must be just as true: whatever checks or interferes with importation of goods must to the same extent check or interfere with exportation.

This is by no means evident at first glance. We let goods go out freely, even encourage them to go, and block their coming in with taxes. Suppose we reversed this policy and admitted foreign goods free while taxing our exports.

It seems a little strange to say that the effect of two policies so very different must be in a general way the same, and yet there can be no doubt of the fact. Prices would be lower in the country taxing its exports, the same piece of money would buy more there, but there need be no other perceptible and no practical difference. In either case the value of exports would bear about the same proportion to that of imports; something near to equality, but neither so large as it would be with trade unimpeded.

The effect is a good deal that of the rubber or brake on your wagon wheel; it makes no difference whether you apply it to the side of the wheel that is going down or to the side that is coming up; what is done in either case is only to clog the wheel. You know that our tariff checks and interferes with importations; it is imposed with that very object. You know, too, that agricultural productions in this country form our most important exports and depend for a considerable part of their total sale on consumption abroad. Is it not well worth while to think a little and see how your access to your market abroad is checked and interfered with by the same agency that checks and interferes with importations?

That such interference exists there can be no question. There are two possible causes from which it could come: your foreign customers might be made less disposed to buy or you less disposed to sell to them. I do not see how our tariff could deter the foreigner from buying; and if it discourages you from selling, it must be by increasing the cost of production, by decreasing the price you get, or perhaps by furnishing a new consumer in place of the lost one. It is plain that while either of the first two effects must be injurious to your business, the last-named effect is not; and for that reason you hear nothing from protectionist orators of any effect but the last, which is always inflated and exaggerated past all recognition, notwithstanding the fact that we are without proof that it has any real existence, and have a good deal of proof of the other effects. Have patience now while I set before you as much as I can of my reasons for making so bold a statement.

DO IMPORT DUTIES GIVE US A HOME MARKET?

Do high taxes on imported goods have the effect of providing new customers at home who replace the foreigners to whom you would sell otherwise? Many people believe so, and that is what is meant by the "home-market" cry that is so loudly dinned in your ears before every election. It is perfectly true that, where other things are exactly equal, you can more profitably provide for customers close by than for customers across the ocean; and it is true that any device for bringing customers close to you, if it does not at the same time injure you in some other way, works in your interest; but it is quite untrue that these facts have any bearing upon the tariff question. For it is untrue that other things are exactly equal—that you are suffering no injuries from the protective system—and it is untrue that that system has any considerable effect in bringing consumers of farm products close to your farms.

In the first place, it has no such power to stimulate manufacturing as people claim for it. I am not denying that if there were but one duty levied, on one particular article of manufacture, the production of that article might be very much increased in this country or that the production of some articles may be stimulated as things are now, but I am claiming that, in the enormous multiplicity of our protective duties, so many of them operate to harass, obstruct, and injure other manufacturing enterprises, while advancing a few favored ones, that the whole effect of the system is less beneficial than detrimental to manufacturers along with the rest of the country.

This may sound strange to you who have so long been accustomed to hearing this huge and complicated scheme of duties spoken of as though absolutely essential to the carrying on of manufacturing, but I think you will be able to see on examining it the reason for it. Many manufacturers—myself among the number—every year export large amounts of goods, in the face of the world's competition; and no sophist, I think, is quite clever enough to persuade you that we can compete with foreign manufacturers abroad without any point in our favor, and yet can not compete at home unprotected, when we have all the advantages of nearness to the consumer, ability to study his wants, and lower freights to pay.

So that none of us making goods for export is helped in the smallest degree by the tariff; and, more than that, there is not one of us to whom it is not a great deal in the way. To find how much of our manufacturing is in that condition, see the number of manufactured articles of which there is a steady export trade. Besides agricultural implements, there are sewing-machines and clocks, engines and dredging machinery, and saws and axes; flour and vegetable oils, of course, and some boots and shoes and unbleached cotton goods. That makes a considerable list (which might be greatly extended) of manufacturing enterprises that are more hurt than helped by protection; and when you come to count up the aggregate effect the balance is by no means assured to the favorable side.

If you wish a test by figures compare the growth of our manufactures between 1850 and 1860, ten years of low tariffs, during which the value nearly doubled, with that between 1870 and 1880, ten years of very high tariffs, when the total value produced (allowance being made for the fact that all the values of the 1870 census were given in 80-cent dollars) increased hardly 60 per cent. I need not tell you that if the duties were as necessary to success in manufacturing as their advocates pretend, our rate of growth ought to have been greater, instead of less, when those duties were higher. If, therefore, you are benefited by having manufactures established in this country, it does not at all follow that you ought to keep the tariff high. You get quite as much benefit from the prosperity of those manufactures to which it is a tax and a nuisance as from those which are helped by it.

The point I have just made would be quite sufficient to settle the "home-market" question, but there is another one quite as strong. The easy assumption of the protectionists that, supposing for a moment we grant their unfounded claims about the manufactures "established" by their invention, they thus bring customers close to you, is altogether false. I might safely ask nineteen out of twenty of you, perhaps forty-nine out of fifty, what chance there is of building a factory within easy hauling distance of your own farms, however great the stimulation given to manufacturing in this country. How many of you live near the great lines of commerce, indispensable to manufacturing success? Could not a great many of you tell the old but ever new story of some capitalist, of more enterprise than shrewdness, who has tried to start some kind of factory in your neighborhood, but has failed because he found the location unsuitable?

You may be very certain that a stimulus to manufactures can stimulate them only where they exist—may start a new mill or two along the New England streams, or near the Pennsylvania coal fields; but, though protection were piled up to 200 per cent. and exports cut off along with imports, they would not penetrate the farming regions of Nebraska and Iowa and Kansas. What good, then, is the system to farmers there located? They probably share in the general patriotic satisfaction that our country has the manufactures, but not sufficiently to have the cost thrown upon them; for, as a matter of simple business, a factory in New England or one of the less accessible parts of Pennsylvania is no more to them than one in Glasgow or Liverpool. In fact, so cheap are ocean freights that Liverpool might easily be the more advantageous to the Western farmer as a place to have his customer, because the cheaper place to ship grain to. So much for the alleged home market, which I think I have proved would not be worth keeping up a protective system for, even if it cost you nothing. As I shall now try to prove, its cost is far indeed from being negligible as an airy trifle.

HOW FOREIGN SALES ARE RESTRICTED.

Your sales to foreign buyers might be cut down, I reminded you a little while ago, in three ways, and I have considered the only one of those ways in which that cutting down would not be injurious to you. The other ways, you remember, were by increasing the cost of production and by diminishing the price your produce brought you. It is not worth while to separate these. To save discussion I will admit at once that the price which agricultural produce brings in English markets would not be sensibly increased in money by removal of our restrictions on trade; but that is not all that you have to consider. A dollar in a place where everything costs double is worth no more than 50 cents to its possessor; and you will easily see that if protection raises all prices above the level they would otherwise maintain it effects a practical lowering of your price by decreasing the amount that you can do with the same money. So that this question, along with that of the cost of your tools and supplies, depends on this other: are prices of necessities higher because of the protective tariff?

How this question can be any question at all I find it difficult to see. You can not yourselves do very much at traveling, I am afraid; but to few of you can it be unknown that people never make large purchases of clothing before sailing for Europe, while they are pretty sure to bring a great many new clothes back with them. The difference in price does not extend to all necessaries; such provisions as are raised upon your own farms are nowhere, I dare say, to be had at lower prices than those you must be content with. But cutlery and other iron ware, as well as silk goods, are very much lower in England, while almost anything of wool is, quality considered, hardly above half price. I have the best reason and the strongest desire to uphold the credit of American manufacturing, and I know that many of our products—agricultural machinery particularly—are better than can be made anywhere on the globe; but when I look at woolens I am a little mortified.

It is not pleasant to contemplate the worsted or shoddy fabrics that are made here and compare them with the fine, durable articles at a lower price that are to be had in England and France. That there would be no such difference in prices were it not for our tariff I need hardly assure you. Ocean carriage of such goods as clothing is not expensive, and there is nothing else that could keep our price and theirs apart. Whenever, therefore, you are purchasers of woolen goods you feel your profits diminished by our tariff laws, by the duties on woolens and raw wool. You must now take 100 bushels of corn to market to buy your suit of Sunday clothes, while 50 bushels would buy as good a suit had we no tariff. Whenever you buy a tool of any sort you feel your cost of production increased by the higher price we are obliged to put upon it, higher because of the duties on iron, iron ore, timber, paint, and other items. And it is precisely by producing these effects that the tariff system operates to discourage the production of goods for exportation; in this way is the balance of trade held even, and thus does the repression of imports throw a burden on every producer of goods that can be sold abroad.

PRETENSE THAT THE DUTY IS PAID BY THE FOREIGNER.

It is one of the inevitables that there should be strenuous efforts to break the force of these conclusions; another, that those efforts should meet with some success; for it is a well known fact that a theory has only to bring in some money to some class of men in order to find earnest defenders, however opposed it may be to common knowledge and to common sense; and another, that a doctrine needs only to be taught confidently and emphatically enough in order to find adherents. Let us see, then, what the tariff advocates have to say for themselves. Accordingly, we find them one and all insisting, as though it were an established and certain truth, on the view that the duty is something paid by the foreign producer in order to secure his goods admission into our markets.

This being assumed, a great deal else very easily follows. Mr. McKINLEY, for instance, in the campaign speech I have already noticed, dwelt longer on this point than on any other. His opponents were "in the service of foreigners," seeking to have them relieved of this payment; he himself, like the ardent patriot he was, insisted that the foreigners must pay it. "How absurd in us to pay our own taxes when here was a way in which the foreigner could be made to pay them for us." "How unjust, too, to take a loyal citizen of our country, who had borne all the obligations of a citizen, and leave him only the same show in the market that was allowed an alien who bore none of those obligations." And so on and so on. It is easy to build up a towering edifice when the foundation is granted; but the whole structure at once collapses when once the foundation is knocked from under, when once it is settled that the import tax is a charge on the goods, and that if the foreigner pays it to get them admitted he always takes the best of care to get it back out of the user of his goods.

The fact that the great mass of articles protected in this country are more costly here than they are in Great Britain is one proof of this. Second, the fact that the explanation so comforting to Mr. McKINLEY was one that never occurred to any one in the early days of tariff agitation is quite suggestive. The invention of this explanation (that it was the foreigner who finally paid the duty) evidently awaited the day when people had forgotten what prices used to be before the duty was imposed. Third, proof is in the common sense of the thing. Suppose that some foreigner pays $1 duty on an article and sells it here for $4, is it probable that he would sell it for $4 or for $3 if there were no duty? His profits on sales here can not be very different from what they are at home, either higher or lower, for he has competitors, and the one who got hold of the more profitable trade would finally drive the others out; so that $3 must be his price at home.

Again, but for the duty he could not charge a much higher price here than at home for fear that we might take to buying of his home customers instead of himself directly. Manifestly, then, the same $3 would be his price to us if there were no duty. It is hardly worth while to bother about who it is that pays the duty so long as we know that it is lumped with the price of the article in the end. I know very well that this reasoning does not apply when the producer holds a monopoly, or when this country contains the only consumers, or when the demand elsewhere, or the supply, is very limited; but it does apply to the great mass of articles. If fourth proof is desired you have it in the necessary conditions of protection. The producer of this country is only protected when the sales of competing foreign articles are diminished. For this purpose either buyer or foreign seller must be obstructed.

Now, if the foreign producer pays the tax our buyers are certainly not at all obstructed; and if he finds profit in selling a few articles and paying the duty on them he would certainly find no less in a greater number of sales. In fact, as any manufacturer will tell you, it is only by very largely increasing his sales that he can pay his way at all when profits are low. Do you not plainly see, then, that if the duty is paid by the foreigner there is no protection possible? Put the rate high enough to stop all importations, and of course you have protection complete. Short of that, it is only because the charge is thrown on the buyer, because it is he that is obstructed from making the purchase, that protection protects.

My favorite demonstration, that the final cost of a duty is thrown in the end on the consumer of the taxed article is found, I confess, in the course of the protectionist legislators themselves. A disaster occurs sometimes; Portland or Chicago is swept by fire or some prairie town succumbs to a tornado. As a measure of relief it is proposed and carried through a protectionist Congress that materials for the rebuilding of the unfortunate town shall be admitted free of duty. Why is that? Why does not the statesman in Congress send word back that the proposed remission will have no effect except to relieve foreign

lumbermen of what they have to pay to gain admission to our markets? Would he not say so if he dared—if he did not know that at such times the people are not to be deluded?

Every revenue bill that has been introduced—certainly since the era of war tariffs—has contained provisions for what are known as "compensating duties." Examples of these are seen in woolen goods, which are protected by the curious rate of so many per cent. ad valorem, and so much per pound in addition. The reason assigned for this provision—and no other explanation, be assured, has ever been given for it—is that the first part is the suitable protection for the goods, and the second is the "compensation" for the duty on raw wool. This is only one among many duties of this "compensating" class; the manufacturer has always insisted on higher rates because of the duties levied on his raw materials. The facts about these duties have been often set before the public, and this explanation has never, I believe, been contradicted. Did you ever ask the question why it is that those manufacturers need "compensation?" They do not need it because of anything that the foreigner has to pay for getting his goods into our markets you may be very certain. Every Congressman who votes for such a compensating duty, as all protectionist Congressmen always do, acknowledges by that very vote that the duty is a charge on the purchaser of the goods, the price of which is made higher by the amount of the duty.

The way protectionists hang together is itself a demonstration. The statesman who is interested in getting one article taxed is bound by the strongest incentives to vote for taxing a great many other articles in which other members are interested, and tariff bills are always carried by log-rolling, each Representative voting for the favorite jobs of the others in order to carry through his own. It is well known to every Congressman in charge of a job to benefit some influential constituent at your expense, that he will fail to carry it if he does not stand in with the other fellows. Have you any idea that he would feel this apprehension if he believed, and believed that the others believed, that his scheme would throw no additional burden on the country? If the bit of protection he seeks is going to be a general benefit without general cost he could have it without buying it.

I have not space to consider all the reasons brought to prove that the burden of protection is thrown upon the foreigners. Here are two that are used as often as any. First, certain manufactured articles—steel rails, for instance—have been highly protected and have greatly fallen in price. It is claimed that protection did this, but if those who make the claim would only furnish, along with their list of prices in this country, the prices in England at the same time, and thus show that every fall in price here was preceded by a fall to an even lower point there, the fact that they would bring out would be merely that protection had prevented the price from falling as fast here as it otherwise would. The true causes of the fall—improvements in the process of making steel and the expiration of patents guarding it—are, of course, never alluded to by the faithful protectionist. Second, the English must be those who suffer from our high duties, because they are so anxious to have us lower them. Let me assure you they are not anywhere nearly so anxious for us to lower our duties as people pretend. What they tell you about large disbursements by the "Cobden Club" is 3 per cent. exaggeration and 97 per cent. sheer invention. A great many lines of export trade, including most of that to South and Central America, Japan, and Australia, the English now have a "soft thing" of, owing to our persistence in running up the cost of our raw material and machinery for manufacturing and in preventing our citizens from owning ships to send there. Were we to adopt a commercial policy like their own we might become formidable rivals in this business, as we promised to become before the civil war.

Notwithstanding this state of things, of which observant Englishmen are perfectly aware, I do not deny that if the question of our tariffs were to be left to them they would probably think more of gaining custom with us than of losing it with remoter countries, and vote a reduction by a considerable majority. But the laughable part of the business is that that fact, if it be a fact, should make any difference to you. Let me put to you a test question. One of you, we will suppose, lives across the river from a large town. You raise, we will also suppose, better oats, or turnips, or something than Jones, just over the bridge, and can afford to sell them at a lower price. Now, if Jones mounted guard over the bridge, so as to keep you from getting across with your produce, would you object to it or not? And what would you think if the townspeople, hearing your complaints, should set them down as a proof that you were the only sufferer by the closing of the bridge, and that they were just as well off in putting up with the inferior and more costly goods of Jones?

POINTS TO BE TESTED AND PITFALLS TO BE ESCAPED.

Now, permit me to go over the points I have undertaken to make:

1. That there is never any great movement of gold and silver in trade between nations unless there is somewhere an unusual demand for them.

2. That in consequence revenue devices can not change, and in fact never do change, the relative proportions of imported and exported goods.

3. That if duties cause a reduction in amount of imports, they must inevitably bring about an equal reduction in exports.

4. That this can only be done by preventing those who have exportable goods—particularly farmers—from exporting them.

5. That the pretense of increased home consumption, alleged to account for this, is baseless.

6. That the prevention of exportation of farm produce must therefore be brought about by increasing cost of production and lowering the effective reward of the farmer's labor.

7. That every pretense that the system acts otherwise—that it somehow throws the cost of protection upon the foreigner—is opposed to reason and to experience. Of all these points I gave as much proof as there was room for; and I earnestly hope, as my aim is more than anything else to present the matter before you as it truly is, that you will take all possible pains to test my argument both by reflection and searching of facts.

Do not be misled in making the test by plausible irrelevancies. Do not be persuaded into forgetting that American labor can be protected only by or at the expense of American labor, and that whatever one trade gains others have to stand the charge of. Do not be cajoled into the delusion that you need "protection" in this market when you know that you are able to meet competitors in foreign markets. Do not let people throw obstacles in the way of your reaching foreign markets under the plea that these are "uncertain" and "unreliable." If they really are so, exports will fall off of themselves, and "protection of home industries" will, therefore, be quite unnecessary. Do not let them frighten you with the prospect of competition in your own field of labor with workmen thrown out of factories, when the highest reasonable estimate of the number of workmen that absolute free trade could throw out of employment is less than that of our able-bodied immigrants in three years.

Do not let them ascribe the general prosperity of our people—not so high, you very well know, as it ought to be—to taxation, until allowance is made for the fact that this country (leaving out Alaska) has about thirty acres to each inhabitant, while England has less than two. Any man who conceals this fact in comparing industrial conditions in the two countries thereby proves his blindness or his dishonesty. Do not give protection credit for the progress of our country until you have seen what great forward strides have been made by England and New South Wales without any protection.

Treat with just contempt all insinuations that those who are engaged in the endeavor to reduce the burdens upon you are "agents of foreign manufacturers," or "enemies of the workingman," or "enemies of the old soldier," or "Confederates." If the Southerners oppose protection it is because they know what will advance agriculture, the great interest of the South; and on this point their interest is your interest. Have you any doubt of that? If the protective system is good for your industry, why not for the same industry in the Southern States? And if it is really to their interest to support it why do they oppose it? The agriculturists of the Southern States are not more intelligent than those of my own section, I willingly grant. But they are reasoning men, nevertheless; and neither the Union of our fathers nor the rights of the colored citizen will be endangered in the least if you stop and study out a candid answer to the questions asked you.

PRESENT AGRICULTURAL DEPRESSION.

That the farming interest of the country is not prospering as it should must be well known to all of you. You raised in 1889 greater crops than ever before, but the increase was prevented somehow from working in your favor. Prices have fallen more than your production has risen. The census of 1880 already showed, in its comparative tables of property located and property owned, that a considerable portion of the land of the great agricultural West was owned in the East; that of 1890, if fairly taken, will show the same thing in stronger colors. The amount of your land held under mortgages to non-residents every one knows to be huge, and it is hoped that the next census will furnish particulars. Farms in the older States are deserted by the hundred and begging for purchasers at prices less than the cost of the buildings on them. Farm values have fallen even where the farms are all occupied. An increased value of real estate is reported only in the cities and their suburbs.

The farmer's boy does not take to his father's calling as he used to. The amount of wealth held by farmers is, proportionally to the total wealth of the community, far smaller now than thirty years ago. That was, by comparison, a golden age for American agriculture. Can you fail to recognize the cause to which, in great degree at least, this state of things is owing? Can you allow youselves to be misled in regard to it because you happen to be unable to tell exactly where your money goes and how you fail of getting the return to which you are entitled? For me it is enough to know that a gun was fired in your direction, and that you have been struck by something; I do not feel obliged to trace the bullet through every inch of its passage from muzzle to mark. Evidence of exactly the same kind that the protective system is the cause of your injury is in your hands. You can not make the injury less by blinding your eyes to the evidence.

DUTIES ON FARM PRODUCE IN THE M'KINLEY BILL.

The subject proposed for this essay was the McKinley bill and the arguments made in behalf of it. Instead of examining these at once I have given five-sixths of my space to a preliminary discussion; but this course is not unwise, I think, because we must have some groundwork of general principles to stand on before we can see how to judge the bill at all. If we have prepared our groundwork rightly the judgment follows as a matter of course.

That the statesman who framed this bill has labored zealously for your approbation is very clear. If it is passed most of the things raised on farms will be dearer to every one who undertakes to import them. The gain to you (measured exactly by the loss to possible importers) you can easily estimate when you have found how much of the articles to be protected are now imported. Animals of all domestic kinds are among the items largely increased. But we do not import many of them; on the contrary, we more than supply our own market, and have such animals for export. Wheat, corn, and oats ditto, ditto.

The best that can be said of these provisions is that they are a dead letter, and were designed so to be—that is to say, a conscious humbug. Such practical operation as they can have will be to prevent you from improving your fields by the importation of seed grains, or your stock by bringing in any animal that you can not prove to be "for breeding purposes." Barley is increased. Were not you just suffering for that? Potatoes are advanced from 15 to 25 cents. At present rates we some years import fewer potatoes than we export, and only half the time does the amount reach 1 per cent. of the crop raised in this country. In but two years of the last thirteen, 1882 and 1888, did the importation of them rise as high as 3 per cent., and those years followed very poor yields the preceding fall; two-thirds of a crop made to cost the consumers more than do many full crops.

Is it not plain that the only aid that the duty can bring you is in making scarcer a food that is particularly the resource of the poor at times when nature has been least kind to them—at times, I should add, when you have least to sell? To my mind the idea of coining money by procuring legislation to help in starving my fellow-beings is something little less than infamous; but the cruelty of this blow at the defenseless is not more conspicuous than the stupidity of upholding an expensive protective system for the sake of gains that only come in exceptional years, when the potatoes are not in your hands to sell, and the same farmers who usually have a surplus may be compelled to buy for their own use. Hay is increased. How far could imported hay be carried, even though free, do you calculate, before losing its whole value in cost of carrying it?

THE OTHER SIDE OF THE ACCOUNT.

So much for what this bill proposes to do for you. Now let us examine what there is on the other side. I know that such an examination is considered irregular; that those who have charge of measures of this kind call no attention to any other provisions but those for preventing the importation of the goods that you produce, and represent those provisions as being the whole measure. Only those proposing to manufacture tin-plates by this reasoning need be interested in the duty on tin-plates (a firm of Pittsburgh capitalists in the present case). But we are not to be manipulated in this way. We are interested in this duty as well as others, you and I, and we propose to see how it will affect us.

We know that the proposed increase is and can only be for the purpose of increasing the cost of plates, since Government can help to increase the profits of domestic producers of them in no other possible way; we know that these plates are necessary for buckets and cans of all kinds, and form a considerable item in the cost of agriculture, in the meat and fruit preserving and dairying industries; we know that any increase in the expense of the tins must be passed down to the consumer—to all of us, that is—and it may so embarrass the trade as to drive out many private canners doing a small business in the back-country districts; we know also that our exports of canned goods raised by farmers give markets and added value to surplus fruits, vegetables, and meats, and that this trade would be crippled if not totally ruined by the proposed duty. Does that not interest us?

Consider the proposed increase in lead ore and the smelting establishments now using ore from Mexico that would be broken up by it. The compensating duty that Mexico proposes putting on imports of our corn will still further injure the farmer. Consider also the increase on wool. What our wool tariff does for us I have already tried to show you. Some of you may, perhaps, make something by the increase if it ever goes into effect, but not many. I do not think that our factories will pay much higher prices for your wool; they can not afford to and remain in business. The most significant increase is in the kind of wool that you do not grow, the coarse fibers used for carpets. The one certain thing about it is that it must make your carpets dearer (a well known manufacturer tells me that the material in a plain ingrain carpet, such as is used by most of you, will cost more after the passage of the McKinley bill than the finished carpet does now), and compel you to go without or else be content with poorer quality.

One provision that was left out of the bill is quite as instructive as anything contained in it. As originally prepared it provided for a duty on hides. This

was all for you, of course, notwithstanding the fact that few of you have hides to sell in such quantities that you could make much by the duty and that all of you wear the boots and shoes and drive with the harness whose cost would be increased by it. Mr. McKINLEY's committee loved you (or Armour & Co., of Chicago, I should rather say) so much that it was ready to sacrifice our trade in shoes with Canada, which could not bear any increase in the cost of leather. It yielded this provision, though, and why? Only because the consummation of the deal with Armour would have left it without votes enough to pass its bill.

SECRETARY RUSK'S BID.

The letter of Mr. Rusk does not call for much of our attention. He gives you a good deal of advice about private economy, railroads, speculative combinations, and other matters, with which I have no fault to find. His professed opinion that "the present agricultural depression" is due to "our imports of agricultural products" will be easy to weigh when we have considered the remedy he proposes: that of making scarcer and dearer such products as we import, so that you may be forced into raising them yourselves. Accepting his figures (although misleading in the exaggerated idea they give of the competition you have to withstand), we seem to import $250,000,000 of agricultural products that might possibly be raised. Well, how do we pay for them? What industries now supported by sending produce abroad to buy them does he propose to sacrifice? Or what else worth $250,000,000 does he propose to have us import?

A practical man, making a recommendation in good faith, would have looked carefully into these questions. Mr. Rusk makes no allusion to them. For anything that appears in his letter he might be as ignorant as a baby that there were any such questions to consider. Or he might perhaps fancy that we paid for this yearly importation out of the $30,000,000 of gold and $60,000,000 of silver that our mines annually yield. I should be delighted if we could. For Secretary Rusk personally I have none but the kindliest of feelings, and I cordially hope for him the best thing possible: that he will resign the discussion of political economy to people better equipped for it.

A CONFIDENCE GAME.

Are you not convinced that Mr. McKINLEY's new "farmers' tariff" and committee report are only a little confidence game, that his party is making a great clatter about the increase of duties on your products in order to draw attention away from the increases that truly count for something, those on the products of the "campaign boodler," about which nothing is said to you, on the principle of the adroit juggler who always has some by-play to distract your eye and your attention while he is performing his tricks? I can not see in it anything else. When you have studied the mazes and dark corners of the tariffs a little longer you will be able to see duplicity almost everywhere. Nowhere are their promoters so ready to make victims as in your own calling. They know the power of your mighty numbers, against whose opposition their ablest efforts would be hopeless, and they seek to enlist you by inflaming your unworthiest prejudices, befogging the issues, and beguiling you with misrepresentations.

Some of their tricks—for example, besides those I have exposed, there is that one of pretending that the duty on manufactures is for the purpose of making them cheaper, and that on your products it is at the same time for the purpose of increasing the price; or that other one of pointing at a few "trusts" not built up by the tariff, and pretending that they thus prove that the tariff does not build up "trusts," just as they might pretend that exposed cesspools do not cause disease, because they do not cause hydrophobia—are really so shallow that I am quite sure they can not long mislead you. You are beginning to reflect, to think for yourselves, and when you have once learned to do that the victory is won. United, you are irresistible.

The case is now in your hands. Your decision is more important to yourselves than to anybody else in the world; and the issue of welfare or disaster is one that comes so closely home to you that no words of mine are needed to lay stress upon it. Its gravity is such, moreover, that all the light you can possibly gather will be none too bright to pierce the dust and the fogs that have been thrown about it. If I have brought you a little new light, if I have made any point clearer or exposed any stumbling-block in your path, by this essay, I shall be well repaid for the trouble it has cost me. And I repeat, your interests are my interests, and I am far less anxious that you should agree with me than that you should know the truth wherever the truth is to be discovered.

The Revenue Bill.

SPEECH

OF

HON. JOHN P. JONES.

OF NEVADA,

IN THE SENATE OF THE UNITED STATES,

Wednesday, September 10, 1890.

The Senate, as in Committee of the Whole, having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes—

Mr. JONES, of Nevada, said:

Mr. PRESIDENT: There are two tests to which all theories may be subjected, the test of reason and the test of experience. Discussions of the tariff are usually replete with statistics, and so completely, as I think, do statistics prove the wisdom of protection, that the advocates of that policy may well be pardoned for relying in large measure upon demonstrated facts for its ample justification. But, inasmuch as that side of the question has already been fully presented, it will be my endeavor in the few remarks which I shall have the honor to submit to avoid as far as possible the statistical method, and to rely, for the most part, on what I conceive to be the fundamental principles on which a protective system is founded.

The Senate, however, being anxious to reach a vote on the pending measure, time will not permit a marshaling of all the arguments which to my mind support the policy of protection. They are as numerous as the interests of the nation are various. Nor will the exigencies of this occasion admit of great amplification of the arguments presented. I shall therefore content myself rather with outlining than exhaustively discussing the propositions.

I do not rise to defend the policy which in the short space of thirty years has enabled this Republic to leap to the front rank among the nations of the earth. That policy needs no greater defense than to point to its achievements. "By their fruits ye shall know them!" I desire simply to present a few of the basic propositions constituting the immovable logical foundation upon which our tariff-wall securely stands. If, in the performance of this task, the discussion shall occasionally trench on the abstruse, I can only express the hope that the innate dignity of the inquiry will warrant the attention which I invoke for its consideration.

CAN A NATION DO MORE THAN SUPPLY ALL ITS OWN WANTS?

No man, Mr. President, can produce of *all things* more than are sufficient for his wants. In the savage state he clearly can not do it. As he becomes civilized, at every onward step, at every upward reach, his wants grow in number and in character more rapidly than do the means of supplying them. Some are physical wants, which must first be supplied, but these are the least of the wants of man. With every discovery in science, with every development of invention, with every new aspiration come trooping before his mental vision new wants.

After all that he has achieved in thousands of years of slow and toilsome emergence from barbarism man still finds himself standing on the edge of space, reaching out into the mysterious and marvelous domain of science, groping into the secret recesses of the earth, peering into the infinite azure and the deeper infinitude of his own brain, in the attempt to satisfy new wants. If one man can not produce of all things more than he wants, sixty-five million men can not produce of all things more than they want. Nor will the exchange power of the product of the labor of one man or of sixty-five million men be more than sufficient to supply his or their wants.

When, therefore, all the activities of a nation are in equilibrium—when its industries are perfectly adjusted to its needs—that nation can do no more than supply to all its people all the things they need. As society exists by reason of the mutual wants of men, if the inhabitants of a country occupy themselves in supplying all their own wants, there can not fail to be occupation enough for all and there will be no surplus for export.

There are, however, barriers established by nature, such as defects or limitations of soil or climate, or both, which render it impossible for men at the particular spot of earth on which they may be situated to produce the entire variety of articles of which advancing knowledge admits and which growing tastes desire. It is not unnatural, therefore, that men should wish to obtain from other countries some of the products which nature has inhibited in their own. Reciprocally, it is natural that they should produce of some articles indigenous to their own soil such quantity beyond their immediate needs as may be given in exchange for the foreign articles thus obtained.

But, as nations have grown up from small beginnings, the needs, the ignorance, the perplexities, and the selfishness of peoples have rendered impossible a compliance with this just law. Industries have been established and developed where, for the moment, they would prove profitable, and the several countries of the world have exchanged their products in response to the demands of the "market."

TWO COURSES OPEN TO A NATION FOR THE SUPPLYING OF ITS WANTS; WHICH SHOULD WE ADOPT?

According to the policy thus developed, there are two courses open to a nation for the supplying of its wants.

On the one hand, it may confine itself to producing, in larger quantity than its people need, some commodities of general or universal demand, and exchanging with other countries its surplus of those commodities for such others as it may require but does not itself produce. On the other hand, it may determine, so far as soil and climate permit, to supply all its own wants.

Whatever may be deemed the wiser policy for small countries capable of exceptional development in a few industries, but with limited natural resources, who is there that can doubt the proper policy for a nation of continental proportions, possessing every variety of climate, controlling every character of soil, and enjoying in unexampled degree and diversity the bounties and benefactions of nature? And especially who can doubt the proper policy for such a nation when it possesses a numerous and versatile population? The people of the United States already number 65,000,000. They inhabit a vast domain extending from the frozen zone to the tropics. Imperial Rome, at the height of its splendor, comprising all the civilized world, did not possess greater variety or affluence of natural conditions. The energy of our people is unexcelled, their ingenuity unequaled. What article of importance to civilization can they not produce or soon learn to produce for themselves?

At the rate of increase hitherto shown, our population in thirty years will number 130,000,000. In sixty years, or within the lifetime of men now born, it will number 250,000,000.

What momentous consequences do not these figures import? What far-reaching results do they not imply?

How shall the infinitely varying capacities of this vast population find suitable occupation? What economic policy will best subserve the interests of all and secure for them the highest form of industrial, educational, social, and political development?

In the evolution of society the pastoral preceded the agricultural age. Before men were farmers they were shepherds: that is to say, they were nomads. Being unacquainted with the art of agriculture or its implements, they wandered with their flocks from place to place in search of pastures that should demand no more labor than was necessary to reach them. In these wanderings they encountered a constant element of uncertainty. They were never sure how soon the fields of nutrition might become exhausted or they themselves be dislodged and their flocks driven off by hostile tribes. They found, also, that, notwithstanding long and tedious journeys, occasional seasons arrived when, owing to the action of the elements or otherwise, the grasses were stunted or altogether failed of growth, and water became inaccessible, so that their herds perished of hunger, thirst, and fatigue.

Urged by necessity, therefore, the more enlightened of them bethought themselves of the wisdom of controlling the conditions of existence by causing production to take place through the exercise of their own energies on the soil, within a fixed area, on which they should permanently remain, and of securing to themselves the results of their labor by erecting barriers which should serve as a protection against the attacks of less enlightened but more numerous tribes.

WE SHOULD SUPPLY ALL OUR WANTS.

As society advances and emerges from the strictly agricultural to the combined agricultural and mechanical industries the same rule of progress and of safety will hold good. The people of a country should produce everything that nature favors within their area, and should by proper means protect their industries from industrial invasion.

In order to secure to this country such abundance and variety of industries as shall constantly occupy, in the highest degree of efficiency, a large and alert population, and to maintain such industries indefinitely as population increases, I contend that it is necessary for us to supply our own wants to the fullest extent that the climate, soil, and physical conformation of our country will permit, and to seek in foreign countries only such articles as can not be produced here without greater expenditure of physical and mental force than is made in the production of like articles elsewhere.

Without the widest diversity of occupations among people their maximum power can not be realized.

This complete diversification of industries can not coexist with the free admission to this country of the product of the ill-paid labor of other lands.

Men differ widely in their tastes and aptitudes. The occupation that may be suitable and enjoyable for one may be unsuitable or repugnant to another. The work that would draw from one man his highest possible effort would render another indifferent and inert. It is only when men follow the occupations for which they are by nature and disposition adapted that they enter with zest upon their daily labor, and contribute with pleasure all the force of body and mind to the performance of what would otherwise be an irksome or intolerable task. One of the most serious evils that can afflict industry is the waste arising from lack of zeal in those who, by reason of the absence of opportunity, have been forced into vocations to which they are ill adapted.

The elevation and development of all the people should be the highest aim of the nation. That elevation is never complete until every man is occupied in the "labor of love"—the labor of his free, intelligent, and thoughtful choice—the labor which induces greatest effort without fatigue and produces the largest and most beneficial results. In all this the real enjoyment is the labor. The resulting product, while indispensable and natural, is not of itself the source of delight, except as the climax of effort. The enjoyment is in the doing, in the making, in the work.

What would be thought of the hunter, whether poor or rich, who should have his mind constantly fixed upon the material result of the chase? If he be a poor man the result is useful, perhaps necessary, to him. But the glow of delight is in the pursuit, in the occupation for mind and hand. So it is with the workman engaged in the labor of his aptitude. The high reward is in the pursuit, in the mental attrition, in the overcoming of difficulties, in the sense of achievement.

When men have found their true vocation they approach it each day with pleasure; they pursue it each day with exaltation; they live in its contemplation; they are happy in unraveling its mysteries, and take delight in surveying the fair proportions of their well conceived and well wrought plans.

This is the inestimable boon which diversified industries confer, and no greater diversity of human effort is conceivable than is involved in supplying all the wants, material, intellectual, and spiritual of the free, progressive, and aspiring population of this country. Such diversity can be secured only by confiding to those people themselves the duty of supplying all their mutual wants, which, under existing conditions, can not be done without recourse to the policy of protection.

THE POLICIES OF OTHER NATIONS NOT NECESSARILY A CRITERION FOR US.

If reminded of economic policies that prevail in other countries and of the great wealth and high civilization that there coexist, I reply that policies which are credited with developing that wealth and civilization for a comparatively few, must also be charged with the degradation and starvation of uncounted millions. In a government of the people, for all and by all the people, no inferences favorable to such policies can be drawn. Of what account to the great mass of the workers of those countries is it that they toil from daylight to dark throughout all the years of their weary lives, if of the wealth they create they themselves receive but a fraction, barely enough, even in the heyday of civilization, to maintain existence on a plane but one stage removed from that of primeval man?

If the wealth created be not justly distributed, if the producers of it are forever to produce and never to enjoy, if the larger part of the fruits of production are appropriated by a few who do not produce, and if this be the best result of enlightened progress, what a ghastly failure is civilization! But, Mr. President, it is not the best result. It is the result only of a partial and one-sided development, the fruits of false and selfish policies. The policies that are to prevail in this country must be such as will diffuse the blessings of material progress and advancing civilization among the entire body of its citizens.

The larger the numbers of the population of a country the greater the need for diversification of its industries. Among sixty-five million people an infinite variance of aptitudes will be found, and every increase in the number of inhabitants will be accompanied by a need for greater subdivision of industries to correspond with the ever-increasing differentiation of individual faculties and proclivities.

In order, therefore, to insure that a given population will always voluntarily yield up its natural maximum of working force, such national policies should be adopted as may encourage the establishment and maintenance throughout the country of the widest diversity of industries. This diversity should not be limited or affected by geographical lines. It should not be a characteristic of one section merely. In a country of such magnitude and variety of resource as ours each section should develop and mature every industry to which it may be adapted. There would thus be available for growing youth in all parts of the country the opportunity of adopting at home such calling as may be suited to individual aptitude. As additions were made to the number and variety of industries time would produce the needed adjustment and co-ordination.

INDUSTRIAL AS IMPORTANT AS POLITICAL INDEPENDENCE.

In order that this Republic may become fully independent it must become not merely politically, but also industrially independent; for, broadly considered, political freedom is not so much an end as a means; it is not a goal, but a starting-point. In the presence of false industrial and economic systems political freedom can not avail. After inducing the mass of the people to indulge in high aspiration, to believe in the principles of our immortal Declaration, that "all men are created equal," to understand that here they are living under no system of caste, that the people constitute the Government, and that all opportunities are open to the least among them, it is vain to say that they must be content to live in conditions of misery identical with those which surround the subjects of despotic governments who have never drank in the spirit of liberty. We must not say to our people, "Aspire, be proud, be independent—and live in squalor."

To be independent in the true and full sense a nation must become self-sustaining. Its work must be done by its own people on its own soil. In the means of livelihood of its citizens it must be independent of all the world. It should not leave them subject to the shifting, uncertain, and antagonistic policies of foreign governments. A great people should possess themselves of all the arts and industries of civilization.

THE BEST WEALTH—KNOWLEDGE.

For the art, Mr. President, is better than the article. The knowing how to produce is infinitely more valuable than the thing produced. The product we have for to-day; the knowledge we have for all time. No nation can enjoy to the full extent the luxuries, conveniences, and comforts of civilization whose people do not themselves produce them. Such things can not be permanently secured by exchange. If a nation would have them it must create them.

This consideration should impel every nation of wide territorial extent to be self-sustaining. That is the condition pointed out by nature. It is the only condition that accords with the fullest growth and development of a people. Exchange will for a time supplement our deficiencies, but, if for want of practical knowledge of the arts our skill decline, our exchange power will also decline.

Besides, material wealth is not the highest wealth, nor is it the most enduring. Not only is it drawn upon from day to day for natural consumption in the supply of man's wants, but it is liable to destruction by fire or flood; and, even when husbanded with solicitude and protected by all the safeguards that cunning and skill can devise, it bears within itself the seeds of corrosion, and in spite of all that human ingenuity can do it will deteriorate and decay.

How different is it with the intellect of man! It develops with use; it expands with exercise; it strengthens with time. The more it is used, that is to say, the more it is consumed, the more abundant and prolific it becomes.

Whatever policy best employs and develops the intellect of a nation, that is the policy which most enriches it. For, in the last analysis, intellect is the highest form of wealth. The prime factor in the wealth of the United States is the intellectual force of its people. The loss of

a fraction of that force would be a greater calamity to this Republic than the destruction at any given moment of all its accumulated billions.

If a people have not intellectual vigor, no matter what other elements of prosperity they possess, they have not true or enduring wealth. Imagine all our tangible products, the enormous bulk of the material wealth of this continent, transported into the heart of Africa and placed in the possession of a people without intellect; how long would the Africans be rich? But a few days, for they would consume the goods without knowing how to produce others in their stead.

Or, again, conceive it all immersed in the inaccessible depths of the ocean, leaving nothing within the limits of our national domain, save only the natural resources of our soil and climate and the intellectual vigor and activity of our people—within a short period we would have reproduced it all.

The doctrinaires of Europe, and some of those of our own country, are prone to ascribe our unexampled growth and development to our great natural resources. But that our prosperity is due only in part to that cause must be manifest from the slightest historical retrospection. Before our race peopled this continent, the aboriginal Indians had, for untold centuries, had at their disposal every physical property of soil and climate that we to-day possess. Yet where was their wealth?

THE BEST KNOWLEDGE—KNOWLEDGE OF WORK.

The ultimate foundation of wealth among any people will be sought in vain in natural resources merely, and in vain among temporary stores of tangible and material commodities. The greatest wealth resides in applied knowledge. Not the abstraction, knowledge, which has been the fetich of the ages; not the knowledge of dilettanteism, which has glossed over the miseries of mankind with the consolations of rhetoric; not the knowledge of polite literature, which has remanded man to the past and turned him from the future; but the knowledge of science, the knowledge of nature, the knowledge of endeavor, the knowledge of *work*. What the world demands is a knowledge that shall ameliorate the condition of man, that shall augment his happiness, develop his powers of body and mind, and establish his dominion over nature.

How is such knowledge to be acquired? Not by contemplation merely, not by the brain alone, but by the combination of brain and hand. To be of use to mankind, the conceptions of the intellect must be transmuted into material force.

On this point I will read an extract from a monograph on "The Coeducation of Mind and Hand," a most luminous and thought-stirring essay by Charles H. Ham, published by the New York College for the Training of Teachers. In it the attentive reader will find a contribution to the literature of education and of labor not surpassed, if equaled, in all the libraries of learning. Mr. Ham says:

> Education and civilization are convertible terms; for civilization is the art of rendering life agreeable, and things—art products—constitute the basis of all the comforts and elegancies of civilized life. The great gulf between the savage and the civilized man is spanned by the seven hand-tools and the modern machine-shop is an aggregation of these tools driven by steam. Tools, then, constitute the great civilizing agency of the world. Carlyle well said of man: "without tools he is nothing, with tools he is all." The savage may own a continent, but if he has only the savage's tools—the spear and the bow and arrow—he will be ill fed, ill clothed, and ill housed. He might be familiar with philosophy and the sciences, but if he were ignorant of the useful arts his state would be the more deplorable, for, with the sensibilities and aspirations of a sage, he would still be powerless to draw from heaven a spark of fire with which to warm his miserable hut.
>
> It is not necessary to divide the arts by the employment of the terms "useful" and "fine," for the fine arts, so called, can only exist legitimately where the useful arts have paved the way. In a harmonious development the artist will enter on the heels of the artisan. Art is one, a unit. It is not less worthily typified by the carpenter with his square and the smith with his sledge than by the sculptor with his mallet and chisel and the painter with his easel and brush. Both classes contribute to the elevation of man.
>
> It follows that the ultimate object of education is the attainment of skill in the arts. To this end the speculations of philosophy and the experiments of chemistry lead. At the door of the study of the philosopher and of the laboratory of the chemist stands the artisan, listening for the newest hint philosophy can impart, waiting for the result of the latest chemical analysis. In his hands these suggestions take form. Through his skillful manipulations the faint tracings of science become real things, suited to the needs of human life, for it is through the arts alone that all branches of learning find expression.

These words, Mr. President, will find ready appreciation among all who have reflected upon the influence of the arts upon the progress and development of civilization.

The world has had its share of ornate but barren scholasticism. It has seen the fruit of an intellectual training that made education an end, not a means—a training as sterile as it was severe and which kept the human mind forever moving in a circle. It has trained its youth, when it trained them at all, in dialectics, in the arts of speech, in the arrangement of phrases, in the devising of syllogisms. It is time it turned to a higher order of effort—from the analysis of sentences to the analysis of things, from metaphysics to physics, from the artificial to the natural.

The giant forces of nature, that for thousands of years had slumbered unsuspected under the gaze and within the very reach of the abstract philosophers, have been awakened by the concrete philosophy of labor. With that awakening has come a rearrangement of all industry, a readjustment of all interests, a transformation of the universe.

Men have learned that the highest enjoyment of knowledge consists not in revery, but in application, and that the highest application consists in supplying their own ever-increasing wants. It is the increase of wants that distinguishes civilization from barbarism. That increase should, as far as possible, be supplemented by a corresponding increase of power to supply them.

The importance of knowing how to make rather than how to buy is seen in the fact that the world has never more than one year's subsistence ahead. In the face of this tremendous fact, how insignificant are all ideas of hiring our work out and, by so doing, training and developing the creative faculty of the people of other countries instead of that of our own.

What a nation needs in order to be great is the generation of power in all its people; not merely the power to think, but the power to execute; not merely the power of a few to think for all, but the power of all to think for themselves. Nations are unworthy the name of great in which the thinking faculty is exercised by but a fragment of the population. American civilization is based on an essentially different foundation. It depends on the intelligence of all. But it should not content itself with a regard for literature alone; it should perceive thought, not in sculpture and painting merely, but in the art that supplies material wants. While admiring the ability that creates a statue, which cultivates and refines the tastes of a people, it should admire no less the steam-engine, whose influence on civilization has been greater than that of any other creation of man.

In a letter which I have recently received from a lady of high culture, of most refined sensibility and great accuracy of intuition, I find my idea upon this point so happily expressed that I shall read a few of her sentences and make them my own. She says:

> I think that insufficient consideration is given to mechanics, men of practical science, and inventors, as compared with that given to artists and authors. Art, of course, has its place and fills a certain demand of our nature, but no man can enjoy the contemplation of a fine picture or statue, or the reading of a poem, no matter how perfect its construction or sublime its subject, if he be hungry or scantily clad. The practical, the useful, the necessary, must precede the beautiful and the simply artistic, or at least go hand in hand with them. At the present stage of civilization there is more of the human than of the angel in man; and if the human side is neglected, the angel will soon disappear.

As this lady well observes, it is only as the human wants are satisfied that the finer qualities of man become developed. It is hopeless to expect high ideals of morality or civilization while men are struggling for bread. This struggle removed, the energy absorbed in the fevered hunt for subsistence is liberated and applied to purposes of progress, to production and invention.

The power to produce—the faculty to create—is indispensable to the full measure of enjoyment of any product. A nation that can not create things can not truly enjoy them. A people who do not know how to produce an article readily content themselves without it. Without possession of the art—without the knowledge how to make—the possession of the article will not suffice. There is not, and can not be, in the mere power to use, that sense of possession and enjoyment that comes of the power to create. Things furnished to a nation by the intellect of other nations can never serve the highest purpose. The highest work of art, the product of a foreign people, can never convey true delight to a people themselves wanting in the power and experience of art.

I do not envy a people that could thoroughly enjoy, or be content with copying, the inventions of other countries. It is the highest duty of a government to adopt policies that shall tend to develop the creative faculties of its people. In the savage state the only object of man is to obtain food and shelter. Civilization should have a higher aim and purpose. In order to obtain the barest necessaries of life—to secure a mere animal existence—it was not necessary for men to enter into relationships in society, to organize communities, to subject themselves to the restraints and limitations of civilization. Mere physical existence could be maintained without it.

ADVANTAGES OF ASSOCIATION.

The great end of civilization as distinguished from barbarism should be to uplift humanity, to unfold and develop those qualities of mankind that are superior to the animal nature, to bring forth and give play to intellectual force by the operation of which the higher wants may be satisfied. In this country the struggle is not for the bare necessaries of life. The struggle is for advancement, for progress, for elevation, for association. These objects can be attained only by a governmental policy that will insure such variety of occupations as may evoke the best efforts of all our people. The more men mingle together the more each man learns of that which his fellows know. Thus each will possess and enjoy a share of the knowledge of all, and will himself have imparted to others a share of the knowledge resulting from his own observation and reflection.

Man is a gregarious animal. His strength can not be developed, neither can his happiness be secured, in isolation. Imagine him placed, solitary and alone, amid the most splendid and luxuriant surroundings, with every wish granted, every yearning realized, every aspiration gratified, excepting one alone, society—excepting the touch of the human hand, the sound of the human voice, the interchange of thought with his kind! He would fly from this condition as from death, of which it is the "counterfeit presentment."

The instinct of association is the most powerful attribute of our race. No object of desire holds a higher place in the estimation of men. From

the cradle to the grave, the greatest charm which existence offers is companionship. The great object of life, after satisfying the indispensable needs of physical existence, is social intercourse.

This is more true of the people of this Republic than of those of any other country on the globe. Nine-tenths of their labor, whether of hand or head, is induced by social aspiration. It is to gratify this aspiration, to give their children larger and better opportunities, that men hazard their lives in numberless avocations. It is the mark of superiority in a people that they prize progress beyond physical ease, and it is the boast of the American people that their progress is unexampled among the nations.

The principle of association and social growth receives among us a broader recognition than among any other people, and it is to this country that the world must look for the highest realization of that principle. Association is the fundamental fact upon which civilization rests. It is the law of progress for humanity, and we can no more escape a violation of its decrees than we can escape a violation of those of any other natural law. To men in aggregations, with universality of occupations, properly proportioned and co-ordinated, all power is given, all advancement is possible.

So well and so universally is this fact appreciated that the greater part of the material wealth of every nation is derived from the assertion of the principle of aggregation. The twenty-five cities of Massachusetts, covering less than 5 per cent. of the area, contain 77 per cent. of the land values of that State. Boston alone, containing not one-half of 1 per cent. of the area of the State, contains 45 per cent. of the land values. These values do not arise from any property of the soil.

What people are paying for in cities is not the particular number of square feet which serve the purpose of existence, but for the opportunity at short range of supplying each other's wants—the opportunities of association, the privileges of possessing paved and lighted streets, ready means of locomotion, of having water, gas, or electricity in their homes, of having access to libraries and museums, of having their morning newspaper, hot from the press, of attending instructive and entertaining lectures, of hearing operas, of seeing the drama, and all the other innumerable advantages which can only be had by people in aggregation.

Association, then, stands for strength, for concentration, for intensity, for achievement. Isolation stands for feebleness, for ignorance, for inefficiency. It is the negation of achievement. It implies expenditure of force without proportionate result. It involves waste of physical energy, and induces mental languor and impotence. Whatever, therefore, tends to bring men together in communities, tends to lighten the burden of each, while multiplying the achievements of all. This is the great work accomplished by a protective tariff.

As men must live by labor, they must learn occupations that will supplement each other. The study of an occupation is the noblest study of life. In the absence of a policy which may enable our own people, without degrading competition, to do all their own work, how are they to secure opportunity for the study of varied occupations?

THE GREAT SCHOOLS OF THE WORLD—THE WORKSHOPS.

The great schools of the world are no longer those in which the dead languages are taught. They are the mechanical workshops, in which young men learn to build Corliss engines, Waltham watches, dynamos, and the long list of other marvelous machines that but herald the approach of greater marvels. The professors of the new philosophy are not those who despise industry; they are the chieftains of industry. "This is the stone which was set at naught of you builders, which is become the head of the corner."

These are the schools—the true "universities"—that a nation needs. The instruction which they impart has all the accuracy of mathematics, all the grace of rhetoric, all the rhythm of poetry. The implements of thought are not words, but the tools of labor. The processes of analysis and synthesis are taught by real, not mimic, object-lessons. The constructive faculty is exercised where it should be exercised—in construction. The imagination has free play in the realm of invention and experiment. The reasoning powers are disciplined to an extent unknown to the logicians. In the making of an argument men may err without detection; in the making of a watch or a window-sash they can not do so.

Says Macaulay:

> Bacon has remarked that in all ages when philosophy was stationary the mechanical arts went on improving. Why was this? Evidently because the mechanic was not content with so careless a mode of induction as served the purpose of the philosophers. And why was the philosopher more easily satisfied than the mechanic? Evidently because the object of the mechanic was to mold things, while the object of the philosopher was only to mold words. Careful induction is not at all necessary to the making of a good syllogism, but it is indispensable to the making of a good shoe.
>
> Mechanics therefore have always been, as far as the range of their humble but useful callings extended, not anticipators but interpreters of nature; and when a philosophy rose the object of which was to do on a large scale what the mechanic does on a small scale—to extend the power and to supply the wants of man—the truth of the premises which, logically, is a matter altogether unimportant, became a matter of the highest importance; and the careless induction with which men of learning had previously been satisfied gave place of necessity to an induction far more accurate and satisfactory.

Men may take risks, Mr. President, in the employment of a professor of belles-lettres; they will take none in the employment of an engineer. The untrained head may do no harm; the unskilled hand may prove destructive. The workshop is the academia of the new philosophy. It is the fountain of thought, from which must flow the stream of invention that is to enrich and fructify the world. Who can prophesy the ultimate result of its work? Who would limit the bounty which it must confer on mankind?

The greater the number of workshops existing in a country the greater will be the number of inventions, and the more numerous the sources of that country's wealth.

The conquest of forest and field, the civilization of man, was achieved not by literature, but by labor; not by the wise saws of soothsayers, the deductions of moralists, the eloquence of orators, or the rhymes of those who "yoked rich words together." A half-dozen simple tools tell the story of the early struggles. From these, by the cunning of brain and hand, have been evolved all the intricate contrivances that now constitute the extended paraphernalia of the workshop. Whoever invented a new device and added it to the common stock was the true civilizer. If it be a benefaction to mankind to cause two blades of grass to grow where before but one had grown, it is no less a benefaction to multiply a hundredfold the power of the human arm.

Those who laud the graces of poetry and the charms of rhetoric will do well to remember that a machine which runs with rythmic beauty and irresistible power is more awe-inspiring, more eloquent, more noble, and infinitely more instructive and valuable to mankind than any poem ever inscribed. The power-loom, the spinning-jenny, the sewing-machine, the reaper, the steam-engine have done more to deliver the world from barbarism—to clothe, to feed, and to elevate the race morally, intellectually, and physically, than all the works of poetry and rhetoric that the world has ever seen. The Corliss engine is an Iliad, the locomotive an anthem, the sewing-machine an idyl, the reaper an eclogue. These are the greatest achievements of man—the richest and ripest fruits of his culture and genius.

Around these will the philosophers and *littérateurs* of the future admiringly cluster. In their praise will the muses sing, the poets indite, the seers foretell. In comparison with their deeds how insignificant the feats of Hector and Ajax, how repulsive the exploits of Alexander and Cæsar!

The advancement of the future must find its material basis in the development of the mechanic arts and inventions. There is a limit to the consumption of food; the richest man can consume no more of it than the poorest. An advance in civilization does not increase the demand for food, but it does increase without limit the demand for articles that minister to the comforts and refinements of life in other respects. New works of use and ornament are constantly in demand; new inventions and machines constantly making; new styles of houses, of furniture, of clothing, of jewelry, coming into vogue; new tastes and fancies even in the games and amusements of the people.

THOSE SCHOOLS MUST BE PERMANENTLY ESTABLISHED.

To secure the largest achievement, manufactures must not only be varied and generally dispersed throughout the country, but it is indispensable that they be long continued. The young of each generation must live in the presence of work and in the atmosphere of production. They must be accustomed to the hum of industry. They must imbibe the spirit of exertion. They must grow up amid surroundings that will give them respect for manual labor, which they must identify with their future as with honorable and self-respecting utility. They must see no debasement in the hard hand and the soiled face—these are the "medals" and insignia of the new order; they must hear none in the rumble of machinery—it is the sign by which they conquer.

A people accustomed to looking upon these things as humiliating, or as involving inferiority, can not succeed. When men realize that there are no divisions in the guild of labor, and that all labor is noble and necessary, they will seek that to which they are adapted, and will pursue it with zest. For such men there is always a future. Zeal is the parent of promotion. Study and observation are the handmaids of progress.

Improvements in machinery are effected by those in daily association with it; who see and study it at rest and in motion; who occupy themselves in noting the harmony and proportion of its parts and their adaptability to the functions to which they are assigned; who reflect upon the symmetry or the aberrations of its movements and discuss its merits and defects in detail with their fellows. This process awakens thought and arouses ambition. It invents machines and develops men.

A country can have no source of power more enduring than a body of skilled and well-paid mechanics who, working and residing in centers or cities at short and convenient distances apart, spend their money in their own localities and furnish the most certain, convenient, and profitable market for the products of agriculture. I lay it down as a fundamental maxim that the highest agricultural prosperity can never be reached except in countries which do their own work; in other words, in countries in which manufactures abound and in which the farms feed the factories. The law of orderly progress demands that a people shall develop all their powers. The aptitude of each will supplement the aptitudes of the others.

THE APTITUDES OF ALL THE PEOPLE SHOULD BE DEVELOPED.

In a controversy on protection and free trade, appearing in the North American Review for January, 1890, Mr. Gladstone said:

International commerce is based not upon arbitrary or fanciful considerations, but upon the unequal distribution among men and regions of aptitudes to produce the several commodities which are necessary or useful for the sustenance, comfort, and advantage of human life. If every country produced all commodities with exactly the same degree of facility or cheapness, it would be contrary to common sense to incur the charge of sending them from one country to another. But the inequalities are so great that (for example) region A can supply region B with many articles of food, and region B can in return supply region A with many articles of clothing at such rates that although in each case the charge of transmission has of necessity been added to the first cost, the respective articles can be sold for importation at a lower rate than if they were home-grown or home manufactured in the one or the other respectively.

In this statement Mr. Gladstone, to my mind, surrenders the fundamental basis of international free trade, so far as this country is concerned. Whatever might have been the apparent or presumed support for such a theory up to 1861, before the protective tariff gave impetus to home manufactures, the experience of the past thirty years has conclusively demonstrated to every reflecting mind that numbers of aptitudes not before possessed by our people have in that time been acquired. What but a free-trade policy can prevent us from acquiring other aptitudes which we do not now possess? Aptitudes reside not in the country, but in the people, and they are as varied as the people are numerous. Within the period indicated the development of aptitudes in this country has been a marvel and a revelation not only to ourselves, but to the world.

Mr. Gladstone admits that "it would be contrary to common sense" to pay freight on goods exchanged between countries, provided the aptitude for making such goods existed at home. Why not carry the argument to its logical conclusion, namely, that with an alert population it is cheaper to develop the aptitudes at home than to continue indefinitely the payment of freights?

But I take the question to a higher ground, where it enters the domain of ethics. Is it not the paramount duty of a people to develop all their aptitudes? Is it not in the following out of aptitudes that their enduring happiness is to be found? The enjoyment essentially is not in the product, but in its production; not in the possession of the article, but in the pursuit of the art.

Mr. Gladstone's argument is but a repetition of that with which the free-traders have for fifty years endeavored to make us familiar, namely, that our "aptitude" is restricted to the cultivation of the soil, while that of England extends to the ever-widening and all-comprehending work of manufactures.

It would be much better for England if her statesmen gave their country credit for more aptitude for agriculture. Owing to neglect of that industry a few months' suspension of England's commerce would bring the proudest of her aristocracy to starvation. As to this country, it will be found, as time goes on, that under the benign influence of a protective policy, which enables our people to supply all their own wants, we shall develop more aptitude for manufactures than now exists in any country of the world.

In a discussion on the repeal of the corn laws, to be found in the Journal of the Statistical Society of London for January, 1839, a British banker, in advocating the repeal of the duties, stated, as one of the advantages to accrue to England, that by offering a market for American cereals the development of American manufactures could be retarded. Free trade had not then been declared in England. On the contrary, so protective, even at that date, was the economic policy of that country that it was an offense against the law, punishable with severity, to export to a foreign country a piece of English machinery. Cloth could be sold, but not looms. The dream of England was to do skilled work for all mankind, and to receive reward in proportion to the skill. In stating his views as to the effect of the repeal of the import duty on cereals, this banker said:

It is probable that the continental nations, and especially America, would cease to turn their attention to manufactures. They would exchange their raw products for our manufactures, and the exchange would be beneficial to all parties. They buy from us, and we buy from them, not from any affection, but because the commodities which each has for sale are produced at the lowest price; and to effect such purchase is the constant aim of all merchants.

The effect of our present corn laws is, that we can not purchase their corn, and we are driving them to become manufacturers. As it is contraband [in Great Britain] to export machinery, they can not buy it without paying an exorbitant price—15 per cent. more than the regular charge being known to have been offered in this place to land it in Belgium. Hence, as the machinery can not be exported the heads are emigrating who will make the machinery, and who will carry with them all the capital they can command; and our landed proprietors too late will find that the prosperity of agriculture depends upon the prosperity of the manufacturers—upon their power of producing commodities, and exchanging them for the raw products of the agriculturists.

The bank officer of fifty years ago was concerned for the manufacturing supremacy of his country. In deeming it probable that America would cease to turn its attention to manufactures, it is evident that with him the wish was father to the thought. It continues to be intimated that by reason of our great agricultural resources we should depend for our wealth on crops of cotton, corn, and wheat, and that the duty of supplying ourselves with manufactured products should be committed to other nations with aptitude for manufacture.

How were those aptitudes acquired?

HOW APTITUDES MAY BE DEVELOPED.

For five centuries England protected her industries, both by heavy tariff charges and rigid prohibitory enactments, and when ready to become the workshop of the world her statesmen declared that she had "aptitude" for manufactures. There was a time, long before England asserted such "aptitude," when the weavers of Flanders made all the woolen cloth of the world—England, in the absence of "home manufactures," supplying them with her proportion of the wool. Flanders was then credited with aptitude for weaving. But the English people understood the importance of industrial development. They knew that aptitudes depended largely on conditions and training. They adopted the policy of protection, imported weavers, retained their wool, wove it into cloth in their own country, and thus developed the "aptitudes" which now they would lead us to infer are exclusively their own.

Aptitudes undoubtedly may be inherited, but, as we have seen, under fitting conditions they may also be acquired. It is in our power, and it should be our duty, to create in this country conditions that will develop every aptitude of which the human mind and hand are capable. If we continue unfalteringly the protective policy, it will be but a short time before our large, alert, and ingenious population will exhibit all the aptitudes now possessed by every nation engaged in industrial pursuits.

I will venture the assertion that with a proper adjustment and wide diversification of industries the strong, bright, hopeful, and alert people of this Republic may, in one generation, acquire all the aptitudes now exhibited by any nation upon earth. By that I do not mean that protection may then be dispensed with, for I contend that the protective policy—the policy which is to result in keeping in active and vigorous exercise the best faculties of all our people, in maintaining in equilibrium all their industries and enabling them to supply all their own wants—must be continued if this nation is to perpetuate its high order of manhood.

Nowhere in the world are there a greater variety of aptitudes displayed than in this Republic. Even were we lacking in some special aptitude, that is the one we should hasten to cultivate.

According to the free-trade theory, without the aptitude we should not attempt manufactures; yet without manufactures we can not secure the aptitude. We can not expect it to develop by accident. It can only be acquired by long and patient study in the "schools" of which I have spoken—the workshops of the country.

England became a great mechanical nation because of her wealth of minerals, her secure physical situation, and her strong protective policy. She had great beds of coal and iron, and had the men to work them. Shall we, possessing far greater wealth of minerals and far greater security of physical situation, possessing a boundless domain and an ingenious and untiring population, permit all opportunities of invention and progress to be confined to Europe? Shall we contribute nothing to the advancement of mankind? Shall we not lead rather than follow? Shall we content ourselves with the rudimental industry of agriculture, the industry of Adam, and depend upon other nations for our mechanical contrivances?

Rather let it be our aim to develop every aptitude of our people, so that our country may, through the intelligence, ingenuity, and virtues of its citizens, continue the work of upbuilding a great and free nation on this hemisphere from which the light of a true social science may shed its rays back upon the fading civilizations of the older continents, rekindling the torch of hope and revivifying the aspirations of their peoples.

It would be an extraordinary effect of liberty and of self-government of which we boast so much if the intellectual work of the world were confined exclusively to the people living under despotic and monarchical governments, and nothing but the least intellectual forms of manual labor performed in a free and self-governing republic.

If that is to be the result of republican liberty, then the other peoples of the world should be in no haste to change their forms of government. Civilization and spirituality under a despotism are better for mankind than the freedom and ignorance of the aborigines. If the price of liberty is to be the loss of skill in the arts which elevate and ennoble humanity, better that liberty should die in order that men may live.

If the results of the Declaration of Independence are to be that the work which exercises and develops the noblest faculties of man, the work which combines the labors of hand and brain, shall acquire increasing vigor and plenitude under the so-called "effete" governments of the older continents, and only the unskilled, unintellectual, and unprogressive labor is to be the characteristic of this Republic, the philosophers of the future will be at a loss to attach to republican freedom the importance claimed for it by the literature of the present. Thus Macaulay's famed New Zealander, instead of surveying the ruins of London from its celebrated bridge, may sit astride the fallen and forgotten Statue of Liberty in New York Harbor and sweep the horizon in vain for proof to support the averments of historians that civilization had once found lodgment on Manhattan Island.

ORIGIN OF FREE TRADE.

The free-traders and their allies, the "revenue reformers," aver that a protective policy is an injury to our people.

Two powerful classes have contributed largely to the dissemination of this belief. One, as would naturally be expected, comprises the European manufacturers, who see great profit to themselves in a possible monopoly of our market for the sale of their wares. The other is composed of the great variety of non-producers of Europe, the respectable idlers, the most powerful and influential of whom are the titled aristocracy, the annuitants and income classes. Their only relation to the state is as consumers, and they are naturally zealous in their own behalf.

Living largely on rents of houses and lands, on unearned pensions from the Government, and the interests on bonds and mortgages, they add nothing to the material wealth of the state. Producing nothing themselves, they regard the consumer and producer as different individuals, and hence talk of the producer "robbing" the consumer. They have no knowledge of conditions such as exist in this country, where practically all the people are both producers and consumers and where the general sentiment is that he who consumes without producing is not entitled to especial consideration in the enactment of economic statutes.

The great body of the land of Europe being held out of reach, the masses have not, as have our workmen, the alternative afforded by a resort to agriculture. However low the wages of labor may be pressed, they must be accepted. The laborer, being between the upper and the nether mill-stone, is in no condition to dictate terms. Two powerful classes combine to despoil him of a portion of the products of his labor.

THE PROTOTYPE OF THE FREE-TRADER, THE FREEBOOTER!

In the accomplishment of this purpose the free-trader is but following, by a more humane method, the precedent set by his prototype, the freebooter.

The object of the freebooter was to get wealth without producing it, to get that which somebody else had earned, but to get it without giving an equivalent.

In the early history of human endeavor large wealth could be obtained only by direct and open plunder, by undisguised spoliation.

This was a spoliation of the "producers" for the benefit of men who could not produce, and who despised the arts that led to production. It frequently culminated in the enslavement of the weak by the strong. Whenever circumstances gave prospect of constant employment to labor, the laborer was enslaved and large bodies of men, the real "producers" of the world, were held in subjection and hired out for wages paid to their masters, the "consumers," that they might contribute to the ease and wealth of those "consumers" who themselves could produce nothing. Thus we find that of a population of 120,000,000, constituting the Roman Empire, 60,000,000 were slaves, almost all of these being of the white race.

Whenever the conditions were unfavorable for actual enslavement, the "consumer" and his retainers contented themselves with making periodical raids upon the producer and in a night depriving him of the hard earnings of years of industry. The "free-trader" of that period was the warrior on land and the pirate at sea.

Whether in the midnight raid of robber bands, the more warlike conflicts of tribes, or the sanguinary encounters of armies, the ultimate object always was—unearned wealth. The opulence of the Orient excited the envy of Alexander, whose legions reveled in their ill-gotten booty. The riches of Gaul aroused the avarice of Cæsar, and the spoils of the provinces, transported to Rome, long supplied her proletariat with "bread and circuses." The empire, in its turn, was sacked by the barbarians. When, at its fall, society reverted to its earlier forms, the deadly foray and the predatory incursion became again, throughout Europe, leading instruments for the distribution of wealth among those who had not earned it.

On the decline of feudalism and the rise of the modern nationalities, the pillage for the benefit of the aristocratic "consumer" was continued under a new guise. The work was invested with an air of philanthropy. Barbarians were to be enlightened, and it became the self-imposed duty of the leading nations to secure, at the mouth of the cannon, the privileges of "freedom" of trade with those barbarians. Civilization had to be extended, and, with the aid of the resources of civilization, the terms of the trade were fixed by the one side for the "benefit" of both. These resources, however, did not consist exclusively of implements of warfare.

The aid of literature was invoked, and the world was flooded with books, which were translated into the principal languages, attempting to prove that free trade was the panacea for all economic ills. In the progress of time, having exhausted both physical and mental force in compelling or persuading the people of the world to accept "free" trade, and understanding the importance of money in its influence on the distribution of wealth, the free-trade "consumer" secured a further share of the earnings of the producer by a skillful manipulation of the volume of money in the leading countries of the world and by depriving of the money function the older, more useful, and more universal of the precious metals.

THE BASIS OF FREE TRADE.

Free trade is based essentially on the idea, express or implied, that in trading with other nations we can cheat them in the trade—that in exchanging with foreigners we can secure an advantage over them, that in return for the products of one day's work of ours we can get the product of a day and a half of theirs.

This is a delusive hope. With freedom of trade, equalization would soon take place. All the wealth we can have is what we produce, or its equivalent. In obtaining the equivalent, let us obtain it of our own people. Thus, to the extent that we are consumers of the things they make, we shall give them employment; and, in return, to the extent that they are consumers of the things we make will they give us employment, thereby insuring an equilibrium in our industries, developing at home skillful artisans in every branch of industry, and dotting the country over with manufacturing establishments.

Free trade would banish those establishments and would exchange skilled mechanics for cheap door-knobs or cheap cutlery. It would reject the knowledge of useful arts in order to save for the moment a few cents a yard on woolen cloth or cotton-ties, or a few cents a pound on tin-plates. Protection secures the arts and protects the artists. It transforms ignorance into knowledge, indifference into zeal, inertia into activity, impotence into power.

Free trade is based essentially on the idea of landed aristocracy—on the idea that the land of the country is the property, not of independent farmers, owning and working their own land, but of allodial lords, owning practically the community in which they live. It has its foundation in that form of social development of which slavery was a type, which takes no thought of the man who works with his hands. It implies that, as in Europe, there shall eventually be in this country no proprietary farmers, but that a few great proprietors who disdain work shall monopolize the land. It implies that when a few barons shall hold in large tracts the land of the country they, as lords of the soil, can ordain that what they call "their" country shall forever remain in the primitive occupation of agriculture.

These baronial owners can say to all comers, "We own all this land; this country is ours; you can starve unless you accept work on our terms. We do not wish you to have a variety of occupations. We do not wish you to aspire. What have you to do with aspiration? We can buy all the manufactured goods we want from the cheap labor of Europe or Asia. If you open stores or set up workshops you must compete with the cheapness of Europe and the squalor of the Hindoos and Chinese; you are entitled to no protection as against them. They have as good a right to sell their wares here as you have." But in the same breath the landed proprietor will add, "Of course you people are expected to shoulder your guns and with your lives defend and protect us and our property in case those same Europeans or Chinese invade the country and endanger our ownership of this property."

They will recognize the propriety and even the duty of protecting the country from an armed invasion, while they will contemplate with serenity the prospect of an industrial invasion, which might be more disastrous. The principal use of conquered territory in this age is to secure a market for the industries of the conqueror.

The opponents of the protective system claim that under their policy no law would prevent us from doing our own work. But they are unable to deny that conditions are as powerful as law, and that where conditions render it impossible for us to compete in our own market with foreign manufacturers it is idle to boast of our freedom under the law to enter into any business which we may desire.

SHOULD WE ADOPT A FREE-TRADE POLICY?

The question whether free trade should receive the sanction of our people depends altogether upon the view we take of the wants of the nation. If all that is to be done is to satisfy the barest physical wants, if we care only to maintain our workmen on the lowest fare, dress them in the poorest clothes, house them in the meanest buildings, and deprive them of the hope of all intellectual advancement, then let us adopt an economic policy which will result in the destruction of our industries.

If, on the other hand, we wish to unfold and strengthen every energy of our people—cultivate our material resources, preserve our national strength and impregnability; if we are to maintain our place in the vanguard of the nations; if we are to seek the satisfaction of intellectual and spiritual needs; if we yearn after the higher life, after the broadest development; if we aspire to the noblest use of our best faculties; then we must look for these, not in free trade, nor in any form of foreign trade, but in the development within our own country of the wide and varied catalogue of all the industries, all the sciences, all the arts that contribute to the happiness of man.

In none of this work would free trade aid or encourage us. On the contrary, its motto is to buy wherever it may buy cheapest to-day, without regard to the future, or to the country in which it buys. It is distinctly founded on individual selfishness. It looks only to the temporary advantage of the individual, and takes no thought for the future or for the community. The protective policy is founded on a higher form of selfishness, the selfishness of the nation, which is but another name for patriotism.

Free trade brings the watch, protection brings the watchmaker; free trade brings the machine, protection the machinist; free trade brings the engine, protection the engineer. Given the men, we can not lack the machines. Having the art, we shall not want for the article. Pos-

sessing the producer, we shall not want for the product. Between them who shall hesitate as to which is the more valuable to the country? Men found communities, machines do not; men constitute a society, machines do not.

The policy of free trade involves a contradiction not readily reconcilable with the genesis of the Republic. Among the causes that led to the Declaration of Independence was the fact that Great Britain would not permit us to do our own work. No source of difference between the mother country and the colonies was more offensive and repugnant to the sense of reason than the denial of the right to the colonists to set up their own manufactures.

All the force of law and of official discouragement was brought to bear to repress the spirit of enterprise on the new continent and to force its people to remain forever in a condition no less of industrial than of political dependence upon the mother country. It was our "market" rather than our country that Great Britain prized. Our voluntary adoption of an economic policy which would now give that market to Great Britain or any other country would defeat one of the principal objects of the founders of the Republic.

But it is not alone in an economic aspect that free trade would be an injury to this country. If we consider its effects upon our social life, we shall find it no less injurious. Communities are composed of men and women. Free trade separates by thousands of miles the sons of the farmer and the daughters of the watchmaker, of the machinist, of the book-keeper. It keeps the farmer's daughters unacquainted with the sturdy and honorable young men who should be learning in American, rather than European, workshops the various mechanical trades, which would yield them an income sufficient to enable them to enter with prudence into the marriage relation.

Not the least of the achievements of a continued protective policy will be that, by encouraging the widest development of the arts and manufactures and the formation of communities in proximity to the farmer's home, the law of natural selection in the most important incident of human life may have opportunity to assert itself. It will render it unnecessary for the farmer to send his daughters from home to get the advantages of society; it will bring society to them. The varying tastes, preferences, and affinities which sanctify the marriage state will thus have opportunity of finding expression. All temperaments, all dispositions, all shades of character will be observable in such communities, and ample opportunity for choice will be afforded to each sex. This will in very large degree promote the progress and happiness of society.

FREE TRADE DISCREDITED.

Not only is free trade delusive as a theory, it is discredited as a fact. The tendency of the time is in the other direction. By protective tariffs the nations of Europe are developing home industries.

For manufactured products France is no longer tributary to England, as she was thirty years ago. Instead, she is a competitor of England. The exports of French manufactured goods are now valued at nearly one-half those of Great Britain, and two-thirds of the amount consist of textile fabrics. In agriculture the French people, by the greater intensity of cultivation characteristic of small farms, are producing 50 to 60 bushels of wheat to the acre.

Germany, since the Franco-Prussian war, has by means of a protective tariff effected a revolution in her industrial system. She has improved and renewed her machinery in accordance with the latest developments of inventive genius. She begins her industrial career at a point at which Britain has arrived only after centuries of endeavor. Twenty years ago Germany was one of the best customers of Britain; to-day she is rapidly supplying her own wants. It is but thirty years since cotton spinning and weaving in Germany were unorganized and insignificant house industries, and the exports of cotton goods from all the German states but 830 tons. In 1884 Germany's exports of such goods were 25,000 tons. In the nine years from 1875 to 1884 she doubled the number of spindles in her woolen factories, and in the last-mentioned year exported 21,000 tons of woolen goods.

In 1879 Russia adopted a protective policy, increasing her tariff dues nearly 30 per cent., enormously decreasing her imports of British manufactures and correspondingly augmenting her own. Nearly all the steel and three-quarters of the iron now used in that country are of home manufacture. In the ten years ending 1884 the exports of British produce to Russia declined from $44,000,000 to $25,000,000 per annum.

Italy, too, has now her protective tariff. Notwithstanding lack of fuel, her home industries are rapidly developing. Her spindles, that in 1877 were but 1,000,000, had by 1885 increased to 1,800,000. Her imports of coal furnish an index to her augmented manufacturing power. For 1871 those imports amounted to 780,000 tons; for 1884 to 3,000,000 tons.

Austria and Hungary are participating in the race for home production, not only by protective tariffs, but by laws which exempt from taxation for a period of years such industries as may be established.

Thus all the leading countries of the world are waking up to the fact that they should be doing their own work, producing for their own people, setting their own houses in order. All begin to see the permanent value and the enduring national security furnished by an integrated variety of occupations. England itself is in throes of doubt, and discussing the virtues of "fair trade." Even Spain, the somnolent, is waking up.

The people of this country have in their own history an illustration of the blighting effects of a policy which disregards diversification of industries.

THE EFFECT ON THE SOUTHERN STATES OF THE ABSENCE OF DIVERSIFIED INDUSTRIES.

The great body of the opponents of a protective policy are found in the States of the South. Until lately they had no experience with labor, except such as they owned, and such as they could not, with safety to the institution of slavery, permit to become intelligent or aspiring.

The workman of the South, unlike him of the North, does not belong to the creative race. He forms the base only, the lowest stratum of the industrial system. He is under the feet of the dominating caste.

He is not regarded as a component part of the Government, or as a factor in the support of its institutions. He is simply a hereditary laborer doomed, as the people of the South believe, forever to remain a laborer, and forever to remain in a condition little above that of slavery.

The Southern people took no interest in the advancement or the intellectual achievement of their working class. They were willing to live on the reward of the rudimental industry of agriculture, and to be surrounded by a laboring class who should indulge no hope of advancement. As was to be expected, in the presence of the slave, with whom manual labor was identified, such labor by free men was discouraged and despised. Naturally, therefore, the South favored and now favors a policy which would enable its people to exchange the products of their cheap laborers for the products of the cheapest laborers they could find elsewhere on the globe.

In other sections of the country the conditions are wholly different. The workmen are in control. They do the voting; they direct the policies of the Government. Did the Southern people have in their working population so aspiring, self-reliant, intelligent, and aggressive an element as the working population of the North they would look at the question differently; nor would this result be with them altogether a matter of choice. The workmen would demand protection and insist upon receiving it.

The labor of the North forms at once the foundation and the superstructure, the pillar and the dome, of its civilization. The prosperity of that section means the prosperity of its workmen. With very few exceptions, the men of the North are all workmen. To degrade and depress them means to degrade and depress the entire body of the people. This can not be done. A policy that might be tolerable where the lowest order of laborers was employed would not be consistent with the peace, order, or well-being of a society in which the workingmen were of a high order and comprised the vast majority of the community in numbers and force.

The gauge and measure of civilization is the extent to which man subordinates to his will the latent forces of the universe. To that sublime work the States of the South contributed little or nothing.

As an illustration of this I will cite the ratio between the number of the white population and the number of patents that in the year 1870 were issued to the citizens of a number of the States of the South. For purposes of comparison I cite also the like figures for a number of States of the North. In order to make the comparison just, I do not include in the figures of population the recently manumitted class:

Table showing the ratio between the number of the white population and the number of patents issued to citizens of the States named during the year 1870.

States of the South.	Persons.	States of the North.	Persons.
Alabama, 1 patent to	14,483	Connecticut, 1 patent to	896
Arkansas, 1 patent to	32,919	Illinois, 1 patent to	2,916
Georgia, 1 patent to	7,888	Indiana, 1 patent to	4,277
Mississippi, 1 patent to	7,658	Massachusetts, 1 patent to	1,051
North Carolina, 1 patent to	12,565	New Hampshire, 1 patent to	3,121
South Carolina, 1 patent to	8,376	New Jersey, 1 patent to	1,827
Texas, 1 patent to	11,764	New York, 1 patent to	1,450
Virginia, 1 patent to	6,473	Pennsylvania, 1 patent to	2,284

The most instructive lesson of American history—indeed, the most impressive economic lesson of all history—is that afforded in a great crisis by the industrial impotence of those States, resulting from their persistent neglect of the mechanical arts and of diversified industries.

When the South declared war it was found that its people could create nothing of practical utility. Their orators and stump-speakers, who led them into the war, could spin "yarns," but not of cotton; they could weave sentences, but not woolens. They could make speeches, but could not make engines. They could make verses, but not vestments; they could talk learnedly of the rights of man, but could not supply the wants of man. They could write flaming essays on courage, but could not make a gun or a canister of powder. They could organize armies, but not industries. They could inspire their troops with en-

thusiasm, but could not supply them with blankets. With all their cotton they could not make a handkerchief; with quantities of sheep and all natural facilities for producing wool and turning it into cloth, they could not make a coat. With every opportunity for the establishment of manufactures, they could not make a needle, a knife, a bayonet, or a button.

With ample natural resources, and with opportunities equal to those of the North, the people of the South, looking only to the moment and never to the morrow, permitted iron, coal, and other valuable minerals in illimitable quantities to lie inert and useless in their fields. They could produce nothing but the raw materials of agriculture, and but little variety even of those. Theirs was a civilization that "disdained to be useful, and was content to be stationary."

When, therefore, in the hour of their utmost need, they wanted clothing, arms, munitions, and means of transportation, they were without factories, foundries, mills, machine-shops, railroads, tools, and skilled workmen. Had it not been for their slaves, they would have been without food. Their soldiers suffered for want of proper clothing, some of them even dying of cold; and many, especially toward the close of the war, wearing uniforms made from rag carpet. Like helpless aborigines, they were obliged to look to their enemy for every resource of warfare.

But this was not because the people of the South were wanting in ability. It was not that they lacked great qualities, not that they were destitute of the mental and physical characteristics of the great creative race from which, in common with the people of the North, they had sprung and to which they belong. In every department of effort to which they had directed attention, they had displayed all the ability characteristic of that race. They had the same innate qualities which all people of that race possess; but the greatest of those qualities they never exercised. The creative and inventive faculties were never brought forth.

The lack of diversified industries is destructive in time of war, but, like the "dry rot," it is none the less operative in time of peace and none the less certain to culminate in disaster.

The fruits of all this the leaders of the South have had ample opportunity to observe; but, with the fatuity of those who never learn and who never forget, they still cling to the traditions of the old régime and close their eyes to the demands of the age and of the future. The blunder on the part of the South was no less economic than historic. This fact has not escaped the eye of discerning men among its people.

In a work entitled Destruction and Reconstruction, by a lieutenant-general, Richard Taylor, of the Confederate army (son of President Zachary Taylor), that officer, referring to the effect on the struggle of the lack of diversified industries in the South, said:

> We suffered less from inferiority of numbers than from the want of mechanical resources. Most of the mechanics employed in the South were Northern men, and returned to their section at the outbreak of the war. The loss of New Orleans, our only large city, aggravated this trouble, and we had no means of repairing the long lines of railway, nor the plant. Even when unbroken by raids, wear and tear rendered them inefficient at an early period of the struggle. This had a more direct influence on the sudden downfall of the Confederacy than is generally supposed.

This pregnant statement of a distinguished officer is corroborated by Col. Archer Anderson in his oration delivered on the occasion of the late unveiling in Richmond, Va., of the statue of General Lee. In the course of a lengthy and eloquent review of the events of the war, Colonel Anderson said:

> Modern armies, with their elaborate small-arms, artillery, and ammunition, can not be maintained without great mechanical appliances. They can not even be fed without great lines of railway. And how can railways be operated in a country closely blockaded, without those same manufacturing resources? All this was true from 1861 to 1865. At no time during that period did there exist south of Richmond foundries and rolling-mills capable, in a year's work, of supplying the Confederate armies and railways for three months. In the first part of the war the nucleus of such establishments could not be found elsewhere in the South. In the latter part beginnings had been made, but the new production of cannon and railway material never became adequate to the demands of a campaign. If the requisite machinery could have been improvised the product could not have been hastily increased because of the absolute lack of skilled workmen. The loss of the skilled artisans of Richm nd would have been as fatal in our poverty as the loss of its mills and workshops.

These are the philosophical reflections and frank admissions of a chosen leader of the "lost cause."

The trouble with the South, Mr. President, was that in the case of its working classes the hand had been at work without the brain; and in the case of the intellectual classes, the brain had been at work without the hand. One worked without thinking, and the other thought without working.

At the North, on the contrary, the great bulk of the population had been working, and to-day continue working, with hand and brain in unison. The exact training of the mechanic of the North, under conditions which gave ample room for the expansion of his mind and the development of his intellect, had produced a race of mechanics who, compared with the mechanics of other countries, must be classed as intellectual athletes. These are the men who win wars—men of ingenuity, of resource, of high intelligence, of physical strength, of undaunted courage. Those are the reliance of a nation in war, each other's best customers in peace. Those are the men who build up great communities. It is to those that the people of this country must look for their prosperity.

A nation that does not perform its own work and possess, in the body of its citizenship, the mental as well as physical force wherewith to carry on every process of industry, from the production of the raw material to the last stage of its development and transformation, will be the helpless prey of national marauders. Without mechanical and manufacturing resources and capacity, no people can maintain prosperity or independence.

Any nation that desired the mastership of the world could achieve supremacy without a blow if the other nations of the earth would permit it to become their manufacturer. They would become powerless against it in war, as they would be tributary to and dependent upon it in peace.

The admissions of the distinguished Confederate chieftains quoted should stand for all time as a monumental lesson to the world, that a people, however brave, engaged exclusively in farming pursuits, can never hope to cope with a people of the same origin whose diversified avocations enable them indefinitely to feed, clothe, and move armies, overcome interior intrenched lines by concentrated systems of railway, and, through their large plants, organized workshops, and independent army of skilled artisans, maintain supplies of improved and elaborate small-arms, artillery, and ammunition, and improvise ingenious and effective weapons and works of offense and defense.

The success of the North was due to the wise, patriotic, and far-sighted policy of its people in adopting at the outbreak of the war the protective policy through which a wide diversity of industries was established and maintained. That policy they will continue and enlarge. But the lesson which history teaches of the defeat and discomfiture of the South seems lost upon the survivors of the lost cause, whose clamor for a low tariff would, if successful, lay this whole country as prostrate and helpless as they found their own States in 1865.

To whatever words they may give expression their favorite policy makes them in effect say: "We care not who makes articles, nor where they are made. We are not interested in the advancement of labor. We care nothing for improvements in machinery. We care nothing for the harmony of development of our national industries. We want to buy where we can buy most cheaply at the present moment, whether that be on this side the ocean or at the other end of the earth. We heed not the lessons of the past and reck not of the future. After us, the deluge!"

It is stated that a leading figure in the Confederacy has declared since the war that the fundamental error of the South was not to have remained in the Union long enough to fasten upon it a policy of absolute free trade with all the world, which would have starved out our workmen and closed up our workshops, and then to have kept them closed for a sufficient length of time to insure the loss of all the arts. Had this been done he felt no doubt that the South would have gained its cause, and I agree with him.

There are in this Chamber distinguished and patriotic Senators, once high in the counsels both of the cabinet and senate of the "lost cause," who can not controvert the bitter confession of the distinguished Confederate officers I have named: yet with this lesson deeply engraved on the mortuary tablet erected to their late military hero and chief, they persist in demanding the establishment throughout the Union of the same malign economic policy which was confessedly the prime source of the weakness of their own States:

> So the struck eagle, stretched upon the plain,
> No more through rolling clouds to soar again,
> Viewed his own feather on the fatal dart
> And wing'd the shaft that quivered in his heart.
> Keen were his pangs, but keener far to feel
> He nursed the pinion which impelled the steel.

IS A PROTECTIVE TARIFF CONSTITUTIONAL?

Many distinguished "tariff reformers," in this Chamber and out of it, wholly deny the constitutionality of a protective tariff. It is, of course, not my purpose to enter upon a discussion of the relations existing between the Constitution and the tariff. That question has been fully debated by able lawyers on both sides of the Chamber. But there is one aspect of it which, as it seems to me, lies at the foundation of our existence as a nation, and which, with propriety, even a layman may presume to discuss.

It is the inherent right of a nation to defend its life. The clear-sighted men who draughted our Constitution needed no instruction in that regard. In the preamble to that instrument they declare the purpose of its formation in the following words:

> We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

In Article I, section 8, the Constitution provides that—

> The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States.

What the opponents of a protective tariff assert is, not that Congress may not levy duties, but that it has no power to levy duties for the purpose of protection, or duties that shall be protective in character.

If Congress has not now the power to levy such duties it never had such power. In that case the members of the first Congress that met

under the Constitution were surprisingly ignorant of the intentions of the framers of that instrument, for the preamble to the first tariff bill, passed July 4, 1789, read as follows:

Whereas it is necessary for the support of the Government, the discharge of the debts of the United States, and the encouragement and protection of manufactures that duties be laid on goods, wares, and merchandise imported.

But the utmost conceivable effect that the highest protective tariff—even a tariff of exclusion—can have in any country is to decree that the people living in that country shall perform their own work. Is it then to be supposed that the framers of the Constitution intended that this country should never supply its own wants—should be forever dependent upon foreign countries for the simplest manufactured articles—nay, for the very instruments with which to "provide for the common defense?"

VARIETY OF INDUSTRIES NECESSARY TO THE NATIONAL DEFENSE.

How, in an inventive age, is the "common defense" to be provided for? Shall we accumulate enormous supplies of cannon and military stores of the kind now most approved? They would be worthless in a few years. Shall we build great fleets of armored vessels which no gun of to-day may penetrate? Their armor would be as tin-foil to the cannon of the future. And if we buy guns and ships of the most modern pattern, how many shall we have? For how long a war and how great a war shall we prepare?

Is it not manifest that the most powerful of all means for promoting the common defense is the development and maintenance of the highest and most varied mechanical and inventive skill among our people? Had we a sufficient number of weapons of the latest design wherewith to arm every able-bodied man in the United States, these weapons, in the absence of skilled workmen and of large manufacturing establishments constantly at work would, in a short time, be comparatively worthless. While this country might possess the article other countries would possess the art. They would possess not only great and indispensable plants, but the brainy and ingenious workman who, as occasion arose, as our own experience has shown, would invent new weapons of destructive power infinitely surpassing the old. The possession of skilled workmen who can make guns is of far greater consequence than the possession of the guns themselves.

But apart from the manufacture of arms, what more effective instrumentalities can a nation have of providing for the "common defense" than citizens who can make structural iron, erect bridges, construct steam-engines, and build ships of all kinds, including armor-clad vessels of the newest designs; and not alone who can construct all these, but who can invent new and improved designs in every department?

And if the makers of iron are necessary for the "common defense," why not, equally, weavers of cloth, artificers in leather, in brass, in copper, in steel, in tin, and in all the other materials of art and industry?

The larger the nation the more indispensable such artisans are to its safety and independence. They can not be had in large numbers without the existence of extensive manufacturing establishments, and even with these, they can not rely upon constant employment—the indispensable prerequisite of skill, and consequently of invention—without the encouragement and material support arising from the supplying of all the wants of their own country. The workmen of the country are entitled to the assurance of that support. With that assurance and that support we shall have no lack of skilled artisans upon whom, in these days, fully as much as upon soldiers in the field, depends the existence of nations. That assurance and support can not be extended except by the adoption permanently of the policy of protection.

GROWING IMPORTANCE OF THE MECHANIC AS A FACTOR IN WARFARE.

More and more as time passes will the workman in his shop become of greater importance than the soldier in the field. Less and less as invention develops will success in war depend on the man who holds the weapon; more and more on the weapon itself and on the man who invents and constructs it. Time was when war consisted of the wielding of clubs, and success depended wholly on the physical energy expended in their handling. But "times change and men change with them." The strength of the arm has been transferred to the finger, and the bullet outdoes the bludgeon. Power has been shifted from the field to the factory; from muscle alone to the combination of muscle and mind. The armies that have not artisans at their back, that have not the latest product of the ever-teeming brain and untiring hand of the alert and aspiring mechanic, may look well on paper and on dress-parade, but they will not win battles.

In order, then, that we may have, and constantly maintain in the highest degree of efficient training, a numerous body of men skilled in the mechanical arts, we must encourage the growth and development of extensive plants, not in one direction or department alone, not in one section of the Union, merely, but in all directions and departments of the arts, and in all sections of our common country. Such enterprises are not the spontaneous offerings of nature; they will not grow while we sleep, nor will they come with waiting. Neither, for emergencies, can they be had by act of Congress.

A large manufacturing plant is not a ready-made article which, like a piece of real estate, may be secured on the instant by the expenditure of sufficient money. A great mechanical organization is a growth, a development, a result of evolution. In all new fields of industry, and in most of the old, it finds its birth in the shop of the single machine, to which, as business increases, there is added a second and a third. Thus, as the human being arrives at maturity by the natural growth of each added day, so the workshop grows, from the smallest to the largest proportions, by almost imperceptible stages. But as men can not by taking thought add a cubit to their stature, neither can they by resolution effect at once that which time alone and the intelligent adaptation of means to ends can accomplish.

Even assuming that great plants could, on emergency, be obtained abroad, we should be without the skilled workmen to utilize them, and without the talent to organize or intelligently direct the work.

CONTINUED WORK NECESSARY FOR TRAINING.

Workmen do not acquire skill by reading books on machinery and homilies on the blessings of industry.

In an admirable little work entitled "The School of Life," William Rounseville Alger says:

A small portion only of the strenuous schooling of the world is done within academic walls. The general germs of culture, the elementary principles of education, are there disseminated; but the toughest toil is afterwards done by each student in the special school of his professional calling. The actor studies for the stage, on the stage; the courtier, for the salon, in all parlors; the lawyer, for the bar, at the bar; the politician, for the Senate, in the caucus; the physician, for the sick room, amidst his practice; the clergyman, for the pulpit, not less after than before he begins to preach.

The farmer studies agriculture more effectually by practical farming than in any bookish theory. No pedant or dreamer in scholastic halls pores over his manuscripts and themes with more intensity and perseverance than the devoted artist gives to the elements of his designs, to the features of the landscape, and to the colors on his canvas. And then what disciplinary process of tuition and practice do a hundred million laborers undergo in the dinning school of the mechanic arts, in whose seats their sturdy ranks stoop and strike, spin and weave, mold and polish, plane and saw, sift and strain, from dawn to dusk, till their trades are learned and their tasks are completed.

Neither can men maintain skill without uninterrupted employment, which can be secured only through the energy, the enterprise, and the sound judgment of the employers of labor.

The ability to wisely, kindly, and successfully supervise large gatherings of workmen, to place every man where he will achieve most, and most willingly, is an indispensable factor in the great work of upbuilding industries. Foresight and discretion in management are as necessary as skill in execution of the details.

IMPORTANCE OF THE TIME CONTRACT.

The feature which distinguishes the industry of this age from that of all the past is a feature demanding a high order of ability in the manager. That feature is the time contract. How is it that the great gatherings of workmen in the different manufacturing establishments of the country are kept occupied? Only by means of contracts made frequently years ahead of complete fulfillment. On the intelligence and foresight with which time contracts are made depends the success or failure of every industrial enterprise in the country. This intelligence and foresight are not wholly the work of nature. The quality of wise leadership—one of the greatest blessings as well as one of the most indispensable needs of labor—depends for the most part on experience and training.

Like the skill of the workman, this experience and training of the manager can not suddenly be acquired, nor can the skill or talent of either workman or manager be maintained without uninterrupted exercise. How, then, shall unceasing continuity of industry be secured? Only by securing to our own people through the protective policy the economic conditions which will enable them to do all their own work.

Great manufacturing enterprises are not entered upon without hope of reward. Without the encouragement of the home market we shall have neither the great plant, the great workman, nor the great organizing talent. With the support afforded by that market to the founding of industries of every character, and to their growth in magnitude and variety, we shall have, and continue indefinitely to have, all of these.

Our Constitution was framed to meet the wants of a living and progressive people. It contemplated the continued political and industrial existence of that people under ever-changing conditions. Its framers and founders, though gifted with prescience beyond most men, knew they could not foresee all the circumstances which the future might unfold, and having prescribed in general terms the duty and power of the Legislature, they wisely relegated to those who might come after them the selection of the means whereby to give effect to their purpose.

Who then but those whose intellects are clouded by party necessity can for a moment doubt that the ample warrant of the Constitution covers every means which the wisdom of the people of the United States may decide to be for the "common defense and general welfare?"

FOREIGN TRADE IS NOT WEALTH.

The free-traders attach much importance to foreign trade, which they regard as a source of great wealth to the nation.

I deny that the wealth of a country is shown by the amount of its imports and exports. It is seen in the every-day manner of life of the masses of its people. It is seen in the character and quantity of the food they eat; in the quality of the beds they sleep in, of the houses

they live in; in the character of their social life; in the quality of the education which they give their children.

Foreign trade exchanges wealth; it does not make it. Wealth is not made by exchange, but by production. Trade produces nothing. It serves a useful purpose in the distribution of wealth, but is not itself wealth. Neither can it make wealth. If, in the making of a bargain, one side is cheated, it may be said that the wealth of the other side has been increased, but the total sum remains the same. When the transaction is a fair and even exchange, as, under the operation of the principle of *caveat emptor*, it is bound in the long run to be, nothing is made by it, and wealth is in no way augmented.

One distinguished Senator on the other side of the Chamber, the Senator from North Carolina [Mr. VANCE], declared in this debate that foreign commerce was the chief source of the wealth of the United States. Said he:

> I maintain that neither men nor nations can grow wealthy except by the sale of their surplus products. A man sells his surplus to his neighbor, a nation sells its surplus to its neighbor; that is foreign commerce. That which is sold to its own people is not a surplus. When, therefore, our foreign commerce is destroyed the chief source of our national wealth will have perished.

In order, Mr. President, to illustrate this, and also to show the fallacy of the theory that it is the "foreignness" of the trade that enriches a nation, let us suppose a case.

Our trade with Canada for the year 1889 (imports and exports) amounted, in round numbers, to $100,000,000. That, of course, is foreign commerce. We therefore derived that much "wealth" from our trade with Canada in that year. If the principle enunciated by our free-trade friends be correct, then Canada realized an equal amount of "wealth" from the same trade. Hence the sum of wealth accruing to the two countries is yearly $200,000,000.

Now, suppose that Canada should be annexed to the United States and become an integrant portion of the Republic, then, Mr. President, all this wealth would disappear! Though the trade might be greater, it would no longer be evidence of wealth; for, "when * * * our foreign commerce is destroyed," says the Senator from North Carolina, "the chief source of our national wealth will have perished!"

The principle laid down by the honorable Senator gives a hitherto unsuspected reason for the determination of his section in 1861 to sever its connection with the Union. Obviously the purpose was to add to the wealth of both North and South by changing the designation of their trade relations and calling that "foreign" which before had been merely "domestic." Had the South succeeded, and then had each of its States in turn seceded from the Confederacy itself, what an enormous "foreign trade" there would have been all around! What untold "wealth" has been lost by the success of the Union arms!

LARGE FOREIGN TRADE AN EVIDENCE OF THE VICIOUS DISTRIBUTION OF INDUSTRIES.

No, Mr. President, the honorable Senator is mistaken. Foreign trade does not add to the wealth of a country. On the contrary, except in so far as it consists of articles inhibited by soil or climate in one of the countries to the trade, it is evidence of a vicious distribution of the industries of that country. If foreign trade decreases by reason of a people's supplying their own wants, the decrease is an evidence of increasing prosperity.

But, in any event, the foreign commerce of this country is a trifle, a bagatelle, compared with our magnificent domestic commerce, which, thanks to our protective tariff, is unexampled among the nations, whether of the present day or of all history. In the extent and completeness of its material resources, and, above all, in the high spirit and intellectuality of its people, our country can rely upon itself.

While ship-loads of goods are undoubted evidence of production, I deny that the extent of foreign commerce is of itself any evidence of prosperity.

As shown by the investigations of the select parliamentary committee of England, it has often happened that the foreign commerce of that country was largest when the times were hardest, because the people at home were too poor to buy, and the goods had to be exported in order to find sale. It is no sign of prosperity that one's dealings with foreigners increase; they may increase at the expense of dealings with one's neighbors. As production increases, if wages be pressed down, the laborer will become less and less a consumer, and the articles he would be glad to buy if he had the money may have to be sold abroad. Such foreign trade is no sign that the country is getting richer, but, on the contrary, is a sign that its people are getting poorer.

Foreign trade destroys the equilibrium of a nation's industry; it leaves them one-sided and disjointed, and postpones indefinitely the period of their natural co-ordination.

We are one country and one people, with one future and one destiny; subject to the same burdens of taxation, to the same duties and responsibilities of citizenship, and living on the highest plane of material civilization ever known to mankind. As against all the world we must regard ourselves as one family, between whose members there exist reciprocal duties which may not—nay, can not—be overlooked by any without injury to all.

Our geographical situation, separated as we are by the fiat of nature from the older forms, the stagnant conditions, and the imbruting civilizations of other continents, warrant us in demanding of the intellectual men among us, the professors and political economists of the country, themselves sharers of the national prosperity, that they shall investigate the new conditions of humanity, that they shall take into account the manhood and the spirituality of a people. Our workmen have a right to demand of the professors of polite learning that they shall study, not merely books of literature, but the book of labor, and that they shall cease their attempts to adjust the conditions of the free citizens of this country to the conditions, infinitely lower, which prevail in other countries.

The trifling character of our foreign, compared with our domestic, trade may be gathered from a few figures. The Bureau of Statistics estimates the total production of the United States in 1880 as worth $10,000,000,000, or $200 per capita of the population, and that of this $200 the value exported was $17, or 8½ per cent., the value consumed at home, $183, or 91½ per cent. Is it worth while to trouble ourselves about such a "foreign trade" when our home trade offers to our farmers, manufacturers, and merchants the richest market in the world?

The abandonment of our protective policy for the purpose of securing foreign trade would be to save at the spigot and lose at the bung.

England having already lost much of her foreign market, through the adoption of protective policies by Germany, France, Italy, and Russia, is filled with apprehension that by the bill under consideration her greatest market will be taken from her. This is made manifest by the tone of her public press and by the loud protests which have come to us from the manufacturing centers of that country.

By reason of the want of equilibrium in her own industries, her agriculturists being unable to furnish the food necessary for the support of her manufactures, England's position is such that at any moment the laws of a foreign country might force a deportation of large numbers of her people. What a helpless and pitiful attitude for a great nation!

FREE TRADE TENDS TO EQUALIZATION OF CONDITIONS.

The tendency of all free and unrestricted exchange is to equalize the conditions of the parties engaged in it.

It will be admitted that, under like conditions of skill and capital, persons engaged in the same trade and occupying adjoining houses can not do business except on substantially equal terms. That is to say, they must pay substantially the same wages and receive substantially the same prices for their products. If they are making and selling shoes, they can not materially differ in the scale of wages they pay to workmen of like skill, or the prices they charge for shoes of the same quality. What is true of persons thus circumstanced is equally true of persons across the street similarly circumstanced. The rule that holds good for men trading on opposite sides of the street will hold good for men trading on opposite banks of a river, and, by a parity of reasoning (making due allowance for time), to men on opposite shores of the ocean. The tendency is constantly and irresistibly toward equalization.

This is but the operation on trade and industry of a principle universal in its application. Take two reservoirs in which the water is of unequal height; connect them by a conduit, and at once the process of equalization sets in. How soon it will be completed, how far the water will fall in the one and rise in the other depends on the relative superficial areas of the reservoirs, on the capacity of the conduit, and its freedom from obstruction. If the low-water reservoir be much the larger of the two its rise will be slow and relatively slight, while the fall of the other will be rapid and great.

Again, take two rooms of varying degrees of temperature, and connect them by opening a communicating door. It is clear that as soon as communication is established the colder of the rooms will begin to warm, while the warmer will begin to cool. This process will continue till equalization is reached, until both rooms are of practically the same temperature. But, manifestly, if the cold room be much larger than the warm, the temperature of the smaller room will be sensibly diminished, while that of the larger will not be appreciably increased.

Throughout the entire material world this process of equalization is at work. Even when unobserved, or observed only by the rigid scrutiny of science, it pursues its unceasing course. By imperceptible stages the mountains are being leveled and the valleys upraised. Equally in the moral world is the operation of the same law to be observed. It is an old adage that "evil communications corrupt good manners." We can not deny that the tone of virtue is impaired by habitual contact with vice, even though we must admit that there is hope for the vicious if subjected to the constant association of the good. The processes of leveling up and leveling down are but complements of each other.

My contention, then, is that in any two countries engaged in mutual interchange of commodities, according as wages approach a level common to both, the conditions of life in both become gradually adjusted to the new line of wages until those conditions reach a stage at which they are on a level.

It is vain, therefore, for a nation possessing a high order of workmen to attempt to benefit itself by trading with a "cheap" nation. If it persists in doing so, the inevitable result must be that in time both nations will be equally cheap. Whoever insists on having cheap labor

from others will, in the end, find that in the process of cheapening the labor of others his own labor has been cheapened in precisely the same proportion.

INTERNATIONAL FREEDOM OF TRADE—INTERNATIONAL LEVELING.

International freedom of trade is but a process of international leveling. Lay down the connecting pipe of perfect freedom of trade between any two nations, and instantly the equalizing process begins. The nation having the higher average conditions will level down, while that having the lower will level up. How soon an equilibrium may be established will depend on the degree of divergence between their conditions and the disproportion in the numbers of their inhabitants. If the country of the higher level have the smaller population it will suffer a serious decline, while that of the lower level, because of its more numerous population, will not experience any material advance.

But the law, like that of gravitation, is irresistible. Running along the line of least resistance, equalization will more quickly take place with people of our own race, especially those with whom we are in touch, or with whose customs our customs correspond, than with people of a different race, or those at a greater distance, or of greatly different customs. So will it assert itself more quickly between ourselves and foreign peoples speaking our own language than with those speaking other languages. As affecting two or more countries equidistant from us, the tendency to equalization is more immediately felt between ourselves and those with which we have readiest facilities of communication than those with which communication is less ready.

The more we cultivate foreign commerce the more numerously do we lay down and keep open pipes of intercommunication between the reservoirs of industrial and social life characteristic of our own country and of the countries with which that commerce is conducted. This can only result in lowering greatly the level of prosperity of our people, while, owing to the much larger population of other continents, not greatly elevating the level of theirs.

We are therefore losing valuable time in attempting to acquire wealth or prosperity by mere trade and traffic with other countries—by exchanging with people of lower conditions things which we can make and should make for ourselves. In the end, the cheapest way for us to get an article is to produce it ourselves, under conditions of the most advanced scientific development and skill. Any country that trades at long range with another for articles which it could produce for itself, denies itself the acquirement and possession of the art and science which the other country possesses; that is to say, it deprives its people of the opportunity to acquire and maintain the skill necessary to produce the articles that are obtained abroad.

The true rule is that the people of the country should produce for themselves all things that require of them no greater expenditure of physical and mental force than must be expended by the people of other countries in the production of the same things.

Even were equalization to be established between this country and foreign countries on the basis of present conditions, how are we to know that that range of equalization is to continue? How are we to know that the exploiters of foreign labor will not force still lower the wages and conditions of their workmen in order to secure for themselves a continuing advantage over us? We know how difficult and undesirable it is to reduce labor in this country; it may not be so difficult to reduce it abroad. Our laborer can go to the land; the foreign laborer can not. With the slightest hope of success held out, the foreign manufacturers would make a desperate struggle to secure our markets, and, when secured, to keep them. To accomplish their purpose they would reduce to any desired level the wages of their laborers; ours would submit to no serious reduction without a struggle that would convulse society.

To set in motion the international equalizing process all that needs to be done is to destroy the tariff wall and lay down the connecting pipe of freedom of trade with foreign countries. Equalization must follow, as the night the day. From that time onward our prosperity will continue falling until it reaches the level of the countries with which we trade.

SHOULD NOT OUR PEOPLE EQUALIZE WITH ONE ANOTHER, IN PREFERENCE TO EQUALIZING WITH FOREIGN PEOPLES?

The law of equalization being in constant operation among the people of the United States themselves, the question at issue between the free-trader and the protectionist is whether our people should be satisfied to equalize with one another in their own country, where average conditions are high, and favorable to progress and prosperity, or should equalize with the people of foreign countries, of lower grades of living, whom they can not influence and with whom they can not co-operate. Is it not manifest that the prosperous and well-paid people of this country had better trade and equalize with one another than with the underpaid people of other countries?

The only thing that now restrains a tendency to equalization between this country and the countries of Europe is the tariff wall which we have erected. Were it not for this the cheap products of foreign factories would flood our markets, would destroy our workshops—those greatest of all our schools. We expend millions of dollars annually for the elementary education of our young men—an education that merely prepares them to enter these great schools of life, in which they continue their studies. No one doubts that we should provide liberally for our public schools. The great workshops of the country, filled with deft, thoughtful, and studious young men, are in the true sense an extension of the public schools—they constitute advanced grades—in which the students not only pay for their own tuition, but pay back to the country much more than was expended on their elementary education.

Without those workshops and workmen we should soon find ourselves reduced to the necessity of exchanging a large amount of the raw material of our soil for a very small quantity of the finished product of foreign factories. It would be discovered when too late that the work of supplying the wants of our own people, a people that earns more and spends more than any other people on earth, had been bartered away for the poor privilege of supplying the wants of the squalid and poorly paid inhabitants of other continents.

England very well understands this principle of equalization. When she looks toward France and Germay she wants "fair" trade, which means protection, because she knows that in dealing with those countries her people would have to equalize downward. When she looks toward the United States she wants "free" trade, because she knows that in dealing with us they would be equalizing upward.

I maintain and repeat that free trade between countries compels eventual equalization in the conditions of the people of those countries. To accomplish this may take a longer or shorter time, according to the circumstances of each case, but the process begins at once.

If it be desirable that the aspiring workmen of this country shall maintain their present grade of living, and shall not be pressed down to the condition of the ill-fed and ill-paid workmen of other lands, then all idea of a low-tariff policy and of a policy of international free trade must be abandoned, and the tariff wall must be maintained sufficiently high to exclude all articles whose manufacture or production here would require no greater expenditure of mental or physical force than must be expended in their production elsewhere.

THE TARIFF A NATURAL, NOT AN ARTIFICIAL, WALL.

A tariff upon imports, instead of being an artificial creation, is, in my judgment, the natural and proper thing for a nation. Free foreign trade is the artificial thing. A nation must be regarded as a family, all of whose members should stand together. As between the members of that family, undoubtedly, unrestricted trade is the natural condition, because equalization between them is the condition suggested by nature and by the mutual interests of the members of the national family. Any advantage given to one member of that family over another would be unnatural and intolerable, but to deny to strangers benefits that we might confer on members of our own family would not be unnatural. On the contrary, it would be in strict conformity with nature. The same law should govern the national family.

One of the highest duties of Government is the adoption of such economic policy as may encourage and develop every industry to which the soil and climate of the country are adapted, and, when established, to preserve and protect such industries from destructive foreign competition. Industries which, owing to climatic or other insuperable barriers, it would be manifestly impossible to develop should not be attempted, or, if foolishly attempted, should not be encouraged or protected. I should not think of raising bananas under glass, nor encourage an attempt to plant in this country the India-rubber tree, nor to develop a tea or coffee plantation—at least not with our present information regarding the probabilities of success in the growth of tea and coffee in the United States. But I lay this down as the correct and fundamental idea of a tariff: That whenever a given degree of mental and physical force exerted in this country will accomplish results equal to those accomplished by an equal degree of such force exerted in any other country, our tariff charge can not be too high.

With that principle in practical operation, the compensation for labor would be regulated, not by competition between our workmen and those of lower forms of civilization, but by the natural and unrestricted competition among workmen wholly within the borders of our own country, who are partakers of and contributors to the same civilization, who are the support and defense of our institutions and are prepared to sustain with their lives the perpetuity of our Government.

THE NATURAL WAGE.

I maintain that the natural wage of every man—the amount to which he is fairly entitled—is the amount he can earn in free and unrestricted competition in his own country with men who are subject to the same laws and responsibilities, accustomed to the same manner and standard of living.

To subject men to any keener competition than this or to exact a lower standard of wages than would result from the operation of that principle would be substantially to declare the ultimate and fundamental standard of wages for the world at large to be that rate at which the least skilled workmen of the lowest civilization will consent to work and procreate. The American workman will never accept such a standard, and he never should do so. He will not consent to be pressed down into the penury and squalor to which the laborers of other lands are subjected and with which, in the main, they are contented.

It is much better to do justice at the outset—to concede that the nation is one great family, and that no member of that family has a moral right to supply his wants with a cheaper workman than his own country affords. A country that will employ cheap labor will find that it reacts on those who employ it, and that, in the long run, instead of a profit, they will experience a loss by the operation. Our workmen are entitled to the control of our markets for the product of their industry. They pay the taxes; they constitute the people. It is right that they should refuse to be subjected to the barbarous competition of people who are living under the shadow of standing armies, and who, through ages of oppression, have become accustomed to a grade of existence that to our people would make life not worth living.

There is no reason whatever why every man in the United States should not be willing to pay such rates of wages as shall obtain by the free and unrestricted competition of all workmen in his own country. The compensation which he receives for his own services in whatever occupation he may be employed—and there are few of our people who do not work—is based on the average wages of his own community. He is not entitled to get other men's labor at any cheaper rate, in proportion to value of service, than he charges for his own; and this is what an adequate tariff justly prevents him from doing.

Under such tariff we are sustaining the conditions of life to which our people are accustomed. At the same time we are creating new comforts and inventing new devices by which human wants may be supplied with less of human sacrifice. Nor under it can we be in any danger of losing the benefit of such inventions as may be made in other lands. Science and invention are great travelers, and with the maintenance of such economic policy as may keep at a high level the conditions of all our people our country will always attract men of choicest skill in every department of the arts.

The condition of our people being universally acknowledged to be superior to that of any other people on the globe, the tariff wall is necessary to protect them from the squalor and misery prevailing elsewhere. If this be a Chinese wall it is only so because it walls out the poverty of less favored countries and walls in the prosperity of the United States of America.

IS THE TARIFF A ROBBERY?

The free-traders and revenue reformers assert that the tariff is a "robbery."

Can it be a "robbery" of any one to secure to the people of this country the opportunity to supply our national wants by the hands of our own countrymen? That is all that the highest conceivable tariff can secure.

In times of armed conflict our citizens are required to leave their homes and families to take up arms, and at the risk of their lives defend the country against armed invasion. Why should not the country in time of peace protect the labor of those men from an industrial invasion no less destructive?

If the tariff be a "robbery," it is first to be observed that all classes of people, the robbed as well as the robbing, are better fed, better clothed, and better housed than the people of any other country in the world. That is the crucial test of economical policies.

It is undeniable that the most perfect suiting of occupations to the various aptitudes of all the members of the community will be produced by the carrying on of the largest variety of industries.

Is it not then the duty of a country to maintain such industrial policy as will secure the greatest possible extent and variety of production, leaving to the natural competition between individuals the function of preventing undue profits on the part of any? There are 23,000,000 of active workers in this country. Among that large number the contests and competition of those engaged in the same business may be relied on to adjust prices so that none can make a profit greater than the average profits of the community.

But let us see whether there is any robbery effected by a tariff.

As to such portion of the money collected as is paid to the Government, that goes into the public Treasury and aids in defraying the expenses of the nation. Inasmuch as all the people share in its benefits, that portion can not be considered "robbery."

It will hardly do to assert that the foreign manufacturer is "robbed" by our requiring him to deposit in our Treasury a sum of money in the nature of a license-fee for the privilege of selling his wares in this country.

The "rob" therefore must consist of the difference between a reasonable price and the price now charged by the manufacturer. If such difference exists, it must constitute a margin so ample as to become a strong incentive to the people of any section claiming to be robbed by it to organize for themselves competing establishments and thus wholly protect themselves against the exaction of the robber. The tariff protects them against the foreigner, and all that is needed to protect them against the native robber is for themselves to do the work—to produce the article. Why do they not produce it? If they have not the skill, they can employ it. There is ample skill in this country ready to go wherever sufficient inducement is offered.

The law operating equally and impartially on all sections of the Union, the people of any section claiming to be robbed, yet refusing or neglecting to set up establishments for the manufacture of the article through which the robbery is effected, confess, by such refusal or negligence, that, notwithstanding their complaint, they get the article for less than they are willing to produce it for themselves. If through the adoption of sinister policies the domestic manufacturers should be driven out of business, then both they and those who now complain of robbery would be equally helpless against the exactions of the foreign manufacturer, who, the field being all his own, would continue, and, at will, enlarge upon the "robbery." If the "rob" is not sufficient to induce competition on the part of those who claim to suffer by it, it can not be very great—it can not exist at all except in the imaginations of those who believe that the exigencies of a political party are more to be consulted than the interests of the country.

UNDER KEEN COMPETITION IN ALL INDUSTRIES, HOW CAN ANY ONE BE ROBBED?

In order that we may arrive at some idea of the possibility of robbery by our manufacturers, let us inquire as to the character of the competition existing.

As the census figures for this year are not yet available, the figures at command apply to a population not of 65,000,000, but 50,000,000. I do not doubt that they are 40 per cent. greater now than in 1880, but I will take them as they then stood.

According to the census of 1880 there were 17,972 boot and shoe factories in the United States. Has anybody in this country, then, a monopoly in the making of boots and shoes? With the keen competition maintained by nearly eighteen thousand establishments, is it likely that purchasers of boots and shoes can be "robbed?" It is probable the number of establishments is now twenty-five thousand. No one of those establishments, if it would get trade and keep it, can charge more for boots and shoes than its competitors charge.

The census of 1880 also shows that we had 3,841 carriage and wagon factories. Is not that number enough to afford the purchaser of carriages and wagons ample protection against overcharge, against "robbery?"

We had 1,943 manufactories of agricultural implements. This is an average of fifty such factories for each State in the Union. Is it at all probable that with active competition for business among so many establishments any one of them could succeed for any length of time in "robbing" its customers?

We had 1,005 cotton factories, working 230,223 looms and 10,921,147 spindles. Is that number not enough to maintain sufficient competition in the manufacture of cotton goods? Is it likely that with so many separate and competing establishments, compelled to keep in active use so vast an amount of machinery, the profits in the manufacture of that class of goods can be maintained above the average profits of business in the United States? If 1,000 establishments, 230,000 looms, and 11,000,000 spindles are not enough to keep prices at a reasonable level, how many establishments, how many looms and spindles would be necessary for that purpose?

We had 4,958 machine-shops. Is not this number enough to keep up a fair competition in the production and price of machinery?

We had 6,008 factories of furniture and upholstery. Surely that number of competitors should make it impossible for any one of these factories to make more than a fair average profit in the making of furniture.

We had 1,005 separate establishments for the making of iron and steel. Considering the intensity of the competition in that business and the large amount of capital employed (which in 1880 was $230,000,000), the efforts of each establishment to get business, as against its competitors, render it certain that the profits of the business must bear a normal ratio to the general range of profits throughout the country.

Where competition is free among so vast a population as ours there can be no robbery in a tariff, no matter how high. Where the material forming the stock of an industry is not monopolized it is impossible to conceive of anybody being robbed. Our laws are general, and permit all our people to enter any pursuit they please. It can not be truthfully said that anybody is robbed if everybody is at liberty to enter and follow a pursuit that is profitable. There is an irresistible tendency under equal conditions to an equalization of the profits of industry as there is to an equalization of wages.

We are told that the free ingress of foreign-made goods is necessary to protect our people against the extortion and spoliation of the "trusts" and "combines" of this country. Leaving out of view the fact that free-trade countries are themselves the home and habitat of trusts and "combines," let me inquire whether our people are not perfectly well able to deal with any that may spring up in this country? If not, imagine the helplessness of our condition if there were no other country in the world than our own! How deplorable would be our fate did we not have the friendly and philanthropic English, French, Germans, Spaniards, Chinese, and Hindoos to protect us from the exactions of the "robber barons" who are "plundering" our people through the tariff! How these 65,000,000 of aggressive people would then be plundered! How grateful we should feel to the gracious foreigners who, from their distant homes, thousands of miles away, extend their sheltering and protecting arms over the oceans and hold in check the power of our robber chiefs!

If these theories of the free-traders are correct, it is a wonder that a

people so lacking in penetration, so devoid of the instinct of self-protection as our people have thus shown themselves to be, could have mustered up courage enough to venture on the experiment of self-government. The free-trade theory seems to be that while, up to a certain point, we can successfully carry on free government, yet when a protective policy is adopted our Government needs the safety-valve of cheaper labor than our country furnishes. While our people have been able to organize free political institutions, raise the greatest armies known to history, and fight the greatest battles of all time, yet, say the free-traders and the tariff reformers, they are unable to organize and carry on an industrial system, owing to the marauding proclivities of a few among their own number.

This is why the aid of foreign cheap laborers has to be invoked. Their efforts are directed to establishing an equilibrium between the power of a few of our manufacturers on the one hand, and the power of the remainder of our 65,000,000 on the other! If it were not for the friendly aid of these foreigners, the free-traders fear that the robber barons of this country would take from our people all the products of their labor, just as the slave masters did from their slaves.

Mr. President, if the protective wall were removed, most of the great manufacturing plants which have taken thirty years to build up would be abandoned in a single year. After that the prices of foreign articles would rise, while American wages would remain low and would constantly trend downward till they reached the foreign level. During the continuance of the fall the only persons benefited would be the income classes and such consumers as are not themselves producers. They would secure increased command over the labor and property of the country. On the other hand, by a continuation of the protective policy our great body of skilled artisans through increasing invention will continue reducing prices without reducing wages, without lowering the conditions of our civilization. They will cheapen articles without cheapening men.

But, Mr. President, no man is robbed by the tariff. The poor man is protected in his employment and in his wages from the competition of the half-starved labor of other countries, and the rich idler is compelled to contribute his proportion to the maintenance of the national policy which shall tend to keep every man at work, by reducing to a minimum the quantity of imported articles.

It is charged that the tariff rate is a tax. It strikes me, Mr. President, that it would be more correct to say that it is the price which the foreign manufacturers pay to this country for the privilege of selling the product of foreign labor in our market.

A duty of 40 per cent. ad valorem means that for every $100,000 worth of labor in the concrete which the foreigner ships into this country we charge him $40,000. That is to say, we charge him that sum for the privilege of cheating our workmen out of the work of this country, to which I maintain they have the first right and title.

It is the bonus which the foreign manufacturer pays us for the privilege of selling in our market the work of thousands of laborers who can not be called upon to defend the country in time of danger.

The Democratic party says that we ought to sell them that privilege for less. The Republican party, on the contrary, maintains we ought to charge the foreigner very much more, and enough even to absolutely prohibit him from bringing his goods here at any price.

If an American manufacturer, by genius of organization and the faculty of directing the employment of great numbers of men, aided perhaps by patents for valuable and beneficent inventions, succeeds in making a competence, he is pointed at by the free-traders from one end of the country to the other as a baleful example of the oppressive character of our tariff legislation, as though he had robbed the community. If, however, we observe the disposition of the wealth of the United States we will observe that the proportion of it realized in manufacturing industries is comparatively small. In this country, as in all countries, great wealth has been made for the most part in real estate and in railroads.

I admit that when the tariff is first levied, those who are most alert, those who are most active in mind or body, or both, are the first to reap the greatest benefit from it, and they may perhaps for a time hold some advantage. But it will not be long before the American people "catch on." It would be a poor compliment for a Senator or Member of Congress to pay to his constituents to say of them that they would long allow any class to have an advantage over them. American citizens very soon enter into a contest for their share of any advantages offered by the tariff laws or any other laws, these advantages being offered to all alike.

I should be loath to state that my constituents would long continue exchanging two days of their labor for one day of the labor of people of any other section of the country, provided the same opportunities and provisions of law were open to all.

The greatest bodies of iron ore in this country are to be found in Alabama; the greatest mines of lead in Missouri; the greatest sugar-fields in Louisiana. All those States have fine water courses, large bodies of timber, and large areas of arable land. Those States are governed by the same general laws that govern the other States. They have natural advantages equal to those of any State in the Union. For them to say that a law imposing a tariff for the protection of their laborers is a robbery of them, is nothing short of an admission, however unintentional, that under equal conditions they are unable to compete with their fellow-countrymen in other portions of the Union. More than that, it is a plea of supreme indifference to the welfare and advancement of their workingmen and to the development of diversified industries in their States.

It is charged that by the imposition of a tariff on imported goods one man is taxed for the benefit of another. That is not the fact, except in the sense that each citizen is taxed for the benefit of all, and all are taxed for the benefit of each. If by excluding foreign goods greater results are achieved in our own country, if there comes to be a larger proportion of production per day or per year than would otherwise take place, the nation is richer, not only in dollars and cents, but inestimably richer in the fact that it secures a wide range and variety of occupations for its own citizens. With all industries established, and all the people in their aptitudes, the largest possible aggregate of wealth is produced. Who shall secure that wealth? Who is entitled to it? The persons who produce it.

THE EMPLOYER AND THE WORKMEN.

The free-traders assert that our manufacturers make too much money. But we do not hear that, on the whole, the owners of our manufacturing establishments are as rich as the manufacturing barons of free-trade England, nor of those of Germany or France, nor are our manufacturers credited with making as much money in proportion to their plant.

Two or three persons are occasionally mentioned in the public press who, it is said, have realized fortunes in some manufacturing business. Nothing is said of the thousands of men throughout the country who have devoted their whole lives to manufacturing pursuits and have simply paid their way and made ordinary profit. It is something of a hobby with our free-trade friends to ascribe to the "iniquities" of the tariff every fortune made in this country.

The majority of American manufacturers find no greater reward for the money invested than is found by other business men for the money otherwise invested. As soon as it becomes evident that investment in any special line of business in this or any other country is more profitable than the average investments of the community, capital, ever on the alert, invades the more profitable department and reduces the profits. This rule applies to manufactures as to everything else.

Of the whole amount of money received by the American manufacturer, the workmen get a part and the employer a part. In other words, between them the employer and the workmen of this country get all that is made in the business.

Suppose it to be agreed that at the end of each day the workmen and their employer should sit down to divide or consume directly the products of their labor. Suppose there should be nine workmen and one employer. Suppose it were agreed that those products should be transformed into a dinner for ten. Imagine the nine workmen seated around the table, with the employer at the head. Imagine the workmen, after eating what had been set before them, rising from the table, pale, gaunt, and hungry, having received hardly enough to satisfy the first stage of animal hunger, and imagine the employer rising from the same table, his stomach gorged with terrapin-stew and canvas-back duck and his veins distended with potations of Pommery Sec or Mumm's extra dry.

That, in effect, is the picture which the free-traders give us of the relation between employer and employed in this country. And how do they propose to remedy that state of affairs? What substitute do they offer the workman for this modern form of Barmecide's feast? To give them a share of the good things? Oh, no. Simply to take from the head of the table and from the American employer the terrapin-stew, the canvas-back duck, and the other delicacies of life, and give them to the English, French, and German employer, leaving the place at the head of the American table as bare as the other places, and giving the workmen no chance to secure more than they now receive. The remedy proposed by the Republican party is one which says to the workingmen seated at the table, "This dinner is for all, employer and employed; divide it out between you according as you shall agree. It is for each of you to see to it that you get your fair share." And the workman is rapidly learning to look after his interests in that regard.

There is no law in this or any other country which prescribes the compensation of labor; and there is no doubt that there are in this country, as in all countries, greedy employers who would, if they could, pay their workmen but one-half their present wages. But every man knows that in this country the employer does not have things all his own way by any means. The workmen

Know their rights, and, knowing, dare maintain.

They very well understand that the only method by which the terms of labor are fixed is by agreement of both sides, and they show a constantly increasing confidence in their own power to protect themselves from unjust exactions. But instead of being benefited by the policy which the Democratic party favors, whatever profits now accrue from the products of labor would by that policy be destroyed, so that the workingman, no matter how earnestly he may struggle, could receive no more than he now receives, because there would be no more to divide. The only change which the Democratic party recommends is one by

which all would leave the table—employer and employed alike—lank and emaciated.

The laborer makes every effort in his power to get all the money he can for the smallest amount of labor; the employer, on the other hand, attempts to secure all the labor he can for the smallest amount of money. When the workmen do not receive their proper share, their growing intelligence will soon secure it. It is but a question of organization, and of the adoption by them of wise measures. The situation is absolutely at the control of labor, but the laborers are not yet in condition to guide and regulate the great force of which they are the exponents. If the laborers of the world should refuse to work, there would be no capital, and the capitalist would have to become himself a laborer.

When laborers understand how to unite and what rightly to insist upon—especially when they understand what it is that can be insisted on without destruction of the business in which they are engaged—when they know what is their just due and adopt wise and intelligent measures to obtain it, they will receive the equivalent of the entire products of their labor, less cost of management, renewal of plant, interest on investment, and a percentage to cover risks. The determination of the sum will require intelligence, virtue, wisdom, patience, and patriotism; and it will require those faculties not merely from leaders of labor, but from the whole body of labor. The schoolmaster is abroad, and the situation is full of hope.

It is a circumstance to be noted that the greater the knowledge of a workman, the higher his intellectual grade, the higher the grade of his wages. Even in countries in which the average range of wages is low, the intelligent workman extorts from capital a larger share of the product than is received by those in the same pursuit who have not become so well instructed. If any exactions are made by American manufacturers from their employés, they are not exactions based on or created by the tariff. If they depended on a tariff the European workmen should be better off than the American.

Whatever the horoscope of labor, industrial development can not yet dispense with the employer. Without the genius of organization and of effective and successful direction large bodies of men could not be kept continuously occupied. With the infinite variety of human aptitudes it is in the nature of things that as some men are equipped for detailed execution others are equipped for general supervision; and no co-ordination of effort can be complete and harmonious that has not room for both classes. In the true sense, therefore, the employer is not the enemy of the worker; nor, in the same sense, is the worker the enemy of the employer. They are simply indispensable to each other. Advancing knowledge will equitably prescribe the rightful share of each.

THE SPIRIT OF LIBERTY AS A FACTOR IN THE DETERMINATION OF WAGES.

A most powerful factor in the determination of wages is the spirit of liberty. The unfettered interchange of thought exercised by the people of this Republic, their unbounded freedom of association, and the absence of depressing, tyrannical, and overawing castes and aristocracies—all have potent influence in establishing the rates of wages of this country.

This is the answer to the inquiry of the free-traders why wages are higher in free-trade England than in protected France or Germany. The teaching of history is that increase of wages and improvement of conditions for the laboring classes have always followed accessions to the spirit of liberty. The pay of labor of all kinds is low where despotism prevails, where labor is considered dishonorable, or less honorable than idleness, and where standing armies stand ready to silence complaint and repress agitation. All improvements in the material conditions of people keep pace with their self-assertion and independence. This is evinced by a consideration of the average rates of wages paid in several of the countries of Europe to the ordinary mechanic. A free-trade writer of authority, quoted by the San Francisco Chronicle, states the wages of ordinary mechanics in Europe to be on the average as follows:

	Per day.
Great Britain	$0.91
France	.80
Germany	.72
Italy	.65
Russia	.35½

By a glance at these figures we observe the gradation to be practically in harmony with the proportional development of liberty in the several countries.

In the presence of standing armies of millions of men, the process of industrial no less than political emancipation is necessarily slow; but it is manifest that wages rise in proportion as liberty rises. But in all countries the selfishness of mankind is such that the laborer would be in poor condition had he to depend on the generosity of his employer. I have a higher opinion, a more hopeful view of the situation than to suppose that what the workman gets for wages, or is to get for wages, is to be what the employer sees fit to give him.

When the workman gets his full share of the products of his labor, the only advance he can then make—an advance fully equivalent to an advance in wages—will be through improvement in methods of production. Thus if two pairs of shoes can, with improved machinery, be made with the same sacrifice that before was required to make one pair, then, so far as concerns shoes, the wages of the workman have been doubled. When invention shall have asserted itself progressively along the lines of labor, effecting in each as much improvement as may have been effected in the making of shoes, then practically all wages will be doubled, because with the same amount of compensation the workman gets double the comforts that he got before.

WAGES IN THE UNITED STATES.

There is no reason whatever why every man in the United States should not be willing to pay such rates of wages and such prices of commodities as shall naturally result from the free and unrestricted competition of all our own people.

When trade between a people is perfectly free, as in this country, there can not, on the average and in the long run, be higher wages paid to those employed in one industry than to those in another. Wherever any one industry gives indication that the compensation paid to those engaged in it is on the average greater than the compensation paid in other occupations, the industry paying the higher compensation is invaded by men from the occupations paying less, and thus wages constantly tend to an equalization. This invasion may continue to a point at which, by the overstocking of the labor market in the favored industry, wages may finally decline to a point lower than the average rates prevailing in other industries.

Under the Democratic policy if wages fall in Europe our industries stand in danger of destruction. On the other hand, while professing to be the special friend of the workingman, the Democratic party would set on foot a policy which would render impossible any increase in the wages of our own people.

I favor the erection of a tariff wall so high that no possible reduction of wages in Europe would enable the foreign manufacturer to scale it. I would have it so high that absolutely nothing but the competition of our own workmen with one another would fix wages in this country. That is competition enough among 23,000,000 workers. The people of this country are entitled to such wages as result from the unrestricted competition of their own producers.

In the debate on the tariff in both Houses of Congress long discussions were had as to the exact amount of duty which should be levied on imported goods to make up for the difference between wages in this country and wages abroad. In these discussions the Democrats affected to admit that their object was to keep the duty at such point as would provide for that difference.

But such an admission presupposes that wages in this country are now exactly what they should be. This I deny. My idea as to the proper rates of wages for American labor is that they should result from the unrestricted competition of our own people; and I do not admit that the American laborer as yet gets his full share of the products of his industry. I do not admit that wages are yet what they will be.

The true wages that should obtain in the United States will never be known until, first, all our workmen shall be protected absolutely against the squalid competition of other lands; and, secondly, until they shall receive the equivalent of the value which they severally contribute to the products of their industry.

It is sometimes charged as a reproach against the protective policy that in some special protected industry wages tend to a minimum. Where this occurs it is an unerring indication of the vicious distribution of industries, and one of the most distressing consequences of their maladjustment. The remedy indicated is, not a reduction of the tariff, but a wider diversification and distribution of industries, so that all persons who want employment may not be compelled to seek it in the same occupation.

It is obvious that if industries be relatively few, with large numbers of men seeking employment, those men must distribute themselves as best they may, and without intelligent adjustment, among the few industries in operation. If a larger number enter into any special pursuit than are needed to meet the demands of production in that pursuit wages will inevitably decline. The function of a protective tariff, carried to its furthest limit, is to obviate the necessity for this. Its tendency is to encourage the establishment of a variety of industries and so to increase opportunities for employment, not in one or two, but in a great diversity of occupations.

No inference injurious to the tariff can therefore be drawn from the fact that at times in some occupations wages tend to a minimum. This is rather a sign that the tariff is too low to encourage the establishment of a sufficient variety of industries to absorb all the labor of the community.

But whatever the condition of labor in this country, it is infinitely superior to the conditions of labor in the home of free trade.

COMPARISON OF THE CONDITIONS OF LABOR IN A FREE-TRADE COUNTRY AND IN A PROTECTION COUNTRY.

What is the testimony on that point of those who have personal knowledge?

John Morley, speaking of Great Britain, makes the following striking statement:

It is an awful fact—it is really not short of awful—that in this country, with all its wealth, all its vast resources, all its power, 45 per cent., that is to say,

nearly one-half, of the persons who reach the age of sixty are or have been paupers. I say that it is a most tremendous fact, and I can not conceive any subject more worthy of the attention of the legislature, more worthy of the attention of us all.

Said John Ruskin:

Though England is deafened with spinning-wheels, her people have not clothes: though she is black with the digging of fuel, they die of cold; and though she has sold her soul for grain, they die of hunger.

Let me read from an article published in the London Evening News of November 14, 1888:

MR. H. J. PETTIFER ON HIS AMERICAN TRIP.

Last night the executive committee of the Workmen's Association for Defense of British Industry held their first meeting since the return of their secretary from the United States. That gentleman gave at considerable length his experience of that country, where he had addressed thirty large meetings. Amongst other things he stated that it was very hard to make American workingmen believe that their English brothers had any voice in the government of this country, as the first question he was invariably asked was, How is it possible for English workingmen to have control of the laws that regulate the tariff, and yet continue to admit the productions of other countries duty free? This was a question which he was unable to answer. He said he did not believe the Sackville incident had much to do with the result of the Presidential election.

The Republican majority was composed of seceding Democrats, many of whom were naturalized English and Irish citizens, who had been driven out of their native country by free imports, and who were afraid that Cleveland, if re-elected, would reduce the American tariff. He met with great numbers of workingmen who, still calling themselves Democrats, had decided to vote for Harrison and protection. Mr. Pettifer said he was sure that free trade between this country and America would in the long run be injurious to the British workman, as one of the first results of it would be the bringing down of American wages to the English level, or even below it, and with reduced wages the Americans would not only become our great competitors in foreign markets, but would also lose their present purchasing power, and consequently could not buy as much of us as they do now.

The only people he found in America who were in favor of what is there called English free trade were the professors of political economy at the different colleges. As a proof of the purchasing power of the wages obtained in the United States, Mr. Pettifer showed the boots he was wearing, bought in Boston, Mass., which could be purchased there by one day's wages, while in this country it would take at least two days' wages to buy a pair of the same quality. Public meetings in the States are always orderly and well conducted, it being considered a disgrace to any person to attempt to interrupt the speaker.

You are supposed to applaud as much as you like, but not to hiss, groan, or shout. If you do not like what is being said you walk out, and the test of the ability of the orator is his power to hold the audience to the finish. He also gave the average earnings of twenty girls taken haphazard from the wages books of Goff & Sons' braid works, Pawtucket, R. I., showing that they averaged $35 per month, or 35s. in English money per week, these young women being able to earn enough in one week to keep themselves in board and lodging over three weeks. He also stated on the authority of Mr. Conat, superintendent of Messrs. Coates's thread works in the same city, that they paid double wages in their American factory to what they paid in Paisley, Scotland.

Mr. Pettifer gave other figures to show the difference in wages between England and America in a variety of trades, but maintained that, after all, comparisons of wages are always more or less misleading. The true test is, what has the wage-earner got left after paying for rent, clothes, food, and taxes? Looked at from this point of view, and supposing the people in both countries to have steady work (which as a rule they have got in America and have not got in England), we find that at the end of the year, the American workman, on an average, will have $175, or about £36 in English money, left to spend in luxuries, or to save for an old age, and the English workman will have $50, or about £10 in English money left to use for the same purpose.

Mr. Pettifer told a very amusing anecdote about a free-trade Englishman he visited while in the State of New Hampshire. This man, although admitting that he had been forced to emigrate because he could not compete in England with German productions, was almost moved to tears when he said, "This tariff is a tax. We in America are taxed from the crown of our head to the sole of our foot; from hat to boots it is one long tax," and looking round his well-furnished sitting-room for an illustration of his argument, he went on to say, "That piano is taxed, that sewing-machine is taxed, that carpet is taxed," etc., and finished up by saying that he never had to pay a tariff tax on those articles while in England. "That is quite true," interrupted the wife, "because we did not have them when we lived in England." And, as Mr. Pettifer truly remarked, that put the whole matter in a nutshell. In America, where all these luxuries are taxed, the workingman has got them; while in England, where they are allowed to come in duty free, he has to do without them.

That is the frank statement of an English workingman as to the relative conditions of the masses of the people in his country and in the United States. But, as he seems to be a protectionist, I will supplement his statement with that of a free-trader whose testimony will not be suspected of bias. The late Matthew Arnold, in an article in the Nineteenth Century, for April, 1884, on "Civilization in the United States," concedes with candor that for all persons whose income is within the limit of £300 ($1,500) no country in the world offers such advantages as this. Such is the comment of a distinguished free-trader as to a country which at the time of his writing had had over a quarter of a century's experience of protection. Inasmuch as those whose incomes fall within the limit named by Mr. Arnold include the great bulk of mankind, we can bear up against his strictures with regard to other features of our civilization.

If we have high wages and high civilization for the masses in this country, then in order to keep wages and civilization on a high plane a tariff is indispensable. If we are to permit the product of the labor of the foreign workman, underpaid and underfed as he is, to compete in our home market with the product of our own workmen, shall we permit that competition to take place without exacting any return for the privilege? Shall our people, who consume twice as much food per head as the people of Europe, expend six times as much per head for education, cheerfully contribute of their earnings in many other directions to support the civilization of this country, and stand ready to defend it if need be with their lives—shall they permit foreign manufacturers from a distance of thousands of miles to carry on business in all the towns and cities of the United States without contributing in any way whatever to the support of our institutions or Government?

Shall we permit them to compete in our own market with our own people on perfectly even terms? If so, the consequences will not be slow to make themselves felt. The competition for the present may be only with the English, the French, or the Germans, but it is a progressive competition. What is to make it stop with the competition of Europe? If cheapness is the desideratum it can not stop there. Reaching beyond the Englishman, the Frenchman, and the German, our competition will soon be with the half-clothed Hindoo, and, beyond him, with the naked inhabitant of the Congo. Is this to be the measure of the ultimate civilization of the United States?

RAW MATERIALS.

While in one breath we are told that the manufacturers are robbing the people and growing rich upon the enormous profits of their business, the result of a wicked tariff, in the next we are informed that for want of "free raw materials" the manufacturers are unable to keep their factories going, and are compelled to go out of business.

What are "raw materials?"

The man dealing in pig-iron deems an article "raw material" until he has expended labor on it, ignoring the labor of the toiling miners. The man who makes steel calls it "raw material" until he puts it into steel. He ignores the labor of the miner and the iron manufacturer. The man who manufactures cutlery includes in his category of raw material the "finished" billet of steel, and denies that it is a "finished" product till it has been made into cutlery. The ship-builder considers the finished plate of steel to be "raw material" until he puts it into his ship. And so on through the entire series of industries, until the material that started out at $5 a ton as iron ore ends up in watch-springs at $276,000 a ton! Each man in his turn considers it "raw material." This view can be excused only upon the ground of the narrowness of human vision in all matters pertaining to self. The only period at which the article was, strictly speaking, "raw material" was while it lay, inert, useless, and valueless in the bowels of the earth. The moment a pick was applied to it, or a shaft sunk to facilitate its extraction, labor entered into the value of the article, and although it may be claimed that most of the labor employed in mining iron ore is not skilled, yet it is labor.

The miners are among us, and must live. If iron ores should be imported without limit, on the ground that they are "raw material," hundreds of thousands of American citizens would be deprived of their means of livelihood, and being without skill in other directions would be driven back to the land, from which, in isolation, to eke out a scanty subsistence, and by competition reduce the already sufficiently low compensation of agriculture. Each man thinks he should have, free of tariff duties, whatever is "raw material" in his business. This is saying to the long line of those who at various stages prepared the material for his use, "You shall starve in order that I may increase my profits."

WHO ARE THE PRODUCERS OF RAW MATERIALS?

The producers of these "raw materials" are the men without technical education—large numbers of people who in youth had not the advantages of schooling or the opportunity of acquiring skill in the production of a more highly finished product. They are the very men that most of all appeal to our sense of justice for protection. They are the most helpless members of the community—the men without alternative. They are, for the most part, the uninstructed foreigners among us; the victims of the free-trade policies, or, it may be, the despotism of the Governments under which they were born.

When the liberty-loving people of this country speak of "the down-trodden masses of Europe," these are the very men they have in mental contemplation. When those men become citizens of this country they come to cast their lot with us. They are here. What shall we do with them? Is there to be no hope held out to them? Are ignorance and poverty to become perpetual and recognized conditions of some class in this country? Are those people not to be uplifted?

When they become members of a community in which the life of the masses is on a relatively high plane they become subjected to the higher responsibilities and the greater expenditures characteristic of that life. Are they, who most need the helping hand, to be the only class to be brought into direct competition with the wretchedly paid labor of foreign countries, with a class of people who are not only wretchedly fed and clothed, but upon many of whom no governmental or other responsibilities are permitted to rest, who are suffered to maintain physical existence, while watchful and powerful military organizations stand ready to keep them in their places? The conditions of life and of citizenship for that class in this country differ so absolutely from those of like classes abroad that to remove the tariff protection from "raw materials" would leave absolutely without livelihood a class of men already the most needy and helpless in the community.

If the protection be taken from some forms of skilled industry their workers will not be altogether helpless. They may get along by going into other occupations. The wool-spinner can, on a pinch, earn a livelihood at cotton spinning, the machinist can become a factory hand, the

factory hand can invade the occupation of the producer of "raw material." But there is no alternative for those already engaged in the production of raw material.

Every industry in a nation is interwoven with each other industry. All industries are interdependent. It is a maxim of political economy that every man's income is derived in part from the income of every other man in the community. An injury to one industry, therefore, is an injury to all. That which lessens the prosperity of one lessens in a greater or less degree the prosperity of all. Hence, I maintain that no man has a moral right to bring into this country, in competition with the products of home industry, any article that is or can be manufactured here with no more effort than is required to manufacture it elsewhere. This is the fundamental principle on which a protective tariff is based.

The Government, as representing all the people, and charged with the duty of seeing that the Republic take no harm, has a right to say that no man, to gratify a selfish cupidity, shall buy from abroad any article which his own country is able to produce with an expenditure of energy no greater than is necessary to produce the article elsewhere. The state has a right to say that no man shall have his wants supplied for a less compensation than can be secured by the free play of competition among the people of his own country and within the borders of that country. The rate of wages to which the workers of that country are entitled is the rate dictated by fair and free competition among themselves. They are entitled to be protected from the influence of the lower rates of wages ruling in foreign countries.

It is the duty of the state to interpose barriers against the degradation of its people by industrial invasion no less than by armed invasion. These barriers may take the form of a money payment which the foreign manufacturer pays to the Government for the privilege of competing with our industries in our own country. That form it takes in the tariff.

HOW THE DEMOCRATIC POLICY WOULD DESTROY ALL OUR INDUSTRIES.

In his somewhat celebrated tariff message, the chief of the free-trade party, Mr. Cleveland, when President, referred to the small number of farmers engaged in wool-raising compared with all the farmers in the country, and used the fact of the comparative smallness of their number to enforce his argument that foreign wool should be admitted free of duty. He also says, "It may fairly be assumed that a large proportion of the sheep owned by the farmers throughout the country are found in small flocks numbering from twenty-five to fifty." On this theory of the then President we may assume that the average flock consists of thirty-five sheep.

WOOL.

According to the figures of the Bureau of Statistics the total number of sheep in the United States in 1887 was 44,759,414. Mr. Cleveland said (and I accept his statement) that "a large proportion" of those sheep consists of small flocks. Just what he means by a "large proportion" we are allowed to infer. It might be fairly within the line to say that 75 per cent., or three-quarters of the whole number of sheep, consists of those small flocks, but to keep within bounds I will assume the number to be 65 per cent. Sixty-five per cent., then, of all the sheep in the country consists of "small flocks, numbering from twenty-five to fifty," say thirty-five, sheep each.

Sixty-five per cent. of 44,759,414, is 29,083,619, which, divided by 35, gives 830,960 as the number of separate flocks. That means 830,960 separate farmers or wool-raisers owning flocks of 35 sheep each. On Mr. Cleveland's own rule of ascertainment, therefore, there are over 830,000 farmers who are directly benefited by the tariff on wool. If we estimate five persons to each family, it will appear that there are 4,000,000 persons directly and pecuniarily interested in the wool tariff. This may be a "small proportion" of the population, but it is a very considerable number of persons.

If this theory of Mr. Cleveland's be correct, that because the number of persons engaged in a particular industry is not a "large proportion of the population" therefore the product of their labor should have no protection whatever, what would become of the industries of the United States? Who shall judge when the number of persons engaged in any special industry is sufficient to warrant the protection of that industry? And if the needs and condition of the country warrant or demand the establishment of an industry essential to its industrial independence why should it not be established and maintained irrespective of the number engaged in it?

In a great self-sustaining nation of 65,000,000 people, with the multiplicity of occupations that should prevail among them, with a proper variety and co-ordination of their industries, the number of persons engaged in any one industry can never bear any large proportion to the entire population. Indeed, the smaller the number in any one industry, provided it be sufficient to supply the wants of the country, the better. What is wanted is an infinite variety of occupations, that each man may find that for which he is best fitted.

Mr. Cleveland called wool "raw material," but by the application of his own rule we find as many as 830,000 farmers with whom wool is a finished product; that is to say, a product into which a part of their labor has entered. If we take the principle laid down by him as to the industry of wool-raising and apply it to the various other occupations and industries followed by the people of the United States we shall make short work of the entire body of our industries.

BOOTS AND SHOES.

If wool should be admitted free of duty because only 830,000 farmers are engaged in its production—that being but "a small fraction" of the population—then boots and shoes should be admitted free, because by the census of 1880 only 194,000 shoemakers were engaged in that industry. If we should have free trade in wool, why not free trade in shoes? Reducing the duty would not suit Mr. Cleveland, for his implied question is, "Why should the entire population be 'taxed' for the benefit of a few?" If wool must go on the free-list, why not boots and shoes?

COTTON FABRICS.

Again, the cotton-mills of the country in 1880 gave occupation to 169,771 operatives. This, too, is "a small fraction" of the population. Why should we place a duty on imported cottons? Why not buy our cotton goods in England, and keep the workmen of that country busy making for us all the cotton cloth we need in the United States?

HATS.

By the same census the number of hatters in the United States in 1880 was 16,860. This, again, is a "small fraction" of the population. Why should we put a duty on hats made in foreign countries in order that 16,860 American hatters may be kept busy? The idea of Mr. Cleveland and his Democratic friends is that in any case it is not the workman who gets the benefit of the duty, but the employer. Why, then, should we think for a moment of keeping any duty on hats? Why not admit all hats duty free?

CLOTHING.

Why, too, should we have any duty on foreign-made clothes? Why not have all our ready-made clothing made abroad? The number of tailors in the United States in 1880 was 133,756, which is but "a small fraction" of the population. Should the ready-made clothing of London and Liverpool be "taxed" merely to support 133,000 American tailors?

CARPETS.

Our carpet makers in 1880 numbered 17,068. Why should not foreign-made carpets be admitted free to compete in our home market with carpets made by our own people?

PAPER.

Our paper-mills in 1880 employed 21,430 operatives. This is a very small fraction of the population. Why should we care to foster that industry? We can get good papers made abroad. If wool should have the benefit of free trade, why not much more so paper?

IRON AND STEEL.

The number of iron and steel workers in the United States in 1880 was 114,539. This, again, is a "small fraction" of the population. Why should we attempt to bolster up a business that employs only 114,539 people out of the entire population of this vast country? If the wages paid these men benefit nobody but themselves, then we are depriving the workmen of Liverpool and Birkenhead of the work to which, by reason of the long establishment of their industries, they may be considered fairly entitled.

MACHINERY.

We had in the United States in 1880 some 101,130 machinists. Why should we buy machines made by them in preference to those made more cheaply abroad? One hundred thousand men form but a "small fraction" of our population. If the wool grown by 830,000 farmers should be on the free-list, why not the product of the labor of 100,000 machinists?

CARRIAGES AND WAGONS.

Our carriage and wagon makers in 1880 numbered 49,887. Should we impose a "tax" on foreign carriages and wagons and deprive our people of the benefit of patronizing foreign workmen and the pleasure of sending our money out of the country merely to benefit such "a small fraction" of our population as 50,000 carriage and wagon makers?

And so, if the list were continued, we should find the industries of the country utterly wiped out piecemeal by applying to each in turn the views of the Democratic President with regard to the wool-raising industry.

The denial of protection to any one pursuit on the ground of the small number engaged in it serves, *pro tanto*, to drive people out of it, to overcrowd other pursuits and correspondingly depressing the rewards of labor in the other branch. But it brings no benefit even then. As soon as the occupation is destroyed in this country and the workmen dispersed into other occupations the prices of the articles which it had produced and which now must be imported would at once be increased. So that we should not only injure our workmen, but compel all our people needing the articles produced in that occupation to pay the foreign manufacturer whatever price he may choose to put upon his own production.

ARE THERE SOME UNPROTECTED INDUSTRIES?

In the tariff message to which I have referred, Mr. Cleveland takes

occasion to declare that many of our industries are unprotected, and implies that those who follow them are robbed by the protective tariff.

He maintains that no protection is afforded to the blacksmith, the mason, the baker, the plasterer, the carpenter, the railroad employé, the milliner, the day-laborer, the domestic servant, nor to the persons engaged in professions, such as doctors, lawyers, clergymen, etc.

On the very contrary, Mr. President, I maintain that those are the most absolutely protected of all industries.

The utmost that the highest protective tariff could do—even a tariff of absolute exclusion—would be to decree that all the work of the country should be done by the people living in the country, and that the rates of wages and of profits should be regulated by their unrestricted competition among themselves. No protective tariff ever enacted in this country has been so high as to have that effect.

Such being the case, those so-called "unprotected" industries enjoy a much more stringent protection than that of a tariff. Were it possible to construct houses in Europe and send them, ready-made, to this country, it would become our duty to protect specifically, by a tariff charge on imported houses, the occupations of the mason, the bricklayer, the carpenter, the plasterer, the painter, etc. In their favor is ceaselessly operating a barrier more effective than the custom-house—a barrier erected by nature—and equivalent to a tariff of exclusion.

This applies equally to the blacksmith, the domestic servant, the lawyer, the doctor, etc. In the very nature of things it is impossible that they can have European competition. Their only competition is with the inhabitants of their own country—just such competition as the protected industries would enjoy were the tariff so high that not a dollar's worth of foreign product could be imported into this country.

Such of our people as are engaged in those occupations have therefore no need of any other barrier than that which nature provides for their protection. It is a barrier which neither time nor circumstances can remove. No man not standing on American soil can enter into competition with them. Competing with Americans only, they will always receive such rates of compensation as shall result from the unrestricted competition of our own people, uninfluenced by the low compensation of labor in other lands.

If it be said that our unskilled laborers are liable to competition by reason of the free immigration of the unskilled laborers of foreign lands, I answer that our skilled workmen are liable to precisely the same competition by the equally free immigration of the foreign skilled workmen. But our skilled workmen are subject to the additional disadvantage of the competition created by the importation of the products of foreign skilled labor.

UNSKILLED LABOR HAS THE HIGHEST CONCEIVABLE PROTECTION.

The unskilled laborer of this country, then, enjoys a protection of the highest character conceivable. He can never be competed with from abroad. His competitors must live in this country. The skilled workman, on the contrary, is competed with at every step of his progress, not only by his fellow-workmen living here, but by men living and working in Europe, the products of whose labor are imported and sold in this country. One is protected by nature; why should not the other be protected by statute? Shall we not decree for our skilled workmen some share of the protection which nature has decreed for our unskilled? Shall we, by our law, refuse to care for the higher industries, while the lower and rudimental industries are cared for by a law as immutable as time? The unskilled workmen of other lands are attracted to this country because of the protection afforded by nature; should we not establish conditions of protection that will attract the skilled workmen also? Should we dedicate the Republic to the use of the unskilled only?

Nature found men without skilled industries; it found them in a rude and undeveloped condition; it therefore protected them by natural law. It decreed that the unskilled workers should have no competition except those of their own community. It set the example of the highest conceivable form of tariff—a tariff of absolute exclusion.

SHALL SKILLED LABOR HAVE NONE?

Shall men, as they become skilled, forfeit at each step of their progress all the benefits of effort and aspiration by being exposed to the competition of the whole world? Skill comes only by labor. It is an artificial creation. With its development shall not advancing knowledge give by artificial means to the products of the skilled producer the protection that nature gives to the unskilled? The unrestricted competition among themselves of the men engaged in the unskilled industries among us and in such of the skilled industries as can not be prosecuted elsewhere results in a level of prices of which nobody complains. Should not like competition in the skilled industries produce a like effect?

Without a tariff we should have the patcher of shoes instead of the skilled shoemaker, the solderer of tin pans instead of the producer of tin-plates; the line-man who strings the wire instead of the wire-worker who makes it; the second-rate man who mends machines and the botch who attempts to mend them, instead of the first-rate man, the intelligent and alert man, who can not only mend machines, but can invent and make them.

Shall we protect, by what is tantamount to a tariff of exclusion, the man who lays the rail on the track, and yet afford no protection to the man whose skill produced the rail out of the inert matter of the earth? Shall we give to the cobbler and the tinker, the mere menders of things, the highest protection known to man, and the compensation characteristic of America, while subjecting the makers of the articles which the cobbler and the tinker mend to the competition of the low-paid labor of Europe?

Free trade says to the shoemaker: "We can not protect you in the making of shoes. Become a cobbler and you have all the protection that the highest tariff could possibly give you." It says to the man skilled in the art of making tin-plate: "We can not protect or encourage skill. Become a tinker and you have the highest of all forms of protection."

It says to the intelligent and skillful watchmaker: "Do not exercise your talents in the making of watches; that is skilled work and we can get that class of work done in Europe. Set up a little mending shop and we will drop in occasionally and have our watches repaired." It says to skilled workmen of every class: "Abandon all ambition. For workingmen, ignorance is preferable to knowledge. The country is in danger from the aspirations of its laborers. If you will give up all desire for advancement, if you will content yourself with the cobbler's bench and the tinker's 'budget' you will not have to compete with the ill-paid workmen of Europe; you will have for competitors only the men living in your own country, which is as absolute a protection as the highest tariff could possibly give you. If, however, you dare to aspire, you shall compete with the half-starved labor of every land."

THE DEMOCRATIC POLICY DISCOURAGES THE IMMIGRATION OF SKILLED MEN AND INVITES THE UNSKILLED.

Free trade, therefore, tends to discourage the incoming of skilled and talented men; and instead would invite hither the unskilled of every land, including the paupers, of whom their country is glad to be rid. Those whom we should attract to our shores should be the men of skill and ability—men who, when domiciled among us, would be an endless source of wealth, not in material result merely, but in blood and brain and brawn.

We can not employ labor in Europe to repair our shoes; why should we employ labor in Europe to make them? We can not have our old clothes mended in Europe; why send to Europe for our new clothes? We can not send old engines and machinery to Europe for repairs; why send to Europe for new engines and machinery?

The tariff, then, unless absolutely prohibitory, affords but partial protection to our skilled workmen. If it be true that by this partial protection the skilled workman is robbing the community, what can be said of the robbery effected by the unskilled workman? He has the community entirely at his mercy. The skilled workman, by reason of the importation of competing foreign manufactures, is able to effect but a partial "robbery," while the unskilled workman has a clear field. Yet we have heard neither from Mr. Cleveland nor any one else any complaint of "robbery" effected by the unskilled workman.

The fact that no one suspects those who repair our shoes or our machinery of robbing the community should be assurance that there is no need to suspect of robbery those engaged in making our shoes or our machinery. If such fear existed it would only show that ignorance should be preferred to intelligence. It would tend to prove an absurdity, namely, that the more instructed a people become the less integrity will they have, and that a nation has less to fear from an ignorant populace than from an intelligent body of skilled and artistic people. It would be an extraordinary result of human progress if those who had only a smattering of a trade should be more desirable citizens than those who were masters of it. The utmost that a tariff can do is to lift the skilled workman to the same high level of protection afforded to the unskilled workman.

The moment the Democratic leaders reach the point at which labor becomes skilled they complain of "robbery." Are they afraid to trust the laborer when he becomes skilled? Do they fear that in proportion as a workmen becomes intelligent and skillful he becomes more removed from the Democratic party?

THE "NECESSARIES OF LIFE."

The sympathies of the free-trader go out in unstinted measure to the purchaser of goods; he has no sympathy with the producer of them. He wishes the duty taken from the "necessaries of life." In behalf of whom? Not the producer of those necessaries, but the purchaser. He ignores the fact that it is in the production of those very necessaries that nine-tenths of our people are engaged. If the tariff charges are to be taken from "necessaries of life," there will be no need of a protective tariff; there will be nobody to be protected. Under the pretense of benefiting the purchaser the Democratic party would destroy both the producer and the industry.

If we examine the list of productive pursuits followed in this country, we shall find almost all of them dealing with "necessaries of life." Protection should be given to all pursuits, so that the largest variety of industries may be encouraged. The fact that only a few persons are engaged in a particular industry is no reason why that industry should

be destroyed, our country deprived of the art, and other industries overcrowded with the displaced labor.

In the idea, therefore, that all tariff charges should be taken off the "necessaries of life," there is nothing but an appeal to "consumers," in the hope that the producers of the country, being also consumers, may be deceived by mere names.

Before the great protective system was inaugurated by the Republican party a very large number of articles now deemed by our people to be "necessaries" were luxuries of life. The daily living of the masses of this country has in thirty years, under protection, come more and more to consist of things that prior to that time were beyond their reach. With the protective principle thoroughly understood and universally applied, there is hardly an article in the present category of luxuries that would not, as time passed, become part of the daily life and daily needs of the masses of the American people.

It will be generally admitted that worsted shawls come fairly within the designation of "necessaries of life" in this country. Suppose the duty on worsted shawls to be high and the duty on camel's-hair shawls low. Our free-trade friends would characterize this as a gross wrong. Let us see. There are thousands of people in this country engaged in the manufacture of worsted shawls. With one accord they assert that if the tariff charge should be taken from those articles it would either destroy the industry in this country or relegate all those engaged in it to a grade of living inconsistent with citizenship of this free Republic. They therefore unite in a request that the duty be not taken from imported worsted shawls.

So, also, the American sheep-raisers who supply the wool for those shawls, living in isolation and self-denial, entreat us not to subject them to a competition with the cheap labor of South America and Australia. It is manifest, if we are to have a protective policy at all, that the policy should extend to every industry existing in the country; otherwise it would be a partial and unjust policy. By a duty on wool and on worsted shawls we protect the people engaged in the manufacture of those articles from the competition of European labor. But in examining the subject, to see against whom a discrimination would operate in case we put only a comparatively light duty on camel's-hair shawls, I fail to find American labor engaged in raising camels. I have seen no camel ranches in this country, nor have I heard of anybody in the United States being engaged in the manufacture of camel's-hair shawls.

Whom, therefore, should we protect by an extraordinarily high tariff charge on camel-hair shawls? An industrial policy, to be worthy of a great nation like this, should enable its people to do all their own work, untouched by competition from the squalid labor of other lands.

By the protective feature of the tariff we secure all the revenue needed by the Government, and, whether luxuries are highly taxed or not, it would be absolutely destructive of the interests of our laboring men to take the tariff charge from foreign importations of articles that may be called "necessaries of life." By taking the duty off "necessaries of life" we should subject our producers to a competition that would deprive them of work, that work being the production of those very "necessaries." As I have said elsewhere, it is the producer to whom the highest consideration is due. All except the aged and infirm should be producers, and even these are provided for by the protection which the tariff affords to those whom nature has appointed to care for them. Industrial policies can not be planned in the interest of those who produce nothing, who contribute nothing to the common wealth. States can live without them.

IS THE DEMOCRATIC PARTY A FREE-TRADE PARTY?

Is the Democratic party a free-trade party? Some of the leaders of the Democratic party dislike the appellation of "free-trader," and deny that theirs is a free-trade party. Inasmuch, however, as all phases of the economic policy of that party would produce every injurious effect of absolute free-trade, they object to nothing but the name. They will not deny that in their ranks will be found all the free-traders of the country, whatever the number may be; and that there are a considerable number must be inferred from the fact that one section of the constitution of the late Confederate States contained the following provision:

> Nor shall any duties or taxes on importations from foreign nations be laid to promote or to foster any branch of industry.

The free-traders are those who, when asked at what time they would remove all tariff duties and tear down all custom-houses, have the candor to reply, "Now!" As this frank avowal might lead to the alienation of Northern votes from the Democratic party, some of the great lights of that party denominate themselves "tariff reformers," while, in order that the party may be all things to all men, others of its leaders are advocates of a "tariff for revenue with incidental protection." The "tariff reformers" have as little regard for a protective tariff as have the free-traders. They are believers in a "revenue tariff." This is the opposite—the very contradiction—of a protective tariff. Its purpose is to refuse to protect. It would utterly destroy protection. In order that under it protection may be impossible, a "revenue tariff" imposes duties on articles not produced in this country, so that nobody could be protected—duties levied with a view of providing a revenue only.

The advocates of a "tariff for revenue with incidental protection" are the most illogical of these "reformers." Professing to desire protection, they would adopt means that would render its realization impossible. Now, protection is either right or wrong. It is either necessary or unnecessary. If right and necessary, why should it be made an "incident?" If wrong and unnecessary, why, equally, should it be made an "incident?" In such case, why have it at all? The outspoken free-traders, therefore, deserve credit for possessing the courage of their convictions.

If, as all Democrats in good standing believe, it be a "robbery" to have a tariff that fully protects, how much of a robbery is permissible under that which "incidentally" protects? Where does the "incidental" honesty cease, and the "robbery" begin? Do they mean that they are in favor of a "tariff for revenue with incidental robbery?" This is equivalent to a rule of morals that should inculcate the observance of truth with incidental lying, of honesty with incidental stealing, or, in general, the practice of virtue with incidental vice.

The simple fact is that all these classes of "reformers" have in view the very same purpose. The out-and-out free-trader would at a stride place the people of this country on a level with the people of other countries. The "revenue reformer" would perhaps make two strides instead of one—the first taking us half the way, and the second the other half. The advocate of a "tariff for revenue with incidental protection" would take us to the goal by "easy stages"—at each remove reducing the condition of our workmen, and getting them accustomed to the new and less favorable condition before taking them farther along in their journey to join the army of the disinherited, the poverty-stricken laborers of other lands.

If the intention be to protect in any degree the labor of this country from competition with low-paid foreign labor, how can a low tariff effect that object?

This class of tariff results in large importations, but the special degree of lowness is not a matter of importance. So long as the goods can be imported and sold here at all at a profit, they will come. Suppose that English cotton goods, if admitted free of duty, could be sold here at a profit of 10 per cent. And suppose that with a view to "incidental" protection a tariff charge of 5 per cent. were imposed on such goods. There being still possible a profit of 5 per cent., the foreign goods would keep pouring in. If, therefore, the tariff charge be not high enough to afford substantial protection it does not "incidentally" protect. It does not protect at all.

No prudent man would build a house in a valley in proximity to a dam that was just high enough, and no more, to keep the water from overflowing during an ordinary season. Before building he would wish the dam raised to a point sufficiently high to protect his dwelling in seasons of exceptional overflow, during which he might be subjected to the risk of having his house carried away by flood.

So it is with the tariff. So long as the wall—or dam—is only just high enough to keep out the article the prudent American business man will hesitate about investing his money in the business. He can not foresee the moment when through even a slight reduction of wages abroad a flood of imports may overwhelm him, and consequently the full benefits arising from keen home competition will be wanting. If the tariff be amply high, confidence is established and the business of production can go on without trepidation.

The greatest decline of prices in this country has been of articles on which the tariff charge has been so high as practically to exclude the foreign article from our markets. Illustration of this fact may, as is universally known, be found in the carpet and steel industries. The decline of prices has been least in articles of which our principal supply comes from Europe. The reason is obvious—because full competition was not secured among our own people. Fears were entertained as to the wisdom of entering a business which might at any time be disastrously affected by importations. In all departments in which there existed perfect safety from foreign competition the competition among our own people was keen enough to effect a great reduction in price.

HOW HIGH SHOULD THE TARIFF BE?

The early protectionists of this country believed that protection would be needed for but a short time. They supposed that when industries had been established and in operation for a short period they would be able to compete in our own market with the products of foreign labor. It did not present itself to their minds that protection was a continuing duty which the country owed to its labor and its industries. The factors and conditions which enter into and surround the industrial problem must be such as will assure permanence and progress, so that labor and capital may intelligently reason upon the future and make the calculations necessary in these days of large time contracts and great manufacturing plants.

No mistake can be made by making a tariff too high; an industry may be destroyed by making the tariff too low. If the protection is not needed, it has no effect. Whenever a duty is placed on any article that can be produced here cheaper than elsewhere, the duty is of course a dead letter. It has no effect one way or the other. If, for example, we should put a duty of $10 a pound on imported cotton, the duty would not have the slightest effect, either on keeping out foreign cotton, which is already effectually kept out, or in raising the price of the domestic article. Or if we should put a duty of $1 a gallon on imported

petroleum, it would not change the price of petroleum. Protection, then, refuses to protect any article that is cheaper here than in foreign countries.

When people say that the tariff is or is not high enough, they very often have no definite conception why it is or is not so.

THE TRUE TEST—ARE WE DOING OUR OWN WORK?

The true test of whether the tariff is high enough is to be found in answer to the question, Are we doing our own work?

When large importations are coming in it is a certain sign that the tariff is not high enough. To suppose otherwise would be to assume that our people are not active in observing opportunities for promoting and extending their business.

The tariff ought to be sufficient to insure our people against the competition of foreign labor and foreign capital.

Nobody in this country is going to risk a new, elaborate, and costly plant on the hazard that wages in other countries are going to continue at present rates, as he does not know, and can not know, to how low a degree wages may be pressed in those countries. The people there, having no alternative, must accept any offered wages, however low. The people here would not. In Europe one class fixes wages; in this country two classes fix them.

If our people do not enter an industry the tariff should be made high enough to induce them to do so. Capital is constantly seeking investment and taking risks, but there is a point at which risk will stop. If it were fully assured and understood that the protective policy would continue, capital would more freely enter new occupations and thus, by degrees, reduce the importations of foreign goods.

If the fear be expressed that the profits of capital may become too high, it is only necessary to remember that the tendency to equalization of profits and of interest on capital is just as strong as the tendency to equalization of wages or of anything else.

No matter to what height the tariff might be carried in a country where capital is as widely diffused as it is here, where it is more widely diffused than anywhere else on earth and where it is daring to a remarkable degree, it is absurd to suppose that men with money, looking for investment, will long permit those already in business to make extraordinary profits.

The profits of capital in one industry can not long remain above the average profits of capital in all the enterprises of the community. There is a constant vigilance exercised by those having money to invest; they will invade any department of business in which the profits promise to be remunerative, and moneyed men of active dispositions are not long going to permit other men in the neighborhood to continue making two or three times the profits realized in the average business. To suppose otherwise would be to admit that men are not actuated by self-interest.

IF THE TARIFF IS HIGH ENOUGH, WHY ARE OUR IMPORTS SO LARGE?

If the tariff is high enough, why is it that our own people, enterprising as they are, should continue to permit the foreigner to occupy our markets, when by every means in their power our people are hunting for the profitable employment of capital, especially in manufacturing industries? If it be high enough in woolen goods, why is it that fifty to seventy million dollars' worth of woolen goods are imported every year into this country? If not high enough to maintain our rates of wages, it is only a revenue tariff.

When a tariff is really protective we produce the article here, and there is no revenue derived from it. By making it too low, or by declining to make it high enough to bridge over the difference between the rates of wages and subsistence in another country and in this, our wages must range so as to approximate those of foreign countries.

Whenever conditions are such in any line of industry that it is on the edge of competition with a like foreign industry, a reduction of the tariff by 10 per cent. might be sufficient to drive the industry wholly out of our own country.

So long as the reduction is not sufficient to enable the manufacturer to send his goods here it has no effect.

But if the rate be so reduced as that importations come in by reason of it, then by our law we cheat our workmen out of their right to the work of this country, to which by reason of their citizenship, their tax-payments, and their obligations to support and defend the country they are naturally entitled. I maintain that they are entitled to have the products of their labor bought at prices that will admit of the payment to them of wages on which they can live in the manner characteristic of this country and people.

Whenever the tariff is sufficiently high and sufficiently general in its application to protect all industries, no one is or can be injured.

It is impossible to protect one industry without in a measure protecting all industries.

When everybody is permitted to engage in any industry he chooses, he can only get paid according to the average wages paid in his community. If, then, you raise permanently the wages of any reasonable number of laborers in the community, you increase to that extent the average wages of that community.

BUYING IN THE CHEAPEST MARKET.

But we are told by the free-traders that political economy teaches that we must buy in the cheapest market and sell in the dearest. That is good political economy for the few, but bad political economy for the many. For a short time one may get an article cheap in a foreign market, but the article is dear at any price if its purchase abroad discourages or postpones the production or development of a similar article in our own country.

If the English people had contented themselves with importing the work which the skill of the Huguenots had fashioned England would have lost a source of much wealth as well as a most desirable addition to her population. With true foresight England abandoned the importation of the Huguenot's manufacture and imported the Huguenot himself. There may have been for a short time a money loss on the article, but Great Britain got more than an equivalent; she got an enduring source of intellectual and moral wealth by importing the fabricator instead of the fabric. The thought embodied in the article is surpassed by the thought embodied in the artist.

Our farmer may be willing to buy cheap clothes or exchange his wheat for them, but the clothes soon wear out. The farmer would do better were the country filled with the talent that produces good clothes, which, by reason of the ingenuity of the skilled workman in calling to his aid the latent forces of nature, would soon become as cheap in the farmer's own country as the clothes he now buys abroad. The farmer would then have the skilled workman as a customer for his agricultural products.

DEMOCRATIC CHEAPNESS A CHEAPNESS OF—MEN REPUBLICAN CHEAPNESS A CHEAPNESS OF METHODS.

The cheapness that our Democratic free-trade friends are seeking means an ultimate cheapness of men, an inferiority of citizenship, a cheapness that submits men to squalor of living. This form of cheapness is odious and repulsive. In order to get cheaper goods for the moment they would cheapen our institutions. The aspiration of the Republican party is not for that form of cheapness, but for the cheapness developed by science and promoted by art, the cheapness that results from improved methods of production.

I maintain that the first duty of the government of a republic is to adopt and maintain such economic policies as shall protect its citizens from a degrading competition with "cheap" people, with those who have no alternative but to take what is offered or starve, men who are obliged to accept in return for their labor the smallest amount that will sustain animal life.

With the free-trader the dream of life is "cheapness." He uses this word as if it were a fixed and immutable quantity and not a mere expression of temporary relation. He says we ought to have "cheap" clothing without regard to the method by which the cheapness is effected. If we have to keep the wool-grower, the wool-spinner, and the cotton-weaver in squalor in order that we may have cheap clothes; if we are to keep the shoemaker on the edge of starvation in order that we may have cheap shoes, every man in the community will find in "cheapness" a two-edged blade, one edge cutting the man from whom he buys, the other cutting himself.

ONE CHEAP MAN BEGETS ANOTHER.

All industries being interdependent, the prosperity of all depends on the prosperity of each. One "cheap" man begets another. If the hatter must have "cheap" shoes, the shoemaker must have "cheap" hats. If both must have "cheap" clothes, there must be "cheap" farmers to raise the wool, "cheap" spinners to spin it, "cheap" weavers to weave it, "cheap" sewing-women and "cheap" tailors to make it into clothing. To supply "cheap" machinery for the shoemaker and the hatter, we must have "cheap" machinists; to supply the needs of existence for all these, there must be "cheap" agricultural produce, and "cheap" grocers; to repair their houses there must be "cheap" carpenters and painters.

So there must be cheap railway cars, cheap locomotives, cheap engineers and conductors—and so on throughout the entire body of labor. This form of cheapness would be the destruction of civilization. The way to cheapen things is not to cheapen the price without regard to the effort involved in production—not to cheapen the men who make them, but to cheapen the processes by which they are made—to reduce the amount of human sacrifice that enters into their making; in other words, to compel the forces of nature to do the work of man.

Whoever buys "cheap" must sell "cheap." This rule is inexorable. It has but one exception. If a man has a monopoly of a product he may sell "dear" and buy "cheap;" but where no monopoly exists, where, from the nature of the business, it is impossible to have a monopoly, then cheapness on the one side will involve cheapness on the other. Cheapness in buying will involve cheapness in selling.

TRUE CHEAPNESS IS EFFECTED WHEN LESS SACRIFICE PRODUCES THE ARTICLE.

The true cheapening of an article takes place when its production demands less sacrifice from him who produces it, not when its purchase demands less sacrifice from him who purchases it. The gauge of cheapness is the sacrifice incurred by the producer, not that incurred by the consumer. There is no producer who is not also a consumer; there are consumers who are not producers. With the exception of the aged and the infirm, men are entitled to regard only in so far as they are producers. It is the man who works, not him who idles, that is entitled

to consideration. The producers are the strength and buttress of the state. The willing idlers, whether rich or poor, and the majority are rich, are its weakness. No mistake can be made by consulting the interests of men in their capacity of producers. By consulting the interests of men as "consumers" merely we undertake to protect the interests of the idle rich—the non-producers—at the expense of the producers.

To get cheap shoes the free-trader would either buy the product of foreign labor, which he would admit free of duty, to enter into competition with the product of our shoemakers, or if he bought the home-made article it would be at the low price of the European shoe. So he would condemn all our artisans, in turn, to the lowest grade of compensation because he could buy at less outlay in dollars and cents the products of European labor. The truth is that no class of people in this country are entitled to goods any cheaper than the other classes of our own people can make them at wages that comport with the requirements of American civilization.

Our people not being able under present conditions to compete with the foreign manufacturer in the production of the various articles demanded by our civilization, a larger proportion are driven into agriculture than the needs of our own country require, and more than is consistent with a proper adjustment of industry. The consequence is that large numbers of men find their life-work uncongenial or repulsive, who, had they, in youth, had the opportunity of entering an avocation suited to their tastes and capacities, would have been a source of strength instead of weakness to their country. For with everybody occupied at the work for which he is fitted, not only is the largest amount of work produced, but it is produced at the smallest amount of sacrifice.

If we are to be satisfied with hiring our work done abroad in all departments of practical art because it can be done there more cheaply than here, then on the same principle we should be satisfied with hiring music for our homes instead of permitting our children to experience the delights of musical instruction. Millions of dollars are annually expended in teaching American girls the use of the piano, in possessing them of the art of music. Why not instead hire a hand-organ? For the same reason, instead of applying our money to the education of our children, we should be satisfied to hire "cheap" intelligence.

Why should we deem it essential that in respect to the accomplishments of life—in respect to music, to literature, to the abstract sciences, and the fine arts—our young people should be trained according to their several aptitudes, while in respect to the most important of all arts—the art of supplying the material wants of life—they should be made dependent on foreign nations?

Are we willing that our people, having a larger faculty of development than any other people in the world, shall be dependent on other lands for the skill that shall enable them to keep pace with their aspirations?

When it becomes a question of cultivating the esthetic and refined tastes all admit that we want the art, but it would seem that we do not care for the art that teaches people how to achieve in the great work of providing all the wants of a highly civilized people.

It is proper that our people should cultivate esthetic tastes and extend the influence of refinement through all the homes of the land, but the estheticism, the literature, the fine arts, that will endure are not those that precede, but those that accompany and follow material progress. They have a positive and assured foundation. Neither the moral, the intellectual, nor the physical advancement of a people is assured without immunity from hunger.

Neither is the civilization to be commended that develops one class of the community in all the intellectual qualities, while leaving all other classes without opportunity for progress. The cultivation of a few does not compensate a nation, especially a republic, for the ignorance of the many. This is a country without privilege or privileged classes. For us cultivation must reach beyond the few; it must extend to the many. Ours is a society of workers, and work should be held to be the highest badge of privilege. It is the prime factor in the true cultivation of a people, that form of cultivation most essential to the prosperity of a nation. The cultivation that contemns labor is not for us. That is a relic of the past and is inconsistent with the welfare of mankind. The most essential and salutary culture is that culture of head and hand whose beginnings have been observed to develop within the recent past and whose culmination reaches far into the distant future.

In the last analysis the real cost of production is not money, but labor. The true cost of any article is the number of hours' or days' work that have entered into its manufacture, the amount of toil it has evoked. As already stated, if you have unrestricted freedom of trade, you must exchange on even terms. The man who is at work making shoes in England will not be content to be cheated by the man who grows wheat or anything else in America. Under free conditions things tend to equalization. If the Englishman sells cheap shoes he will insist on getting cheap wheat. When people say they want things "cheap," it only means that they want everybody else to make things for them more cheaply than they are willing to make things for other people. It means that each man wants his share of the world's goods supplied to him at a lower price than he is willing to supply the world with the things he makes.

With this sordid argument of cheapness the free-trader goes to the shoemaker and inquires, "What do you pay for your clothes?" On being informed of the cost of the clothes, he says, "If it were not for the tariff you could buy your clothes so many per cent. cheaper." He then says to the tailor, "What do you pay for your shoes?" On receiving the information he tells the tailor, "If it were not for the tariff you could get your shoes at so many per cent. less." He advises each to agitate for a repeal of the tariff act. If the agitation prove successful, the tailor, by buying his shoes abroad, deprives his neighbor, the shoemaker, of a customer. The shoemaker, in turn, by buying his clothes abroad, deprives his neighbor, the tailor, of a customer. Thus selfishness overreaches itself.

WHAT IS MEANT BY BUYING IN A FOREIGN MARKET?

When a man says he wants to buy in a "foreign market," what does it imply? Simply that he wants to get, in exchange for his own toil, more than an equal share of the result of some other man's toil. Let the tariff be ever so high, he can get a fair and equal exchange of labor in his own country. If we imagine a condition of things among ourselves in which labor is unequally distributed, so that, for example, one day's work by A is equal to two days' work by B, other men, seeing the advantageous position occupied by A, will enter his trade, and thus lower or tend to lower the value of his day's labor when compared with that of B. Thus profit and wages are constantly tending to an equality. People who entertain the hope that they can get a cheap market—that is to say, a market in which a given amount of force or labor will be exchanged for a less amount of force or labor—will find in the end that they entertain a vain and delusive hope. However things may be at the start they will soon equalize.

The cost of all articles in this country should be that which results from the universal and unrestricted competition of our own people, untouched by that of the squalid labor of other lands.

Whoever competes with others must accept all the conditions of life of those with whom he competes. If we compete with Europe, we must accept the conditions of European life. From this there is no escape.

But the free-trader tells us that when he wants a bale of cotton, he does not want a cotton-mill. Wanting but one bale, he wants that at the lowest price at which he can get it. He insists that the element of present price is all that he has to consider.

FLESH AND BLOOD INVOLVED IN CHEAPNESS.

If cotton produced itself, without human agency, there might be some reason in that argument. But we can not discuss the price of cotton without discussing the price of flesh and blood. It is no answer to this for the free-trader to ask "Am I my brother's keeper?" A nation is a living community in which each individual has certain well-recognized and well-defined duties toward every other, in which each person is under an implied obligation not to seek his personal gain by an injury to the community. When the free-trader sends abroad for his cotton goods, is it to be supposed that he inflicts no injury on his own community? We have only to extend the inquiry by asking how this rule would work if everybody sent abroad for everything! The result would be that in time the people themselves would have to go abroad.

Why send abroad for cotton goods? Because, says the free-trader, they are produced cheaper abroad than at home. Does it follow that those goods will never be cheaper at home? Can not our skilled workmen devise improvements and processes by which to make cotton goods cheap without at the same time, as is the case abroad, cheapening the men who make them? And have they not so done again and again? Is not this work of improving our processes going on every day in every machine shop and cotton factory in the United States? The ingenuity of our artizans is proverbial; it is constantly discovering new methods and inventing new machiney which, by greatly increasing the product of labor, cheapen the price of the product without reducing the wages of labor.

Wages and all other conditions of life are higher with us to-day than they were in 1850 when, according to the census, the value of our manufactures was $44 per head of population; and higher than in 1860, when our manufactures had risen to $65 per head. In 1880 we manufactured $107 worth of goods for each man, woman, and child in the United States. Yet the price of manufactured articles is generally conceded to be, on the average, 50 per cent. less to-day than in 1860. With increasing output we are decreasing the price. Is it to be assumed, because an article is cheaper to-day in some foreign country than in the United States, that it is to the permanent interest of our people that the article shall be bought abroad and brought here ready made rather than made here, where the art will be the possession of the people, where the money will enter into the home circulation and aid in the development of home industry?

Are we willing, for the sake of the price which happens to be ruling abroad to-day, to permit our home manufactures to languish, if not to die, and the inventive genius of our people to decline? It does not need the eye of a prophet to see that had we no tariff charge on the foreign article the foreign manufacturers would flood our market with

their goods, destroying our industries. It is equally clear that they could then raise the price of the articles to whatever figure they pleased.

One of the principal effects of the tariff, therefore, is that by the development of home manufactures we are protected from the exorbitant prices which in the absence of the home product we should be compelled to pay for the products of foreign factories and workshops.

IS PRICE A STATIC CONDITION?

Price is treated by the free-traders as a static condition, as a fixed and unvarying quantity, whereas in fact it is controlled absolutely by the relations existing, at any given time, between supply and demand. Increase the supply of any article without correspondingly increasing the demand, and you diminish the price of that article. On the other hand, add to the demand for it without adding to the supply, and you increase its price. With this principle borne clearly in mind, let us see how it applies to the doctrine that our people should abandon the protective policy, tear down the tariff wall which incloses our prosperity, and admit to full competition with our own manufactures the manufactures of foreign countries.

We impose what the free-trader would no doubt regard as a heavy duty on imported cotton goods, yet we imported into the United States in 1889 manufactures of cotton amounting in value to $26,805,942. On these the duties amounted to $10,841,970, an average of about 40 per cent. If the payment of $10,000,000 of duty did not prevent the sending of $27,000,000 worth of those goods into this country, the quantity that would be sent here were no duty imposed can only be measured by the entire demand of our people for that class of goods. If the foreign manufacturer can pay 40 per cent. duty and still compete with us in our own markets, it must be obvious that were the tariff out of his way he would speedily dismantle every cotton-mill in the United States. That done, what is to prevent the foreign manufacturer from raising his price for the cotton goods which we would have to buy?

Prices would no longer be those of to-day, but would depend absolutely on the new conditions. The European manufacturers understand their business, and should they find the entire demand of 65,000,000 people open to them, they would sell their goods on the basis of the increased demand.

Whatever price cotton goods command to-day is a price resulting from and fixed by the relations of supply and demand as they now exist. Imagine our cotton mills destroyed, our plant, consisting of probably 300,000 looms and 14,000,000 spindles, rendered idle, and our markets made wholly dependent for their supply upon the foreign manufacturers. Notwithstanding the cessation of production in this country our people would still need a large supply of cotton goods. This would enormously increase the demand for the products of the foreign factories, and correspondingly increase the prices at which we could buy them.

Even if the price should afterward rise to a point at which our people could make them, they would be restrained from again entering upon the risks of the business. It is not what the foreigner is willing to sell for, but what he can sell for, that will decide. Our cotton mills would therefore continue closed until such a time as a lower order and scale of living should reduce our people to the conditions prevailing in competing countries. That result would be certain to follow from precipitating all our people into one industry. Even then the advantage of plant would remain with the foreign manufacturer, which would enable him to out-sell the American.

But as it would take half a century to reduce our people to the conditions prevailing abroad, if our capitalists should decline to altogether abandon the business, they would be compelled to take their plant and machinery from this country and set it up elsewhere, in some country in which they could get labor on the same terms as other manufacturers, where the laboring classes are oppressed and where great armies stand ready to repress all demonstrations of dissatisfaction.

HOW PROTECTION REDUCES PRICES.

The duty of this Republic is to assist in the cheapening of products, not by cheapening humanity, but by cheapening the processes of labor. This is the only method consistent with progress. By any other method, humanity must retrograde, not advance. By this method the result is effected by bringing to bear upon industry all the subtle powers of science for the liberation of man from the slow and toilsome method of hand labor. For centuries cotton fabrics from the hand-looms of India had been imported into England. In order to develop her manufactures England finally passed an act absolutely prohibiting their importation—with what result? The development of the industry in England, and as a consequence the invention of the power-loom. Had it not been for that prohibitory act the world might for centuries have had to depend on the ryots of India for cotton fabrics.

Does the free-trader believe that the end of discovery and invention has been reached? If the action of England proved a benefaction to humanity by promoting variety of industries among a race superior to the Hindoos, even though unfavorably situated, why should we not expect further advance of invention by promotion and encouragement of diversity of industries among the same race on this continent, situated infinitely more favorably, where every inducement is held out to ingenuity and where every aspiration finds encouragement? The age of invention is not past. On the contrary, we have seen but its opening day.

Our workingmen, who with hand and brain have been busy devising new labor-saving processes, have year by year reduced the cost to the consumer without reducing the wages of the producer. They have cheapened the article without cheapening the artisan. Had we not had this great gathering of skilled mechanics, well fed, well clothed, well housed, with all the energy and aspiration that prosperity begets, thousands of labor-saving inventions would have been postponed to the far future. Why is it that Americans are recognized the world over as natural inventors? It is because they are the best fed and best paid of all the people of the earth.

A people accustomed to low physical conditions and depressing social surroundings, deprived of aspiration and liberty, can never possess the fullest inventive faculty. Men engaged in a hunt for mere animal subsistence are too near the starvation line to give thought to invention. In proportion as the intensity of this pursuit relaxes thought is born, imagination expands, invention develops, and men investigate the subtle forces of nature. Accordingly we find that for the past quarter of a century, under the fostering care of the protective tariff, this Republic has not merely outstripped all other nations in the extent of its industrial development, but far exceeded its own previous history.

AS WE EXCLUDE THE CONTRACT AND THE PAUPER LABORER, WHY ADMIT THEIR GOODS?

Our free-trade friends vote for laws intended to keep out that class of labor known as contract labor. Yet the objections that apply to the contract laborer himself apply with greater force to his goods, the products of his labor. If he is "cheap," his goods are cheaper. If he deprives our workmen of their work, so do his goods. There is no logic in excluding the one and admitting the other. To be consistent the Democratic party should oppose all laws that restrict the immigration of contract laborers, for they bring what that party regard as the most desirable attribute which society can covet, namely, cheapness.

While assisting the Republicans in the passage of laws to keep out the cheap laborer, the Democrats have no objection to his remaining in his own country, and while receiving much less wages than American labor receives, shipping annually millions of boxes and bales of his goods in here to be sold in competition with the products of American labor. I maintain that it were better to have the laborer than the products of his labor.

WE CAN REASON WITH THE LABORER—WHAT ARGUMENT CAN BE USED WITH BALES OF GOODS?

The foreign workman coming here becomes inspired by his new-found freedom. Belonging to our own race, he becomes moved by higher aspirations; he soon joins the labor associations of his American fellow-workers; he becomes in all senses, except that of birth, a true American. With him our workmen can reason; to him they can appeal. But what argument can be used with boxes and bales of goods? How can men reason with a pair of blankets or of shoes? So, as long as the foreign articles are on the shelves of our merchants, American labor must constantly tend to equalization of conditions with those who make them. Our workmen will not accept European conditions so long as there is an acre of unoccupied land in the country. They will prefer to take the land. In doing so they take from our farmers one consumer; and worse, add a producer and a competitor.

If cheapness is the desideratum the contract laborers are the very laborers who should be brought in. If they come to this country in person, then to the extent that they consume they will furnish a market for our farm products, and will consume infinitely more of those products here than they would consume in Europe.

Would it not be better for the American farmer to have the European laborer brought in person to the neighborhood of the American farm, where he will earn American wages, such as he had never earned before, eat the products of American agriculture, as he had never eaten before, and pay for them two or three fold what he had paid before, than to send those products across the ocean to be sold to the same laborer under conditions which would render it impossible for him to pay the cost of their production? If we are to have no tariff, our people, farmers and mechanics alike, will be obliged to compete not merely with the pauper laborer who comes here, but with the pauper laborer who does not. If our people have to compete with pauper labor, they had better compete with it here than to compete with it in foreign lands.

CAN OUR WORKMEN COMPETE WITH EUROPEAN PRISON LABOR?

Suppose the governments of Europe should organize in their prisons great systems of manufacture, with all the most modern machinery, set their prisoners to work, and ship the products of their labor to this country, will it for a moment be contended that the product of the labor of our workmen could compete in the home market or in any market with that class of merchandise? It will at once be admitted that the prisoners receive but the barest necessaries of existence. Yet according to the statements of all witnesses there are millions of people in Europe, outside of the prisons, who, in all the essentials of life except greater liberty of movement, are no better off than the prisoners.

Should our workmen be subjected to competition with those merely that some non-producers may, for the moment, be able to save a few cents?

OR WITH THE CHINESE?

Suppose the people of China, by the aid of European or American superintending skill and the adoption of the latest improved machinery for manufacturing cotton goods, should undertake to compete with Europe and America in the manufacture of such goods. With their hundreds of millions of cheap and imitative laborers they would soon become the most extensive manufacturers of such goods in the world. If we imported their cottons it would be in vain that we excluded themselves.

Should the Chinaman come here in person, while he would be an undesirable accession to our population, while he would not amalgamate with us, and could never become part or parcel of our civilization, we could at least compel him to pay his share of the expenses of the Government under which he conducted business. But with free trade, with the unhindered power of entrance given to the product of his labor performed in China, he would contribute nothing to that object, but, while carrying on his business practically among us, and under the protection of our Government, would drive all men of our own race entirely out of any business which the Chinese might invade.

The two faculties that most distinguish races of men from one another are the creative and the imitative faculties. The creative, inventive, or originating faculty is practically confined to the Western races. The oriental and all other races, constituting the great bulk of mankind, are wholly imitative. Of the white race, our countrymen are the most inventive and original. We have, therefore, most to lose in arming the imitative nations with the latest developments of inventive genius. With our latest machinery in their possession, the products of their labor transported to our shores—freights costing practically nothing—can crush out the life of our industries.

Shall the men of originating force and constructive genius in this country have no protection against this class of labor wherever performed—whether abroad or here?

IF THE EUROPEAN PAUPER LABORER IS TO CONTROL OUR INDUSTRIAL AFFAIRS, WHY NOT, WITH AS MUCH REASON, OUR POLITICAL AFFAIRS?

Under the doctrine of the Democratic party, while the foreign laborer might remain physically in his own country, he would be here no less actually in the form of boxes and bales of goods.

Suppose we extend the illustration a little.

Since the foreign laborers can exercise their vocations in this country without their personal presence; since, with boxes and bales by the million, containing their cheap goods, they can control our industrial conditions, the basis and foundation of our people's prosperity and independence, why not entitle them to send here, at each recurring period of our general elections, boxes and bales containg countless millions of their cheap votes, that they may thus be enabled to destroy the policy of protection and secure a more perfect "freedom" of trade?

I have already, on another occasion, quoted the words of Sir Lyon Playfair, in the British House of Commons, to the effect that if you harness a racer to a dray-horse you may slightly improve the speed of the dray-horse, but it will be at the expense of the racer. So, by harnessing a proud, free, aspiring, and inventive people to a people dispirited, hopeless, and unaspiring, you may succeed in elevating to a slight extent the condition of the second class, but it can only be at the grievous expense of the first. It may cost us something more to keep our "stock," Mr. President, but all that we have consists of "racers."

WHAT HAS THE TARIFF DONE?

The tariff has protected our people against the competition of the under-paid and under-fed workmen of foreign countries.

The condition of those people is such that no friend of humanity can wish to see it duplicated on this continent.

The ruling classes of Europe consist of countless numbers of aristocratic idlers who, at the expense of the masses, consume of the products of land and labor, without themselves creating wealth to the value of a blade of grass.

During the feudal ages their ancestors, or predecessors in privilege, secured a monopoly of the land, which they still hold out of reach of the masses. They maintain their power and privileges by the aid of standing armies composed of millions of men who, also at the expense of the masses, consume without producing. These great swarms of idle men of both classes live on the producers and eat up their substance. It is a fair estimate that at least one-half the products of the labor of Europe are practically confiscated to support and maintain in idleness the classes named.

After centuries of what is styled a "high civilization" we still see the great body of the European people sunk in the lowest condition of ignorance and misery—millions of them often, if not always, on the verge of starvation. We see those millions unable to grasp the meaning of liberty, forbidden to think for themselves, unwilling or unable to assert their manhood, and, while not devoid of the aspirations of their race, so depressed by their conditions and environment as to lack the independence and self-assertion that characterize the workers of the United States.

The tariff has operated to bar out from competition with our people the peoples of those countries. That is precisely what a tariff properly adjusted should do and is intended to do. At the same time it has kept the people of our own country busy in their shops and laboratories working, investigating, and inventing.

IT HAS DEVELOPED OUR WORKMEN AND THUS PROMOTED PRODUCTION.

The discipline and training thus received by virtue of the protective policy of the country has produced here a class of workmen the like of which has never been seen in the history of the world. Intelligent, fearless, aspiring, they are men fit to constitute a great nation and to be citizens of a great Republic. As the workers must always form the great bulk of the people, so must they constitute the bulwark of the nation. It is on their love of liberty that republican government depends. They man the armies in time of war and contribute to the country all the wealth it has, whether in war or peace. Their prosperity, therefore, should be the especial concern of the Republic. It is impossible that true patriotism, virtue, or progress among the masses should exist in the presence of ignorance and squalor.

The industries which have been most highly protected in this country are those in which not only the greatest improvements have been effected, but the greatest reductions of price have taken place. Such reductions, however, are not those that result from the cheapening of men or the crushing out of humanity. They are the result of the cheapening of methods by requiring less sacrifice to be expended in production. The truth of this is evident from the fact that wages have not only not declined, but have risen.

By means of modern invention—for the most part the work of Americans—even the servant girl is able, with her American wages, to wear better clothes, eat better food, and enjoy more of all the comforts of life than could Queen Elizabeth have done with the income of a monarch and all resources of her time.

SAVING OF TIME AND MONEY BY INVENTION.

The mere pecuniary result of invention, the saving to society, the freeing for purposes of progress and advancement of much of the monetary reward of toil, may be indicated by the mere suggestion that the sewing-machine must save to the people of this country alone not less than $50,000,000 a year. It enables millions of mothers to do the sewing of their families who could not possibly do so without its aid.

The pecuniary value of the time saved by the air-brake is almost incalculable.

During the year 1889 the railroads of this country transported 476,000,000 passengers. If one-fifth the time of all those passengers has been saved by the efficiency of the new brake—and no reasonable estimate can place the saving at less—the time thus plucked from waste is so much added to the effective working force of the community, so much to the productive capacities of men and to the wealth of the nation. And so it is with a great number of other inventions which might be named. Indeed it might be said that the money value of the time saved and of the greater production effected in the United States each year by reason of inventions made by the mechanics in our workshops far exceeds the annual sum of customs receipts.

In the mere pecuniary sense therefore, even were the tariff a tax, the stimulus which it gives to invention by inducing effort and encouraging the establishment in our own country of an infinite variety of industries is more than ample return for the money cost. Every penny devoted to the payment of tariff charges represents a ticket in the lottery of invention, from which society is constantly drawing prizes.

SOME MARVELOUS EFFECTS OF INVENTION.

The marvelous effects of invention in economizing labor may be told in a few lines.

By the aid of machinery every man employed in the manufacture of boots and shoes can now do the work that by hand labor alone would require the work of five men. In farm labor also one man with machinery is equal to five without it; in flour-mills one man under the new system becomes equal to four under the old. In the making of brooms one becomes equal to five; in the making of glass jars, to eight. In the manufacture of hats and of tobacco one operative with machinery becomes equal to eight without it.

The sewing-machine does the work of twelve women. In the winding of silk one person with machinery becomes equal to ten, and in its weaving one becomes equal to twenty. In the manufacture of woolens one person with machinery is equal to seventeen without it. In the manufacture of paper one becomes equal to seventeen, while in the manufacture of wall-paper one person by the aid of machinery is made equal to one hundred operating by hand-labor. These are some of the results of recent invention and do not include such as are familiar to all—the steam-engine, that infinitely multiplies power; the locomotive, that destroys distance; the telegraph, that annihilates both distance and time, and the great variety of electrical machinery with which the world is familiar. The wealth created by skill may be indicated by a few facts. One pound of steel wire worth 70 cents makes 7,000 screws for the Waterbury watch, each screw worth 1 cent, making $70.

PRODUCT OF 13,800 ACRES OF LAND FOR THE PRODUCT OF ONE BAR OF PIG-IRON.

A bar of pig-iron worth $5 made into horseshoes becomes worth $10;

into needles, $55; into pocket-knives, $3,250; into buttons, $30,500; into watch-springs, $276,000! These values are the creation of labor. In the progress of the material from the ore-bed to the finished watch, it passes through hundreds of processes, in each of which the hand and head of the deft and skillful workman are necessary to prepare it for the processes that are to follow. The nation that exchanges wheat at a dollar a bushel for foreign-made watch-springs gives the product of 13,800 acres of land for the product of one bar of pig-iron!

SAVING OF FARM LABOR.

The mechanical industries have not neglected the farmer. The tools of his trade have been revolutionized and the hardships of his life materially lessened by them. Fifty years ago agriculture was one of the most exhausting of pursuits. The sickle, the scythe, and the cradle were its principal instruments. Their employment demanded hard and unremitting toil. They have been superseded by machines with the aid of which the farmer does his work for the most part while seated and under shade. Like a conqueror, he "drives his team afield" and reaps, binds, and thrashes his grain with hardly any manual labor. The beneficent instruments that have thus smoothed the rugged path of life for the farmer are the products of American invention. They are the results of training and discipline received and thought evoked in the mechanical workshops of this country.

But invention in aid of the farmer does not end in the field. It supplies the elevators which handle his grain, the locomotives and cars which haul it to the markets of his own country, and the steam-ships which carry it to distant lands. No farmer, therefore, should favor the establishment of an economic policy which would limit or retard mechanical progress.

HAVE NOT AMERICAN WORKMEN LED THE WORLD IN INVENTIONS?

When we point to the reductions which have been made in the prices of articles by reason of inventions which economize human labor and give to each man the working power of many men, we are met by our free-trade friends with the statement that this cheapness is not a characteristic of this country alone; that it is seen operating all over the world. Though the greater effectiveness of labor be observable universally, is it not a well verified fact that the inventions of this country have been the principal factors in securing this result?

Is it to be supposed that in this age the developments of science and art can be kept secret? Is it to be supposed that an invention which cheapens steel in this country will not cheapen steel in England? Does the Democratic party believe that the human mind has reached the limit of its powers—that all the secrets of the universe have now been exposed? Are we to live henceforth exclusively on the discoveries of the past, without hope and without confidence in the future?

It may be true that at any given moment the foreigner may defeat us by a 30 per cent. difference in the cost of some manufactured article. If, then, by means of American invention we reduce our price 60 per cent. (or 30 per cent. below the price abroad), the foreigner may immediately take our invention and by applying to it his cheaper labor again reduce his price to a point much below ours. It is therefore obvious that no matter to what stage of reduction wages or prices may be brought in this country, the foreigner can at any given time undersell us.

Yet the Democratic policy would require us to employ the foreigner to the exclusion of our own workmen. That party would concede that invention has ceased, and to secure cheapness for the moment would abandon the certainty of future inventions.

IF LABOR IN EUROPE MUST CONSTRUCT OUR MACHINERY, LABOR IN EUROPE MUST REPAIR IT.

If it be admitted that by reason of its cheapness foreign labor must construct our machinery, it must follow as a natural consequence that foreign labor must repair it when out of order. Great establishments and plants can not be maintained on repairs alone; and if they could, the expense of maintaining them for repairs alone would be altogether disproportioned to the results. On repairs alone our workmen could not acquire the skill, experience, and familiarity necessary to thoroughly understand and efficiently and promptly repair delicate and complicated machinery. That which may be simple to the man who made it may be of exceeding complication to him who did not.

The purchase of our machinery abroad practically necessitating repairs abroad, our people would be absolutely deprived of all mechanical industries and compelled to resort to agriculture for subsistence.

This would be an extraordinary condition for a people who have developed the greatest inventive talents of the age. The most splendid triumphs of mechanical genius during the past quarter of a century have been effected by the mechanicians of this Republic. The most beneficent improvements in both the large and small economies of life for all mankind have been made by them. Must we require improvements now to cease? Shall our inventors retire from the position which a high tariff has enabled them to occupy, that of advance agents of progress? Is it not so probable as to amount to a certainty that the developments of the past are but the first steps in the great march of improvement?

If it be true that no consideration would now induce us to part with the sewing-machine, the air-brake, and the thousand other valuable devices to which we have become accustomed, why should we be willing to set on foot an economical policy that would destroy all opportunity for future inventions? Why subject the American mechanic to such competition with European labor as would keep him always on the verge of want? Such a condition would deprive him of the faculty of invention. It would shut off progress; it would petrify the civilization even of this Republic.

Judging by our experience under the protective policy, there would seem to be no limit to the inventive powers of our people. The inventive faculty is acquiring accelerated momentum. At the present time the spirit of invention in all departments of industry is more active than at any period of our history. Are we willing to permit present conditions to be declared permanent and immutable, to declare them the conditions that must forever prevail for the highest type of the human race?

If the people are not constantly in their workshops or otherwise engaged in daily observation of the working of machinery, great inventions will come into existence only at long intervals. Such inventions can result alone from continuous communing with mechanism and mechanical forces. Of this fact the great agricultural implements known as "harvesters" afford an apt illustration. In order to develop and improve them it was necessary to secure continued observation of the process of harvesting. The season being necessarily short in any one locality, men were sent to the southernmost boundary of the United States with directions to follow the process northward, State by State, as the season progressed, so that beginning in Texas the tour was not ended or the fund of information deemed complete till Minnesota and Manitoba were reached.

These inventions and improvements were not made by agriculturists, but by mechanics. In the nature of things a knowledge of mechanical forces was necessary to their conception and development. Men so determined to achieve should not, by the selfishness of the moment, be arrested in their great career as the most inventive in the history of the world.

When, by perfect equilibrium of our industries, we shall have developed to the highest degree the intellectuality and skill of our people, when we shall have rounded out all their faculties of investigation and construction, then will it be found that what are now called the necessaries, comforts, and even luxuries of life will cease to be objects of serious concernment; they will be mere by-products, which all may have as matter of course, while the great consideration will come to be the finding of fitting work for head and hand, and the greater development, by inquiry and analysis, of man's power over nature.

By doing our own work we shall have centers of industry existing at short distances apart throughout the entire extent of the continent, affording to all engaged in mechanical trades constant, remunerative, and honorable employment, with opportunity for the development of every aspiration. By this means the workmen throughout the country will be brought into intimate touch and relation, by which the sense of invention will be quickened. By the same means the agriculturist will be furnished not only with the most remunerative of markets at his door, but also with that which men prize beyond pecuniary reward, the advantage of association, with all that it implies: a higher range of social life, schools, academies, libraries, museums, works of art and taste, theaters, opera-houses, and all the elements that distinguish life in communities from life in isolation.

The people of this Republic will prefer to be called great, not for resort to the forces that waste and destroy, but for development and utilization of the beneficent powers of production by giving to mankind great discoveries and inventions in all departments of science and art. In this way and this only can they fulfill their high mission among the peoples of the earth.

THE SOUTH AND THE PROTECTIVE TARIFF.

Mr. President, yesterday I heard the Senator from Texas [Mr. REAGAN] take exception to a statement made by the Senator from Iowa [Mr. ALLISON], who denied that the tariff bill under consideration was sectional in its bearing. The Senator from Iowa stated that the tariff bill operated equally upon all the people and upon every section of the country, and that it could not truthfully be said that it was either sectional or unfair. The statement of the Senator from Texas has been repeated by almost every Senator on that side of the Chamber.

The Senator from Texas stated that the North and East are manufacturing countries, while the West and South are agricultural countries. Why, Mr. President, there was a time in this world when countries had not arrived at even the agricultural stage. First came the pastoral condition; then came agriculture; then the manufacturing. States can have and should have both agriculture and manufactures. Illinois is as great an agricultural State as Texas, and yet Illinois is one of the greatest manufacturing States in the Union. Pennsylvania is as great an agricultural State as any State in the South, yet Pennsylvania has most extensive manufactures.

Is there any law in the United States which prevents the people of Texas, with their immense herds of sheep, from utilizing the wool obtained from them and spinning it into cloth? Is there any law which

prevents them from taking their surplus cotton and spinning and weaving it into cloth, as is done in Connecticut or Massachusetts?

The Senator who last occupied the floor [Mr. VANCE] complained that an enormous wrong had been inflicted and great discrimination had been made because binding-twine had been put upon the free-list and cotton-ties and cotton-bagging had been subjected to a duty. I disagree with the gentlemen who voted for free binding-twine, for I believe that the dropping of any industry from the dutiable list affects, so far as it goes, every industry and the wages of every artisan throughout the country. I believe, in order to have a perfect system of industry, there must be an equilibrium of all industries and that this country must produce everything which by nature it is capable of producing.

When we know that great fields of iron ore lie in the mountains of Alabama, Tennessee, Georgia, and other States of the South, when we know that throughout those States there are great deposits of limestone and all that is necessary for fluxing, great deposits of coal fit for coking and for steam in the very region where the cotton is produced, I should be surprised to be told that these people, having the chance to take that ore and coal and make iron, could not do it. Especially would it be strange if they could not make cotton-ties, for they belong to one of the rudimentary processes of iron-making. If those who favor this tariff are engaged in perpetrating a wrong upon them, why do they not do this work themselves? Do they plead mental inferiority?

Mr. REAGAN. Will the Senator allow me to answer him in a word?

Mr. JONES, of Nevada. Certainly.

Mr. REAGAN. The capital is concentrated in the older portions of the country, and, under the influence of legislation which has been passed, capital has been added to capital, and the agricultural portions of the country have been so taxed for the support of manufacturers that they could not accumulate money.

Mr. JONES, of Nevada. That is the most astounding proposition I ever heard in my life, that one of the very richest States in the Union can not put up a cotton factory.

Mr. REAGAN. I meant the general business of manufacturing.

Mr. JONES, of Nevada. Build one factory and that will build another, and the second will build a third. There must be a beginning. It was but a short time since the monopoly of manufacturing was east of the Blue Ridge Mountains and north of the State of Maryland. Now the center of manufacturing has gone over the mountains and into the Western country. All that these Western people had at the start were their courage and their enterprise. The manufactories had always been in Massachusetts, Connecticut, Rhode Island, and the other Eastern States, but now the manufacturing supremacy of those States has passed away.

With a tariff law operating uniformly over a great country like this, when industries are established in certain localities and other localities afterward develop, it will sometimes happen that hardships will accrue to individuals. Such hardships are now being suffered in the Eastern States. People who established in those States manufactures of barbed wire and other articles find that the same class of manufactures are now not only nearer to the points at which barbed wire and other articles are wanted, but the ore or raw material is nearer to the mill as is also the coal necessary to make it. But, like men, they stand up to the consequences of the change. They say if we have made a mistake in locating our industries in an improper situation we must suffer the loss and must readjust our workshops. If we can not make barbed wire we can make something else. It is not the fault of the law that the industries are more profitably pursued elsewhere.

Where the law bears equally on all, capital will adjust itself to the demands of business and to the probabilities of profit in all parts of the country. The law gives equal facilities to every man in every part of this country to engage in any business he chooses. As far as my constituency are concerned, I should be ashamed to claim that they are robbed; for, I can assure you, whenever there is any chance to get a portion of the plunder, if they do not get their share they will not complain. [Laughter.] They are going to be alert and get in. The trouble with the constituents of the Senator from Texas is that they have been asleep, they have not fully "caught on" to the movement, but we have seen signs lately that they will do so. Throughout the entire State of Virginia such a movement as has not been heretofore known is now going on, building up the industries of that State, and if the protective policy shall continue it will make that State one of the great manufacturing States of the Union. So it is in Alabama; so in Tennessee; and so it will be throughout the Union if the protective policy shall remain the policy of the country.

STATISTICS OF RECENT PROGRESS.

What has the tariff done for the South? In a few years of the new policy that section has shown more progress than in a century it would have shown under the old. In 1880 the number of cotton mills in that section was 142; in ten years they have doubled. In 1880 the number of bales of cotton consumed by those mills was 180,000 pounds; in 1889 it was 500,000 pounds. In 1880 the pig-iron produced in the South amounted to 350,000 tons; in 1889, to 1,780,000 tons. In the same period the product of wood-working establishments has increased by 225 per cent. In 1880 the amount of coal mined in the South was 2,000,000 tons; in 1889 it was 13,000,000 tons. In 1880 the total value of the manufactured products of the South was $3,300,000; in 1889 it was $30,000,000!

The railroad mileage of the South has increased from 17,808 miles in 1880 to over 40,000 miles in 1889. The assessed value of Southern property, which in 1880 was $2,000,000,000, is now estimated at $4,000,000,000.

These figures show that a new era has opened for the South, that at last the brain and hand are working together, and that with a continued policy of protection the ultimate development of all the material resources of that section is assured.

In order to show that some progress is making, even in invention, I will cite the advance shown in a few of the Southern States in the ratio between the number of patents and the numbers of white population since 1870. The figures of the Eleventh Census not being yet available I have based my computation of population for 1889 on the estimates of the New York World Almanac for 1890. As in the case of the figures cited earlier, I have in this case also excluded all consideration of the numbers of the recently manumitted class, from whom, in the nature of things, no great creative effort could yet be expected:

States.	1870.	1889.
Alabama, 1 to every	14,483	10,375
Arkansas, 1 to every	32,919	11,160
Georgia, 1 to every	7,888	6,222
Texas, 1 to every	11,764	5,261

The tariff therefore stands for aggregation because it tends to develop aggregation. It implies that all the wants of the country can be supplied by our own people. It stands for association, for strength, for homogeneity, for national self-development. It promotes equality of material conditions among our own people and prevents a descent to the lower conditions of life that obtain in other countries. In a free and self-governing republic equality of conditions must precede and accompany a progressive and enduring civilization. Those conditions are impossible without a protective tariff. It would be folly for us, situated as we are, to attempt the task of equalizing conditions of living with those of foreign peoples of lower material conditions.

The tariff encourages the pursuit of all the industries in our own country; it therefore tends to symmetry of industrial development.

Free trade, and what is called "revenue reform," which practically amounts to the same thing, would keep us from developing our own resources and compel us throughout all our history to be industrially dependent upon other nations. In so far as it permitted progress the development would be uneven, one-sided, and unsymmetrical. It tends to the creation of castes, one consisting of the very rich, few in numbers, but great in power; the other of an enormous mass of the very poor. The reason why men preferred slavery to freedom was the same that impels them to oppose a protective policy, namely, to obtain the labor and sacrifice of others in return for less labor and sacrifice of their own.

For our country, therefore, free trade and "revenue reform" stand for national dependence, inequality, and waste. While the protective tariff cheapens products by promoting inventions that elevate humanity, free trade and so called "revenue reform" would cheapen products by degrading humanity.

It will not be matter of surprise—indeed it seems highly probable—that under the operation of the measure now pending in this body the industries of the country will within ten years be brought to an equilibrium, so that we shall have practically no surplus staples for export.

THE FARMER AND THE PROTECTIVE POLICY.

Agriculture, though the basis of all other industries, can never of itself develop the highest form of social life. With agriculture, population must always be sparse. Its fundamental condition is, not that men shall come together in aggregations, but that they shall stand apart. The labor of the field is, as a rule, labor of isolation. In it men are a series of units, not an aggregation. Many of them have selected that occupation, not from choice, but from necessity; from the lack of other opportunities; from the absence in their community of that amplitude and variety of industrial development necessary to afford scope and play to the varying tastes and adaptabilities of men.

The recent organization of Farmers' Alliances in this country is an indication that the farmer is beginning to understand the needs of association. He realizes that men in isolation are ciphers in comparison with those living in aggregations, where they can bring their influence to bear on their Government as well as on their fellow-citizens in other occupations. He has observed that the movements which have been instituted by populous communities and associations have been, to a large degree, successful. He is learning the strength which lies in association and organization. The popularity of the Farmers' Alliances is derived from the awakened sense of pleasure and the gratified sense of power which association and aggregation bring to a class hitherto comparatively isolated.

It has its genesis in the yearning for society. The American farmer

wishes to be in touch with his fellows. Like all other Americans he longs for broader intellectual interchange. His hopes and aspirations are reflected in his children, who, often at an early age, fly from the isolation and monotony of the farm to seek the life and bustle of the city.

To enable the farmers to realize the full benefit of the associative tendency of the age, to give to their occupation the strength and influence as well as the pecuniary reward to which it is entitled, they should not be content with organizing Alliances; they should aid in the organization and development of communities in proximity to their farms.

For this reason there is no class of men in this country whose interests are so absolutely bound up with and dependent on the policy of protection as the farmers. Not only is that the policy which gives birth to and develops communities in proximity to the home of the farmer, but it is the only economic policy consistent with the existence of the independent working farmer.

SUGGESTION OF THE EFFECT OF FREE TRADE ON AGRICULTURE.

Men who seriously reflect on the subject will find it difficult to escape the conclusion that long persistence in a policy of free trade would, by destroying the present system of farming, effect the ruin of the Republic. As our population increased (as increase it will, and rapidly) the absence of a sufficiency of mechanical industries would drive people more and more into agriculture. As there would be but little opportunity for the investment of capital, except in land, which the people must have, large capitalists would be quick to grasp their opportunity. Their only resource for profit would be in the ownership of great landed estates, on which to exploit multitudes of tenant farmers, over whom they would exercise the dogmatic authority of lords-paramount.

The free American farmer of to-day would disappear, to be replaced at first by the lessee, next by the tenant at will, and later on, in the future, as the exploitation continued and became more intense, by men who, however free in law, would in fact, like the Coloni of Rome, become attachments of the soil on which they worked, for all practical purposes the personal property of the landed magnate. Let us take a lesson from history. "Great estates," said Pliny, "ruined Italy." The greed and selfishness that destroyed Italy are still doing their perfect work among the nations of the earth.

An excellent authority* estimates that in order to have an equilibrium between agriculture and all other industries in any nation the number of persons engaged in agriculture should not exceed one-third the number engaged in all occupations. That is the proportion whose labor, properly applied, can produce the food supply of all the people without leaving a surplus. If more than this proportion are farmers their competition with one another reduces to an abnormal and unremunerative degree the compensation which they should receive in so arduous an occupation. According to the census of 1880 the number of separate farms in the United States was 4,008,907; the number of persons engaged in agriculture, 7,670,493; the number of workmen engaged in all occupations, 17,392,099. The farming class, therefore, constituted 44 per cent. of the whole working body.

IN THE ABSENCE OF DIVERSIFIED INDUSTRIES, TENDENCY TO OVERCROWDING OF THE FARMERS' OCCUPATION.

The constant tendency, in the absence of sufficient protection and encouragement for manufacturing industries, is to an overproportion of cultivators of the soil. Agriculture being a primitive occupation, requiring for its conduct on a small scale but little capital and comparatively little skill, may be undertaken by persons who for any reason fail to find occupation in any of the great fields of manufacture. Whatever, therefore, tends to discourage the establishment or maintenance of manufactures or to limit their variety tends in the same degree to encourage men to engage in agriculture. That is to say, men who fail to find employment in their accustomed occupation, having no skill in any other, are necessarily thrown back to the land, from which by hard work they may hope to secure at least a subsistence. Workmen in any and every industry thrown out of employment by a reduction of the tariff, therefore, swell the great army of those who cultivate the soil. Every such addition to the number of agriculturists not only tends by competition to reduce the price of agricultural products, but at the same time reduces the number of persons who would be consumers of those products.

According as we increase the numbers of our skilled workmen, we do not diminish the number of farmers. As we diminish the number of skilled workmen we increase the number of farmers. When the farmer's occupation is invaded he has no recourse. Not being a skilled mechanic he can not in turn invade some other occupation. All mechanics can become farmers without preparatory training; no farmer can become a mechanic without such training. When we shall possess the utmost diversity and multiplication of industries, therefore, we shall have comparatively fewer farmers and a relatively greater number engaged in skilled industries.

The trend of population from farming to industrial pursuits will then have a tendency to make manufactured articles relatively cheaper and farm products relatively dearer. The farmer, therefore, has everything to gain by a policy which induces the people of this country to do all their own work.

Instead of precipitating increased numbers into farming by lowering the tariff and reducing the numbers employed in the work-shops, if we can succeed by a high tariff in widening our industrial development and rendering it unnecessary for our skilled workmen to have recourse to the land, our natural increase of population will in a few years enable our factories to consume all the products of our farms.

In a properly adjusted system of industry the artisan is as necessary to the agriculturist as one blade of a pair of shears is to the other; and both are indispensable to the state. It may be said by the free-trader that the foreign mechanic can supplement the American agriculturist and that he will cost less. But this places the agriculturist in one country and the consumer of his products in another, 3,000 miles away. The producer in Europe has but little means wherewith to pay for the agricultural products of our farmers; and if he be a good workman, he as where the sons of our farmers can have none of the advantages of association with him or of instruction in his art.

THE PROTECTIVE POLICY NOT BEGUN SOON ENOUGH.

There is much truth in the statement made by the free-traders that the farmers of the United States do not receive the full benefit of the protective tariff. The cause of this, however, is not that usually advanced by the free-traders, nor is it one which their policy would in any degree tend to remove. On the contrary, it would but intensify that cause and bring disaster where now there is at least a chance for prosperity. The true reason why the tariff policy does not bring to the agriculturist the full measure of prosperity of which it is capable is because that policy was not inaugurated earlier.

Had the protective policy been adopted a quarter of a century sooner than it was the entire country would now be dotted with manufacturing centers—not merely cities separated by long distances, but busy towns and villages a few miles apart, in which the farmers of the neighborhood would find ready and remunerative markets. In other words, in a properly adjusted system of industries the farms would feed the factories and the factories would consume all the products of the farms. There would then be no overproduction of farm products for export; the "home" market (in the strict sense of the term) would consume all that would be produced, and the farmers would have the benefits and profits coming from direct sales to consumers, without the intervention of brokers, commission merchants, railroad magnates, and the army of middle-men who now appropriate what under a better system would be the farmer's profits. The delay in the adoption of a distinctly protective policy postponed till the coming generation that fullness of development and that variety of industry which, if a strong tariff be maintained, we shall at no distant day secure.

As our population has increased by immigration and natural growth the meagerness of our industrial development and the absence of variety in such industries as were established afforded insufficient accommodation for our rapidly increasing numbers. Hence very many men who would have preferred town or village life and who had neither taste nor inclination for agriculture were compelled to resort to it for a living. And thus the lot of the farmers, already sufficiently hard, became gradually harder because of the disproportionate increase in their numbers, and can not materially improve till the manufacturing activities of the country are developed in proportion to the numbers engaged in agriculture; in other words, until an equilibrium is established between the manufacturing and agricultural industries.

FREE TRADE WOULD INJURE THE FARMER.

Instead, therefore, of the free-trade or low-tariff policy benefiting the farmer, it would seriously injure him. Whatever may be said against a tariff, it is undeniable that it induces the establishment and maintenance of manufacturing enterprises. Thereby it gives employment to labor and keeps the wheels of industry and commerce in motion. The men who are to eat and wear the products of the farm can pay for them only from the fund created by those manufactured products, for the money result of a manufacture does not end with the making of the article, but follows it through every movement of its transportation and every transfer of its ownership.

Any reduction of the tariff, therefore, which throws factory operatives out of employment must result in throwing men out of employment on railroads, steam-ships, and in city stores and offices. The products of factory labor, being no longer transported, will require no merchants to "place" them, no salesmen to induce customers in city stores to buy them, no book-keepers or clerks to keep account of them; nor, indeed, will the city store itself be required in which to expose them for sale. Thus the politician who formulates a tariff bill which results in closing up a factory in the remotest corner of the Union or reduces the reasonable profit of its business is but touching the electric button that rings the alarm in every avenue of labor throughout the land, and loudest of all in the open highway, where every farmer may hear.

A POLICY OF VARIED INDUSTRIES THE BIRTHRIGHT OF THE FARMER'S CHILD.

In a strictly agricultural community, if a farmer desires to give his children that broad character of education necessary to fit them to enjoy an advanced civilization and to perform with the highest degree of

*Mr. J. R. Dodge, Statistician of the Department of Agriculture.

efficiency the duties of citizenship in a country which depends for governmental direction upon the intelligence and sound judgment of its people, he must send his children away from home; whereas if manufacturing centers were established within convenient distances and in large numbers throughout the country, all the facilities for education would be almost at his door. Hence, his children could remain at home and have the advantage of parental supervision and authority at that important period; and the farmer and his wife would find in their home that solace of life, society, which present conditions render impossible.

There would also be opportunity afforded the farmer's children to enter upon the occupations to which by taste and nature they may be adapted. With a protective tariff that confines the work of this country to the people of this country, these young people would not be turned out at maturity to compete with the starving labor of other lands. They would not find themselves at the threshhold of their career engaged in a hand-to-hand struggle for existence with men who have no alternative but to work at low wages or starve; men who, having no access to land, must accept proffered conditions, however hard. Does not the farmer wish for his children all the opportunities of advancement which they have the ability to utilize? Is not his whole life characterized by an unselfish desire to advance their interests?

The time is close at hand, if not already upon us, when all available or desirable land in this country will be held in private ownership. From what we know of farming and of the prices that can be obtained for the products of the farm all over the world, it is out of the question to suppose that from the products of his farm any farmer of average condition can take care of his children as they grow up and go out into life. Imagine the case of the farmer who has three or four children growing into manhood and womanhood. He can not, from the profits of his farm, buy from private owners three or four quarter-sections of land with which to start the young people in the world; and, were he able to do so, they would necessarily be engaging in competition with himself in the production of farm products, increasing the supply and lowering the price. Nor can he take into the old homestead the wives or the husbands of his children, for it would be impossible for them all to make a living on an average-sized farm.

Even were that practicable it is not to be supposed that, with varying tastes and aptitudes, all the sons or sons-in-law of farmers would be contented to go into farming, or would, by so doing, be putting their lives to the best use, whether for themselves or for their country. The children of even one hundred thousand farmers would evince too great a variety of tastes to make it conceivable that all of them would be contented on farms. How much more true is this of the children of four million farmers! A large variety of industries and occupations would be indispensable to enable them to make out of their lives the most that is possible by enabling each to find that vocation for which his talents might fit him.

For the training and development of whatever talent he may have the farmer's boy must seek instruction in his own country. Unlike the son of the city merchant or of the successful lawyer, physician, or artist, the farmer's son can not spend years in the study of an occupation in foreign countries, and it is better that he should not. He who takes high talent into the machine-shop contributes more to the elevation and advancement of humanity than the prize-scholar of the university.

A policy of varied industries is therefore at once an heirloom to the farmer's child and his birthright. When he steps out of the old homestead (as, in ninety-nine cases in a hundred, step out he must) he should find established in his own country—and the nearer to his home the better—such diversity of industries as to enable him to select for his life work that which best suits his taste and temperament. In following his chosen pursuit and rendering service to his employer he should receive such compensation as will enable him to live as an American should live. This he will not receive unless employers need workmen and compete for their labor as keenly as workmen compete with each other for employment.

If all workmen crowd into a few pursuits, the labor market is overstocked and wages tend to a minimum. If the working population be distributed throughout a variety of occupations there will be no surplusage of labor in any of them, and there will be as much competition among employers to find workmen as among workmen to find employment.

Inasmuch as the farmers are the most numerous class of the community, their children will therefore benefit more by diversity and multiplication of industry than the children of any other class.

DISADVANTAGES OF EXPORT CROPS.

In exporting the cereals of the country our farmers, as experience has shown, have not only shipped the crop, but at each shipment have sent out of the country a portion of their land. They might as well have reduced the quantity of the land as to reduce its productive power. There is a great and growing necessity for a larger development and growth of the classes of crops that do not appreciably impoverish the soil, but for which now, in the nosence of the local markets that, with a more general diffusion of manufactures, would exist, there is not sufficient demand to compensate for the labor necessary to their production.

The farmer who is simply producing things suitable for export must of necessity confine himself to the cultivation of crops that will bear distant transportation. Hence, much of his time is not fully occupied. There are probably ten millon persons now engaged in the farming industry in this country. Assuming that there is but a loss of one day's time each week by each man, what an enormous economic loss is suffered by the country!

ADVANTAGES OF LIGHTER CROPS.

If the American farmer were working not for the inhabitants of other continents, but for his own neighborhood, he would combine with the cultivation of the cereals the profitable culture of various other products of the field, the garden, and the orchard, that not only would not exhaust the soil, but would supply to his own family and his neighbors certain favored articles of food which are now too generally denied them.

For want of local centers of population, which would constitute a market for the tender and more palatable products of agriculture, such as the luscious fruits and berries and the more palatable vegetables, the farmer's family is itself, in many cases, deprived of those articles, and the table which of all others should be laden with what the non-agricultural communities denominate the delicacies and luxuries of life is often spread with uninviting and unpalatable food.

So, too, what pleasure and profit may not be had in the cultivation of flowers, those emblems of refinement and purity, of which every household in the land should have its daily quota. Millions of dollars are annually expended in the cities of the country for the adornment and delight which these furnish. With centers of mechanical industry in the neighborhood of his home, the farmer would find ready sale for large quantities of flowers, and in their culture could turn to interesting and profitable account many hours now necessarily unoccupied and add new zest and pleasure to the lives of all the members of his household.

Those little additions to life are filled with importance for individual men and women; they change the standard of living from the lowest to the highest grade. When the industries of the country are not in equilibrium, the farmer is without customers for many products that under proper conditions would prove highly profitable. At the same time the workmen of the country and their families lose many delicacies and refinements, are deprived of the very things that mark the difference between the hard necessaries and the luxuries of life.

In agricultural communities, when young girls or women are deprived of father or husband they are left utterly helpless. Compelled to earn a livelihood, they find no occupation open to them. They deem themselves fortunate if they find opportunity to lead a life of dreary drudgery on some neighboring farm, or, sadder still, of entering the marriage relation for the sake of "having a home!"

What a boon to such girls and women would be a neighboring village or town with manufacturing establishments for the lighter grades of fabrics, affording such work as is adapted to the physical strength and delicate organization of their sex.

ADVANTAGES OF CENTERS OF POPULATION IN PROXIMITY TO THE FARM.

As all farmers know, agriculture, conducted in proximity to populous communities, is an occupation wholly different from agriculture conducted in sections remote from population.

Under the present system, with farmer's homes remote from centers of population, not only are their occupants deprived of society, but the intelligent and aspiring young men and women among them who have reading tastes or intellectual ambitions can not gratify them. To people in isolation, literature is expensive and art impossible. They can not have libraries, museums, theaters, opera-houses. It is with difficulty that they are able even to maintain churches.

By being deprived of these amenities the life of the farmer and that of each member of his household are often rendered dreary and uninteresting. It may be fairly said that a few hundred persons constitute an average agricultural community in this country. If each contributed one or two dollars toward the establishment of some work of general improvement, the whole would make but a trifling and inadequate sum. As a nucleus for a library it would serve to buy but a few books. On the other hand, as men come together in aggregations they may have libraries containing thousands of volumes at a cost to each person of but a fraction of that which it would cost an agricultural community to accumulate a few.

The larger the aggregation the smaller the amount necessary for each person to pay in order to procure comforts, conveniences, and even luxuries. The experience of city life teaches that the larger the audience the smaller the amount of money needed from each individual composing it. And although all the advantages of the largest aggregations can not be realized in villages or the smaller towns, yet to the extent that towns and villages are multiplied in agricultural sections, to that extent will the way be opened to the farmer and his family for the enjoyment of social opportunities.

It should, therefore, be the great aim of the farming class to aid in securing the adoption of such national policies as may encourage the establishment and maintenance of manufacturing industries in all parts of the country.

The farmers and their families will be much more contented and happy when, in their home surroundings they shall have a larger measure of the advantages of civilization; and those can only be attained by the growth and development of centers of industry in all parts of the country.

As it is, those engaged in agriculture spend much time and money in traveling to and from centers, to and from the nearest cities or towns, which may be many miles distant. If centers of population existed in proximity to the farm, the money thus expended would be saved and the time utilized in profitable employment.

FOREIGN COMPETITION.

In agriculture, the barbarous peoples of the world, aided by machinery, are fully able to compete with those that are more intellectual. With our own inventions in their hands they defeat us. For this reason the agriculturists of the United States should by all possible means attempt to build up and maintain a market at home. They should not attempt to compete with the ryots of India, who, by the aid of improved railroad systems and extensive canals, are now cultivating wheat in the immense plains stretching from the base of the Himalayas to the Indian Ocean.

But cheapness is not to end with the competition of the Hindoo. Leaving out of view the vast pampas of the Amazon and La Plata, the cheapest agricultural laborers in the world will shortly be found in the valley of the Congo, raising illimitable quantities of wheat and all the other cereals which our farmers now export. The foreign competition to which the American farmer is to be subjected has therefore hardly commenced. For the moment, owing to the beneficent effects of the silver bill recently passed in this body, the competition is not so keen as heretofore, but the danger still threatens.

The combined inventions of the world are at the disposal of all who cultivate land, and whatever injury may not be inflicted upon us by cheap labor, standing alone, will be inflicted by ingenious machinery in the hands of the cheap laborer. The time is coming, therefore, when, if the industries of this country are not developed to their widest and greatest extent and variety, so that the factories and machine-shops may consume all the products of our farms, the American farmer will experience a competition the like of which has never been known in the history of the world.

POSSIBLE HOME COMPETITION.

But aside from foreign competition how would the farmers feel if, with their occupation already overcrowded, one-half the remaining population, deprived of their industries, should go into farming? The farmer's surplus, already too great, would then be quadrupled and would not sell for one-half the present price.

Our free-trade friends inform the farmer that by getting cheaply the things he buys he will improve his condition, and that he should therefore oppose a protective tariff. They fail to inform him that as the prices of manufactured articles decline the greater become the incentive and the necessity for the makers of those articles to invade the farmer's domain.

To illustrate the ever-widening ill-effects, especially to the farmer, of a policy which encourages foreign importations without regard to the permanent welfare of the community, let us suppose that all who wanted crockery at the lowest price to-day should buy it abroad, which, were there no tariff, they would undoubtedly do. That would destroy the crockery manufacture of the United States and throw out of employment all persons engaged in it, obliging them to invade other occupations, and, by overstocking the labor market in such occupations, materially reduce the compensation of the people already engaged in them or throw them altogether out of employment.

So, also, such of our citizens as should insist on obtaining woolen goods at the cheapest price to-day, irrespective of the interests of their own communities, would find them abroad. If all bought foreign cloths our woolen industries would decay, and the large numbers of persons to whom they now give employment would be compelled to distribute themselves among other occupations, glutting the labor market wherever they went, and thus reducing wages.

Again, those desiring to obtain silk at the cheapest price at the present moment would, in the absence of a tariff, find it in France. If all Americans bought their silk in France, the silk industry in this country would be destroyed, and all engaged in it would be compelled to enter other occupations, either displacing numbers of people already engaged in those occupations or lowering their wages.

The extension of the same policy of destruction to the pursuits thus newly entered would in time subject them also to a like displacement of labor, and so, by taking all occupations in turn, we should find the people engaged in manufacturing industries thrown back from one occupation to another until all were relegated to the cultivation of the soil, beyond which they could not go. Where, in all this, would be the advantage of the farmer? He might, for a time, supply some of his wants with less money than can be done under the operation of a protective tariff, but each purchase of a foreign-made article would be an invitation to the maker of a like American article to invade the field of the American farmer. The only prospect of relief to the farmer is to have people invade other industries, not his.

If the farmer is to pursue the "cheapness" of the moment, without regard to the future, he will soon find the entire population of the country, trade after trade, brought to the level of the cheap people of whom he has been buying. A large population of "cheap" and idle people, such as throng the European countries, would constitute but a poor home market for our farmers.

It is a modern idea to give the ballot to landless men. European governments keep millions of soldiers to overawe the people and repress all serious evidences of discontent. In this country the people themselves constitute the Government. Better than standing armies, as security for the peace and prosperity of a nation, is a high-spirited people constantly occupied and well paid.

If by reason of the vicious distribution of industries too many persons invade one occupation, there will be unavoidable disturbance and distress. As all men are prone to enter farming when their own occupation fails; the farmer's vocation is always that which there is a tendency to overcrowd. In seasons of industrial depression, therefore, it becomes the common receptacle for the displaced and dispossessed of all the other occupations. This leads naturally to greater competition and depression. Owing to the disarrangement of industry and lack of prosperity which, for the past seventeen years, by reason of the demonetization of silver and the consequent disturbance of the money system of the world, have characterized the condition of industry, the American farmer's occupation has become much overcrowded.

Unrest and discontent have therefore found expression. But if for a few years the mechanical industries be permitted to remain in adjustment, so that no mechanical labor shall be displaced to invade the farmer's calling, the equilibrium will be restored, consumption will overtake production, and prosperity will mark the lot not of the farmer only, but of every American workman.

To the end that the adjustment and co-ordination necessary to prosperity may be reached at the earliest period, it is absolutely indispensable that the tariff charges upon imported goods shall be maintained at a point sufficiently high to render certain that no attack from foreign ships can dislodge it.

It being estimated that if one-third of the workers of a country are engaged in agriculture the food wants of all the people can be supplied, it is clear that in this age, when invention and manufactures are transforming the world, a great economic waste would take place by a failure of this Republic to utilize its natural resources. The only moral justification which can be advanced for our seizure from the Indians of the lands of which they had so long been in possession is that they were wasting a great inheritance, that they were devoting an illimitable area of land to the sustenance of a small population. Should we in this age devote ourselves to agriculture alone we should effect a far more serious waste.

In my belief, the possibilities of development by means of the inventions of our people surpass the conceptions of the most exalted imagination. After the examples we have had of American genius for invention, to confine such a people wholly to the labor of cultivating the soil would be nothing short of culpable and criminal national folly, a folly from which the present class of independent, working farmers would suffer more than any other class of the community.

The increased protection afforded by this bill will, in my belief, largely add to the demand for products of the farm by encouraging the development of manufactures in various directions. Taking one article alone—should we manufacture all our tin-plate, of which we have been importing in the neighborhood of $20,000,000 worth a year, employment will be given to probably 40,000 men, who, with their families, constitute a population of 200,000 persons, all to become consumers of the products of the farm.

With all industries in full operation in a country the farmer will find a market for a great variety of articles for which he can find none if trade be carried on at long distances. Transportation is not production. It should be the aim of every nation to dispense with unnecessary transportation. Nothing can be more absurd than to haul articles across the ocean to be used by people who themselves have the skill and the natural resources for producing those articles in their own communities. A man sending 3,000 miles for an article which he can get within a mile of his home is guilty of grievous waste as well as of an injury to his community.

THE FARMER AND THE "MARKETS OF THE WORLD."

The free-trader points the farmer to the "markets of the world," and recommends him to strain every nerve and exert every energy to supply those markets. He advises the farmer that his mission in life is to produce a "surplus" which shall meet the wants of the teeming millions of other continents.

The hope of the farmer of the United States, however, is in the home market. The best consumers of his products are his own countrymen. They are, man for man, the greatest consumers in the world of everything that is the product of labor.

The general power of consumption of our people compared with that of other peoples may be indicated in a few words, it being borne in mind that our population is not one-twentieth the population of the earth.

The annual production of coffee for the entire world is stated to be

856,000 tons, of which the United States consumes 265,000 tons, or 30 per cent. The iron production of the world is 25,000,000 tons, and of this we use over 8,000,000, or one-third. The steel product of the world is 10,500,000 tons, of which this country uses one-third. The total product of the world in cotton is stated to be 11,421,000 bales of 400 pounds each, of which this country consumes more than a quarter. We consume nearly a third of the world's wool, our consumption being estimated at 600,000,000 pounds. We consume a third of the India rubber of the world, nearly 40 per cent. of all the coal mined, and more than half the tin produced. The sugar crop of the world is stated to be 5,114,620 tons, and of this we consume 1,422,900 tons, or 28 per cent.

A comparison, by countries, of one article alone, and that of universal consumption, will serve as a criterion for all. The consumption in this country of cotton is 17½ pounds per annum for each inhabitant; in Great Britain it is 7.56 pounds to each inhabitant (not one-half that of the United States). In Germany, 7.53 pounds; in Austria, 5.27 pounds (not one-third the average for this country); in Italy, 5.6 pounds; in Russia, 3.31 pounds, not one-fifth our average. Thus, with a population, as stated, of less than one-twentieth that of the world, we consume more than a quarter of the world's production of this great staple.

The statistics of our agricultural exports for the fiscal year 1886–'87, as reported by the Department of Agriculture, show that, omitting cotton and tobacco, our own people in that year consumed 95 per cent. of all the products of our farms. Exclusive of the two articles named the exports were but 5 per cent. Including cotton and tobacco the exports were 10 per cent. The following are the figures in detail:

Value of products of American agriculture in 1886 and of the proportion exported in the fiscal year 1886–'87.

Products.	Production (farm value).	Exportation (farm value).	Per cent.
Breadstuffs:			
Corn	$810,311,000	$11,790,046	1.9
Wheat	314,226,020	87,668,833	27.9
Oats	186,137,930	343,659	.2
Barley	31,840,510	691,809	2.2
Rye	13,181,330	197,687	1.5
Buckwheat	6,465,120	.....	.....
Rice	5,000,000	26,284	.5
Total breadstuffs	1,167,161,910	100,718,318	8.6
Meats	748,000,000	62,522,185	8.4
Poultry products	186,000,000	71,172	.....
Hides, hair, etc	93,000,000	825,502	.9
Dairy products:			
Butter	192,000,000	1,487,773	.8
Cheese	32,000,000	6,455,438	20.2
Milk	156,000,000	181,279	.1
Total meats and dairy products	380,000,000	8,124,490	2.1
Textile fibers:			
Cotton	257,295,327	177,895,501	69.1
Wool	77,000,000	70,202	.1
Hemp, flax, etc	9,000,000	.....	.....
Total textile fibers	343,295,327	177,965,703	51.8
Vegetables:			
Irish potatoes	78,441,940	238,694	.3
Sweet potatoes	20,000,000	.....	.....
Pease and beans	13,800,000	450,291	3.3
Market gardens	68,000,000	256,518	.4
Fruits	175,000,000	1,601,979	.9
Hay	353,437,699	130,804	.....
Tobacco	39,082,118	22,510,388	62.5
Hops	3,500,000	46,725	1.3
Sugar and sirup, including honey	33,500,000	.....	.....
Clover and grass seed	15,000,000	638,329	4.3
Wines	10,000,000	129,103	1.3
Grand totals	3,727,218,994	374,230,603	10.1
Percentage exclusive of cotton and tobacco	.....	.....	5.2

Deducting from the total agricultural exports the amount of the cotton and tobacco (together $200,405,887), we find that there were exported but $173,824,716, and of that amount wheat and meat constituted $150,191,018, so that of miscellaneous articles of farm produce the amount exported was but $23,633,698. If we estimate the average expenditure for food for a family of five persons to be even no greater than one dollar a day, an addition of 476,232 families or 2,251,160 persons of all ages to the population of the country would take up this entire agricultural surplus, including wheat and meat, leaving nothing for export but cotton and tobacco.

The census showing our increase of population for the past decade to be about 1,500,000 yearly it is clear that if our mechanical industries were sufficiently prosperous and sufficiently co-ordinated to keep all their workmen constantly employed, so that none were compelled to invade the domain of the farmer, and if, of the immigrants, a fair proportion were mechanics, or non-agriculturists, it would take but four or five years at furthest for the home market to consume all the products of our farms, and at prices that would compensate the farmer better than he has ever been compensated.

These figures are convincing evidence that the American people—especially the American farmers—should attend to the wants of the home market. By intelligent attention to our own needs we should not have any material disproportion between production and consumption, resulting in stagnation of trade, with all the evil which that implies. The so-called "markets of the world" are an indefinite and intangible element.

EFFECT OF THE SILVER BILL ON THE PRICES OF FARM PRODUCTS.

Much of the discontent of our farming population during the past decade, and much of the misfortune of which they have been the victims, has arisen from the depression caused by what, for the United States, was the economic mistake of the century: the demonetization of silver. Our farmers could not expect remunerative prices for their surplus wheat while competing with the wheat of India, paid for at par with silver purchased at a discount of 30 per cent. Silver having been during all the age the legal money of India, it suffered no loss of purchasing power in that country when demonetized in Europe and America.

The multitudinous millions of ignorant people constituting the population of Hindostan could not in one generation so far depart from their traditional ideas of value as to permit Western legislation to affect in the slightest degree the purchasing power of their money medium. Hence the English merchant, wanting Indian wheat, bought in England or America for 70 cents such quantity of silver bullion as realized him $1 (2 rupees) in the mints of India, where the coinage of silver is free—the sum of $1, or, in the money of the country, 2 rupees. Thus the quantity of wheat which if bought in America would have cost a dollar could, by the trick of transmutation effected by demonetization, be bought in India for 70 cents. It is no wonder, therefore, that the price of American wheat was such as to depress and discourage the American farmer.

But the recent legislation effected by the Republican party, whereby silver has been brought nearer to a par with gold, is destined to effect a much needed improvement in the price not only of wheat, but of all the products of the American farm. That this is not an empty prophecy the following table, cut from a recent issue of the Cincinnati Price-Current, will bear witness:

Comparative statement of prices of leading articles of agriculture on August 26, 1889 and 1890, respectively.

Articles.	1890.	1889.
Wheat, No. 2, bushel	$1.02½	$0.74
Corn, No. 2, mixed, bushel	.52	.35
Oats, No. 2, mixed, bushel	.38½	.20½
Rye, No. 2, bushel	.70	.41
Flour, winter patent, barrel	5.25	4.40
Mess pork, barrel	11.00	10.62½
Lard, 100 pounds	6.00	5.90
Short rib sides, 100 pounds	5.60	5.15
S. P. hams, 100 pounds	10.50	10.25
Butter, creamery, pound	.25	.21
Cheese, choice, pound	.08½	.08
Eggs, dozen	.16½	.15
Potatoes, barrel	3.50	1.00
Apples, choice, barrel	3.00	1.75
Rice, Louisiana, pound	.07	.06

The beneficent effect of that legislation on our agricultural interests is so clearly stated in an editorial article of a leading Democratic daily, The New York Sun (August 21, 1890), that in connection with the farmer's future I can not do better than read that article.

It is as follows:

THE ADVANCE IN THE PRICE OF SILVER.

The advance in the price of silver from 94 cents to $1.20 per ounce has a wider bearing than seems to be generally appreciated. There is a general disposition to see in this new departure merely a variation in the amount of currency or a speculative phenomenon incident to a great and sudden advance in the value of an important commodity.

We have heretofore, in round numbers, exported about 20,000,000 ounces of silver per annum, the remainder of our product being absorbed by Government purchases and by use in the arts. For these 20,000,000 ounces there is now opened a market at home, and it would seem at first sight as if for their former export to pay our debts abroad we should have to substitute a corresponding export of gold but this is not the case.

In our three staple exports, petroleum, cotton, and wheat, we come into competition with silver-using countries exclusively, with the exception of Australia. Egypt and India supply cotton and wheat to Europe, and, with declining values of silver in terms of gold, so long as we were on a gold basis those countries were competing with us at a tremendous advantage. This is proved by the enormous increase in the exports of wheat and cotton from India during the last few years. By causing the appreciation of silver, as measured in gold, we make Indian wheat and cotton cost just so much more as the rise in the gold price of silver measures.

Of course we can not expect to get the full measure of this advance. The augmented price of wheat and cotton in India and Egypt must, to a certain extent, react in order to meet the increased competition from America. But European markets will rise in sympathy with the higher cost of these exports from those countries measured in terms of gold. Of our cotton crop we export in round numbers 5,000,000 bales, and of our wheat crop from 100,000,000 to 150,000,000 bushels. It is fair to assume that the advance under normal conditions in the price of the exportable surplus of these two staples would reach two-thirds of the advance in silver, allowing one-third to be taken off the increased

standard for Indian and Egyptian wheat and cotton, to enable those countries to export at all.

As against the export of 20,000,000 ounces of silver bullion we have therefore the enhanced value of the exportable surplus of wheat and cotton, to say nothing of oil.

Assuming that we receive 2 cents per pound more for our cotton out of the now inevitable 30 per cent. rise in the value of silver, we should thus have $10 per bale added to the value of the exportable surplus of cotton, and thus the country would receive from Europe $50,000,000 more than it has received for this staple previously. The same calculation applies relatively to our surplus of wheat and oil.

We believe it will be found that this new value of silver provides the true protection to our agriculturists. And the inferences to be drawn from these facts are plain. Given $100,000,000 more in the pockets of our farmers, and it is safe to argue that an activity such as we have not witnessed in years in this country must follow in all lines and ramifications of business.

Every man who goes into a business makes some calculation, not only as to probable profits, but as to the possibilities of the business as a whole. This he can do with some degree of certainty as to the home market, of which he is sure. He knows the elements entering into the home demand, the numbers of the population, their manner of life, the character and degree of their wants, and their general civilization. He can place no reliance on the markets abroad. Whoever leans upon them leans upon a broken reed. The nations we might trade with are liable at any moment to adopt a fiscal or an industrial policy that might exclude our products from their markets.

Germany, by a single decree—by the stroke of one man's pen—cut off in a day the entire German market from one of the largest products of American exportation, pork. France did likewise as to the French market. This action was based upon the gratuitous assumption that the pork was not sound, but the decrees were not modified upon the presentation of complete and irrefragable proof of the groundlessness of that assumption. The course pursued by those Governments as to that article may at any moment be repeated by other Governments. Should the embargo be extended by the French and Germans so as to include all other articles of American export, we could not prevent it. We can not control the policies of other nations; we can fully control our own. It is their right to regulate their own affairs; it is our right to regulate ours.

What the farmer now receives for his wheat is the Liverpool price minus the cost of its transportation to Liverpool. Under an economical system which should develop among ourselves the capacity to do all our own work our industries would be in equilibrium, and all the products of our farms would be consumed at home at such price to the farmer as should result from the unrestricted competition of the other farmers of this country. With a varied and natural development of all mechanical industry, the tendency of the youth of the country would be to enter such of those pursuits as they felt adapted to, and so to lessen the tendency to engage in the pursuit of agriculture. Under those circumstances the probabilities are that those who followed agriculture would receive relatively greater reward for their labor than those who followed other pursuits, inasmuch as the competition among farmers would tend to a minimum. It is certain that under an economical system by which we should do all our own work the farmer would find a market at home at good paying prices for all his products. This being the case, a Liverpool merchant wanting American wheat would be compelled to pay our farmer not, as now, the Liverpool price minus the cost of taking our wheat to Liverpool, but the Liverpool price plus the cost of bringing foreign wheat here; that is to say, our farmer would not sell for less than the price at which he could be competed with.

With proper development of mechanical industries in local centers in all parts of our country, it will not be long before the farmers will find our own people consuming all the agricultural products of the country; and whenever we are threatened with invasion of foreign agricultural produce—and that time is much nearer at hand than many suppose—the same policy which shall have enabled us to do all our own manufacturing will enable us to protect the farmer against foreign competition by reserving for him the markets of his own country.

The utmost that protection can do for any industry is to keep the foreigner from competing with our own people in our home market.

If we are to have free trade or anything approaching it, our industries will languish; and our farmers will find that protection did protect—even them.

One of the leaders of the free-traders, Mr. ROGER Q. MILLS, himself bears unconscious testimony to the insignificance of the foreign markets, so far as they relate to our industries. In a speech delivered at his home, Corsicana, Tex., on May 21, 1888, he said, "We produce and exchange among ourselves and consume more of the products of our own labor than the 300,000,000 on the continent of Europe." Our home population being 65,000,000 this would make the average production, consumption, and exchange among our people nearly five times as great for each head of population as the like average for Europe; and we all know that this is not too high a figure at which to measure the entire body of American activities compared with those of Europe.

CONTRAST OF THE CONSUMPTION OF FOOD IN EUROPE AND AMERICA.

One of the essential differences between the civilization of Europe and that of the United States concerns the relation of the masses of the people to the prosperity of the whole community. For the rich, the privileged, and the high-born, as well as for the literary, artistic, and professional classes, the civilization of Europe is high; for the great mass of the people it is low. There civilization is the privilege of the few; here it is the inalienable right of all. The literature of Europe is full of the implication that aspiration is the concomitant of birth and wealth, and of those alone. How significant is the fact that in all the marvelous conceptions of Shakespeare's genius no elevated sentiment is attributed to any except men of noble blood.

In literature, as in life, the plebeian is made to "keep his place." This is a philosophy that accords well with the aristocratic spirit and with the maintenance of standing armies, which overawe the masses and repress their aspiration. It is the philosophy of the *dilettante* and the doctrinaire, who discuss the theory of supply and demand as a "great natural law," and then, ignoring other natural laws of equal and countervailing force, apply their theories to the human laborer with the same iron rigidity and cynical indifference that they apply it to waste paper and scrap-iron. It is to this class of men, not the real workers of the world, that we are indebted for the political economy that advocates free trade between nations.

It will be generally admitted that the food consumed by the masses of the people of a country is a fair index of their energy and power of achievement. Is it not also an index of their civilization? For of what avail is the civilization under which the masses of the people starve or in which life becomes a fevered hunt for animal subsistence?

In order to leave no room for a charge of partiality, I take my figures not from an American or "protection," authority, but from the English statistician, Mulhall. He states the number of pounds of meat consumed annually by the people of the different countries as follows:

Number of pounds of meat to each inhabitant consumed in the United States and in the principal countries of Europe.

	Pounds.		Pounds.
Italy	23	Denmark	69
Russia	48	France	74
Spain	49	Belgium	76
Holland	56	Great Britain	105
Austria	64		
Norway	65	Average for all Europe	63½
Germany	69	The United States	120

I will remark in passing that two distinguished American authorities—one, Mr. J. R. Dodge, statistician of our Department of Agriculture; the other, an editorial writer on The New York Tribune, of world-wide repute for the accuracy of his computations—agree that the consumption of meat in the United States is not less than 175 pounds per annum for each inhabitant.

But even on English authority it is seen that on the average our people consume twice as much meat per year, man for man, as the people of Europe. I think the American computations, however, nearer to the fact.

Again, Mulhall gives the statistics of cereals consumed by the people of different countries, as follows:

Annual consumption of cereals per head of population.

	Bushels.
Italy	9½
Austria	14
Holland	16
Spain	18
Russia	18
Great Britain	20
Germany	24
Average for Europe	17
Annual consumption per head of cereals in the United States	41

As to this item also, our American statisticians credit this country with a larger consumption, but the foreign authority will not be suspected of favoritism.

These figures represent the bread and meat consumed by the people of the countries named. Although our consumption is thus shown to be enormously greater per head of population than that of Europe, such is the scale of American wages that our food costs our people less in proportion to their incomes than is paid by the masses of the people of Europe for the meager supply of poor and innutritious food eaten by them. Mulhall states that—

If we consider only the working classes, we find that in the United States the cost of food is exactly one-third the value of labor, whereas in Great Britain it is almost one-half, and in France still more.

Those figures have deep significance, since at the foundation of all questions of civilization and human progress must lie the question of food. Other things being equal, the quantity and quality of food consumed by the people of a nation determine the energy of body and vigor of mind which they will possess.

As a further illustration of the importance of the home market and the trifling character of our foreign trade, I would remind Senators who point to our commerce with Great Britain that in two decades we shall have added to our own numbers a population as large as that of Great Britain, and that the population so added will consume, man for man, three times as much as is consumed by the inhabitants of that country.

What folly, therefore, to dwell upon the supreme importance to the

American people of the "markets of the world." The trade of our own people with one another is infinitely to be preferred. We should be preparing, by the adoption of proper policies at this time, for the immense population—at least 250,000,000—which within the lifetime of men now living will have assembled within the limits of the United States.

The most beneficial, economical, and natural commerce must always be that between neighbors. If I can exchange with my neighbor a thing of which I have a surplus for a thing of which he has a surplus, it is a more economical and natural exchange than an exchange with somebody living at the antipodes. Not only do we gain by saving charges of middlemen and avoiding deterioration of goods in transit, but, as I have already had occasion to observe, a consideration of paramount consequence is that we establish here the civilization that comes of aggregations, without which we should be deprived of many of the modern comforts, and of that large body of society which has a refining and civilizing influence on men.

Whatever tends to aggregate people in communities tends to increase the comforts and luxuries of life and to develop human aspiration. A man living alone must go through life with little, if any, improvement in mental condition beyond that which he inherited. He may even deteriorate from the condition at which he began; but where numbers are gathered together each takes inspiration from all. The intellectual attrition that takes place in society is the great source of the advancement of humanity. Without it men would degenerate into savages. It is impossible to conceive of intellectual growth under conditions of complete isolation. In the proportion in which men isolate themselves is their social and intellectual growth retarded.

The ultimate result of American development must be the emancipation of labor from the stigma which the privileged classes of the older continents have imposed upon it. They have permitted their laborers to remain ignorant and despised them for their ignorance. They have treated them as belonging to an order apart, to a race different from their own. This can not be attempted and will not be tolerated in America. With the education of our laborer he approaches nearer to his employer, and if, as is certain, the education of all is to continue from generation to generation, the line of demarkation in the intelligence of the two classes will become less and less apparent. There is no necessary connection between ignorance and any form of labor, however humble. All labor is honorable; it is idleness that is degrading. The time must come when every workman, being as intelligent, as honorable, and as useful to society as his employer, will be treated with the same degree of consideration. As men approach nearer to each other in intellectual, social, and moral excellence, they come face to face, without regard to their business relationship.

One of the great obstacles to the progress of the working classes of Europe has been that during all history legislation has been in the hands of men who have been consumers without being producers. As might have been expected, the producers have been subjected to an elaborate system of spoliation by which they have been compelled to support from their hard-earned pittances the magnificent establishments of royalty, with their superadded infliction of endless "civil lists," by which aristocratic mendicants may live in idleness at the expense of the humble and hard-working producers.

This is the government of a free Republic, without king or kaiser. The army on which it relies for defense is not composed of men who consume without producing. It is not a standing army of a million men, but a moving army of many millions, moving, not on the field of battle, but in all the varied fields of industry. We live without fear of assault or molestation. With our mechanical resources fully developed and in operation we need contemplate no attack. Possessing in the brains and hands of our people all the intellectual and all the executive powers, all the sciences and all the arts, should great emergencies arise our workshops as schools of invention and achievement will be found again, as they have been already found, the buttress and support of the Republic. In war a skillful and alert population proves the greatest defense against an enemy, as in peace it proves the most effective defense against hunger and cold.

In discarding the European political system and admitting all citizens to an equal participation in the Government, we discarded the idea that idleness was entitled to more consideration than industry. We also discarded the idea that a workingman is under obligation to his employer for the fact of his employment. It does not require much reasoning to perceive that if the workman faithfully performs what he has agreed to perform he is under no obligation whatever.

With the independence and self-assertion of the American people and the irresistible tendency to equalization among them, if the protective policy be continued and foreign trade be not permitted to disorganize and disrupt our industries, the time will come when each worker will receive the full value of his individual contribution to the common wealth, and when, therefore, no man can acquire more than he fairly earns or take from society more than he gives it in labor or its equivalent. In my belief the time will come when men, however rich or learned, who do not contribute their quota of useful labor of some sort to the support of society will be looked upon with much the same eye as criminals. They will lose and should lose caste in a society and civilization based upon labor as upon a necessary foundation. The maxim of justice is, "If a man work not, neither shall he eat."

No American can doubt that our country should stand first among the nations in all that tends to the unfolding and development of the powers of man.

The implied promise of the Republic to the people of the earth is that on this continent shall be developed the highest type of manhood. The founders of the Republic did not aim at political liberty merely. They had in contemplation the highest standard of individual and social life, the crowning work of civilization. Their efforts were an earnest that here should be found not only that equal liberty which was to constitute the level plain on which all citizens may stand alike, but that there should, in time, be found that which alone can give to political liberty its highest value, but of which the history of the world furnished no example, namely, the opportunity for the equal, complete, and harmonious development of all the faculties of all the people.

An enduring civilization must have its foundations laid not in what are called the upper but in the lower levels of society. The history of the past civilization is the history of the few; that of the coming civilization shall be the history of the many.

In our schools for the young the teaching of science and the useful arts must take the place of dead languages and mythology. The high school of the future will be the school of technology, supported by the State, in which the children of all the people may learn how to explore the recesses of science and to apply their discoveries to the satisfaction of the wants of man. But the greatest of all schools are the workshops, the schools of practical life.

These will be found the basis of the coming civilization, in which the process of development begins, where it should begin, among the level masses of the people.

The same beneficent principle which would warrant us in supporting schools of technology in which to train our youth to investigate the laws of nature and to evoke new and subtle forces from the arcana of science will justify us in maintaining a tariff sufficiently high to enable our workmen—those faithful students of a lifetime—to continue in their schools of applied science the investigations and discoveries which, during the last quarter of a century, have transformed the face of industry.

Whenever the artisans of the United States are subjected in their home market to unrestrained competition with the ill-paid labor of other countries, their wages, on which depends their grade of living, will decline, their aspirations droop, and their life of hopeful, genial, and welcome occupation be turned into plodding, dreary, and unremitting drudgery.

If cheapness alone be the desideratum, without regard to the means by which it is attained, then it would seem that in the other countries of the world the ultimate is about reached. The cheapening of human life has gone about as far as it can go. As we look over the face of the globe and "survey mankind from China to Peru," we see millions toiling during all their waking hours for pittances that barely sustain animal existence. As the masses acquire greater intelligence, their condition will undoubtedly be ameliorated by an insistence upon a just distribution of the products of their labor, but even this relief has its limits, for in a stagnant and unprogressive civilization, did they receive the entire product, their last state would be little better than their first. The great relief is to come from improvements in the processes by which things are produced, so that without increase of sacrifice there may be increase of production. Without such improvements it is clear that the sacrifices to be made by men in order to procure the comforts of life would always, even under the most righteous distribution of the products of industry, be nearly as great as they now are.

According to the policy of the Democratic party cheap products mean cheap men.

The policy of the Republican party aims at a reversal of this. It seeks to make products cheaper by making human life—flesh and blood—dearer. This means cheap products and dear men. In a civilization that is truly advancing, it is only as men become dearer that products can become truly cheaper. It does not follow that products are cheap merely because they cost less to the purchaser or consumer. No inquiry as to cost can be answered without taking into account the cost in sacrifice to the producer. If the cheapening is at the expense of the producer, the article is not really cheaper, but dearer.

Skillful men, intellectual men, creative men, may be dear, but it is their labor and theirs alone that can effect a true cheapening of products—a cheapening consistent with the welfare and progress of society.

The policy of the Democratic party presents no outlook to humanity. That of the Republican party by encouraging the development of skill will make men dearer and products cheaper. The aim of society should be to have dear men and cheap products—not to secure cheap products by cheapening and debasing humanity.

Increase of comfort uniformly accompanies the growth of constructive intellectuality. The development of this force among the masses of the people should especially be the duty of a republic. Their prosperity is indispensable to the perpetuity of a republican form of government. A despotic government may exist with an ignorant and poverty-stricken population, all power being in the hands of a few,

while the masses are inert and without responsibility. With us the responsibilities of government are shared by all. We have no privileged class. Power is distributed throughout the entire community. Intelligence and opportunity of achievement should be equally distributed.

This measure, Mr. President, I regard as one of the most important which could be enacted into legislation. Its influence will be felt in every household throughout the land. It will enlarge and develop industries already established, will give birth to new industries of the most useful and far-reaching character, and will give employment to large numbers of men now suffering from involuntary idleness.

As it is a measure for the protection of labor and one which will largely increase the productive wealth of the country, it is the fitting companion of the silver bill recently passed by this body, which will secure a more equitable distribution of the products of industry. Such, however, in my belief, will be the increase and development of business caused by the passage of these two measures that it may, and probably will, in the interest of a perfect distribution of those products, be necessary in the near future to make some amendments to the silver bill.

These measures, to my mind, embody in their conception and scope the highest duty of government, which is to see that all its people have work for hand and work for brain, and just reward for both.

The passage of this bill, Mr. President, will bring the toilers of this country a long step nearer that to which they have a natural right, namely, the supplying of all their own wants, and at rates of compensation consistent with the grade of civilization maintained among us.

With those great twin measures on our statute-books, I predict for the people of this Republic, by the opening of the next census year, a prosperity and progress unexampled in our own history or in the history of the world.

Much of that prosperity will be due to the organization of great workshops which the pending measure will call into being. With workshops and skillful workmen the Republic will be all-powerful. Without them how helpless would it not be? Without a high order of workmen well paid, well fed, and well housed, the inventive faculty can not assert itself. Without the possession of large numbers of such men constantly at work in well appointed establishments, in which they may be in touch with one another, how can a nation accomplish, and continue to accomplish, the largest results in science, art, industry, and invention? The higher the range of living for such men the sooner will all their powers be developed and the sooner will they succeed in removing from the face of nature the veil which during all the ages has hidden in impenetrable secrecy the beneficent forces that are only now revealing themselves; and which yet hides forces of equal or greater beneficence, forces that with the progress of invention and discovery can not elude the unceasing scrutiny of the human mind, the unceasing industry and immeasurable skill of the human hand. How wise the provision of nature which refuses to yield its secrets without demanding from man the labor of search! If mankind could have everything it wanted without the necessity of labor, the charm of life would be destroyed. The glory of existence is in achievement. How barren, how wasteful, how unbeautiful, how offensive to nature is life without work! Yet, from an economic point of view, ill directed work may prove as wasteful as idleness. To be of the highest efficiency, work must be intelligently directed. The time that men spend seeking roses in thistle-beds is time put to little purpose. The labor of this country can not be directed with the fullest intelligence until we do all our own work; and this result can never be accomplished without a tariff which shall exclude the products of labor performed abroad, except in so far as that labor may supply us with articles to the production of which some insurmountable barrier exists in our own country.

The highest aim of society should be to develop man. By developing the human being all other development follows. Every faculty of mind and hand should be afforded opportunity for expression and exercise. Above all, the powers of construction should be encouraged and promoted. What miracles have they not wrought! More awe-inspiring than the tread of conquering armies are the rush and whirr, the dash and drive, the rumble and roar of the locomotive, as with mighty speed and resistless power, in the light of day and gloom of night, it traverses continents, bounding over prairies, vaulting over rivers, penetrating mountains, pursuing with faithful and unceasing pace its mission from ocean to ocean as the "messenger of glad tidings" to all the habitations of men!—its column of smoke the "pillar of cloud" by day, its flamboyant head-light the "pillar of fire" by night, leading the way for labor from the house of bondage through the wilderness into the land of promise and of hope.

With the advance of man in knowledge and skill work will become increasingly dignified and ennobled. Labor will become its own liberator. Increasing intelligence and wise organization will effect its disenthrallment. Land will become more accessible to the laborers of the older continents. The vast and idle hunting-grounds, the parks and preserves held out of reach of the people, will be restored to their proper use in furnishing sustenance for human life. Then will swords be turned into plowshares and spears into pruning-hooks. Then will the king—which is the people—come to his own again.

In the early stages of civilization, man secured assistance in the hardest of his toil by domesticating and subordinating to his will the animals of the dumb creation. In process of time the winds and waters were harnessed; and later, under the impetus of modern progress, the more subtle forces of steam and electricity. In all this there was a steady advance, an evolution from the rude to the refined. The strength of horses was found insignificant compared with the strength of the unseen properties of matter. It is the duty and the destiny of man to continue the work of subduing and "domesticating" the viewless forms of the universe. To this work he is dedicated by the higher law of his being. Who can doubt his ability, who does not observe his ambition, to evoke from earth and air and sea hitherto unsuspected forces? In the ample folds of the unrolling years of an illimitable future what may not the genius of man accomplish? As the navigation of the sea extended the boundaries of his knowledge of the earth, what may not the navigation of the air unfold? And as the soil is but the bed in which the plant may securely rest while absorbing and assimilating chemical constituents themselves dependent for their nutritive qualities upon atmospheric conditions, why may we not look to a time when the nutrition may be drawn from the atmosphere direct and when we may thus return to the soil all that we take from it? What widening of the vista of human achievement does not such prospect afford? What marvels may we not see when every farmer shall be a chemist, evoking from the circumambient air the life-giving force that is to regenerate the earth, and this by the aid of processes yet to come from the laboratory, by the aid of instruments yet to be furnished by those universities of applied science, the mechanical workshops?

So with advancing knowledge the farmer will not be dependent for his crop upon accidental and ill timed rains, upon alternating floods and droughts. By securing fuller control of natural forces he will learn how to effect condensation and precipitation of the moisture of the upper atmosphere, and, in the fitting seasons of recurrence, cause it to descend upon the earth "like the gentle dew from heaven," fructifying and refreshing the soil. The arid lands will then no longer be arid; the waste places will no longer be waste.

Then will the world realize for the first time the full meaning of the lines:

What a piece of work is a man! How noble in reason! How infinite in faculties! In form and feature how express and admirable! In action how like an angel; in apprehension, how like a god!

Federal Elections.

SPEECH
OF
HON. LEVI MAISH,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. MAISH said:

Mr. SPEAKER: A party that has lost the confidence of the people and sees its power rapidly vanishing, sometimes will resort to every means, good or bad, to avert its impending fate. The measure now before the House is one of the means resorted to by the Republican party to defeat the doom that awaits it. It has this purpose, none other. The elections that have occurred since the last Presidential contest portend the defeat of the dominant party at the elections of 1890 and 1892, and something, its leaders declare, must be done to frustrate the will of the people.

The success of that party at the last Presidential election was accomplished by methods that, for vile and corrupting processes, have had no parallel in the history of the country. Superadded to the unscrupulous use of money, furnished by the beneficiaries of national legislation, pledges were made to divert millions of the public treasury as a reward for the support of that party. It was found that a discontented people, already crushed by the weight of merciless taxation, would not tolerate these proposed exactions, and the pledges were broken.

In this dire dilemma desperate expedients were required, and the Federal election law is one of them.

It is certainly not designed to improve the condition of the negro race in the South. If such were its purpose I have heard no argument advanced in support of the proposition. It would be futile to do so, for I can conceive of no measure better calculated to demoralize it. If one fact is more apparent than another it is that the colored man was never in a more prosperous condition than he is now.

At no time since the war was he as secure in his person and property, at no time were his rights better protected. Contrast his condition to-day with his condition during the gloomy days of carpet-bag rule, when, as is alleged, his rights were protected by the strong arm

of the Government, as it is proposed to do by the pending bill. No, the motive for this proposed legislation is the same that actuated the Republican party when they clothed the negro with the right of suffrage.

The professed purpose then was to save the Republican party from overthrow. As was stated by that gifted orator, Henry Winter Davis, with a frankness that would be refreshing in this debate, "We want numbers." It was the numbers it got by that means that enabled it to succeed for the last quarter of a century. Those numbers, however, have in many places in the South been deserting the Republican party and adding considerable numerical strength to the Democratic party. This, of course, is a very ominous state of affairs for the other side of the House, and the ingratitude of the negro must, in some way, be arrested. He must be made to feel the strong arm of the Government, or to be more exact, the strong arm of the Republican party.

It is quite unnecessary to show that this bill is, to say the least, of questionable constitutional authority, for it is not every measure that is constitutional that is also expedient or desirable. The report of the majority of the committee that reported this bill seemed to take the view that if they can show that the bill does not conflict with the Constitution it is all right. The committee declared that there are two points to be considered: First, the power of Congress to enact such legislation; and, second, the expediency of doing so. Then, after declaring that the language of the Constitution "is so plain that it seems almost superfluous to enter into argument or discussion as to its meaning," they devote nearly five pages to a discussion of the constitutionality of the bill, and not quite a half page to its expediency.

The bill, however, is inherently so pernicious that the sanction of the Constitution can give it no redeeming quality. The ostensible purpose of it is to guard the ballot-box against fraud. The bill contains fifty-seven sections, or 1,653 lines, and in many respects it is so complex and obscure that it will be exceedingly difficult even for intelligent people to comprehend it. It will prove much more of a snare than a shield to those whom it was designed to benefit.

For the purpose of suppressing fraud at elections the bill places their control in the hands of Federal officers. They are, strictly speaking, Federal officers, because they are appointed under Federal statute; but they could be called with much more propriety officers of the Republican party. They would owe their appointment and retention in office to the Republican party; and hence they would have a powerful interest in the success of that party. They are besides virtually guaranteed immunity from prosecution for any crimes they may commit "for the good of their party."

The bill is so framed that these guardians of the purity of the ballot-box may violate every statute, State and national, and under this bill they are in advance indemnified and saved harmless from condign punishment. Now, this is the scheme devised to promote the purity of the ballot-box. The bill should be entitled "An act to control elections in the interest of the Republican party."

The people of this country are not quite unsophisticated enough to believe that all political virtue resides in the Republican party. That is quite too much even for the gullibility of the Republicans themselves.

Pains and penalties are prescribed in this bill for violations of law; but what good does that do if the tribunal is so formed as to insure acquittal to the offender? Under this bill the conviction of a Federal officer would practically be impossible. The outraged voters, knowing this, would never institute prosecutions against them, for they would have only a humiliating defeat and heavy costs of prosecution for their attempt. This bill, therefore, gives a license to election officers to perpetrate frauds with impunity.

This is the plan presented by the committee and advocated by a large majority of the other side of the House to promote that "popular confidence" which the committee allege is "the only guaranty of the peaceful acceptance of the verdict of the ballot-box." It can not be seriously pretended that a method so permeated from beginning to end with partisan control as this, can have any other effect than to destroy utterly the freedom of elections.
